Milne Fjord's southern entrance is located at approximately 61° 45' S, 166° 15' E. The fjord is about 10 km long and has a maximum depth of about 100 m. The water is relatively clear and shallow, with a sandy bottom. The fjord is surrounded by mountains, and there are several small islands in the water. The climate is temperate, with cool summers and mild winters. The area is sparsely populated, with only a few small settlements along the coast.
