TITLE: Community – Based Monitoring of Sea Ice and Eider Duck Populations around the
Belcher Islands, Nunavut

OBJECTIVES OF RESEARCH:

Our objective is to understand how changing sea ice conditions influence the movements and population dynamics of eider ducks. Our ongoing use of time lapse photography and Inuit field surveys have led to the implementation of a multi-scale community-based research and monitoring program that allows us to simultaneously monitor the dynamics of sea ice formation and habitat use by eiders around southeastern Hudson Bay.
