## 4 2020 Exploration

No work was completed in 2020.

## 5 Personnel

No work was completed in 2020.

## 6 Land Use Considerations

No work was completed during the 2020 season; therefore, no water was used, nor waste deposited. The camp stands as it was left at the end of the 2018 season, including structures, a small cache of fuel, and drilling equipment. All that remains on site is described below.

A water licence renewal/amendment was approved on July 16, 2020 and the new licence number is 2BE-STO2025. An application for a new Land Use Permit is currently under review with CIRNAC.

### 6.1 Camp & Waste

The Storm Camp is located along the Aston River at approximately 73°39'23" N latitude and 94°27'07" W longitude. The camp site is located on an elevated gravel bar in the river valley. It includes an airstrip suitable for landing a Twin Otter. A staging area was established at the east end of the airstrip, approximately 600 metres west of Storm Camp.

Eighteen structures were constructed during 2018, in addition to the four existing plywood structures already on site (Pacto toilet shack, storage shack, water tank shack, generator shack). With the exception of the kitchen and core cutting shack, the new structures were all insulated Weatherport tents, built upon existing wooden floors. The kitchen was constructed using dimensional lumber and plywood, upon an existing wooden floor.

Upon completion of the 2018 program, all tents and plywood buildings were left in place for future use. Electronics and communications gear were removed from site. Most other camp equipment was stored on site inside of the tents or plywood buildings. All remaining lumber was stacked at the east end of camp for future use. Tables 1 and 2 list the structures and major equipment left on site at the close of the season on August 25, 2018. Camp photos are included in Appendix 2.

## 6.2 Fuel Storage

During the 2018 program, the existing fuel cache was used, located adjacent to Storm Camp at approximately 73° 39' 23" N latitude and 94° 26' 58" W longitude. A small amount of fuel remains at the cache (Table 3). All remaining fuel is stored in covered secondary containment berms. Jet fuel is stored separately from diesel and gas. Remaining propane cylinders were secured to one of the plywood buildings.

The fuel cache is located more than 31 metres from the normal high-water mark of any water bodies. No damaged or leaking drums were identified during inspection prior to the end of the 2018 season. Drums were stored in an organized manner with the bungs at the 9 o'clock and 3 o'clock positions. There are no empty fuel drums stored on site.

## 6.3 Flights

No work was completed in 2020.

## 6.4 Drilling

One Multi Power Products Discovery II drill and one Zinex A-5 drill, including most of the ancillary equipment and consumables, were left on site for subsequent drill programs. All equipment was drained of fuel and oil for off-season storage. Tables 4 and 5 list the drilling equipment and consumables left on site at the close of the season on August 25, 2018.

#### 6.4 Archaeological Sites

No work was completed in 2020.

#### 6.5 Inuit Owned Land

No work was completed in 2020.

#### 7 Wildlife and Environment

No work was completed in 2020.

#### 8 Reclamation Work

No work was completed in 2020.

#### 9 Waste Disposal

No work was completed in 2020.

#### 10 Inspections

An inspection was performed by CIRNAC Water Resource Officer Joseph Monteith on September 7, 2020. The spill appears to be from a 5 gallon container of a non-hazardous drilling additive, but as it cannot be definitively determined from the pictures, the Spill Report case will be left open until such time it can be identified and rectified. The spill is contained within the berm. Due to the remote location, difficulty accessing the site, time of year and the fact the spill is contained within a berm, cleanup is anticipated to be completed during the next site visit. Inspection Report completed by Mr. Monteith is still pending.

#### 11 2021 Work Plan

The 2021 Aston Bay Property exploration program is anticipated to include a diamond drilling program of 5,000 to 10,000 metres (m), utilizing one or two drills. The average hole depth is expected to be approximately 250 m, up to a maximum anticipated length of 700 m. Additional exploration work may include soil and rock sampling, mapping and geophysical surveys. The 2021 exploration program is projected to start as early as June and continue until as late as September. Similar programs are anticipated for 3 to 4 subsequent years.

All exploration activities will be helicopter supported and based out of Storm Camp, located along the Aston River at approximately 73°39'23" N latitude and 94°27'07" W longitude. The camp site is located on an elevated gravel bar in the Aston River valley. It includes an airstrip suitable for

landing a Twin Otter. Camp infrastructure includes six plywood buildings and sixteen Weatherport tents, built upon wooden platforms.

A fuel cache of approximately 80,000 L (~400 drums) will be established at the current fuel cache location, adjacent to camp. The cache will be primarily diesel and jet fuel, with small quantities of gasoline and propane. All fuel will be stored within secondary containment. All fuel caches will be located a minimum distance of 31 metres from the normal high-water mark of any water body.

With proper design and execution, environmental impacts of the proposed exploration program are expected to be minimal. Plans are continuously being updated for storage and handling of fuel, waste management, reclamation, and wildlife management, all with the goal of ensuring minimal impact on the environment.
