

The New High School in project will require a considerable amount of granular material. It will essentially be used for concrete footings and general site grading and landscaping.

Kudlik Construction Ltd (KCL) has produced crushed material before in the community of Repulse Bay.

Acting as the general contractor in this project, KCL was awarded the contract by the Government of Nunavut. For that reason, explosives will be stored in magazines within a remote area closed by the municipal quarry in Repulse Bay.
