

APPENDIX I 2024 PRE-SHIPMENT EQUIPMENT CLEANING

PRE-SHIPMENT EQUIPMENT CLEANING

Objective:

All equipment and bulk supplies must arrive to the Back River Project site in a condition free of any soil or plant debris to minimize the risk of invasive plant introduction.

Requirements:

Expediter - Expediter must inspect each item of equipment and bulk supplies prior to shipment. Inspection to focus on wheels, tracks, skids, buckets, scoops, undercarriage, and packing material. If any soil is identified, the below cleaning procedures should be followed. Confirmation that equipment is clean must be documented (e.g. as a column to be initialed on the shipping/flight manifest or completion of Form A Expediter Verification).

Designated site personnel -If absence of soil or plant matter is discovered upon offload, on-site cleaning should follow the cleaning protocols below, but minimize or eliminate the use of water and ensure any removed material is contained, collected and disposed of as directed by Environment personnel.

Cleaning measures:

Equipment and bulk supplies can be cleaned using brooms, brushes, shovels, water, or compressed air. Areas of particular concern include tires, tracks, skids, buckets, scoops and packing materials.

Remove clumps of accumulated soil, plant material or crop debris from openings, tracks, skids, wheels, buckets, scoops, and packing materials using a hand scraper, shovel, broom, or wire brush. If required, use water or compressed air to remove any remaining material. Pay extra attention to areas where soil or plant debris can accumulate (i.e., tires or undercarriage).

For hydrovac trucks which have been previously been used, cleaning includes the inside of the tank and any implement in contact with soil.

Form A

Expediter Verification Equipment Free of Soil/Plant Debris

We, B2Gold Nunavut (the Expediter) verify that all equipment and bulk supplies shipped to the Back River site on August - September 2024 (date YY/MM/DD) has been individually inspected by us, and is confirmed to be free of soil and plant debris on shipment. The equipment and bulk supplies shipped is listed below, or is identified in the attached copy of the shipping manifest.
