Il s'agit de la première affaire du genre à être soumise à la Cour. Notre tâche se limite modestement à établir le cadre général d'application, dans les cas indiqués, de l'obligation de consultation et d'accommodement avant que les revendications de titre et droits ancestraux soient tranchées. Au fur et à mesure de l'application de ce cadre, les tribunaux seront appelés, conformément à la méthode traditionnelle de la common law, à préciser l'obligation de consultation et d'accommodement.

II. Analyse

A. *Le droit en matière d'injonction s'applique-t-il en l'espèce?*

On fait valoir que le recours approprié pour les Haïda consiste à demander une injonction interlocutoire contre le gouvernement et contre Weyerhaeuser et qu'il est en conséquence inutile d'examiner la question de l'existence de l'obligation de consulter ou d'accommoder. Dans *RJR — MacDonald Inc. c. Canada (Procureur général)*, [1994] 1 R.C.S. 311, les critères à respecter pour obtenir une injonction interlocutoire ont été examinés. Le demandeur

suffered if the injunction is not granted; and (3) that the balance of convenience favours the injunction.

It is open to plaintiffs like the Haida to seek an interlocutory injunction. However, it does not follow that they are confined to that remedy. If plaintiffs can prove a special obligation giving rise to a duty to consult or accommodate, they are free to pursue these remedies. Here the Haida rely on the obligation flowing from the honour of the Crown toward Aboriginal peoples.

Interlocutory injunctions may offer only partial imperfect relief. First, as mentioned, they may not capture the full obligation on the government alleged by the Haida. Second, they typically represent an all-or-nothing solution. Either the project goes ahead or it halts. By contrast, the alleged duty to consult and accommodate by its very nature entails balancing of Aboriginal and other interests and thus lies closer to the aim of reconciliation at the heart of Crown-Aboriginal relations, as set out in *R. v. Van der Peet*, [1996] 2 S.C.R. 507, at para. 31, and *Delgamuukw v. British Columbia*, [1997] 3 S.C.R. 1010, at para. 186. Third, the balance of convenience test tips the scales in favour of protecting jobs and government revenues, with the result that Aboriginal interests tend to "lose" outright pending a final determination of the issue, instead of being balanced appropriately against conflicting concerns: J. J. L. Hunter, "Advancing Aboriginal Title Claims after *Delgamuukw*: The Role of the Injunction" (June 2000). Fourth, interlocutory injunctions are designed as a stop-gap remedy pending litigation of the underlying issue. Aboriginal claims litigation can be very complex and require years and even decades to resolve in the courts. An interlocutory injunction over such a long period of time might work unnecessary prejudice and may diminish incentives on the part of the successful party to compromise. While Aboriginal claims can be and are pursued through litigation, negotiation is a preferable way of reconciling state

doit établir les éléments suivants : (1) il existe une question sérieuse à juger; (2) le refus de l'injonction causera un préjudice irréparable; (3) la prépondérance des inconvénients favorise l'octroi de l'injonction.

13 Il est loisible à des demandeurs comme les Haïda de demander une injonction interlocutoire. Cependant, cela ne signifie pas qu'il s'agit là de leur seul recours. Si des demandeurs sont en mesure d'établir l'existence d'une obligation particulière donnant naissance à l'obligation de consulter ou d'accommoder, ils sont libres de demander l'application de ces mesures. Ici, les Haïda invoquent l'obligation découlant du principe que la Couronne doit agir honorablement envers les peuples autochtones.

14 L'injonction interlocutoire n'offre parfois qu'une réparation partielle et imparfaite. Premièrement, comme nous l'avons déjà mentionné, elle peut ne pas faire apparaître toute l'obligation du gouvernement, qui, selon les Haïda, incombe au gouvernement. Deuxièmement, elle représente généralement la solution du tout ou rien. Ou le projet se poursuit, ou il s'arrête. Par contre, l'obligation de consulter et d'accommoder invoquée en l'espèce nécessite, de par sa nature même, une mise en balance des intérêts autochtones et des intérêts non autochtones et se rapproche donc de l'objectif de conciliation qui est au cœur des rapports entre la Couronne et les Autochtones et qui a été énoncé dans les arrêts *R. c. Van der Peet*, [1996] 2 R.C.S. 507, par. 31, et *Delgamuukw c. Colombie-Britannique*, [1997] 3 R.C.S. 1010, par. 186. Troisièmement, le critère de la balance des inconvénients fait pencher la balance du côté de la protection des emplois et des recettes de l'État, de sorte que les intérêts autochtones tendent à « être écartés » totalement jusqu'à ce que la question en litige ait été tranchée de façon définitive, au lieu d'être convenablement mis en balance avec les préoccupations opposées : J. J. L. Hunter, « Advancing Aboriginal Title Claims after *Delgamuukw* : The Role of the Injunction » (juin 2000). Quatrièmement, l'injonction interlocutoire est considérée comme une mesure corrective provisoire jusqu'à ce que le tribunal ait statué sur la question litigieuse fondamentale. Les affaires portant sur des revendications autochtones peuvent

and Aboriginal interests. For all these reasons, interlocutory injunctions may fail to adequately take account of Aboriginal interests prior to their final determination.

15 I conclude that the remedy of interlocutory injunction does not preclude the Haida's claim. We must go further and see whether the special relationship with the Crown upon which the Haida rely gives rise to a duty to consult and, if appropriate, accommodate. In what follows, I discuss the source of the duty, when the duty arises, the scope and content of the duty, whether the duty extends to third parties, and whether it applies to the provincial government and not exclusively the federal government. I then apply the conclusions flowing from this discussion to the facts of this case.

B. *The Source of a Duty to Consult and Accommodate*

16 The government's duty to consult with Aboriginal peoples and accommodate their interests is grounded in the honour of the Crown. The honour of the Crown is always at stake in its dealings with Aboriginal peoples: see for example *R. v. Badger*, [1996] 1 S.C.R. 771, at para. 41; *R. v. Marshall*, [1999] 3 S.C.R. 456. It is not a mere incantation, but rather a core precept that finds its application in concrete practices.

17 The historical roots of the principle of the honour of the Crown suggest that it must be understood generously in order to reflect the underlying realities from which it stems. In all its dealings with Aboriginal peoples, from the assertion of sovereignty to the resolution of claims and the implementation of treaties, the Crown must act

être extrêmement complexes et prendre des années, voire des décennies, avant d'être tranchées par les tribunaux. L'application d'une injonction interlocutoire pendant une si longue période pourrait causer des préjudices inutiles et pourrait inciter la partie en bénéficiant à faire moins de compromis. Même si les revendications autochtones sont et peuvent être réglées dans le cadre de litiges, il est préférable de recourir à la négociation pour concilier les intérêts de la Couronne et ceux des Autochtones. Pour toutes ces raisons, il est possible qu'une injonction interlocutoire ne tienne pas suffisamment compte des intérêts autochtones avant qu'une décision définitive soit rendue au sujet de ceux-ci.

J'estime que le recours en injonction interlocutoire ne fait pas obstacle à la revendication des Haïda. Nous devons aller plus loin et décider si les rapports particuliers avec la Couronne qu'invoquent les Haïda font naître une obligation de consulter et, s'il y a lieu, d'accommoder. Je vais maintenant analyser la source de l'obligation, le moment où elle prend naissance, sa portée et son contenu, la question de savoir si elle vise aussi les tiers et si elle s'applique au gouvernement provincial, et non exclusivement au gouvernement fédéral. J'appliquerai ensuite les conclusions de cette analyse aux faits de l'espèce.

B. *La source de l'obligation de consulter et d'accommoder*

L'obligation du gouvernement de consulter les peuples autochtones et de prendre en compte leurs intérêts découle du principe de l'honneur de la Couronne. L'honneur de la Couronne est toujours en jeu lorsque cette dernière transige avec les peuples autochtones : voir par exemple *R. c. Badger*, [1996] 1 R.C.S. 771, par. 41; *R. c. Marshall*, [1999] 3 R.C.S. 456. Il ne s'agit pas simplement d'une belle formule, mais d'un précepte fondamental qui peut s'appliquer dans des situations concrètes.

Les origines historiques du principe de l'honneur de la Couronne tendent à indiquer que ce dernier doit recevoir une interprétation généreuse afin de refléter les réalités sous-jacentes dont il découle. Dans tous ses rapports avec les peuples autochtones, qu'il s'agisse de l'affirmation de sa souveraineté, du règlement de revendications ou de la mise en œuvre

honourably. Nothing less is required if we are to achieve "the reconciliation of the pre-existence of aboriginal societies with the sovereignty of the Crown": *Delgamuukw*, *supra*, at para. 186, quoting *Van der Peet*, *supra*, at para. 31.

The honour of the Crown gives rise to different duties in different circumstances. Where the Crown has assumed discretionary control over specific Aboriginal interests, the honour of the Crown gives rise to a fiduciary duty: *Wewaykum Indian Band v. Canada*, [2002] 4 S.C.R. 245, 2002 SCC 79, at para. 79. The content of the fiduciary duty may vary to take into account the Crown's other, broader obligations. However, the duty's fulfilment requires that the Crown act with reference to the Aboriginal group's best interest in exercising discretionary control over the specific Aboriginal interest at stake. As explained in *Wewaykum*, at para. 81, the term "fiduciary duty" does not connote a universal trust relationship encompassing all aspects of the relationship between the Crown and Aboriginal peoples:

> . . . "fiduciary duty" as a source of plenary Crown liability covering all aspects of the Crown-Indian band relationship . . . overshoots the mark. The fiduciary duty imposed on the Crown does not exist at large but in relation to specific Indian interests.

Here, Aboriginal rights and title have been asserted but have not been defined or proven. The Aboriginal interest in question is insufficiently specific for the honour of the Crown to mandate that the Crown act in the Aboriginal group's best interest, as a fiduciary, in exercising discretionary control over the subject of the right or title.

The honour of the Crown also infuses the processes of treaty making and treaty interpretation. In making and applying treaties, the Crown must act with honour and integrity, avoiding even the appearance of "sharp dealing" (*Badger*, at para. 41). Thus in *Marshall*, *supra*, at para. 4, the majority of this Court supported its interpretation of a treaty by

de traités, la Couronne doit agir honorablement. Il s'agit là du minimum requis pour parvenir à « concilier la préexistence des sociétés autochtones et la souveraineté de Sa Majesté » : *Delgamuukw*, précité, par. 186, citant *Van der Peet*, précité, par. 31.

18 L'honneur de la Couronne fait naître différentes obligations selon les circonstances. Lorsque la Couronne assume des pouvoirs discrétionnaires à l'égard d'intérêts autochtones particuliers, le principe de l'honneur de la Couronne donne naissance à une obligation de fiduciaire : *Bande indienne Wewaykum c. Canada*, [2002] 4 R.C.S. 245, 2002 CSC 79, par. 79. Le contenu de l'obligation de fiduciaire peut varier en fonction des autres obligations, plus larges, de la Couronne. Cependant, pour s'acquitter de son obligation de fiduciaire, la Couronne doit agir dans le meilleur intérêt du groupe autochtone lorsqu'elle exerce des pouvoirs discrétionnaires à l'égard des intérêts autochtones en jeu. Comme il est expliqué dans *Wewaykum*, par. 81, l'expression « obligation de fiduciaire » ne dénote pas un rapport fiduciaire universel englobant tous les aspects des rapports entre la Couronne et les peuples autochtones :

> . . . [considérer l'] « obligation de fiduciaire » [. . .] comme si elle imposait à la Couronne une responsabilité totale à l'égard de tous les aspects des rapports entre la Couronne et les bandes indiennes[, c'est] aller trop loin. L'obligation de fiduciaire incombant à la Couronne n'a pas un caractère général, mais existe plutôt à l'égard de droits particuliers des Indiens.

En l'espèce, des droits et un titre ancestraux ont été revendiqués, mais n'ont pas été définis ou prouvés. L'intérêt autochtone en question n'est pas suffisamment précis pour que l'honneur de la Couronne oblige celle-ci à agir, comme fiduciaire, dans le meilleur intérêt du groupe autochtone lorsqu'elle exerce des pouvoirs discrétionnaires à l'égard de l'objet du droit ou du titre.

19 L'honneur de la Couronne imprègne également les processus de négociation et d'interprétation des traités. Lorsqu'elle conclut et applique un traité, la Couronne doit agir avec honneur et intégrité, et éviter la moindre apparence de « manœuvres malhonnêtes » (*Badger*, par. 41). Ainsi, dans *Marshall*, précité, par. 4, les juges majoritaires de la Cour ont

stating that "nothing less would uphold the honour and integrity of the Crown in its dealings with the Mi'kmaq people to secure their peace and friendship . . .".

20 Where treaties remain to be concluded, the honour of the Crown requires negotiations leading to a just settlement of Aboriginal claims: *R. v. Sparrow*, [1990] 1 S.C.R. 1075, at pp. 1105-6. Treaties serve to reconcile pre-existing Aboriginal sovereignty with assumed Crown sovereignty, and to define Aboriginal rights guaranteed by s. 35 of the *Constitution Act, 1982*. Section 35 represents a promise of rights recognition, and "[i]t is always assumed that the Crown intends to fulfil its promises" (*Badger*, *supra*, at para. 41). This promise is realized and sovereignty claims reconciled through the process of honourable negotiation. It is a corollary of s. 35 that the Crown act honourably in defining the rights it guarantees and in reconciling them with other rights and interests. This, in turn, implies a duty to consult and, if appropriate, accommodate.

21 This duty to consult is recognized and discussed in the jurisprudence. In *Sparrow*, *supra*, at p. 1119, this Court affirmed a duty to consult with west-coast Salish asserting an unresolved right to fish. Dickson C.J. and La Forest J. wrote that one of the factors in determining whether limits on the right were justified is "whether the aboriginal group in question has been consulted with respect to the conservation measures being implemented".

22 The Court affirmed the duty to consult regarding resources to which Aboriginal peoples make claim a few years later in *R. v. Nikal*, [1996] 1 S.C.R. 1013, where Cory J. wrote: "So long as every reasonable effort is made to inform and to consult, such efforts would suffice to meet the justification requirement" (para. 110).

justifié leur interprétation du traité en déclarant que « rien de moins ne saurait protéger l'honneur et l'intégrité de la Couronne dans ses rapports avec les Mi'kmaq en vue d'établir la paix avec eux et de s'assurer leur amitié . . . ».

Tant qu'un traité n'a pas été conclu, l'honneur de la Couronne exige la tenue de négociations menant à un règlement équitable des revendications autochtones : *R. c. Sparrow*, [1990] 1 R.C.S. 1075, p. 1105-1106. Les traités permettent de concilier la souveraineté autochtone préexistante et la souveraineté proclamée de la Couronne, et ils servent à définir les droits ancestraux garantis par l'art. 35 de la *Loi constitutionnelle de 1982*. L'article 35 promet la reconnaissance de droits, et « [i]l faut toujours présumer que [la Couronne] entend respecter ses promesses » (*Badger*, précité, par. 41). Un processus de négociation honnête permet de concrétiser cette promesse et de concilier les revendications de souveraineté respectives. L'article 35 a pour corollaire que la Couronne doit agir honorablement lorsqu'il s'agit de définir les droits garantis par celui-ci et de les concilier avec d'autres droits et intérêts. Cette obligation emporte à son tour celle de consulter et, s'il y a lieu, d'accommoder.

Cette obligation de consulter a été reconnue et analysée dans la jurisprudence. Dans *Sparrow*, précité, p. 1119, la Cour a confirmé l'existence de l'obligation de consulter les Salish de la côte ouest qui revendiquaient un droit de pêche non encore reconnu. Le juge en chef Dickson et le juge La Forest ont écrit que, pour déterminer si les restrictions imposées au droit sont justifiées, il faut notamment se demander « si le groupe d'autochtones en question a été consulté au sujet des mesures de conservation mises en œuvre ».

Quelques années plus tard, la Cour a confirmé l'existence de l'obligation de consultation à l'égard des ressources visées par une revendication autochtone dans *R. c. Nikal*, [1996] 1 R.C.S. 1013, où le juge Cory a écrit que « [d]ans la mesure où tous les efforts raisonnables ont été déployés pour informer et consulter, on a alors satisfait à l'obligation de justifier » (par. 110).

In the companion case of *R. v. Gladstone*, [1996] 2 S.C.R. 723, Lamer C.J. referred to the need for "consultation and compensation", and to consider "how the government has accommodated different aboriginal rights in a particular fishery . . ., how important the fishery is to the economic and material well-being of the band in question, and the criteria taken into account by the government in, for example, allocating commercial licences amongst different users" (para. 64).

Dans l'arrêt connexe *R. c. Gladstone*, [1996] 2 R.C.S. 723, le juge en chef Lamer a fait état de la nécessité « [des] consultations et [de] l'indemnisation », et de la nécessité d'examiner « la manière dont l'État a concilié les différents droits ancestraux visant une pêche donnée [. . .], l'importance de la pêche pour le bien-être économique et matériel de la bande en question, ainsi que les critères appliqués par l'État, par exemple, dans la répartition des permis de pêche commerciale entre les divers usagers » (par. 64). 23

The Court's seminal decision in *Delgamuukw*, *supra*, at para. 168, in the context of a claim for title to land and resources, confirmed and expanded on the duty to consult, suggesting the content of the duty varied with the circumstances: from a minimum "duty to discuss important decisions" where the "breach is less serious or relatively minor"; through the "significantly deeper than mere consultation" that is required in "most cases"; to "full consent of [the] aboriginal nation" on very serious issues. These words apply as much to unresolved claims as to intrusions on settled claims.

Au paragraphe 168 de l'arrêt de principe *Delgamuukw*, précité, prononcé dans le contexte d'une revendication de titre sur des terres et des ressources, la Cour a confirmé l'existence de l'obligation de consulter et a précisé cette obligation, affirmant que son contenu variait selon les circonstances : de la simple « obligation de discuter des décisions importantes » « lorsque le manquement est moins grave ou relativement mineur », en passant par l'obligation nécessitant « beaucoup plus qu'une simple consultation » qui s'impose « [d]ans la plupart des cas », jusqu'à la nécessité d'obtenir le « consentement [de la] nation autochtone » sur les questions très importantes. Ces remarques s'appliquent autant aux revendications non réglées qu'aux revendications déjà réglées et auxquelles il est porté atteinte. 24

Put simply, Canada's Aboriginal peoples were here when Europeans came, and were never conquered. Many bands reconciled their claims with the sovereignty of the Crown through negotiated treaties. Others, notably in British Columbia, have yet to do so. The potential rights embedded in these claims are protected by s. 35 of the *Constitution Act, 1982*. The honour of the Crown requires that these rights be determined, recognized and respected. This, in turn, requires the Crown, acting honourably, to participate in processes of negotiation. While this process continues, the honour of the Crown may require it to consult and, where indicated, accommodate Aboriginal interests.

En bref, les Autochtones du Canada étaient déjà ici à l'arrivée des Européens; ils n'ont jamais été conquis. De nombreuses bandes ont concilié leurs revendications avec la souveraineté de la Couronne en négociant des traités. D'autres, notamment en Colombie-Britannique, ne l'ont pas encore fait. Les droits potentiels visés par ces revendications sont protégés par l'art. 35 de la *Loi constitutionnelle de 1982*. L'honneur de la Couronne commande que ces droits soient déterminés, reconnus et respectés. Pour ce faire, la Couronne doit agir honorablement et négocier. Au cours des négociations, l'honneur de la Couronne peut obliger celle-ci à consulter les Autochtones et, s'il y a lieu, à trouver des accommodements à leurs intérêts. 25

C. *When the Duty to Consult and Accommodate Arises*

26 Honourable negotiation implies a duty to consult with Aboriginal claimants and conclude an honourable agreement reflecting the claimants' inherent rights. But proving rights may take time, sometimes a very long time. In the meantime, how are the interests under discussion to be treated? Underlying this question is the need to reconcile prior Aboriginal occupation of the land with the reality of Crown sovereignty. Is the Crown, under the aegis of its asserted sovereignty, entitled to use the resources at issue as it chooses, pending proof and resolution of the Aboriginal claim? Or must it adjust its conduct to reflect the as yet unresolved rights claimed by the Aboriginal claimants?

27 The answer, once again, lies in the honour of the Crown. The Crown, acting honourably, cannot cavalierly run roughshod over Aboriginal interests where claims affecting these interests are being seriously pursued in the process of treaty negotiation and proof. It must respect these potential, but yet unproven, interests. The Crown is not rendered impotent. It may continue to manage the resource in question pending claims resolution. But, depending on the circumstances, discussed more fully below, the honour of the Crown may require it to consult with and reasonably accommodate Aboriginal interests pending resolution of the claim. To unilaterally exploit a claimed resource during the process of proving and resolving the Aboriginal claim to that resource, may be to deprive the Aboriginal claimants of some or all of the benefit of the resource. That is not honourable.

28 The government argues that it is under no duty to consult and accommodate prior to final determination of the scope and content of the right. Prior to proof of the right, it is argued, there exists only

C. *Le moment où l'obligation de consulter et d'accommoder prend naissance*

L'obligation de négocier honorablement emporte celle de consulter les demandeurs autochtones et de parvenir à une entente honorable, qui tienne compte de leurs droits inhérents. Mais prouver l'existence de droits peut prendre du temps, parfois même beaucoup de temps. Comment faut-il traiter les intérêts en jeu dans l'intervalle? Pour répondre à cette question, il faut tenir compte de la nécessité de concilier l'occupation antérieure des terres par les peuples autochtones et la réalité de la souveraineté de la Couronne. Celle-ci peut-elle, en vertu de la souveraineté qu'elle a proclamée, exploiter les ressources en question comme bon lui semble en attendant que la revendication autochtone soit établie et réglée? Ou doit-elle plutôt adapter son comportement de manière à tenir compte des droits, non encore reconnus, visés par cette revendication?

La réponse à cette question découle, encore une fois, de l'honneur de la Couronne. Si cette dernière entend agir honorablement, elle ne peut traiter cavalièrement les intérêts autochtones qui font l'objet de revendications sérieuses dans le cadre du processus de négociation et d'établissement d'un traité. Elle doit respecter ces intérêts potentiels mais non encore reconnus. La Couronne n'est pas paralysée pour autant. Elle peut continuer à gérer les ressources en question en attendant le règlement des revendications. Toutefois, selon les circonstances, question examinée de façon plus approfondie plus loin, le principe de l'honneur de la Couronne peut obliger celle-ci à consulter les Autochtones et à prendre raisonnablement en compte leurs intérêts jusqu'au règlement de la revendication. Le fait d'exploiter unilatéralement une ressource faisant l'objet d'une revendication au cours du processus visant à établir et à régler cette revendication peut revenir à dépouiller les demandeurs autochtones d'une partie ou de l'ensemble des avantages liés à cette ressource. Agir ainsi n'est pas une attitude honorable.

Le gouvernement prétend qu'il n'a aucune obligation de consulter et d'accommoder tant qu'une décision définitive n'a pas été rendue quant à la portée et au contenu du droit. Avant que le droit ne soit

a broad, common law "duty of fairness", based on the general rule that an administrative decision that affects the "rights, privileges or interests of an individual" triggers application of the duty of fairness: *Cardinal v. Director of Kent Institution*, [1985] 2 S.C.R. 643, at p. 653; *Baker v. Canada (Minister of Citizenship and Immigration)*, [1999] 2 S.C.R. 817, at para. 20. The government asserts that, beyond general administrative law obligations, a duty to consult and accommodate arises only where the government has taken on the obligation of protecting a specific Aboriginal interest or is seeking to limit an established Aboriginal interest. In the result, the government submits that there is no legal duty to consult and accommodate Haida interests at this stage, although it concedes there may be "sound practical and policy reasons" to do so.

The government cites both authority and policy in support of its position. It relies on *Sparrow*, *supra*, at pp. 1110-13 and 1119, where the scope and content of the right were determined and infringement established, prior to consideration of whether infringement was justified. The government argues that its position also finds support in the perspective of the Ontario Court of Appeal in *TransCanada Pipelines Ltd. v. Beardmore (Township)* (2000), 186 D.L.R. (4th) 403, which held that "what triggers a consideration of the Crown's duty to consult is a showing by the First Nation of a violation of an existing Aboriginal or treaty right recognized and affirmed by s. 35(1)" (para. 120).

As for policy, the government points to practical difficulties in the enforcement of a duty to consult or accommodate unproven claims. If the duty to consult varies with the circumstances from a "mere" duty to notify and listen at one end of the spectrum to a requirement of Aboriginal consent at the other end, how, the government asks, are the parties to agree which level is appropriate in the face of contested claims and rights? And if they cannot agree, how are courts or tribunals to determine this? The

établi, affirme-t-on, il n'existe qu'une « obligation d'équité » générale en common law, fondée sur la règle générale selon laquelle une décision administrative qui touche « les droits, privilèges ou biens d'une personne » entraîne l'application de cette obligation d'équité : *Cardinal c. Directeur de l'établissement Kent*, [1985] 2 R.C.S. 643, p. 653; *Baker c. Canada (Ministre de la Citoyenneté et de l'Immigration)*, [1999] 2 R.C.S. 817, par. 20. Le gouvernement affirme que, en dehors des obligations générales découlant du droit administratif, l'obligation de consulter et d'accommoder n'existe que dans le cas où le gouvernement s'est engagé à protéger un intérêt autochtone particulier ou cherche à restreindre un intérêt autochtone reconnu. Le gouvernement soutient donc qu'il n'existe, à ce stade-ci, aucune obligation légale de consulter les Haïda et de prendre en compte leurs intérêts, bien qu'il admette qu'il puisse exister de [TRADUCTION] « bonnes raisons sur le plan pratique et politique » de le faire.

29 Le gouvernement invoque des précédents et des considérations d'intérêt général à l'appui de sa thèse. Il cite *Sparrow*, précité, p. 1110-1113 et 1119, où l'étendue et le contenu du droit avaient été déterminés et l'atteinte avait été établie, avant que soit examinée la question de savoir si l'atteinte était justifiée. Le gouvernement prétend que sa position est également étayée par le point de vue exprimé dans *TransCanada Pipelines Ltd. c. Beardmore (Township)* (2000), 186 D.L.R. (4th) 403, où la Cour d'appel de l'Ontario a jugé que [TRADUCTION] « ce qui déclenche l'examen de l'obligation de la Couronne de consulter, c'est la démonstration par la Première nation qu'il y a eu violation d'un droit existant, ancestral ou issu de traité, reconnu et confirmé par le par. 35(1) » (par. 120).

30 Du point de vue des considérations d'intérêt général, le gouvernement invoque les difficultés que pose sur le plan pratique l'application de l'obligation de consulter ou d'accommoder dans les cas de revendications non établies. Si, selon les circonstances, l'obligation de consulter peut aller de la « simple » obligation d'informer et d'écouter, à une extrémité de la gamme, à l'obligation d'obtenir le consentement des Autochtones, à l'autre extrémité, comment, demande le gouvernement, les parties peuvent-elles

government also suggests that it is impractical and unfair to require consultation before final claims determination because this amounts to giving a remedy before issues of infringement and justification are decided.

s'entendre sur le degré de consultation lorsque des revendications et des droits sont contestés? Et si elles n'arrivent pas à s'entendre, comment les tribunaux judiciaires ou administratifs sont-ils censés trancher la question? Le gouvernement affirme également qu'il est irréaliste et injuste d'imposer une consultation avant que les revendications soient réglées de façon définitive, car cela revient à accorder réparation avant que la question de l'atteinte et celle de la justification aient été tranchées.

31 The government's arguments do not withstand scrutiny. Neither the authorities nor practical considerations support the view that a duty to consult and, if appropriate, accommodate arises only upon final determination of the scope and content of the right.

Les arguments du gouvernement ne résistent pas à un examen minutieux. Ni les précédents ni les considérations d'ordre pratique n'appuient la thèse selon laquelle l'obligation de consulter et, s'il y a lieu, d'accommoder ne prend naissance que lorsqu'une décision définitive a été rendue quant à la portée et au contenu du droit.

32 The jurisprudence of this Court supports the view that the duty to consult and accommodate is part of a process of fair dealing and reconciliation that begins with the assertion of sovereignty and continues beyond formal claims resolution. Reconciliation is not a final legal remedy in the usual sense. Rather, it is a process flowing from rights guaranteed by s. 35(1) of the *Constitution Act, 1982*. This process of reconciliation flows from the Crown's duty of honourable dealing toward Aboriginal peoples, which arises in turn from the Crown's assertion of sovereignty over an Aboriginal people and *de facto* control of land and resources that were formerly in the control of that people. As stated in *Mitchell v. M.N.R.*, [2001] 1 S.C.R. 911, 2001 SCC 33, at para. 9, "[w]ith this assertion [sovereignty] arose an obligation to treat aboriginal peoples fairly and honourably, and to protect them from exploitation" (emphasis added).

La jurisprudence de la Cour étaye le point de vue selon lequel l'obligation de consulter et d'accommoder fait partie intégrante du processus de négociation honorable et de conciliation qui débute au moment de l'affirmation de la souveraineté et se poursuit au-delà du règlement formel des revendications. La conciliation ne constitue pas une réparation juridique définitive au sens usuel du terme. Il s'agit plutôt d'un processus découlant des droits garantis par le par. 35(1) de la *Loi constitutionnelle de 1982*. Ce processus de conciliation découle de l'obligation de la Couronne de se conduire honorablement envers les peuples autochtones, obligation qui, à son tour, tire son origine de l'affirmation par la Couronne de sa souveraineté sur un peuple autochtone et par l'exercice de fait de son autorité sur des terres et ressources qui étaient jusque-là sous l'autorité de ce peuple. Comme il est mentionné dans *Mitchell c. M.R.N.*, [2001] 1 R.C.S. 911, 2001 CSC 33, par. 9, « [c]ette affirmation de souveraineté a fait naître l'obligation de traiter les peuples autochtones de façon équitable et honorable, et de les protéger contre l'exploitation » (je souligne).

33 To limit reconciliation to the post-proof sphere risks treating reconciliation as a distant legalistic goal, devoid of the "meaningful content" mandated by the "solemn commitment" made by the Crown in recognizing and affirming Aboriginal rights and

Limiter l'application du processus de conciliation aux revendications prouvées comporte le risque que la conciliation soit considérée comme un objectif formaliste éloigné et se voie dénuée du « sens utile » qu'elle doit avoir par suite de l'« engagement

title: *Sparrow*, *supra*, at p. 1108. It also risks unfortunate consequences. When the distant goal of proof is finally reached, the Aboriginal peoples may find their land and resources changed and denuded. This is not reconciliation. Nor is it honourable.

solennel » pris par la Couronne lorsqu'elle a reconnu et confirmé les droits et titres ancestraux : *Sparrow*, précité, p. 1108. Une telle attitude risque également d'avoir des conséquences fâcheuses. En effet, il est possible que, lorsque les Autochtones parviennent finalement à établir le bien-fondé de leur revendication, ils trouvent leurs terres changées et leurs ressources épuisées. Ce n'est pas de la conciliation, ni un comportement honorable.

The existence of a legal duty to consult prior to proof of claims is necessary to understand the language of cases like *Sparrow*, *Nikal*, and *Gladstone*, *supra*, where confirmation of the right and justification of an alleged infringement were litigated at the same time. For example, the reference in *Sparrow* to Crown behaviour in determining if any infringements were justified, is to behaviour before determination of the right. This negates the contention that a proven right is the trigger for a legal duty to consult and if appropriate accommodate even in the context of justification.

34 L'existence d'une obligation légale de consulter le groupe intéressé avant qu'il ait apporté la preuve de sa revendication est nécessaire pour comprendre le langage employé dans des affaires comme *Sparrow*, *Nikal* et *Gladstone*, précitées, où la confirmation du droit et la justification de l'atteinte reprochée ont été débattues en même temps. Dans *Sparrow*, par exemple, la référence au comportement de la Couronne au cours de l'examen de la justification des atteintes s'entend du comportement avant l'établissement du droit, ce qui réfute l'argument que ce soit la preuve de l'existence du droit revendiqué qui déclenche l'obligation légale de consulter et, s'il y a lieu, d'accommoder, même dans le contexte de la justification.

But, when precisely does a duty to consult arise? The foundation of the duty in the Crown's honour and the goal of reconciliation suggest that the duty arises when the Crown has knowledge, real or constructive, of the potential existence of the Aboriginal right or title and contemplates conduct that might adversely affect it: see *Halfway River First Nation v. British Columbia (Ministry of Forests)*, [1997] 4 C.N.L.R. 45 (B.C.S.C.), at p. 71, *per* Dorgan J.

35 Mais à quel moment, précisément, l'obligation de consulter prend-elle naissance? L'objectif de conciliation ainsi que l'obligation de consultation, laquelle repose sur l'honneur de la Couronne, tendent à indiquer que cette obligation prend naissance lorsque la Couronne a connaissance, concrètement ou par imputation, de l'existence potentielle du droit ou titre ancestral revendiqué et envisage des mesures susceptibles d'avoir un effet préjudiciable sur celui-ci : voir *Halfway River First Nation c. British Columbia (Ministry of Forests)*, [1997] 4 C.N.L.R. 45 (C.S.C.-B.), p. 71, le juge Dorgan.

This leaves the practical argument. It is said that before claims are resolved, the Crown cannot know that the rights exist, and hence can have no duty to consult or accommodate. This difficulty should not be denied or minimized. As I stated (dissenting) in *Marshall*, *supra*, at para. 112, one cannot "meaningfully discuss accommodation or justification of a right unless one has some idea of the core of that right and its modern scope". However, it will

36 Il reste l'argument d'ordre pratique. On affirme que, tant qu'une revendication n'est pas réglée, la Couronne ne peut pas savoir si les droits revendiqués existent ou non et que, de ce fait, elle ne peut être tenue à une obligation de consulter ou d'accommoder. Cette difficulté ne saurait être niée ou minimisée. Comme je l'ai déclaré (dans mes motifs dissidents) dans *Marshall*, précité, par. 112, on ne peut « analyser utilement la question de la prise en

frequently be possible to reach an idea of the asserted rights and of their strength sufficient to trigger an obligation to consult and accommodate, short of final judicial determination or settlement. To facilitate this determination, claimants should outline their claims with clarity, focussing on the scope and nature of the Aboriginal rights they assert and on the alleged infringements. This is what happened here, where the chambers judge made a preliminary evidence-based assessment of the strength of the Haida claims to the lands and resources of Haida Gwaii, particularly Block 6.

compte d'un droit ou de la justification de ses limites sans avoir une idée de l'essence de ce droit et de sa portée actuelle ». Cependant, il est souvent possible de se faire, à l'égard des droits revendiqués et de leur solidité, une idée suffisamment précise pour que l'obligation de consulter et d'accommoder s'applique, même si ces droits n'ont pas fait l'objet d'un règlement définitif ou d'une décision judiciaire finale. Pour faciliter cette détermination, les demandeurs devraient exposer clairement leurs revendications, en insistant sur la portée et la nature des droits ancestraux qu'ils revendiquent ainsi que sur les violations qu'ils allèguent. C'est ce qui s'est produit en l'espèce, lorsque le juge en son cabinet a procédé à une évaluation préliminaire, fondée sur la preuve, de la solidité des revendications des Haïda à l'égard des terres et des ressources des îles Haïda Gwaii, en particulier du Bloc 6.

37 There is a distinction between knowledge sufficient to trigger a duty to consult and, if appropriate, accommodate, and the content or scope of the duty in a particular case. Knowledge of a credible but unproven claim suffices to trigger a duty to consult and accommodate. The content of the duty, however, varies with the circumstances, as discussed more fully below. A dubious or peripheral claim may attract a mere duty of notice, while a stronger claim may attract more stringent duties. The law is capable of differentiating between tenuous claims, claims possessing a strong *prima facie* case, and established claims. Parties can assess these matters, and if they cannot agree, tribunals and courts can assist. Difficulties associated with the absence of proof and definition of claims are addressed by assigning appropriate content to the duty, not by denying the existence of a duty.

Il y a une différence entre une connaissance suffisante pour entraîner l'application de l'obligation de consulter et, s'il y a lieu, d'accommoder, et le contenu ou l'étendue de cette obligation dans une affaire donnée. La connaissance d'une revendication crédible mais non encore établie suffit à faire naître l'obligation de consulter et d'accommoder. Toutefois, le contenu de l'obligation varie selon les circonstances, comme nous le verrons de façon plus approfondie plus loin. Une revendication douteuse ou marginale peut ne requérir qu'une simple obligation d'informer, alors qu'une revendication plus solide peut faire naître des obligations plus contraignantes. Il est possible en droit de différencier les revendications reposant sur une preuve ténue des revendications reposant sur une preuve à première vue solide et de celles déjà établies. Les parties peuvent examiner la question et, si elles ne réussissent pas à s'entendre, les tribunaux administratifs et judiciaires peuvent leur venir en aide. Il faut régler les problèmes liés à l'absence de preuve et de définition des revendications en délimitant l'obligation de façon appropriée et non en niant son existence.

38 I conclude that consultation and accommodation before final claims resolution, while challenging, is not impossible, and indeed is an essential corollary to the honourable process of reconciliation that s. 35 demands. It preserves the Aboriginal interest

J'estime que, bien que le respect des obligations de consultation et d'accommodement avant le règlement définitif d'une revendication ne soit pas sans poser de problèmes, de telles mesures ne sont toutefois pas impossibles et constituent même un aspect

pending claims resolution and fosters a relationship between the parties that makes possible negotiations, the preferred process for achieving ultimate reconciliation: see S. Lawrence and P. Macklem, "From Consultation to Reconciliation: Aboriginal Rights and the Crown's Duty to Consult" (2000), 79 *Can. Bar Rev.* 252, at p. 262. Precisely what is required of the government may vary with the strength of the claim and the circumstances. But at a minimum, it must be consistent with the honour of the Crown.

D. *The Scope and Content of the Duty to Consult and Accommodate*

The content of the duty to consult and accommodate varies with the circumstances. Precisely what duties arise in different situations will be defined as the case law in this emerging area develops. In general terms, however, it may be asserted that the scope of the duty is proportionate to a preliminary assessment of the strength of the case supporting the existence of the right or title, and to the seriousness of the potentially adverse effect upon the right or title claimed.

In *Delgamuukw*, *supra*, at para. 168, the Court considered the duty to consult and accommodate in the context of established claims. Lamer C.J. wrote:

> The nature and scope of the duty of consultation will vary with the circumstances. In occasional cases, when the breach is less serious or relatively minor, it will be no more than a duty to discuss important decisions that will be taken with respect to lands held pursuant to aboriginal title. Of course, even in these rare cases when the minimum acceptable standard is consultation, this consultation must be in good faith, and with the intention of substantially addressing the concerns of the aboriginal peoples whose lands are at issue. In most cases, it will be significantly deeper than mere consultation. Some cases may even require the full consent of an aboriginal nation, particularly when provinces enact hunting and fishing regulations in relation to aboriginal lands.

essentiel du processus honorable de conciliation imposé par l'art. 35. Elles protègent les intérêts autochtones jusqu'au règlement des revendications et favorisent le développement entre les parties d'une relation propice à la négociation, processus à privilégier pour parvenir finalement à la conciliation : voir S. Lawrence et P. Macklem, « From Consultation to Reconciliation : Aboriginal Rights and the Crown's Duty to Consult » (2000), 79 *R. du B. can.* 252, p. 262. Les mesures précises que doit prendre le gouvernement peuvent varier selon la solidité de la revendication et les circonstances, mais elles doivent à tout le moins être compatibles avec l'honneur de la Couronne.

D. *L'étendue et le contenu de l'obligation de consulter et d'accommoder*

39 Le contenu de l'obligation de consulter et d'accommoder varie selon les circonstances. La nature précise des obligations qui naissent dans différentes situations sera définie à mesure que les tribunaux se prononceront sur cette nouvelle question. En termes généraux, il est néanmoins possible d'affirmer que l'étendue de l'obligation dépend de l'évaluation préliminaire de la solidité de la preuve étayant l'existence du droit ou du titre revendiqué, et de la gravité des effets préjudiciables potentiels sur le droit ou le titre.

40 Dans *Delgamuukw*, précité, par. 168, la Cour a examiné l'obligation de consulter et d'accommoder dans le contexte de revendications dont le bien-fondé a été établi. Le juge en chef Lamer a écrit :

> La nature et l'étendue de l'obligation de consultation dépendront des circonstances. Occasionnellement, lorsque le manquement est moins grave ou relativement mineur, il ne s'agira de rien de plus que la simple obligation de discuter des décisions importantes qui seront prises au sujet des terres détenues en vertu d'un titre aborigène. Évidemment, même dans les rares cas où la norme minimale acceptable est la consultation, celle-ci doit être menée de bonne foi, dans l'intention de tenir compte réellement des préoccupations des peuples autochtones dont les terres sont en jeu. Dans la plupart des cas, l'obligation exigera beaucoup plus qu'une simple consultation. Certaines situations pourraient même exiger l'obtention du consentement d'une nation autochtone, particulièrement lorsque des provinces prennent des règlements de chasse et de pêche visant des territoires autochtones.

41 Transposing this passage to pre-proof claims, one may venture the following. While it is not useful to classify situations into watertight compartments, different situations requiring different responses can be identified. In all cases, the honour of the Crown requires that the Crown act with good faith to provide meaningful consultation appropriate to the circumstances. In discharging this duty, regard may be had to the procedural safeguards of natural justice mandated by administrative law.

La transposition de ce passage dans le contexte des revendications non encore établies permet d'avancer ce qui suit. Bien qu'il ne soit pas utile de classer les situations dans des compartiments étanches, il est possible d'identifier différentes situations appelant des solutions différentes. Dans tous les cas, le principe de l'honneur de la Couronne commande que celle-ci agisse de bonne foi et tienne une véritable consultation, qui soit appropriée eu égard aux circonstances. Lorsque vient le temps de s'acquitter de cette obligation, les garanties procédurales de justice naturelle exigées par le droit administratif peuvent servir de guide.

42 At all stages, good faith on both sides is required. The common thread on the Crown's part must be "the intention of substantially addressing [Aboriginal] concerns" as they are raised (*Delgamuukw*, *supra*, at para. 168), through a meaningful process of consultation. Sharp dealing is not permitted. However, there is no duty to agree; rather, the commitment is to a meaningful process of consultation. As for Aboriginal claimants, they must not frustrate the Crown's reasonable good faith attempts, nor should they take unreasonable positions to thwart government from making decisions or acting in cases where, despite meaningful consultation, agreement is not reached: see *Halfway River First Nation v. British Columbia (Ministry of Forests)*, [1999] 4 C.N.L.R. 1 (B.C.C.A.), at p. 44; *Heiltsuk Tribal Council v. British Columbia (Minister of Sustainable Resource Management)* (2003), 19 B.C.L.R. (4th) 107 (B.C.S.C.). Mere hard bargaining, however, will not offend an Aboriginal people's right to be consulted.

À toutes les étapes, les deux parties sont tenues de faire montre de bonne foi. Le fil conducteur du côté de la Couronne doit être « l'intention de tenir compte réellement des préoccupations [des Autochtones] » à mesure qu'elles sont exprimées (*Delgamuukw*, précité, par. 168), dans le cadre d'un véritable processus de consultation. Les manœuvres malhonnêtes sont interdites. Cependant, il n'y a pas obligation de parvenir à une entente mais plutôt de procéder à de véritables consultations. Quant aux demandeurs autochtones, ils ne doivent pas contrecarrer les efforts déployés de bonne foi par la Couronne et ne devraient pas non plus défendre des positions déraisonnables pour empêcher le gouvernement de prendre des décisions ou d'agir dans les cas où, malgré une véritable consultation, on ne parvient pas à s'entendre : voir *Halfway River First Nation c. British Columbia (Ministry of Forests)*, [1999] 4 C.N.L.R. 1 (C.A.C.-B.), p. 44; *Heiltsuk Tribal Council c. British Columbia (Minister of Sustainable Resource Management)* (2003), 19 B.C.L.R. (4th) 107 (C.S.C.-B.). Toutefois, le seul fait de négocier de façon serrée ne porte pas atteinte au droit des Autochtones d'être consultés.

43 Against this background, I turn to the kind of duties that may arise in different situations. In this respect, the concept of a spectrum may be helpful, not to suggest watertight legal compartments but rather to indicate what the honour of the Crown may require in particular circumstances. At one end of the spectrum lie cases where the claim to title is weak, the Aboriginal right limited, or the potential for infringement minor. In such cases, the only duty

Sur cette toile de fond, je vais maintenant examiner le type d'obligations qui peuvent découler de différentes situations. À cet égard, l'utilisation de la notion de continuum peut se révéler utile, non pas pour créer des compartiments juridiques étanches, mais plutôt pour préciser ce que le principe de l'honneur de la Couronne est susceptible d'exiger dans des circonstances particulières. À une extrémité du continuum se trouvent les cas où la revendication

on the Crown may be to give notice, disclose information, and discuss any issues raised in response to the notice. "'[C]onsultation' in its least technical definition is talking together for mutual understanding": T. Isaac and A. Knox, "The Crown's Duty to Consult Aboriginal People" (2003), 41 *Alta. L. Rev.* 49, at p. 61.

de titre est peu solide, le droit ancestral limité ou le risque d'atteinte faible. Dans ces cas, les seules obligations qui pourraient incomber à la Couronne seraient d'aviser les intéressés, de leur communiquer des renseignements et de discuter avec eux des questions soulevées par suite de l'avis. La [TRADUCTION] « "consultation", dans son sens le moins technique, s'entend de l'action de se parler dans le but de se comprendre les uns les autres » : T. Isaac et A. Knox, « The Crown's Duty to Consult Aboriginal People » (2003), 41 *Alta. L. Rev.* 49, p. 61.

At the other end of the spectrum lie cases where a strong *prima facie* case for the claim is established, the right and potential infringement is of high significance to the Aboriginal peoples, and the risk of non-compensable damage is high. In such cases deep consultation, aimed at finding a satisfactory interim solution, may be required. While precise requirements will vary with the circumstances, the consultation required at this stage may entail the opportunity to make submissions for consideration, formal participation in the decision-making process, and provision of written reasons to show that Aboriginal concerns were considered and to reveal the impact they had on the decision. This list is neither exhaustive, nor mandatory for every case. The government may wish to adopt dispute resolution procedures like mediation or administrative regimes with impartial decision-makers in complex or difficult cases.

44 À l'autre extrémité du continuum on trouve les cas où la revendication repose sur une preuve à première vue solide, où le droit et l'atteinte potentielle sont d'une haute importance pour les Autochtones et où le risque de préjudice non indemnisable est élevé. Dans de tels cas, il peut s'avérer nécessaire de tenir une consultation approfondie en vue de trouver une solution provisoire acceptable. Quoique les exigences précises puissent varier selon les circonstances, la consultation requise à cette étape pourrait comporter la possibilité de présenter des observations, la participation officielle à la prise de décisions et la présentation de motifs montrant que les préoccupations des Autochtones ont été prises en compte et précisant quelle a été l'incidence de ces préoccupations sur la décision. Cette liste n'est pas exhaustive et ne doit pas nécessairement être suivie dans chaque cas. Dans les affaires complexes ou difficiles, le gouvernement peut décider de recourir à un mécanisme de règlement des différends comme la médiation ou un régime administratif mettant en scène des décideurs impartiaux.

Between these two extremes of the spectrum just described, will lie other situations. Every case must be approached individually. Each must also be approached flexibly, since the level of consultation required may change as the process goes on and new information comes to light. The controlling question in all situations is what is required to maintain the honour of the Crown and to effect reconciliation between the Crown and the Aboriginal peoples with respect to the interests at stake. Pending settlement, the Crown is bound by its honour to balance societal and Aboriginal interests in making decisions that may affect Aboriginal claims. The Crown

45 Entre les deux extrémités du continuum décrit précédemment, on rencontrera d'autres situations. Il faut procéder au cas par cas. Il faut également faire preuve de souplesse, car le degré de consultation nécessaire peut varier à mesure que se déroule le processus et que de nouveaux renseignements sont mis au jour. La question décisive dans toutes les situations consiste à déterminer ce qui est nécessaire pour préserver l'honneur de la Couronne et pour concilier les intérêts de la Couronne et ceux des Autochtones. Tant que la question n'est pas réglée, le principe de l'honneur de la Couronne commande que celle-ci mette en balance les

may be required to make decisions in the face of disagreement as to the adequacy of its response to Aboriginal concerns. Balance and compromise will then be necessary.

46 Meaningful consultation may oblige the Crown to make changes to its proposed action based on information obtained through consultations. The New Zealand Ministry of Justice's *Guide for Consultation with Mäori* (1997) provides insight (at pp. 21 and 31):

> Consultation is not just a process of exchanging information. It also entails testing and being prepared to amend policy proposals in the light of information received, and providing feedback. Consultation therefore becomes a process which should ensure both parties are better informed . . . .
>
> . . .
>
> . . . genuine consultation means a process that involves . . .:
>
> - gathering information to test policy proposals
> - putting forward proposals that are not yet finalised
> - seeking Mäori opinion on those proposals
> - informing Mäori of all relevant information upon which those proposals are based
> - not promoting but listening with an open mind to what Mäori have to say
> - being prepared to alter the original proposal
> - providing feedback both during the consultation process and after the decision-process.

47 When the consultation process suggests amendment of Crown policy, we arrive at the stage of accommodation. Thus the effect of good faith consultation may be to reveal a duty to accommodate. Where a strong *prima facie* case exists for the claim,

intérêts de la société et ceux des peuples autochtones lorsqu'elle prend des décisions susceptibles d'entraîner des répercussions sur les revendications autochtones. Elle peut être appelée à prendre des décisions en cas de désaccord quant au caractère suffisant des mesures qu'elle adopte en réponse aux préoccupations exprimées par les Autochtones. Une attitude de pondération et de compromis s'impose alors.

À la suite de consultations véritables, la Couronne pourrait être amenée à modifier la mesure envisagée en fonction des renseignements obtenus lors des consultations. Le *Guide for Consultation with Mäori* (1997) du ministère de la Justice de la Nouvelle-Zélande fournit des indications sur la question (aux p. 21 et 31):

> [TRADUCTION] La consultation n'est pas seulement un simple mécanisme d'échange de renseignements. Elle comporte également des mises à l'épreuve et la modification éventuelle des énoncés de politique compte tenu des renseignements obtenus ainsi que la rétroaction. Elle devient donc un processus grâce auquel les deux parties sont mieux informées . . .
>
> . . .
>
> . . . de véritables consultations s'entendent d'un processus qui consiste . . . :
>
> - à recueillir des renseignements pour mettre à l'épreuve les énoncés de politique;
> - à proposer des énoncés qui ne sont pas encore arrêtés définitivement;
> - à chercher à obtenir l'opinion des Mäoris sur ces énoncés;
> - à informer les Mäoris de tous les renseignements pertinents sur lesquels reposent ces énoncés;
> - à écouter avec un esprit ouvert ce que les Mäoris ont à dire sans avoir à en faire la promotion;
> - à être prêt à modifier l'énoncé original;
> - à fournir une rétroaction tant au cours de la consultation qu'après la prise de décision.

S'il ressort des consultations que des modifications à la politique de la Couronne s'imposent, il faut alors passer à l'étape de l'accommodement. Des consultations menées de bonne foi peuvent donc faire naître l'obligation d'accommoder. Lorsque la

and the consequences of the government's proposed decision may adversely affect it in a significant way, addressing the Aboriginal concerns may require taking steps to avoid irreparable harm or to minimize the effects of infringement, pending final resolution of the underlying claim. Accommodation is achieved through consultation, as this Court recognized in *R. v. Marshall*, [1999] 3 S.C.R. 533, at para. 22: ". . . the process of accommodation of the treaty right may best be resolved by consultation and negotiation".

revendication repose sur une preuve à première vue solide et que la décision que le gouvernement entend prendre risque de porter atteinte de manière appréciable aux droits visés par la revendication, l'obligation d'accommodement pourrait exiger l'adoption de mesures pour éviter un préjudice irréparable ou pour réduire au minimum les conséquences de l'atteinte jusqu'au règlement définitif de la revendication sous-jacente. L'accommodement est le fruit des consultations, comme la Cour l'a reconnu dans *R. c. Marshall*, [1999] 3 R.C.S. 533, par. 22 : « . . . il est préférable de réaliser la prise en compte du droit issu du traité par des consultations et par la négociation ».

This process does not give Aboriginal groups a veto over what can be done with land pending final proof of the claim. The Aboriginal "consent" spoken of in *Delgamuukw* is appropriate only in cases of established rights, and then by no means in every case. Rather, what is required is a process of balancing interests, of give and take.

48 Ce processus ne donne pas aux groupes autochtones un droit de veto sur les mesures susceptibles d'être prises à l'égard des terres en cause en attendant que la revendication soit établie de façon définitive. Le « consentement » dont il est question dans *Delgamuukw* n'est nécessaire que lorsque les droits invoqués ont été établis, et même là pas dans tous les cas. Ce qu'il faut au contraire, c'est plutôt un processus de mise en balance des intérêts, de concessions mutuelles.

This flows from the meaning of "accommodate". The terms "accommodate" and "accommodation" have been defined as to "adapt, harmonize, reconcile" . . . "an adjustment or adaptation to suit a special or different purpose . . . a convenient arrangement; a settlement or compromise": *Concise Oxford Dictionary of Current English* (9th ed. 1995), at p. 9. The accommodation that may result from pre-proof consultation is just this — seeking compromise in an attempt to harmonize conflicting interests and move further down the path of reconciliation. A commitment to the process does not require a duty to agree. But it does require good faith efforts to understand each other's concerns and move to address them.

49 Cette conclusion découle du sens des termes « accommoder » et « accommodement », définis respectivement ainsi : « **Accommoder qqc. à.** L'adapter à, la mettre en correspondance avec quelque chose . . . » et « Action, résultat de l'action d'accommoder (ou de s'accommoder); moyen employé en vue de cette action. [. . .] Action de (se) mettre ou fait d'être en accord avec quelqu'un; règlement à l'amiable, transaction » (*Trésor de la langue française*, t. 1, 1971, p. 391 et 388). L'accommodement susceptible de résulter de consultations menées avant l'établissement du bien-fondé de la revendication correspond exactement à cela : la recherche d'un compromis dans le but d'harmoniser des intérêts opposés et de continuer dans la voie de la réconciliation. L'engagement à suivre le processus n'emporte pas l'obligation de se mettre d'accord, mais exige de chaque partie qu'elle s'efforce de bonne foi à comprendre les préoccupations de l'autre et à y répondre.

The Court's decisions confirm this vision of accommodation. The Court in *Sparrow* raised

50 La jurisprudence de la Cour confirme cette conception d'accommodement. Dans *Sparrow*, la Cour

the concept of accommodation, stressing the need to balance competing societal interests with Aboriginal and treaty rights. In *R. v. Sioui*, [1990] 1 S.C.R. 1025, at p. 1072, the Court stated that the Crown bears the burden of proving that its occupancy of lands "cannot be accommodated to reasonable exercise of the Hurons' rights". And in *R. v. Côté*, [1996] 3 S.C.R. 139, at para. 81, the Court spoke of whether restrictions on Aboriginal rights "can be accommodated with the Crown's special fiduciary relationship with First Nations". Balance and compromise are inherent in the notion of reconciliation. Where accommodation is required in making decisions that may adversely affect as yet unproven Aboriginal rights and title claims, the Crown must balance Aboriginal concerns reasonably with the potential impact of the decision on the asserted right or title and with other societal interests.

a évoqué cette notion, insistant sur la nécessité d'établir un équilibre entre des intérêts sociétaux opposés et les droits ancestraux et issus de traités des Autochtones. Dans *R. c. Sioui*, [1990] 1 R.C.S. 1025, p. 1072, la Cour a affirmé qu'il incombe à la Couronne de prouver que son occupation des terres « ne peut s'accommoder de l'exercice raisonnable des droits des Hurons ». Et, dans *R. c. Côté*, [1996] 3 R.C.S. 139, par. 81, la Cour s'est demandé si les restrictions imposées aux droits ancestraux « [étaient] conciliable[s] avec les rapports spéciaux de fiduciaire de l'État à l'égard des premières nations ». La mise en équilibre et le compromis font partie intégrante de la notion de conciliation. Lorsque l'accommodement est nécessaire à l'occasion d'une décision susceptible d'avoir un effet préjudiciable sur des revendications de droits et de titre ancestraux non encore prouvées, la Couronne doit établir un équilibre raisonnable entre les préoccupations des Autochtones, d'une part, et l'incidence potentielle de la décision sur le droit ou titre revendiqué et les autres intérêts sociétaux, d'autre part.

51 It is open to governments to set up regulatory schemes to address the procedural requirements appropriate to different problems at different stages, thereby strengthening the reconciliation process and reducing recourse to the courts. As noted in *R. v. Adams*, [1996] 3 S.C.R. 101, at para. 54, the government "may not simply adopt an unstructured discretionary administrative regime which risks infringing aboriginal rights in a substantial number of applications in the absence of some explicit guidance". It should be observed that, since October 2002, British Columbia has had a Provincial Policy for Consultation with First Nations to direct the terms of provincial ministries' and agencies' operational guidelines. Such a policy, while falling short of a regulatory scheme, may guard against unstructured discretion and provide a guide for decision-makers.

Il est loisible aux gouvernements de mettre en place des régimes de réglementation fixant les exigences procédurales applicables aux différents problèmes survenant à différentes étapes, et ainsi de renforcer le processus de conciliation et réduire le recours aux tribunaux. Comme il a été mentionné dans *R. c. Adams*, [1996] 3 R.C.S. 101, par. 54, le gouvernement « ne peut pas se contenter d'établir un régime administratif fondé sur l'exercice d'un pouvoir discrétionnaire non structuré et qui, en l'absence d'indications explicites, risque de porter atteinte aux droits ancestraux dans un nombre considérable de cas ». Il convient de souligner que, depuis octobre 2002, la Colombie-Britannique dispose d'une politique provinciale de consultation des Premières nations établissant les modalités d'application des lignes directrices opérationnelles des ministères et organismes provinciaux. Même si elle ne constitue pas un régime de réglementation, une telle politique peut néanmoins prévenir l'exercice d'un pouvoir discrétionnaire non structuré et servir de guide aux décideurs.

E. *Do Third Parties Owe a Duty to Consult and Accommodate?*

The Court of Appeal found that Weyerhaeuser, the forestry contractor holding T.F.L. 39, owed the Haida people a duty to consult and accommodate. With respect, I cannot agree.

It is suggested (*per* Lambert J.A.) that a third party's obligation to consult Aboriginal peoples may arise from the ability of the third party to rely on justification as a defence against infringement. However, the duty to consult and accommodate, as discussed above, flows from the Crown's assumption of sovereignty over lands and resources formerly held by the Aboriginal group. This theory provides no support for an obligation on third parties to consult or accommodate. The Crown alone remains legally responsible for the consequences of its actions and interactions with third parties, that affect Aboriginal interests. The Crown may delegate procedural aspects of consultation to industry proponents seeking a particular development; this is not infrequently done in environmental assessments. Similarly, the terms of T.F.L. 39 mandated Weyerhaeuser to specify measures that it would take to identify and consult with "aboriginal people claiming an aboriginal interest in or to the area" (Tree Farm Licence No. 39, Haida Tree Farm Licence, para. 2.09(g)(ii)). However, the ultimate legal responsibility for consultation and accommodation rests with the Crown. The honour of the Crown cannot be delegated.

It is also suggested (*per* Lambert J.A.) that third parties might have a duty to consult and accommodate on the basis of the trust law doctrine of "knowing receipt". However, as discussed above, while the Crown's fiduciary obligations and its duty to consult and accommodate share roots in the principle that the Crown's honour is engaged in its relationship with Aboriginal peoples, the duty to consult is distinct from the fiduciary duty that is owed in relation to particular cognizable Aboriginal interests.

E. *Les tiers ont-ils l'obligation de consulter et d'accommoder?*

52 La Cour d'appel a conclu que Weyerhaeuser, l'entreprise forestière détenant la CFF 39, avait l'obligation de consulter les Haïda et de trouver des accommodements à leurs préoccupations. En toute déférence, je ne puis souscrire à cette conclusion.

53 Il a été dit (le juge Lambert de la Cour d'appel) qu'un tiers peut être tenu de consulter les Autochtones concernés du fait qu'il a la faculté, en cas de violation des droits de ces derniers, de plaider en défense que l'atteinte est justifiée. Comme nous l'avons vu, cependant, l'obligation de consulter et d'accommoder découle de la proclamation de la souveraineté de la Couronne sur des terres et ressources autrefois détenues par le groupe autochtone concerné. Cette théorie ne permet pas de conclure que les tiers ont l'obligation de consulter ou d'accommoder. La Couronne demeure seule légalement responsable des conséquences de ses actes et de ses rapports avec des tiers qui ont une incidence sur des intérêts autochtones. Elle peut déléguer certains aspects procéduraux de la consultation à des acteurs industriels qui proposent des activités d'exploitation; cela n'est pas rare en matière d'évaluations environnementales. Ainsi, la CFF 39 obligeait Weyerhaeuser à préciser les mesures qu'elle entendait prendre pour identifier et consulter les [TRADUCTION] « Autochtones qui revendiquaient un intérêt ancestral dans la région » (CFF 39, CFF haïda, paragraphe 2.09g)(ii)). Cependant, la responsabilité juridique en ce qui a trait à la consultation et à l'accommodement incombe en dernier ressort à la Couronne. Le respect du principe de l'honneur de la Couronne ne peut être délégué.

54 Il a également été avancé (le juge Lambert de la Cour d'appel) que les tiers pourraient être assujettis à l'obligation de consulter et d'accommoder par l'effet de la doctrine du droit des fiducies appelée « réception en connaissance de cause ». Cependant, comme nous l'avons vu, même si les obligations de fiduciaire de la Couronne et son obligation de consulter et d'accommoder découlent toutes du principe que l'honneur de la Couronne est en jeu dans ses rapports avec les peuples autochtones, l'obligation de

As noted earlier, the Court cautioned in *Wewaykum* against assuming that a general trust or fiduciary obligation governs all aspects of relations between the Crown and Aboriginal peoples. Furthermore, this Court in *Guerin v. The Queen*, [1984] 2 S.C.R. 335, made it clear that the "trust-like" relationship between the Crown and Aboriginal peoples is not a true "trust", noting that "[t]he law of trusts is a highly developed, specialized branch of the law" (p. 386). There is no reason to graft the doctrine of knowing receipt onto the special relationship between the Crown and Aboriginal peoples. It is also questionable whether businesses acting on licence from the Crown can be analogized to persons who knowingly turn trust funds to their own ends.

55 Finally, it is suggested (*per* Finch C.J.B.C.) that third parties should be held to the duty in order to provide an effective remedy. The first difficulty with this suggestion is that remedies do not dictate liability. Once liability is found, the question of remedy arises. But the remedy tail cannot wag the liability dog. We cannot sue a rich person, simply because the person has deep pockets or can provide a desired result. The second problem is that it is not clear that the government lacks sufficient remedies to achieve meaningful consultation and accommodation. In this case, Part 10 of T.F.L. 39 provided that the Ministry of Forests could vary any permit granted to Weyerhaeuser to be consistent with a court's determination of Aboriginal rights or title. The government may also require Weyerhaeuser to amend its management plan if the Chief Forester considers that interference with an Aboriginal right has rendered the management plan inadequate (para. 2.38(d)). Finally, the government can control by legislation, as it did when it introduced the *Forestry Revitalization Act*, S.B.C. 2003, c. 17, which claws back 20 percent of all licensees' harvesting rights, in part to make land available for Aboriginal peoples. The government's legislative authority over provincial natural resources gives it

consulter est différente de l'obligation de fiduciaire qui existe à l'égard de certains intérêts autochtones reconnus. Comme il a été indiqué plus tôt, la Cour a souligné, dans *Wewaykum*, qu'il fallait se garder de supposer l'existence d'une obligation générale de fiduciaire régissant tous les aspects des rapports entre la Couronne et les peuples autochtones. En outre, dans *Guerin c. La Reine*, [1984] 2 R.C.S. 335, la Cour a clairement dit que la relation « semblable à une fiducie » qui existe entre la Couronne et les peuples autochtones n'est pas une vraie « fiducie », faisant observer que « [l]e droit des fiducies constitue un domaine juridique très perfectionné et spécialisé » (p. 386). Il n'y a aucune raison d'introduire la doctrine de la réception en connaissance de cause dans la relation spéciale qui existe entre la Couronne et les peuples autochtones. Il n'est pas certain non plus qu'une entreprise en vertu d'une concession de la Couronne puisse être assimilée à une personne qui, en toute connaissance de cause, divertit à son profit des fonds en fiducie.

Enfin, il a été affirmé (le juge Finch, juge en chef de la C.-B.) que, pour qu'il soit possible d'accorder une réparation efficace, il faudrait considérer que les tiers sont tenus à l'obligation. La première difficulté que comporte cette affirmation réside dans le fait que la réparation ne détermine pas la responsabilité. Ce n'est qu'une fois la question de la responsabilité tranchée que se soulève la question de la réparation. Il ne faut pas mettre la charrue (la réparation) devant les bœufs (la responsabilité). Nous ne pouvons poursuivre une personne riche simplement parce qu'elle a de l'argent plein les poches ou que cela permet d'obtenir le résultat souhaité. La seconde difficulté est qu'il n'est pas certain que le gouvernement ne dispose pas de mécanismes suffisants pour procéder à des mesures de consultation et d'accommodement utiles. En l'espèce, la partie 10 de la CFF 39 prévoit que le ministre des Forêts peut modifier toute concession accordée à Weyerhaeuser pour la rendre conforme aux décisions des tribunaux relativement aux droits ou titres ancestraux. Le gouvernement peut également exiger de Weyerhaeuser qu'elle modifie son plan d'aménagement si le chef des services forestiers le considère inadéquat du fait qu'il porte atteinte à un droit ancestral (paragraphe 2.38d)). Enfin, le

a powerful tool with which to respond to its legal obligations. This, with respect, renders questionable the statement by Finch C.J.B.C. that the government "has no capacity to allocate any part of that timber to the Haida without Weyerhaeuser's consent or co-operation" ((2002), 5 B.C.L.R. (4th) 33, at para. 119). Failure to hold Weyerhaeuser to a duty to consult and accommodate does not make the remedy "hollow or illusory".

gouvernement peut exercer son autorité sur la question par voie législative, comme il l'a fait en édictant la *Forestry Revitalization Act*, S.B.C. 2003, ch. 17, qui permet de récupérer 20 pour 100 du droit de coupe des titulaires de concession, en partie pour mettre des terres à la disposition des peuples autochtones. De par son pouvoir de légiférer sur les ressources naturelles de la province, le gouvernement provincial dispose d'un outil puissant pour s'acquitter de ses obligations légales, situation qui met en doute l'affirmation du juge en chef Finch de la C.-B. qu'il [TRADUCTION] « ne peut allouer une partie de ce bois d'œuvre aux Haïda sans le consentement ou la collaboration de Weyerhaeuser » ((2002), 5 B.C.L.R. (4th) 33, par. 119). Le fait de ne pas imposer à Weyerhaeuser l'obligation de consulter et d'accommoder ne rend pas la réparation [TRADUCTION] « futile ou illusoire ».

The fact that third parties are under no duty to consult or accommodate Aboriginal concerns does not mean that they can never be liable to Aboriginal peoples. If they act negligently in circumstances where they owe Aboriginal peoples a duty of care, or if they breach contracts with Aboriginal peoples or deal with them dishonestly, they may be held legally liable. But they cannot be held liable for failing to discharge the Crown's duty to consult and accommodate.

56 Le fait que les tiers n'aient aucune obligation de consulter les peuples autochtones ou de trouver des accommodements à leurs préoccupations ne signifie pas qu'ils ne peuvent jamais être tenus responsables envers ceux-ci. S'ils font preuve de négligence dans des circonstances où ils ont une obligation de diligence envers les peuples autochtones, ou s'ils ne respectent pas les contrats conclus avec les Autochtones ou traitent avec eux d'une manière malhonnête, ils peuvent être tenus légalement responsables. Cependant, les tiers ne peuvent être jugés responsables de ne pas avoir rempli l'obligation de consulter et d'accommoder qui incombe à la Couronne.

F. *The Province's Duty*

F. *L'obligation de la province*

The Province of British Columbia argues that any duty to consult or accommodate rests solely with the federal government. I cannot accept this argument.

57 La province de la Colombie-Britannique soutient que l'obligation de consulter ou d'accommoder, si elle existe, incombe uniquement au gouvernement fédéral. Je ne peux accepter cet argument.

The Province's argument rests on s. 109 of the *Constitution Act, 1867*, which provides that "[a]ll Lands, Mines, Minerals, and Royalties belonging to the several Provinces of Canada . . . at the Union . . . shall belong to the several Provinces." The Province argues that this gives it exclusive right to the land at issue. This right, it argues, cannot be limited by the protection for Aboriginal rights found in s. 35 of the *Constitution Act, 1982*. To do

58 L'argument de la province repose sur l'art. 109 de la *Loi constitutionnelle de 1867*, qui dispose que « [t]outes les terres, mines, minéraux et réserves royales appartenant aux différentes provinces du Canada [. . .] lors de l'union [. . .] appartiendront aux différentes provinces. » Selon la province, cette disposition lui confère des droits exclusifs sur les terres en question. Ce droit, affirme-t-elle, ne peut être limité par la protection accordée aux

so, it argues, would "undermine the balance of federalism" (Crown's factum, at para. 96).

59 The answer to this argument is that the Provinces took their interest in land subject to "any Interest other than that of the Province in the same" (s. 109). The duty to consult and accommodate here at issue is grounded in the assertion of Crown sovereignty which pre-dated the Union. It follows that the Province took the lands subject to this duty. It cannot therefore claim that s. 35 deprives it of powers it would otherwise have enjoyed. As stated in *St. Catherine's Milling and Lumber Co. v. The Queen* (1888), 14 App. Cas. 46 (P.C.), lands in the Province are "available to [the Province] as a source of revenue whenever the estate of the Crown is disencumbered of the Indian title" (p. 59). The Crown's argument on this point has been canvassed by this Court in *Delgamuukw*, *supra*, at para. 175, where Lamer C.J. reiterated the conclusions in *St. Catherine's Milling*, *supra*. There is therefore no foundation to the Province's argument on this point.

droits ancestraux par l'art. 35 de la *Loi constitutionnelle de 1982*. La province affirme qu'agir ainsi reviendrait à [TRADUCTION] « rompre l'équilibre du fédéralisme » (mémoire de la Couronne, par. 96).

La réponse à cet argument est que les intérêts que détenait la province sur les terres sont subordonnés à « tous intérêts autres que ceux que peut y avoir la province » (art. 109). L'obligation de consulter et d'accommoder en litige dans la présente affaire est fondée sur l'affirmation de la souveraineté de la Couronne qui a précédé l'Union. Il s'ensuit que la province a acquis les terres sous réserve de cette obligation. Elle ne peut donc pas prétendre que l'art. 35 la prive de pouvoirs dont elle aurait joui autrement. Comme il est précisé dans *St. Catherine's Milling and Lumber Co. c. The Queen* (1888), 14 App. Cas. 46 (C.P.), les terres situées dans la province [TRADUCTION] « peuvent constituer une source de revenus [pour la province] dans tous les cas où les biens de la Couronne ne sont plus grevés du titre indien » (p. 59). L'argument de la Couronne sur ce point a été examiné de façon approfondie par la Cour dans *Delgamuukw*, précité, par. 175, où le juge en chef Lamer a réitéré les conclusions tirées dans *St. Catherine's Milling*, précité. Cet argument n'est en conséquence pas fondé.

G. *Administrative Review*

60 Where the government's conduct is challenged on the basis of allegations that it failed to discharge its duty to consult and accommodate pending claims resolution, the matter may go to the courts for review. To date, the Province has established no process for this purpose. The question of what standard of review the court should apply in judging the adequacy of the government's efforts cannot be answered in the absence of such a process. General principles of administrative law, however, suggest the following.

61 On questions of law, a decision-maker must generally be correct: for example, *Paul v. British Columbia (Forest Appeals Commission)*, [2003] 2 S.C.R. 585, 2003 SCC 55. On questions of fact or

G. *L'examen administratif*

Lorsque la conduite du gouvernement est contestée au motif qu'il ne se serait pas acquitté de son obligation de consulter et d'accommoder en attendant le règlement des revendications, la question peut être soumise aux tribunaux pour examen. La province n'a pas encore établi de mécanisme à cette fin. En l'absence d'un tel mécanisme, il est impossible de déterminer quelle norme de contrôle devrait appliquer le tribunal appelé à statuer sur le caractère suffisant des efforts déployés par le gouvernement. Les principes généraux du droit administratif permettent toutefois de dégager les notions suivantes.

Quant aux questions de droit, le décideur doit, en règle générale, rendre une décision correcte : voir, par exemple, *Paul c. Colombie-Britannique (Forest Appeals Commission)*, [2003] 2 R.C.S.

mixed fact and law, on the other hand, a reviewing body may owe a degree of deference to the decision-maker. The existence or extent of the duty to consult or accommodate is a legal question in the sense that it defines a legal duty. However, it is typically premised on an assessment of the facts. It follows that a degree of deference to the findings of fact of the initial adjudicator may be appropriate. The need for deference and its degree will depend on the nature of the question the tribunal was addressing and the extent to which the facts were within the expertise of the tribunal: *Law Society of New Brunswick v. Ryan*, [2003] 1 S.C.R. 247, 2003 SCC 20; *Paul*, *supra*. Absent error on legal issues, the tribunal may be in a better position to evaluate the issue than the reviewing court, and some degree of deference may be required. In such a case, the standard of review is likely to be reasonableness. To the extent that the issue is one of pure law, and can be isolated from the issues of fact, the standard is correctness. However, where the two are inextricably entwined, the standard will likely be reasonableness: *Canada (Director of Investigation and Research) v. Southam Inc.*, [1997] 1 S.C.R. 748.

585, 2003 CSC 55. Par contre, en ce qui a trait aux questions de fait et aux questions mixtes de fait et de droit, l'organisme de révision peut devoir faire preuve de déférence à l'égard du décideur. L'existence et l'étendue de l'obligation de consulter ou d'accommoder sont des questions de droit en ce sens qu'elles définissent une obligation légale. Cependant, la réponse à ces questions repose habituellement sur l'appréciation des faits. Il se peut donc qu'il convienne de faire preuve de déférence à l'égard des conclusions de fait du premier décideur. La question de savoir s'il y a lieu de faire montre de déférence et, si oui, le degré de déférence requis dépendent de la nature de la question dont était saisi le tribunal administratif et de la mesure dans laquelle les faits relevaient de son expertise : *Barreau du Nouveau-Brunswick c. Ryan*, [2003] 1 R.C.S. 247, 2003 CSC 20; *Paul*, précité. En l'absence d'erreur sur des questions de droit, il est possible que le tribunal administratif soit mieux placé que le tribunal de révision pour étudier la question, auquel cas une certaine déférence peut s'imposer. Dans ce cas, la norme de contrôle applicable est vraisemblablement la norme de la décision raisonnable. Dans la mesure où la question est une question de droit pur et peut être isolée des questions de fait, la norme applicable est celle de la décision correcte. Toutefois, lorsque les deux types de questions sont inextricablement liées entre elles, la norme de contrôle applicable est vraisemblablement celle de la décision raisonnable : *Canada (Directeur des enquêtes et recherches) c. Southam Inc.*, [1997] 1 R.C.S. 748.

The process itself would likely fall to be examined on a standard of reasonableness. Perfect satisfaction is not required; the question is whether the regulatory scheme or government action "viewed as a whole, accommodates the collective aboriginal right in question": *Gladstone*, *supra*, at para. 170. What is required is not perfection, but reasonableness. As stated in *Nikal*, *supra*, at para. 110, "in . . . information and consultation the concept of reasonableness must come into play. . . . So long as every reasonable effort is made to inform and to consult, such efforts would suffice." The government is required to make reasonable efforts

62

Le processus lui-même devrait vraisemblablement être examiné selon la norme de la décision raisonnable. La perfection n'est pas requise; il s'agit de se demander si, « considéré dans son ensemble, le régime de réglementation [ou la mesure gouvernementale] respecte le droit ancestral collectif en question » : *Gladstone*, précité, par. 170. Ce qui est requis, ce n'est pas une mesure parfaite mais une mesure raisonnable. Comme il est précisé dans *Nikal*, précité, par. 110, « [l]e concept du caractère raisonnable doit [. . .] entrer en jeu pour ce qui [. . .] concern[e] l'information et la consultation. [. . .] Dans la mesure où tous les efforts raisonnables ont

to inform and consult. This suffices to discharge the duty.

63 Should the government misconceive the seriousness of the claim or impact of the infringement, this question of law would likely be judged by correctness. Where the government is correct on these matters and acts on the appropriate standard, the decision will be set aside only if the government's process is unreasonable. The focus, as discussed above, is not on the outcome, but on the process of consultation and accommodation.

H. *Application to the Facts*

(1) Existence of the Duty

64 The question is whether the Province had knowledge, real or constructive, of the potential existence of Aboriginal right or title and contemplated conduct that might adversely affect them. On the evidence before the Court in this matter, the answer must unequivocally be "yes".

65 The Haida have claimed title to all of Haida Gwaii for at least 100 years. The chambers judge found that they had expressed objections to the Province for a number of years regarding the rate of logging of old-growth forests, methods of logging, and the environmental effects of logging. Further, the Province was aware since at least 1994 that the Haida objected to replacement of T.F.L. 39 without their consent and without accommodation with respect to their title claims. As found by the chambers judge, the Province has had available evidence of the Haida's exclusive use and occupation of some areas of Block 6 "[s]ince 1994, and probably much earlier". The Province has had available to it evidence of the importance of red cedar to the Haida culture since before 1846 (the assertion of British sovereignty).

été déployés pour informer et consulter, on a alors satisfait à l'obligation de justifier. » Le gouvernement doit déployer des efforts raisonnables pour informer et consulter. Cela suffit pour satisfaire à l'obligation.

Si le gouvernement n'a pas bien saisi l'importance de la revendication ou la gravité de l'atteinte, il s'agit d'une question de droit qui devra vraisemblablement être jugée selon la norme de la décision correcte. Si le gouvernement a raison sur ces points et agit conformément à la norme applicable, la décision ne sera annulée que si le processus qu'il a suivi était déraisonnable. Comme il a été expliqué précédemment, l'élément central n'est pas le résultat, mais le processus de consultation et d'accommodement.

H. *L'application aux faits*

(1) L'existence de l'obligation

Il s'agit de savoir si la province connaissait, concrètement ou par imputation, l'existence potentielle d'un droit ou titre ancestral et envisageait des mesures susceptibles d'avoir un effet préjudiciable sur ce droit ou titre. Compte tenu de la preuve présentée à la Cour en l'espèce, il ne fait aucun doute qu'il faut répondre « oui » à cette question.

Les Haïda revendiquent depuis au moins 100 ans le titre sur l'ensemble des îles Haida Gwaii. Le juge de première instance a conclu que les Haïda se plaignaient depuis plusieurs années auprès de la province du rythme d'exploitation des vieilles forêts, des méthodes d'exploitation et des répercussions de l'exploitation forestière sur l'environnement. De plus, la province savait, depuis au moins 1994, que les Haïda s'opposaient à ce qu'on remplace la CFF 39 sans leur consentement et sans que leurs revendications aient fait l'objet de mesures d'accommodement. Comme l'a constaté le juge en son cabinet, la province disposait, [TRADUCTION] « [d]epuis 1994, et peut-être bien avant », d'éléments de preuve établissant que les Haïda utilisaient et occupaient à titre exclusif certaines régions du Bloc 6. Depuis au moins 1846 (affirmation de la souveraineté britannique), elle possède des preuves témoignant de l'importance du cèdre rouge dans la culture haïda.

The Province raises concerns over the breadth of the Haida's claims, observing that "[i]n a separate action the Haida claim aboriginal title to all of the Queen Charlotte Islands, the surrounding waters, and the air space. . . . The Haida claim includes the right to the exclusive use, occupation and benefit of the land, inland waters, seabed, archipelagic waters and air space" (Crown's factum, at para. 35). However, consideration of the duty to consult and accommodate prior to proof of a right does not amount to a prior determination of the case on its merits. Indeed, it should be noted that, prior to the chambers judge's decision in this case, the Province had successfully moved to sever the question of the existence and infringement of Haida title and rights from issues involving the duty to consult and accommodate. The issues were clearly separate in the proceedings, at the Province's instigation.

66 La province se dit inquiète de l'ampleur des revendications des Haïda, faisant observer que, [TRADUCTION] « [d]ans une action distincte, les Haïda revendiquent un titre ancestral sur l'ensemble des îles de la Reine-Charlotte, sur les eaux les entourant et sur l'espace aérien. [. . .] La revendication des Haïda vise le droit à l'utilisation, à l'occupation et au bénéfice exclusifs des terres, des eaux intérieures, du fond marin, des eaux pélagiques et de l'espace aérien » (mémoire de la Couronne, par. 35). Cependant, se demander si l'obligation de consulter et d'accommoder s'applique avant que la preuve de l'existence d'un droit n'ait été apportée n'équivaut pas à préjuger de l'affaire sur le fond. D'ailleurs, il convient de souligner que, avant que le juge en son cabinet ait rendu sa décision en l'espèce, la province avait obtenu que la question de l'existence du titre et des droits des Haïda et de l'atteinte portée à ceux-ci soit examinée séparément des questions se rapportant à l'obligation de consulter et d'accommoder. Les questions ont été clairement séparées dans l'instance, à l'instigation de la province.

The chambers judge ascertained that the Province knew that the potential Aboriginal right and title applied to Block 6, and could be affected by the decision to replace T.F.L. 39. On this basis, the honour of the Crown mandated consultation prior to making a decision that might adversely affect the claimed Aboriginal title and rights.

67 Le juge en son cabinet a estimé que la province savait que les droits et titre ancestraux potentiels en question visaient le Bloc 6 et qu'ils pouvaient être touchés par la décision de remplacer la CFF 39. Pour ce motif, l'honneur de la Couronne commandait que celle-ci procède à une consultation avant de prendre une décision susceptible d'avoir un effet préjudiciable sur les droits et titre ancestraux revendiqués.

(2) Scope of the Duty

(2) L'étendue de l'obligation

As discussed above, the scope of the consultation required will be proportionate to a preliminary assessment of the strength of the case supporting the existence of the right or title, and to the seriousness of the potentially adverse effect upon the right or title claimed.

68 Comme il a été expliqué plus tôt, l'ampleur de la consultation requise dépend de l'évaluation préliminaire de la solidité de la preuve étayant l'existence du droit ou du titre, ainsi que de la gravité de l'effet préjudiciable potentiel sur le droit ou titre revendiqué.

(i) *Strength of the Case*

(i) *Solidité de la preuve*

On the basis of evidence described as "voluminous", the chambers judge found, at para. 25, a number of conclusions to be "inescapable" regarding the Haida's claims. He found that the Haida had inhabited Haida Gwaii continuously since at least 1774, that they had never been conquered, never surrendered their rights by treaty, and that their

69 Après avoir examiné une preuve qu'il a qualifiée d'[TRADUCTION] « abondante », le juge en son cabinet a, au par. 25 de sa décision, tiré un certain nombre de conclusions [TRADUCTION] « incontournables » relativement aux revendications des Haïda. Il a conclu que les Haïda habitaient les îles Haïda Gwaii depuis au moins 1774, qu'ils n'avaient jamais

rights had not been extinguished by federal legislation. Their culture has utilized red cedar from old-growth forests on both coastal and inland areas of what is now Block 6 of T.F.L. 39 since at least 1846.

été conquis, qu'ils n'avaient jamais cédé leurs droits dans un traité et qu'aucune loi fédérale n'avait éteint leurs droits. Depuis au moins 1846, l'utilisation du cèdre rouge provenant des vieilles forêts des régions côtières et intérieures de la zone maintenant connue comme étant le Bloc 6 de la CFF 39 fait partie de leur culture.

70 The chambers judge's thorough assessment of the evidence distinguishes between the various Haida claims relevant to Block 6. On the basis of a thorough survey of the evidence, he found, at para. 47:

> (1) a "reasonable probability" that the Haida may establish title to "at least some parts" of the coastal and inland areas of Haida Gwaii, including coastal areas of Block 6. There appears to be a "reasonable possibility" that these areas will include inland areas of Block 6;
>
> (2) a "substantial probability" that the Haida will be able to establish an aboriginal right to harvest old-growth red cedar trees from both coastal and inland areas of Block 6.

Le juge en son cabinet a rigoureusement évalué la preuve et établi une distinction entre les différentes revendications des Haïda visant le Bloc 6. Au terme d'un examen approfondi de la preuve, il a tiré les conclusions suivantes au par. 47 :

> (1) il existe une [TRADUCTION] « probabilité raisonnable » que les Haïda réussissent à établir l'existence d'un titre sur [TRADUCTION] « au moins quelques parties » des régions côtières et intérieures des îles Haïda Gwaii, notamment les régions côtières du Bloc 6; il semble exister une [TRADUCTION] « possibilité raisonnable » que ces régions comprennent les régions intérieures du Bloc 6;
>
> (2) il existe une [TRADUCTION] « forte probabilité » que les Haïda réussissent à établir l'existence d'un droit ancestral de récolter le cèdre rouge provenant des vieilles forêts des régions côtières et intérieures du Bloc 6.

The chambers judge acknowledged that a final resolution would require a great deal of further evidence, but said he thought it "fair to say that the Haida claim goes far beyond the mere 'assertion' of Aboriginal title" (para. 50).

Le juge en son cabinet a reconnu qu'un règlement définitif nécessiterait beaucoup plus d'éléments de preuve, mais, selon lui, [TRADUCTION] « il est juste de dire que la revendication des Haïda est beaucoup plus qu'une simple "affirmation" de titre ancestral » (par. 50).

71 The chambers judge's findings grounded the Court of Appeal's conclusion that the Haida claims to title and Aboriginal rights were "supported by a good *prima facie* case" (para. 49). The strength of the case goes to the extent of the duty that the Province was required to fulfill. In this case the evidence clearly supports a conclusion that, pending a final resolution, there was a *prima facie* case in support of Aboriginal title, and a strong *prima facie* case for the Aboriginal right to harvest red cedar.

La Cour d'appel s'est fondée sur les constatations du juge en son cabinet pour conclure que les revendications par les Haïda du titre et de droits ancestraux étaient [TRADUCTION] « étayées par une preuve à première vue valable » (par. 49). La solidité de la preuve influe sur l'étendue de l'obligation que doit satisfaire la province. En l'espèce, le dossier permet clairement de conclure, en attendant le règlement définitif, qu'il existe une preuve *prima facie* de l'existence d'un titre ancestral et une solide preuve *prima facie* de l'existence d'un droit ancestral de récolter le cèdre rouge.

(ii) *Seriousness of the Potential Impact*

The evidence before the chambers judge indicated that red cedar has long been integral to Haida culture. The chambers judge considered that there was a "reasonable probability" that the Haida would be able to establish infringement of an Aboriginal right to harvest red cedar "by proof that old-growth cedar has been and will continue to be logged on Block 6, and that it is of limited supply" (para. 48). The prospect of continued logging of a resource in limited supply points to the potential impact on an Aboriginal right of the decision to replace T.F.L. 39.

Tree Farm Licences are exclusive, long-term licences. T.F.L. 39 grants exclusive rights to Weyerhaeuser to harvest timber within an area constituting almost one quarter of the total land of Haida Gwaii. The chambers judge observed that "it [is] apparent that large areas of Block 6 have been logged off" (para. 59). This points to the potential impact on Aboriginal rights of the decision to replace T.F.L. 39.

To the Province's credit, the terms of T.F.L. 39 impose requirements on Weyerhaeuser with respect to Aboriginal peoples. However, more was required. Where the government has knowledge of an asserted Aboriginal right or title, it must consult the Aboriginal peoples on how exploitation of the land should proceed.

The next question is when does the duty to consult arise? Does it arise at the stage of granting a Tree Farm Licence, or only at the stage of granting cutting permits? The T.F.L. replacement does not itself authorize timber harvesting, which occurs only pursuant to cutting permits. T.F.L. replacements occur periodically, and a particular T.F.L. replacement decision may not result in the substance of the asserted right being destroyed. The Province argues that, although it did not consult the Haida prior to replacing the T.F.L., it "has consulted, and continues to consult with the Haida

(ii) *Gravité des conséquences potentielles*

72 La preuve présentée au juge en son cabinet indiquait que l'utilisation du cèdre rouge fait depuis longtemps partie intégrante de la culture haïda. Le juge a considéré qu'il existait une [TRADUCTION] « probabilité raisonnable » que les Haïda réussissent à démontrer une atteinte à un droit ancestral de récolter le cèdre rouge [TRADUCTION] « en prouvant que le cèdre des vieilles forêts a été et continuera d'être exploité dans le Bloc 6, et que cette ressource est limitée » (par. 48). La perspective de l'exploitation continue d'une ressource par ailleurs limitée laisse entrevoir les répercussions que la décision de remplacer la CFF 39 pourrait avoir sur un droit ancestral.

73 Les CFF ont un caractère exclusif et sont accordées pour de longues périodes. La CFF 39 confère à Weyerhaeuser le droit exclusif de récolter le bois dans une région qui représente près du quart de la superficie totale des îles Haïda Gwaii. Le juge en son cabinet a fait observer qu'[TRADUCTION] « il [est] manifeste que de vastes étendues du Bloc 6 ont été coupées à blanc » (par. 59). Ce fait illustre les conséquences potentielles que la décision de remplacer la CFF 39 a sur les droits ancestraux.

74 Il faut reconnaître à la province d'avoir imposé à Weyerhaeuser, dans la CFF 39, des conditions à l'égard des peuples autochtones. Mais la province devait faire davantage. Lorsque le gouvernement sait qu'un droit ou un titre ancestral est revendiqué, il doit consulter les Autochtones sur la façon dont les terres visées devraient être exploitées.

75 Il faut maintenant se demander à quel moment prend naissance l'obligation de consulter. Est-ce à l'étape de l'octroi d'une CFF, ou seulement à l'étape de la délivrance des permis de coupe? Le remplacement d'une CFF n'autorise pas en soi la récolte de bois, qui ne peut se faire qu'en vertu des permis de coupe. Les CFF sont périodiquement remplacées, et la décision de remplacer une CFF en particulier n'a pas nécessairement pour effet de détruire l'essence même du droit revendiqué. La province fait valoir que, bien qu'elle ne les ait pas consultés avant de remplacer la CFF, elle [TRADUCTION]

prior to authorizing any cutting permits or other operational plans" (Crown's factum, at para. 64).

« a consulté et continue de consulter les Haïda avant d'autoriser les permis de coupe ou autres plans d'aménagement » (mémoire de la Couronne, par. 64).

76 I conclude that the Province has a duty to consult and perhaps accommodate on T.F.L. decisions. The T.F.L. decision reflects the strategic planning for utilization of the resource. Decisions made during strategic planning may have potentially serious impacts on Aboriginal right and title. The holder of T.F.L. 39 must submit a management plan to the Chief Forester every five years, to include inventories of the licence area's resources, a timber supply analysis, and a "20-Year Plan" setting out a hypothetical sequence of cutblocks. The inventories and the timber supply analysis form the basis of the determination of the allowable annual cut ("A.A.C.") for the licence. The licensee thus develops the technical information based upon which the A.A.C. is calculated. Consultation at the operational level thus has little effect on the quantity of the annual allowable cut, which in turn determines cutting permit terms. If consultation is to be meaningful, it must take place at the stage of granting or renewing Tree Farm Licences.

J'estime que, lorsqu'elle prend des décisions concernant les CFF, la province est tenue à une obligation de consultation, et peut-être à une obligation d'accommodement. La décision rendue à l'égard d'une CFF reflète la planification stratégique touchant l'utilisation de la ressource en cause. Les décisions prises durant la planification stratégique risquent d'avoir des conséquences graves sur un droit ou titre ancestral. Tous les cinq ans, le titulaire de la CFF 39 doit présenter au chef des services forestiers un plan d'aménagement comprenant l'inventaire des ressources du secteur visé par la concession, une analyse des approvisionnements en bois d'œuvre et un « plan de 20 ans » présentant une séquence hypothétique de blocs de coupe. C'est à partir de l'inventaire et de l'analyse des approvisionnements en bois d'œuvre qu'est fixée la possibilité annuelle de coupe (« PAC ») pour la concession. Ainsi, le titulaire de la concession établit les renseignements techniques servant à calculer la PAC. La tenue de consultations au niveau de l'exploitation a donc peu d'incidence sur le volume fixé dans la PAC, qui, à son tour, détermine les modalités du permis de coupe. Pour que les consultations soient utiles, elles doivent avoir lieu à l'étape de l'octroi ou du renouvellement de la CFF.

77 The last issue is whether the Crown's duty went beyond consultation on T.F.L. decisions, to accommodation. We cannot know, on the facts here, whether consultation would have led to a need for accommodation. However, the strength of the case for both the Haida title and the Haida right to harvest red cedar, coupled with the serious impact of incremental strategic decisions on those interests, suggest that the honour of the Crown may well require significant accommodation to preserve the Haida interest pending resolution of their claims.

Il s'agit enfin de décider si la Couronne avait l'obligation non seulement de consulter les Haïda au sujet des décisions relatives aux CFF mais aussi de trouver des accommodements à leurs préoccupations. Les faits de l'espèce ne permettent pas de dire si la consultation aurait entraîné la nécessité de telles mesures. Cependant, la solidité de la preuve étayant l'existence et d'un titre haïda et d'un droit haïda autorisant la récolte du cèdre rouge, conjuguée aux répercussions sérieuses sur ces intérêts des décisions stratégiques successives, indique que l'honneur de la Couronne pourrait bien commander des mesures d'accommodement substantielles pour protéger les intérêts des Haïda en attendant que leurs revendications soient réglées.

(3) Did the Crown Fulfill its Duty?

The Province did not consult with the Haida on the replacement of T.F.L. 39. The chambers judge found, at para. 42:

> [O]n the evidence presented, it is apparent that the Minister refused to consult with the Haida about replacing T.F.L. 39 in 1995 and 2000, on the grounds that he was not required by law to consult, and that such consultation could not affect his statutory duty to replace T.F.L. 39.

In both this Court and the courts below, the Province points to various measures and policies taken to address Aboriginal interests. At this Court, the Province argued that "[t]he Haida were and are consulted with respect to forest development plans and cutting permits. . . . Through past consultations with the Haida, the Province has taken various steps to mitigate the effects of harvesting . . ." (Crown's factum, at para. 75). However, these measures and policies do not amount to and cannot substitute for consultation with respect to the decision to replace T.F.L. 39 and the setting of the licence's terms and conditions.

It follows, therefore, that the Province failed to meet its duty to engage in something significantly deeper than mere consultation. It failed to engage in any meaningful consultation at all.

III. Conclusion

The Crown's appeal is dismissed and Weyerhaeuser's appeal is allowed. The British Columbia Court of Appeal's order is varied so that the Crown's obligation to consult does not extend to Weyerhaeuser. The Crown has agreed to pay the costs of the respondents regarding the application for leave to appeal and the appeal. Weyerhaeuser shall be relieved of any obligation to pay the costs of the Haida in the courts below. It is not necessary to answer the constitutional question stated in this appeal.

(3) La Couronne s'est-elle acquittée de son obligation?

78 La province n'a pas consulté les Haïda au sujet du remplacement de la CFF 39. Le juge en son cabinet a tiré la conclusion suivante (par. 42) :

> [TRADUCTION] [S]elon la preuve présentée, il est manifeste que le ministre a refusé de consulter les Haïda au sujet du remplacement de la CFF 39 en 1995 et en l'an 2000, au motif que la loi ne l'obligeait pas à le faire et qu'une telle consultation ne pouvait avoir d'incidence sur son obligation, prévue par la loi, de remplacer la CFF 39.

La province a attiré l'attention de la Cour et des tribunaux d'instance inférieure sur les nombreuses mesures et politiques qu'elle a adoptées pour tenir compte des intérêts autochtones. Devant la Cour, elle a affirmé que [TRADUCTION] « [l]es Haïda ont été et sont consultés au sujet des plans d'aménagement forestier et des permis de coupe. [. . .] À la suite de consultations antérieures auprès des Haïda, la province a pris plusieurs mesures pour atténuer les effets de l'exploitation forestière [. . .] » (mémoire de la Couronne, par. 75). Cependant, ces mesures et politiques n'équivalent pas à une consultation au sujet de la décision de remplacer la CFF 39 et de l'établissement de ses modalités, et ne peuvent la remplacer.

79 Par conséquent, la province ne s'est pas acquittée de son obligation de procéder à davantage qu'une simple consultation. Elle n'a procédé à absolument aucune consultation utile.

III. Conclusion

80 Le pourvoi de la Couronne est rejeté et celui de Weyerhaeuser est accueilli. L'ordonnance de la Cour d'appel de la Colombie-Britannique est modifiée de manière que l'obligation de consultation de la Couronne ne s'étende pas à Weyerhaeuser. La Couronne a accepté de payer les dépens des intimés pour la demande d'autorisation de pourvoi et pour le pourvoi. Weyerhaeuser est dispensée de toute obligation de payer les dépens des Haïda devant les instances inférieures. Il n'est pas nécessaire de répondre à la question constitutionnelle dans le présent pourvoi.

Appeal by the Crown dismissed. Appeal by Weyerhaeuser Co. allowed.

Solicitors for the appellant the Minister of Forests: Fuller Pearlman & McNeil, Victoria.

Solicitor for the appellant the Attorney General of British Columbia on behalf of Her Majesty the Queen in Right of the Province of British Columbia: Attorney General of British Columbia, Victoria.

Solicitors for the appellant Weyerhaeuser Company Limited: Hunter Voith, Vancouver.

Solicitors for the respondents: EAGLE, Surrey.

Solicitor for the intervener the Attorney General of Canada: Department of Justice, Vancouver.

Solicitor for the intervener the Attorney General of Ontario: Attorney General of Ontario, Toronto.

Solicitor for the intervener the Attorney General of Quebec: Department of Justice, Sainte-Foy.

Solicitor for the intervener the Attorney General of Nova Scotia: Department of Justice, Halifax.

Solicitor for the intervener the Attorney General for Saskatchewan: Deputy Attorney General for Saskatchewan, Regina.

Solicitor for the intervener the Attorney General of Alberta: Department of Justice, Edmonton.

EN APPEL DE LA COUR D'APPEL DE LA SASKATCHEWAN

Délits civils — Véhicules automobiles — Routes — Négligence — Responsabilité d'une municipalité rurale qui omet d'installer des panneaux d'avertissement le long d'une voie d'accès locale — Blessures subies par un passager dans un accident automobile sur une route rurale — Responsabilité imputée en partie à la municipalité rurale par la juge de première instance — La Cour d'appel a-t-elle eu raison d'infirmer la décision de la juge de première instance concluant à la négligence de la municipalité rurale? — The Rural Municipality Act, 1989, S.S. 1989-90, ch. R-26.1, art. 192.

Droit municipal — Négligence — Responsabilité d'une municipalité rurale qui omet d'installer des panneaux d'avertissement le long d'une voie d'accès locale — Blessures subies par un passager dans un accident automobile sur une route rurale — Responsabilité imputée en partie à la municipalité rurale par la juge de première instance — La Cour d'appel a-t-elle eu raison d'infirmer la décision de la juge de première instance concluant à la négligence de la municipalité rurale? — The Rural Municipality Act, 1989, S.S. 1989-90, ch. R-26.1, art. 192.

Appels — Tribunaux judiciaires — Norme de contrôle applicable en appel — La Cour d'appel a-t-elle eu raison d'infirmer la décision de la juge de première instance concluant à la négligence de la municipalité rurale? — Norme de contrôle applicable à l'égard des questions mixtes de fait et de droit.

L'appelant était passager dans le véhicule conduit par N sur une route rurale située sur le territoire de la

failed to negotiate a sharp curve on the road and lost control of his vehicle. The appellant was rendered a quadriplegic as a result of the injuries he sustained in the accident. Damages were agreed upon prior to trial in the amount of $2.5 million, but at issue were the respective liabilities, if any, of the municipality, N and the appellant. On the day before the accident, N had attended a party at the T residence not far from the scene of the accident. He continued drinking through the night at another party where he met up with the appellant. The two men drove back to the T residence in the morning where N continued drinking until a couple of hours before he and the appellant drove off in N's truck. N was unfamiliar with the road, but had travelled on it three times in the 24 hours preceding the accident, on his way to and from the T residence. Visibility approaching the area of the accident was limited due to the radius of the curve and the uncleared brush growing up to the edge of the road. A light rain was falling as N turned onto the road from the T property. The truck fishtailed a few times before approaching the sharp curve where the accident occurred. Expert testimony revealed that N was travelling at a speed of between 53 and 65 km/hr when the vehicle entered the curved portion of the road, slightly above the speed at which the curve could be safely negotiated under the conditions prevalent at the time of the accident.

The road was maintained by the municipality and was categorized as a non-designated local access road. On such non-designated roads, the municipality makes the decision to post signs if it becomes aware of a hazard, or if there are several accidents at one spot. The municipality had not posted signs on any portion of the road. Between 1978 and 1987, three other accidents were reported in the area to the east of the site of the appellant's accident. The trial judge held that the appellant was 15 percent contributorily negligent in failing to take reasonable precautions for his own safety in accepting a ride from N, and apportioned the remaining joint and several liability 50 percent to N and 35 percent to the municipality. The Court of Appeal overturned the trial judge's finding that the municipality was negligent.

Held (Gonthier, Bastarache, Binnie and LeBel JJ. dissenting): The appeal should be allowed and the judgment of the trial judge restored.

municipalité intimée. N a été incapable de prendre un virage serré et il a perdu la maîtrise de son véhicule. L'appelant est devenu quadriplégique à la suite des blessures subies dans l'accident. Les parties ont convenu avant le procès du montant des dommages-intérêts, qui ont été fixés à 2,5 millions de dollars. La question en litige était celle de savoir si la municipalité, N et l'appelant étaient responsables et, dans l'affirmative, dans quelles proportions. Le jour qui a précédé l'accident, N avait assisté à une fête à la résidence des T, non loin de la scène de l'accident. Durant la nuit, il a continué de boire à une autre fête, où il a rencontré l'appelant. Le matin, les deux hommes sont retournés en automobile à la résidence des T, où N a continué de boire, cessant de le faire quelques heures avant de prendre la route dans sa camionnette en compagnie de l'appelant. N n'était pas familier avec le chemin en question, mais il l'avait emprunté à trois reprises au cours des 24 heures qui avaient précédé l'accident pour aller et venir de la résidence des T. À l'approche de l'endroit de l'accident, la distance de visibilité était réduite en raison du rayon de courbure du virage et de la présence de broussailles poussant jusqu'au bord du chemin Une faible pluie tombait lorsque N s'est engagé sur le chemin en quittant la résidence des T. L'arrière de la camionnette a zigzagué à plusieurs reprises avant que le véhicule n'arrive aux abords du virage serré où l'accident est survenu. Selon le témoignage d'un expert, N roulait à une vitesse se situant entre 53 et 65 km/h lorsque le véhicule s'est engagé dans la courbe, soit une vitesse légèrement supérieure à celle à laquelle le virage pouvait être pris en sécurité eu égard aux conditions qui existaient au moment de l'accident.

Le chemin, qui était entretenu par la municipalité, appartenait à la catégorie des voies d'accès locales non désignées. La municipalité installe des panneaux de signalisation sur ces chemins si elle constate l'existence d'un danger ou si plusieurs accidents se produisent au même endroit. Elle n'avait installé aucune signalisation le long de cette portion du chemin. On a signalé trois autres accidents survenus de 1978 à 1987 à l'est du lieu de l'accident dont a été victime l'appelant. La juge de première instance a estimé que l'appelant était responsable de négligence concourante dans une proportion de 15 p. 100, du fait qu'il avait omis de prendre des précautions raisonnables pour assurer sa propre sécurité en acceptant de monter à bord du véhicule de N, et elle a réparti le reste de la responsabilité solidairement entre N (50 p. 100) et la municipalité (35 p. 100). La Cour d'appel a infirmé la conclusion de la juge de première instance selon laquelle la municipalité avait été négligente.

Arrêt (les juges Gonthier, Bastarache, Binnie et LeBel sont dissidents) : Le pourvoi est accueilli et la décision de la juge de première instance est rétablie.

Per McLachlin C.J. and L'Heureux-Dubé, Iacobucci, Major and Arbour JJ.: Since an appeal is not a re-trial of a case, consideration must be given to the standard of review applicable to questions that arise on appeal. The standard of review on pure questions of law is one of correctness, and an appellate court is thus free to replace the opinion of the trial judge with its own. Appellate courts require a broad scope of review with respect to matters of law because their primary role is to delineate and refine legal rules and ensure their universal application.

The standard of review for findings of fact is such that they cannot be reversed unless the trial judge has made a "palpable and overriding error". A palpable error is one that is plainly seen. The reasons for deferring to a trial judge's findings of fact can be grouped into three basic principles. First, given the scarcity of judicial resources, setting limits on the scope of judicial review in turn limits the number, length and cost of appeals. Secondly, the principle of deference promotes the autonomy and integrity of the trial proceedings. Finally, this principle recognizes the expertise of trial judges and their advantageous position to make factual findings, owing to their extensive exposure to the evidence and the benefit of hearing the testimony *viva voce*. The same degree of deference must be paid to inferences of fact, since many of the reasons for showing deference to the factual findings of the trial judge apply equally to all factual conclusions. The standard of review for inferences of fact is not to verify that the inference can reasonably be supported by the findings of fact of the trial judge, but whether the trial judge made a palpable and overriding error in coming to a factual conclusion based on accepted facts, a stricter standard. Making a factual conclusion of any kind is inextricably linked with assigning weight to evidence, and thus attracts a deferential standard of review. If there is no palpable and overriding error with respect to the underlying facts that the trial judge relies on to draw the inference, then it is only where the inference-drawing process itself is palpably in error that an appellate court can interfere with the factual conclusion.

Le juge en chef McLachlin et les juges L'Heureux-Dubé, Iacobucci, Major et Arbour : Étant donné que l'appel ne constitue pas un nouveau procès, il faut se demander quelle est la norme de contrôle applicable en appel à l'égard des diverses questions que soulève le pourvoi. La norme de contrôle applicable aux pures questions de droit est celle de la décision correcte et, en conséquence, il est loisible aux cours d'appel de substituer leur opinion à celle des juges de première instance. Les cours d'appel ont besoin d'un large pouvoir de contrôle à l'égard des questions de droit pour être en mesure de s'acquitter de leur rôle premier, qui consiste à préciser et à raffiner les règles de droit et à veiller à leur application universelle.

Suivant la norme de contrôle applicable aux conclusions de fait, ces conclusions ne peuvent être infirmées que s'il est établi que le juge de première instance a commis une « erreur manifeste et dominante ». Une erreur manifeste est une erreur qui est évidente. Les diverses raisons justifiant la retenue à l'égard des conclusions de fait du juge de première instance peuvent être regroupées sous trois principes de base. Premièrement, vu la rareté des ressources dont disposent les tribunaux, le fait de limiter la portée du contrôle judiciaire a pour effet de réduire le nombre, la durée et le coût des appels. Deuxièmement, le respect du principe de la retenue envers les conclusions favorise l'autonomie et l'intégrité du procès. Enfin, ce principe permet de reconnaître l'expertise du juge de première instance et la position avantageuse dans laquelle il se trouve pour tirer des conclusions de fait, étant donné qu'il a l'occasion d'examiner la preuve en profondeur et d'entendre les témoignages de vive voix. Il faut faire preuve du même degré de retenue envers les inférences de fait, car nombre de raisons justifiant de faire preuve de retenue à l'égard des constatations de fait du juge de première instance valent autant pour toutes ses conclusions factuelles. La norme de contrôle ne consiste pas à vérifier si l'inférence peut être raisonnablement étayée par les conclusions de fait du juge de première instance, mais plutôt si ce dernier a commis une erreur manifeste et dominante en tirant une conclusion factuelle sur la base de faits admis, ce qui suppose l'application d'une norme plus stricte. Une conclusion factuelle — quelle que soit sa nature — exige nécessairement qu'on attribue un certain poids à un élément de preuve et, de ce fait, commande l'application d'une norme de contrôle empreinte de retenue. Si aucune erreur manifeste et dominante n'est décelée en ce qui concerne les faits sur lesquels repose l'inférence du juge de première instance, ce n'est que lorsque le processus inférentiel lui-même est manifestement erroné que la cour d'appel peut modifier la conclusion factuelle.

Questions of mixed fact and law involve the application of a legal standard to a set of facts. Where the question of mixed fact and law at issue is a finding of negligence, it should be deferred to by appellate courts, in the absence of a legal or palpable and overriding error. Requiring a standard of "palpable and overriding error" for findings of negligence made by either a trial judge or a jury reinforces the proper relationship between the appellate and trial court levels and accords with the established standard of review applicable to a finding of negligence by a jury. Where the issue on appeal involves the trial judge's interpretation of the evidence as a whole, it should not be overturned absent palpable and overriding error. A determination of whether or not the standard of care was met by the defendant involves the application of a legal standard to a set of facts, a question of mixed fact and law, and is thus subject to a standard of palpable and overriding error, unless it is clear that the trial judge made some extricable error in principle with respect to the characterization of the standard or its application, in which case the error may amount to an error of law, subject to a standard of correctness.

Here, the municipality's standard of care was to maintain the road in such a reasonable state of repair that those requiring to use it could, exercising ordinary care, travel upon it with safety. The trial judge applied the correct test in determining that the municipality did not meet this standard of care, and her decision should not be overturned absent palpable and overriding error. The trial judge kept the conduct of the ordinary motorist in mind because she stated the correct test at the outset, and discussed implicitly and explicitly the conduct of a reasonable motorist approaching the curve. Further, her apportionment of negligence indicates that she assessed N's conduct against the standard of the ordinary driver as does her use of the term "hidden hazard" and her consideration of the speed at which motorists should have approached the curve.

The Court of Appeal's finding of a palpable and overriding error by the trial judge was based on the erroneous presumption that she accepted 80km/h as the speed at which an ordinary motorist would approach the curve, when in fact she found that a motorist exercising

Les questions mixtes de fait et de droit supposent l'application d'une norme juridique à un ensemble de faits. Lorsque la question mixte de fait et de droit en litige est une conclusion de négligence, il y a lieu de faire preuve de retenue à l'égard de cette conclusion en l'absence d'erreur de droit ou d'erreur manifeste et dominante. Le fait d'exiger l'application de la norme de l'« erreur manifeste et dominante » aux fins de contrôle d'une conclusion de négligence tirée par un juge ou un jury consolide les rapports qui doivent exister entre les juridictions d'appel et celles de première instance et respecte la norme de contrôle bien établie qui s'applique aux conclusions de négligence tirées par les jurys. Si la question litigieuse en appel soulève l'interprétation de l'ensemble de la preuve par le juge de première instance, cette interprétation ne doit pas être infirmée en l'absence d'erreur manifeste et dominante. La question de savoir si le défendeur a respecté la norme de diligence suppose l'application d'une norme juridique à un ensemble de faits, ce qui en fait une question mixte de fait et de droit. Cette question est alors assujettie à la norme de l'erreur manifeste et dominante, à moins que le juge de première instance n'ait clairement commis une erreur de principe en déterminant la norme applicable ou en appliquant cette norme, auquel cas l'erreur peut constituer une erreur de droit, qui est assujettie à la norme de la décision correcte.

En l'espèce, la norme de diligence à laquelle devait se conformer la municipalité consistait à tenir le chemin dans un état raisonnable d'entretien, de façon que ceux qui devaient l'emprunter puissent, en prenant des précautions normales, y circuler en sécurité. La juge de première instance a appliqué le bon critère juridique en concluant que la municipalité n'avait pas respecté cette norme et sa décision ne devrait pas être infirmée en l'absence d'erreur manifeste et dominante. La juge de première instance a eu à l'esprit la conduite de l'automobiliste moyen puisqu'elle a commencé son examen de la norme de diligence en formulant dès le départ le critère approprié, puis elle s'est interrogée, tant explicitement qu'implicitement, sur la façon dont conduirait l'automobiliste raisonnable en s'approchant du virage. De plus, le fait qu'elle a imputé une partie de la responsabilité à N indique qu'elle a évalué sa conduite au regard du critère du conducteur moyen, tout comme l'indique le fait qu'elle a utilisé l'expression « danger caché » et qu'elle s'est demandé à quelle vitesse les automobilistes auraient dû approcher du virage.

La conclusion de la Cour d'appel portant que la juge de première instance avait commis une erreur manifeste et dominante reposait sur la présomption erronée selon laquelle la juge aurait accepté que l'automobiliste moyen approcherait du virage à 80 km/h, alors que dans les faits

ordinary care could approach the curve at greater than the speed at which it would be safe to negotiate it. This finding was based on the trial judge's reasonable and practical assessment of the evidence as a whole, and is far from reaching the level of palpable and overriding error.

The trial judge did not err in finding that the municipality knew or ought to have known of the disrepair of the road. Because the hazard in this case was a permanent feature of the road, it was open to the trial judge to draw the inference that a prudent municipal councillor ought to be aware of it. Once this inference has been drawn, then unless the municipality can rebut the inference by showing that it took reasonable steps to prevent such a hazard from continuing, the inference will be left undisturbed. Prior accidents on the road do not provide a direct basis for finding that the municipality had knowledge of the particular hazard, but this factor, together with knowledge of the type of drivers using this road, should have caused the municipality to investigate the road which would have resulted in actual knowledge. To require the plaintiff to provide concrete proof of the municipality's knowledge of the state of disrepair of its roads is to set an impossibly high burden on the plaintiff. Such information was within the particular sphere of knowledge of the municipality, and it was reasonable for the trial judge to draw an inference of knowledge from her finding that there was an ongoing state of disrepair.

The trial judge's conclusion on the cause of the accident was a finding of fact subject to the palpable and overriding error standard of review. The abstract nature of the inquiry as to whether N would have seen a sign had one been posted before the curve supports deference to the factual findings of the trial judge. The trial judge's factual findings on causation were reasonable and thus should not have been interfered with by the Court of Appeal.

Per Gonthier, Bastarache, Binnie and LeBel JJ. (dissenting): A trial judge's findings of fact will not be overturned absent palpable and overriding error principally in recognition that only the trial judge observes witnesses and hears testimony first hand and is therefore better able to choose between competing versions of events. The process of fact-finding involves

elle a estimé qu'il était possible qu'un automobiliste prenant des précautions normales s'approche du virage à une vitesse supérieure à la vitesse sécuritaire pour effectuer la manœuvre. Loin de constituer une erreur manifeste et dominante, cette conclusion découlait d'une évaluation raisonnable et réaliste de l'ensemble de la preuve par la juge de première instance.

La juge de première instance n'a pas commis d'erreur en concluant que la municipalité connaissait ou aurait dû connaître le mauvais état du chemin. Étant donné que, en l'espèce, le danger était une caractéristique permanente du chemin, il était loisible à la juge de première instance d'inférer que le conseiller municipal prudent aurait dû être au fait du danger. Dès l'instant où une telle inférence est tirée, elle demeure inchangée à moins que la municipalité ne puisse la réfuter en démontrant qu'elle a pris des mesures raisonnables pour faire cesser le danger. Les accidents survenus antérieurement sur le chemin ne constituent pas une preuve directe permettant de conclure que la municipalité connaissait l'existence du danger particulier en cause, mais ce facteur, conjugué à la connaissance du type de conducteurs utilisant le chemin, aurait dû inciter la municipalité à faire enquête à l'égard du chemin en question, ce qui lui aurait permis de prendre connaissance concrètement de l'existence du danger. Exiger du demandeur qu'il apporte la preuve concrète de la connaissance par la municipalité du mauvais état d'entretien de ses chemins revient à imposer à ce dernier un fardeau inacceptablement lourd. Il s'agit d'information relevant du domaine de connaissance de la municipalité et, selon nous, il était raisonnable que la juge de première instance infère de sa conclusion relative au mauvais état d'entretien persistant du chemin que la municipalité possédait la connaissance requise.

La conclusion de la juge de première instance quant à la cause de l'accident était une conclusion de fait assujettie à la norme de contrôle de l'« erreur manifeste et dominante ». Le caractère théorique de l'analyse de la question de savoir si N aurait aperçu un panneau de signalisation installé avant la courbe justifie de faire montre de retenue à l'égard des conclusions factuelles de la juge de première instance. Les constatations factuelles de cette dernière relativement à la causalité étaient raisonnables et la Cour d'appel n'aurait donc pas dû les modifier.

Les juges Gonthier, Bastarache, Binnie et LeBel (dissidents) : Les conclusions de fait du juge de première instance ne sont pas modifiées en l'absence d'erreur manifeste ou dominante, principalement parce qu'il est le seul à avoir l'occasion d'observer les témoins et d'entendre les témoignages de vive voix, et qu'il est, de ce fait, plus à même de choisir entre deux versions

not only the determination of the factual nexus of the case but also requires the judge to draw inferences from facts. Although the standard of review is identical for both findings of fact and inferences of fact, an analytical distinction must be drawn between the two. Inferences can be rejected for reasons other than that the inference-drawing process is deficient. An inference can be clearly wrong where the factual basis upon which it relies is deficient or where the legal standard to which the facts are applied is misconstrued. The question of whether the conduct of the defendant has met the appropriate standard of care in the law of negligence is a question of mixed fact and law. Once the facts have been established, the determination of whether or not the standard of care was met will in most cases be reviewable on a standard of correctness since the trial judge must appreciate the facts within the context of the appropriate standard of care, a question of law within the purview of both the trial and appellate courts.

A question of mixed fact and law in this case was whether the municipality knew or should have known of the alleged danger. The trial judge must approach this question having regard to the duties of the ordinary, reasonable and prudent municipal councillor. Even if the trial judge correctly identifies this as the applicable legal standard, he or she may still err in assessing the facts through the lens of that legal standard, a process which invokes a policy-making component. For example, the trial judge must consider whether the fact that accidents had previously occurred on different portions of the road would alert the ordinary, reasonable and prudent municipal councillor to the existence of a hazard. The trial judge must also consider whether the councillor would have been alerted to the previous accident by an accident-reporting system, a normative issue reviewable on a standard of correctness. Not all matters of mixed fact and law are reviewable according to the standard of correctness, but neither should they be accorded deference in every case.

Section 192 of the *Rural Municipality Act, 1989*, requires the trial judge to examine whether the portion of the road on which the accident occurred posed a hazard to the reasonable driver exercising ordinary care. Here, the trial judge failed to ask whether a reasonable driver exercising ordinary care would have been able to safely drive the portion of the road on which the accident

divergentes d'un même événement. Le processus de constatation des faits exige non seulement du juge qu'il dégage le nœud factuel de l'affaire, mais également qu'il tire des inférences des faits. Bien que la norme de contrôle soit la même et pour les conclusions de fait et pour les inférences de fait, il importe néanmoins de faire une distinction analytique entre les deux. Des inférences peuvent être rejetées pour d'autres raisons que le fait que le processus qui les a produites est lui-même déficient. Une inférence peut être manifestement erronée si ses assises factuelles présentent des lacunes ou si la norme juridique appliquée aux faits est mal interprétée. Dans le contexte du droit relatif à la négligence, la question de savoir si la conduite du défendeur est conforme à la norme de diligence appropriée est une question mixte de fait et de droit. Une fois les faits établis, la décision touchant la question de savoir si le défendeur a respecté ou non la norme de diligence est, dans la plupart des cas, contrôlable selon la norme de la décision correcte, puisque le juge de première instance doit apprécier les faits au regard de la norme de diligence appropriée, question de droit qui relève autant des cours de première instance que des cours d'appel.

En l'espèce, la question de savoir si la municipalité connaissait ou aurait dû connaître le danger dont on alléguait l'existence était une question mixte de fait et de droit. Le juge de première instance doit examiner cette question eu égard aux obligations qui incombent au conseiller municipal moyen, raisonnable et prudent. Même en supposant que le juge de première instance détermine correctement la norme juridique applicable, il lui est encore possible de commettre une erreur lorsqu'il apprécie les faits à la lumière de cette norme juridique, processus qui implique notamment l'établissement de politiques d'intérêt général. Par exemple, il doit se demander si le fait que des accidents se soient déjà produits à d'autres endroits du chemin alerterait le conseiller municipal moyen, raisonnable et prudent de l'existence d'un danger. Il doit également se demander si ce conseiller aurait appris l'existence de l'accident antérieur par un système d'information sur les accidents, question normative qui est contrôlable selon la norme de la décision correcte. Les questions mixtes de fait et de droit ne sont pas toutes contrôlables suivant cette norme, mais elles ne commandent pas systématiquement une attitude empreinte de retenue.

Suivant la norme de diligence énoncée à l'art. 192 de la *Rural Municipality Act, 1989*, la juge de première instance devait se demander si le tronçon du chemin sur lequel s'est produit l'accident constituait un danger pour le conducteur raisonnable prenant des précautions normales. En l'espèce, la juge de première instance a omis de se demander si un tel conducteur aurait pu rouler

occurred. This amounted to an error of law. The duty of the municipality is to keep the road in such a reasonable state of repair that those required to use it may, exercising ordinary care, travel upon it with safety. The duty is a limited one as the municipality is not an insurer of travellers using its streets. Although the trial judge found that the portion of the road where the accident occurred presented drivers with a hidden hazard, there is nothing to indicate that she considered whether or not that portion of the road would pose a risk to the reasonable driver exercising ordinary care. Where an error of law has been found, the appellate court has jurisdiction to take the factual findings of the trial judge as they are and to reassess these findings in the context of the appropriate legal test. Here, the portion of the road on which the accident occurred did not pose a risk to a reasonable driver exercising ordinary care because the condition of the road in general signalled to the reasonable driver that caution was needed.

The trial judge made both errors of law and palpable and overriding errors of fact in determining that the municipality should have known of the alleged state of disrepair. She made no finding that the municipality had actual knowledge of the alleged state of disrepair, but rather imputed knowledge to it on the basis that it should have known of the danger. As a matter of law, the trial judge must approach the question of whether knowledge should be imputed to the municipality with regard to the duties of the ordinary, reasonable and prudent municipal councillor. The question is then answered through the trial judge's assessment of the facts of the case. The trial judge erred in law by approaching the question of knowledge from the perspective of an expert rather than from that of a prudent municipal councillor and by failing to appreciate that the onus of proving that the municipality knew or should have known of the disrepair remained on the plaintiff throughout. She made palpable and overriding errors in fact by drawing the unreasonable inference that the municipality should have known that the portion of the road on which the accident occurred was dangerous from evidence that accidents had occurred on other parts of the road. As the municipality had not received any complaints from motorists respecting the absence of signs on the road, the lack of super-elevation on the curves, or the presence of vegetation along the sides of the road, it had no particular reason to inspect that segment of the road for the presence of hazards. The question of the municipality's knowledge is inextricably linked to the standard of care. A municipality can only be expected to have knowledge of those hazards which pose a risk to the reasonable driver exercising ordinary care, since these are the only hazards for which there is

en sécurité sur le tronçon en question. Il s'agissait d'une erreur de droit. Les municipalités ont l'obligation de tenir les chemins dans un état raisonnable d'entretien de façon que ceux qui doivent les emprunter puissent, en prenant des précautions normales, y circuler en sécurité. Il s'agit d'une obligation de portée limitée, car les municipalités ne sont pas les assureurs des automobilistes qui roulent dans leurs rues. Bien que la juge de première instance ait conclu que la portion du chemin où s'est produit l'accident exposait les conducteurs à un danger caché, il n'y a rien qui indique qu'elle s'est demandé si cette portion du chemin présentait un risque pour le conducteur raisonnable prenant des précautions normales. La cour d'appel qui décèle une erreur de droit a compétence pour reprendre telles quelles les conclusions de fait du juge de première instance et les réévaluer au regard du critère juridique approprié. En l'espèce, la portion du chemin où s'est produit l'accident ne présentait pas de risque pour un conducteur raisonnable prenant des précautions normales, car l'état de ce chemin en général avertissait l'automobiliste raisonnable que la prudence s'imposait.

La juge de première instance a commis et des erreurs de droit et des erreurs de fait manifestes et dominantes en statuant que la municipalité intimée aurait dû connaître le mauvais état dans lequel se trouvait, prétendait-on, le chemin. La juge de première instance n'a pas conclu que la municipalité intimée connaissait concrètement le prétendu mauvais état du chemin, mais elle lui a plutôt prêté cette connaissance pour le motif qu'elle aurait dû connaître l'existence du danger. Sur le plan juridique, le juge de première instance doit se demander s'il y a lieu de présumer que la municipalité connaissait ce fait, eu égard aux obligations qui incombent au conseiller municipal moyen, raisonnable et prudent. Il répond ensuite à cette question en appréciant les faits de l'espèce dont il est saisi. Dans la présente affaire, la juge de première instance a fait erreur en droit en examinant la question de la connaissance requise du point de vue du spécialiste plutôt que du point de vue du conseiller municipal prudent et en ne reconnaissant pas que le fardeau de prouver que la municipalité connaissait ou aurait dû connaître le mauvais état du chemin ne cessait jamais d'incomber au demandeur. La juge de première instance a commis une erreur de fait manifeste et dominante en inférant déraisonnablement que la municipalité intimée aurait dû savoir que la partie du chemin où l'accident s'est produit était dangereuse, compte tenu de la preuve que des accidents avaient eu lieu ailleurs sur ce chemin. La municipalité n'avait aucune raison particulière d'aller inspecter cette portion du chemin pour voir s'il y existait des dangers, puisqu'elle n'avait reçu aucune plainte d'automobilistes relativement à l'absence de signalisation, à l'absence de surélévation des courbes ou à la présence d'arbres et de végétation en bordure du

a duty to repair. Here, the municipality cannot have been expected to have knowledge of the hazard that existed at the site of the accident, since the hazard did not pose a risk to the reasonable driver. Implicit in the trial judge's reasons was the expectation that the municipality should have known about the accidents through an accident reporting system, a palpable error, absent any evidence of what might have been a reasonable system.

With respect to her conclusions on causation, which are conclusions on matters of fact, the trial judge ignored evidence that N had swerved on the first curve he negotiated prior to the accident, and that he had driven on the road three times in the 18 to 20 hours preceding the accident. She further ignored the significance of the testimony of the forensic alcohol specialist which pointed overwhelmingly to alcohol as the causal factor which led to the accident, and erroneously relied on one statement by him to support her conclusion that a driver at N's level of impairment would have reacted to a warning sign. The finding that the outcome would have been different had N been forewarned of the curve ignores the fact that he already knew the curve was there. The fact that the trial judge referred to some evidence to support her findings on causation does not insulate them from review by this Court. An appellate court is entitled to assess whether or not it was clearly wrong for the trial judge to rely on some evidence when other evidence points overwhelmingly to the opposite conclusion.

Whatever the approach to the issue of the duty of care, it is only reasonable to expect a municipality to foresee accidents which occur as a result of the conditions of the road, and not, as in this case, as a result of the condition of the driver. To expand the repair obligation of municipalities to require them to take into account the actions of unreasonable or careless drivers when discharging this duty would signify a drastic and unworkable change to the current standard.

chemin. La question de la connaissance de l'intimée est intimement liée à celle de la norme de diligence. Une municipalité est uniquement censée avoir connaissance des dangers qui présentent un risque pour le conducteur raisonnable prenant des précautions normales, puisqu'il s'agit des seuls dangers à l'égard desquels existe une obligation d'entretien. En l'espèce, on ne pouvait attendre de l'intimée qu'elle connaisse le danger qui existait à l'endroit où l'accident est survenu, puisque ce danger ne présentait tout simplement pas de risque pour le conducteur raisonnable. Il ressort implicitement des motifs de la juge de première instance que la municipalité aurait censément dû connaître l'existence des accidents grâce à un système d'information en la matière, erreur manifeste en l'absence de quelque élément de preuve indiquant ce qui aurait pu constituer un système raisonnable.

Relativement aux conclusions de la juge de première instance sur le lien de causalité, qui sont des conclusions de fait, celle-ci a fait abstraction de la preuve que le véhicule de N avait fait une embardée dans la première courbe et que ce dernier avait roulé à trois reprises sur le chemin en question au cours des 18 à 20 heures ayant précédé l'accident. La juge de première instance a également omis de tenir compte de l'importance du témoignage du spécialiste judiciaire en matière d'alcool, qui menait irrésistiblement à la conclusion que l'alcool avait été le facteur causal de l'accident, et elle a erronément invoqué une déclaration de celui-ci au soutien de sa conclusion que N aurait réagi à un panneau de signalisation. La conclusion que le résultat aurait été différent si N avait été prévenu de l'existence de la courbe ne tient pas compte du fait qu'il savait déjà qu'elle existait. Le fait que la juge de première instance ait mentionné certains éléments de preuve au soutien de ses conclusions sur le lien de causalité n'a pas pour effet de soustraire ces conclusions au pouvoir de contrôle de notre Cour. Le tribunal d'appel est habilité à se demander si le juge de première instance a clairement fait erreur en décidant comme il l'a fait sur le fondement de certains éléments de preuve alors que d'autres éléments mènent irrésistiblement à la conclusion inverse.

Indépendamment de l'approche choisie à l'égard de la question de l'obligation de diligence, il n'est que raisonnable d'attendre d'une municipalité qu'elle prévoit les accidents qui surviennent en raison de l'état du chemin, et non, comme en l'espèce, ceux qui résultent de l'état du conducteur. Élargir l'obligation d'entretien des municipalités en exigeant qu'elles tiennent compte, dans l'exécution de cette obligation, des actes des conducteurs déraisonnables ou imprudents, entraînerait une modification radicale et irréalisable de la norme actuelle.

The judgment of McLachlin C.J. and L'Heureux-Dubé, Iacobucci, Major and Arbour JJ. was delivered by

IACOBUCCI AND MAJOR JJ. —

I. Introduction

A proposition that should be unnecessary to state is that a court of appeal should not interfere with a trial judge's reasons unless there is a palpable and overriding error. The same proposition is sometimes stated as prohibiting an appellate court from reviewing a trial judge's decision if there was some evidence upon which he or she could have relied to reach that conclusion.

Authority for this abounds particularly in appellate courts in Canada and abroad (see *Gottardo Properties (Dome) Inc. v. Toronto (City)* (1998), 162 D.L.R. (4th) 574 (Ont. C.A.); *Schwartz v. Canada*, [1996] 1 S.C.R. 254; *Toneguzzo-Norvell (Guardian ad litem of) v. Burnaby Hospital*, [1994] 1 S.C.R. 114; *Van de Perre v. Edwards*, [2001] 2 S.C.R. 1014, 2001 SCC 60). In addition scholars, national and international, endorse it (see C. A. Wright in "The Doubtful Omniscience of Appellate Courts" (1957), 41 *Minn. L. Rev.* 751, at p. 780; and the Honourable R. P. Kerans in *Standards of Review Employed by Appellate Courts* (1994); and American Bar Association, Judicial Administration Division, *Standards Relating to Appellate Courts* (1995), at pp. 24-25).

The role of the appellate court was aptly defined in *Underwood v. Ocean City Realty Ltd.* (1987), 12 B.C.L.R. (2d) 199 (C.A.), at p. 204, where it was stated:

The appellate court must not retry a case and must not substitute its views for the views of the trial judge according to what the appellate court thinks the evidence establishes on its view of the balance of probabilities.

Gary D. Young, *c.r.*, *Denis I. Quon* et *M. Kim Anderson*, pour l'appelant.

Michael Morris et *G. L. Gerrand*, *c.r.*, pour l'intimée.

Version française du jugement du juge en chef McLachlin et des juges L'Heureux-Dubé, Iacobucci, Major et Arbour rendu par

LES JUGES IACOBUCCI ET MAJOR —

I. Introduction

Il va sans dire qu'une cour d'appel ne devrait modifier les conclusions d'un juge de première instance qu'en cas d'erreur manifeste et dominante. On reformule parfois cette proposition en disant qu'une cour d'appel ne peut réviser la décision du juge de première instance dans les cas où il existait des éléments de preuve qui pouvaient étayer cette décision. 1

Il existe une abondante jurisprudence étayant cette proposition, particulièrement des décisions émanant de cours d'appel, tant au Canada qu'à l'étranger (voir *Gottardo Properties (Dome) Inc. c. Toronto (City)* (1998), 162 D.L.R. (4th) 574 (C.A. Ont.); *Schwartz c. Canada*, [1996] 1 R.C.S. 254; *Toneguzzo-Norvell (Tutrice à l'instance de) c. Burnaby Hospital*, [1994] 1 R.C.S. 114; *Van de Perre c. Edwards*, [2001] 2 R.C.S. 1014, 2001 CSC 60). En outre, des auteurs, tant à l'échelle nationale qu'internationale, y souscrivent (voir C. A. Wright, « The Doubtful Omniscience of Appellate Courts » (1957), 41 *Minn. L. Rev.* 751, p. 780; l'honorable R. P. Kerans, *Standards of Review Employed by Appellate Courts* (1994); et American Bar Association, Judicial Administration Division, *Standards Relating to Appellate Courts* (1995), p. 24-25). 2

Le rôle des tribunaux d'appel a été défini de manière judicieuse dans l'arrêt *Underwood c. Ocean City Realty Ltd.* (1987), 12 B.C.L.R. (2d) 199 (C.A.), p. 204, où la cour a dit ceci : 3

[TRADUCTION] La cour d'appel ne doit pas juger l'affaire de nouveau, ni substituer son opinion à celle du juge de première instance en fonction de ce qu'elle pense que la preuve démontre, selon son opinion de la prépondérance des probabilités.

4 While the theory has acceptance, consistency in its application is missing. The foundation of the principle is as sound today as 100 years ago. It is premised on the notion that finality is an important aim of litigation. There is no suggestion that appellate court judges are somehow smarter and thus capable of reaching a better result. Their role is not to write better judgments but to review the reasons in light of the arguments of the parties and the relevant evidence, and then to uphold the decision unless a palpable error leading to a wrong result has been made by the trial judge.

Quoique cette théorie soit généralement acceptée, elle n'est pas appliquée de manière systématique. Le fondement de cette théorie est aussi valide aujourd'hui qu'il l'était il y a 100 ans. Cette théorie repose sur l'idée que le caractère définitif des décisions est un aspect important du processus judiciaire. Personne ne prétend que les juges des cours d'appel seraient, d'une manière ou d'une autre, plus intelligents que les autres et donc capables d'arriver à un meilleur résultat. Leur rôle n'est pas de rédiger de meilleurs jugements, mais de contrôler les motifs à la lumière des arguments des parties et de la preuve pertinente, puis de confirmer la décision à moins que le juge de première instance n'ait commis une erreur manifeste ayant conduit à un résultat erroné.

5 What is palpable error? The *New Oxford Dictionary of English* (1998) defines "palpable" as "clear to the mind or plain to see" (p. 1337). The *Cambridge International Dictionary of English* (1996) describes it as "so obvious that it can easily be seen or known" (p. 1020). The *Random House Dictionary of the English Language* (2nd ed. 1987) defines it as "readily or plainly seen" (p. 1399).

Qu'est-ce qu'une erreur manifeste? Le *Trésor de la langue française* (1985) définit ainsi le mot « manifeste » : « . . . Qui est tout à fait évident, qui ne peut être contesté dans sa nature ou son existence. [. . .] *erreur manifeste* » (p. 317). *Le Grand Robert de la langue française* (2e éd. 2001) définit ce mot ainsi : « Dont l'existence ou la nature est évidente. [. . .] Qui est clairement, évidemment tel. [. . .] *Erreur, injustice manifeste* » (p. 1139). Enfin, le *Grand Larousse de la langue française* (1975) donne la définition suivante de « manifeste » : « . . . Se dit d'une chose que l'on ne peut contester, qui est tout à fait évidente : *Une erreur manifeste* » (p. 3213).

6 The common element in each of these definitions is that palpable is plainly seen. Applying that to this appeal, in order for the Saskatchewan Court of Appeal to reverse the trial judge the "palpable and overriding" error of fact found by Cameron J.A. must be plainly seen. As we will discuss, we do not think that test has been met.

L'élément commun de ces définitions est qu'une chose « manifeste » est une chose qui est « évidente ». Si l'on applique ce critère au présent pourvoi, il faut que l'« erreur manifeste et dominante » décelée par le juge Cameron soit évidente pour que la Cour d'appel de la Saskatchewan puisse infirmer la décision de la juge de première instance. Comme nous le verrons plus loin, nous ne croyons pas qu'on a satisfait à ce critère en l'espèce.

II. The Role of the Appellate Court in the Case at Bar

II. Le rôle de la Cour d'appel en l'espèce

7 Given that an appeal is not a retrial of a case, consideration must be given to the applicable standard of review of an appellate court on the various issues which arise on this appeal. We therefore find it helpful to discuss briefly the standards of review relevant

Étant donné que l'appel ne constitue pas un nouveau procès, il faut se demander quelle est la norme de contrôle applicable en appel à l'égard des diverses questions que soulève le présent pourvoi. Nous estimons donc utile d'examiner brièvement

to the following types of questions: (1) questions of law; (2) questions of fact; (3) inferences of fact; and (4) questions of mixed fact and law.

A. *Standard of Review for Questions of Law*

On a pure question of law, the basic rule with respect to the review of a trial judge's findings is that an appellate court is free to replace the opinion of the trial judge with its own. Thus the standard of review on a question of law is that of correctness: Kerans, *supra*, at p. 90.

There are at least two underlying reasons for employing a correctness standard to matters of law. First, the principle of universality requires appellate courts to ensure that the same legal rules are applied in similar situations. The importance of this principle was recognized by this Court in *Woods Manufacturing Co. v. The King*, [1951] S.C.R. 504, at p. 515:

> It is fundamental to the due administration of justice that the authority of decisions be scrupulously respected by all courts upon which they are binding. Without this uniform and consistent adherence the administration of justice becomes disordered, the law becomes uncertain, and the confidence of the public in it undermined. Nothing is more important than that the law as pronounced . . . should be accepted and applied as our tradition requires; and even at the risk of that fallibility to which all judges are liable, we must maintain the complete integrity of relationship between the courts.

A second and related reason for applying a correctness standard to matters of law is the recognized law-making role of appellate courts which is pointed out by Kerans, *supra*, at p. 5:

> The call for universality, and the law-settling role it imposes, makes a considerable demand on a reviewing court. It expects from that authority a measure of expertise about the art of just and practical rule-making, an expertise that is not so critical for the first court. Reviewing courts, in cases where the law requires settlement, make law for future cases as well as the case under review.

les normes de contrôle se rapportant à chacune des catégories de questions suivantes : (1) les questions de droit; (2) les questions de fait; (3) les inférences de fait; (4) les questions mixtes de fait et de droit.

A. *La norme de contrôle applicable aux questions de droit*

8 Dans le cas des pures questions de droit, la règle fondamentale applicable en matière de contrôle des conclusions du juge de première instance est que les cours d'appel ont toute latitude pour substituer leur opinion à celle des juges de première instance. La norme de contrôle applicable à une question de droit est donc celle de la décision correcte : Kerans, *op. cit.*, p. 90.

9 Au moins deux raisons justifient l'application de la norme de la décision correcte aux questions de droit. Premièrement, le principe de l'universalité impose aux cours d'appel le devoir de veiller à ce que les mêmes règles de droit soient appliquées dans des situations similaires. Notre Cour a reconnu l'importance de ce principe dans *Woods Manufacturing Co. c. The King*, [1951] R.C.S. 504, p. 515 :

> [TRADUCTION] Il est fondamental, pour assurer la bonne administration de la justice, que l'autorité des décisions soit scrupuleusement respectée par tous les tribunaux qui sont liées par elles. Sans cette adhésion générale et constante, l'administration de la justice sera désordonnée, le droit deviendra incertain et la confiance dans celui-ci sera ébranlée. Il importe plus que tout que le droit, tel qu'il a été énoncé, [. . .] soit accepté et appliqué comme l'exige notre tradition; et même au risque de nous tromper, tous les juges étant faillibles, nous devons préserver totalement l'intégrité des rapports entre les tribunaux.

Une deuxième raison, connexe, d'appliquer la norme de la décision correcte aux questions de droit tient au rôle qu'on reconnaît aux cours d'appel en matière de création du droit et qu'a souligné Kerans, *op. cit.*, p. 5 :

> [TRADUCTION] Le principe de l'universalité — et le rôle de création du droit qu'il emporte — exige beaucoup du tribunal de révision. Il exige de ce tribunal qu'il fasse preuve d'un certain degré d'expertise dans l'art d'élaborer une règle de droit juste et pratique, expertise qui ne revêt pas une importance aussi cruciale pour le premier tribunal. Dans les affaires où le droit n'est pas fixé, le tribunal de révision élabore des règles de droit applicables tout autant à d'éventuelles affaires qu'à celle dont il est saisi.

Thus, while the primary role of trial courts is to resolve individual disputes based on the facts before them and settled law, the primary role of appellate courts is to delineate and refine legal rules and ensure their universal application. In order to fulfill the above functions, appellate courts require a broad scope of review with respect to matters of law.

B. *Standard of Review for Findings of Fact*

10 The standard of review for findings of fact is that such findings are not to be reversed unless it can be established that the trial judge made a "palpable and overriding error": *Stein v. The Ship "Kathy K"*, [1976] 2 S.C.R. 802, at p. 808; *Ingles v. Tutkaluk Construction Ltd.*, [2000] 1 S.C.R. 298, 2000 SCC 12, at para. 42; *Ryan v. Victoria (City)*, [1999] 1 S.C.R. 201, at para. 57. While this standard is often cited, the principles underlying this high degree of deference rarely receive mention. We find it useful, for the purposes of this appeal, to review briefly the various policy reasons for employing a high level of appellate deference to findings of fact.

11 A fundamental reason for general deference to the trial judge is the presumption of fitness — a presumption that trial judges are just as competent as appellate judges to ensure that disputes are resolved justly. Kerans, *supra*, at pp. 10-11, states that:

> If we have confidence in these systems for the resolution of disputes, we should assume that those decisions are just. The appeal process is part of the decisional process, then, only because we recognize that, despite all effort, errors occur. An appeal should be the exception rather than the rule, as indeed it is in Canada.

12 With respect to findings of fact in particular, in *Gottardo Properties*, *supra*, Laskin J.A. summarized the purposes underlying a deferential stance as follows (at para. 48):

Ainsi, alors que le rôle premier des tribunaux de première instance consiste à résoudre des litiges sur la base des faits dont ils disposent et du droit établi, celui des cours d'appel est de préciser et de raffiner les règles de droit et de veiller à leur application universelle. Pour s'acquitter de ces rôles, les cours d'appel ont besoin d'un large pouvoir de contrôle à l'égard des questions de droit.

B. *La norme de contrôle applicable aux questions de fait*

Suivant la norme de contrôle applicable aux conclusions de fait, ces conclusions ne peuvent être infirmées que s'il est établi que le juge de première instance a commis une « erreur manifeste et dominante » : *Stein c. Le navire « Kathy K »*, [1976] 2 R.C.S. 802, p. 808; *Ingles c. Tutkaluk Construction Ltd.*, [2000] 1 R.C.S. 298, 2000 CSC 12, par. 42; *Ryan c. Victoria (Ville)*, [1999] 1 R.C.S. 201, par. 57. On cite souvent cette norme, mais rarement les principes justifiant ce degré élevé de retenue. Pour les besoins du présent pourvoi, nous estimons qu'il est utile d'examiner brièvement les diverses considérations de principe qui incitent les cours d'appel à faire preuve d'un degré élevé de retenue à l'égard des conclusions de fait.

L'une des raisons fondamentales de cette retenue générale à l'égard des conclusions des juges de première instance tient à la présomption d'aptitude à juger — présomption selon laquelle les juges de première instance sont tout aussi aptes que les juges d'appel à apporter des solutions justes aux litiges. Kerans, *op. cit.*, dit ceci aux p. 10-11 :

> [TRADUCTION] Si nous nous fions à ces systèmes pour régler les différends, il nous faut présumer que les décisions qu'ils produisent sont justes. La procédure d'appel ne fait en conséquence partie du processus décisionnel que parce que nous reconnaissons que, malgré tous les efforts déployés, des erreurs se produisent. L'appel devrait être l'exception plutôt que la règle, ce qui est d'ailleurs le cas au Canada.

Pour ce qui est des conclusions de fait en particulier, dans *Gottardo Properties*, précité, le juge Laskin de la Cour d'appel de l'Ontario a résumé ainsi les objectifs qui sous-tendent le principe de la retenue judiciaire (au par. 48) :

Deference is desirable for several reasons: to limit the number and length of appeals, to promote the autonomy and integrity of the trial or motion court proceedings on which substantial resources have been expended, to preserve the confidence of litigants in those proceedings, to recognize the competence of the trial judge or motion judge and to reduce needless duplication of judicial effort with no corresponding improvement in the quality of justice.

Similar concerns were expressed by La Forest J. in *Schwartz*, *supra*, at para. 32:

It has long been settled that appellate courts must treat a trial judge's findings of fact with great deference. The rule is principally based on the assumption that the trier of fact is in a privileged position to assess the credibility of witnesses' testimony at trial. . . . Others have also pointed out additional judicial policy concerns to justify the rule. Unlimited intervention by appellate courts would greatly increase the number and the length of appeals generally. Substantial resources are allocated to trial courts to go through the process of assessing facts. The autonomy and integrity of the trial process must be preserved by exercising deference towards the trial courts' findings of fact; see R. D. Gibbens, "Appellate Review of Findings of Fact" (1992), 13 *Adv. Q.* 445, at pp. 445-48; *Fletcher v. Manitoba Public Insurance Co.*, [1990] 3 S.C.R. 191, at p. 204.

See also in the context of patent litigation, *Consolboard Inc. v. MacMillan Bloedel (Saskatchewan) Ltd.*, [1981] 1 S.C.R. 504, at p. 537.

In *Anderson v. Bessemer City*, 470 U.S. 564 (1985), at pp. 574-75, the United States Supreme Court also listed numerous reasons for deferring to the factual findings of the trial judge:

The rationale for deference to the original finder of fact is not limited to the superiority of the trial judge's position to make determinations of credibility. The trial judge's major role is the determination of fact, and with experience in fulfilling that role comes expertise. Duplication of the trial judge's efforts in the court of appeals would very likely contribute only negligibly to the accuracy of fact determination at a huge cost in diversion of judicial resources. In addition, the parties to a case on appeal have already been forced to concentrate

[TRADUCTION] La retenue est souhaitable pour diverses raisons : pour limiter le nombre et la durée des appels, pour promouvoir l'autonomie et l'intégrité des procédures devant le tribunal de première instance ou la cour des requêtes auxquelles de nombreuses ressources ont été consacrées, pour maintenir la confiance des plaideurs, pour reconnaître la compétence du juge de première instance ou du juge des requêtes, et pour réduire la multiplication inutile des procédures qui n'entraînent aucune amélioration correspondante de la qualité de la justice.

Le juge La Forest a exprimé des préoccupations semblables dans l'arrêt *Schwartz*, précité, par. 32 :

Il est établi depuis longtemps que les cours d'appel doivent faire preuve d'une grande retenue à l'égard des conclusions de fait d'un juge de première instance. La règle se justifie principalement par la situation avantageuse dont bénéficie le juge des faits pour ce qui est d'évaluer la crédibilité des témoignages entendus au procès. [. . .] D'autres préoccupations liées à la politique judiciaire ont par ailleurs été invoquées pour justifier la règle. Une intervention illimitée des cours d'appel ferait augmenter considérablement le nombre et la durée des appels en général. D'importantes ressources sont mises à la disposition des tribunaux de première instance pour qu'ils puissent évaluer les faits. Il faut préserver l'autonomie et l'intégrité du procès en faisant preuve de retenue à l'égard des conclusions de fait des tribunaux de première instance; voir R. D. Gibbens, « Appellate Review of Findings of Fact » (1992), 13 *Adv. Q.* 445, aux pp. 445 à 448; *Fletcher c. Société d'assurance publique du Manitoba*, [1990] 3 R.C.S. 191, à la p. 204.

Voir aussi, dans le contexte d'une poursuite touchant un brevet, *Consolboard Inc. c. MacMillan Bloedel (Saskatchewan) Ltd.*, [1981] 1 R.C.S. 504, p. 537.

13 Dans *Anderson c. Bessemer City*, 470 U.S. 564 (1985), p. 574-575, la Cour suprême des États-Unis a aussi dressé une liste de raisons qui justifient de faire preuve de retenue à l'égard des conclusions de fait des juges de première instance :

[TRADUCTION] La raison d'être de la retenue à l'égard des conclusions de fait du juge de première instance ne se limite pas au fait que ce dernier est mieux placé pour statuer sur la crédibilité. Le rôle principal du juge de première instance est de constater les faits, et l'expérience qu'il acquiert en s'acquittant de ce rôle lui confère son expertise à cet égard. Si les cours d'appel refaisaient le travail du juge de première instance, il est fort possible que ces efforts n'amélioreraient que marginalement l'exactitude des conclusions de fait, malgré

their energies and resources on persuading the trial judge that their account of the facts is the correct one; requiring them to persuade three more judges at the appellate level is requiring too much. As the Court has stated in a different context, the trial on the merits should be "the 'main event' . . . rather than a 'tryout on the road.'" . . . For these reasons, review of factual findings under the clearly-erroneous standard — with its deference to the trier of fact — is the rule, not the exception.

14 Further comments regarding the advantages possessed by the trial judge have been made by R. D. Gibbens in "Appellate Review of Findings of Fact" (1991-92), 13 *Advocates' Q.* 445, at p. 446:

> The trial judge is said to have an expertise in assessing and weighing the facts developed at trial. Similarly, the trial judge has also been exposed to the entire case. The trial judge has sat through the entire case and his ultimate judgment reflects this total familiarity with the evidence. The insight gained by the trial judge who has lived with the case for several days, weeks or even months may be far deeper than that of the Court of Appeal whose view of the case is much more limited and narrow, often being shaped and distorted by the various orders or rulings being challenged.
>
> The corollary to this recognized advantage of trial courts and judges is that appellate courts are not in a favourable position to assess and determine factual matters. Appellate court judges are restricted to reviewing written transcripts of testimony. As well, appeals are unsuited to reviewing voluminous amounts of evidence. Finally, appeals are telescopic in nature, focussing narrowly on particular issues as opposed to viewing the case as a whole.

15 In our view, the numerous bases for deferring to the findings of fact of the trial judge which are discussed in the above authorities can be grouped into the following three basic principles.

(1) Limiting the Number, Length and Cost of Appeals

16 Given the scarcity of judicial resources, setting limits on the scope of judicial review is to be

les ressources judiciaires considérables qui devraient être réaffectées à cette fin. En outre, les parties à un appel ont déjà dû consacrer énergies et ressources à convaincre le juge de première instance de la justesse de leur version des faits; ce serait abuser que de leur demander de convaincre trois autres juges en appel. Comme l'a dit notre Cour dans un contexte différent, le procès sur le fond devrait être considéré comme « "l'épreuve principale" [. . .] plutôt que comme un "banc d'essai" ». [. . .] Pour ces motifs, le contrôle des décisions de fait selon la norme de la décision manifestement erronée — et la retenue envers le juge de première instance qu'elle suppose — est la règle, et non l'exception.

D'autres observations sur les avantages dont disposent le juge de première instance ont été formulées par R. D. Gibbens dans « Appellate Review of Findings of Fact » (1991-92), 13 *Advocates' Q.* 445, p. 446 :

> [TRADUCTION] On dit que le juge de première instance possède de l'expertise dans l'évaluation et l'appréciation des faits présentés au procès. Il a également entendu l'affaire au complet. Il a assisté à toute la cause et son jugement final reflète cette connaissance intime de la preuve. Cette connaissance, acquise par le juge au fil des jours, des semaines voire des mois qu'a durés l'affaire, peut se révéler beaucoup plus profonde que celle de la cour d'appel, dont la perception est beaucoup plus limitée et étroite, et souvent déterminée et déformée par les diverses ordonnances et décisions qui sont contestées.
>
> Cet avantage reconnu des tribunaux et des juges de première instance a pour corollaire que les cours d'appel ne sont pas dans une position favorable pour évaluer et apprécier les questions de fait. Les juges des cours d'appel n'examinent que la transcription des témoignages. De plus, les appels ne se prêtent pas à l'examen de dossiers volumineux. Enfin, les appels ont un caractère « focalisateur », en ce qu'ils s'attachent à des questions particulières plutôt qu'à l'ensemble de l'affaire.

À notre avis, ces diverses raisons justifiant la retenue à l'égard des conclusions de fait du juge de première instance peuvent être regroupées sous les trois principes de base suivants.

(1) Réduire le nombre, la durée et le coût des appels

Vu la rareté des ressources dont disposent les tribunaux, il faut encourager l'établissement

encouraged. Deferring to a trial judge's findings of fact not only serves this end, but does so on a principled basis. Substantial resources are allocated to trial courts for the purpose of assessing facts. To allow for wide-ranging review of the trial judge's factual findings results in needless duplication of judicial proceedings with little, if any improvement in the result. In addition, lengthy appeals prejudice litigants with fewer resources, and frustrate the goal of providing an efficient and effective remedy for the parties.

(2) Promoting the Autonomy and Integrity of Trial Proceedings

The presumption underlying the structure of our court system is that a trial judge is competent to decide the case before him or her, and that a just and fair outcome will result from the trial process. Frequent and unlimited appeals would undermine this presumption and weaken public confidence in the trial process. An appeal is the exception rather than the rule.

(3) Recognizing the Expertise of the Trial Judge and His or Her Advantageous Position

The trial judge is better situated to make factual findings owing to his or her extensive exposure to the evidence, the advantage of hearing testimony *viva voce*, and the judge's familiarity with the case as a whole. Because the primary role of the trial judge is to weigh and assess voluminous quantities of evidence, the expertise and insight of the trial judge in this area should be respected.

C. *Standard of Review for Inferences of Fact*

We find it necessary to address the appropriate standard of review for factual inferences because the reasons of our colleague suggest that a lower standard of review may be applied to the inferences of fact drawn by a trial judge. With respect, it is our

de limites à la portée du contrôle judiciaire. La retenue à l'égard des conclusions de fait du juge de première instance sert cet objectif d'une manière rationnelle. D'importantes ressources sont allouées aux tribunaux de première instance aux fins d'évaluation des faits. Permettre un large contrôle des conclusions factuelles des juges de première instance entraîne une inutile répétition de procédures judiciaires, tout en n'améliorant que peu ou pas le résultat. En outre, de longs appels causent préjudice aux plaideurs moins bien nantis et compromettent l'objectif qui consiste à mettre à leur disposition des recours efficients et efficaces.

(2) Favoriser l'autonomie du procès et son intégrité

17 L'organisation de notre système judiciaire repose sur la présomption que le juge de première instance est qualifié pour trancher l'affaire dont il est saisi et qu'une solution juste et équitable résultera du procès. Des appels fréquents et illimités affaibliraient cette présomption et saperait la confiance du public dans le processus judiciaire. L'appel est l'exception, non la règle.

(3) Reconnaître l'expertise du juge de première instance et sa position avantageuse

18 Le juge de première instance est celui qui est le mieux placé pour tirer des conclusions de fait, parce qu'il a l'occasion d'examiner la preuve en profondeur, d'entendre les témoignages de vive voix et de se familiariser avec l'affaire dans son ensemble. Étant donné que le rôle principal du juge de première instance est d'apprécier et de soupeser d'abondantes quantités d'éléments de preuve, son expertise dans ce domaine et sa connaissance intime du dossier doivent être respectées.

C. *La norme de contrôle applicable aux inférences de fait*

19 Nous estimons nécessaire de nous pencher sur la question de la norme de contrôle appropriée quant aux inférences de fait des juges de première instance, parce que les motifs de notre collègue suggèrent qu'une norme de contrôle moins exigeante peut

view, that to apply a lower standard of review to inferences of fact would be to depart from established jurisprudence of this Court, and would be contrary to the principles supporting a deferential stance to matters of fact.

20 Our colleague acknowledges that, in *Geffen v. Goodman Estate*, [1991] 2 S.C.R. 353, this Court determined that a trial judge's inferences of fact and findings of fact should be accorded a similar degree of deference. The relevant passage from *Geffen* is the following (*per* Wilson J., at pp. 388-89):

> It is by now well established that findings of fact made at trial based on the credibility of witnesses are not to be reversed on appeal unless it is established that the trial judge made some palpable and overriding error which affected his assessment of the facts . . . . Even where a finding of fact is not contingent upon credibility, this Court has maintained a non-interventionist approach to the review of trial court findings. . . .
>
> And even in those cases where a finding of fact is neither inextricably linked to the credibility of the testifying witness nor based on a misapprehension of the evidence, the rule remains that appellate review should be limited to those instances where a manifest error has been made. Hence, in *Schreiber Brothers Ltd. v. Currie Products Ltd.*, [1980] 2 S.C.R. 78, this Court refused to overturn a trial judge's finding that certain goods were defective, stating at pp. 84-85 that it is wrong for an appellate court to set aside a trial judgment where the only point at issue is the interpretation of the evidence as a whole (citing *Métivier v. Cadorette*, [1977] 1 S.C.R. 371).

This view has been reiterated by this Court on numerous occasions: see *Palsky v. Humphrey*, [1964] S.C.R. 580, at p. 583; *Schwartz*, *supra*, at para. 32; *Hodgkinson v. Simms*, [1994] 3 S.C.R. 377, at p. 426, *per* La Forest J.; *Toneguzzo-Norvell*, *supra*. The United States Supreme Court has taken a similar position: see *Anderson*, *supra*, at p. 577.

21 In discussing the standard of review of the trial judge's inferences of fact, our colleague states, at para. 103, that:

être appliquée à cet égard. En toute déférence, nous sommes d'avis que l'application d'une telle norme de contrôle romprait avec la jurisprudence établie de notre Cour en la matière et serait contraire aux principes justifiant le respect d'une attitude empreinte de retenue à l'égard des constatations de fait.

Notre collègue reconnaît que dans l'arrêt *Geffen c. Succession Goodman*, [1991] 2 R.C.S. 353, notre Cour a jugé qu'il fallait faire preuve du même degré de retenue à l'égard des inférences de fait du juge de première instance qu'à l'égard de ses constatations de fait. Voici le passage pertinent des motifs de madame le juge Wilson (aux p. 388-389) :

> C'est maintenant un principe bien établi que les constatations de fait d'un juge de première instance, fondées sur la crédibilité des témoins, ne doivent pas être infirmées en appel à moins qu'il ne soit prouvé que le juge de première instance a commis une erreur manifeste et dominante qui a faussé son appréciation des faits [. . .] Même si une constatation de fait ne dépend pas de la crédibilité, notre Cour a pour principe de ne pas intervenir pour réviser les constatations des tribunaux de première instance . . .
>
> Et même dans les cas où une constatation de fait n'est ni liée inextricablement à la crédibilité du témoin ni fondée sur une mauvaise compréhension de la preuve, la règle reste la même : l'examen en appel devrait se limiter aux cas où une erreur manifeste a été commise. C'est pourquoi, dans l'arrêt *Schreiber Brothers Ltd. c. Currie Products Ltd.*, [1980] 2 R.C.S. 78, notre Cour a refusé d'infirmer la conclusion du juge de première instance que certaines marchandises étaient défectueuses, disant, aux pp. 84 et 85, qu'une cour d'appel ne peut à bon droit infirmer une décision de première instance lorsque la seule question en litige porte sur l'interprétation de l'ensemble de la preuve (citant *Métivier c. Cadorette*, [1977] 1 R.C.S. 371).

Notre Cour a réitéré cette opinion à maintes reprises : voir *Palsky c. Humphrey*, [1964] R.C.S. 580, p. 583; *Schwartz*, précité, par. 32; *Hodgkinson c. Simms*, [1994] 3 R.C.S. 377, p. 426, le juge La Forest; *Toneguzzo-Norvell*, précité. La Cour suprême des États-Unis a adopté une position semblable : voir *Anderson*, précité, p. 577.

Dans son examen de la norme de contrôle applicable aux inférences de fait du juge de première instance, notre collègue dit ce qui suit, au par. 103 :

In reviewing the making of an inference, the appeal court will verify whether it can reasonably be supported by the findings of fact that the trial judge reached and whether the judge proceeded on proper legal principles. . . . While the standard of review is identical for both findings of fact and inferences of fact, it is nonetheless important to draw an analytical distinction between the two. If the reviewing court were to review only for errors of fact, then the decision of the trial judge would necessarily be upheld in every case where evidence existed to support his or her factual findings. In my view, this Court is entitled to conclude that inferences made by the trial judge were clearly wrong, just as it is entitled to reach this conclusion in respect to findings of fact. [Emphasis added.]

With respect, we find two problems with this passage. First, in our view, the standard of review is not to verify that the inference can be reasonably supported by the findings of fact of the trial judge, but whether the trial judge made a palpable and overriding error in coming to a factual conclusion based on accepted facts, which implies a stricter standard.

Second, with respect, we find that by drawing an analytical distinction between factual findings and factual inferences, the above passage may lead appellate courts to involve themselves in an unjustified reweighing of the evidence. Although we agree that it is open to an appellate court to find that an inference of fact made by the trial judge is clearly wrong, we would add the caution that where evidence exists to support this inference, an appellate court will be hard pressed to find a palpable and overriding error. As stated above, trial courts are in an advantageous position when it comes to assessing and weighing vast quantities of evidence. In making a factual inference, the trial judge must sift through the relevant facts, decide on their weight, and draw a factual conclusion. Thus, where evidence exists which supports this conclusion, interference with this conclusion entails interference with the weight assigned by the trial judge to the pieces of evidence.

La cour d'appel qui contrôle la validité d'une inférence se demande si celle-ci peut raisonnablement être étayée par les conclusions de fait tirées par le juge de première instance et si celui-ci a appliqué les principes juridiques appropriés. [. . .] Bien que la norme de contrôle soit la même et pour les conclusions de fait et pour les inférences de fait, il importe néanmoins de faire une distinction analytique entre les deux. Si le tribunal de révision ne faisait que vérifier s'il y a des erreurs de fait, la décision du juge de première instance serait alors nécessairement confirmée dans tous les cas où il existe des éléments de preuve étayant les conclusions de fait de ce dernier. Selon moi, notre Cour a le droit de conclure que les inférences du juge de première instance étaient manifestement erronées, tout comme elle peut le faire à l'égard des conclusions de fait. [Nous soulignons.]

En toute déférence, nous estimons que ce passage comporte deux erreurs. Premièrement, selon nous, la norme de contrôle ne consiste pas à vérifier si l'inférence peut être raisonnablement étayée par les conclusions de fait du juge de première instance, mais plutôt si ce dernier a commis une erreur manifeste et dominante en tirant une conclusion factuelle sur la base de faits admis, ce qui suppose l'application d'une norme plus stricte.

22

Deuxièmement, nous croyons en toute déférence qu'en faisant une distinction analytique entre les conclusions factuelles et les inférences factuelles, le passage précité pourrait amener les cours d'appel à soupeser la preuve à nouveau et sans raison. Bien que nous partagions l'opinion selon laquelle il est loisible à une cour d'appel de conclure qu'une inférence de fait tirée par le juge de première instance est manifestement erronée, nous tenons toutefois à faire la mise en garde suivante : lorsque des éléments de preuve étayent cette inférence, il sera difficile à une cour d'appel de conclure à l'existence d'une erreur manifeste et dominante. Comme nous l'avons dit précédemment, les tribunaux de première instance sont dans une position avantageuse pour apprécier et soupeser de vastes quantités d'éléments de preuve. Pour tirer une inférence factuelle, le juge de première instance doit passer les faits pertinents au crible, en apprécier la valeur probante et tirer une conclusion factuelle. En conséquence, lorsque cette conclusion est étayée par des éléments de preuve, modifier cette conclusion équivaut à modifier le poids accordé à ces éléments par le juge de première instance.

23 We reiterate that it is not the role of appellate courts to second-guess the weight to be assigned to the various items of evidence. If there is no palpable and overriding error with respect to the underlying facts that the trial judge relies on to draw the inference, then it is only where the inference-drawing process itself is palpably in error that an appellate court can interfere with the factual conclusion. The appellate court is not free to interfere with a factual conclusion that it disagrees with where such disagreement stems from a difference of opinion over the weight to be assigned to the underlying facts. As we discuss below, it is our respectful view that our colleague's finding that the trial judge erred by imputing knowledge of the hazard to the municipality in this case is an example of this type of impermissible interference with the factual inference drawn by the trial judge.

24 In addition, in distinguishing inferences of fact from findings of fact, our colleague states, at para. 102, that deference to findings of fact is "principally grounded in the recognition that only the trial judge enjoys the opportunity to observe witnesses and to hear testimony first-hand", a rationale which does not bear on factual inferences. With respect, we disagree with this view. As we state above, there are numerous reasons for showing deference to the factual findings of a trial judge, many of which are equally applicable to all factual conclusions of the trial judge. This was pointed out in *Schwartz*, *supra*. After listing numerous policy concerns justifying a deferential approach to findings of fact, at para. 32 La Forest J. goes on to state:

> This explains why the rule [that appellate courts must treat a trial judge's findings of fact with great deference] applies not only when the credibility of witnesses is at issue, although in such a case it may be more strictly applied, but also to all conclusions of fact made by the trial judge. [Emphasis added.]

Nous rappelons qu'il n'appartient pas aux cours d'appel de remettre en question le poids attribué aux différents éléments de preuve. Si aucune erreur manifeste et dominante n'est décelée en ce qui concerne les faits sur lesquels repose l'inférence du juge de première instance, ce n'est que lorsque le processus inférentiel lui-même est manifestement erroné que la cour d'appel peut modifier la conclusion factuelle. La cour d'appel n'est pas habilitée à modifier une conclusion factuelle avec laquelle elle n'est pas d'accord, lorsque ce désaccord résulte d'une divergence d'opinion sur le poids à attribuer aux faits à la base de la conclusion. Comme nous le verrons plus loin, nous estimons en toute déférence que constitue un exemple de ce genre d'intervention inadmissible à l'égard d'une inférence de fait la conclusion de notre collègue selon laquelle la juge de première instance a commis une erreur en prêtant à la municipalité la connaissance du danger dans la présente affaire.

De plus, en établissant une distinction entre les inférences de fait et les conclusions de fait, notre collègue dit, au par. 102, que la retenue à l'égard des secondes « repose principalement sur le fait que, puisqu'il [le juge de première instance] est le seul à avoir l'occasion d'observer les témoins et d'entendre les témoignages de vive voix », justification non pertinente dans le cas des inférences de fait. En toute déférence, nous ne partageons pas cette opinion. Comme nous l'avons dit plus tôt, il existe de nombreuses raisons de faire preuve de retenue à l'égard des constatations de fait du juge de première instance, dont plusieurs valent autant pour toutes ses conclusions factuelles. Cette observation a été faite dans l'arrêt *Schwartz*, précité. Après avoir énuméré les nombreuses considérations de politique judiciaire invoquées pour justifier la règle de la retenue à l'égard des constatations de fait, le juge La Forest, au par. 32, ajoute :

> Cela explique pourquoi la règle [selon laquelle les cours d'appel doivent faire preuve d'une grande retenue à l'égard des conclusions de fait des juges de première instance] s'applique non seulement lorsque la crédibilité des témoins est en cause, quoiqu'elle puisse alors s'appliquer plus strictement, mais également à toutes les conclusions de fait tirées par le juge de première instance. [Nous soulignons.]

Recent support for deferring to all factual conclusions of the trial judge is found in *Toneguzzo-Norvell*, *supra.* McLachlin J. (as she then was) for a unanimous Court stated, at pp. 121-22:

> A Court of Appeal is clearly not entitled to interfere merely because it takes a different view of the evidence. The finding of facts and the drawing of evidentiary conclusions from facts is the province of the trial judge, not the Court of Appeal.
>
> . . .
>
> I agree that the principle of non-intervention of a Court of Appeal in a trial judge's findings of facts does not apply with the same force to inferences drawn from conflicting testimony of expert witnesses where the credibility of these witnesses is not in issue. This does not however change the fact that the weight to be assigned to the various pieces of evidence is under our trial system essentially the province of the trier of fact, in this case the trial judge. [Emphasis added.]

We take the above comments of McLachlin J. to mean that, although the same high standard of deference applies to the entire range of factual determinations made by the trial judge, where a factual finding is grounded in an assessment of credibility of a witness, the overwhelming advantage of the trial judge in this area must be acknowledged. This does not, however, imply that there is a lower standard of review where witness credibility is not in issue, or that there are not numerous policy reasons supporting deference to all factual conclusions of the trial judge. In our view, this is made clear by the underlined portion of the above passage. The essential point is that making a factual conclusion, of any kind, is inextricably linked with assigning weight to evidence, and thus attracts a deferential standard of review.

Although the trial judge will always be in a distinctly privileged position when it comes to

Notre Cour a récemment donné son appui à la règle de la retenue judiciaire à l'égard de l'ensemble des conclusions factuelles du juge de première instance dans l'arrêt *Toneguzzo-Norvell*, précité. Madame le juge McLachlin (maintenant Juge en chef), qui a rédigé le jugement unanime de notre Cour, a dit ceci, aux p. 121-122 :

> Une cour d'appel n'est manifestement pas autorisée à intervenir pour le simple motif qu'elle perçoit la preuve différemment. Il appartient au juge de première instance, et non à la cour d'appel, de tirer des conclusions de fait en matière de preuve.
>
> . . .
>
> Je reconnais que le principe de non-intervention d'une cour d'appel dans les conclusions de fait d'un juge de première instance ne s'applique pas avec la même vigueur aux conclusions tirées de témoignages d'expert contradictoires lorsque la crédibilité de ces derniers n'est pas en cause. Il n'en demeure pas moins que, selon notre système de procès, il appartient essentiellement au juge des faits, en l'espèce le juge de première instance, d'attribuer un poids aux différents éléments de preuve. [Nous soulignons.]

Nous considérons que ces propos du juge McLachlin signifient que, bien que le même degré élevé de retenue s'applique à l'ensemble des décisions factuelles du juge de première instance, lorsqu'une telle conclusion factuelle repose sur l'appréciation de la crédibilité d'un témoin, il faut reconnaître l'énorme avantage dont jouit le juge de première instance à cet égard. Cela ne veut toutefois pas dire qu'une norme de contrôle moins rigoureuse s'applique lorsque la question en jeu ne porte pas sur la crédibilité d'un témoin, ni qu'il n'existe pas de nombreuses considérations de principe justifiant de faire montre de retenue à l'égard de toutes les conclusions factuelles. À notre avis, cela ressort clairement du passage souligné dans l'extrait précité. Le point essentiel est qu'une conclusion factuelle — quelle que soit sa nature — exige nécessairement qu'on attribue un certain poids à un élément de preuve et, de ce fait, commande l'application d'une norme de contrôle empreinte de retenue.

25

Bien que le juge de première instance soit toujours dans une position privilégiée pour apprécier

assessing the credibility of witnesses, this is not the only area where the trial judge has an advantage over appellate judges. Advantages enjoyed by the trial judge with respect to the drawing of factual inferences include the trial judge's relative expertise with respect to the weighing and assessing of evidence, and the trial judge's inimitable familiarity with the often vast quantities of evidence. This extensive exposure to the entire factual nexus of a case will be of invaluable assistance when it comes to drawing factual conclusions. In addition, concerns with respect to cost, number and length of appeals apply equally to inferences of fact and findings of fact, and support a deferential approach towards both. As such, we respectfully disagree with our colleague's view that the principal rationale for showing deference to findings of fact is the opportunity to observe witnesses first-hand. It is our view that the trial judge enjoys numerous advantages over appellate judges which bear on all conclusions of fact, and, even in the absence of these advantages, there are other compelling policy reasons supporting a deferential approach to inferences of fact. We conclude, therefore, by emphasizing that there is one, and only one, standard of review applicable to all factual conclusions made by the trial judge — that of palpable and overriding error.

la crédibilité des témoins, ce n'est pas là le seul domaine où il bénéficie d'un avantage sur les juges des cours d'appel. Parmi les avantages dont jouit le juge de première instance sur le plan des inférences factuelles, mentionnons son expertise relative en matière d'appréciation et d'évaluation de la preuve, de même que la connaissance unique qu'il possède de la preuve souvent abondante produite par les parties. Cette familiarité avec toute la trame factuelle lui est d'une grande utilité lorsque vient le moment de tirer des conclusions de fait. En outre, les considérations relatives au coût, au nombre et à la durée des appels sont tout aussi pertinentes pour ce qui est des inférences de fait que pour ce qui est des conclusions de fait, et justifient l'application aux unes comme aux autres d'une norme empreinte de retenue. En conséquence, nous ne partageons pas l'opinion de notre collègue selon laquelle la raison principale justifiant de faire montre de retenue à l'égard des conclusions de fait est la possibilité qu'a le juge de première instance d'observer les témoins directement. Nous sommes d'avis que le juge de première instance jouit, par rapport aux juges d'appel, de nombreux avantages qui influent sur toutes les conclusions de fait et que, même si ces avantages n'existaient pas, d'autres considérations impérieuses justifient de faire montre de retenue à l'égard des inférences de fait. Par conséquent, nous concluons en soulignant qu'il n'y a qu'une seule et unique norme de contrôle applicable à toutes les conclusions factuelles tirées par le juge de première instance, soit celle de l'erreur manifeste et dominante.

D. *Standard of Review for Questions of Mixed Fact and Law*

26 At the outset, it is important to distinguish questions of mixed fact and law from factual findings (whether direct findings or inferences). Questions of mixed fact and law involve applying a legal standard to a set of facts: *Canada (Director of Investigation and Research) v. Southam Inc.*, [1997] 1 S.C.R. 748, at para. 35. On the other hand, factual findings or inferences require making a conclusion of fact based on a set of facts. Both mixed fact and law and fact findings often involve drawing inferences; the difference lies in whether the inference drawn is legal

D. *La norme de contrôle applicable aux questions mixtes de fait et de droit*

D'entrée de jeu, il importe de distinguer les questions mixtes de fait et de droit des conclusions factuelles (qu'il s'agisse de conclusions directes ou d'inférences). Les questions mixtes de fait et de droit supposent l'application d'une norme juridique à un ensemble de faits : *Canada (Directeur des enquêtes et des recherches) c. Southam Inc.*, [1997] 1 R.C.S. 748, par. 35. Par contre, les conclusions ou les inférences de fait exigent que soit tirée une conclusion factuelle d'un ensemble de faits. Tant les questions mixtes de fait et de droit que les questions

or factual. Because of this similarity, the two types of questions are sometimes confounded. This confusion was pointed out by A. L. Goodhart in "Appeals on Questions of Fact" (1955), 71 *L.Q.R.* 402, at p. 405:

> The distinction between [the perception of facts and the evaluation of facts] tends to be obfuscated because we use such a phrase as "the judge found as a fact that the defendant had been negligent," when what we mean to say is that "the judge found as a fact that the defendant had done acts A and B, and as a matter of opinion he reached the conclusion that it was not reasonable for the defendant to have acted in that way."

In the case at bar, there are examples of both types of questions. The issue of whether the municipality ought to have known of the hazard in the road involves weighing the underlying facts and making factual findings as to the knowledge of the municipality. It also involves applying a legal standard, which in this case is provided by s. 192(3) of the *Rural Municipality Act, 1989*, S.S. 1989-90, c. R-26.1, to these factual findings. Similarly, the finding of negligence involves weighing the underlying facts, making factual conclusions therefrom, and drawing an inference as to whether or not the municipality failed to exercise the legal standard of reasonable care and therefore was negligent.

Once it has been determined that a matter being reviewed involves the application of a legal standard to a set of facts, and is thus a question of mixed fact and law, then the appropriate standard of review must be determined and applied. Given the different standards of review applicable to questions of law and questions of fact, it is often difficult to determine what the applicable standard of review is. In *Southam*, *supra*, at para. 39, this Court illustrated how an error on a question of mixed fact and law can amount to a pure error of law subject to the correctness standard:

> . . . if a decision-maker says that the correct test requires him or her to consider A, B, C, and D, but in fact the

de fait exigent souvent du tribunal qu'il tire des inférences; la différence réside dans le caractère — juridique ou factuel — de ces inférences. En raison de cette similitude, on confond parfois les deux catégories de questions. Cette confusion a été soulignée par A. L. Goodhart dans « Appeals on Questions of Fact » (1955), 71 *L.Q.R.* 402, p. 405 :

> [TRADUCTION] La distinction entre [la perception des faits et l'appréciation de ceux-ci] a tendance à être embrouillée parce que nous utilisons la formule « le juge a conclu au fait que le défendeur avait été négligent », alors que ce que nous voulons dire, c'est que « le juge a constaté le fait que le défendeur a commis les actes A et B et, suivant son opinion, il a conclu qu'il n'était pas raisonnable pour ce dernier d'avoir agi ainsi ».

L'affaire qui nous occupe présente des exemples des deux catégories de questions. Pour répondre à la question de savoir si la municipalité aurait dû connaître le danger présenté par le chemin, il faut apprécier les faits à l'origine de l'affaire et tirer des conclusions factuelles relativement à la connaissance de la municipalité. Il faut appliquer à ces conclusions factuelles une norme juridique qui, en l'occurrence, est énoncée au par. 192(3) de la *Rural Municipality Act, 1989*, S.S. 1989-90, ch. R-26.1. De même, pour pouvoir conclure à la négligence, il faut apprécier les faits essentiels, en tirer des conclusions factuelles puis en dégager une inférence, c'est-à-dire se demander si la municipalité a oui ou non omis de respecter la norme de diligence raisonnable et si elle a, par conséquent, été négligente ou non.

27

Une fois établi que la question examinée exige l'application d'une norme juridique à un ensemble de faits et qu'il s'agit donc d'une question mixte de fait et de droit, il faut alors déterminer quelle est la norme de contrôle appropriée et l'appliquer. Vu les diverses normes de contrôle qui s'appliquent aux questions de droit et aux questions de fait, il est souvent difficile de déterminer celle qui s'applique. Dans l'arrêt *Southam*, précité, par. 39, notre Cour a expliqué comment une erreur touchant une question mixte de fait et de droit peut constituer une pure erreur de droit, assujettie à la norme de la décision correcte :

> . . . si un décideur dit que, en vertu du critère applicable, il lui faut tenir compte de A, B, C et D, mais que, dans les

decision-maker considers only A, B, and C, then the outcome is as if he or she had applied a law that required consideration of only A, B, and C. If the correct test requires him or her to consider D as well, then the decision-maker has in effect applied the wrong law, and so has made an error of law.

Therefore, what appears to be a question of mixed fact and law, upon further reflection, can actually be an error of pure law.

28 However, where the error does not amount to an error of law, a higher standard is mandated. Where the trier of fact has considered all the evidence that the law requires him or her to consider and still comes to the wrong conclusion, then this amounts to an error of mixed law and fact and is subject to a more stringent standard of review: *Southam*, *supra*, at paras. 41 and 45. While easy to state, this distinction can be difficult in practice because matters of mixed law and fact fall along a spectrum of particularity. This difficulty was pointed out in *Southam*, at para. 37:

> . . . the matrices of facts at issue in some cases are so particular, indeed so unique, that decisions about whether they satisfy legal tests do not have any great precedential value. If a court were to decide that driving at a certain speed on a certain road under certain conditions was negligent, its decision would not have any great value as a precedent. In short, as the level of generality of the challenged proposition approaches utter particularity, the matter approaches pure application, and hence draws nigh to being an unqualified question of mixed law and fact. See R. P. Kerans, *Standards of Review Employed by Appellate Courts* (1994), at pp. 103-108. Of course, it is not easy to say precisely where the line should be drawn; though in most cases it should be sufficiently clear whether the dispute is over a general proposition that might qualify as a principle of law or over a very particular set of circumstances that is not apt to be of much interest to judges and lawyers in the future.

29 When the question of mixed fact and law at issue is a finding of negligence, this Court has held that

faits, il ne prend en considération que A, B, et C, alors le résultat est le même que s'il avait appliqué une règle de droit lui dictant de ne tenir compte que de A, B et C. Si le bon critère lui commandait de tenir compte aussi de D, il a en fait appliqué la mauvaise règle de droit et commis, de ce fait, une erreur de droit.

Par conséquent, ce qui peut paraître une question mixte de fait et de droit peut, après plus ample examen, se révéler en réalité une pure erreur de droit.

Cependant, lorsque l'erreur ne constitue pas une erreur de droit, une norme de contrôle plus exigeante s'impose. Dans les cas où le juge des faits examine tous les éléments de preuve que le droit lui commande de prendre en considération mais en tire néanmoins une conclusion erronée, il commet alors une erreur mixte de fait et de droit, qui est assujettie à une norme de contrôle plus rigoureuse : *Southam*, précité, par. 41 et 45. Bien que facile à énoncer, cette distinction peut s'avérer difficile à établir en pratique parce que les questions mixtes de fait et de droit s'étalent le long d'un spectre comportant des degrés variables de particularité. Cette difficulté a été soulignée dans l'arrêt *Southam*, par. 37 :

> . . . il arrive que les faits dans certaines affaires soient si particuliers, de fait qu'ils soient si uniques, que les décisions concernant la question de savoir s'ils satisfont aux critères juridiques n'ont pas une grande valeur comme précédents. Si une cour décidait que le fait d'avoir conduit à une certaine vitesse, sur une route donnée et dans des conditions particulières constituait de la négligence, sa décision aurait peu de valeur comme précédent. Bref, plus le niveau de généralité de la proposition contestée se rapproche de la particularité absolue, plus l'affaire prend le caractère d'une question d'application pure, et s'approche donc d'une question de droit et de fait parfaite. Voir R. P. Kerans, *Standards of Review Employed by Appellate Courts* (1994), aux pp. 103 à 108. Il va de soi qu'il n'est pas facile de dire avec précision où doit être tracée la ligne de démarcation; quoique, dans la plupart des cas, la situation soit suffisamment claire pour permettre de déterminer si le litige porte sur une proposition générale qui peut être qualifiée de principe de droit ou sur un ensemble très particulier de circonstances qui n'est pas susceptible de présenter beaucoup d'intérêt pour les juges et les avocats dans l'avenir.

Lorsque la question mixte de fait et de droit en litige est une conclusion de négligence, notre

a finding of negligence by the trial judge should be deferred to by appellate courts. In *Jaegli Enterprises Ltd. v. Taylor*, [1981] 2 S.C.R. 2, at p. 4, Dickson J. (as he then was) set aside the holding of the British Columbia Court of Appeal that the trial judge had erred in his finding of negligence on the basis that "it is wrong for an appellate court to set aside a trial judgment where there is not palpable and overriding error, and the only point at issue is the interpretation of the evidence as a whole" (see also *Schreiber Brothers Ltd. v. Currie Products Ltd.*, [1980] 2 S.C.R. 78, at p. 84).

Cour a jugé que les cours d'appel devaient faire preuve de retenue à l'égard de la conclusion du juge de première instance. Dans l'arrêt *Jaegli Enterprises Ltd. c. Taylor*, [1981] 2 R.C.S. 2, p. 4, le juge Dickson (plus tard Juge en chef) a infirmé la décision de la Cour d'appel de la Colombie-Britannique portant que le juge de première instance avait erronément conclu à la négligence, pour le motif qu'« une cour d'appel commet une erreur lorsqu'elle infirme un jugement de première instance s'il n'y a pas une erreur manifeste et dominante, et si l'interprétation de l'ensemble de la preuve est le seul point en litige » (voir aussi l'arrêt *Schreiber Brothers Ltd. c. Currie Products Ltd.*, [1980] 2 R.C.S. 78, p. 84).

This more stringent standard of review for findings of negligence is appropriate, given that findings of negligence at the trial level can also be made by juries. If the standard were instead correctness, this would result in the appellate court assessing even jury findings of negligence on a correctness standard. At present, absent misdirection on law by the trial judge, such review is not available. The general rule is that courts accord great deference to a jury's findings in civil negligence proceedings:

30

Il convient d'appliquer cette norme de contrôle plus exigeante aux conclusions de négligence, étant donné que de telles conclusions peuvent également être tirées par des jurys en première instance. Si la norme applicable était celle de la décision correcte, il s'ensuivrait que les cours d'appel appliqueraient cette norme pour contrôler même des conclusions de négligence tirées par jurys. Actuellement, il n'y a ouverture à un tel contrôle que si le juge du procès a donné des directives erronées au jury sur le droit applicable. Suivant la règle générale, les tribunaux font montre d'une grande retenue envers les conclusions des jurys dans les procès civils pour négligence :

> The principle has been laid down in many judgments of this Court to this effect, that the verdict of a jury will not be set aside as against the weight of evidence unless it is so plainly unreasonable and unjust as to satisfy the Court that no jury reviewing the evidence as a whole and acting judicially could have reached it.
>
> (*McCannell v. McLean*, [1937] S.C.R. 341, at p. 343)

> [TRADUCTION] Le principe pertinent a été énoncé dans bon nombre d'arrêts de notre Cour, à savoir qu'il n'y a pas lieu d'écarter le verdict d'un jury parce qu'il va à l'encontre du poids de la preuve, à moins que le verdict en question ne soit nettement déraisonnable et injuste au point de convaincre le tribunal qu'aucun jury examinant la preuve dans son ensemble et agissant de façon judiciaire n'aurait pu le prononcer.
>
> (*McCannell c. McLean*, [1937] R.C.S. 341, p. 343)

See also *Dube v. Labar*, [1986] 1 S.C.R. 649, at p. 662, and *C.N.R. v. Muller*, [1934] 1 D.L.R. 768 (S.C.C.). To adopt a correctness standard would change the law and undermine the traditional function of the jury. Therefore, requiring a standard of "palpable and overriding error" for findings of negligence made by either a trial judge or a jury rein-

Voir également *Dube c. Labar*, [1986] 1 R.C.S. 649, p. 662, et *C.N.R. c. Muller*, [1934] 1 D.L.R. 768 (C.S.C.). Adopter la norme de la décision correcte aurait pour effet de modifier le droit et de porter atteinte au rôle traditionnel du jury. Par conséquent, le fait d'exiger l'application de la norme de l'« erreur manifeste et dominante » aux

forces the proper relationship between the appellate and trial court levels and accords with the established standard of review applicable to a finding of negligence by a jury.

31 Where, however, the erroneous finding of negligence of the trial judge rests on an incorrect statement of the legal standard, this can amount to an error of law. This distinction was pointed out by Cory J. in *Galaske v. O'Donnell*, [1994] 1 S.C.R 670, at pp. 690-91:

> The definition of the standard of care is a mixed question of law and fact. It will usually be for the trial judge to determine, in light of the circumstances of the case, what would constitute reasonable conduct on the part of the legendary reasonable man placed in the same circumstances. In some situations a simple reminder may suffice while in others, for example when a very young child is the passenger, the driver may have to put the seat belt on the child himself. In this case, however, the driver took no steps whatsoever to ensure that the child passenger wore a seat belt. It follows that the trial judge's decision on the issue amounted to a finding that there was no duty at all resting upon the driver. This was an error of law.

Galaske, *supra*, is an illustration of the point made in *Southam*, *supra*, of the potential to extricate a purely legal question from what appears to be a question of mixed fact and law. However, in the absence of a legal error or a palpable and overriding error, a finding of negligence by a trial judge should not be interfered with.

32 We are supported in our conclusion by the analogy which can be drawn between inferences of fact and questions of mixed fact and law. As stated above, both involve drawing inferences from underlying facts. The difference lies in whether the inference drawn relates to a legal standard or not. Because both processes are intertwined with the weight assigned to the evidence, the numerous policy reasons which support a deferential stance to the trial judge's inferences of fact, also, to a certain extent, support showing

fins de contrôle d'une conclusion de négligence tirée par un juge ou un jury consolide les rapports qui doivent exister entre les juridictions d'appel et celles de première instance et respecte la norme de contrôle bien établie qui s'applique aux conclusions de négligence tirées par les jurys.

Toutefois, lorsque le juge du procès conclut erronément à la négligence par suite d'une formulation incorrecte de la norme juridique, cela peut constituer une erreur de droit. Cette distinction a été faite par le juge Cory dans l'arrêt *Galaske c. O'Donnell*, [1994] 1 R.C.S. 670, p. 690-691 :

> La définition de la norme de diligence est une question mixte de droit et de fait. Il incombera habituellement au juge du procès de déterminer, compte tenu des circonstances de l'espèce, ce qui constituerait une conduite raisonnable de la part de la personne raisonnable légendaire placée dans la même situation. Dans certains cas, un simple rappel suffira, tandis que dans d'autres, par exemple lorsqu'un très jeune enfant est passager, le conducteur peut avoir à attacher lui-même la ceinture de sécurité de l'enfant. Cependant, en l'espèce, le conducteur n'a pris aucune mesure pour veiller à ce que l'enfant porte sa ceinture de sécurité. Il s'ensuit que la décision du juge du procès sur la question équivalait à une conclusion qu'aucune obligation n'incombait au conducteur, ce qui constituait une erreur de droit.

L'arrêt *Galaske*, précité, illustre bien l'idée exposée dans l'arrêt *Southam*, précité, selon laquelle il est possible de dégager une pure question de droit de ce qui paraît être une question mixte de fait et de droit. Toutefois, en l'absence d'erreur de droit ou d'une erreur manifeste et dominante, la conclusion de négligence tirée par un juge de première instance ne doit pas être modifiée.

L'analogie qui peut être établie entre les inférences de fait et les questions mixtes de fait et de droit étaye notre conclusion. Comme nous l'avons dit précédemment, dans les deux cas des inférences doivent être tirées des faits à l'origine de l'affaire. La différence dépend de la question de savoir si l'inférence se rapporte à une norme juridique ou non. Parce que le résultat des deux processus est tributaire du poids accordé à la preuve, les diverses considérations de principe justifiant de faire montre de retenue à l'égard des inférences de

deference to the trial judge's inferences of mixed fact and law.

Where, however, an erroneous finding of the trial judge can be traced to an error in his or her characterization of the legal standard, then this encroaches on the law-making role of an appellate court, and less deference is required, consistent with a "correctness" standard of review. This nuance was recognized by this Court in *St-Jean v. Mercier*, [2002] 1 S.C.R. 491, 2002 SCC 15, at paras. 48-49:

> A question "about whether the facts satisfy the legal tests" is one of mixed law and fact. Stated differently, "whether the defendant satisfied the appropriate standard of care is a question of mixed law and fact" (*Southam*, at para. 35).
>
> Generally, such a question, once the facts have been established without overriding and palpable error, is to be reviewed on a standard of correctness since the standard of care is normative and is a question of law within the normal purview of both the trial and appellate courts. [Emphasis added.]

A good example of this subtle principle can be found in *Rhône (The) v. Peter A.B. Widener (The)*, [1993] 1 S.C.R. 497, at pp. 515-16. In that case the issue was the identification of certain individuals within a corporate structure as directing minds. This is a mixed question of law and fact. However, the erroneous finding of the courts below was easily traceable to an error of law which could be extricated from the mixed question of law and fact. The extricable question of law was the issue of the functions which are required in order to be properly identified as a "directing mind" within a corporate structure (pp. 515-16). In the opinion of Iacobucci J. for the majority of the Court (at p. 526):

> With respect, I think that the courts below overemphasized the significance of sub-delegation in this case. The key factor which distinguishes directing minds from normal employees is the capacity to exercise decision-making authority on matters of corporate policy, rather than merely to give effect to such policy on an

fait du juge de première instance justifient également, dans une certaine mesure, de faire de même à l'égard de ses inférences mixtes de fait et de droit.

33 Par contre, lorsqu'il peut être établi que la conclusion erronée du juge de première instance découle d'une erreur quant à la norme juridique à appliquer, ce facteur touche au rôle de création du droit de la cour d'appel, et une retenue moins élevée s'impose, conformément à la norme de la décision « correcte ». Notre Cour a apporté cette nuance dans l'arrêt *St-Jean c. Mercier*, [2002] 1 R.C.S. 491, 2002 CSC 15, par. 48-49 :

> La question qui consiste « à déterminer si les faits satisfont au critère juridique » est une question mixte de droit et de fait ou, en d'autres termes, « la question de savoir si le défendeur a respecté la norme de diligence appropriée est une question de droit et de fait » (*Southam*, par. 35).
>
> Une fois les faits établis sans erreur manifeste et dominante, cette question doit généralement être révisée suivant la norme de la décision correcte puisque la norme de diligence est normative et constitue une question de droit qui relève de la compétence habituelle des tribunaux de première instance et d'appel. [Nous soulignons.]

34 Un bon exemple de ce principe subtil est l'arrêt *Rhône (Le) c. Peter A.B. Widener (Le)*, [1993] 1 R.C.S. 497, p. 515-516. La question en litige dans cette affaire consistait à déterminer si certaines personnes faisaient partie des âmes dirigeantes d'une société. Il s'agit d'une question mixte de droit et de fait. Toutefois, la conclusion erronée des juridictions inférieures était facilement imputable à une erreur de droit qui pouvait être dégagée de la question mixte de droit et de fait. La question de droit ainsi isolable était celle des fonctions que devait remplir une personne pour qu'on puisse à bon droit la considérer comme une « âme dirigeante » de la société (p. 515-516). Le juge Iacobucci s'est exprimé ainsi au nom des juges de la majorité, à la p. 526 :

> En toute déférence, je crois que les juridictions inférieures ont trop insisté sur l'importance de la subdélégation en l'espèce. Le facteur clé qui permet de distinguer les âmes dirigeantes des employés ordinaires est la capacité d'exercer un pouvoir décisionnel sur les questions de politique générale de la personne morale, plutôt que

operational basis, whether at head office or across the sea.

35 Stated differently, the lower courts committed an error in law by finding that sub-delegation was a factor identifying a person who is part of the "directing mind" of a company, when the correct legal factor characterizing a "directing mind" is in fact "the capacity to exercise decision-making authority on matters of corporate policy". This mischaracterization of the proper legal test (the legal requirements to be a "directing mind") infected or tainted the lower courts' factual conclusion that Captain Kelch was part of the directing mind. As this erroneous finding can be traced to an error in law, less deference was required and the applicable standard was one of correctness.

36 To summarize, a finding of negligence by a trial judge involves applying a legal standard to a set of facts, and thus is a question of mixed fact and law. Matters of mixed fact and law lie along a spectrum. Where, for instance, an error with respect to a finding of negligence can be attributed to the application of an incorrect standard, a failure to consider a required element of a legal test, or similar error in principle, such an error can be characterized as an error of law, subject to a standard of correctness. Appellate courts must be cautious, however, in finding that a trial judge erred in law in his or her determination of negligence, as it is often difficult to extricate the legal questions from the factual. It is for this reason that these matters are referred to as questions of "mixed law and fact". Where the legal principle is not readily extricable, then the matter is one of "mixed law and fact" and is subject to a more stringent standard. The general rule, as stated in *Jaegli Enterprises*, *supra*, is that, where the issue on appeal involves the trial judge's interpretation of the evidence as a whole, it should not be overturned absent palpable and overriding error.

le simple fait de mettre en œuvre ces politiques dans un cadre opérationnel, que ce soit au siège social ou en mer.

En d'autres termes, les juridictions inférieures ont commis une erreur de droit en concluant que la subdélégation était un facteur permettant de qualifier une personne d'« âme dirigeante » d'une société, alors que le facteur juridique applicable à cet égard est en fait « la capacité d'exercer un pouvoir décisionnel sur les questions de politique générale de la personne morale ». Cette formulation erronée du critère juridique approprié (les conditions juridiques requises pour être une « âme dirigeante ») a entaché ou vicié la conclusion factuelle des juridictions inférieures selon laquelle le capitaine Kelch était une âme dirigeante de la société. Comme cette conclusion erronée était imputable à une erreur de droit, un degré moindre de retenue s'imposait et la norme applicable était celle de la décision correcte.

En résumé, la conclusion de négligence que tire le juge de première instance suppose l'application d'une norme juridique à un ensemble de faits et constitue donc une question mixte de fait et de droit. Les questions mixtes de fait et de droit s'étalent le long d'un spectre. Lorsque, par exemple, la conclusion de négligence est entachée d'une erreur imputable à l'application d'une norme incorrecte, à l'omission de tenir compte d'un élément essentiel d'un critère juridique ou à une autre erreur de principe semblable, une telle erreur peut être qualifiée d'erreur de droit et elle est contrôlée suivant la norme de la décision correcte. Les cours d'appel doivent cependant faire preuve de prudence avant de juger que le juge de première instance a commis une erreur de droit lorsqu'il a conclu à la négligence, puisqu'il est souvent difficile de départager les questions de droit et les questions de fait. Voilà pourquoi on appelle certaines questions des questions « mixtes de fait et de droit ». Si le principe juridique n'est pas facilement isolable, il s'agit alors d'une « question mixte de fait et de droit », assujettie à une norme de contrôle plus rigoureuse. Selon la règle générale énoncée dans l'arrêt *Jaegli Enterprises*, précité, si la question litigieuse en appel soulève l'interprétation de l'ensemble de la preuve par le juge de première instance, cette interprétation ne doit pas être infirmée en l'absence d'erreur manifeste et dominante.

In this regard, we respectfully disagree with our colleague when he states at para. 106 that "[o]nce the facts have been established, the determination of whether or not the standard of care was met by the defendant will in most cases be reviewable on a standard of correctness since the trial judge must appreciate the facts within the context of the appropriate standard of care. In many cases, viewing the facts through the legal lens of the standard of care gives rise to a policy-making or law-setting function that is the purview of both the trial and appellate courts". In our view, it is settled law that the determination of whether or not the standard of care was met by the defendant involves the application of a legal standard to a set of facts, a question of mixed fact and law. This question is subject to a standard of palpable and overriding error unless it is clear that the trial judge made some extricable error in principle with respect to the characterization of the standard or its application, in which case the error may amount to an error of law.

III. Application of the Foregoing Principles to this Case: Standard of Care of the Municipality

A. *The Appropriate Standard of Review*

We agree with our colleague that the correct statement of the municipality's standard of care is that found in *Partridge v. Rural Municipality of Langenburg*, [1929] 3 W.W.R. 555 (Sask. C.A.), *per* Martin J.A., at pp. 558-59:

> The extent of the statutory obligation placed upon municipal corporations to keep in repair the highways under their jurisdiction, has been variously stated in numerous reported cases. There is, however, a general rule which may be gathered from the decisions, and that is, that the road must be kept in such a reasonable state of repair that those requiring to use it may, exercising ordinary care, travel upon it with safety. What is a reasonable state of repair is a question of fact, depending upon all the surrounding circumstances; "repair" is a relative term, and hence the facts in one case afford no fixed rule

37 À cet égard, nous ne pouvons en toute déférence pas souscrire à l'opinion de notre collègue lorsqu'il affirme, au par. 106, qu'« [u]ne fois les faits établis, la décision touchant la question de savoir si le défendeur a respecté ou non la norme de diligence est, dans la plupart des cas, contrôlable selon la norme de la décision correcte, puisque le juge de première instance doit apprécier les faits au regard de la norme de diligence appropriée. Dans bien des cas, l'examen des faits à travers le prisme juridique de la norme de diligence implique l'établissement de politiques d'intérêt général ou la création de règles de droit, rôle qui relève autant des cours de première instance que des cours d'appel ». À notre avis, il est bien établi en droit que la question de savoir si le défendeur a respecté la norme de diligence suppose l'application d'une norme juridique à un ensemble de faits, ce qui en fait une question mixte de fait et de droit. Cette question est assujettie à la norme de l'erreur manifeste et dominante, à moins que le juge de première instance n'ait clairement commis une erreur de principe isolable en déterminant la norme applicable ou en appliquant cette norme, auquel cas l'erreur peut constituer une erreur de droit.

III. Application des principes qui précèdent à l'espèce : la norme de diligence applicable à la municipalité

A. *La norme de contrôle appropriée*

38 À l'instar de notre collègue, nous sommes d'avis que la norme de diligence applicable à la municipalité a été convenablement énoncée par le juge Martin dans l'arrêt *Partridge c. Rural Municipality of Langenburg*, [1929] 3 W.W.R. 555 (C.A. Sask.), p. 558-559 :

> [TRADUCTION] L'étendue de l'obligation légale d'entretien qui incombe aux corporations municipales à l'égard des routes qui se trouvent sur leur territoire a été énoncée de diverses façons dans nombre de décisions publiées. Il est toutefois possible de dégager la règle générale suivante de ces décisions : le chemin doit être tenu dans un état raisonnable d'entretien, de façon que ceux qui doivent l'emprunter puissent, en prenant des précautions normales, y circuler en sécurité. La question de savoir en quoi consiste un état raisonnable d'entretien est une question de fait, qui est fonction de toutes

by which to determine another case where the facts are different . . . .

However, we differ from the views of our colleague in that we find that the trial judge applied the correct test in determining that the municipality did not meet its standard of care, and thus did not commit an error of law of the type mentioned in *Southam*, *supra*. The trial judge applied all the elements of the *Partridge* standard to the facts, and her conclusion that the respondent municipality failed to meet this standard should not be overturned absent palpable and overriding error.

B. *The Trial Judge Did Not Commit an Error of Law*

39 We note that our colleague bases his conclusion that the municipality met its standard of care on his finding that the trial judge neglected to consider the conduct of the ordinary motorist, and thus failed to apply the correct standard of care, an error of law, which justifies his reconsideration of the evidence (para. 114). As a starting point to the discussion of the ordinary or reasonable motorist, we emphasize that the failure to discuss a relevant factor in depth, or even at all, is not itself a sufficient basis for an appellate court to reconsider the evidence. This was made clear by the recent decision of *Van de Perre*, *supra*, where Bastarache J. says, at para. 15:

. . . omissions in the reasons will not necessarily mean that the appellate court has jurisdiction to review the evidence heard at trial. As stated in *Van Mol (Guardian ad Litem of) v. Ashmore* (1999), 168 D.L.R. (4th) 637 (B.C.C.A.), leave to appeal refused [2000] 1 S.C.R. vi, an omission is only a material error if it gives rise to the reasoned belief that the trial judge must have forgotten, ignored or misconceived the evidence in a way that affected his conclusion. Without this reasoned belief, the appellate court cannot reconsider the evidence.

les circonstances de l'espèce; le terme « entretien » est une notion relative et, par conséquent, les faits propres à une affaire donnée ne permettent pas de dégager de règle déterminée permettant de trancher une autre affaire présentant des circonstances différentes . . .

Toutefois, contrairement à notre collègue, nous estimons que la juge de première instance a appliqué le bon critère juridique en concluant que la municipalité n'avait pas respecté la norme de diligence à laquelle elle était tenue, et que la juge n'a donc pas commis une erreur de droit du genre de celle décrite dans l'arrêt *Southam*, précité. La juge de première instance a appliqué aux faits de l'espèce tous les éléments du critère énoncé dans l'arrêt *Partridge*, et sa conclusion que la municipalité défenderesse n'a pas respecté ce critère ne devrait pas être infirmée en l'absence d'erreur manifeste et dominante.

B. *La juge de première instance n'a pas commis d'erreur de droit*

Nous soulignons que notre collègue fonde sa décision que la municipalité a respecté la norme de diligence sur sa conclusion que la juge de première instance a négligé de prendre en compte le comportement de l'automobiliste moyen et n'a donc pas appliqué la bonne norme de diligence, commettant ainsi une erreur de droit le justifiant de réexaminer la preuve (par. 114). Pour les besoins de l'analyse du critère de l'automobiliste moyen ou raisonnable, nous tenons au départ à signaler que l'omission d'examiner en profondeur un facteur pertinent, voire de ne pas l'examiner du tout, n'est pas en soi un fondement suffisant pour justifier une cour d'appel de réexaminer la preuve. Ce principe a été clairement énoncé dans l'arrêt récent *Van de Perre*, précité, où le juge Bastarache a dit ceci, au par. 15 :

. . . des omissions dans les motifs ne signifieront pas nécessairement que la cour d'appel a compétence pour examiner la preuve entendue au procès. Comme le dit l'arrêt *Van Mol (Guardian ad Litem of) c. Ashmore* (1999), 168 D.L.R. (4th) 637 (C.A.C.-B.), autorisation d'appel refusée [2000] 1 R.C.S. vi, une omission ne constitue une erreur importante que si elle donne lieu à la conviction rationnelle que le juge de première instance doit avoir oublié, négligé d'examiner ou mal interprété la preuve de telle manière que sa conclusion en a été affectée. Faute d'une telle conviction rationnelle, la cour d'appel ne peut pas réexaminer la preuve.

In our view, as we will now discuss, there can be no reasoned belief in this case that the trial judge forgot, ignored, or misconceived the question of the ordinary driver. It would thus be an error to engage in a re-assessment of the evidence on this issue.

The fact that the conduct of the ordinary motorist was in the mind of the trial judge from the outset is clear from the fact that she began her standard of care discussion by stating the correct test, quoting the above passage from *Partridge*, *supra*. Absent some clear sign that she subsequently varied her approach, this initial acknowledgment of the correct legal standard is a strong indication that this was the standard she applied. Not only is there no indication that she departed from the stated test, but there are further signs which support the conclusion that the trial judge applied the *Partridge* standard. The first such indication is that the trial judge did discuss, both explicitly and implicitly, the conduct of an ordinary or reasonable motorist approaching the curve. The second indication is that she referred to the evidence of the experts, Mr. Anderson and Mr. Werner, both of whom discussed the conduct of an ordinary motorist in this situation. Finally, the fact that the trial judge apportioned negligence to Mr. Nikolaisen indicates that she assessed his conduct against the standard of the ordinary driver, and thus considered the conduct of the latter.

The discussion of the ordinary motorist is found in the passage from the trial judgment immediately following the statement of the requisite standard of care:

> Snake Hill Road is a low traffic road. It is however maintained by the R.M. so that it is passable year round. There are permanent residences on the road. It is used by farmers for access to their fields and cattle. Young people frequent Snake Hill Road for parties and as such the road is used by those who may not have the same degree of familiarity with it as do residents.

À notre avis, comme nous allons le voir, la présente espèce ne peut faire naître la conviction rationnelle que la juge de première instance a oublié d'examiner la question du conducteur moyen, en a fait abstraction ou l'a mal interprétée. Il serait donc erroné de réexaminer la preuve relative à cette question.

40 Le fait que, dès le départ, la juge de première instance a eu à l'esprit la conduite de l'automobiliste moyen ressort clairement du fait qu'elle a commencé son examen de la norme de diligence en formulant le critère approprié, c'est-à-dire en citant le passage susmentionné de l'arrêt *Partridge*, précité. En l'absence d'indications claires qu'elle a subséquemment modifié sa méthode d'analyse, cette mention initiale de la norme juridique appropriée constitue un indice solide qu'il s'agit bien de la norme qu'elle a appliquée. Non seulement rien n'indique qu'elle s'est écartée du critère énoncé, mais d'autres indices étayent la conclusion qu'elle a appliqué le critère de l'arrêt *Partridge*. Le premier de ces indices est que la juge s'est bel et bien interrogée, tant explicitement qu'implicitement, sur la conduite de l'automobiliste moyen ou raisonnable s'approchant du virage. Le deuxième indice est qu'elle a fait état des témoignages des experts, MM. Anderson et Werner, qui ont tous deux analysé le comportement de l'automobiliste moyen se trouvant dans cette situation. Enfin, le fait que la juge de première instance ait imputé une partie de la responsabilité à M. Nikolaisen indique qu'elle a évalué sa conduite eu égard au critère du conducteur moyen, et qu'elle a donc pris en compte la conduite de ce dernier.

41 On trouve l'analyse relative à l'automobiliste moyen dans cet extrait du jugement de première instance qui suit immédiatement l'énoncé de la norme de diligence requise :

> [TRADUCTION] Le chemin Snake Hill est un chemin à faible débit de circulation. Il est néanmoins entretenu par la M.R. à longueur d'année afin de le garder carrossable. Des résidences permanentes sont situées en bordure de celui-ci. Les fermiers l'utilisent pour accéder à leurs champs et à leur bétail. Des jeunes gens empruntent le chemin Snake Hill pour se rendre à des fêtes, de sorte qu'il est utilisé par des conducteurs qui ne le connaissent pas toujours aussi bien que les résidents de l'endroit.

There is a portion of Snake Hill Road that is a hazard to the public. In this regard I accept the evidence of Mr. Anderson and Mr. Werner. Further, it is a hazard that is not readily apparent to users of the road. It is a hidden hazard. The location of the Nikolaisen rollover is the most dangerous segment of Snake Hill Road. Approaching the location of the Nikolaisen rollover, limited sight distance, created by uncleared bush, precludes a motorist from being forewarned of an impending sharp right turn immediately followed by a left turn. While there were differing opinions on the *maximum* speed at which this curve can be negotiated, I am satisfied that when limited sight distance is combined with the tight radius of the curve and lack of superelevation, this curve cannot be *safely* negotiated at speeds greater than 60 kilometres per hour when conditions are favourable, or 50 kilometres per hour when wet.

. . . where the existence of that bush obstructs the ability of a motorist to be forewarned of a hazard such as that on Snake Hill Road, it is reasonable to expect the R.M. to erect and maintain a warning or regulatory sign so that a motorist, using ordinary care, may be forewarned, adjust speed and take corrective action in advance of entering a dangerous situation. [Underlining added; italics in original.]

([1998] 5 W.W.R. 523, at paras. 84-86)

42 In our view, this passage indicates that the trial judge did consider how a motorist exercising ordinary care would approach the curve in question. The implication of labelling the curve a "hidden hazard" which is "not readily apparent to users of the road", is that the danger is of the type that cannot be anticipated. This in turn implies that, even if the motorist exercises ordinary care, he or she will not be able to react to the curve. As well, the trial judge referred explicitly to the conduct of a motorist exercising ordinary care: "it is reasonable to expect the R.M. to erect and maintain a warning or regulatory sign so that a motorist, using ordinary care, may be forewarned, adjust speed and take corrective action in advance of entering a dangerous situation" (para. 86 (emphasis added)).

Il y a, sur le chemin Snake Hill, un tronçon qui présente un danger pour le public. À cet égard, je retiens les témoignages de MM. Anderson et Werner. En outre, il s'agit d'un danger qui n'est pas facilement décelable par les usagers du chemin. Il s'agit d'un danger caché. L'endroit où le véhicule de M. Nikolaisen a fait un tonneau est situé sur le tronçon le plus dangereux du chemin Snake Hill. À l'approche de cet endroit, des broussailles réduisent la distance de visibilité de l'automobiliste et l'empêchent de voir l'imminence d'un virage à droite serré, qui est immédiatement suivi d'un virage à gauche. Bien que des opinions divergentes aient été émises quant à la vitesse *maximale* à laquelle ce virage peut être pris, je suis d'avis que, vu la distance de visibilité réduite, l'existence d'une courbe serrée et l'absence de surélévation du chemin, ce virage ne peut être pris *en sécurité* à une vitesse supérieure à 60 kilomètres à l'heure dans des conditions favorables, ou 50 kilomètres à l'heure sur chaussée humide.

. . . à l'endroit où la présence des broussailles empêche les automobilistes de voir venir un danger comme celui qui existe sur le chemin Snake Hill, il est raisonnable de s'attendre à ce que la M.R. installe et maintienne un panneau d'avertissement ou de signalisation afin qu'un automobiliste prenant des précautions normales soit prévenu et puisse réduire sa vitesse et prendre des mesures correctives avant d'arriver à l'endroit dangereux. [Nous soulignons; en italique dans l'original.]

([1998] 5 W.W.R. 523, par. 84-86)

À notre avis, cet extrait indique que la juge de première instance a effectivement pris en compte la façon dont l'automobiliste prenant des précautions normales s'approcherait du virage en question. Qualifier le virage de [TRADUCTION] « danger caché », danger qui « n'est pas facilement décelable par les usagers du chemin », implique que le danger en est un qu'il est impossible de prévoir. Il s'ensuit que, même si l'automobiliste prend des précautions normales, il ne pourra pas réagir à la présence du virage. Par ailleurs, la juge de première instance a explicitement fait état de la conduite de l'automobiliste prenant des précautions normales : [TRADUCTION] « [I]l est raisonnable de s'attendre à ce que la M.R. installe et maintienne un panneau d'avertissement ou de signalisation afin qu'un automobiliste prenant des précautions normales soit prévenu et puisse réduire sa vitesse et prendre des mesures correctives avant d'arriver à l'endroit dangereux » (par. 86 (nous soulignons)).

With respect to the speed of a motorist approaching the curve, there is also an indication that the trial judge considered the conduct of an ordinary motorist. First, she stated that she accepted the evidence of Mr. Anderson and Mr. Werner with respect to the finding that the curve constituted a hazard to the public. The evidence given by these experts suggests that between 60 and 80 km/h is a reasonable speed to drive parts of this road, and at that speed, the curve presents a hazard. Their evidence also indicates their general opinion that the curve was a hazardous one. Mr. Anderson refers to the curve being difficult to negotiate at "normal speeds". Also, Mr. Anderson states that "if you're not aware that this curve is there, the sharp course of the curve, and you enter too far into it before you realize that the curve is there, then you have to do a tighter radius than 118 metres in order to get back on track to be able to negotiate the second curve". He also states that "you could be lulled into thinking you've got an 80 kilometres an hour road until you are too far into the tight curve to be able to respond".

43 Relativement à la vitesse à laquelle les automobilistes s'approchent du virage, il existe également un indice confirmant que la juge de première instance a pris en compte la conduite de l'automobiliste moyen. Premièrement, elle a dit qu'elle acceptait les témoignages de MM. Anderson et de Werner en ce qui concerne la conclusion que la courbe constituait un danger pour le public. Leurs témoignages suggèrent qu'une vitesse de 60 à 80 km/h est une vitesse raisonnable à certains endroits de ce chemin et que, à cette vitesse, la courbe constitue un danger. Leurs témoignages indiquent également qu'ils estiment de façon générale que la courbe est dangereuse. De dire M. Anderson, le virage est difficile à prendre à des [TRADUCTION] « vitesses normales ». Il ajoute que, [TRADUCTION] « si on ne connaît pas la présence de ce virage à cet endroit, le caractère prononcé du virage, et qu'on ne s'aperçoit pas qu'il y a un virage avant de s'être déjà engagé trop loin dans celui-ci, il faut tourner dans un rayon inférieur à 118 mètres pour corriger sa trajectoire afin d'être en mesure de prendre le deuxième virage ». Il affirme également qu' [TRADUCTION] « on peut être amené à croire qu'on se trouve sur une route où il est possible de rouler à 80 km/h, jusqu'à ce qu'on soit engagé trop loin dans le virage serré pour être capable de réagir ».

The Court of Appeal found that, given the nature and condition of Snake Hill Road, the contention that this rural road would be taken at 80 km/h by the ordinary motorist was untenable. However, it is clear from the trial judge's reasons that she did not take 80 km/h as the speed at which the ordinary motorist would approach the curve. Instead she found, based on expert evidence, that "this curve cannot be *safely* negotiated at speeds greater than 60 kilometres per hour when conditions are favourable, or 50 kilometres per hour when wet" (para. 85 (emphasis in original)). From this finding, coupled with the finding that the curve was hidden and unexpected, the logical conclusion is that the trial judge found that a motorist exercising ordinary care could easily be deceived into approaching the curve at speeds in excess of the safe speed for the curve, and subsequently be taken by surprise. Therefore, the trial judge found that the curve was hazardous to the ordinary

44 La Cour d'appel a jugé que, vu la nature et l'état du chemin Snake Hill, la prétention selon laquelle l'automobiliste moyen roulerait sur cette route rurale à 80 km/h était insoutenable. Toutefois, il ressort clairement des motifs de la juge de première instance qu'elle ne considérait pas que l'automobiliste moyen s'approcherait du virage à 80 km/h. Elle a plutôt conclu, à partir des témoignages des experts, que [TRADUCTION] « ce virage ne peut être pris *en sécurité* à une vitesse supérieure à 60 kilomètres à l'heure dans des conditions favorables, ou 50 kilomètres à l'heure sur chaussée humide » (par. 85 (en italique dans l'original)). De cette constatation, conjuguée à celle que le virage était caché et imprévu, il est logique de conclure que la juge de première instance a estimé que l'automobiliste prenant des précautions normales pouvait aisément être amené à s'approcher du virage à des vitesses supérieures à la vitesse sécuritaire pour le prendre, et se retrouver ensuite pris au dépourvu. La juge de première

motorist and it follows that she applied the correct standard of care.

45 In our respectful view, our colleague errs in agreeing with the Court of Appeal's finding that the trial judge should have addressed the conduct of the ordinary motorist more fully (para. 124). At para. 119, he writes:

> A proper application of the test demands that the trial judge ask the question: "How would a reasonable driver have driven on this road?" Whether or not a hazard is "hidden" or a curve is "inherently" dangerous does not dispose of the question.

And later, he states, "In my view, the question of how the reasonable driver would have negotiated Snake Hill Road necessitated a somewhat more in-depth analysis of the character of the road" (para. 125). With respect, requiring the trial judge to have made this specific inquiry in her reasons is inconsistent with *Van de Perre*, *supra*, which makes it clear that an omission or a failure to discuss a factor in depth is not, in and of itself, a basis for interfering with the findings of the trial judge and reweighing the evidence. As we note above, it is clear that although the trial judge may not have conducted an extensive review of this element of the *Partridge* test, she did indeed consider this factor by stating the correct test, then applying this test to the facts.

46 We note that in relying on the evidence of Mr. Anderson and Mr. Werner, the trial judge chose not to base her decision on the conflicting evidence of other witnesses. However, her reliance on the evidence of Mr. Anderson and Mr. Werner is insufficient proof that she "forgot, ignored, or misconceived" the evidence. The full record was before the trial judge and we can presume that she reviewed all of it, absent further proof that the trial judge forgot, ignored or misapprehended the evidence, leading to an error in law. It is open to a trial judge to prefer the evidence of some witnesses over others:

instance a donc conclu que le virage était dangereux pour l'automobiliste moyen et il s'ensuit qu'elle a appliqué la norme de diligence appropriée.

En toute déférence, notre collègue commet une erreur en souscrivant à la conclusion de la Cour d'appel selon laquelle la juge de première instance aurait dû examiner de manière plus approfondie la conduite de l'automobiliste moyen (par. 124). Il écrit ceci, au par. 119 :

> Pour bien appliquer le critère juridique, le juge de première instance doit se poser la question suivante : « Comment un conducteur raisonnable aurait-il roulé sur ce chemin? » Le fait de conclure qu'il existe ou non un danger « caché » ou qu'une courbe est quelque chose d'« intrinsèquement » dangereux ne vide pas la question.

Plus loin, il dit : « À mon avis, la question de savoir comment un conducteur raisonnable aurait roulé sur le chemin Snake Hill nécessitait un examen un peu plus approfondi de la nature du chemin » (par. 125). En toute déférence, considérer que la juge de première instance aurait dû faire cette analyse particulière dans ses motifs est incompatible avec l'arrêt *Van de Perre*, précité, lequel établit clairement que l'omission ou le défaut d'analyser un facteur en profondeur ne constitue pas, en soi, une raison justifiant de modifier les conclusions du juge de première instance et de réexaminer la preuve. Comme nous l'avons dit précédemment, il est clair que, quoique la juge de première instance n'ait peut-être pas fait une analyse approfondie de ce volet du critère énoncé dans l'arrêt *Partridge*, elle a effectivement tenu compte de ce facteur en formulant le critère approprié puis en l'appliquant aux faits de l'espèce.

Nous tenons à souligner que, en s'appuyant sur les témoignages de MM. Anderson et Werner, la juge de première instance a choisi de ne pas fonder sa décision sur les témoignages contradictoires rendus par d'autres témoins. Toutefois, cela ne suffit pas pour établir qu'elle a « oublié, négligé d'examiner ou mal interprété » la preuve. La juge de première instance disposait de l'ensemble du dossier et on peut présumer qu'elle l'a étudié d'un bout à l'autre, en l'absence d'autre indication qu'elle a oublié, négligé d'examiner ou mal interprété la preuve, commettant ainsi une erreur de droit. Le juge de première

Toneguzzo-Norvell, *supra*, at p. 123. Mere reliance by the trial judge on the evidence of some witnesses over others cannot on its own form the basis of a "reasoned belief that the trial judge must have forgotten, ignored or misconceived the evidence in a way that affected his conclusion" (*Van de Perre*, *supra*, at para. 15). This is in keeping with the narrow scope of review by an appellate court applicable in this case.

A further indication that the trial judge considered the conduct of an ordinary motorist on Snake Hill Road is her finding that both Mr. Nikolaisen and the municipality breached their duty of care to Mr. Housen, and that the defendant Nikolaisen was 50 percent contributorily negligent. Since a finding of negligence implies a failure to meet the ordinary standard of care, and since Mr. Nikolaisen's negligence related to his driving on the curve, to find that Mr. Nikolaisen's conduct on the curve failed to meet the standard of the ordinary driver implies a consideration of that ordinary driver on the curve. The fact that the trial judge distinguished the conduct of Mr. Nikolaisen in driving negligently on the road from the conduct of the municipality in negligently failing to erect a warning sign is evidence that the trial judge kept the municipality's legal standard clearly in mind in its application to the facts, and that she applied this standard to the ordinary driver, not the negligent driver.

To summarize, in the course of her reasons, the trial judge first stated the requisite standard of care from *Partridge*, *supra*, relating to the conduct of the ordinary driver. She then applied that standard to the facts referring again to the conduct of the ordinary driver. Finally, in light of her finding that the municipality breached this standard, she apportioned negligence between the driver and the municipality in a way which again entailed a consideration of the

instance peut retenir la déposition de certains témoins de préférence à d'autres : *Toneguzzo-Norvell*, précité, p. 123. Le fait pour le juge de première instance de s'appuyer sur certains témoignages plutôt que sur d'autres ne peut à lui seul fournir l'assise d'une « conviction rationnelle que le juge de première instance doit avoir oublié, négligé d'examiner ou mal interprété la preuve de telle manière que sa conclusion en a été affectée » (*Van de Perre*, précité, par. 15). Cette conclusion est compatible avec la portée restreinte de l'examen qu'il convient de faire en appel dans la présente affaire.

47 Une autre indication que la juge de première instance s'est interrogée sur la façon dont conduit l'automobiliste moyen sur le chemin Snake Hill est sa conclusion que M. Nikolaisen et la municipalité ont tous deux manqué à leur obligation de diligence envers M. Housen, et que le défendeur Nikolaisen était responsable de négligence concourante dans une proportion de 50 p. 100. Comme une conclusion de négligence implique un manquement à la norme de diligence habituelle, et comme la négligence de M. Nikolaisen était liée à sa manière de conduire dans le virage, la conclusion que sa conduite à cet endroit ne respectait pas le critère du conducteur moyen suppose qu'on s'est demandé comment ce conducteur s'approcherait du virage. La distinction qu'a établie la juge de première instance entre la négligence dont a fait preuve M. Nikolaisen lorsqu'il roulait sur le chemin et celle dont la municipalité a fait montre en omettant d'installer un panneau d'avertissement prouve qu'elle n'a pas perdu de vue la norme juridique régissant la municipalité et l'application de cette norme aux faits, et que la juge a appliqué cette norme au conducteur moyen, et non au conducteur négligent.

48 En résumé, dans ses motifs la juge de première instance a d'abord énoncé la norme de diligence requise par l'arrêt *Partridge*, précité, relativement à la conduite de l'automobiliste moyen. Elle a ensuite appliqué cette norme aux faits, se reportant encore une fois à la conduite de l'automobiliste moyen. Enfin, vu sa conclusion que la municipalité avait manqué à cette norme de diligence, elle a réparti la responsabilité entre le conducteur

ordinary driver. As such, we are overwhelmingly drawn to the conclusion that the conduct of the ordinary driver was both considered and applied by the trial judge.

49 Thus, we conclude that the trial judge did not commit an error of law with respect to the municipality's standard of care. On this matter, we disagree with the basis for the re-assessment of the evidence undertaken by our colleague (paras. 122-42) and regard this re-assessment to be an unjustified intrusion into the finding of the trial judge that the municipality breached its standard of care. This finding is a question of mixed law and fact which should not be overturned absent a palpable and overriding error. As discussed below, it is our view that no such error exists, as the trial judge conducted a reasonable assessment based on her view of the evidence.

C. *The Trial Judge Did Not Commit A Palpable or Overriding Error*

50 Despite this high standard of review, the Court of Appeal found that a palpable and overriding error was made by the trial judge ([2000] 4 W.W.R. 173, 2000 SKCA 12, at para. 84). With respect, this finding was based on the erroneous presumption that the trial judge accepted 80 km/h as the speed at which an ordinary motorist would approach the curve, a presumption which our colleague also adopts in his reasons (para. 133).

51 As discussed above, the trial judge's finding was that an ordinary motorist could approach the curve in excess of 60 km/h in dry conditions, and 50 km/h in wet conditions, and that at such speeds the curve was hazardous. The trial judge's finding was not based on a particular speed at which the curve would be approached by the ordinary motorist. Instead, she found that, because the curve was hidden and sharper than would be anticipated, a motorist exercising ordinary care could approach it at greater than

et la municipalité d'une manière qui, une fois de plus, atteste la prise en compte du critère du conducteur moyen. En conséquence, nous en venons irrésistiblement à la conclusion que la juge de première instance a pris en compte et appliqué ce critère.

Par conséquent, nous estimons que la juge de première instance n'a pas commis d'erreur de droit en ce qui concerne la norme de diligence à laquelle était tenue la municipalité. Sur ce point, nous ne souscrivons pas aux raisons sur lesquelles se fondent notre collègue pour réexaminer la preuve (aux par. 122 à 142) et nous considérons ce réexamen comme une intervention injustifiée relativement à la conclusion de la juge de première instance portant que la municipalité a manqué à la norme de diligence à laquelle elle était tenue. Cette conclusion porte sur une question mixte de droit et de fait et elle ne peut pas être infirmée en l'absence d'erreur manifeste et dominante. Comme nous le verrons plus loin, nous sommes d'avis qu'aucune erreur de cette nature n'a été commise, car la juge de première instance a fait une analyse raisonnable, fondée sur son appréciation de la preuve.

C. *La juge de première instance n'a pas commis d'erreur manifeste ou dominante*

Malgré cette norme de contrôle sévère, la Cour d'appel a jugé que la juge de première instance avait commis une erreur manifeste et dominante ([2000] 4 W.W.R. 173, 2000 SKCA 12, par. 84). En toute déférence, cette conclusion repose sur la présomption erronée selon laquelle la juge aurait accepté que l'automobiliste moyen approcherait du virage à 80 km/h, présomption qu'adopte également notre collègue dans ses motifs (par. 133).

Comme nous l'avons vu plus tôt, la conclusion de la juge de première instance était que l'automobiliste moyen pourrait s'approcher du virage à une vitesse supérieure à 60 km/h sur chaussée sèche, et 50 km/h sur chaussée humide, mais qu'à ces vitesses le virage était dangereux. Cette conclusion n'était pas fondée sur une vitesse précise à laquelle l'automobiliste moyen s'approcherait du virage. La juge de première instance a plutôt estimé que, parce que le virage est caché et plus serré que ce à quoi on

the speed at which it would be safe to negotiate the curve.

As we explain in greater detail below, in our opinion, not only is this assessment far from reaching the level of a palpable and overriding error, in our view, it is a sensible and logical way to deal with large quantities of conflicting evidence. It would be unrealistic to focus on some exact speed at which the curve would likely be approached by the ordinary motorist. The findings of the trial judge in this regard were the result of a reasonable and practical assessment of the evidence as a whole.

In finding a palpable and overriding error, Cameron J.A. relied on the fact that the trial judge adopted the expert evidence of Mr. Anderson and Mr. Werner which was premised on a *de facto* speed limit of 80 km/h taken from *The Highway Traffic Act*, S.S. 1986, c. H-3.1. However, whether or not the experts based their testimony on this limit, the trial judge did not adopt that limit as the speed of the ordinary motorist approaching the curve. Again, the trial judge found that the curve could not be taken safely at greater than 60 km/h dry and 50 km/h wet, and there is evidence in the record to support this finding. For example, Mr. Anderson states:

If you don't anticipate the curve and you get too far into it before you start to do your correction then you can get into trouble even at, probably at 60. Fifty you'd have to be a long ways into it, but certainly at 60 you could.

It is notable too that both Mr. Anderson and Mr. Werner would have recommended installing a sign, warning motorists of the curve, with a posted limit of 50 km/h.

Although clearly the curve could not be negotiated safely at 80 km/h, it could also not be

s'attend normalement, il était possible qu'un automobiliste prenant des précautions normales s'en approche à une vitesse supérieure à la vitesse sécuritaire pour prendre le virage.

52 Comme nous allons le préciser plus loin, nous sommes d'avis que non seulement cette appréciation est-elle loin de constituer une erreur manifeste et dominante, mais elle est une réponse judicieuse et logique eu égard à l'abondance d'éléments de preuve contradictoires. Il serait irréaliste de fixer une quelconque vitesse à laquelle l'automobiliste moyen s'approcherait vraisemblablement du virage. Les conclusions de la juge de première instance à cet égard découlent d'une évaluation raisonnable et réaliste de l'ensemble de la preuve.

53 En concluant à l'existence d'une erreur manifeste et dominante, le juge Cameron de la Cour d'appel s'est appuyé sur le fait que la juge de première instance avait retenu les témoignages d'expert de MM. Anderson et Werner, lesquels étaient fondés sur la vitesse limite *de facto* de 80 km/h prévue par la *Highway Traffic Act*, S.S. 1986, ch. H-3.1. Toutefois, que le témoignage des experts ait été ou non fondé sur cette limite, la juge de première instance n'a pas retenu cette vitesse comme étant celle à laquelle l'automobiliste moyen s'approche du virage. Rappelons que la juge de première instance a estimé qu'il n'était pas possible d'aborder le virage en sécurité à une vitesse supérieure à 60 km/h sur chaussée sèche et 50 km/h sur chaussée humide, et il existe au dossier des éléments étayant cette conclusion. Par exemple, M. Anderson a dit ceci :

[TRADUCTION] Si vous ne prévoyez pas l'arrivée du virage et que vous vous engagez trop loin dans celui-ci avant d'amorcer votre manœuvre correctrice, vous risquez d'avoir des ennuis même à, probablement à 60. À cinquante il faudrait que vous soyez engagé assez loin, mais à 60 vous pourriez certainement en avoir.

Il convient également de signaler que MM. Anderson et Werner auraient tous deux recommandé l'installation d'un panneau avertissant les automobilistes de l'imminence du virage et fixé la vitesse maximale permise à 50 km/h.

54 Le virage ne pouvait manifestement pas être pris en sécurité à 80 km/h, mais il ne pouvait l'être non

negotiated safely at much slower speeds. It should also be noted that the trial judge did not adopt the expert testimony of Mr. Anderson and Mr. Werner in its entirety. She stated: "There is a portion of Snake Hill Road that is a hazard to the public. In this regard I accept the evidence of Mr. Anderson and Mr. Werner" (para. 85 (emphasis added)). It cannot be assumed from this that she accepted a *de facto* speed limit of 80 km/h especially when one bears in mind (1) the trial judge's statement of the safe speeds of 50 and 60 km/h, and (2) the fact that both these experts found the road to be unsafe at much lower speeds than 80 km/h.

55 Given that the trial judge did not base her standard of care analysis on a *de facto* speed limit of 80 km/h, it then follows that the Court of Appeal's finding of a palpable and overriding error cannot stand.

56 Furthermore, the narrowly defined scope of appellate review dictates that a trial judge should not be found to have misapprehended or ignored evidence, or come to the wrong conclusions merely because the appellate court diverges in the inferences it draws from the evidence and chooses to emphasize some portions of the evidence over others. As we are of the view that the trial judge committed no error of law in finding that the municipality breached its standard of care, we are also respectfully of the view that our colleague's re-assessment of the evidence on this issue (paras. 129-42) is an unjustified interference with the findings of the trial judge, based on a difference of opinion concerning the inferences to be drawn from the evidence and the proper weight to be placed on different portions of the evidence. For instance, in the opinion of our colleague, based on some portions of the expert evidence, a reasonable driver exercising ordinary care would approach a rural road at 50 km/h or less, because a reasonable driver would have difficulty seeing the sharp radius of the curve and oncoming traffic (para. 129). However, the trial judge, basing her assessment on other portions of the expert evidence, found that the nature of the road was such that a motorist could be

plus à des vitesses beaucoup plus réduites. Il convient également de souligner que la juge de première instance n'a pas retenu intégralement les témoignages d'expert de MM. Anderson et Werner. Elle a dit : [TRADUCTION] « Il y a, sur le chemin Snake Hill, un tronçon qui présente un danger pour le public. À cet égard, je retiens les témoignages de MM. Anderson et Werner » (par. 85 (nous soulignons)). Ces propos ne permettent pas de présumer qu'elle acceptait une vitesse limite *de facto* de 80 km/h, particulièrement si l'on se rappelle (1) qu'elle a dit qu'on pouvait rouler en sécurité à des vitesses de 50 et de 60 km/h, et (2) que ces deux experts ont considéré que le chemin n'était pas sûr même à des vitesses bien inférieures à 80 km/h.

Puisque la juge de première instance n'a pas fondé son analyse de la norme de diligence sur une vitesse limite *de facto* de 80 km/h, il s'ensuit que la conclusion de la Cour d'appel relativement à l'existence d'une erreur manifeste et dominante ne saurait être confirmée.

En outre, vu la portée restreinte de la révision en appel, on ne saurait conclure qu'un juge de première instance a négligé d'examiner la preuve, l'a mal interprétée ou est arrivé à des conclusions erronées, simplement parce que le tribunal d'appel tire des inférences divergentes de la preuve et décide d'accorder plus d'importance à certains éléments qu'à d'autres. Étant d'avis que la juge de première instance n'a pas commis d'erreur de droit en concluant que la municipalité avait violé la norme de diligence à laquelle elle était tenue, nous estimons aussi, en toute déférence, que le réexamen de la preuve auquel procède notre collègue sur cette question (aux par. 129 à 142) constitue une intervention injustifiée relativement aux conclusions de la juge de première instance, fondée sur une divergence d'opinions quant aux inférences devant être tirées de la preuve et au poids qu'il convient d'accorder à divers éléments. Par exemple, notre collègue est d'avis, sur la foi de certaines parties des témoignages d'expert, qu'un conducteur raisonnable prenant des précautions normales roulerait sur une route rurale à une vitesse maximale de 50 km/h, parce qu'il aurait de la difficulté à voir que le virage est serré et s'il vient des véhicules en sens inverse (par. 129). Or, se

deceived into believing that the road did not contain a sharp curve and thus would approach the road normally, unaware of the hidden danger.

We are faced in this case with conflicting expert evidence on the issue of the correct speed at which an ordinary motorist would approach the curve on Snake Hill Road. The differing inferences from the evidence drawn by the trial judge and the Court of Appeal amount to a divergence on what weight should be placed on various pieces of conflicting evidence. As noted by our colleague, Mr. Sparks was of the opinion that "[if] you can't see around the corner, then, you know, drivers would have a fairly strong signal . . . that due care and caution would be required". Similar evidence of this nature was given by Mr. Nikolaisen, and indeed even by Mr. Anderson and Mr. Werner. This is contrasted with evidence such as that given by Mr. Anderson and Mr. Werner that a reasonable driver would be "lulled" into thinking that there is an 80 km/h road ahead of him or her.

As noted by McLachlin J. in *Toneguzzo-Norvell*, *supra*, at p. 122 and mentioned above, "the weight to be assigned to the various pieces of evidence is under our trial system essentially the province of the trier of fact". In that case, a unanimous Court found that the Court of Appeal erred in interfering with the trial judge's factual findings, on the basis that it was open to the trial judge to place less weight on certain evidence and accept other, conflicting evidence which the trial judge found to be more convincing (*Toneguzzo-Norvell*, at pp. 122-23). Similarly, in this case, the trial judge's factual findings concerning the proper speed to be used on approaching the curve should not be interfered with. It was open to her to choose to place more weight on certain portions of the evidence of Mr. Anderson and Mr. Werner, where the evidence was conflicting. Her assessment of the proper speed was a reasonable inference based on the evidence and does not reach

fondant sur d'autres parties des témoignages d'expert, la juge de première instance a estimé que la nature du chemin était telle qu'un automobiliste pourrait être amené à croire que le chemin ne comporte pas de virage serré et, de ce fait, à y rouler normalement, sans soupçonner l'existence du danger caché.

57 En l'espèce, nous sommes en présence de témoignages d'expert contradictoires sur la question de la vitesse à laquelle l'automobiliste moyen s'approcherait du virage du chemin Snake Hill. Les inférences différentes que la juge de première instance et la Cour d'appel tirent de la preuve équivalent à une divergence d'opinion quant au poids à accorder à divers éléments de preuve contradictoires. Le témoin Sparks a émis l'opinion suivante, que cite également notre collègue : [TRADUCTION] « [Si] vous ne pouvez voir, de l'autre côté du virage, alors, vous savez, cela devrait envoyer un message clair aux conducteurs [. . .] que l'attention et la prudence s'imposent ». M. Nikolaisen, et même MM. Anderson et Werner ont d'ailleurs témoigné au même effet. Cela contraste avec l'affirmation de MM. Anderson et Werner selon laquelle un conducteur raisonnable serait [TRADUCTION] « amené » à croire qu'il se trouve sur un chemin où l'on peut rouler à 80 km/h.

58 Comme l'a souligné madame le juge McLachlin, à la p. 122 de l'arrêt *Toneguzzo-Norvell*, précité, « selon notre système de procès, il appartient essentiellement au juge des faits [. . .] d'attribuer un poids aux différents éléments de preuve ». Dans cette affaire, notre Cour a conclu à l'unanimité que la Cour d'appel avait commis une erreur en modifiant les conclusions de fait du juge de première instance, au motif qu'il était loisible à celui-ci d'accorder un poids moins grand à certains éléments de preuve et à accepter d'autres éléments contradictoires, qu'il considérait plus convaincants. (*Toneguzzo-Norvell*, p. 122-123). De même, en l'espèce, il n'y a pas lieu de modifier les conclusions de fait de la juge de première instance au sujet de la vitesse à laquelle il faudrait approcher du virage. Il lui était loisible d'accorder plus de poids à certaines parties des témoignages de MM. Anderson et Werner, dans les cas où la preuve était contradictoire. Son

the level of a palpable and overriding error. As such, the trial judge's findings with respect to the standard of care should not be overturned.

IV. Knowledge of the Municipality

59 We agree with our colleague that s. 192(3) of *The Rural Municipality Act*, *1989*, requires the plaintiff to show that the municipality knew or should have known of the disrepair of Snake Hill Road before the municipality can be found to have breached its duty of care under s. 192. We also agree that the evidence of the prior accidents, in and of itself, is insufficient to impute such knowledge to the municipality. However, we find that the trial judge did not err in her finding that the municipality knew or ought to have known of the disrepair.

60 As discussed, the question of whether the municipality knew or should have known of the disrepair of Snake Hill Road is a question of mixed fact and law. The issue is legal in the sense that the municipality is held to a legal standard of knowledge of the nature of the road, and factual in the sense of whether it had the requisite knowledge on the facts of this case. As we state above, absent an isolated error in law or principle, such a finding is subject to the "palpable and overriding" standard of review. In this case, our colleague concludes that the trial judge erred in law by failing to approach the question of knowledge from the perspective of a prudent municipal councillor, and holds that a prudent municipal councillor could not be expected to become aware of the risk posed to the ordinary driver by the hazard in question. He also finds that the trial judge erred in law by failing to recognize that the burden of proving knowledge rested with the plaintiff. With respect, we disagree with these conclusions.

appréciation de la vitesse appropriée constituait une inférence raisonnable, fondée sur la preuve, et elle ne constitue pas une erreur manifeste et dominante. Dans ce contexte, il n'y a pas lieu d'écarter ses conclusions concernant la norme de diligence.

IV. Connaissance de la municipalité

À l'instar de notre collègue, nous estimons que le par. 192(3) de la *Rural Municipality Act, 1989*, oblige le demandeur à démontrer que la municipalité connaissait ou aurait dû connaître le mauvais état du chemin Snake Hill pour qu'il soit possible de conclure qu'elle a manqué à l'obligation de diligence qui lui incombe en vertu de l'art. 192. Nous sommes nous aussi d'avis que la preuve des accidents antérieurs n'est pas, en soi, suffisante pour prêter cette connaissance à la municipalité. Cependant, nous arrivons à la conclusion que la juge de première instance n'a pas commis d'erreur lorsqu'elle a conclu que la municipalité connaissait ou aurait dû connaître le mauvais état du chemin.

Comme nous l'avons vu, la question de savoir si la municipalité connaissait ou aurait dû connaître le mauvais état du chemin Snake Hill est une question mixte de droit et de fait. Il s'agit, d'une part, d'une question de droit en ce que la municipalité est tenue à une norme juridique qui lui impose de connaître la nature du chemin, et, d'autre part, d'une question de fait en ce qu'il faut déterminer si, eu égard aux faits de l'espèce, elle avait la connaissance requise. Comme nous l'avons dit précédemment, en l'absence d'erreur de droit ou de principe isolable, une telle conclusion est assujettie à la norme de contrôle de l'erreur « manifeste et dominante ». En l'espèce, notre collègue conclut que la juge de première instance a commis une erreur de droit en ne considérant pas la question de la connaissance du point de vue du conseiller municipal prudent, et il estime qu'on ne pouvait s'attendre à ce qu'un conseiller municipal prudent s'aperçoive du risque que le danger en question faisait courir au conducteur moyen. Il est également d'avis que la juge de première instance a commis une erreur de droit en ne reconnaissant pas que la charge de prouver la connaissance incombait au demandeur. En toute déférence, nous ne pouvons souscrire à ces conclusions.

The hazard in question is an unsigned and unexpected sharp curve. In our view, when a hazard is, like this one, a permanent feature of the road which has been found to present a risk to the ordinary driver, it is open to the trial judge to draw an inference, on this basis alone, that a prudent municipal councillor ought to be aware of the hazard. In support of his conclusion on the issue of knowledge, our colleague states that the municipality's knowledge is inextricably linked to the standard of care, and ties his finding on the question of knowledge to his finding that the curve did not present a hazard to the ordinary motorist (para. 149). We agree that the question of knowledge is closely linked to the standard of care, and since we find that the trial judge was correct in holding that the curve presented a hazard to the ordinary motorist, from there it was open to the trial judge to find that the municipality ought to have been aware of this hazard. We further note that as a question of mixed fact and law this finding is subject to the "palpable and overriding" standard of review. On this point, however, we restrict ourselves to situations such as the one at bar where the hazard in question is a permanent feature of the road, as opposed to a temporary hazard which reasonably may not come to the attention of the municipality in time to prevent an accident from occurring.

61 Le danger en question est une courbe serrée et soudaine, qui n'est annoncée par aucune signalisation. À notre avis, lorsqu'un danger constitue, comme celui-ci qui nous intéresse, une caractéristique permanente qui, a-t-on jugé, présente un risque pour le conducteur moyen, le juge de première instance peut, pour ce seul motif, inférer qu'un conseiller municipal prudent aurait dû connaître l'existence d'un danger. Pour étayer sa conclusion sur la question de la connaissance, notre collègue affirme que la connaissance de la municipalité est intimement liée à celle de la norme de diligence, et il lie sa conclusion sur la connaissance à sa conclusion selon laquelle la courbe ne constituait pas un danger pour l'automobiliste moyen (par. 149). Nous reconnaissons que la question de la connaissance est étroitement liée à celle de la norme de diligence, et, comme nous estimons que la juge de première instance a eu raison de conclure que la courbe présentait un danger pour l'automobiliste moyen, elle pouvait dès lors juger que la municipalité aurait dû connaître ce danger. Soulignons également que cette conclusion visant une question mixte de fait et de droit est assujettie à la norme de contrôle de l'erreur « manifeste et dominante ». Sur ce point, toutefois, nous limitons la portée de notre opinion aux situations analogues à celle qui nous occupe, où le danger constitue une caractéristique permanente du chemin, par opposition à un danger temporaire dont une municipalité pourrait raisonnablement ne pas être informée en temps utile pour empêcher un accident de survenir.

In addition, our colleague relies on the evidence of the lay witnesses, Craig and Toby Thiel, who lived on Snake Hill Road, and who testified that they had not experienced any difficulties with it (para. 149). With respect, we find three problems with this reliance. First, since the curve was found to be a hazard based on its hidden and unexpected nature, relying on the evidence of those who drive the road on a daily basis does not, in our view, assist in determining whether the curve presented a hazard to the ordinary motorist, or whether the municipality ought to have been aware of the hazard. In addition, in finding that the municipality ought to have known of the disrepair, the trial judge clearly chose not to rely on the above evidence. As we state above,

62 Par ailleurs, notre collègue se fonde sur les dépositions de témoins ordinaires, Craig et Toby Thiel, qui habitaient sur le chemin Snake Hill et qui ont témoigné n'avoir jamais éprouvé de difficulté à conduire à cet endroit (par. 149). En toute déférence, nous estimons que le fait de se fonder sur ces témoignages pose trois problèmes. D'abord, vu la conclusion que la courbe constituait un danger à cause de sa nature cachée et imprévue, ce n'est pas en se basant sur le témoignage de ceux qui empruntent quotidiennement le chemin qu'il est possible, à notre avis, de déterminer si cette courbe présentait un danger pour l'automobiliste moyen, ou si la municipalité aurait dû connaître l'existence du danger. De plus, en concluant que la municipalité

it is open for a trial judge to prefer some parts of the evidence over others, and to re-assess the trial judge's weighing of the evidence, is, with respect, not within the province of an appellate court.

63 As well, since the question of knowledge is to be approached from the perspective of a prudent municipal councillor, we find the evidence of lay witnesses to be of little assistance. In *Ryan*, *supra*, at para. 28, Major J. stated that the applicable standard of care is that which "would be expected of an ordinary, reasonable and prudent person in the same circumstances" (emphasis added). Municipal councillors are elected for the purpose of managing the affairs of the municipality. This requires some degree of study and of information gathering, above that of the average citizen of the municipality. Indeed, it may in fact require consultation with experts to properly meet the obligation to be informed. Although municipal councillors are not experts, to equate the "prudent municipal councillor" with the opinion of lay witnesses who live on the road is incorrect in our opinion.

64 It is in this context that we view the following comments of the trial judge, at para. 90:

> If the R.M. did not have actual knowledge of the danger inherent in this portion of Snake Hill Road, it should have known. While four accidents in 12 years may not in itself be significant, it takes on more significance given the close proximity of three of these accidents, the relatively low volume of traffic, the fact that there are permanent residences on the road and the fact that the road is frequented by young and perhaps less experienced drivers. I am not satisfied that the R.M. has established that in these circumstances it took reasonable steps to prevent this state of disrepair on Snake Hill Road from continuing.

aurait dû connaître le mauvais état du chemin, la juge de première instance a clairement choisi de ne pas se fonder sur les témoignages susmentionnés. Comme nous l'avons dit précédemment, le juge de première instance peut préférer certaines parties de la preuve à d'autres, et, en toute déférence, il n'appartient pas au tribunal d'appel de procéder à nouveau à l'appréciation de la preuve, tâche déjà accomplie par le juge du procès.

Qui plus est, étant donné que la question de la connaissance doit être considérée du point de vue du conseiller municipal prudent, nous estimons que le témoignage des témoins ordinaires est peu utile. Dans l'arrêt *Ryan*, précité, par. 28, le juge Major a dit que la norme de diligence qui s'applique est celle de la personne agissant aussi diligemment que « le ferait une personne ordinaire, raisonnable et prudente placée dans la même situation » (nous soulignons). Les conseillers municipaux sont élus pour gérer les affaires de la municipalité. Pour s'acquitter de cette tâche, il leur faut, dans un cas donné, examiner la situation et recueillir de l'information, faire davantage que ce que fait le simple citoyen de la municipalité. De fait, ils peuvent avoir à consulter des experts pour respecter leur obligation d'être informés. Bien que les conseillers municipaux ne soient pas des experts, il est à notre avis erroné d'assimiler le point de vue du « conseiller municipal prudent » à l'opinion de témoins ordinaires qui habitent sur le chemin.

C'est à la lumière de ce contexte que nous interprétons les commentaires suivants de la juge de première instance (au par. 90) :

> [TRADUCTION] Si la M.R. ne connaissait pas concrètement le danger intrinsèque que comporte cette portion du chemin Snake Hill, elle aurait dû le connaître. Le fait que quatre accidents se soient produits en 12 ans n'est peut-être pas significatif en soi, mais il le devient si l'on considère que trois de ces accidents sont survenus à proximité, qu'il s'agit d'une route à débit de circulation relativement faible, que des résidences permanentes sont situées en bordure de celle-ci et que le chemin est fréquenté par des conducteurs jeunes et peut-être moins expérimentés. Je ne suis pas convaincue que la M.R. a établi avoir, dans ces circonstances, pris des mesures raisonnables pour remédier au mauvais état du chemin Snake Hill.

From this statement, we take the trial judge to have meant that, given the occurrence of prior accidents on this low-traffic road, the existence of permanent residents, and the type of drivers on the road, the municipality did not take the reasonable steps it should have taken in order to ensure that Snake Hill Road did not contain a hazard such as the one in question. Based on these factors, the trial judge drew the inference that the municipality should have been put on notice and investigated Snake Hill Road, in which case it would have become aware of the hazard in question. This factual inference, grounded as it was on the trial judge's assessment of the evidence, was in our view, far from reaching the requisite standard of palpable and overriding error, proper.

Selon notre interprétation, la juge de première instance a voulu dire que, compte tenu des accidents antérieurs sur ce chemin à faible débit de circulation, de la présence de résidents permanents et du type de conducteurs qui empruntent le chemin, la municipalité n'a pas pris les mesures raisonnables qu'elle aurait dû prendre pour faire en sorte que le chemin Snake Hill ne comporte pas de danger comme celui en cause. À partir de ces éléments, la juge de première instance a inféré que la municipalité aurait dû être informée de la situation sur le chemin Snake Hill et aurait dû faire enquête à cet égard, ce qui lui aurait permis de prendre connaissance de l'existence du danger. Cette inférence factuelle, qui repose sur l'appréciation de la preuve faite par la juge de première instance, était selon nous fondée et loin de constituer l'erreur manifeste et dominante requise par la norme pertinente.

Although we agree with our colleague that the circumstances of the prior accidents in this case do not provide a direct basis for the municipality to have had knowledge of the particular hazard in question, in the view of the trial judge, they should have caused the municipality to investigate Snake Hill Road, which in turn would have resulted in actual knowledge. In this case, far from causing the municipality to investigate, the evidence of Mr. Danger, who had been the municipal administrator for 20 years, was that, until the time of the trial, he was not even aware of the three accidents which had occurred between 1978 and 1987 on Snake Hill Road. As such, we do not find that the trial judge based her conclusion on any perspective other than that of a prudent municipal councillor, and therefore that she did not commit an error of law in this respect. Moreover, we do not find that she imputed knowledge to the municipality on the basis of the occurrence of prior accidents on Snake Hill Road. The existence of the prior accidents was simply a factor which caused the trial judge to find that the municipality should have been put on notice with respect to the condition of Snake Hill Road (para. 90).

65 À l'instar de notre collègue, nous estimons que les circonstances des accidents survenus antérieurement, en l'espèce, ne constituent pas une preuve directe que la municipalité aurait dû avoir connaissance du danger particulier en cause, mais, selon la juge de première instance, ces circonstances auraient dû inciter la municipalité à faire enquête à l'égard du chemin Snake Hill, ce qui lui aurait permis de prendre connaissance concrètement du danger. Dans la présente affaire, les accidents antérieurs sont loin d'avoir incité la municipalité à faire enquête. D'ailleurs, M. Danger, administrateur de la municipalité pendant 20 ans, a témoigné que, jusqu'au procès, il n'était même pas au fait des trois accidents survenus entre 1978 et 1987 sur le chemin Snake Hill. En conséquence, nous n'estimons pas que la juge de première instance a fondé sa conclusion sur quelque autre point de vue autre que celui du conseiller municipal prudent, et elle n'a donc pas commis d'erreur de droit à cet égard. De plus, nous sommes d'avis qu'elle n'a pas prêté à la municipalité la connaissance requise sur la base des accidents antérieurs. L'existence de ces accidents ne constituait rien de plus qu'un des éléments qui l'ont amenée à conclure que la municipalité aurait dû être au fait de l'état du chemin Snake Hill (par. 90).

We emphasize that, in our view, the trial judge did not shift the burden of proof to the municipality

66 Nous tenons à souligner que la juge de première instance n'a pas, à notre avis, transféré le fardeau de

on this issue. Once the trial judge found that there was a permanent feature of Snake Hill Road which presented a hazard to the ordinary motorist, it was open to her to draw an inference that the municipality ought to have been aware of the danger. Once such an inference is drawn, then, unless the municipality can rebut the inference by showing that it took reasonable steps to prevent such a hazard from continuing, the inference will be left undisturbed. In our view, this is what the trial judge did in the above passage when she states: "I am not satisfied that the R.M. has established that in these circumstances it took reasonable steps to prevent this state of disrepair on Snake Hill Road from continuing" (para. 90 (emphasis added)). The fact that she drew such an inference is clear from the fact that this statement appears directly after her finding that the municipality ought to have known of the hazard based on the listed factors. Thus, it is our view that the trial judge did not improperly shift the burden of proof onto the municipality in this case.

67 As well, although the circumstances of the prior accidents in this case do not provide strong evidence that the municipality ought to have known of the hazard, proof of prior accidents is not a necessary condition to a finding of breach of the duty of care under s. 192 of *The Rural Municipality Act, 1989*. If this were so, the first victim of an accident on a negligently maintained road would not be able to recover, whereas subsequent victims in identical circumstances would. Although under s. 192(3) the municipality cannot be held responsible for disrepair of which it could not have known, it is not sufficient for the municipality to wait for an accident to occur before remedying the disrepair, and, in the absence of proof by the plaintiff of prior accidents, claim that it could not have known of the hazard. If this were the case, not only would the first victim of an accident suffer a disproportionate evidentiary burden, but municipalities would also be encouraged not to collect information pertaining to accidents on its roads, as this would make it more difficult for the plaintiff in a motor vehicle accident to prove that the

la preuve à la municipalité sur cette question. Dès lors qu'elle a conclu qu'il existait sur le chemin Snake Hill une caractéristique permanente présentant un danger pour l'automobiliste moyen, il lui était loisible d'inférer que la municipalité aurait dû être au fait du danger. Dès l'instant où une telle inférence est tirée, elle demeure inchangée à moins que la municipalité ne puisse la réfuter en démontrant qu'elle a pris des mesures raisonnables pour faire cesser le danger. Selon nous, c'est ce que la juge de première instance a fait dans l'extrait précité lorsqu'elle dit : [TRADUCTION] « Je ne suis pas convaincue que la M.R. a établi avoir, dans ces circonstances, pris des mesures raisonnables pour remédier au mauvais état du chemin Snake Hill » (par. 90 (nous soulignons)). L'existence de cette inférence ressort clairement du fait que le passage précité suit immédiatement la conclusion de la juge de première instance selon laquelle, pour les raisons qu'elle énumère, la municipalité aurait dû connaître l'existence du danger. Par conséquent, nous sommes d'avis que la juge de première instance n'a pas fait erreur et transféré le fardeau de la preuve à la municipalité en l'espèce.

De même, bien que les accidents survenus antérieurement en l'espèce ne constituent pas une preuve solide que la municipalité aurait dû connaître l'existence du danger, la preuve d'accidents antérieurs n'est pas une condition nécessaire pour qu'un tribunal puisse conclure à la violation de l'obligation de diligence prévue par l'art. 192 de la *Rural Municipality Act, 1989*. Si c'était le cas, la première victime d'un accident sur une route négligemment entretenue ne pourrait obtenir réparation, alors que les victimes subséquentes d'accidents survenant dans des circonstances identiques le pourraient. Bien que, au regard du par. 192(3), la municipalité ne puisse être tenue responsable du mauvais état d'une route dont elle n'aurait pu avoir connaissance, elle ne saurait se contenter d'attendre qu'un accident se produise avant de remédier au mauvais état de la route et, si un demandeur n'apporte pas la preuve de l'existence d'accidents antérieurs, soutenir qu'elle n'aurait pu connaître l'existence du danger. Dans cette hypothèse, non seulement imposerait-on à la première victime d'un accident un fardeau de preuve disproportionné, mais on encouragerait aussi

municipality knew or ought to have known of the disrepair.

Although in this case the trial judge emphasized the prior accidents that the plaintiff did manage to prove, in our view, it is not necessary to rely on these accidents in order to satisfy s. 192(3). For the plaintiff to provide substantial and concrete proof of the municipality's knowledge of the state of disrepair of its roads, is to set an impossibly high burden on the plaintiff. Such information was within the particular sphere of knowledge of the municipality, and in our view, it was reasonable for the trial judge to draw an inference of knowledge from her finding that there was an ongoing state of disrepair.

To summarize our position on this issue, we do not find that the trial judge erred in law either by failing to approach the question from the perspective of a prudent municipal councillor, or by improperly shifting the burden of proof onto the defendant. As such, it would require a palpable and overriding error in order to overturn her finding that the municipality knew or ought to have known of the hazard, and, in our view, no such error was made.

V. Causation

We agree with our colleague's statement at para. 159 that the trial judge's conclusions on the cause of the accident was a finding of fact: *Cork v. Kirby MacLean, Ltd.*, [1952] 2 All E.R. 402 (C.A.), at p. 407, quoted with approval in *Matthews v. MacLaren* (1969), 4 D.L.R. (3d) 557 (Ont. H.C.), at p. 566. Thus, this finding should not be interfered with absent palpable and overriding error.

les municipalités à ne pas recueillir d'informations concernant les accidents survenant sur leurs routes, puisqu'il serait en conséquence plus difficile à la victime d'un accident d'automobile qui intente des poursuites de prouver que la municipalité visée connaissait le mauvais état de la route ou aurait dû le connaître.

68 Bien que, en l'espèce, la juge de première instance ait souligné les accidents antérieurs dont le demandeur a effectivement prouvé l'existence, nous sommes d'avis qu'il n'est pas nécessaire de s'appuyer sur ces accidents pour satisfaire aux exigences du par. 192(3). Exiger du demandeur qu'il fournisse une preuve substantielle et tangible de la connaissance par la municipalité du mauvais état de ses routes revient à lui imposer un fardeau inacceptablement lourd. Il s'agit d'information relevant du domaine de connaissance de la municipalité et, selon nous, il était raisonnable que la juge de première instance infère de sa conclusion relative au mauvais état d'entretien persistant du chemin que la municipalité possédait la connaissance requise.

69 Pour résumer notre position sur cette question, nous ne pouvons conclure que la juge de première instance a commis une erreur de droit soit parce qu'elle aurait omis d'examiner la question du point de vue du conseiller municipal prudent, soit parce qu'elle aurait à tort transféré le fardeau de la preuve à la défenderesse. Par conséquent, il faudrait une erreur manifeste et dominante pour écarter sa conclusion que la municipalité connaissait le danger ou aurait dû le connaître et, selon nous, aucune erreur de cette nature n'a été commise.

V. Lien de causalité

70 Nous faisons nôtres les propos énoncés par notre collègue, au par. 159, selon lesquels la conclusion de la juge de première instance quant à la cause de l'accident était une conclusion de fait : *Cork c. Kirby MacLean, Ltd.*, [1952] 2 All E.R. 402 (C.A.), p. 407; cité et approuvé dans *Matthews c. MacLaren* (1969), 4 D.L.R. (3d) 557 (H.C. Ont.), p. 566. En conséquence, cette conclusion ne doit pas être modifiée en l'absence d'erreur manifeste et dominante.

71 The trial judge based her findings on causation on three points (at para. 101):

> (1) the accident occurred at a dangerous part of the road where a sign warning motorists of the hidden hazard should have been erected;
>
> (2) even if there had been a sign, Mr. Nikolaisen's degree of impairment did increase his risk of not reacting, or reacting inappropriately, to a sign;
>
> (3) even so, Mr. Nikolaisen was not driving recklessly such that one would have expected him to have missed or ignored a warning sign. Moments before, on departing the Thiel residence, he had successfully negotiated a sharp curve which he could see and which was apparent to him.

The trial judge concluded that, on a balance of probabilities, Mr. Nikolaisen would have reacted and possibly avoided an accident, if he had been given advance warning of the curve. However she also found that the accident was partially caused by the conduct of Mr. Nikolaisen, and apportioned fault accordingly, with 50 percent to Mr. Nikolaisen and 35 percent to the Rural Municipality (para. 102).

72 As noted above, this Court has previously held that "an omission is only a material error if it gives rise to the reasoned belief that the trial judge must have forgotten, ignored or misconceived the evidence in a way that affected his conclusion" (*Van de Perre*, *supra*, at para.15). In the present case, it is not clear from the trial judge's reasons which portions of the evidence of Mr. Laughlin, Craig and Toby Thiel and Paul Housen she relied upon, or to what extent. However, as we have already stated, the full evidentiary record was before the trial judge and, absent further proof that the omission in her reasons was due to her misapprehension or neglect, of the evidence, we can presume that she reviewed the evidence in its entirety and based her factual findings

La juge de première instance a fondé ses conclusions au sujet du lien de causalité sur trois éléments (au par. 101) :

> (1) l'accident est survenu à un endroit dangereux du chemin, où un panneau de signalisation aurait dû être installé pour avertir les automobilistes du danger caché;
>
> (2) même s'il y avait eu un panneau de signalisation, le degré d'ébriété de M. Nikolaisen avait accru chez lui le risque qu'il ne réagisse pas du tout ou de façon inappropriée à une signalisation;
>
> (3) malgré cela, M. Nikolaisen ne conduisait pas de façon si téméraire qu'il était à prévoir qu'il ne voit pas un panneau de signalisation ou n'en tienne pas compte. Quelques instants plus tôt, à son départ de la résidence des Thiel, il avait pris avec succès un virage serré qu'il pouvait clairement voir.

La juge de première instance a estimé que, selon la prépondérance des probabilités, M. Nikolaisen aurait réagi et peut-être évité l'accident si on lui avait signalé à l'avance la présence de la courbe. Toutefois, elle a également conclu que l'accident avait été causé en partie par la conduite de M. Nikolaisen, et elle a réparti la responsabilité en conséquence, soit dans une proportion de 50 p. 100 à M. Nikolaisen et de 35 p. 100 à la municipalité rurale (par. 102).

Comme nous l'avons indiqué précédemment, notre Cour a jugé, dans une autre affaire, qu'« une omission ne constitue une erreur importante que si elle donne lieu à la conviction rationnelle que le juge de première instance doit avoir oublié, négligé d'examiner ou mal interprété la preuve de telle manière que sa conclusion en a été affectée » (*Van de Perre*, précité, par. 15). En l'espèce, les motifs de la juge de première instance n'indiquent pas clairement sur quelles parties des témoignages de M. Laughlin, de Craig et Toby Thiel et de Paul Housen elle s'est appuyée, ni dans quelle mesure elle l'a fait. Cependant, comme nous l'avons dit plus tôt, la juge de première instance disposait de l'ensemble de la preuve et, en l'absence d'autre élément

on this review. This presumption, absent sufficient evidence of misapprehension or neglect, is consistent with the high level of error required by the test of "palpable and overriding" error. We reiterate that it is open to the trial judge to prefer the testimony of certain witnesses over others and to place more weight on some parts of the evidence than others, particularly where there is conflicting evidence: *Toneguzzo-Norvell*, *supra*, at pp. 122-23. The mere fact that the trial judge did not discuss a certain point or certain evidence in depth is not sufficient grounds for appellate interference: *Van de Perre*, *supra*, at para. 15.

indiquant que cette omission dans ses motifs résulte du fait qu'elle aurait mal interprété des éléments de la preuve ou négligé d'en examiner certains, nous pouvons présumer qu'elle a examiné l'ensemble de la preuve et que ses conclusions de fait reposaient sur cet examen. En l'absence de preuve établissant de façon suffisante qu'il y a eu mauvaise interprétation d'éléments de preuve ou négligence d'examiner certains de ceux-ci, cette présomption permet de conclure à l'absence d'erreur importante du type de celle requise pour satisfaire au critère de l'erreur « manifeste et dominante ». Nous tenons à rappeler que le juge de première instance peut préférer le témoignage de certains témoins et accorder plus de poids à certaines parties de la preuve qu'à d'autres, particulièrement en présence de preuves contradictoires : *Toneguzzo-Norvell*, précité, p. 122-123. Le simple fait que la juge de première instance n'a pas analysé en profondeur un point donné ou un élément de preuve particulier ne constitue pas un motif suffisant pour justifier l'intervention des tribunaux d'appel : *Van de Perre*, précité, par. 15.

For these reasons, we do not feel it appropriate to review the evidence of Mr. Laughlin and the lay witnesses *de novo*. As we concluded earlier, the trial judge's finding of fact that a hidden hazard existed at the curve should not be interfered with. The finding of a hidden hazard that requires a sign formed part of the basis of her findings concerning causation. As her conclusions on the existence of a hidden hazard had a basis in the evidence, her conclusions on causation grounded in part on the hidden hazard finding also had a basis in the evidence.

73 Pour ces motifs, nous n'estimons pas opportun d'examiner à nouveau les dépositions de M. Laughlin et des témoins ordinaires. Comme nous l'avons affirmé précédemment, il n'y a pas lieu de modifier la conclusion de fait de la juge de première instance selon laquelle la courbe présentait un danger caché. Ses conclusions touchant le lien de causalité reposent en partie sur cette conclusion relative à l'existence d'un danger caché nécessitant l'installation d'un panneau d'avertissement. Tout comme ses conclusions relatives à l'existence d'un danger caché, celles touchant le lien de causalité — fondées en partie sur le danger caché — avaient elles aussi des assises dans la preuve.

As for the silence of the trial judge on the evidence of Mr. Laughlin, we observe only that the evidence of Mr. Laughlin appears to be general in nature and thus of limited utility. Mr. Laughlin admitted that he could only provide general comments on the effects of alcohol on motorists, but could not provide specific expertise on the actual effect of alcohol on an individual driver. This is significant, as the level of tolerance of an individual driver plays a key role in determining the actual effect of alcohol on the

74 Pour ce qui est du silence de la juge de première instance concernant le témoignage de M. Laughlin, signalons simplement que ce témoignage paraît être de nature générale et, partant, d'une utilité limitée. M. Laughlin a reconnu qu'il ne pouvait faire que des observations générales quant aux effets de l'alcool sur les automobilistes, et non apporter une expertise particulière sur l'effet concret de l'alcool sur un conducteur donné. Il s'agit d'un point important, puisque le seuil de tolérance d'un conducteur donné

motorist; an experienced drinker, although dangerous, will probably perform better on the road than an inexperienced drinker. It is noteworthy that the trial judge believed the evidence of Mr. Anderson that Mr. Nikolaisen's vehicle was travelling at the relatively slow speed of between 53 to 65 km/h at the time of impact with the embankment. It was also permissible for the trial judge to rely on the evidence of lay witnesses that Mr. Nikolaisen had successfully negotiated an apparently sharp curve moments before the accident, rather than relying on the evidence of Mr. Laughlin, which was of a hypothetical and unspecific nature. Indeed, the hypothetical nature of Mr. Laughlin's evidence reflects the entire inquiry into whether Mr. Nikolaisen would have seen a sign and reacted, or the precise speed that would be taken by a reasonable driver upon approaching the curve. The abstract nature of such inquiries supports deference to the factual findings of the trial judge, and is consistent with the stringent standard imposed by the phrase "palpable and overriding error".

75 Therefore we conclude that the trial judge's factual findings on causation were reasonable and thus do not reach the level of a palpable and overriding error, and therefore should not have been interfered with by the Court of Appeal.

VI. Common Law Duty of Care

76 As we conclude that the municipality is liable under *The Rural Municipality Act, 1989*, we find it unnecessary to consider the existence of a common law duty in this case.

VII. Disposition

77 As we stated at the outset, there are important reasons and principles for appellate courts not to interfere improperly with trial decisions. Applying

joue un rôle essentiel dans la détermination de l'effet concret de l'alcool sur cet automobiliste; bien que dangereuse, la personne qui a l'habitude de boire se débrouillera probablement mieux sur la route qu'une personne qui n'en a pas l'habitude. Il convient de souligner que la juge de première instance a cru le témoignage de M. Anderson selon lequel le véhicule de M. Nikolaisen roulait à une vitesse relativement faible, soit entre 53 et 65 km/h, au moment de l'impact avec le remblai. Il lui était également permis de retenir les dépositions des témoins ordinaires selon lesquelles M. Nikolaisen avait réussi à prendre un virage apparemment serré quelques instants avant l'accident, plutôt que le témoignage de M. Laughlin, lequel était de nature hypothétique et générale. De fait, la nature hypothétique du témoignage de M. Laughlin est représentative de toute l'analyse de la question de savoir si M. Nikolaisen aurait aperçu un panneau de signalisation et aurait réagi en conséquence, ou à quelle vitesse précise un conducteur raisonnable s'approcherait du virage. Le caractère théorique de ces analyses justifie de faire montre de retenue à l'égard des conclusions factuelles de la juge de première instance et permet d'affirmer qu'on n'a pas satisfait à la norme rigoureuse imposée par l'expression « erreur manifeste et dominante ».

Par conséquent, nous estimons que les constatations factuelles de la juge de première instance concernant la causalité étaient raisonnables, qu'elles ne constituent donc pas une erreur manifeste et dominante et, partant, que la Cour d'appel n'aurait pas dû les modifier.

VI. Obligation de diligence prévue par la common law

Puisque nous concluons à la responsabilité de la municipalité en vertu de la *Rural Municipality Act, 1989*, nous n'estimons pas nécessaire de nous demander s'il existe en l'espèce une obligation de diligence prévue par la common law.

VII. Dispositif

Comme nous l'avons dit au départ, d'importantes raisons et d'importants principes commandent aux tribunaux d'appel de ne pas modifier indûment

these reasons and principles to this case, we would allow the appeal, set aside the judgment of the Saskatchewan Court of Appeal, and restore the judgment of the trial judge, with costs throughout.

The reasons of Gonthier, Bastarache, Binnie and LeBel JJ. were delivered by

BASTARACHE J. (dissenting) —

I. Introduction

This appeal arises out of a single-vehicle accident which occurred on July 18, 1992, on Snake Hill Road, a rural road located in the Municipality of Shellbrook, Saskatchewan. The appellant, Paul Housen, a passenger in the vehicle, was rendered a quadriplegic by the accident. At trial, the judge found that the driver of the vehicle, Douglas Nikolaisen, was negligent in travelling Snake Hill Road at an excessive rate of speed and in operating his vehicle while impaired. The trial judge also found the respondent, the Municipality of Shellbrook, to be at fault for breaching its duty to keep the road in a reasonable state of repair as required by s. 192 of *The Rural Municipality Act, 1989*, S.S. 1989-90, c. R-26.1. The Court of Appeal overturned the trial judge's finding that the respondent municipality was negligent. At issue in this appeal is whether the Court of Appeal had sufficient grounds to intervene in the decision of the lower court. The respondent has also asked this Court to overturn the trial judge's finding that the respondent knew or ought to have known of the alleged disrepair of Snake Hill Road and that the accident was caused in part by the negligence of the respondent. An incidental question is whether a common law duty of care exists alongside the statutory duty imposed on the respondent by s. 192.

les décisions des tribunaux de première instance. Appliquant ces raisons et principes à la présente espèce, nous sommes d'avis d'accueillir le pourvoi, d'infirmer le jugement de la Cour d'appel de la Saskatchewan et de rétablir la décision de la juge de première instance, avec dépens devant toutes les cours.

Version française des motifs des juges Gonthier, Bastarache, Binnie et LeBel rendus par

LE JUGE BASTARACHE (dissident) —

I. Introduction

78 Le présent pourvoi découle d'un accident impliquant un seul véhicule survenu le 18 juillet 1992 sur le chemin Snake Hill, route rurale située dans la municipalité de Shellbrook, en Saskatchewan. L'appelant, Paul Housen, qui était passager dans le véhicule, est devenu quadriplégique à la suite de cet accident. Au procès, la juge a conclu que le conducteur du véhicule, Douglas Nikolaisen, avait fait preuve de négligence en roulant à une vitesse excessive sur le chemin Snake Hill et en conduisant son véhicule pendant que ses facultés étaient affaiblies. La juge de première instance a également estimé que l'intimée, la municipalité de Shellbrook, avait commis une faute en manquant à l'obligation de tenir le chemin dans un état raisonnable d'entretien comme le lui impose l'art. 192 de la loi intitulée la *Rural Municipality Act, 1989*, S.S. 1989-90, ch. R-26.1. La Cour d'appel a infirmé la décision de la juge de première instance concluant à la négligence de la municipalité intimée. La question en litige dans le présent pourvoi consiste à déterminer si la Cour d'appel avait des motifs suffisants pour modifier la décision du tribunal de première instance. L'intimée demande également à notre Cour d'infirmer les conclusions de la juge de première instance portant que l'intimée connaissait ou aurait dû connaître le mauvais état dans lequel se trouvait, prétend-on, le chemin Snake Hill, et que l'accident a été causé en partie par sa négligence. Il faut également répondre à la question incidente de savoir si une obligation de diligence de common law coexiste avec l'obligation légale imposée à l'intimée par l'art. 192.

79 I conclude that the Court of Appeal was correct to overturn the trial judge's finding that the respondent was negligent. Though I would not interfere with the trial judge's factual findings on this issue, I find that she erred in law by failing to apply the correct standard of care. I would also overturn the trial judge's conclusions with regard to knowledge and causation. In coming to the conclusion that the respondent knew or should have known of the alleged disrepair of Snake Hill Road, the trial judge erred in law by failing to consider the knowledge requirement from the perspective of a prudent municipal councillor and by failing to be attentive to the fact that the onus of proof was on the appellant. In addition, the trial judge drew an unreasonable inference by imputing knowledge to the respondent on the basis of accidents that occurred on other segments of the road while motorists were travelling in the opposite direction. The trial judge also erred with respect to causation. She misapprehended the evidence before her, drew erroneous conclusions from that evidence and ignored relevant evidence. Finally, I would not interfere with the decision of the courts below to reject the appellant's argument that a common law duty existed. It is unnecessary to impose a common law duty of care where a statutory duty exists. Moreover, the application of common law negligence principles would not affect the outcome in these proceedings.

J'estime que la Cour d'appel a eu raison d'infirmer la conclusion de la juge de première instance selon laquelle la municipalité intimée a été négligente. Je ne modifierais pas les conclusions de fait de la juge de première instance sur cette question, mais je suis d'avis qu'elle a commis une erreur de droit en n'appliquant pas la norme de diligence appropriée. J'infirmerais également ses conclusions en ce qui concerne la question de la connaissance et le lien de causalité. En concluant que l'intimée connaissait ou aurait dû connaître le mauvais état dans lequel se trouvait, prétend-on, le chemin Snake Hill, la juge de première instance a commis une erreur de droit en n'appréciant pas l'exigence relative à la connaissance du point de vue du conseiller municipal prudent et en ne tenant pas compte du fait que le fardeau de la preuve incombait à l'appelant. De plus, la juge de première instance a tiré une inférence déraisonnable en prêtant à l'intimée la connaissance requise, en raison d'accidents survenus sur d'autres tronçons du chemin alors que des automobilistes circulaient en sens inverse. La juge de première instance a également commis une erreur relativement au lien de causalité. Elle a mal interprété la preuve qui lui était soumise, elle en a tiré des conclusions erronées et elle n'a pas tenu compte d'éléments de preuve pertinents. Enfin, je ne modifierais pas la décision des juridictions inférieures ayant rejeté l'argument de l'appelant selon lequel il existait une obligation de diligence de common law. Il est inutile d'imposer une obligation de common law lorsqu'il existe une obligation légale. Qui plus est, l'application des principes de la common law en matière de négligence n'aurait aucune incidence sur l'issue de la présente instance.

II. Factual Background

80 The sequence of` events which culminated in this tragic accident began to unfold some 19 hours before its occurrence on the afternoon of July 18, 1992. On July 17, Mr. Nikolaisen attended a barbeque at the residence of Craig and Toby Thiel, located on Snake Hill Road. He arrived in the late afternoon and had his first drink of the day at approximately 6:00 p.m. He consumed four or five drinks before leaving the Thiel residence at approximately

II. Les faits

La suite d'événements ayant abouti au tragique accident a commencé quelque 19 heures avant l'accident lui-même, dans l'après-midi du 18 juillet 1992. Le 17 juillet, M. Nikolaisen a participé à un barbecue à la résidence de Craig et Toby Thiel, sur le chemin Snake Hill. Arrivé en fin d'après-midi, il a pris son premier verre de la journée vers 18 h. Il en a pris quatre ou cinq avant de quitter la résidence des Thiel vers 22 h ou 22 h 30. Après avoir passé

10:00 or 10:30 p.m. After returning home for a few hours, Mr. Nikolaisen proceeded to the Sturgeon Lake Jamboree, where he met up with the appellant. At the jamboree, Mr. Nikolaisen consumed eight or nine double rye drinks and several beers. The appellant was also drinking during this event. The appellant and Mr. Nikolaisen partied on the grounds of the jamboree for several hours. At approximately 4:30 a.m., the appellant left the jamboree with Mr. Nikolaisen. After travelling around the back roads for a period of time, they returned to the Thiel residence. It was approximately 8:00 a.m. The appellant and Mr. Nikolaisen had several more drinks over the course of the morning. Mr. Nikolaisen stopped drinking two or three hours before leaving the Thiel residence with the appellant at approximately 2:00 p.m.

A light rain was falling when the appellant and Mr. Nikolaisen left the Thiel residence, travelling eastbound with Mr. Nikolaisen behind the wheel of a Ford pickup truck. The truck swerved or "fish-tailed" as it turned the corner from the Thiel driveway onto Snake Hill Road. As Mr. Nikolaisen continued on his way over the course of a gentle bend some 300 metres in length, gaining speed to an estimated 65 km/h, the truck again fish-tailed several times. The truck went into a skid as Mr. Nikolaisen approached and entered a sharper right turn. Mr. Nikolaisen steered into the skid but was unable to negotiate the curve. The left rear wheel of the truck contacted an embankment on the left side of the road. The vehicle travelled on the road for approximately 30 metres when the left front wheel contacted and climbed an 18-inch embankment on the left side of the road. This second contact with the embankment caused the truck to enter a 360-degree roll with the passenger side of the roof contacting the ground first.

When the vehicle came to rest, the appellant was unable to feel any sensation. Mr. Nikolaisen climbed out the back window of the vehicle and ran to the Thiel residence for assistance. Police later accompanied Mr. Nikolaisen to the Shellbrook Hospital where a blood sample was taken. Expert testimony estimated Mr. Nikolaisen's blood alcohol level to be

quelques heures chez lui, M. Nikolaisen s'est rendu au jamboree de Sturgeon Lake, où il a rencontré l'appelant. Sur les lieux du jamboree, M. Nikolaisen a consommé huit ou neuf ryes doubles et plusieurs bières. L'appelant buvait lui aussi. L'appelant et M. Nikolaisen ont fait la fête sur les lieux du jamboree pendant plusieurs heures. Vers 4 h 30, l'appelant a quitté le jamboree en compagnie de M. Nikolaisen. Après avoir roulé sur des routes de campagne pendant un certain temps, ils sont retournés à la résidence des Thiel. Il était environ 8 h. L'appelant et M. Nikolaisen ont pris plusieurs autres verres au cours de la matinée. M. Nikolaisen a cessé de boire deux ou trois heures avant de quitter la résidence des Thiel en compagnie de l'appelant vers 14 h.

81 Une faible pluie tombait lorsque l'appelant et M. Nikolaisen ont quitté la résidence des Thiel et pris la route, en direction est, à bord d'une camionnette Ford conduite par M. Nikolaisen. L'arrière de la camionnette a zigzagué lorsque le véhicule a tourné à l'intersection de l'entrée de la résidence des Thiel et du chemin Snake Hill. Alors que M. Nikolaisen prenait un léger virage d'une longueur de quelque 300 mètres, tout en accélérant à 65 km/h environ, l'arrière de sa camionnette a zigzagué à nouveau à plusieurs reprises. La camionnette s'est mise à déraper lorsque M. Nikolaisen a amorcé un virage plus serré vers la droite. Il a donné un coup de volant, mais n'a pas réussi à prendre le virage. La roue arrière gauche de la camionnette a heurté un remblai situé du côté gauche du chemin. Le véhicule a continué sa course sur une distance d'environ 30 mètres, puis sa roue avant gauche est montée sur un remblai de 18 pouces du côté gauche du chemin, après l'avoir heurté. Sous la force du second impact, la camionnette a fait un tonneau complet, le toit du côté du passager touchant le sol en premier.

82 Lorsque le véhicule s'est immobilisé, l'appelant n'éprouvait plus aucune sensation. M. Nikolaisen s'est hissé hors du véhicule par la fenêtre arrière et a couru chez les Thiel pour demander de l'aide. Plus tard, la police a accompagné M. Nikolaisen à l'hôpital de Shellbrook, où un échantillon de sang a été prélevé. Le témoignage d'expert a révélé

between 180 and 210 milligrams in 100 millilitres of blood at the time of the accident, well over the legal limits prescribed in *The Highway Traffic Act*, S.S. 1986, c. H-3.1, and the *Criminal Code*, R.S.C. 1985, c. C-46.

83 Mr. Nikolaisen had travelled on Snake Hill Road three times in the 24 hours preceding the accident, but had not driven it on any earlier occasions. The road was about a mile and three quarters in length and was flanked by highways to the north and to the east. Starting at the north end, it ran south for a short distance, dipped between open fields, then curved to the southeast and descended in a southerly loop down and around Snake Hill, past trees, bush and pasture, to the bottom of the valley. There it curved sharply to the southeast as it passed the Thiels' driveway. Once it passed the driveway, it curved gently to the south east for about 300 metres, then curved more distinctly to the south. It was on this stretch that the accident occurred. From that point on, the road crossed a creek, took another curve, then ascended a steep hill to the east, straightened out, and continued east for just over half a mile, past tree-lined fields and another farm site, to an approach to the highway.

84 Snake Hill Road was established in 1923 and was maintained by the respondent municipality for the primary purpose of providing local farmers access to their fields and pastures. It also served as an access road for the two permanent residences and one veterinary clinic located on it. The road at its northernmost end, coming off the highway, is characterized as a "Type C" local access road under the provincial government's scheme of road classification. This means that it is graded, gravelled and elevated above the surrounding land. The portion of the road east of the Thiel residence, on which the accident occurred, is characterized as "Type B" bladed trail, essentially a prairie trail that has been bladed to remove the ruts and to allow it to be driven on. Bladed trails follow the path of least resistance through the surrounding land and are not elevated or gravelled. The

que, au moment de l'accident, l'alcoolémie de M. Nikolaisen se situait entre 180 et 210 milligrammes par 100 milligrammes, taux largement supérieur à la limite permise par la loi intitulée la *Highway Traffic Act*, S.S. 1986 ch. H-3.1, et par le *Code criminel*, L.R.C. 1985, ch. C-46.

M. Nikolaisen avait emprunté le chemin Snake Hill à trois reprises au cours des 24 heures ayant précédé l'accident, mais il n'y avait jamais circulé auparavant. Ce chemin, flanqué de routes au nord et à l'est, fait environ un mille et trois quarts de longueur. À partir de son extrémité nord, il franchit une courte distance en direction sud, traverse des champs, puis tourne vers le sud-est pour ensuite descendre en lacet vers le sud autour du mont Snake Hill, passant devant des arbres, buissons et pâturages, jusqu'au fond de la vallée. De là, il tourne brusquement vers le sud-est devant l'entrée de la résidence des Thiel. Tout de suite après, il tourne doucement vers le sud-est sur une distance d'environ 300 mètres, puis décrit une courbe plus prononcée vers le sud. C'est à cet endroit que l'accident s'est produit. De là, le chemin traverse un ruisseau, tourne encore, puis monte une pente raide vers l'est, se redresse et continue vers l'est sur une distance d'un peu plus d'un demi mille et passe devant des champs bordés d'arbres et une autre ferme, jusqu'à une voie d'accès à la route.

Construit en 1923, le chemin Snake Hill est entretenu par la municipalité intimée dans le but premier de permettre aux fermiers de la région d'accéder à leurs champs et pâturages. Il sert également de voie d'accès à deux résidences permanentes et à une clinique vétérinaire. Le tronçon nord du chemin, dont l'extrémité part de la route, est considéré comme un chemin d'accès local de « type C » selon le système provincial de classification des routes. Cela signifie qu'il est nivelé, gravelé et possède une chaussée surélevée. Le tronçon du chemin situé à l'est de la résidence des Thiel et sur lequel l'accident s'est produit est considéré comme un chemin nivelé de « type B », c'est-à-dire essentiellement un chemin dont les ornières ont été remplies pour le rendre carrossable. Les chemins nivelés suivent le tracé qui présente le moins d'obstacle à travers le terrain environnant et ne sont ni surélevés ni gravelés. La

province of Saskatchewan has some 45,000 kilometres of bladed trails.

According to the provincial scheme of road classification, both bladed trails and local access roads are "non-designated", meaning that they are not subject to the Saskatchewan Rural Development Sign Policy and Standards. On such roads, the council of the rural municipality makes a decision to post signs if it becomes aware of a hazard or if there are several accidents at one specific spot. Three accidents had occurred on Snake Hill Road between 1978 and 1987. All three accidents occurred to the east of the site of the Nikolaisen rollover, with drivers travelling westbound. A fourth accident occurred on Snake Hill Road in 1990 but there was no evidence as to where it occurred. There was no evidence that topography was a factor in any of these accidents. The respondent municipality had not posted signs on any portion of Snake Hill Road.

province de Saskatchewan compte quelque 45 000 kilomètres de chemins nivelés.

85 Selon le système de classification des routes, tant les chemins nivelés que les chemins d'accès local sont [TRADUCTION] « non désignés », c'est-à-dire qu'ils ne sont pas visés par le document intitulé *Saskatchewan Rural Development Sign Policy and Standards* (« Politique et normes de signalisation routière en milieu rural en Saskatchewan »). Le conseil de la municipalité rurale installe des panneaux de signalisation sur ces chemins s'il constate l'existence d'un danger ou si plusieurs accidents se produisent au même endroit. Trois accidents sont survenus sur le chemin Snake Hill de 1978 à 1987. Tous ces accidents se sont produits à l'est de l'endroit où la camionnette de Nikolaisen a fait un tonneau et les véhicules concernés circulaient en direction ouest. Un quatrième accident s'est produit sur le chemin Snake Hill en 1990, mais aucune preuve indiquant l'endroit exact de l'accident n'a été présentée. Rien ne permettait de conclure que la topographie des lieux était à l'origine de l'un ou l'autre de ces accidents. La municipalité intimée n'avait installé aucun panneau signalisateur le long du chemin Snake Hill.

III. Relevant Statutory Provisions

The Rural Municipality Act, 1989, S.S. 1989-90, c. R-26.1

192(1) Every Council shall keep in a reasonable state of repair all municipal roads, dams and reservoirs and the approaches to them that have been constructed or provided by the municipality or by any person with the permission of the council or that have been constructed or provided by the province, having regard to the character of the municipal road, dam or reservoir and the locality in which it is situated or through which it passes.

. . .

(2) Where the council fails to carry out its duty imposed by subsections (1) and (1.1), the municipality is, subject to *The Contributory Negligence Act*, civilly liable for all damages sustained by any person by reason of the failure.

III. Les dispositions législatives pertinentes

86 *The Rural Municipality Act, 1989*, S.S. 1989-90, ch. R-26.1

[TRADUCTION]

192(1) Le conseil tient dans un état raisonnable d'entretien tous les chemins municipaux, barrages et réservoirs, ainsi que les accès à ces ouvrages qui ont été construits ou sont fournis par la municipalité ou par toute autre personne avec la permission du conseil ou qui ont été construits ou sont fournis par le gouvernement de la province, eu égard à la nature de l'ouvrage en question et à la localité où il est situé ou qu'il traverse.

. . .

(2) Lorsque le conseil omet de s'acquitter des obligations qui lui incombent en vertu des paragraphes (1) et (1.1), la municipalité est, sous réserve de la *Contributory Negligence Act* [*Loi sur le partage de la responsabilité*], civilement responsable des dommages subis par toute personne à la suite de ce manquement.

(3) Default under subsections (1) and (1.1) shall not be imputed to a municipality in any action without proof by the plaintiff that the municipality knew or should have known of the disrepair of the municipal road or other thing mentioned in subsections (1) and (1.1).

The Highway Traffic Act, S.S. 1986, c. H-3.1

33(1) Subject to the other provisions of this Act, no person shall drive a vehicle on a highway:

(a) at a speed greater than 80 kilometres per hour; or

(b) at a speed greater than the maximum speed indicated by any signs that are erected on the highway . . . .

(2) No person shall drive a vehicle on a highway at a speed greater than is reasonable and safe in the circumstances.

44(1) No person shall drive a vehicle on a highway without due care and attention.

(3) En cas d'action reprochant un manquement visé aux paragraphes (1) et (1.1) la responsabilité de la municipalité concernée n'est engagée que si le demandeur établit que cette dernière connaissait ou aurait dû connaître le mauvais état du chemin municipal ou autre ouvrage mentionné aux paragraphes (1) et (1.1).

The Highway Traffic Act, S.S. 1986, ch. H-3.1

[TRADUCTION]

33(1) Sous réserve des autres dispositions de la présente loi, il est interdit de conduire sur une voie publique à une vitesse supérieure, selon le cas :

a) à 80 kilomètres à l'heure;

b) à la vitesse maximale indiquée par la signalisation routière le long de la voie publique en question . . .

(2) Il est interdit de conduire un véhicule sur une voie publique à une vitesse supérieure à celle qui est raisonnable et sécuritaire dans les circonstances.

44(1) Il est interdit de conduire un véhicule sur une voie publique sans faire preuve de la prudence et de l'attention nécessaires.

IV. Judicial History

A. *Saskatchewan Court of Queen's Bench*, [1998] 5 W.W.R. 523

87 Wright J. found the respondent negligent in failing to erect a sign to warn motorists of the sharp right curve on Snake Hill Road, which she characterized as a "hidden hazard". She also found Mr. Nikolaisen negligent in travelling Snake Hill Road at an excessive speed and in operating his vehicle while impaired. The appellant was held to be contributorily negligent in accepting a ride with Mr. Nikolaisen. Fifteen percent of the fault was apportioned to the appellant, and the remainder was apportioned jointly and severally 50 percent to Mr. Nikolaisen and 35 percent to the respondent.

88 Wright J. found that s. 192 of *The Rural Municipality Act, 1989* imposed a statutory duty of care on the respondent toward persons travelling on Snake Hill Road. She then considered whether the respondent met the standard of care as delineated in

IV. L'historique des procédures judiciaires

A. *Cour du Banc de la Reine de la Saskatchewan*, [1998] 5 W.W.R. 523

La juge Wright a conclu que l'intimée avait fait preuve de négligence en omettant d'installer un panneau signalant aux automobilistes l'existence du virage à droite serré sur le chemin Snake Hill, virage qu'elle a qualifié de [TRADUCTION] « danger caché ». Elle a également estimé que M. Nikolaisen avait été négligent en roulant à une vitesse excessive sur le chemin Snake Hill et en conduisant son véhicule pendant qu'il avait les facultés affaiblies. L'appelant a été tenu responsable de négligence concourante parce qu'il avait accepté de monter à bord du véhicule de M. Nikolaisen. La responsabilité a été partagée ainsi : 15 p. 100 à l'appelant, le reste étant réparti solidairement entre M. Nikolaisen (50 p. 100) et l'intimée (35 p. 100).

La juge Wright a d'abord conclu que l'art. 192 de la *Rural Municipality Act, 1989* imposait à l'intimée une obligation légale de diligence envers les personnes circulant sur le chemin Snake Hill. Elle s'est ensuite demandée si l'intimée s'était

s. 192 and the jurisprudence interpreting that section. She referred specifically to *Partridge v. Rural Municipality of Langenberg*, [1929] 3 W.W.R. 555 (Sask. C.A.), in which it was stated at p. 558 that "the road must be kept in such a reasonable state of repair that those requiring to use it may, exercising ordinary care, travel upon it with safety". She also cited *Shupe v. Rural Municipality of Pleasantdale*, [1932] 1 W.W.R. 627 (Sask. C.A.), at p. 630: "[R]egard must be had to the locality . . . the situation of the road therein, whether required to be used by many or by few; . . . to the number of roads to be kept in repair; to the means at the disposal of the council for that purpose, and the requirements of the public who use the road." Relying on *Galbiati v. City of Regina*, [1972] 2 W.W.R. 40 (Sask. Q.B.), Wright J. observed that although the Act does not mention an obligation to erect warning signs, the general duty of repair nevertheless includes the duty to warn motorists of a hidden hazard.

conformée à la norme de diligence énoncée à l'art. 192 et dans la jurisprudence portant sur l'interprétation de cet article. Elle a fait état, en particulier, de l'arrêt *Partridge c. Rural Municipality of Langenberg*, [1929] 3 W.W.R. 555, dans lequel la Cour d'appel de la Saskatchewan a déclaré, à la p. 558, que [TRADUCTION] « le chemin doit être tenu dans un état raisonnable d'entretien, de façon que ceux qui doivent l'emprunter puissent, en prenant des précautions normales, y circuler en sécurité ». Elle a également cité le passage suivant de l'affaire *Shupe c. Rural Municipality of Pleasantdale*, [1932] 1 W.W.R. 627 (C.A. Sask.), p. 630 : [TRADUCTION] « [I]l faut tenir compte de la localité où est situé le chemin, [. . .] de son emplacement dans celle-ci, se demander s'il sera beaucoup ou peu fréquenté; [. . .] du nombre de chemins à entretenir; des ressources budgétaires dont dispose le conseil à cette fin et des besoins du public qui emprunte ce chemin ». Se fondant sur l'affaire *Galbiati c. City of Regina*, [1972] 2 W.W.R. 40 (B.R. Sask.), la juge Wright a fait observer que, bien que la Loi ne mentionne pas explicitement l'obligation d'installer des panneaux d'avertissement, l'obligation générale d'entretien comporte néanmoins celle de signaler aux automobilistes l'existence d'un danger caché.

Having laid out the relevant case law, Wright J. went on to discuss the character of the road. Relying primarily on the evidence of two experts at trial, Mr. Anderson and Mr. Werner, she found that the sharp right turning curve was a hazard that was not readily apparent to the users of the road. From their testimony she concluded (at para. 85):

89

Après avoir fait état de la jurisprudence pertinente, la juge Wright a poursuivi en examinant la nature du chemin. S'appuyant principalement sur les témoignages donnés par deux experts au procès, MM. Anderson et Werner, elle a conclu que le virage à droite serré constituait un danger que les usagers du chemin ne pouvaient voir aisément. De leurs témoignages, elle a tiré la conclusion suivante (au par. 85) :

It is a hidden hazard. The location of the Nikolaisen rollover is the most dangerous segment of Snake Hill Road. Approaching the location of the Nikolaisen rollover, limited sight distance, created by uncleared bush, precludes a motorist from being forewarned of an impending sharp right turn immediately followed by a left turn. While there were differing opinions on the *maximum* speed at which this curve can be negotiated, I am satisfied that when limited sight distance is combined with the tight radius of the curve and lack of superelevation, this curve cannot be *safely* negotiated at speeds greater

[TRADUCTION] Il s'agit d'un danger caché. L'endroit où le véhicule de M. Nikolaisen a fait un tonneau est situé sur le tronçon le plus dangereux du chemin Snake Hill. À l'approche de cet endroit, des broussailles réduisent la distance de visibilité de l'automobiliste et l'empêchent de voir l'imminence d'un virage à droite serré, qui est immédiatement suivi d'un virage à gauche. Bien que des opinions divergentes aient été émises quant à la vitesse *maximale* à laquelle ce virage peut être pris, je suis d'avis que, vu la distance de visibilité réduite, l'existence d'une courbe serrée et l'absence de surélévation du chemin, ce

than 60 kilometres per hour when conditions are favourable, or 50 kilometres per hour when wet. [Emphasis in original.]

virage ne peut être pris en sécurité à une vitesse supérieure à 60 kilomètres à l'heure dans des conditions favorables, ou 50 kilomètres à l'heure sur chaussée humide. [En italique dans l'original.]

Wright J. then noted that, while it would not be reasonable to expect the respondent to construct the road to a higher standard or to clear all of the bush away, it was reasonable to expect the respondent to erect and maintain a warning or regulatory sign "so that a motorist, using ordinary care, may be forewarned, adjust speed and take corrective action in advance of entering a dangerous situation" (para. 86).

La juge Wright a ensuite précisé que, bien qu'on ne puisse raisonnablement exiger de l'intimée qu'elle construise le chemin selon une norme plus élevée ou qu'elle enlève toutes les broussailles, il était raisonnable de s'attendre à ce qu'elle installe et maintienne un panneau d'avertissement ou de signalisation [TRADUCTION] « afin qu'un automobiliste prenant des précautions normales soit prévenu et puisse réduire sa vitesse et prendre des mesures correctives avant d'arriver à l'endroit dangereux » (par. 86).

90 Wright J. then considered s. 192(3) of the Act, which provides that there is no breach of the statutory standard of care unless the municipality knew or should have known of the danger. Wright J. observed that between 1978 and 1990, there were four accidents on Snake Hill Road, three of which occurred "in the same vicinity" as the Nikolaisen rollover, and two of which were reported to the authorities. On the basis of this information, she held that "[i]f the R.M. [Rural Municipality] did not have actual knowledge of the danger inherent in this portion of Snake Hill Road, it should have known" (para. 90). Wright J. also found significant the relatively low volume of traffic on the road, the fact that there were permanent residences on the road, and the fact that the road was frequented by young and perhaps less experienced drivers.

La juge Wright a ensuite analysé le par. 192(3) de la Loi, qui prévoit qu'il n'y a manquement à l'obligation de diligence que si la municipalité connaissait ou aurait dû connaître l'existence du danger. Elle a rappelé que quatre accidents étaient survenus sur le chemin Snake Hill de 1978 à 1990. Trois de ceux-ci se sont produits [TRADUCTION] « aux environs » de l'endroit où le véhicule de M. Nikolaisen a fait un tonneau, et deux ont été signalés aux autorités. Sur la base de cette information, elle a conclu que [TRADUCTION] « [s]i la M.R. [municipalité rurale] ne connaissait pas concrètement le danger intrinsèque que comporte cette portion du chemin Snake Hill, elle aurait dû le connaître » (par. 90). La juge Wright a également accordé de l'importance au débit relativement faible de la circulation sur le chemin, au fait que des résidences permanentes étaient situées en bordure de celui-ci et au fait que le chemin était fréquenté par des conducteurs jeunes et peut-être moins expérimentés.

91 In respect to causation, Wright J. found that it was probable that a warning sign would have enabled Mr. Nikolaisen to take corrective action to maintain control of his vehicle despite the fact of his impairment. She concluded (at para. 101):

En ce qui concerne le lien de causalité, la juge Wright a estimé qu'un panneau de signalisation aurait probablement permis à M. Nikolaisen de prendre des mesures correctives et de conserver la maîtrise de son véhicule, même si ses facultés étaient affaiblies. Elle a aussi tiré la conclusion suivante, au par. 101 :

Mr. Nikolaisen's degree of impairment only served to increase the risk of him not reacting, or reacting inappropriately to a sign. Mr. Nikolaisen was not driving recklessly such that he would have intentionally disregarded

[TRADUCTION] Le degré d'ébriété de M. Nikolaisen n'a fait qu'accroître le risque qu'il ne réagisse pas du tout ou encore de façon inappropriée à une signalisation. M. Nikolaisen ne conduisait pas de façon si téméraire qu'il

a warning or regulatory sign. He had moments earlier, when departing the Thiel residence, successfully negotiated a sharp curve which he could see and which was apparent to him.

Wright J. also addressed the appellant's argument that the municipality was in breach of a common law duty of care which was not qualified or limited by any of the restrictions set out under s. 192. She held that *Just v. British Columbia*, [1989] 2 S.C.R. 1228, and the line of authority both preceding and following that decision did not apply to the case before her given the existence of the statutory duty of care. She also found that any qualifying words in s. 192 of the Act pertained to the standard of care and did not impose limitations on the statutory duty of care.

B. *Saskatchewan Court of Appeal*, [2000] 4 W.W.R. 173, 2000 SKCA 12

On appeal, Cameron J.A., writing for a unanimous court, dealt primarily with the trial judge's finding that the respondent's failure to place a warning sign or regulatory sign at the site of the accident constituted a breach of its statutory duty of road repair. He did not find it necessary to rule on the issue of causation given his conclusion that the trial judge erred in finding the respondent negligent.

Cameron J.A. characterized the trial judge's conclusion that the respondent had breached the statutory duty of care as a matter of mixed fact and law. He noted that an appellate court is not to interfere with a trial judge's findings of fact unless the judge made a "palpable and overriding error" which affected his or her assessment of the facts. With respect to errors of law, however, Cameron J.A. remarked that the ability of an appellate court to overturn the finding of the trial judge is "largely unbounded". Regarding errors of mixed fact and law, Cameron J.A. noted that these are typically subject to the same standard of review as findings

aurait intentionnellement fait abstraction d'un panneau d'avertissement ou de signalisation. Quelques instants plus tôt, au moment de quitter la résidence des Thiel, il avait pris avec succès un virage serré qu'il pouvait clairement voir.

92 La juge Wright s'est également penchée sur l'argument de l'appelant voulant que la municipalité ait manqué à une obligation de diligence de common law qui ne serait pas atténuée ou restreinte par l'une ou l'autre des dispositions de l'art. 192. Elle a estimé que l'arrêt *Just c. Colombie-Britannique*, [1989] 2 R.C.S. 1228, ainsi que la jurisprudence antérieure et postérieure à cette décision ne s'appliquaient pas à l'affaire dont elle était saisie, vu l'existence de l'obligation légale de diligence. Elle a également jugé que les termes restrictifs de l'art. 192 de la Loi visaient la norme de diligence et n'avaient pas pour effet de limiter la portée de l'obligation légale de diligence.

B. *Cour d'appel de la Saskatchewan*, [2000] 4 W.W.R. 173, 2000 SKCA 12

93 En appel, exprimant la décision unanime de la cour, le juge Cameron s'est attaché principalement à la conclusion de la juge de première instance portant que, en omettant d'installer un panneau d'avertissement ou de signalisation à l'endroit de l'accident, l'intimée avait manqué à son obligation légale d'entretien des routes. Il n'a pas jugé nécessaire de se prononcer sur la question du lien de causalité, vu sa conclusion que la juge de première instance avait commis une erreur en déclarant l'intimée responsable de négligence.

94 Le juge Cameron a qualifié la conclusion de la juge de première instance que l'intimée avait manqué à son obligation légale de diligence de conclusion portant sur une question mixte de fait et de droit. Il a souligné qu'une cour d'appel ne doit pas modifier les conclusions de fait du juge de première instance à moins que ce dernier n'ait commis une « erreur manifeste et dominante » ayant faussé son appréciation des faits. Pour ce qui est des erreurs de droit, toutefois, le juge Cameron a fait remarquer que le pouvoir d'une cour d'appel d'infirmer la conclusion du juge de première instance est [TRADUCTION] « presque illimité ». En ce qui concerne les erreurs

of fact. One exception to this, according to Cameron J.A., occurs where the trial judge identifies the correct legal test, yet fails to apply one branch of that test to the facts at hand. As support for this proposition, Cameron J.A. cited (at para. 41) Iacobucci J. in *Canada (Director of Investigation and Research) v. Southam Inc.*, [1997] 1 S.C.R. 748, at para. 39:

> [I]f a decision-maker says that the correct test requires him or her to consider A, B, C, and D, but in fact the decision-maker considers only A, B, and C, then the outcome is as if he or she had applied a law that required consideration of only A, B, and C. If the correct test requires him or her to consider D as well, then the decision-maker has in effect applied the wrong law, and so has made an error of law.

95 Turning to the applicable law in this case, Cameron J.A. acknowledged that the standard of care set out in the Act and the jurisprudence interpreting it requires municipalities to post warning signs to warn of hazards that prudent drivers, using ordinary care, would be unlikely to appreciate. Based on the jurisprudence, Cameron J.A. set out (at para. 50) an analytical framework to be used in order to assess if a municipality has breached its duty in this regard. This framework requires the judge:

1. To determine the character and state of the road at the time of the accident. This, of course, is a matter of fact that entails an assessment of the material features of the road where the accident occurred, as well as those factors going to the maintenance standard, namely the location, class of road, patterns of use, and so on.

2. To assess the issue of whether persons requiring to use the road, exercising ordinary car[e], could ordinarily travel upon it safely. This is essentially a reasonable person test, one concerned with how a

mixtes de fait et de droit, le juge Cameron a précisé qu'elles sont normalement assujetties à la même norme de contrôle que les conclusions de fait. Selon le juge Cameron, cette règle générale souffre une exception, qui s'applique dans les cas où, bien que le juge du procès ait retenu le bon critère juridique applicable, il omet d'en appliquer un élément aux faits de l'affaire dont il est saisi. Au soutien de cette affirmation, le juge Cameron a cité, au par. 41, les propos suivants du juge Iacobucci dans l'arrêt *Canada (Directeur des enquêtes et recherches) c. Southam Inc.*, [1997] 1 R.C.S. 748, par. 39 :

> [Si] un décideur dit que, en vertu du critère applicable, il lui faut tenir compte de A, B, C et D, mais que, dans les faits, il ne prend en considération que A, B et C, alors le résultat est le même que s'il avait appliqué une règle de droit lui dictant de ne tenir compte que de A, B et C. Si le bon critère lui commandait de tenir compte aussi de D, il a en fait appliqué la mauvaise règle de droit et commis, de ce fait, une erreur de droit.

Relativement au droit applicable en l'espèce, le juge Cameron a reconnu que la norme de diligence énoncée dans la Loi et dans la jurisprudence portant sur l'interprétation de cette loi exige des municipalités qu'elles installent des panneaux de mise en garde pour signaler les dangers que les conducteurs prudents et prenant des précautions normales ne pourraient vraisemblablement pas mesurer. Se fondant sur la jurisprudence, le juge Cameron a établi, au par. 50, un cadre analytique permettant de déterminer si une municipalité a manqué à son obligation à cet égard. Suivant ce cadre, le juge doit examiner les aspects suivants :

[TRADUCTION]

1. Le juge doit déterminer la nature et l'état du chemin au moment de l'accident. Il s'agit, bien sûr, d'une question de fait, qui nécessite une appréciation des caractéristiques physiques du chemin à l'endroit où l'accident s'est produit, ainsi que de tous les facteurs se rapportant à la norme d'entretien, à savoir l'emplacement du chemin, le type de chemin dont il s'agit, les utilisations habituelles de celui-ci, et ainsi de suite.

2. Il soit se demander si les personnes qui devaient emprunter le chemin pouvaient généralement, en prenant des précautions normales, y circuler en sécurité. Il s'agit essentiellement du critère de la

reasonable driver on that particular road would have conducted himself or herself. It is necessary in taking this step to take account of the various elements noted in the authorities referred to earlier, namely the locality of the road, the character and class of the road, the standard to which the municipality could reasonably have been expected to maintain the road, and so forth. These criteria fall to be balanced in the context of the question: how would a reasonable driver have driven upon this particular road? Since this entails the application of a legal standard to a given set of facts, it constitutes a question of mixed fact and law.

3. To determine either tha[t] the road was in a reasonable state of repair or that it was not, depending upon the assessment made while using the second step. If it is determined that the road was not in a reasonable state of repair, then it becomes necessary to go on to determine whether the municipality knew or should have known of the state of disrepair before imputing liability.

According to Cameron J.A., the trial judge did not err in law by failing to set out the proper legal test. She did, however, make an error in law of the type identified by Iacobucci J. in *Southam*, *supra.* In his view, when applying the law to the facts of the case, the trial judge failed to assess the manner in which a reasonable driver, exercising ordinary care, would ordinarily have driven on the road, and the risk, if any, that the unmarked curve might have posed for the ordinary driver. As noted by Cameron J.A., the trial judge "twice alluded to the matter, but failed to come to grips with it" (para. 57).

Cameron J.A. also found that the trial judge had made a "palpable and overriding" error of fact in determining that the respondent had breached the standard of care. According to Cameron J.A., the trial judge's factual error stemmed from her reliance on the expert testimony of Mr. Werner and Mr. Anderson. Cameron J.A. found that the evidence of both experts was based on the fundamental premise

personne raisonnable, qui sert à déterminer comment se serait comporté un conducteur raisonnable sur ce chemin en particulier. À cette étape, il faut tenir compte des nombreux facteurs énoncés dans la jurisprudence mentionnée précédemment, c'est-à-dire l'emplacement du chemin, la nature et le type du chemin, la norme d'entretien à laquelle on pouvait raisonnablement s'attendre d'une municipalité, et ainsi de suite. Ces facteurs doivent être soupesés dans le contexte de la question suivante : Comment un conducteur raisonnable aurait-il conduit son véhicule sur ce chemin en particulier? Puisque cette question suppose l'application d'une norme juridique à un ensemble donné de faits, elle constitue une question mixte de fait et de droit.

3. Il doit déterminer si le chemin était dans un état raisonnable d'entretien, compte tenu des conclusions tirées à la deuxième étape. S'il est établi que le chemin ne se trouvait pas dans un état raisonnable d'entretien, il faut alors déterminer si la municipalité connaissait ou aurait dû connaître le mauvais état d'entretien avant de conclure à la responsabilité de celle-ci.

96 Selon le juge Cameron, la juge de première instance n'a pas commis d'erreur de droit en ce qui concerne le critère juridique applicable. Elle a cependant commis une erreur de droit du genre de celle exposée par le juge Iacobucci dans l'arrêt *Southam*, précité. À son avis, lorsqu'elle a appliqué le droit aux faits de l'espèce, la juge de première instance a omis, d'une part, de se demander comment un conducteur raisonnable, faisant montre de prudence normale, aurait conduit son véhicule sur ce chemin, et, d'autre part, d'évaluer le risque, s'il en est, que le virage non annoncé aurait pu constituer pour le conducteur moyen. Comme l'a souligné le juge Cameron de la Cour d'appel, la juge de première instance [TRADUCTION] « a évoqué la question à deux reprises, mais elle ne l'a pas abordée » (par. 57).

97 Le juge Cameron a également estimé que la juge de première instance avait commis une erreur de fait « manifeste et dominante » en concluant que l'intimée n'avait pas exercé le degré de diligence requis. Selon le juge Cameron, cette erreur de fait découlait de l'importance accordée par la juge Wright aux témoignages d'experts de MM. Werner et Anderson. À son avis, les témoignages de ces deux experts

that the ordinary driver could be expected to travel the road at a speed of 80 km/h. In his view, this premise was misconceived and unsupported by the evidence.

98 Cameron J.A. concluded that although the trial judge was free to accept the evidence of some witnesses over others, she was not free to accept expert testimony that was based on an erroneous factual premise. According to Cameron J.A., had the trial judge found that a prudent driver, exercising ordinary care for his or her safety, would not ordinarily have driven this section of Snake Hill Road at a speed greater than 60 km/h, then she would have had to conclude that no hidden hazard existed since the curve could be negotiated safely at this speed.

99 Cameron J.A. agreed with the trial judge that a common law duty of care was not applicable in this case. His remarks in this respect are found at para. 44 of his reasons:

> Concerning the duty of care, it might be noted that unlike statutory provisions empowering municipalities to maintain roads, but imposing no duty upon them to do so, the duty in this instance owes its existence to a statute, rather than the neighbourhood principle of the common law: *Just v. British Columbia*, [1989] 2 S.C.R. 1228 (S.C.C.). The duty is readily seen to extend to all who travel upon the roads.

V. Issues

100 A. Did the Court of Appeal properly interfere with the trial judge's finding that the respondent was in breach of its statutory duty of care?

B. Did the trial judge err in finding the respondent knew or should have known of the alleged danger?

C. Did the trial judge err in finding that the accident was caused in part by the respondent's negligence?

reposaient sur la prémisse fondamentale qu'on pouvait s'attendre à ce que le conducteur moyen circule sur le chemin à une vitesse de 80 km/h. Selon lui, cette prémisse était erronée et n'était pas étayée par la preuve.

Le juge Cameron a conclu que, bien qu'il fût loisible à la juge de première instance d'accorder davantage foi à certains témoignages qu'à d'autres, il ne lui était pas loisible de retenir un témoignage d'expert fondé sur une prémisse factuelle erronée. Selon lui, si la juge de première instance avait estimé qu'un conducteur prudent prenant des précautions normales pour assurer sa sécurité n'aurait généralement pas roulé sur cette portion du chemin Snake Hill à plus de 60 km/h, alors elle aurait dû conclure à l'absence de danger caché puisque le virage pouvait être pris en sécurité à cette vitesse.

Le juge Cameron a souscrit à l'opinion de la juge de première instance que l'obligation de diligence de common law ne s'appliquait pas en l'espèce. Il a fait les commentaires suivants à ce sujet, au par. 44 de ses motifs :

> [TRADUCTION] En ce qui concerne l'obligation de diligence, il convient de préciser que, contrairement aux dispositions législatives qui habilitent les municipalités à entretenir les chemins, sans toutefois leur imposer l'obligation de le faire, en l'espèce l'obligation doit son existence à une loi, plutôt qu'au principe de common law fondé sur la proximité : *Just c. Colombie-Britannique*, [1989] 2 R.C.S. 1228. On saisit immédiatement que l'obligation de diligence existe en faveur de tous ceux qui circulent sur les routes.

V. Les questions en litige

A. La Cour d'appel a-t-elle eu raison de modifier la conclusion de la juge de première instance portant que l'intimée avait manqué à son obligation légale de diligence?

B. La juge de première instance a-t-elle commis une erreur en concluant que l'intimée connaissait ou aurait dû connaître le danger allégué?

C. La juge de première instance a-t-elle commis une erreur en concluant que l'accident a été en partie causé par la négligence de l'intimée?

D. Does a common law duty of care coexist alongside the statutory duty of care?

VI. Analysis

A. *Did the Court of Appeal Properly Interfere with the Decision at Trial?*

(1) The Standard of Review

Although the distinctions are not always clear, the issues that confront a trial court fall generally into three categories: questions of law, questions of fact, and questions of mixed law and fact. Put briefly, questions of law are questions about what the correct legal test is; questions of fact are questions about what actually took place between the parties; and questions of mixed law and fact are questions about whether the facts satisfy the legal tests (*Southam*, *supra*, at para. 35).

Of the three categories above, the highest degree of deference is accorded to the trial judge's findings of fact. The Court will not overturn a factual finding unless it is palpably and overridingly, or clearly wrong (*Southam*, *supra*, at para. 60; *Stein v. The Ship "Kathy K"*, [1976] 2 S.C.R. 802, at p. 808; *Toneguzzo-Norvell (Guardian ad litem of) v. Burnaby Hospital*, [1994] 1 S.C.R. 114, at p. 121). This deference is principally grounded in the recognition that only the trial judge enjoys the opportunity to observe witnesses and to hear testimony first-hand, and is therefore better able to choose between competing versions of events (*Schwartz v. Canada*, [1996] 1 S.C.R. 254, at para. 32). It is however important to recognize that the making of a factual finding often involves more than merely determining the who, what, where and when of the case. The trial judge is very often called upon to draw inferences from the facts that are put before the court. For example, in this case, the trial judge inferred from the fact of accidents having occurred on Snake Hill Road

D. Est-ce qu'une obligation de diligence de common law coexiste avec l'obligation légale de diligence?

VI. L'analyse

A. *La Cour d'appel a-t-elle eu raison de modifier la décision de la juge de première instance?*

(1) La norme de contrôle

101 Bien qu'elles ne soient pas toujours faciles à distinguer, les questions auxquelles doit répondre un tribunal de première instance se classent généralement en trois catégories : les questions de droit, les questions de fait et les questions mixtes de fait et de droit. En résumé, les questions de droit concernent la détermination du critère juridique applicable; les questions de fait portent sur ce qui s'est réellement passé entre les parties et les questions mixtes de fait et de droit consistent à déterminer si les faits satisfont au critère juridique (*Southam*, précité, par. 35).

102 De ces trois catégories, ce sont les conclusions de fait du juge de première instance qui commandent le degré le plus élevé de retenue. La Cour ne modifie les conclusions de fait du juge de première instance que si celui-ci a commis une erreur manifeste ou dominante ou si la conclusion est manifestement erronée (*Southam*, précité, par. 60; *Stein c. Le navire « Kathy K »*, [1976] 2 R.C.S. 802, p. 808; *Toneguzzo-Norvell (Tutrice à l'instance de) c. Burnaby Hospital*, [1994] 1 R.C.S. 114, p. 121). Cette retenue repose principalement sur le fait que, puisqu'il est le seul à avoir l'occasion d'observer les témoins et d'entendre les témoignages de vive voix, le juge de première instance est en conséquence plus à même de choisir entre deux versions divergentes d'un même événement (*Schwartz c. Canada*, [1996] 1 R.C.S. 254, par. 32). Cependant, il est important de reconnaître que tirer une conclusion de fait implique souvent davantage que le simple fait de déterminer qui a fait quoi, ainsi que où et quand il l'a fait. Le juge de première instance est très souvent appelé à faire des inférences à partir des faits qui lui sont

that the respondent knew or should have known of the hidden danger.

103 This Court has determined that a trial judge's inferences of fact should be accorded a similar degree of deference as findings of fact (*Geffen v. Goodman Estate*, [1991] 2 S.C.R. 353). In reviewing the making of an inference, the appeal court will verify whether it can reasonably be supported by the findings of fact that the trial judge reached and whether the judge proceeded on proper legal principles. I respectfully disagree with the majority's view that inferences can be rejected only where the inference-drawing process itself is deficient: see *Toronto (City) Board of Education v. O.S.S.T.F., District 15*, [1997] 1 S.C.R. 487, at para. 45:

> When a court is reviewing a tribunal's findings of fact or the inferences made on the basis of the evidence, it can only intervene "where the evidence, viewed reasonably, is incapable of supporting a tribunal's findings of fact": *Lester (W. W.) (1978) Ltd. v. United Association of Journeymen and Apprentices of the Plumbing and Pipefitting Industry, Local 740*, [1990] 3 S.C.R. 644, at p. 669 *per* McLachlin J.

An inference can be clearly wrong where the factual basis upon which it relies is deficient or where the legal standard to which the facts are applied is misconstrued. My colleagues recognize themselves that a judge is often called upon to make inferences of mixed law and fact (para. 26). While the standard of review is identical for both findings of fact and inferences of fact, it is nonetheless important to draw an analytical distinction between the two. If the reviewing court were to review only for errors of fact, then the decision of the trial judge would necessarily be upheld in every case where evidence existed to support his or her factual findings. In my view, this Court is entitled to conclude that inferences made by the trial judge were clearly wrong, just as it is entitled to reach this conclusion in respect to findings of fact.

présentés. En l'espèce, par exemple, la juge de première instance a inféré du fait que des accidents s'étaient produits sur le chemin Snake Hill que l'intimée connaissait ou aurait dû connaître l'existence du danger caché.

Notre Cour a jugé qu'il fallait appliquer aux inférences de fait du juge de première instance le même degré de retenue qu'à ses conclusions de fait (*Geffen c. Succession Goodman*, [1991] 2 R.C.S. 353). La cour d'appel qui contrôle la validité d'une inférence se demande si celle-ci peut raisonnablement être étayée par les conclusions de fait tirées par le juge de première instance et si celui-ci a appliqué les principes juridiques appropriés. En toute déférence, je ne partage pas l'opinion de la majorité selon laquelle des inférences ne peuvent être rejetées que dans les cas où le processus qui les a produites est lui-même déficient : voir *Conseil de l'éducation de Toronto (Cité) c. F.E.E.E.S.O., district 15*, [1997] 1 R.C.S. 487, par. 45 :

> Lorsqu'une cour de justice contrôle les conclusions de fait d'un tribunal administratif ou les inférences qu'il a tirées de la preuve, elle ne peut intervenir que « lorsque les éléments de preuve, perçus de façon raisonnable, ne peuvent étayer les conclusions de fait du tribunal » : *Lester (W.W.) (1978) Ltd. c. Association unie des compagnons et apprentis de l'industrie de la plomberie et de la tuyauterie, section locale 740*, [1990] 3 R.C.S. 644, à la p. 669, le juge McLachlin.

Une inférence peut être manifestement erronée si ses assises factuelles présentent des lacunes ou si la norme juridique appliquée aux faits est mal interprétée. Mes collègues eux-mêmes reconnaissent qu'un juge est souvent appelé à tirer des inférences mixtes de fait et droit (par. 26). Bien que la norme de contrôle soit la même et pour les conclusions de fait et pour les inférences de fait, il importe néanmoins de faire une distinction analytique entre les deux. Si le tribunal de révision ne faisait que vérifier s'il y a des erreurs de fait, la décision du juge de première instance serait alors nécessairement confirmée dans tous les cas où il existe des éléments de preuve étayant les conclusions de fait de ce dernier. Selon moi, notre Cour a le droit de conclure que les inférences du juge de première instance étaient manifestement erronées, tout comme elle peut le faire à l'égard des conclusions de fait.

My colleagues take issue with the above statement that an appellate court will verify whether the making of an inference can reasonably be supported by the trial judge's findings of fact, a standard which they believe to be less strict than the "palpable and overriding" standard. I do not agree that a less strict standard is implied. In my view there is no difference between concluding that it was "unreasonable" or "palpably wrong" for a trial judge to draw an inference from the facts as found by him or her and concluding that the inference was not reasonably supported by those facts. The distinction is merely semantic.

104 Mes collègues ne sont pas d'accord avec l'énoncé susmentionné — savoir celui portant que la cour d'appel se demande si une inférence peut raisonnablement être étayée par les conclusions de fait tirées par le juge de première instance — estimant qu'il s'agit d'une norme de contrôle moins exigeante que celle de l'erreur « manifeste et dominante ». Pour ma part, je ne crois pas que cet énoncé implique l'application d'une norme moins exigeante. À mon avis, il n'y a aucune différence entre le fait de conclure qu'il était « déraisonnable » ou « manifestement erroné » pour un juge de tirer une inférence des faits qu'il a constatés, et le fait de conclure que cette inférence n'était pas raisonnablement étayée par ces faits. La distinction est purement sémantique.

By contrast, an appellate court reviews a trial judge's findings on questions of law not merely to determine if they are reasonable, but rather to determine if they are correct; *Moge v. Moge*, [1992] 3 S.C.R. 813, at p. 833; *R. v. Nova Scotia Pharmaceutical Society*, [1992] 2 S.C.R. 606, at p. 647; R. P. Kerans, *Standards of Review Employed by Appellate Courts* (1994), at p. 90. The role of correcting errors of law is a primary function of the appellate court; therefore, that court can and should review the legal determinations of the lower courts for correctness.

105 En revanche, une cour d'appel ne contrôle pas les conclusions tirées par le juge de première instance à l'égard des questions de droit simplement pour déterminer si elles sont raisonnables, mais plutôt pour déterminer si elles sont correctes : *Moge c. Moge*, [1992] 3 R.C.S. 813, p. 833; *R. c. Nova Scotia Pharmaceutical Society*, [1992] 2 R.C.S. 606, p. 647; R. P. Kerans, *Standards of Review Employed by Appellate Courts* (1994), p. 90. Un des rôles principaux d'une cour d'appel consiste à corriger les erreurs de droit et, par conséquent, cette cour peut et doit vérifier si les conclusions juridiques de la juridiction inférieure sont correctes.

In the law of negligence, the question of whether the conduct of the defendant has met the appropriate standard of care is necessarily a question of mixed fact and law. Once the facts have been established, the determination of whether or not the standard of care was met by the defendant will in most cases be reviewable on a standard of correctness since the trial judge must appreciate the facts within the context of the appropriate standard of care. In many cases, viewing the facts through the legal lens of the standard of care gives rise to a policy-making or law-setting function that is the purview of both the trial and appellate courts. As stated by Kerans, *supra*, at p. 103, "[t]he evaluation of facts as meeting or not meeting a legal test is a process that involves law-making. Moreover, it is probably correct to say that *every* new attempt to apply a legal rule to a set of

106 Dans le contexte du droit relatif à la négligence, la question de savoir si la conduite du défendeur est conforme à la norme de diligence appropriée est forcément une question mixte de fait et de droit. Une fois les faits établis, la décision touchant la question de savoir si le défendeur a respecté ou non la norme de diligence est, dans la plupart des cas, contrôlable selon la norme de la décision correcte, puisque le juge de première instance doit apprécier les faits au regard de la norme de diligence appropriée. Dans bien des cas, l'examen des faits à travers le prisme juridique de la norme de diligence implique l'établissement de politiques d'intérêt général ou la création de règles de droit, rôle qui relève autant des cours de première instance que des cours d'appel. Comme l'a dit Kerans, *op. cit.*, p. 103, [TRADUCTION] « [l]'examen de la

facts involves some measure of interpretation of that rule, and thus more law-making" (emphasis in original).

107 In a negligence case, the trial judge is called on to decide whether the conduct of the defendant was reasonable under all the circumstances. While this determination involves questions of fact, it also requires the trial judge to assess what is reasonable. As stated above, in many cases, this will involve a policy-making or "law-setting" role which an appellate court is better situated to undertake (Kerans, *supra*, at pp. 5-10). For example, in this case, the degree of knowledge that the trial judge should have imputed to the reasonably prudent municipal councillor raised the policy consideration of the type of accident-reporting system that a small rural municipality with limited resources should be expected to maintain. This law-setting role was recognized by the United States Supreme Court in *Bose Corp. v. Consumers Union of U.S., Inc.*, 466 U.S. 485 (1984), at note 17, within the context of an action for defamation:

> A finding of fact in some cases is inseparable from the principles through which it was deduced. At some point, the reasoning by which a fact is "found" crosses the line between application of those ordinary principles of logic and common experience which are ordinarily entrusted to the finder of fact into the realm of a legal rule upon which the reviewing court must exercise its own independent judgment. Where the line is drawn varies according to the nature of the substantive law at issue. Regarding certain largely factual questions in some areas of the law, the stakes — in terms of impact on future cases and future conduct — are too great to entrust them finally to the judgment of the trier of fact.

question de savoir si les faits satisfont ou non à un critère juridique donné est un processus qui implique une fonction créatrice de droit. Qui plus est, il est probablement exact d'affirmer que *chaque* nouvelle tentative d'appliquer une règle de droit à un ensemble de faits emporte une certaine interprétation de cette règle et, partant, l'élaboration de règles de droit additionnelles » (en italique dans l'original).

Dans une affaire de négligence, le juge de première instance est appelé à décider si la conduite du défendeur était raisonnable eu égard à toutes les circonstances. Bien que la prise de cette décision demande l'examen de questions de fait, elle exige également du juge de première instance qu'il établisse ce qui est raisonnable. Comme il a été mentionné plus tôt, dans bien des cas cette décision implique l'établissement de politiques d'intérêt général ou la « création de règles de droit », rôle qu'une cour d'appel est mieux placée pour remplir (Kerans, *op. cit.*, p. 5 à 10). En l'espèce, par exemple, le degré de connaissance que la juge de première instance aurait dû prêter au conseiller municipal raisonnablement prudent soulevait une considération participant d'une politique d'intérêt général, savoir le genre de système d'information sur les accidents qu'une petite municipalité rurale aux ressources budgétaires limitées est censée tenir. Ce rôle créateur de droit a été reconnu par la Cour suprême des États-Unis dans l'arrêt *Bose Corp. c. Consumers Union of U.S., Inc.*, 466 U.S. 485 (1984), à la note 17, dans le contexte d'une action en diffamation :

> [TRADUCTION] Une conclusion de fait est, dans certains cas, indissociable des principes qui ont été appliqués pour y arriver. À un point donné, le raisonnement menant à la « constatation d'un fait » cesse d'être l'application des principes ordinaires de logique et d'expérience générale, qui est généralement l'apanage du juge de première instance, pour devenir l'application d'une règle de droit, tâche où le tribunal de révision doit exercer son propre jugement. Cette ligne de démarcation se déplace selon la nature de la règle de droit substantiel en litige. Dans quelques branches du droit, certaines questions largement factuelles soulèvent des enjeux — incidence sur d'éventuelles affaires et le comportement futur — qui sont trop importants pour être confiés en premier et dernier ressort au juge de première instance.

My colleagues assert that the question of whether or not the standard of care was met by the defendant in a negligence case is subject to a standard of palpable and overriding error unless it is clear that the trial judge made some extricable error in principle with respect to the characterization of the standard or its application, in which case the error may amount to an error of law (para. 36). I disagree. In many cases, it will not be possible to "extricate" a purely legal question from the standard of care analysis applicable to negligence, which is a question of mixed fact and law. In addition, while some questions of mixed fact and law may not have "any great precedential value" (*Southam*, *supra*, at para. 37), such questions often necessitate a normative analysis that should be reviewable by an appellate court.

108 Mes collègues affirment que la question de savoir si, dans une affaire de négligence, le défendeur a respecté ou non la norme de diligence appropriée est assujettie au critère de l'erreur manifeste et dominante, sauf si le juge de première instance a clairement commis une erreur de principe isolable relativement à la détermination de la norme à appliquer ou à son application, auquel cas l'erreur peut constituer une erreur de droit (par. 36). Je ne suis pas d'accord. Dans bon nombre de cas, il ne sera pas possible d'« isoler » une question de droit pur de l'analyse de la norme de diligence applicable en matière de négligence, qui est une question mixte de fait et de droit. En outre, bien que certaines questions mixtes de fait et de droit puissent ne pas avoir « une grande valeur comme précédents » (*Southam*, précité, par. 37), ces questions impliquent souvent une analyse normative que devrait pouvoir contrôler une cour d'appel.

Consider again the issue of whether the municipality knew or should have known of the alleged danger. As a matter of law, the trial judge must approach the question of whether knowledge should be imputed to the municipality having regard to the duties of the ordinary, reasonable and prudent municipal councillor. If the trial judge applies a different legal standard, such as the reasonable person standard, it is an error of law. Yet even if the trial judge correctly identifies the applicable legal standard, he or she may still err in the process of assessing the facts through the lens of that legal standard. For example, there may exist evidence that an accident had previously occurred on the portion of the road on which the relevant accident occurred. In the course of considering whether or not that fact satisfies the legal test for knowledge the trial judge must make a number of normative assumptions. The trial judge must consider whether the fact that one accident had previously occurred in the same location would alert the ordinary, reasonable and prudent municipal councillor to the existence of a hazard. The trial judge must also consider whether the ordinary, reasonable and prudent councillor would have been alerted to the previous accident by an accident-reporting system. In my view, the question of whether the fact of a previous accident having occurred fulfills the applicable knowledge

109 Revenons maintenant à la question de savoir si la municipalité connaissait ou aurait dû connaître le danger allégué. Sur le plan juridique, le juge de première instance doit se demander s'il y a lieu de prêter cette connaissance à la municipalité eu égard aux obligations qui incombent au conseiller municipal moyen, raisonnable et prudent. Si le juge de première instance applique une autre norme juridique, par exemple celle de la personne raisonnable, il commet une erreur de droit. Cependant, même en supposant que le juge de première instance détermine correctement la norme juridique à appliquer, il lui est encore possible de commettre une erreur lorsqu'il apprécie les faits à la lumière de cette norme juridique. Par exemple, il peut exister une preuve indiquant qu'un accident s'était déjà produit sur le tronçon de chemin en cause. Le juge de première instance qui se demande si ce fait satisfait ou non au critère juridique applicable à la question de la connaissance doit poser un certain nombre d'hypothèses normatives. Il doit se demander si le fait qu'un accident se soit déjà produit au même endroit alerterait le conseiller municipal moyen, raisonnable et prudent de l'existence d'un danger. Il doit également se demander si ce conseiller aurait appris l'existence de l'accident antérieur par un système d'information sur les accidents. Selon moi, la question de savoir si le fait qu'un accident se soit produit antérieurement

requirement is a question of mixed fact and law and it is artificial to characterize it as anything else. As is apparent from the example given, the question may also raise normative issues which should be reviewable by an appellate court on the correctness standard.

110 I agree with my colleagues that it is not possible to state as a general proposition that all matters of mixed fact and law are reviewable according to the standard of correctness: citing *Southam*, *supra*, at para. 37 (para. 28). I disagree, however, that the dicta in *Southam* establishes that a trial judge's conclusions on questions of mixed fact and law in a negligence action should be accorded deference in every case. This Court in *St-Jean v. Mercier*, [2002] 1 S.C.R. 491, 2002 SCC 15, a medical negligence case, distinguished *Southam* on the issue of the standard applicable to questions of mixed fact and law where the tribunal has no particular expertise. Gonthier J., writing for a unanimous Court, stated at paras. 48-49:

> A question "about whether the facts satisfy the legal tests" is one of mixed law and fact. Stated differently, "whether the defendant satisfied the appropriate standard of care is a question of mixed law and fact" (*Southam*, at para. 35).
>
> Generally, such a question, once the facts have been established without overriding and palpable error, is to be reviewed on a standard of correctness since the standard of care is normative and is a question of law within the normal purview of both the trial and appellate courts. Such is the standard for medical negligence. There is no issue of expertise of a specialized tribunal in a particular field which may go to the determination of facts and be pertinent to defining an appropriate standard and thereby call for some measure of deference by a court of general appeal (*Southam*, *supra*, at para. 45; and *Nova Scotia Pharmaceutical Society*, *supra*, at p. 647).

111 I also disagree with my colleagues that *Jaegli Enterprises Ltd. v. Taylor*, [1981] 2 S.C.R. 2, is authority for the proposition that when the question

satisfait à l'exigence de connaissance applicable est une question mixte de fait et de droit, et il serait artificiel de la qualifier autrement. Comme l'indique clairement l'exemple qui précède, cette question peut également soulever des questions normatives que devrait pouvoir contrôler une cour d'appel selon la norme de la décision correcte.

Je partage l'opinion de mes collègues selon laquelle on ne peut poser comme principe général que toutes les questions mixtes de fait et de droit sont assujetties à la norme de la décision correcte : citant *Southam*, précité, par. 37 (par. 28). Cependant, je ne crois pas que l'opinion formulée dans *Southam* signifie que, dans une affaire de négligence, les conclusions du juge de première instance sur des questions mixtes de fait et de droit commandent systématiquement une attitude empreinte de retenue. Dans l'arrêt *St-Jean c. Mercier*, [2002] 1 R.C.S. 491, 2002 CSC 15, affaire de négligence médicale, notre Cour a différencié cette affaire de l'arrêt *Southam* sur la question de la norme de contrôle applicable aux questions mixtes de fait et de droit dans les cas où le tribunal ne possède d'expertise particulière. Exposant la décision unanime de la Cour, le juge Gonthier a dit ceci, aux par. 48 et 49 :

> La question qui consiste « à déterminer si les faits satisfont au critère juridique » est une question mixte de droit et de fait ou en d'autres termes, « la question de savoir si le défendeur a respecté la norme de diligence appropriée est une question de droit et de fait » (*Southam*, par. 35).
>
> Une fois les faits établis sans erreur manifeste et dominante, cette question doit généralement être révisée suivant la norme de la décision correcte puisque la norme de diligence est normative et constitue une question de droit qui relève de la compétence habituelle des tribunaux de première instance et d'appel. C'est la norme applicable à la négligence médicale. Il n'est pas question de l'expertise d'un tribunal spécialisé dans un domaine particulier, pouvant toucher la détermination des faits et avoir une incidence sur la définition de la norme appropriée et exiger de ce fait une certaine déférence de la part d'une cour générale d'appel (*Southam*, par. 45; *Nova Scotia Pharmaceutical Society*, précité, p. 647).

Je ne peux non plus me ranger à l'avis de mes collègues selon lequel l'arrêt *Jaegli Enterprises Ltd. c. Taylor*, [1981] 2 R.C.S. 2, permet d'affirmer

of mixed fact and law at issue is a finding of negligence, that finding should be deferred to by appellate courts. In that case the trial judge found that the conduct of the defendant ski instructor met the standard of care expected of him. Moreover, the trial judge found that the accident would have occurred regardless of what the ski instructor had done (*Taylor v. The Queen in Right of British Columbia* (1978), 95 D.L.R. (3d) 82). Seaton J.A. of the British Columbia Court of Appeal disagreed with the trial judge that the ski instructor had met the applicable standard of care (*Taylor (Guardian ad litem of) v. British Columbia* (1980), 112 D.L.R. (3d) 297). Seaton J.A. recognized nevertheless that the "final question" was whether "the instructor's failure to remain was a cause of the accident" (p. 307). On the issue of causation, a question of fact, Seaton J.A. clearly substituted his opinion for that of the trial judge's without regard to the appropriate standard of review. His concluding remarks on the issue of causation at p. 308 highlight his lack of deference to the trial judge's conclusion on causation:

> On balance, I think that the evidence supports the plaintiffs' claim against the instructor, that his conduct in leaving the plaintiff below the crest was one of the causes of the accident.

This Court, which restored the finding of the trial judge, did not clearly state whether it did so on the basis that the appellate court was wrong to interfere with the trial judge's finding of negligence or whether it did so because the appellate court wrongly interfered with the trial judge's conclusions on causation. The reasons suggest the latter. The only portion of the trial judgment that this Court referred to was the finding on causation. Dickson J. (as he then was) remarks in *Jaegli Enterprises*, *supra*, at p. 4:

> At the end of a nine-day trial Mr. Justice Meredith, the presiding judge, delivered a judgment in which he

que, lorsque la question mixte de fait et de droit en litige est la conclusion de négligence tirée par le juge de première instance, les cours d'appel doivent faire preuve de retenue à l'égard de cette conclusion. Dans cette affaire, le juge de première instance avait conclu que le défendeur, un instructeur de ski, avait respecté la norme de diligence à laquelle il était tenu. Il avait aussi conclu que l'accident serait survenu, indépendamment de la conduite de l'instructeur de ski (*Taylor c. The Queen in Right of British Columbia* (1978), 95 D.L.R. (3d) 82). Le juge Seaton de la Cour d'appel de la Colombie-Britannique a exprimé son désaccord avec la conclusion du juge de première instance que l'instructeur de ski avait respecté la norme de diligence applicable (*Taylor (Guardian ad litem of) c. British Columbia* (1980), 112 D.L.R. (3d) 297). Il a néanmoins reconnu que [TRADUCTION] « l'ultime question » consistait à se demander si « l'omission de l'instructeur de rester près de la demanderesse avait été une cause de l'accident » (p. 307). Sur la question du lien de causalité, qui est une question de fait, le juge Seaton a clairement substitué son opinion à celle du juge de première instance sans tenir compte de la norme de contrôle appropriée. Ses remarques finales sur la question de la causalité, à la p. 308, font ressortir son absence de retenue à l'égard de la conclusion du juge de première instance sur ce point :

> [TRADUCTION] Tout bien considéré, j'estime que la preuve étaye la prétention des demandeurs voulant que la conduite de l'instructeur, qui l'a laissée seule sous la crête de la butte, a été l'une des causes de l'accident.

112 En rétablissant la décision du juge de première instance, notre Cour n'a pas précisé si elle le faisait parce que la cour d'appel avait eu tort de modifier la conclusion de ce dernier sur la négligence ou parce qu'elle avait erronément modifié ses conclusions sur la causalité. Les motifs donnent à penser que la dernière proposition est la bonne. La seule partie du jugement de première instance mentionnée par notre Cour se rapporte à la conclusion sur le lien de causalité. Le juge Dickson (plus tard Juge en chef) a fait les remarques suivantes dans l'arrêt *Jaegli Enterprises*, précité, à la p. 4 :

> À la fin d'un procès de neuf jours, le juge Meredith, qui a présidé le procès, a rendu un jugement dans lequel il a

very carefully considered all of the evidence and concluded that the accident had been caused solely by Larry LaCasse and that the plaintiffs should recover damages, in an amount to be assessed, against LaCasse. The claims against Paul Ankenman, Jaegli Enterprises Limited and the other defendants were dismissed with costs.

113 The Court went on to cite a number of cases, some of which did not involve negligence (see *Schreiber Brothers Ltd. v. Currie Products Ltd.*, [1980] 2 S.C.R. 78), for the general proposition that "it [is] wrong for an appellate court to set aside a trial judgment where [there is not palpable and overriding error, and] the only point at issue [was] the interpretation of the evidence as a whole" (p. 84). Given that the Court focussed on the issue of causation, a question of fact alone, I do not think that *Jaegli Enterprises* establishes that a finding of negligence by the trial judge should be deferred to by appellate courts. In my view, the Court in *Jaegli Enterprises* merely affirmed the longstanding principle that an appellate court should not interfere with a trial judge's finding of fact absent a palpable and overriding error.

(2) Error of Law in the Reasons of the Court of Queen's Bench

114 The standard of care set out in s. 192 of *The Rural Municipality Act, 1989*, as interpreted within the jurisprudence, required the trial judge to examine whether the portion of Snake Hill Road on which the accident occurred posed a hazard to the reasonable driver exercising ordinary care. Having identified the correct legal test, the trial judge nonetheless failed to ask herself whether a reasonable driver exercising ordinary care would have been able to safely drive the portion of the road on which the accident occurred. To neglect entirely one branch of a legal test when applying the facts to the test is to misconstrue the law (*Southam*, *supra*, at para. 39). The Saskatchewan Court of Appeal was therefore right to characterize this failure as an error of law and to consider the factual findings made by the trial judge in light of the appropriate legal test.

examiné soigneusement toute la preuve et a conclu que l'accident était imputable uniquement à Larry LaCasse et que les demandeurs pouvaient recouvrer de LaCasse des dommages-intérêts pour un montant à déterminer. Les réclamations contre Paul Ankenman, Jaegli Enterprises Limited et les autres défendeurs ont été rejetées avec dépens.

La Cour a ensuite cité quelques décisions, dont certaines ne traitent pas de négligence (voir *Schreiber Brothers Ltd. c. Currie Products Ltd.*, [1980] 2 R.C.S. 78), au soutien de la proposition générale qu'« une cour d'appel ne peut à bon droit infirmer une décision de première instance lorsque la seule question en litige porte sur l'interprétation de l'ensemble de la preuve » (p. 84). Étant donné que la Cour s'est attachée à la question du lien de causalité, question de fait seulement, je ne crois pas que l'arrêt *Jaegli Enterprises* établisse que les cours d'appel doivent faire montre de retenue lorsque le juge de première instance conclut à la négligence. À mon avis, dans l'arrêt *Jaegli Enterprises*, la Cour n'a fait que confirmer le principe bien établi portant qu'une cour d'appel ne doit pas modifier une conclusion de fait du juge de première instance en l'absence d'erreur manifeste et dominante.

(2) L'erreur de droit dans les motifs de la Cour du Banc de la Reine

Suivant la norme de diligence énoncée à l'art. 192 de la *Rural Municipality Act, 1989*, telle qu'elle a été interprétée dans la jurisprudence, la juge de première instance devait se demander si le tronçon du chemin Snake Hill sur lequel s'est produit l'accident constituait un danger pour le conducteur raisonnable prenant des précautions normales. Après avoir déterminé quel était le critère juridique applicable, la juge de première instance a toutefois omis de se demander si un tel conducteur aurait pu rouler en sécurité sur le tronçon en question. Le fait d'omettre entièrement une étape d'un critère juridique, dans l'application de celui-ci aux faits de l'espèce, équivaut à mal interpréter le droit (*Southam*, précité, par. 39). Par conséquent, la Cour d'appel de la Saskatchewan a donc eu raison de qualifier cette omission d'erreur de droit et de contrôler les conclusions de fait tirées par la juge de première instance à la lumière du critère juridique approprié.

The long line of jurisprudence interpreting s. 192 of *The Rural Municipality Act, 1989* and its predecessor provisions clearly establishes that the duty of the municipality is to keep the road "in such a reasonable state of repair that those requiring to use it may, exercising ordinary care, travel upon it with safety" (*Partridge*, *supra*, at p. 558; *Levey v. Rural Municipality of Rodgers, No. 133*, [1921] 3 W.W.R. 764 (Sask. C.A.), at p. 766; *Diebel Estate v. Pinto Creek No. 75 (Rural Municipality)* (1996), 149 Sask. R. 68 (Q.B.), at pp. 71-72). Legislation in several other provinces establishes a similar duty of care and courts in these provinces have interpreted it in a similar fashion (*R. v. Jennings*, [1966] S.C.R. 532, at p. 537; *County of Parkland No. 31 v. Stetar*, [1975] 2 S.C.R. 884, at p. 892; *Fafard v. City of Quebec* (1917), 39 D.L.R. 717 (S.C.C.), at p. 718). This Court, in *Jennings*, *supra*, interpreting a similar provision under the Ontario *Highway Improvement Act*, R.S.O. 1960, c. 171, remarked at p. 537 that: "[i]t has been repeatedly held in Ontario that where a duty to keep a highway in repair is imposed by statute the body upon which it is imposed must keep the highway in such a condition that travellers using it with ordinary care may do so with safety".

115 La jurisprudence de longue date portant sur l'interprétation de l'art. 192 de la *Rural Municipality Act, 1989* et des dispositions qu'il a remplacées établit clairement que les municipalités ont l'obligation de tenir les chemins [TRADUCTION] « dans un état raisonnable d'entretien de façon que ceux qui doivent l[es] emprunter puissent, en prenant des précautions normales, y circuler en sécurité » (*Partridge*, précité, p. 558; *Levey c. Rural Municipality of Rodgers, No. 133*, [1921] 3 W.W.R. 764 (C.A. Sask.), p. 766; *Diebel Estate c. Pinto Creek No. 75 (Rural Municipality)* (1996), 149 Sask. R. 68 (B.R.), p. 71 et 72). Plusieurs autres provinces ont adopté des lois établissant une obligation de diligence semblable, et les tribunaux de ces provinces ont interprété cette obligation de la même façon (*R. c. Jennings*, [1966] R.C.S. 532, p. 537; *Comté de Parkland n^o^ 31 c. Stetar*, [1975] 2 R.C.S. 884, p. 892; *Fafard c. City of Quebec* (1917), 39 D.L.R. 717 (C.S.C.), p. 718). Interprétant une disposition similaire de la *Highway Improvement Act* de l'Ontario, R.S.O. 1960, ch. 171, notre Cour a indiqué, dans l'arrêt *Jennings*, précité, p. 537, qu'[TRADUCTION] « [i]l a été décidé à maintes reprises en Ontario que, lorsque l'obligation de maintenir une route en bon état d'entretien est légalement imposée à un organisme, celui-ci doit maintenir la route dans un état permettant à ceux qui l'empruntent en prenant des précautions normales d'y circuler en sécurité ».

There is good reason for limiting the municipality's duty to repair to a standard which permits drivers exercising ordinary care to proceed with safety. As stated by this Court in *Fafard*, *supra*, at p. 718: "[a] municipal corporation is not an insurer of travellers using its streets; its duty is to use reasonable care to keep its streets in a reasonably safe condition for ordinary travel by persons exercising ordinary care for their own safety". Correspondingly, appellate courts have long held that it is an error for the trial judge to find a municipality in breach of its duty merely because a danger exists, regardless of whether or not that danger poses a risk to the ordinary user of the road. The type of error to be guarded against was described by Wetmore C.J. in *Williams v.*

116 Il existe de bonnes raisons de limiter l'obligation d'entretien des routes incombant aux municipalités au respect d'une norme suffisante pour permettre aux conducteurs qui prennent des précautions normales d'y circuler en sécurité. Comme l'a dit notre Cour dans l'arrêt *Fafard*, précité, p. 718 : [TRADUCTION] « [l]es municipalités ne sont pas les assureurs des automobilistes qui roulent dans leurs rues; leur obligation consiste à faire preuve de diligence raisonnable et de maintenir leurs rues dans un état raisonnablement sécuritaire pour la circulation normale des personnes qui prennent des précautions normales en vue d'assurer leur propre sécurité ». En conséquence, les cours d'appel estiment depuis longtemps que le juge de première instance commet une erreur s'il conclut qu'une municipalité

Town of North Battleford (1911), 4 Sask. L.R. 75 (*en banc*), at p. 81:

> The question in an action of this sort, whether or not the road is kept in such repair that those requiring to use it may, using ordinary care, pass to and fro upon it in safety, is, it seems to me, largely one of fact . . . I would hesitate about setting aside a finding of fact of the trial Judge if he had found the facts necessary for the determination of the case, but he did not so find. He found that the crossing was a "dangerous spot without a light, and that if the utmost care were used no accident might occur, but it was not in such proper or safe state as to render such accident unlikely to occur." He did not consider the question from the standpoint of whether or not those requiring to use the road might, using ordinary care, pass to and fro upon it in safety. The mere fact of the crossing being dangerous is not sufficient . . . . [Emphasis added.]

117 From the jurisprudence cited above, it is clear that the mere existence of a hazard or danger does not in and of itself give rise to a duty on the part of the municipality to erect a sign. Even if a trial judge concludes on the facts that the conditions of the road do, in fact, present a hazard, he or she must still go on to assess whether that hazard would present a risk to the reasonable driver exercising ordinary care. The ordinary driver is often faced with inherently dangerous driving conditions. Motorists drive in icy or wet conditions. They drive at night on country roads that are not well lit. They are faced with obstacles such as snow ridges and potholes. These obstacles are often not in plain view, but are obscured or "hidden". Common sense dictates that motorists will, however, exercise a degree of caution when faced with dangerous driving conditions. A municipality is expected to provide extra cautionary measures only where the conditions of the road and the surrounding circumstances do not signal to the driver the possibility that a hazard is present. For example, the ordinary driver expects a dirt road to become slippery when wet. By contrast, paved

manque à son obligation du seul fait qu'un danger existe, indépendamment de la question de savoir si ce danger présente ou non un risque pour l'usager ordinaire du chemin. Le genre d'erreur qu'il faut éviter a été décrit ainsi par le juge en chef Wetmore dans l'affaire *Williams c. Town of North Battleford* (1911), 4 Sask. L.R. 75 (*in banco*), p. 81 :

> [TRADUCTION] Il me semble que la question qui se pose dans ce genre d'action — soit celle de savoir si le chemin est tenu dans un état d'entretien tel que ceux qui doivent l'emprunter puissent, en prenant des précautions normales, y circuler en sécurité — est essentiellement une question de fait [. . .] j'hésiterais à écarter une conclusion de fait du juge de première instance s'il avait relevé l'existence des faits nécessaires pour trancher l'affaire, mais il ne l'a pas fait. Il a conclu que l'intersection était « un endroit dangereux non éclairé, et qu'aucun accident ne s'y produirait si on faisait preuve d'une prudence extrême, mais que cet endroit n'était pas tenu dans un état d'entretien propre à rendre improbable un tel accident ». Il n'a pas examiné la question en se demandant si ceux qui doivent emprunter ce chemin peuvent, en prenant des précautions normales, y circuler en sécurité. Le seul fait que l'intersection soit dangereuse n'est pas suffisant . . . [Je souligne.]

Il ressort clairement de la jurisprudence susmentionnée que la simple existence d'un risque ou danger ne fait pas en soi naître pour la municipalité l'obligation d'installer un panneau de signalisation. Même si, à partir des faits, le juge de première instance arrive à la conclusion que l'état du chemin crée effectivement un risque, il doit poursuivre son analyse et se demander si ce risque présente un danger pour le conducteur raisonnable prenant des précautions normales. Le conducteur moyen rencontre souvent des conditions de conduite intrinsèquement dangereuses. Les automobilistes conduisent leur véhicule sur des chaussées glacées ou humides. Ils roulent la nuit sur des chemins de campagne mal éclairés. Ils rencontrent des obstacles comme des bancs de neige et des nids-de-poule. Souvent ces obstacles ne sont pas visibles, car ils sont dissimulés ou « cachés ». Le bon sens suggère que les automobilistes font toutefois preuve d'une certaine prudence en présence de conditions de conduite dangereuses. On n'attend de la municipalité qu'elle prenne des mesures d'avertissement supplémentaires que lorsque l'état du chemin et l'ensemble des

bridge decks on highways are often slick, though they appear completely dry. Consequently, signs will be posted to alert drivers to this unapparent possibility.

The appellant in this case argued, at para. 27 of his factum, that the trial judge did, in fact, assess whether a reasonable driver using ordinary care would find the portion of Snake Hill Road on which the accident occurred to pose a risk. He points in particular to the trial judge's comments at paras. 85-86 that:

> There is a portion of Snake Hill Road that is a hazard to the public. In this regard I accept the evidence of Mr. Anderson and Mr. Werner. Further, it is a hazard that is not readily apparent to users of the road. It is a hidden hazard. . . .
>
> . . . where the existence of . . . bush obstructs the ability of a motorist to be forewarned of a hazard such as that on Snake Hill Road, it is reasonable to expect the R.M. to erect and maintain a warning or regulatory sign so that a motorist, using ordinary care, may be forewarned, adjust speed and take corrective action in advance of entering a dangerous situation. [Emphasis added.]

The appellant's argument suggests that the trial judge discharged her duty to apply the facts to the law merely by restating the facts of the case in the language of the legal test. This was not, however, sufficient. Although it is clear from the citation above that the trial judge made a factual finding that the portion of Snake Hill Road on which the accident occurred presented drivers with a hidden hazard, there is nothing in this portion of her reasons to suggest that she considered whether or not that portion of the road would pose a risk to the reasonable driver exercising ordinary care. The finding that a hazard, or even that a hidden hazard, exists does not automatically give rise to the conclusion that the reasonable driver exercising ordinary care could not

autres circonstances ne signalent pas au conducteur la possibilité qu'un danger existe. Par exemple, le conducteur moyen s'attend à ce qu'un chemin de terre devienne glissant lorsqu'il est mouillé. À l'opposé, les tabliers de pont asphaltés qui se trouvent sur les routes sont souvent glissants, bien qu'ils paraissent complètement secs. Par conséquent, des panneaux sont installés pour alerter les conducteurs de cette possibilité non apparente.

118 En l'espèce, l'appelant a plaidé, au par. 27 de son mémoire, que la juge de première instance s'était, en fait, demandé si un conducteur raisonnable prenant des précautions normales considérerait que le tronçon du chemin Snake Hill où s'est produit l'accident constitue un risque. Il souligne en particulier les commentaires suivants de la juge de première instance, aux par. 85 et 86 :

> [TRADUCTION] Il y a, sur le chemin Snake Hill, un tronçon qui présente un danger pour le public. À cet égard, je retiens les témoignages de MM. Anderson et Werner. En outre, il s'agit d'un danger qui n'est pas facilement décelable par les usagers du chemin. Il s'agit d'un danger caché . . .
>
> . . . à l'endroit où la présence des broussailles empêche les automobilistes de voir venir un danger comme celui qui existe sur le chemin Snake Hill, il est raisonnable de s'attendre à ce que la M.R. installe et maintienne un panneau d'avertissement ou de signalisation afin qu'un automobiliste prenant des précautions normales soit prévenu et puisse réduire sa vitesse et prendre des mesures correctives avant d'arriver à l'endroit dangereux. [Je souligne.]

119 L'appelant semble prétendre que la juge de première instance s'est acquittée de son devoir d'appliquer le droit aux faits simplement en intégrant les faits de l'espèce à la formulation du critère juridique. Ce n'était toutefois pas suffisant. Bien qu'il ressorte clairement des passages précités que la juge de première instance a, à partir des faits, conclu que la portion du chemin Snake Hill où s'est produit l'accident exposait les conducteurs à un danger caché, il n'y a rien dans cette partie de ses motifs qui indique qu'elle s'est demandé si cette portion du chemin présentait un risque pour le conducteur raisonnable prenant des précautions normales. Le fait de conclure à l'existence d'un danger, même caché, n'implique pas forcément que le conducteur

travel through it safely. A proper application of the test demands that the trial judge ask the question: "How would a reasonable driver have driven on this road?" Whether or not a hazard is "hidden" or a curve is "inherently" dangerous does not dispose of the question. My colleagues state that it was open to the trial judge to draw an inference of knowledge of the hazard simply because the sharp curve was a permanent feature of the road (para. 61). Here again, there is nothing in the reasons of the trial judge to suggest that she drew such an inference or to explain how such an inference accorded with the legal requirements concerning the duty of care.

120 Nor did the trial judge consider the question in any other part of her reasons. Her failure to do so becomes all the more apparent when her analysis (or lack thereof) is compared to that in cases in which the courts applied the appropriate method. The Court of Appeal referred to two such cases by way of example. In *Nelson v. Waverley (Rural Municipality)* (1988), 65 Sask. R. 260 (Q.B.), the plaintiff argued that the defendant municipality should have posted signs warning of a ridge in the middle of the road that resulted from the grading of the road by the municipality. The trial judge concluded that if the driver had exercised ordinary care, he could have travelled along the roadway with safety. Instead, he drove too fast and failed to keep an adequate lookout considering the maintenance that was being performed on the road. In *Diebel Estate*, *supra*, the issue was whether the municipality had a duty under s. 192 to post a sign warning motorists that a rural road ended abruptly in a T-intersection. The question of how a reasonable driver exercising ordinary care would have driven on that road was asked and answered by the trial judge in the following passage at p. 74:

His [the expert's] conclusions as to stopping are, however, mathematically arrived at and never having been on

raisonnable prenant des précautions normales ne peut pas y circuler en sécurité. Pour bien appliquer le critère juridique, le juge de première instance doit se poser la question suivante : « Comment un conducteur raisonnable aurait-il roulé sur ce chemin? » Le fait de conclure qu'il existe ou non un danger « caché » ou qu'une courbe est quelque chose d' « intrinsèquement » dangereux ne vide pas la question. Mes collègues affirment que la juge de première instance pouvait inférer la connaissance du danger du seul fait que la courbe serrée constituait une caractéristique permanente du chemin (par. 61). Ici encore, rien dans les motifs de la juge de première instance n'indique qu'elle a tiré une telle inférence ou n'explique en quoi une telle inférence satisfaisait aux conditions juridiques relatives à l'obligation de diligence.

La juge de première instance n'a pas non plus examiné cette question ailleurs dans ses motifs. Son omission à cet égard devient encore plus évidente lorsqu'on compare son analyse (ou son absence d'analyse) à celle des affaires où les tribunaux ont appliqué la bonne démarche. La Cour d'appel a donné comme exemple deux de ces affaires. Dans *Nelson c. Waverley (Rural Municipality)* (1988), 65 Sask. R. 260 (B.R.), le demandeur prétendait que la municipalité défenderesse aurait dû installer des panneaux signalant la présence, au milieu du chemin, d'un sillon résultant de travaux municipaux de nivellement. Le juge de première instance a estimé que, si le conducteur avait pris des précautions normales, il aurait pu rouler en sécurité sur la chaussée. Au lieu de cela, il a roulé trop vite et manqué de vigilance compte tenu des travaux d'entretien qui étaient effectués sur le chemin. Dans *Diebel Estate*, précité, il s'agissait de déterminer si la municipalité avait, en vertu de l'art. 192, l'obligation d'installer un panneau avertissant les automobilistes qu'une route rurale se terminait de façon abrupte à un croisement en T. Le juge de première instance s'est demandé comment un conducteur raisonnable prenant des précautions normales aurait roulé sur ce chemin, et il a répondu ainsi à cette question, à la p. 74 :

[TRADUCTION] Ses conclusions [celles de l'expert] pour ce qui concerne l'arrêt des automobiles découlent

the road, from what was described in the course of the trial, I would think the intersection could be a danger at night to a complete stranger to the area, depending on one's reaction time and the possibility of being confused by what one saw rather than recognizing the T intersection to be just that. On the other hand I would think a complete stranger in the area would be absolutely reckless to drive down a dirt road of the nature of this particular road at night at 80 kilometres per hour. [Emphasis added; emphasis in original deleted.]

toutefois d'opérations mathématiques et bien que je n'aie jamais emprunté le chemin en question, d'après les descriptions faites au procès, je suis d'avis que le croisement pourrait constituer un danger la nuit pour quelqu'un qui ne connaît absolument pas l'endroit, eu égard à la vitesse de réaction de chacun et à la possibilité que quelqu'un confonde le croisement en T avec quelque chose d'autre. Par ailleurs, j'estime que quelqu'un ne connaissant aucunement l'endroit agirait de façon tout à fait téméraire en roulant à 80 kilomètres à l'heure la nuit sur un chemin de terre comme celui qui nous intéresse. [Je souligne; soulignement dans l'original omis.]

The conclusion that Wright J. erred in failing to apply a required aspect of the legal test does not automatically lead to a rejection of her factual findings. This Court's jurisdiction to review questions of law entitles it, where an error of law has been found, to take the factual findings of the trial judge as they are, and to assess these findings anew in the context of the appropriate legal test.

121 Le fait de conclure que la juge Wright a commis une erreur de droit en omettant d'appliquer un élément essentiel du critère juridique n'invalide pas forcément ses conclusions de fait. En effet, la compétence de notre Cour en matière d'examen des questions de droit l'autorise, lorsqu'une telle erreur est décelée, à reprendre telles quelles les conclusions de fait du juge de première instance et à les réévaluer au regard du critère juridique approprié.

In my view, neither Wright J.'s factual findings nor any other evidence in the record that she might have considered had she asked the appropriate question, support the conclusion that the respondent was in breach of its duty. The portion of Snake Hill Road on which the accident occurred did not pose a risk to a reasonable driver exercising ordinary care because the conditions of Snake Hill Road in general and the conditions with which motorists were confronted at the exact location of the accident signalled to the reasonable motorist that caution was needed. Motorists who appropriately acknowledged the presence of the several factors which called for caution would have been able to navigate safely the so-called "hidden hazard" without the benefit of a road sign.

122 Selon moi, ni les faits retenus par la juge Wright ni aucun autre élément de preuve au dossier qu'elle aurait pu prendre en considération si elle s'était posé la bonne question n'appuient sa conclusion que l'intimée a manqué à son obligation. La portion du chemin Snake Hill où s'est produit l'accident ne présentait pas de risque pour un conducteur raisonnable prenant des précautions normales, car l'état de ce chemin en général et les conditions auxquelles les automobilistes doivent faire face à l'endroit précis de l'accident avertissent l'automobiliste raisonnable que la prudence s'impose. Les automobilistes sachant reconnaître les divers facteurs qui appellent à la prudence auraient pu franchir le soi-disant [TRADUCTION] « danger caché » sans l'aide d'un panneau de signalisation.

The question of how a reasonable driver exercising ordinary care would have driven on Snake Hill Road necessitates a consideration of the nature and locality of the road. A reasonable motorist will not approach a narrow gravel road in the country in the same way that he or she will approach a paved highway. It is reasonable to expect a motorist to drive more slowly and to pay greater attention to the potential presence of hazards when driving on a

123 Pour savoir comment un conducteur raisonnable prenant des précautions normales aurait conduit son véhicule sur le chemin Snake Hill, il faut tenir compte de la nature du chemin et de la configuration des lieux. Un automobiliste raisonnable ne roulera pas sur une étroite route de campagne gravelée de la même façon que sur une route asphaltée. Il est raisonnable de s'attendre à ce qu'un automobiliste conduise moins vite et soit plus attentif à la présence

road that is of a lower standard, particularly when he or she is unfamiliar with it.

124 While the trial judge in this case made some comments regarding the nature of the road, I agree with the Court of Appeal's findings that "[s]he might have addressed the matter more fully, taking into account more broadly the terrain through which the road passed, the class and designation of the road in the scheme of classification, and so on . . . " (para. 55). Instead, the extent of her analysis of the road was limited to the following comments, found at para. 84 of her reasons:

> Snake Hill Road is a low traffic road. It is however maintained by the R.M. so that it is passable year round. There are permanent residences on the road. It is used by farmers for access to their fields and cattle. Young people frequent Snake Hill Road for parties and as such the road is used by those who may not have the same degree of familiarity with it as do residents.

125 In my view, the question of how the reasonable driver would have negotiated Snake Hill Road necessitated a somewhat more in-depth analysis of the character of the road. The trial judge's analysis focussed almost entirely on the use of the road, without considering the sort of conditions it presented to drivers. It is perhaps not surprising that the trial judge did not engage in this fuller analysis, given that she did not turn her mind to the question of how a reasonable driver would have approached the road. Had she considered this question, she likely would have engaged in the type of assessment that was made by the Court of Appeal at para. 13 of its judgment:

> The road, about 20 feet in width, was classed as "a bladed trail," sometimes referred to as "a land access road," a classification just above that of "prairie trail". As such, it was not built up, nor gravelled, except lightly at one end of it, but simply bladed across the terrain following the path of least resistance. Nor was it in any way signed.

de dangers potentiels sur un chemin de catégorie inférieure, particulièrement s'il n'est pas familier avec celui-ci.

Bien que, en l'espèce, la juge de première instance ait fait certains commentaires sur la nature du chemin, je souscris à la conclusion de la Cour d'appel selon laquelle [TRADUCTION] « [e]lle aurait pu examiner la question de manière plus approfondie, en tenant davantage compte du type de terrain que le chemin traversait, de la nature et de la désignation du chemin selon le système de classification des routes et ainsi de suite . . . » (par. 55). Au lieu de cela, son analyse s'est limitée aux commentaires suivants, au par. 84 de ses motifs :

> [TRADUCTION] Le chemin Snake Hill est un chemin à faible débit de circulation. Il est néanmoins entretenu par la M.R. à longueur d'année afin de le garder carrossable. Des résidences permanentes sont situées en bordure de celui-ci. Les fermiers l'utilisent pour accéder à leurs champs et à leur bétail. Des jeunes gens empruntent le chemin Snake Hill pour se rendre à des fêtes, de sorte qu'il est utilisé par des conducteurs qui ne le connaissent pas toujours aussi bien que les résidents de l'endroit.

À mon avis, la question de savoir comment un conducteur raisonnable aurait roulé sur le chemin Snake Hill nécessitait un examen un peu plus approfondi de la nature du chemin. Dans son analyse, la juge de première instance s'est attachée presque exclusivement à l'utilisation qui est faite du chemin, sans prendre en compte le genre de conditions qu'il présente aux conducteurs. Il n'est peut-être pas surprenant qu'elle ne se soit pas livrée à cette analyse approfondie, puisqu'elle ne s'est pas demandé comment un conducteur raisonnable aurait roulé sur ce chemin. Si elle s'était posé cette question, elle aurait vraisemblablement procédé à une évaluation analogue à celle qu'a faite la Cour d'appel au par. 13 de son jugement :

> [TRADUCTION] Le chemin, d'une largeur de 20 pieds environ, a été qualifié de « chemin nivelé », qu'on appelle aussi parfois « chemin d'accès », soit tout juste une catégorie au-dessus d'un « chemin de prairie ». Comme tel, il n'a été ni renforcé ni revêtu de gravier, sauf légèrement à l'une de ses extrémités, il s'agit tout simplement d'un chemin nivelé à même le terrain, suivant le tracé présentant le mois d'obstacles. On n'y a installé aucune signalisation.

Given the fact that Snake Hill Road is a low standard road, in a category only one or two levels above a prairie trail, one can assume that a reasonable driver exercising ordinary care would approach the road with a certain degree of caution.

Comme le chemin Snake Hill est une route de catégorie inférieure, à peine un ou deux niveaux au-dessus d'un chemin de prairie, on peut présumer qu'un conducteur raisonnable prenant des précautions normales y roulerait avec une certaine prudence.

Having considered the character of the road in general, and having concluded that by its very nature it warranted a certain degree of caution, it is nonetheless necessary to consider the material features of the road at the point at which the accident occurred. Even on roads which are of a lower standard, a reasonable driver exercising due caution may be caught unaware by a particularly dangerous segment of the road. That was, in fact, the central argument that the appellant put forward in this case. According to the appellant's "dual nature" theory, at para. 8 of his factum, the fact that the curvy portion of Snake Hill Road where the accident occurred was flanked by straight segments of road created a risk that a motorist would be lulled into thinking that the curves could be taken at speeds greater than that at which they could actually be taken.

126 Après avoir examiné la nature générale du chemin et avoir conclu que, du fait de cette nature même, une certaine prudence s'imposait, il faut néanmoins prendre en considération les caractéristiques physiques du chemin à l'endroit où l'accident s'est produit. Même sur des chemins de catégorie inférieure, un conducteur raisonnable prenant des précautions normales pourrait être pris par surprise sur un tronçon particulièrement dangereux. Il s'agit là, en fait, de l'argument central présenté par l'appelant en l'espèce. Selon sa thèse, dite de la « nature hybride » du chemin, au par. 8 de son mémoire, le fait que la courbe où est survenu l'accident se trouve entre des tronçons en ligne droite risquait d'amener les automobilistes à croire que les virages pouvaient être pris à des vitesses supérieures à celles auxquelles ils pouvaient l'être en réalité.

While it is not clear from her reasons that the trial judge accepted the appellant's "dual nature" theory, it appears that her conclusion that the municipality did not meet the standard of care required by it was based largely on her observation of the material features of the road at the location of the Nikolaisen rollover. Relying on the evidence of two experts, Mr. Anderson and Mr. Werner, she found the portion of the road on which the accident occurred to be a "hazard to the public". In her view, the limited sight distance created by the presence of uncleared bush precluded a motorist from being forewarned of the impending sharp right turn immediately followed by a left turn. Based on expert testimony, she concluded that the curve could not be negotiated at speeds greater than 60 km/h under favourable conditions, or 50 km/h under wet conditions.

127 Bien que les motifs de la juge de première instance n'indiquent pas clairement si elle a retenu la thèse de la « nature hybride » du chemin, il semble que sa conclusion selon laquelle la municipalité a manqué à son obligation d'entretien ait reposé largement sur son examen des caractéristiques physiques du chemin, à l'endroit où le véhicule de M. Nikolaisen a fait un tonneau. S'appuyant sur les témoignages de deux experts, MM. Anderson et Werner, elle a estimé que la portion du chemin où s'est produit l'accident constituait un [TRADUCTION] « danger pour le public ». Selon elle, le fait que la distance de visibilité ait été réduite par la présence de broussailles empêchait les automobilistes de voir l'imminence d'un virage à droite serré, qui est immédiatement suivi d'un virage à gauche. Sur la base des témoignages d'experts, elle a conclu que le virage ne pouvait être pris à une vitesse supérieure à 60 km/h dans des conditions favorables, ou 50 km/h sur chaussée humide.

Again, I would not reject the trial judge's factual finding that the curve presented motorists with an

128 Je ne rejetterais pas, je le répète, la conclusion de fait selon laquelle la courbe présentait un risque

inherent hazard. The evidence does not, however, support a finding that a reasonable driver exercising ordinary care would have been unable to negotiate the curve with safety. As I explained earlier, the municipality's duty to repair is implicated only when an objectively hazardous condition exists, and where it is determined that a reasonable driver arriving at the hazard would be unable to provide for his or her own security due to the features of the hazard.

129 I agree with the trial judge that part of the danger posed by the presence of bushes on the side of the road was that a driver would not be able to predict the radius of the sharp right-turning curve obscured by them. In my view, however, the actual danger inherent in this portion of the road was that the bushes, together with the sharp radius of the curve, prevented an eastbound motorist from being able to see if a vehicle was approaching from the opposite direction. Given this latter situation, it is highly unlikely that any reasonable driver exercising ordinary care would approach the curve at speeds in excess of 50 km/h, a speed which was found by the trial judge to be a safe speed at which to negotiate the curve. Since a reasonable driver would not approach this curve at speeds in excess of which it could safely be taken, I conclude that the curve did not pose a risk to the reasonable driver.

130 One need only refer to the series of photographs of the portion of Snake Hill Road on which the accident occurred to appreciate the extent to which visual clues existed which would alert a driver to approach the curve with caution (Respondent's Record, vol. II, at pp. 373-76). The photographs, which indicate what the driver would have seen on entering the curve, show the presence of bush extending well into the road. From the photographs, it is clear that a motorist approaching the curve would not fail to appreciate the risk presented by the curve, which is simply that it is impossible to see around it and to gauge what may be coming in the opposite direction. In addition, the danger posed

intrinsèque pour les automobilistes. Toutefois, il n'y a rien dans la preuve qui permette de conclure qu'un conducteur raisonnable prenant des précautions normales aurait été incapable de prendre le virage en sécurité. Comme je l'ai expliqué plus tôt, l'obligation d'entretien des municipalités n'est en cause que lorsqu'il existe une situation objectivement dangereuse et qu'il est établi qu'un conducteur raisonnable s'approchant du danger serait incapable d'assurer sa sécurité en raison des caractéristiques de ce danger.

Je partage l'opinion de la juge de première instance selon laquelle une partie du danger créé par les broussailles se trouvant en bordure de la route tenait au fait qu'un conducteur ne pourrait deviner le rayon de courbure prononcé du virage à droite serré qu'elles dissimulaient. À mon sens, toutefois, le véritable danger intrinsèque de ce tronçon du chemin résidait dans le fait que les broussailles, ainsi que le court rayon de courbure du virage, empêchent les automobilistes circulant en direction est de voir si un véhicule s'approche en sens inverse. Par conséquent, il est très peu probable qu'un conducteur raisonnable prenant des précautions normales approcherait de ce virage à une vitesse supérieure à 50 km/h, vitesse à laquelle la juge de première instance a conclu qu'il était possible de le prendre en sécurité. Étant donné qu'un conducteur raisonnable n'approcherait pas de ce virage à une vitesse supérieure à celle lui permettant de le prendre en sécurité, je conclus que le virage ne constituait pas un risque pour le conducteur raisonnable.

Il suffit d'examiner les photos du tronçon du chemin Snake Hill où l'accident est survenu pour constater à quel point il existait des indices visuels propres à inciter les conducteurs à s'approcher du virage avec prudence (dossier de l'intimée, vol. II, p. 373-376). Les photos, qui montrent ce que voit le conducteur sur le point d'amorcer le virage, laissent voir la présence de broussailles s'avançant considérablement au-dessus du chemin. Il ressort clairement de ces photographies qu'un automobiliste approchant du virage ne manquerait pas pressentir le risque que présente celui-ci, savoir qu'il est tout simplement impossible de voir de l'autre côté de la courbe ce qui peut arriver en sens inverse. De plus,

by the inability to see what is approaching in the opposite direction is somewhat heightened by the fact that this road is used by farm operators. At trial, the risk was described in the following terms by Mr. Sparks, an engineer giving expert testimony:

> . . . if you can't, if you can't see far enough down the road to, you know, if there's somebody that's coming around the corner with a tractor and a cultivator and you can't see around the corner, then, you know, drivers would have a fairly strong signal, in my view, that due care and caution would be required.

The expert testimony relied on by the trial judge does not support a finding that the portion of Snake Hill Road on which the accident occurred would pose a risk to a reasonable driver exercising ordinary care. When asked at trial whether motorists, exercising reasonable care, would enter the curve at a slow speed because they could not see what was coming around the corner, Mr. Werner agreed that he, himself, drove the corner "at a slower speed" and that it would be prudent for a driver to slow down given the limited sight distance. Similarly, Mr. Anderson admitted to having taken the curve at 40-45 km/h the first time he drove it because he "didn't want to get into trouble with it". When asked if the reason he approached the curve at that speed was because he could not see around it, he replied in the affirmative: "[t]hat's why I approached it the way I did."

Perhaps most tellingly, Mr. Nikolaisen himself testified that he could not see if a vehicle was coming in the opposite direction as he approached the curve. The following exchange which occurred during counsel's cross-examination of Mr. Nikolaisen at trial is instructive:

> Q. . . . You told my learned friend, Mr. Logue, that your view of the road was quite limited, that is correct? The view ahead on the road is quite limited, is that right?

le danger que constitue l'incapacité de voir ce qui arrive en sens inverse est d'une certaine manière exacerbé par le fait que le chemin est utilisé par des exploitants agricoles. Au procès, ce risque a été décrit ainsi par M. Sparks, ingénieur, qui témoignait à titre d'expert :

> [TRADUCTION] . . . si vous ne pouvez pas voir, si vous ne pouvez pas voir assez loin sur le chemin pour, vous savez, savoir si quelqu'un arrive en sens inverse avec un tracteur tirant une herse et que vous ne pouvez voir, de l'autre côté du virage, alors, vous savez, cela devrait envoyer un message clair aux conducteurs, selon moi, que l'attention et la prudence s'imposent.

131 Le témoignage d'expert retenu par la juge de première instance n'étaye pas sa conclusion que la portion du chemin Snake Hill où s'est produit l'accident présente un risque pour un conducteur raisonnable prenant des précautions normales. Lorsqu'on lui a demandé si un automobiliste prenant des précautions normales amorcerait le virage à vitesse réduite étant donné qu'il ne peut voir ce qui l'attend au détour du chemin, M. Werner a reconnu que lui-même prend le virage [TRADUCTION] « à vitesse réduite » et qu'il serait prudent que les conducteurs ralentissent en raison de la distance de visibilité limitée. De même, M. Anderson a admis avoir pris le virage à 40-45 km/h la première fois qu'il est passé par là, car il [TRADUCTION] « ne voulait pas se placer dans une situation difficile ». Lorsqu'on lui a demandé s'il avait pris le virage à cette vitesse parce qu'il ne pouvait pas voir ce qui l'attendait, il a répondu par l'affirmative : [TRADUCTION] « [c']est la raison pour laquelle je l'ai approché comme je l'ai fait. »

132 Fait encore plus révélateur peut-être, M. Nikolaisen lui-même a témoigné qu'il ne pouvait pas savoir si un véhicule venait en sens inverse lorsqu'il s'approchait du virage. L'échange suivant, durant le contre-interrogatoire de M. Nikolaisen au procès par l'avocat de la partie adverse, est éclairant :

[TRADUCTION]

> Q. . . . Vous avez dit à mon savant collègue, M. Logue, que votre visibilité était plutôt réduite, est-ce exact? La visibilité sur le chemin est plutôt réduite, n'est-ce pas?

A. As in regards to travelling through the curves, yes, that's right, yeah.

Q. Yes. And you did not know what was coming as you approached the curve, that is correct?

A. That's correct, yes.

Q. There might be a vehicle around that curve coming towards you or someone riding a horse on the road, that is correct?

A. Or a tractor or a cultivator or something, that's right.

Q. Or a tractor or a cultivator. You know as a person raised in rural Saskatchewan that all of those things are possibilities, that is right?

A. That's right, yeah, that is correct.

R. Lorsqu'on se trouve dans les courbes, oui, c'est exact.

Q. Oui. Et vous ne saviez pas ce qui s'en venait lorsque vous approchiez du virage, est-ce exact?

R. C'est exact, oui.

Q. Il aurait pu y avoir un véhicule venant dans votre direction de l'autre côté de la courbe ou quelqu'un se promenant à cheval sur le chemin, est-ce exact?

R. Ou un tracteur, un cultivateur ou autre chose, c'est vrai.

Q. Ou un tracteur ou un cultivateur. Vous savez, puisque vous avez grandi en milieu rural en Saskatchewan, que toutes ces situations sont autant de possibilités, n'est-ce pas?

R. C'est vrai, oui.

133 Nor do I accept the appellant's submission that the "dual nature" of the road had the effect of lulling drivers into taking the curve at an inappropriate speed. This theory rests on the assumption that the motorists would drive the straight portions of the road at speeds of up to 80 km/h, leaving them unprepared to negotiate suddenly appearing curves. Yet, while the default speed limit on the road was 80 km/h, there was no evidence to suggest that a reasonable driver would have driven any portion of the road at that speed. While Mr. Werner testified that a driver "would be permitted" to drive at a maximum of 80 km/h, since this was the default (not the posted) speed limit, he later acknowledged that bladed trails in the province are not designed to meet 80 km/h design criteria. I agree with the Court of Appeal that the evidence is that "Snake Hill Road was self-evidently a dirt road or bladed trail" and that it "was obviously not designed to accommodate travel at a general speed of 80 kilometres per hour". As I earlier remarked, the locality of the road and its character and class must be considered when determining whether the reasonable driver would be able to navigate it safely.

Je ne retiens pas non plus l'argument de l'appelant portant que la « nature hybride » du chemin avait pour effet d'amener les conducteurs à prendre le virage à une vitesse inappropriée. Cette théorie repose sur l'hypothèse que les automobilistes roulent sur les portions en ligne droite du chemin à une vitesse pouvant atteindre 80 km/h, et qu'ils se trouvent en conséquence pris de court lorsqu'ils doivent prendre un virage soudain. Pourtant, bien que la vitesse permise sur le chemin soit 80 km/h, rien dans la preuve n'indiquait qu'un conducteur raisonnable aurait roulé à cette vitesse à quelque endroit du chemin. Après avoir témoigné que les conducteurs [TRADUCTION] « étaient autorisés » à rouler à une vitesse maximale de 80 km/h, cette vitesse étant la vitesse permise par défaut (et non la vitesse affichée), M. Werner a reconnu que les chemins nivelés de la province ne sont pas conçus pour permettre la circulation à une vitesse de 80 km/h. À l'instar de la Cour d'appel, je suis d'avis que la preuve établit que [TRADUCTION] « le chemin Snake Hill était manifestement un chemin de terre ou un chemin nivelé » et qu'il « n'était clairement pas conçu pour permettre une vitesse générale de 80 kilomètres à l'heure ». Comme je l'ai souligné précédemment, la configuration du chemin, de même que sa nature et sa catégorie doivent être prises en considération pour décider si le conducteur raisonnable aurait pu y rouler en sécurité.

134

Furthermore, the evidence at trial did not suggest that drivers were somehow fooled by the so-called "dual nature" of the road. The following exchange between counsel for the respondent and Mr. Werner at trial is illustrative of how motorists would view the road:

Q. Now, Mr. Werner, would you not agree that the change in the character of this road as you proceeded from east to west was quite obvious?

A. It was straight, and then you came to a hill, and you really didn't know what might lie beyond the hill.

Q. That's right. But I mean, the fact that the road went from being straight and level to suddenly there was a hill and you couldn't see -- you could see from the point of the top of the hill that the road didn't continue in a straight line, couldn't you?

A. Yes, you could, from the top of the hill, it's a very abrupt hill, yes.

Q. And as you proceeded down though the hill it became quite obvious, did it not, that the character of the road changed?

A. Yes, it changed, yes.

Q. Now you were faced with something other than a straight road?

A. M'hm. Yes.

Q. Now you were on -- and at some point along there the surface of the road changed, did it not?

A. Yes.

Q. And, of course, the road was no longer, I use the term built-up to refer to a road that has grade and it has some drainage. As you proceeded from west to east, you realized, you could see, it was obvious that this was not longer a built-up road?

A. It was a road essentially that was cut out of the topography and had no ditches, and there was an abutment or shoulder right to the driving surface. It was different than the first part.

Q. Yes. And all those differences were obvious, were they not?

En outre, rien dans la preuve présentée au procès n'indiquait que les conducteurs avaient été trompés de quelque façon par la soi-disant « nature hybride » du chemin. L'échange suivant, entre l'avocat de l'intimée et M. Werner, illustre bien la façon dont les automobilistes perçoivent le chemin :

[TRADUCTION]

Q. Maintenant M. Werner, ne seriez-vous pas d'accord pour dire que le changement dans la nature de ce chemin lorsque vous rouliez d'est en ouest était très évident?

R. On roulait en ligne droite, puis on descendait une colline, et on ne savait vraiment pas ce qui pouvait se trouver de l'autre côté de la colline.

Q. C'est vrai. Mais je veux dire, le fait que le chemin suivait d'abord un tracé horizontal et en ligne droite pour soudainement devenir une colline et que vous ne pouviez pas voir -- vous pouviez voir du haut de la colline que le chemin ne continuait pas en ligne droite, n'est-ce pas?

R. Oui, vous pouviez, du haut de la colline, c'est une colline très abrupte, oui.

Q. Et au fur et à mesure que vous descendiez la colline il devenait assez évident, n'est-ce pas, que la nature du chemin changeait?

R. Oui, ça changeait, oui.

Q. Vous vous trouviez alors devant autre chose qu'un chemin en ligne droite?

R. M'hm. Oui.

Q. Vous étiez maintenant sur -- et à un moment donné la surface du chemin changeait, n'est-ce pas?

R. Oui.

Q. Et, évidemment, le chemin n'était plus, j'utilise le terme aménagé pour désigner un chemin possédant une certaine élévation et qui est dans une certaine mesure drainé. Au fur et à mesure que vous rouliez d'ouest en est, vous constatiez, vous pouviez voir, il était évident, qu'il ne s'agissait plus d'un chemin aménagé?

R. Il s'agit essentiellement d'un chemin tracé suivant la topographie des lieux et sans fossés, et il y avait un accotement à droite du conducteur. C'était différent de la portion précédente.

Q. Oui. Et toutes ces différences étaient évidentes, n'est-ce pas?

A. Well, I -- they were clear, satisfactorily clear to me, yes. [Emphasis added.]

135 Although they may be compelling factors in other cases, in this case the "dual nature" of the road, the radius of the curve, the surface of the road, and the lack of superelevation do not support the conclusion of the trial judge. The question of how a reasonable driver exercising ordinary care would approach this road demands common sense. There was no necessity to post a sign in this case for the simple reason that any reasonable driver would have reacted to the presence of natural cues to slow down. The law does not require a municipality to post signs warning motorists of hazards that pose no real risk to a prudent driver. To impose a duty on the municipality to erect a sign in a case such as this is to alter the character of the duty owed by a municipality to drivers. Municipalities are not required to post warnings directed at drunk drivers and thereby deal with their inability to react to the cues that alert the ordinary driver to the presence of a hazard.

136 My colleagues assert that the trial judge properly considered all aspects of the applicable legal test, including whether the curve would pose a risk to the reasonable driver exercising ordinary care. They say that the trial judge did discuss, both explicitly and implicitly, the conduct of an ordinary or reasonable motorist approaching the curve. Secondly, they note that she referred to the evidence of the experts, Mr. Anderson and Mr. Werner, both of whom discussed the conduct of an ordinary motorist in this situation. Thirdly, the fact that the trial judge apportioned negligence to Nikolaisen indicates, in their view, that she assessed his conduct against the standard of the ordinary driver, and thus considered the conduct of the latter (para. 40).

R. Bien, je -- elles étaient évidentes, suffisamment évidentes pour moi, oui. [Je souligne.]

Bien qu'ils puissent constituer des facteurs concluants dans d'autres affaires, la « nature hybride » du chemin, le rayon de courbure du virage, le revêtement du chemin et l'absence d'élévation n'étayent pas en l'espèce la conclusion de la juge de première instance. Pour répondre à la question de savoir comment un conducteur raisonnable prenant des précautions normales roulerait sur ce chemin, il faut faire appel au bon sens. Il n'était pas nécessaire d'installer un panneau de signalisation en l'espèce, et ce pour la simple raison que n'importe quel conducteur raisonnable aurait réagi aux indices naturels l'invitant à ralentir. Le droit n'oblige pas les municipalités à installer des panneaux signalant aux automobilistes des dangers qui ne font pas courir de risque véritable aux conducteurs prudents. Imposer à la municipalité l'obligation d'installer un panneau dans un cas comme celui qui nous occupe équivaut à modifier la nature de l'obligation qu'ont les municipalités envers les conducteurs. Les municipalités ne sont pas tenues d'aménager des panneaux d'avertissement à l'intention des conducteurs en état d'ébriété et, ainsi, de remédier à leur incapacité de réagir aux indices qui alertent le conducteur moyen de la présence d'un danger.

Mes collègues affirment que la juge de première instance a dûment pris en considération tous les aspects du critère juridique applicable, y compris la question de savoir si la courbe présentait un risque pour le conducteur moyen qui prend des précautions normales. Ils disent que la juge de première instance a effectivement examiné, explicitement et implicitement, la conduite de l'automobiliste moyen ou raisonnable qui s'approche du virage. Ils font ensuite remarquer qu'elle a fait état du témoignage des experts MM. Anderson et Werner, qui ont tous deux analysé la conduite de l'automobiliste moyen se trouvant dans cette situation. Enfin, le fait qu'elle ait imputé une partie de la responsabilité à M. Nikolaisen indique, à leur avis, qu'elle a évalué sa conduite au regard à la norme du conducteur moyen, et qu'elle a donc pris en compte la façon dont ce dernier aurait conduit (par. 40).

I respectfully disagree that it is explicit in the trial judge's reasons that she considered whether the portion of the road on which the accident occurred posed a risk to the ordinary driver exercising reasonable care. As I explained above, the fact that the trial judge restated the legal test in the form of a conclusion in no way suggests that she turned her mind to the issue of whether the ordinary driver would have found the curve to be hazardous.

137 En toute déférence, je ne crois pas qu'il ressorte explicitement des motifs de la juge de première instance qu'elle s'est demandé si la portion du chemin où s'est produit l'accident constituait un risque pour le conducteur raisonnable prenant des précautions normales. Comme je l'ai expliqué précédemment, le fait que la juge de première instance ait reformulé le critère juridique sous forme de conclusion n'indique aucunement qu'elle s'est demandé si le conducteur moyen aurait considéré la courbe comme dangereuse.

Nor do I agree that a discussion of the conduct of an ordinary motorist in the situation was somehow "implicit" in the trial judge's reasons. In my view, it is highly problematic to presume that a trial judge made factual findings on a particular issue in the absence of any indication in the reasons as to what those findings were. While a trial judge is presumed to know the law, he or she cannot be presumed to have reached a factual conclusion without some indication in the reasons that he or she did in fact come to that conclusion. If the reviewing court is willing to presume that a trial judge made certain findings based on evidence in the record absent any indication in the reasons that the trial judge actually made those findings, then the reviewing court is precluded from finding that the trial judge misapprehended or neglected evidence.

138 Je n'estime pas non plus que l'examen de la façon de conduire de l'automobiliste moyen dans cette situation ressorte « implicitement » des motifs de la juge de première instance. À mon avis, il est très problématique de présumer qu'un juge de première instance a tiré des conclusions de fait à l'égard d'une question précise alors qu'il n'y a aucune indication dans ses motifs quant à la nature de ces conclusions. Bien que le juge de première instance soit censé connaître le droit, on ne peut présumer qu'il a tiré à une conclusion factuelle en l'absence d'indication dans ses motifs qu'il est effectivement arrivé à cette conclusion. Si le tribunal de révision est prêt à supposer que le juge de première instance a tiré certaines conclusions, sur la foi de la preuve figurant au dossier, bien que rien dans les motifs n'indique qu'il a vraiment tiré ces conclusions, alors le tribunal de révision ne saurait conclure que le juge de première instance a mal interprété des éléments de preuve ou a négligé d'en tenir compte.

In my view, my colleagues have throughout their reasons improperly presumed that the trial judge reached certain factual findings based on the evidence despite the fact that those findings were not expressed in her reasons. On the issue of whether the curve presented a risk to the ordinary driver, my colleagues note that "in relying on the evidence of Mr. Anderson and Mr. Werner, the trial judge chose not to base her decision on the conflicting evidence of other witnesses" (para. 46). The problem with this statement is that although the trial judge relied on the evidence of Mr. Anderson and Mr. Werner to conclude that the portion of Snake Hill Road on which the accident occurred was a hazard, it is impossible from her reasons to discern what, if

139 À mon avis, tout au long de leurs motifs, mes collègues ont à tort présumé que la juge de première instance était arrivée à certaines conclusions de fait fondées sur la preuve, malgré le fait que ces conclusions ne soient pas formulées dans ses motifs. Quant à la question de savoir si le virage présentait un risque pour le conducteur moyen, mes collègues ont fait remarquer qu'« en s'appuyant sur les témoignages de MM. Anderson et Werner, la juge de première instance a choisi de ne pas fonder sa décision sur les témoignages contradictoires rendus par d'autres témoins » (par. 46). Le problème que pose cet énoncé est que, même si la juge de première instance s'est appuyée sur les témoignages de MM. Anderson et Werner

any, evidence she relied on to reach the conclusion that the curve presented a risk to the ordinary driver exercising reasonable care. In the absence of any indication that she considered this issue, I am not willing to presume that she did.

140 My colleagues similarly presume findings of fact when discussing the knowledge of the municipality. On this issue, they reiterate that "it is open for a trial judge to prefer some parts of the evidence over others, and to re-assess the trial judge's weighing of the evidence, is, with respect, not within the province of an appellate court" (para. 62). At para. 64 of their reasons, my colleagues review the findings of the trial judge on the issue of knowledge and conclude that the trial judge "drew the inference that the municipality should have been put on notice and investigated Snake Hill Road, in which case it would have become aware of the hazard in question". I think that it is improper to conclude that the trial judge made a finding that the municipality's system of road inspection was inadequate in the absence of any indication in her reasons that she reached this conclusion. My colleagues further suggest that the trial judge did not impute knowledge to the municipality on the basis of the occurrence of prior accidents on Snake Hill Road (para. 65). They even state that it was not necessary for the trial judge to rely on the accidents in order to satisfy s. 192(3) (para. 67). This, in my view, is a reinterpretation of the trial judge's findings that stands in direct contradiction to the reasons that were provided by her. The trial judge discusses other factors pertaining to knowledge only to heighten the significance that she attributes to the fact that accidents had previously occurred on other portions of the road (at para. 90):

pour conclure que la portion du chemin Snake Hill où s'est produit l'accident constituait un danger, il est impossible, à partir de ses motifs, de dire si elle s'est appuyée sur un témoignage — et, dans l'affirmative, sur lequel de ceux-ci — pour conclure que la courbe présentait un risque pour le conducteur moyen qui prend des précautions raisonnables. En l'absence de toute indication que la juge de première instance s'est penchée sur cette question, je ne suis pas disposé à présumer qu'elle l'a fait.

De même, mes collègues supposent l'existence de conclusions factuelles dans leur examen de la question de la connaissance incombant à la municipalité. Sur ce point, ils réitèrent que « le juge de première instance peut préférer certaines parties de la preuve à d'autres, et, en toute déférence, il n'appartient pas au tribunal d'appel de procéder à nouveau à l'appréciation de la preuve, tâche déjà accomplie par le juge de procès » (par. 62). Au paragraphe 64 de leurs motifs, mes collègues examinent les conclusions de la juge de première instance sur la question de la connaissance et concluent qu'elle « a inféré que la municipalité aurait dû être informée de la situation sur le chemin à Snake Hill et aurait dû faire enquête à cet égard, ce qui lui aurait permis de prendre connaissance de l'existence du danger ». Je ne crois pas qu'on puisse à juste titre conclure que la juge de première instance est arrivée à la conclusion que le système d'inspection routière de la municipalité était inadéquat, alors que rien dans ses motifs n'indique qu'elle a tiré cette conclusion. Mes collègues estiment en outre que la juge de première instance n'a pas prêté à la municipalité la connaissance requise sur la base des accidents survenus antérieurement sur le chemin Snake Hill (par. 65). Ils disent même qu'il n'était pas nécessaire de s'appuyer sur ces accidents pour satisfaire aux exigences du par. 192(3) (par. 67). À mon avis, ils donnent à ces conclusions une nouvelle interprétation, qui contredit directement les motifs qu'elle a exposés. La juge de première instance examine d'autres facteurs qui touchent à la connaissance requise, uniquement pour souligner l'importance qu'elle accorde au fait que des accidents sont survenus antérieurement ailleurs sur le chemin (au par. 90) :

If the R.M. did not have actual knowledge of the danger inherent in this portion of Snake Hill Road, it should have known. While four accidents in 12 years may not in itself be significant, it takes on more significance given the close proximity of three of these accidents, the relatively low volume of traffic, the fact that there are permanent residences on the road and the fact that the road is frequented by young and perhaps less experienced drivers. [Emphasis added.]

[TRADUCTION] Si la M.R. ne connaissait pas concrètement le danger intrinsèque que comporte cette portion du chemin Snake Hill, elle aurait dû le connaître. Le fait que quatre accidents se soient produits en 12 ans n'est peut-être pas significatif en soi, mais il le devient si l'on considère que trois de ces accidents sont survenus à proximité, qu'il s'agit d'une route à débit de circulation relativement faible, que des résidences permanentes sont situées en bordure de celle-ci et que ce chemin est fréquenté par des conducteurs jeunes et peut-être moins expérimentés. [Je souligne.]

My colleagues refer to the decision of *Van de Perre v. Edwards*, [2001] 2 S.C.R. 1014, 2001 SCC 60, in which I stated that "an omission [in the trial judge's reasons] is only a material error if it gives rise to the reasoned belief that the trial judge must have forgotten, ignored or misconceived the evidence in a way that affected his conclusion" (para. 15). This case is however distinguishable from *Van de Perre*. In *Van de Perre*, the appellate court improperly substituted its own findings of fact for the trial judge's clear factual conclusions on the basis that the trial judge had not considered all of the evidence. By contrast, in this case my colleagues assert that this Court should not interfere with the "findings of the trial judge" even where no findings were made and where such findings must be presumed from the evidence. The trial judge's failure in this case to reach any conclusion on whether the ordinary driver would have found the portion of the road on which the accident occurred hazardous, in my view, gives rise to the reasoned belief that she ignored the evidence on the issue in a way that affected her conclusion.

141 Mes collègues citent l'arrêt *Van de Perre c. Edwards*, [2001] 2 R.C.S. 1014, 2001 CSC 60, dans lequel j'ai dit, au par. 15, qu'« une omission [dans les motifs du juge de première instance] ne constitue une erreur importante que si elle donne lieu à la conviction rationnelle que le juge de première instance doit avoir oublié, négligé d'examiner ou mal interprété la preuve de telle manière que sa conclusion en a été affectée ». Cependant, le présent pourvoi peut être distingué de l'affaire *Van de Perre*. Dans cette affaire, la Cour d'appel avait irrégulièrement substitué ses propres conclusions de fait aux conclusions factuelles évidentes du juge de première instance, au motif que celui-ci n'avait pas pris en compte tous les éléments de preuve. Par contraste, dans le présent pourvoi, mes collègues affirment que notre Cour ne doit pas modifier les « conclusions de la juge de première instance », même si aucune conclusion n'a été tirée et s'il faut supposer leur existence à partir de la preuve. En l'espèce, je suis d'avis que l'omission de la juge de première instance de tirer quelque conclusion que ce soit quant à la question de savoir si le conducteur moyen aurait considéré comme dangereux le tronçon du chemin où s'est produit l'accident fait naître la conviction rationnelle que, sur ce point, elle a négligé d'examiner la preuve de telle manière que sa conclusion en a été affectée.

Finally, I do not agree that the trial judge's conclusion that Mr. Nikolaisen was negligent equates to an assessment of whether a motorist exercising ordinary care would have found the curve on which the accident occurred to be hazardous. It is clear from the trial judge's reasons that she made a factual finding that the curve could be driven safely at 60 km/h in dry conditions and 50 km/h in wet conditions and that Mr. Nikolaisen approached the curve at an

142 Enfin, je ne peux souscrire à l'opinion que la conclusion de la juge de première instance selon laquelle M. Nikolaisen a fait preuve de négligence vaut examen de la question de savoir si l'automobiliste moyen prenant des précautions normales aurait estimé que la courbe où s'est produit l'accident était dangereuse. Il ressort clairement des motifs de la juge de première instance qu'elle a tiré les conclusions de fait suivantes : il était possible de prendre

excessive speed. As earlier stated, what she failed to consider was whether the ordinary driver exercising reasonable care would have approached the curve at a speed at which it could be safely negotiated, or, stated differently, whether the curve posed a real danger to the ordinary driver.

B. *Did the Trial Judge Err in Finding that the Respondent Municipality Knew or Should Have Known of the Danger Posed by the Municipal Road?*

143 Pursuant to s. 192(3) of *The Rural Municipality Act, 1989*, fault is not to be imputed to the municipality in the absence of proof by the plaintiff that the municipality "knew or should have known of the disrepair".

144 The trial judge made no finding that the respondent municipality had actual knowledge of the alleged state of disrepair, but rather imputed knowledge to the respondent on the basis that it should have known of the danger. This is apparent in her findings on knowledge at paras. 89-91 of her reasons:

> Breach of the statutory duty of care imposed by section 192 of the *Rural Municipality Act*, *supra*, cannot be imputed to the R.M. unless it knew of or ought to have known of the state of disrepair on Snake Hill Road. Between 1978 and 1990 there were four accidents on Snake Hill Road. Three of these accidents occurred in the same vicinity as the Nikolaisen rollover. The precise location of the fourth accident is unknown. While at least three of these accidents occurred when motorists where travelling in the opposite direction of the Nikolaisen vehicle, they occurred on that portion of Snake Hill Road which is the most dangerous — where the road begins to curve, rather than where it is generally straight and flat. At least two of these accidents were reported to authorities.
>
> If the R.M. did not have actual knowledge of the danger inherent in this portion of Snake Hill Road, it should have known. While four accidents in 12 years may not in itself be significant, it takes on more significance

le virage en sécurité à 60 km/h à l'heure sur chaussée sèche et à 50 km/h sur chaussée humide, et M. Nikolaisen s'est approché du virage à une vitesse excessive. Comme je l'ai indiqué plus tôt, elle a omis de se demander si le conducteur moyen qui prend des précautions normales se serait approché du virage à une vitesse qui lui aurait permis de le prendre en sécurité ou, autrement dit, si la courbe présentait un danger réel pour le conducteur moyen.

B. *La juge de première instance a-t-elle commis une erreur en concluant que la municipalité intimée connaissait ou aurait dû connaître le danger que présentait le chemin municipal?*

Conformément au par. 192(3) de la *Rural Municipality Act, 1989*, aucune faute n'est imputée à la municipalité à moins que le demandeur n'établisse que celle-ci « connaissait ou aurait dû connaître le mauvais état du chemin ».

La juge de première instance n'a pas conclu que la municipalité intimée connaissait concrètement le mauvais état dans lequel se trouvait, prétend-on, le chemin, mais elle lui a plutôt prêté cette connaissance pour le motif qu'elle aurait dû connaître l'existence du danger. C'est ce qui ressort de ses conclusions à cet égard, aux par. 89 à 91 de ses motifs :

> [TRADUCTION] On ne peut reprocher à la municipalité rurale d'avoir manqué à l'obligation légale de diligence imposée par l'art. 192 de la loi intitulée la *Rural Municipality Act*, précitée, que si la municipalité connaissait ou aurait dû connaître le mauvais état du chemin Snake Hill. De 1978 à 1990, quatre accidents sont survenus sur ce chemin. Trois de ces accidents ont eu lieu dans le même secteur que celui où le véhicule de Nikolaisen a fait un tonneau. On ne connaît pas le lieu précis du quatrième accident. Bien que, dans au moins trois de ces accidents, les automobilistes aient circulé en sens inverse du véhicule de Nikolaisen, les accidents se sont produits dans la partie la plus dangereuse du chemin Snake Hill — là où commencent les courbes, et non dans la partie où le chemin est généralement droit et plat. Au moins deux de ces accidents ont été signalés aux autorités.
>
> Si la M.R. ne connaissait pas concrètement le danger intrinsèque que comporte cette portion du chemin Snake Hill, elle aurait dû le connaître. Le fait que quatre accidents se soient produits en 12 ans n'est peut-être pas

given the close proximity of three of these accidents, the relatively low volume of traffic, the fact that there are permanent residences on the road and the fact that the road is frequented by young and perhaps less experienced drivers. I am not satisfied that the R.M. has established that in these circumstances it took reasonable steps to prevent this state of disrepair on Snake Hill Road from continuing.

I find that by failing to erect and maintain a warning and regulatory sign on this portion of Snake Hill Road the R.M. has not met the standard of care which is reasonable in the circumstances. Accordingly, it is in breach of its duty of care to motorists generally, and to Mr. Housen in particular. [Emphasis added.]

Whether the municipality should have known of the disrepair (here, the risk posed in the absence of a sign) involves both questions of law and questions of fact. As a matter of law, the trial judge must approach the question of whether knowledge should be imputed to the municipality with regard to the duties of the ordinary, reasonable and prudent municipal councillor (*Ryan v. Victoria (City)*, [1999] 1 S.C.R. 201, at para. 28). The question is then answered through the trial judge's assessment of the facts of the case.

I find that the trial judge made both errors of law and palpable and overriding errors of fact in determining that the respondent municipality should have known of the alleged state of disrepair. She erred in law by approaching the question of knowledge from the perspective of an expert rather than from the perspective of a prudent municipal councillor. She also erred in law by failing to appreciate that the onus of proving that the municipality knew or should have known of the alleged disrepair remained on the plaintiff throughout. The trial judge clearly erred in fact by drawing the unreasonable inference that the respondent municipality should have known that the portion of the road on which the accident occurred was dangerous from evidence that accidents had occurred on other parts of Snake Hill Road.

significatif en soi, mais il le devient si l'on considère que trois de ces accidents sont survenus à proximité, qu'il s'agit d'une route à débit de circulation relativement faible, que des résidences permanentes sont situées en bordure de celle-ci et que le chemin est fréquenté par des conducteurs jeunes et peut-être moins expérimentés. Je ne suis pas convaincue que la M.R. a établi avoir, dans ces circonstances, pris des mesures raisonnables pour remédier au mauvais état du chemin Snake Hill.

J'estime que, en omettant d'installer et de maintenir un panneau d'avertissement ou de signalisation dans cette partie du chemin Snake Hill, la M.R. n'a pas satisfait à la norme de diligence qui est raisonnable dans les circonstances. Par conséquent, elle ne s'est pas acquittée de son obligation de diligence à l'égard des automobilistes en général et à l'égard de M. Housen en particulier. [Je souligne.]

145 La question de savoir si la municipalité aurait dû connaître le mauvais état du chemin (en l'occurrence, le risque que présentait l'absence de signalisation) soulève à la fois des questions de droit et des questions de fait. Sur le plan juridique, le juge de première instance doit se demander s'il y a lieu de présumer que la municipalité connaissait ce fait, au regard des obligations qui incombent au conseiller municipal ordinaire, raisonnable et prudent (*Ryan c. Victoria (Ville)*, [1999] 1 R.C.S. 201, par. 28). Le juge de première instance répond ensuite à la question en appréciant les faits de l'espèce dont il est saisi.

146 J'estime que la juge de première instance a commis et des erreurs de droit et des erreurs de fait manifestes et dominantes en statuant que la municipalité intimée aurait dû connaître le mauvais état dans lequel se trouvait, prétend-on, le chemin. Elle a commis une erreur de droit lorsqu'elle a examiné la question de la connaissance du point de vue du spécialiste plutôt que du point de vue du conseiller municipal prudent. Elle a commis une autre erreur de droit en ne reconnaissant pas que le fardeau de prouver que la municipalité connaissait ou aurait dû connaître le mauvais état du chemin ne cessait jamais d'incomber au demandeur. La juge de première instance a clairement commis une erreur de fait en inférant déraisonnablement que la municipalité intimée aurait dû savoir que la partie du chemin où l'accident s'est produit était dangereuse, compte tenu de la preuve que des accidents avaient eu lieu ailleurs sur le chemin Snake Hill.

147 The trial judge's failure to determine whether knowledge should be imputed to the municipality from the perspective of what a prudent municipal councillor should have known is implicit in her reasons. The respondent could not be held, for the purposes of establishing knowledge under the statutory test, to the standard of an expert analysing the curve after the accident. Yet this is precisely what the trial judge did. She relied on the expert evidence of Mr. Anderson and Mr. Werner to reach the conclusion that the curve presented a hidden hazard. She also implicitly accepted that the risk posed by the curve was not one that would be readily apparent to a lay person. This is evident in the portion of her judgment where she accepts as a valid excuse for not filing a timely claim against the respondent the appellant counsel's explanation that he did not believe the respondent to be at fault until expert opinions were obtained. The trial judge stated in this regard: "[i]t was only later when expert opinions were obtained that serious consideration was given to the prospect that the nature of Snake Hill Road might be a factor contributing to the accident" (para. 64). Her failure to consider the risk to the prudent driver is also apparent when one considers that she ignored the evidence concerning the way in which the two experts themselves had approached the dangerous curve (see para. 54 above).

Il ressort implicitement des motifs de la juge de première instance qu'elle n'a pas décidé s'il fallait prêter à la municipalité la connaissance requise en considérant cette question du point de vue du conseiller municipal prudent. Pour trancher la question de la connaissance requise suivant le critère prévu par la loi, l'intimée ne pouvait être tenue aux mêmes normes qu'un spécialiste analysant la courbe après l'accident. Pourtant, c'est exactement ce qu'a fait la juge de première instance. Elle s'est fondée sur les témoignages d'expert donnés par MM. Anderson et Werner pour conclure que la courbe présentait un danger caché. Elle a également reconnu implicitement que le risque visé par la courbe n'était pas un risque facilement décelable par un profane. Cela ressort clairement du passage de son jugement où elle considère comme une excuse valable pour justifier le dépôt tardif de l'action contre l'intimée l'explication de l'avocat de l'appelant selon laquelle il ne croyait pas que l'intimée était dans son tort jusqu'à ce qu'il prenne connaissance des opinions des experts. La juge de première instance a dit ceci à cet égard : [TRADUCTION] « [c]e n'est que plus tard, après avoir obtenu l'opinion des experts, que la possibilité que la nature du chemin Snake Hill puisse avoir été un facteur ayant contribué à l'accident a été sérieusement envisagée » (par. 64). Son omission de s'interroger sur le risque que courrait le conducteur prudent apparaît elle aussi clairement, lorsqu'on considère qu'elle n'a pas tenu compte de la preuve concernant la façon dont les deux experts avaient eux-mêmes pris le virage dangereux (voir le par. 54 qui précède).

148 Had the trial judge considered the question of whether the municipality should have known of the alleged disrepair from the perspective of the prudent municipal councillor, she would necessarily have reached a different conclusion. There was no evidence that the road conditions which existed posed a risk that the respondent should have been aware of. The respondent had no particular reason to inspect that segment of the road for the presence of hazards. It had not received any complaints from motorists respecting the absence of signs on the road, the lack of superelevation on the curves, or the presence of

Si la juge de première instance avait répondu à la question de savoir si la municipalité aurait dû connaître le mauvais état dans lequel se trouvait, prétend-on, le chemin en se plaçant du point de vue du conseiller municipal prudent, elle serait nécessairement arrivée à une conclusion différente. Il n'y avait aucune preuve établissant que le danger existant créait un risque que l'intimée aurait dû connaître. Cette dernière n'avait aucune raison particulière d'aller inspecter cette portion du chemin pour voir s'il y existait des dangers. Elle n'avait reçu aucune plainte d'automobilistes relativement à l'absence de signalisation, à l'absence de surélévation des

trees and vegetation which grew up along the sides of the road.

In addition, the question of the respondent's knowledge is linked inextricably to the standard of care. A municipality can only be expected to have knowledge of those hazards which pose a risk to the reasonable driver exercising ordinary care, since these are the only hazards for which there is a duty to repair. The trial judge should not have expected the respondent in this case to have knowledge of the road conditions that existed at the site of the Nikolaisen rollover since that road condition simply did not pose a risk to the reasonable driver. In addition to the evidence that was discussed above in the context of the standard of care, this conclusion is supported by the testimony of the several lay witnesses that testified at trial. Craig Thiel, a resident on the road, testified that he was not aware that Snake Hill Road had a reputation of being a dangerous road, and that he himself had never experienced difficulty with the portion of the road on which the accident occurred. His wife, Toby, also testified that she had experienced no problems with the road.

The trial judge also clearly erred in fact by imputing knowledge to the municipality on the basis of the four accidents that had previously occurred on Snake Hill Road. While her factual findings regarding the accidents themselves have a sound basis in the evidence, these findings simply do not support her conclusion that a prudent municipal councillor ought to have known that a risk existed for the normal prudent driver. As such, the trial judge erred in drawing an unreasonable inference from the evidence that was before her. As stated above, the standard of review for inferences of fact is, above all, one of reasonableness. This is reflected in the following passage from *Joseph Brant Memorial Hospital v. Koziol*, [1978] 1 S.C.R. 491, at pp. 503-4:

. . . "it is a well-known principle that appellate tribunals should not disturb findings of fact made by a trial judge

courbes ou à la présence d'arbres et de végétation en bordure du chemin.

149 En outre, la question de la connaissance de l'intimée est intimement liée à celle de la norme de diligence. Une municipalité est uniquement censée avoir connaissance des dangers qui présentent un risque pour le conducteur raisonnable prenant des précautions normales, puisqu'il s'agit des seuls dangers à l'égard desquels existe une obligation d'entretien. En l'espèce, la juge de première instance n'aurait pas dû attendre de l'intimée qu'elle connaisse le danger qui existait à l'endroit où le véhicule de M. Nikolaisen a fait un tonneau, puisque ce danger ne présentait tout simplement pas de risque pour le conducteur raisonnable. Outre les éléments de preuve examinés précédemment relativement à la norme de diligence, les témoignages de plusieurs témoins ordinaires qui ont déposé au procès étayent cette conclusion. Craig Thiel, qui habite le long de ce chemin, a témoigné qu'il ne savait pas que le chemin Snake Hill avait la réputation d'être dangereux et qu'il n'avait lui-même jamais éprouvé de difficulté à conduire à l'endroit du chemin où est survenu l'accident. Sa conjointe, Toby, a également dit ne pas avoir connu de problème sur ce chemin.

150 La juge de première instance a clairement commis une autre erreur de fait en présumant, sur la foi des quatre accidents survenus auparavant sur le chemin Snake Hill, que la municipalité connaissait l'existence du danger. Bien que ses conclusions de fait relativement aux accidents eux-mêmes soient solidement étayées par la preuve, elles n'appuient tout simplement pas sa conclusion qu'un conseiller municipal prudent aurait dû savoir qu'il existait un risque pour le conducteur prudent. En conséquence, la juge de première instance a fait erreur en tirant une inférence déraisonnable de la preuve qui lui était soumise. Comme il a été indiqué plus tôt, la norme de contrôle applicable aux inférences de fait est, d'abord et avant tout, celle de la décision raisonnable. Les propos suivants du juge Spence dans l'arrêt *Joseph Brant Memorial Hospital c. Koziol*, [1978] 1 R.C.S. 491, p. 503-504, illustrent bien ce principe :

. . . « c'est un principe bien connu que les tribunaux d'appel ne doivent pas remettre en cause les conclusions

if there were credible evidence before him upon which he could reasonably base his conclusion". [Emphasis added.]

151 As I stated above, there was no evidence to suggest that the respondent had actual knowledge that accidents had previously occurred on Snake Hill Road. To the contrary, Mr. Danger, the administrator of the municipality, testified that the first he heard of the accidents was at the trial.

152 Implicit in the trial judge's reasons, then, was the expectation that the municipality should have known about the accidents through an accident-reporting system**.** The appellant put forward that argument explicitly before this Court, placing significant emphasis on the fact that respondent "has no regularized approach to gathering this information, whether from councillors or otherwise". The argument suggests that, had the municipality established a formal system to find out whether accidents had occurred on a given road, it would have known that accidents had occurred on Snake Hill Road and would have taken the appropriate corrective action to ensure that the road was safe for travellers.

153 I find the above argument to be flawed in two important respects. First, the argument that the other accidents on Snake Hill Road were relevant in this case is based on the assumption that there was an obligation on the respondent municipality to have a "regularized" accident-reporting system, and that the informal system that was in place was somehow deficient. In my view, the appellant did not meet its onus to show that the system relied on by the municipality to discharge its obligations under s. 192 of the *The Rural Municipality Act, 1989* was deficient. The evidence shows that, prior to 1988, there was no formal system of accident reporting in place. There was, nonetheless, an informal system whereby the municipal councillors were responsible for finding out if there were road hazards. Information that hazards existed came to the attention of the councillors via complaints, and from their own familiarity

de fait du juge de première instance, s'il existait des témoignages dignes de foi sur lesquels le juge pouvait raisonnablement fonder ses conclusions ». [Je souligne.]

Comme je l'ai mentionné précédemment, il n'y avait aucune preuve indiquant que l'intimée savait concrètement que d'autres accidents étaient survenus auparavant sur le chemin Snake Hill. Au contraire, M. Danger, l'administrateur de la municipalité, a témoigné qu'il avait entendu parler de ces accidents pour la première fois au procès.

Par conséquent, il ressort implicitement des motifs de la juge de première instance que la municipalité aurait censément dû connaître l'existence des accidents grâce à un système d'information en la matière. L'appelant a expressément plaidé cet argument devant notre Cour, insistant fortement sur le fait que l'intimée [TRADUCTION] « ne dispose pas d'un mécanisme structuré de collecte de cette information, que ce soit par l'entremise des conseillers ou d'autres personnes ». Suivant cet argument, on prétend que, si la municipalité avait établi un système officiel lui permettant de savoir si des accidents sont survenus sur une route donnée, elle aurait su que des accidents s'étaient produits sur le chemin Snake Hill et elle aurait pris les mesures correctives appropriées pour faire en sorte que le chemin soit sécuritaire pour les usagers.

J'estime que l'argument susmentionné présente deux lacunes importantes. Premièrement, l'argument selon lequel les autres accidents survenus sur le chemin Snake Hill étaient pertinents en l'espèce repose sur la présomption que la municipalité intimée avait l'obligation d'avoir un système « structuré » d'information sur les accidents, et que le système informel en place était d'une certaine manière déficient. À mon avis, l'appelant ne s'est pas acquitté du fardeau qui lui incombait de démontrer que le système sur lequel la municipalité se fondait pour remplir ses obligations au titre de l'art. 192 de la *Rural Municipality Act, 1989*, était déficient. La preuve établit que, avant 1988, il n'existait pas de système officiel d'information sur les accidents. Il existait néanmoins, un système informel dans le cadre duquel les conseillers municipaux étaient chargés de s'enquérir de l'existence de dangers

with the roads within the township under their jurisdiction. The trial judge made a palpable error in finding that this informal system was deficient in the absence of any evidence of the practice of other municipalities at the time that the accidents occurred and what might have been a reasonable system, particularly given the fact that the rural municipality in question had only six councillors. There is no evidence that a rural municipality of this type requires the sort of sophisticated information-gathering process that may be required in a city, where accidents occur with greater frequency and where it is less likely that word of mouth will suffice to bring hazards to the attention of the councillors.

sur les routes. Les conseillers étaient informés de l'existence de dangers par suite des plaintes qu'ils recevaient et par leur propre expérience des routes situées dans les cantons qu'ils représentaient. La juge de première instance a commis une erreur manifeste en concluant que ce système informel était déficient, alors qu'aucune preuve n'indiquait quelles étaient les pratiques suivies par d'autres municipalités à cet égard au moment des accidents, ni n'expliquait en quoi aurait consisté un système raisonnable, compte tenu particulièrement du fait que la municipalité rurale concernée ne comptait que six conseillers. Il n'y a aucune preuve indiquant qu'une municipalité rurale de ce genre a besoin du genre de mécanisme élaboré de collecte de renseignements dont peut avoir besoin une grande ville, où les accidents sont plus fréquents et où il est peu probable que le bouche à oreille soit suffisant pour porter les dangers à l'attention des conseillers.

The respondent municipality now has a more formalized system of accident reporting. Since 1988, Saskatchewan Highways and Transportation annually provides the municipalities with a listing of all motor vehicle accidents which occur within the municipality and which are reported to the police. While I agree that this system may provide the municipality with a better chance of locating hazards in some circumstances, I do not accept that the adoption of this system is relevant on the facts of this case. Only one accident, which occurred in 1990, was reported to the respondent under this system. The appellant adduced no evidence to suggest that this accident occurred at the same location as the Nikolaisen rollover, or that this accident occurred as a result of the conditions of the road rather than the negligence of the driver.

154 La municipalité intimée possède maintenant un système plus officiel d'information sur les accidents. Depuis 1988, en effet, le ministère de la Voirie et du Transport de la Saskatchewan communique annuellement à chaque municipalité la liste de tous les accidents d'automobile survenus sur son territoire et signalés aux policiers. Bien que ce système puisse, j'en conviens, permettre aux municipalités de mieux repérer les dangers dans certaines circonstances, je ne crois pas que son adoption soit pertinente eu égard aux faits de l'espèce. Un seul accident, survenu en 1990, a été signalé à l'intimée par le truchement de ce système. L'appelant n'a produit aucun élément de preuve indiquant que cet accident est survenu au même endroit que celui où le véhicule de M. Nikolaisen a fait un tonneau, ou qu'il était attribuable à l'état de la route plutôt qu'à la négligence du conducteur.

Secondly, and perhaps more importantly, it was simply illogical for the trial judge to infer from the fact of the earlier accidents that the respondent should have known that the site of the Nikolaisen rollover posed a risk to prudent drivers. The three accidents, which took place in 1978, 1985, and 1987, occurred on different curves, while the vehicles involved were proceeding in the opposite

155 Deuxièmement, élément peut-être plus important encore, il était tout simplement illogique pour la juge de première instance d'inférer de l'existence des accidents antérieurs que l'intimée aurait dû savoir que l'endroit où le véhicule de M. Nikolaisen a fait un tonneau présentait un risque pour les conducteurs prudents. Les trois accidents — qui sont survenus en 1978, 1985 et 1987

direction. The accidents of 1978 and 1987 occurred on the first right-turning curve in the road with the drivers travelling westbound, at the bottom of the hill. The accident in 1985 took place on the next curve in the road with the driver also travelling westbound, again on a different curve from the one where the Nikolaisen rollover took place. If anything, these accidents signal that the municipality should have been concerned with the curves that were, when travelling westbound, to the east of the site of the Nikolaisen rollover. The evidence disclosed no accidents that had occurred at the precise location of the accident that is the subject of this case.

— se sont produits dans des courbes différentes, et les véhicules concernés circulaient en sens inverse. L'accident de 1978 et celui de 1987 ont eu lieu dans le premier virage à droite au pied de la colline, les automobilistes roulant alors en direction ouest. L'accident de 1985 s'est produit dans la deuxième courbe, toujours en direction ouest, encore une fois dans une courbe différente de celle où le véhicule de M. Nikolaisen a fait un tonneau. Si ces accidents indiquent quoi que ce soit, c'est plutôt que la municipalité aurait dû se préoccuper des courbes qui, pour les véhicules circulant en direction ouest, se trouvent à l'est de l'endroit où le véhicule de M. Nikolaisen a fait un tonneau. La preuve n'a révélé aucun accident qui se serait produit à l'endroit précis où est survenu l'accident qui nous intéresse.

156 Furthermore, the mere occurrence of an accident does not in and of itself indicate a duty to post a sign. In many cases, accidents happen not because of the conditions of the road, but rather because of the negligence of the driver. Illustrative in this regard is Mr. Agrey's accident on Snake Hill Road in 1978. Mr. Agrey testified that, just prior to the accident, he had turned his attention away from the road to talk to one of the passengers in the vehicle. Another passenger shouted to him to "look out", but by the time he was alerted it was too late to properly navigate the turn. Mr. Agrey was charged and fined for his carelessness. As was discussed in the context of the standard of care, a municipality is not obligated to make safe the roads for all drivers, regardless of the care and attention that they are exercising when driving. It need only keep roads in such a state of repair as will allow a reasonable driver exercising ordinary care to drive with safety.

Qui plus est, le simple fait qu'un accident se produise n'emporte pas en soi l'obligation d'installer un panneau signalisateur. Dans bien des cas, les accidents surviennent non pas à cause de l'état de la route, mais plutôt à cause de la négligence du conducteur. Un bon exemple de cela est l'accident dont a été victime M. Agrey sur le chemin Snake Hill en 1978. Ce dernier a témoigné que, juste avant l'accident, il avait quitté des yeux la route pour parler à l'un des passagers du véhicule. Un autre passager lui a crié de faire attention, mais il était déjà trop tard pour bien exécuter le virage. Accusé de conduite imprudente, M. Agrey a été déclaré coupable et condamné à une amende. Comme on l'a vu plus tôt, dans le contexte de la norme de diligence, une municipalité n'a pas l'obligation de rendre les chemins sécuritaires pour tous les conducteurs, indépendamment de la prudence et de l'attention avec lesquelles ils conduisent. Elle est seulement tenue de maintenir les chemins dans un état propre à permettre au conducteur raisonnable qui prend des précautions normales d'y circuler en sécurité.

157 In addition to the substantial errors discussed above, I would also note that, in my view, the trial judge was inattentive to the onus of proof on this issue. When reviewing the evidence pertaining to other accidents on Snake Hill Road, the trial judge remarked, at para. 31: "Cst. Forbes does not recall

Outre les erreurs substantielles examinées précédemment, je tiens également à souligner que, selon moi, la juge de première instance ne s'est pas souciée du fardeau de preuve sur cette question. Lorsqu'elle a examiné la preuve relative aux autres accidents survenus sur le chemin Snake Hill, la juge

any other accident on Snake Hill Road during her time at the Shellbrook RCMP Detachment, from 1987 until 1996. Cpl. Healey had heard of one other accident. Forbes and Healey are only two of nine members of the RCMP Detachment at Shellbrook" (emphasis added). By this comment, the trial judge seems to imply that there may have been more accidents on Snake Hill Road that had been reported and that the respondent should have known about this. With all due respect to the trial judge, if there had been accidents other than the ones that were raised at trial, it was up to the appellant to bring evidence of these accidents forward, either by calling the RCMP members to whom they had been reported, or by calling those who were involved in the accidents, or by any other available means. Furthermore, the significance that the trial judge attributed to the other accidents that occurred on Snake Hill Road was dependent on her assumption that the respondent should have had a formal accident-reporting system in place. The respondent did not bear the onus of demonstrating that it was not obliged to have such a system; there was, rather, a positive onus on the appellant to demonstrate that such a system was required and that the informal reporting system was inadequate.

de première instance a fait les remarques suivantes au par. 31 : [TRADUCTION] « La gendarme Forbes ne se souvient pas de quelque autre accident sur le chemin Snake Hill durant la période où elle était affectée au détachement de la GRC de Shellbrook, de 1987 à 1996. Le caporal Healey avait entendu parler d'un autre accident. Forbes et Healey ne sont que deux des neuf membres du détachement de la GRC à Shellbrook » (je souligne). Par cette remarque, la juge de première instance semble laisser entendre que d'autres accidents sur le chemin Snake Hill ont pu avoir été signalés et que l'intimée aurait dû le savoir. En toute déférence pour la juge de première instance, s'il y avait eu d'autres accidents que ceux qui ont été mentionnés au procès, il appartenait à l'appelant d'en faire la preuve, soit en faisant témoigner les membres de la GRC à qui les accidents avaient été signalés ou encore les personnes en cause dans ces accidents, soit en utilisant tout autre moyen à sa disposition. En outre, l'importance que la juge de première instance a accordée aux autres accidents survenus sur le chemin Snake Hill dépendait du postulat que l'intimée aurait dû posséder un système officiel d'information sur les accidents. L'intimée n'était pas tenue de prouver qu'elle n'avait pas l'obligation de disposer d'un tel système. Il incombait plutôt à l'appelant d'établir que ce genre de système était nécessaire et que le système informel existant était insuffisant.

C. *Did the Trial Judge Err in Finding that the Accident was Caused in Part by the Failure of the Respondent Municipality to Erect a Sign Near the Curve?*

C. *La juge de première instance a-t-elle commis une erreur en concluant que l'accident avait été causé, en partie, par le défaut de la municipalité intimée d'installer un panneau de signalisation près de la courbe?*

The trial judge's findings on causation are found at para. 101 of her judgment, where she states:

Les conclusions de la juge de première instance au sujet du lien de causalité figurent au par. 101 de son jugement, où elle dit ceci : 158

> I find that this accident occurred as a result of Mr. Nikolaisen entering the curve on Snake Hill Road at a speed slightly in excess of that which would allow successful negotiation. The accident occurred at the most dangerous segment of Snake Hill Road where a warning or regulatory sign should have been erected and maintained to warn motorists of an impending and hidden hazard. Mr. Nikolaisen's degree of impairment only

> [TRADUCTION] J'estime que l'accident s'est produit parce que M. Nikolaisen s'est engagé dans le virage sur le chemin Snake Hill à une vitesse légèrement supérieure à celle qui lui aurait permis de réussir la manœuvre. L'accident est survenu dans la portion la plus dangereuse du chemin Snake Hill, à un endroit où un panneau d'avertissement ou de signalisation aurait dû être installé et maintenu pour avertir les automobilistes de

served to increase the risk of him not reacting, or reacting inappropriately to a sign. Mr. Nikolaisen was not driving recklessly such that he would have intentionally disregarded a warning or regulatory sign. He had moments earlier, when departing the Thiel residence, successfully negotiated a sharp curve which he could see and which was apparent to him. I am satisfied on a balance of probabilities that had Mr. Nikolaisen been forewarned of the curve, he would have reacted and taken appropriate corrective action such that he would not have lost control of his vehicle when entering the curve.

l'imminence d'un danger caché. Le degré d'ébriété de M. Nikolaisen n'a fait qu'accroître le risque qu'il ne réagisse pas du tout ou encore de façon inappropriée à une signalisation. M. Nikolaisen ne conduisait pas de façon si téméraire qu'il aurait intentionnellement fait abstraction d'un panneau d'avertissement ou de signalisation. Quelques instants plus tôt, au moment de quitter la résidence des Thiel, il avait pris avec succès un virage serré qu'il pouvait clairement voir. Je suis convaincue, selon la prépondérance des probabilités, que si on avait prévenu M. Nikolaisen de l'existence de la courbe, il aurait réagi et pris des mesures appropriées, qui l'auraient empêché de perdre la maîtrise de son véhicule en s'engageant dans le virage.

159 The trial judge's above findings in respect to causation represent conclusions on matters of fact. Consequently, this Court will only interfere if it finds that in coming to these conclusions she made a manifest error, ignored conclusive or relevant evidence, misunderstood the evidence, or drew erroneous conclusions from it (*Toneguzzo-Norvell*, *supra*, at p. 121).

Les conclusions susmentionnées de la juge de première instance touchant le lien de causalité sont des conclusions portant sur des questions de fait. Par conséquent, notre Cour n'interviendra que si elle estime que, pour arriver à ses conclusions, la juge a commis une erreur manifeste, n'a pas tenu compte d'un élément de preuve déterminant ou pertinent, a mal compris la preuve ou en a tiré des conclusions erronées (*Toneguzzo-Norvell*, précité, p. 121).

160 In coming to her conclusion on causation, the trial judge made several of the types of errors that this Court referred to in *Toneguzzo-Norvell*. To the extent that the trial judge relied on the evidence of Mr. Laughlin, the only expert to have testified on the issue of causation, I find that she either misunderstood his evidence or drew erroneous conclusions from it. The only other testimony in respect to causation was anecdotal evidence pertaining to Mr. Nikolaisen's level of impairment provided by Craig Thiel, Toby Thiel and Paul Housen. Although their testimonies provided some evidence in respect to causation, for reasons I will discuss, it was not evidence on which the trial judge could reasonably rely. Nor do I find that the trial judge was entitled to rely on evidence that Mr. Nikolaisen successfully negotiated the curve from the Thiel driveway onto Snake Hill Road. The inference that the trial judge drew from this fact was unreasonable and ignored evidence that Mr. Nikolaisen swerved even on this curve. In addition, the trial judge clearly erred by ignoring other relevant evidence in respect to causation, in particular the fact that Mr. Nikolaisen had driven on the

En arrivant à sa conclusion sur le lien de causalité, la juge de première instance a commis plusieurs des erreurs mentionnées par notre Cour dans l'arrêt *Toneguzzo-Norvell*, précité. Dans la mesure où la juge de première instance s'est fondée sur le témoignage de M. Laughlin, le seul expert à avoir témoigné sur la question du lien de causalité, j'estime qu'elle a mal interprété son témoignage ou qu'elle en a tiré des conclusions erronées. Les éléments anecdotiques des témoignages de Craig Thiel, Toby Thiel et Paul Housen concernant le degré d'ébriété de M. Nikolaisen constituent la seule autre preuve testimoniale sur le lien de causalité. Bien que leurs témoignages aient fourni quelques éléments de preuve touchant cette question, il ne s'agit pas, pour des raisons que j'examinerai plus loin, d'éléments sur lesquels la juge de première instance pouvait raisonnablement s'appuyer. Je n'estime pas non plus qu'elle pouvait se fonder sur la preuve que M. Nikolaisen avait réussi à prendre le virage permettant d'accéder au chemin Snake Hill depuis l'entrée des Thiel. L'inférence que la juge de première instance a tirée de ce fait était déraisonnable et faisait abstraction de la preuve selon laquelle

road three times in the 18 to 20 hours preceding the accident.

I cannot agree with the trial judge that the testimony of Mr. Laughlin, a forensic alcohol specialist employed by the RCMP supports the finding that Mr. Nikolaisen would have reacted to a sign forewarning of the impending right-turning curve on which the accident occurred. The preponderance of Mr. Laughlin's testimony establishes that persons at the level of impairment which Mr. Nikolaisen was found to be at when the accident occurred would be unlikely to react to a warning sign. In addition, Mr. Laughlin's testimony points overwhelmingly to the conclusion that alcohol was the causal factor which led to this accident. The trial judge erred by misapprehending one comment in Mr. Laughlin's testimony and ignoring the significance of his testimony when taken as a whole.

Based on blood samples obtained by Constable Forbes approximately three hours after the accident occurred, Mr. Laughlin predicted that Mr. Nikolaisen's blood alcohol level at the time of the accident ranged from 180 to 210 milligrams percent. Mr. Laughlin commented at length on the effect that this level of blood alcohol could be expected to have on a person's ability to drive, testifying:

Well, My Lady, this alcohol level that I've calculated here is a very high alcohol level. The critical mental faculties [that] are important in operating a motor vehicle will be impaired by the alcohol. And any skill that depends on these mental faculties will be affected. These include anticipation, judgment, attention, concentration, the ability to divide attention among two or more areas of interest. Because these are affected to such a degree, it would be unsafe for anybody to operate a motor vehicle with this level of alcohol in their body.

le véhicule de M. Nikolaisen avait fait une embardée même dans cette courbe. En outre, la juge de première instance a clairement commis une erreur en ne prenant pas en considération d'autres éléments de preuve pertinents concernant le lien de causalité, en particulier le fait que M. Nikolaisen avait roulé à trois reprises sur le chemin en question au cours des 18 à 20 heures ayant précédé l'accident.

161 Je ne partage pas l'avis de la juge de première instance voulant que le témoignage de M. Laughlin, spécialiste judiciaire en matière d'alcool au service de la GRC, étaye la conclusion que M. Nikolaisen aurait réagi à un panneau lui signalant l'imminence du virage droite où s'est produit l'accident. Le témoignage de M. Laughlin établit de façon prépondérante que des personnes dans un état d'ébriété aussi avancé que celui de M. Nikolaisen au moment de l'accident ne réagiraient vraisemblablement pas à un panneau d'avertissement. De plus, le témoignage de M. Laughlin mène irrésistiblement à la conclusion que l'alcool a été le facteur causal de l'accident. La juge de première instance a commis une erreur à cet égard, car elle a mal interprété un élément de la déposition de M. Laughlin et elle a omis de tenir compte de l'importance de son témoignage, considéré globalement.

162 À la lumière des échantillons de sang prélevés par la gendarme Forbes environ trois heures après l'accident, M. Laughlin a estimé que, au moment de l'accident, l'alcoolémie de M. Nikolaisen se situait entre 180 et 210 mg par 100 ml de sang. Dans son témoignage, M. Laughlin a commenté en détail l'incidence d'une telle alcoolémie sur la capacité d'une personne de conduire :

[TRADUCTION] Bien, Madame, l'alcoolémie que j'ai calculée en l'espèce est très élevée. Les facultés mentales essentielles qui jouent un rôle important dans la conduite d'un véhicule automobile sont affaiblies par l'alcool. Et toute habileté tributaire de ces facultés mentales est affectée, notamment l'anticipation, le jugement, l'attention, la concentration, la capacité de partager son attention entre deux choses ou plus. Et parce qu'elles sont affectées à ce point, il serait risqué pour quiconque possède un tel taux d'alcool dans son sang de conduire un véhicule automobile.

When asked about his knowledge of research pertaining to the effects of alcohol on the risk of being involved in an automobile accident, Mr. Laughlin had this to say:

> At this level the moderate user of alcohol risk of causing crash is tremendously high, probably 100 times that of a sober driver, or even higher. And in some cases at this level, I've seen scientific literature indicating that the risk of causing a fatal crash is 2 to 300 times that of a sober driver. . . . if an impaired person is an experienced drinker there — it won't be that high. However, there will be an increased risk compared to a sober state. . . . But above 100 milligrams percent, regardless of tolerance, a person will be impaired with respect to driving ability.

Interrogé sur l'état des recherches touchant l'incidence de l'alcool sur le risque d'accident automobile, voici ce qu'a dit M. Laughlin :

> [TRADUCTION] À ce taux-là, le risque qu'une personne qui consomme modérément de l'alcool provoque un accident est extrêmement élevé, probablement 100 fois plus élevé que le conducteur à jeun, ou plus encore. Et dans certains cas, à ce taux-là, j'ai lu des textes scientifiques dans lesquels on indiquait que le risque de provoquer un accident mortel est de 200 à 300 fois plus élevé que celui d'un conducteur à jeun. [. . .] [S]i la personne en état d'ébriété est quelqu'un qui a l'habitude de boire, le risque n'est pas aussi élevé. Cependant, il est plus grand que si la personne avait été à jeun. [. . .] Mais au dessus de 100 mg par 100 ml de sang, peu importe le degré de tolérance à l'alcool, une personne a les facultés affaiblies pour ce qui concerne sa capacité de conduire.

Following these comments, Mr. Laughlin discussed the ability of a severely impaired person to react to the presence of a hazard when driving:

> My Lady, I would like to add that the driving task is a demanding one and involves many multi-various tasks occurring at the same time. The hazard for a person under the influence of alcohol is it takes longer to notice a hazard or danger if one should occur; it takes longer to decide what corrective action is appropriate, and it takes longer to execute that decision and the person may tend to make incorrect decisions. So there is increased risk in that process. As well, if the impairment has progressed to the point where the motor skills are affected, the execution of that decision is impaired. So it's not a very graceful attempt at a corrective action. As well, some people tend to make more risks under the influence of alcohol. They do not apply sound reasoning and judgment. They are not able to properly assess the impairment of their driving skills, they are not able to properly assess the risk, not able to properly assess the changing road and weather conditions and adjust for that. But even if they do recognize those as hazards, they may tend to take more risks than a sober driver would.

Après avoir fait ces remarques, M. Laughlin a décrit la capacité d'une personne en état d'ébriété avancé de réagir à la présence d'un danger lorsqu'elle conduit.

> [TRADUCTION] Madame, j'aimerais ajouter que conduire un véhicule est une activité exigeante, qui demande d'accomplir une multiplicité de tâches simultanément. Le danger pour la personne qui conduit en état d'ébriété réside dans le fait qu'il lui faut plus de temps pour déceler la présence d'un risque ou d'un danger; il lui faut plus de temps pour décider quelle mesure corrective est requise, et elle prend plus de temps à mettre cette décision à exécution; de plus, une telle personne peut avoir tendance à prendre de mauvaises décisions. Ce processus accroît donc le risque. Aussi, si l'ébriété est avancée au point où les habiletés motrices sont affaiblies, l'exécution de la décision s'en trouve compromise. Il s'ensuit donc une tentative plutôt malhabile de corriger la situation. De plus, certaines personnes tendent à prendre davantage de risques lorsqu'elles sont en état d'ébriété. Elles ne font pas preuve de discernement et de jugement. Elles sont incapables d'évaluer correctement les changements dans l'état de la route et les conditions météorologiques et d'adapter leur conduite en conséquence. Mais même si elles reconnaissent qu'il s'agit effectivement de dangers, elles peuvent avoir tendance à prendre davantage de risques que le conducteur à jeun.

163 The above comments support the conclusion that the accident occurred as a result of Mr. Nikolaisen's impairment and not as a result of any failure on the part of the respondent. Indeed, when the portions of Mr. Laughlin's testimony that the trial judge relied

Les remarques qui précèdent étayent la conclusion que l'accident s'est produit en raison de l'état d'ébriété de M. Nikolaisen et non de quelque manquement de la part de l'intimée. De fait, lorsque les extraits du témoignage de M. Laughlin sur lesquels

on are considered in their context, they do not support her conclusion that Mr. Nikolaisen would have been able to react to a sign had one been posted. When asked by counsel whether it was possible for an individual with Mr. Nikolaisen's blood alcohol level to perceive and react to a road sign, Mr. Laughlin responded:

> Yes, it's possible that a person will see and react to it and maybe react properly. It's possible that they will react improperly or may miss it altogether. I think what's key here is that at this level of alcohol, it's more likely that the person under this level of alcohol will either miss the sign or not react properly compared to the sober driver. That the driver with this level of alcohol will make more mistakes than will the sober driver. [Emphasis added.]

In the passage above, it is clear that Mr. Laughlin is merely admitting that anything is possible, while solidly expressing the view that drivers at this level of intoxication are more likely to not react to a sign or other warning. This view is also apparent in the following passage, in which Mr. Laughlin expands on the ability of an intoxicated driver to react to signs and other road conditions:

> What happens with respect to perception under the influence of alcohol is a driver tends to concentrate on the central field of vision, and miss certain indicators on the periphery, that's called tunnel vision. As well, drivers tend to concentrate on the lower part of that central field of view and therefore they don't have a very long preview distance in the course of operating a motor vehicle and looking down the road. And so studies indicate that under the influence of alcohol drivers tend to miss more signs, warnings, indicators, especially those in the peripheral field of view or farther down the road. [Emphasis added.]

In argument before this Court, the appellant emphasized that although Mr. Laughlin was the only expert to testify with respect to causation, lay witnesses testified that Mr. Nikolaisen was not visibly impaired prior to leaving the Thiel residence.

s'est fondée la juge de première instance sont examinés dans leur contexte, ils n'appuient pas la conclusion de cette dernière que M. Nikolaisen aurait été capable de réagir à un panneau de signalisation s'il y en avait eu un. Répondant à la question d'un avocat lui demandant s'il était possible qu'une personne ayant l'alcoolémie de M. Nikolaisen voit un panneau de signalisation et y réagisse, M. Laughlin a dit ceci :

> [TRADUCTION] Oui, il est possible qu'une personne le voit et y réagisse et peut-être qu'elle réagisse adéquatement. Il est possible qu'elle ne réagisse pas adéquatement ou qu'elle ne le voit même pas. J'estime que l'élément fondamental à retenir ici est qu'il est probable que la personne ayant atteint cette alcoolémie ne voit pas le panneau, ou ne réagisse pas adéquatement, comparativement au conducteur à jeun. Que le conducteur avec cette alcoolémie commette plus d'erreurs que le conducteur à jeun. [Je souligne.]

Il est clair, dans le passage qui précède, que M. Laughlin reconnaît simplement que tout est possible, tout en avançant avec conviction qu'il y a une plus forte probabilité que les conducteurs ayant atteint ce degré d'ébriété ne réagissent pas à un panneau de signalisation ou à une autre mesure d'avertissement. Cette opinion ressort également clairement de l'extrait suivant, où il donne des précisions supplémentaires sur la capacité d'une personne en état d'ébriété de réagir aux panneaux de signalisation et à d'autres éléments sur les routes :

> [TRADUCTION] Sur le plan de la perception, le conducteur en état d'ébriété a tendance à se concentrer sur son champ visuel central et à manquer certains indices en périphérie, c'est ce qu'on appelle la vision tubulaire. En outre, les conducteurs ont tendance à se concentrer sur la partie inférieure de ce champ visuel central et, en conséquence, ils ne voient pas très loin devant eux sur la route lorsqu'il sont au volant. Et, par conséquent, les recherches indiquent que les conducteurs en état d'ébriété ont tendance à manquer davantage de panneaux de signalisation, d'avertissements, d'indices, particulièrement ceux situés dans leur champ visuel périphérique ou plus loin sur la route. [Je souligne.]

164

Au cours des plaidoiries devant notre Cour, l'appelant a souligné que, bien que M. Laughlin ait été le seul expert entendu au sujet du lien de causalité, les témoins ordinaires ont attesté que M. Nikolaisen n'avait pas les facultés visiblement

It is not clear from the trial judge's reasons that she relied on testimony to this effect given by Craig Thiel, Toby Thiel and Paul Housen. To the extent that she did rely on such evidence to establish that the accident was caused in part by the respondent's negligence, I find this reliance to be unreasonable. Whereas the lay witnesses in this case were qualified to give their opinion on whether they, as ordinary drivers, could safely negotiate the segment of Snake Hill Road on which the accident occurred, they were not qualified to assess the degree of Mr. Nikolaisen's impairment. The reason for their lack of qualification in this regard was explained by Mr. Laughlin in the following response to counsel's question on whether it is possible to draw a conclusion from the fact that an individual does not exhibit any impairment of their motor skills and speech:

> No, Your Honour, because, My Lady, when you're looking at motor skill impairment or for signs of motor skill impairment, you're looking for signs of intoxication, not impairment. Remember I mentioned that the first components affected by alcohol are cognitive and mental faculties. These are all important in driving. However, it is very difficult when you look at an individual who has been consuming alcohol to tell that they have impaired in attention or divided attention, or concentration, or judgment. So as an indicator of impairment, motor skills are not reliable. And if you think about the *Criminal Code* process, they've been abandoned 30 years ago as a useful indicator of impairment. No longer do we rely on police officers subjective assessment of person's motor skills to determine impairment. [Emphasis added.]

165 It is also clear from the trial judge's reasons that she relied to some extent on evidence that Mr. Nikolaisen successfully negotiated the curve at the point where the driveway to the Thiel residence intersected the road. I agree with the respondent that this fact is simply not relevant. The ability of Mr. Nikolaisen to negotiate this curve does not establish that his driving ability was not impaired. As noted by the respondent, at para. 101 of its factum, he may

affaiblies avant de quitter la résidence des Thiel. Les motifs de la juge de première instance n'indiquent pas clairement si elle s'est appuyée sur les témoignages de Craig Thiel, Toby Thiel et Paul Housen à cet égard. Dans la mesure où elle se serait fondée sur cette preuve pour conclure que l'accident avait été causé en partie par la négligence de l'intimée, j'estime qu'il était déraisonnable de le faire. En l'espèce, bien que compétents pour exprimer leur opinion sur la question de savoir s'ils pourraient, en tant que conducteurs moyens, manœuvrer en toute sécurité sur le tronçon du chemin Snake Hill où l'accident s'est produit, les témoins ordinaires n'étaient pas compétents pour évaluer le degré d'ébriété de M. Nikolaisen. La raison de leur absence de compétence à cet égard a été expliquée en ces termes par M. Laughlin, dans la réponse suivante qu'il a donnée à l'un des avocats qui lui demandait s'il était possible de tirer des conclusions du fait qu'une personne ne démontre ni signe d'affaiblissement de ses habiletés motrices ni problème d'élocution :

> [TRADUCTION] Non, votre Honneur, puisque, Madame, lorsqu'on vérifie s'il y a affaiblissement des habiletés motrices ou des signes de cet affaiblissement, on cherche des indices d'ébriété, et non d'affaiblissement des facultés. Rappelez-vous que j'ai dit que les premières facultés affectées par l'alcool sont les facultés cognitives et mentales. Elles sont toutes importantes lorsqu'il s'agit de conduire un véhicule. Cependant, lorsqu'on examine une personne qui a consommé de l'alcool, il est très difficile de dire si son attention ou sa capacité de diviser son attention, ou si sa concentration ou son jugement sont réduits. En conséquence les habiletés motrices ne sont pas des indices fiables d'affaiblissement des facultés. Et si on pense au processus prévu par le *Code criminel*, on a cessé d'y recourir depuis 30 ans en tant qu'indices utiles de l'affaiblissement des facultés. On ne se fie plus à l'appréciation subjective policier quant aux habiletés motrices d'une personne pour déterminer si les facultés de celle-ci sont affaiblies. [Je souligne.]

Il appert également des motifs de la juge de première instance qu'elle s'est dans une certaine mesure fondée sur la preuve indiquant que M. Nikolaisen avait réussi à prendre le virage à l'intersection de l'entrée de la résidence des Thiel et du chemin Snake Hill. Je partage l'avis de l'intimée selon lequel ce fait n'est tout simplement pas pertinent. La capacité de M. Nikolaisen de prendre ce virage n'établit pas que sa capacité de conduire

have been driving more slowly at this point, or he may simply have been lucky. More importantly, this evidence contributes nothing to the issue of whether or not Mr. Nikolaisen would have reacted to a sign on the curve where the accident occurred, had one been present. There was no sign on the curve one faces upon leaving the driveway, just as there was no sign on the curve where the accident took place.

n'était pas affaiblie. Comme l'a souligné l'intimée, au par. 101 de son mémoire, il a pu réduire sa vitesse à cet endroit, ou simplement avoir eu de la chance. Facteur plus important encore cette preuve n'aide d'aucune façon à déterminer si M. Nikolaisen aurait réagi à un panneau placé à l'approche de la courbe où s'est produit l'accident, si un tel panneau avait existé. Il n'y avait aucun panneau aux abords de la courbe située à la sortie de l'entrée, tout comme il n'y en avait pas aux abords de celle où s'est produit l'accident.

At any rate, the trial judge's reliance on Mr. Nikolaisen's successful negotiation of the curve at the location of the Thiel driveway ignores relevant evidence that he had swerved or "fish-tailed" when leaving the Thiel residence. A reasonable inference to be drawn from this evidence is that while Mr. Nikolaisen was able to negotiate this curve, he did not do so free from difficulty. While this evidence may not be significant in and of itself, it should have been enough to alert the trial judge to the problems inherent in the inference she drew from his ability to navigate this earlier curve.

166 Quoi qu'il en soit, en se fondant sur le fait que M. Nikolaisen avait pris avec succès le virage devant l'entrée des Thiel, la juge de première instance a fait abstraction de l'élément de preuve pertinent indiquant que l'arrière de son véhicule avait zigzagué à son départ de la résidence des Thiel. On peut raisonnablement inférer de cette preuve que, quoique M. Nikolaisen ait été en mesure de prendre ce virage, il n'y est pas parvenu sans difficulté. Bien que cette preuve ne soit pas nécessairement importante en soi, elle aurait dû néanmoins alerter la juge de première instance quant aux problèmes intrinsèques de l'inférence qu'elle tirait de la capacité de M. Nikolaisen de prendre ce premier virage.

In addition to ignoring the relevant evidence of the fish-tail marks, the trial judge failed to consider the relevance of the fact that Mr. Nikolaisen had travelled Snake Hill Road three times in the 18 to 20 hours preceding the accident. In her review of the evidence, she noted at para. 8 of her reasons that: "Mr. Nikolaisen was unfamiliar with Snake Hill Road. While he had in the preceding 24 hours travelled the road three times, only once was in the same direction that he was travelling upon leaving the Thiel residence."

167 En plus de ne pas avoir tenu compte de la preuve pertinente que constituaient les traces des zigzags, la juge de première instance n'a pas considéré pertinent le fait que M. Nikolaisen avait circulé sur le chemin Snake Hill à trois reprises au cours des 18 à 20 heures ayant précédé l'accident. Dans son examen de la preuve, elle a souligné, au par. 8 de ses motifs, que [TRADUCTION] « M. Nikolaisen ne connaissait pas bien le chemin Snake Hill. Bien qu'il ait emprunté ce chemin à trois reprises au cours des 24 heures précédentes, il ne l'a fait qu'une seule fois dans la même direction que celle qu'il a prise en quittant la résidence des Thiel. »

I simply cannot see how the trial judge found accidents which occurred when motorists were travelling in the opposite direction relevant to the issue of the respondent's knowledge of a risk to motorists while at the same time suggesting that the fact that Mr. Nikolaisen had driven the road in the opposite direction twice was irrelevant to the issue of whether

168 Je ne vois tout simplement pas comment la juge de première instance a pu conclure que les accidents qu'ont eu des automobilistes circulant en sens inverse étaient pertinents pour statuer sur la connaissance par l'intimée de l'existence d'un risque d'accident, tout en suggérant du même souffle que le fait que M. Nikolaisen ait roulé à deux reprises

or not he would have recognized that the curve posed a risk or that he would have reacted to a warning sign. This discrepancy aside, I find the fact that Mr. Nikolaisen had travelled Snake Hill Road in the same direction when he left the Thiel residence to go to the Jamboree the evening before the accident highly relevant to the causation issue. The finding that the outcome would have been different had Mr. Nikolaisen been forewarned of the curve ignores the fact that he already knew that the curve was there. I agree with the respondent that the obvious reason Mr. Nikolaisen was unable to safely negotiate the curve on the afternoon of the 18th, despite having negotiated this curve and others without difficulty in the preceding 18 to 20 hours was the combined effect of his drinking, lack of sleep and lack of food.

169 In conclusion on the issue of causation, I wish to clarify that the fact that the trial judge referred to some evidence to support her findings on this issue does not insulate those findings from review by this Court. The standard of review for findings of fact is reasonableness, not absolute deference. Such a standard entitles the appellate court to assess whether or not it was clearly wrong for the trial judge to rely on some evidence when other evidence points overwhelmingly to the opposite conclusion. The logic of this approach was aptly explained by Kerans, *supra*, in the following passage at p. 44:

> The key to the problem is whether the reviewer is to look merely for "evidence to support" the finding. Some evidence might indeed support the finding, but other evidence may point overwhelmingly the other way. A court might be able to say that reliance on the "some" in the face of the "other" was not what the reasonable trier of fact would do; indeed, it might say that, in all the circumstances it was convinced that to rely on the one in the face of the other was quite unreasonable. To say that "some evidence" is enough, then, without regard to that "other

en sens inverse sur le chemin en question n'était pas pertinent pour déterminer s'il aurait reconnu que la courbe présentait un risque ou s'il aurait réagi à un panneau d'avertissement. Indépendamment de cette contradiction, j'estime que le fait que M. Nikolaisen ait roulé dans la même direction sur le chemin Snake Hill après avoir quitté la résidence des Thiel pour se rendre au jamboree, la veille de l'accident, est fort pertinent en ce qui concerne le lien de causalité. La conclusion que le résultat aurait été différent si une signalisation avait prévenu M. Nikolaisen de l'existence de la courbe ne tient pas compte du fait qu'il savait déjà qu'elle existait. Je souscris à l'opinion de l'intimée que la raison évidente pour laquelle M. Nikolaisen n'a pas réussi à prendre le virage en toute sécurité dans l'après-midi du 18, alors qu'il avait déjà pris ce virage et d'autres sans difficulté au cours des 18 à 20 heures précédentes, était l'effet combiné de sa consommation d'alcool, de son manque de sommeil et du fait qu'il n'avait pas mangé.

Pour conclure sur la question du lien de causalité, j'aimerais préciser que le fait que la juge de première instance ait mentionné certains éléments de preuve au soutien de ses conclusions sur ce point n'a pas pour effet de soustraire ces conclusions au pouvoir de contrôle de notre Cour. La norme de contrôle applicable aux conclusions de fait est celle de la décision raisonnable et non celle de la retenue absolue. Cette norme permet au tribunal d'appel de se demander si le juge de première instance a clairement fait erreur en décidant comme il l'a fait sur le fondement de certains éléments de preuve alors que d'autres éléments mènent irrésistiblement à la conclusion inverse. Kerans, *op. cit.*, p. 44, a habilement exposé la logique de cette démarche dans le passage suivant :

> [TRADUCTION] La solution au problème réside dans la réponse à la question de savoir si le tribunal de révision doit simplement se demander s'il existe « des éléments de preuve étayant » la conclusion. Il est possible que certains éléments de preuve étayent effectivement la conclusion alors que d'autres éléments conduisent irrésistiblement à la conclusion inverse. Un tribunal pourrait être en mesure de dire qu'un juge des faits raisonnable ne s'appuierait pas sur « certains » éléments vu l'existence des « autres »; de fait, il pourrait dire que, eu égard à

evidence" is to turn one's back on review for reasonableness.

D. *Did the Courts Below Err in Finding that no Common Law Duty of Care Exists Alongside the Statutory Duty Imposed Under Section 192 of The Rural Municipality Act, 1989?*

The appellant urges this Court to find that a common law duty of care exists alongside the statutory duty of care imposed on the respondent by s. 192 of *The Rural Municipality Act, 1989*. According to the appellant, the application of the common law duty of care would free the Court from the need to focus on how a reasonable driver exercising ordinary care would have navigated the road in question. The appellant submits that the Court would instead apply the "classic reasonableness formulation" which, in its view, would require the Court to take into account the likelihood of a known or foreseeable harm, the gravity of that harm, and the burden or cost of preventing that harm. The appellant argues that the respondent would be held liable under this test.

The courts below rejected the above argument when it was put to them by the appellant. I would not interfere with their ruling on this issue for the reason that it is unnecessary for this Court to impose a common law duty of care where a statutory one clearly exists. In any event, the application of the common law test would not affect the outcome in these proceedings.

I agree with the respondent's submissions that in this case, where the legislature has clearly imposed a statutory duty of care on the respondents, it would be redundant and unnecessary to find that a common law duty of care exists. The two-part test to establish a common law duty of care set out in *Kamloops (City of) v. Nielsen*, [1984] 2 S.C.R. 2, simply has no application where the legislature has defined a statutory duty. As was stated by this Court in *Brown*

l'ensemble des circonstances, il est convaincu qu'il était tout à fait déraisonnable de se fonder sur certains éléments compte tenu des autres. En conséquence, affirmer que « certains éléments de preuve » suffisent, sans égard aux « autres éléments », revient à abandonner l'examen du caractère raisonnable.

D. *Les juridictions inférieures ont-elles commis une erreur en concluant qu'aucune obligation de diligence de common law ne coexiste avec l'obligation légale imposée par l'art. 192 de la Rural Municipality Act, 1989?*

170 L'appelant invite notre Cour à conclure qu'une obligation de diligence de common law coexiste avec l'obligation légale de diligence imposée à l'intimée par l'art. 192 de la *Rural Municipality Act, 1989*. Selon l'appelant, l'application de l'obligation de diligence de common law dispenserait la Cour de la nécessité de se demander comment un conducteur raisonnable prenant des précautions normales aurait roulé sur le chemin en cause. L'appelant soutient que la Cour pourrait plutôt appliquer le [TRADUCTION] « critère classique de la conduite raisonnable », lequel, à son avis, l'obligerait à tenir compte des éléments suivants : la probabilité qu'un préjudice connu ou prévisible survienne, la gravité de ce préjudice et le fardeau ou le coût qu'il faudrait assumer pour le prévenir. L'appelant prétend que, suivant ce critère, l'intimée serait tenue responsable.

171 Les juridictions inférieures ont rejeté l'argument susmentionné de l'appelant. Je ne modifierais pas leur décision sur cette question, car il est inutile que notre Cour impose une obligation de diligence de common law lorsqu'il existe clairement une obligation d'origine législative. Quoi qu'il en soit, l'application du critère prévu par la common law ne modifierait pas l'issue de la présente instance.

172 Je souscris à l'argument de l'intimée selon lequel, en l'espèce, il serait redondant et inutile de conclure qu'elle est assujettie à une obligation de diligence de common law alors que le législateur lui a clairement imposé une obligation légale de diligence. Le critère à deux volets énoncé dans l'arrêt *Kamloops (Ville de) c. Nielsen*, [1984] 2 R.C.S. 2, pour statuer sur l'existence d'une obligation de diligence de common law, ne s'applique tout

v. British Columbia (Minister of Transportation and Highways), [1994] 1 S.C.R. 420, at p. 424:

> . . . if a statutory duty to maintain existed as it does in some provinces, it would be unnecessary to find a private law duty on the basis of the neighbourhood principle in *Anns v. Merton London Borough Council*, [1978] A.C. 728. Moreover, it is only necessary to consider the policy/operational dichotomy in connection with the search for a private law duty of care.

All of the authorities cited by the appellant as support for the imposition of an independent common law duty of care can be distinguished from the case at hand on the basis that no statutory duty of care existed (*Just*, *supra*; *Brown*, *supra*; *Swinamer v. Nova Scotia (Attorney General)*, [1994] 1 S.C.R. 445; *Ryan*, *supra*).

173 In addition, I find that the outcome in this case would not be different if the case were determined according to ordinary negligence principles. First, were the Court to engage in a common law analysis, it would still look to the statutory standard of care as laid out in *The Rural Municipality Act, 1989*, as interpreted by the case law in order to assess the scope of liability owed by the respondent to the appellant. As this Court stated in *Ryan*, *supra*, at para. 29:

> Statutory standards can, however, be highly relevant to the assessment of reasonable conduct in a particular case, and in fact may render reasonable an act or omission which would otherwise appear to be negligent. This allows courts to consider the legislative framework in which people and companies must operate, while at the same time recognizing that one cannot avoid the underlying obligation of reasonable care simply by discharging statutory duties.

174 Moreover, even under the common law analysis, this Court would be called upon to question the type of hazards that the respondent, in this case, ought to have foreseen. Whatever the approach, it is only rea-

simplement pas lorsque le législateur a prescrit l'obligation dans la loi. Comme l'a indiqué notre Cour dans l'arrêt *Brown c. Colombie-Britannique (Ministre des Transports et de la Voirie)*, [1994] 1 R.C.S. 420, p. 424 :

> . . . s'il existait une obligation d'entretien imposée par la loi comme c'est le cas dans certaines provinces, il serait inutile de rechercher une obligation en droit privé en se fondant sur le principe du prochain établi dans l'arrêt *Anns c. Merton London Borough Council*, [1978] A.C. 728. En outre, il est nécessaire d'examiner la dichotomie politique générale-opérations seulement en ce qui concerne la recherche d'une obligation de diligence en droit privé.

Tous les arrêts invoqués par l'appelant pour justifier sa prétention que la municipalité devrait être assujettie à une obligation indépendante de diligence de common law peuvent être distingués de la présente affaire, étant donné qu'il n'existait aucune obligation légale de diligence dans ces affaires (*Just*, précitée; *Brown*, précitée; *Swinamer c. Nouvelle-Écosse (Procureur général)*, [1994] 1 R.C.S. 445; *Ryan*, précitée).

En outre, j'estime que le résultat serait le même en l'espèce si l'affaire était tranchée d'après les principes ordinaires de la négligence. Tout d'abord, si la Cour faisait l'analyse prévue par la common law, elle appliquerait quand même la norme légale de diligence établie dans la *Rural Municipality Act, 1989*, telle qu'elle a été interprétée par la jurisprudence, pour déterminer l'étendue de la responsabilité de l'intimée envers l'appelant. Comme l'a dit notre Cour dans l'arrêt *Ryan*, précité, par. 29 :

> Cependant, les normes législatives peuvent être hautement pertinentes pour déterminer ce qui constitue une conduite raisonnable dans un cas particulier, et elles peuvent, en fait, rendre raisonnable un acte ou une omission qui, autrement, paraîtrait négligent. En conséquence, les tribunaux peuvent examiner le cadre législatif dans lequel les personnes et les sociétés doivent agir, tout en reconnaissant qu'il est impossible de se soustraire à l'obligation sous-jacente de diligence raisonnable simplement en s'acquittant de ses obligations légales.

De plus, même dans le cadre de l'analyse requise par la common law, notre Cour devrait s'interroger sur le type de dangers que l'intimée aurait dû prévoir en l'espèce. Indépendamment de l'approche choisie,

sonable to expect a municipality to foresee accidents which occur as a result of the conditions of the road, and not, as in this case, as a result of the condition of the driver.

The courts have long restricted the standard of care under the statutory duty to require municipalities to repair only those hazards which would pose a risk to the reasonable driver exercising ordinary care. Compelling reasons exist to maintain this interpretation. The municipalities within the province of Saskatchewan have some 175,000 kilometres of roads under their care and control, 45,000 kilometres of which fall within the "bladed trail" category. These municipalities, for the most part, do not boast large, permanent staffs with extensive time and budgetary resources. To expand the repair obligation of municipalities to require them to take into account the actions of unreasonable or careless drivers when discharging this duty would signify a drastic and unworkable change to the current standard. Accordingly, it is a change that I would not be prepared to make.

il n'est que raisonnable d'attendre d'une municipalité qu'elle prévoit les accidents qui surviennent en raison de l'état du chemin, et non, comme en l'espèce, ceux qui résultent de l'état du conducteur.

175 Depuis longtemps, les tribunaux limitent l'étendue de la norme de diligence découlant de l'existence d'un devoir légal de diligence à l'obligation pour les municipalités d'éliminer seulement les dangers qui présenteraient un risque pour le conducteur raisonnable prenant des précautions normales. Des raisons impérieuses militent en faveur du maintien de cette interprétation. Les municipalités de la province de la Saskatchewan assument l'entretien et la surveillance de quelque 175 000 kilomètres de route, dont 45 000 kilomètres font partie de la catégorie des « chemins nivelés ». La plupart de ces municipalités ne disposent ni d'effectifs permanents considérables ni de ressources importantes en temps et en argent. Élargir l'obligation d'entretien des municipalités en exigeant qu'elles tiennent compte, dans l'exécution de cette obligation, des actes des conducteurs déraisonnables ou imprudents, entraînerait une modification radicale et irréalisable de la norme actuelle. Il s'agit en conséquent d'un changement que je ne serais pas disposé à apporter.

VII. Disposition

In the result, the judgment of the Saskatchewan Court of Appeal is affirmed and the appeal is dismissed with costs.

Appeal allowed with costs, GONTHIER, BASTARACHE, BINNIE *and* LEBEL JJ. *dissenting.*

Solicitors for the appellant: Robertson Stromberg, Saskatoon; Quon Ferguson MacKinnon, Saskatoon.

Solicitors for the respondent: Gerrand Rath Johnson, Regina.

VII. Dispositif

176 En définitive, le jugement de la Cour de l'appel de la Saskatchewan est confirmé et le pourvoi est rejeté avec dépens.

Pourvoi accueilli avec dépens, les juges GONTHIER, BASTARACHE, BINNIE *et* LEBEL *sont dissidents.*

Procureurs de l'appelant : Robertson Stromberg, Saskatoon; Quon Ferguson MacKinnon, Saskatoon.

Procureurs de l'intimée : Gerrand Rath Johnson, Regina.

APPLICATION by non-profit organizations for judicial review of decision recommending that oil sands project receive authorization.

***D. Tremblay-Lamer J.*:**

1 This is an application for judicial review brought by the applicants pursuant to ss. 18 and 18.1 of the *Federal Courts Act*, R.S.C. 1985, c. F-7, as amended, respecting a report dated February 27, 2007 by the Joint Review Panel Established by the Alberta Energy and Utilities Board and the Government of Canada (the "Panel") concerning an environmental impact assessment of the Kearl Oil Sands Project (the "Kearl Project" or the "Project"), wherein the Panel recommended to the responsible federal authority, the Department of Fisheries and Oceans ("DFO"), that the Project receive authorization.

2 The applicants, various non-profit organizations concerned about the environmental effects of the Kearl Project, submit that the environmental assessment conducted by the Panel did not comply with the mandatory steps in the *Canadian Environmental Assessment Act*, S.C. 1992, c.37 ("CEAA") and in the Panel's Terms of Reference.

Background

3 Imperial Oil wishes to construct and operate the Kearl Project, an oil sands mine, in northern Alberta. This project includes the design, construction, operation and reclamation of four open pit truck and shovel mines and three trains of ore preparation and bitumen extraction facilities, as well as tailings management facilities and other supporting infrastructure. It will be capable of producing over 48,000 cubic metres of bitumen per day at full production in 2018, and will terminate mining operations in 2060.

4 The Kearl Project will be located approximately 70 kilometres north of Fort McMurray. Further, it is situated in the upper Muskeg River Watershed, a tributary of the Athabasca River, which flows through Wood Buffalo National Park to the Mackenzie River drainage basin in the Northwest Territories.

5 The Kearl Project requires an authorization from the federal Minister of Fisheries and Oceans under section 35(2) of the *Fisheries Act*, R.S.C., 1985, c. F-14. Before any federal approval can be given, an environmental assessment under the CEAA is required.

6 Pursuant to the Canada-Alberta Agreement for Environmental Assessment Cooperation, the Canadian Environmental Assessment Agency notified Alberta that it wished to participate with Alberta in a cooperative environmental assessment of the Kearl Project. Federally, the Canadian Environmental Assessment Agency confirmed it would carry out the role of Federal Environmental Assessment coordinator, and DFO would be the responsible authority, with Environment Canada (EC), Health Canada (HC) and Natural Resources Canada (NRCan) providing DFO with specialist advice.

7 Imperial Oil filed its Environmental Impact Assessment (EIA) relating to the Kearl Project in July 2005. Representatives of DFO, EC, HC and NRCan assessed the information provided by Imperial Oil as part of the joint environmental assessment with Alberta.

8 On January 18, 2006, DFO recommended to the Minister of the Environment that the Kearl Project be referred to a review panel due to the potential for the proposed project to cause significant adverse environmental effects, including cumulative effects, over large areas and on a number of valued ecosystem components. Canada entered into an agreement with the government of Alberta to conduct a joint review panel. The Joint Panel would render a project approval *decision* on behalf of Alberta authorities and make an approval *recommendation* to the responsible federal authority.

9 The Panel held 16 days of public hearings in November 2006. In addition to the EIA report filed by Imperial Oil, 20 parties filed submissions with the Panel, a number of which also gave oral evidence and were cross-examined at the hearing.

The Panel Report

10 On February 27, 2007, the Panel issued its report, setting out its decision for the Alberta authorities and making recommendations to DFO regarding project authorization.

11 The Panel reviewed the project as well as its purpose, need, project alternatives, and alternative means of implementation. The Panel reviewed the views of various stakeholder groups and summarized issues relating to social and economic effects, mine plan and resource conservation, tailings management, reclamation, air emissions, surface water, aquatic resources, Cumulative Environmental Management Association (CEMA) (a voluntary partnership of stakeholders charged with identifying environmental thresholds before irreversible damage occurs from oil sands development), traditional land use and traditional ecological knowledge, the need for follow-up, and human health.

12 The Panel recommended that DFO approve the Project given its view that provided proposed mitigation measures and recommendations were implemented, the Project was not likely to cause significant adverse environmental effects.

Legislative Context

13 The law governing Environmental Impact Assessments is set out by the provisions of the CEAA as interpreted in the jurisprudence of the Federal Court, Federal Court of Appeal, and the Supreme Court of Canada.

14 The CEAA establishes a two-step decision-making process. The first step is an environmental assessment where potentially adverse environmental effects of a project are analysed (s. 5). The second step involves decision-making and follow-up where a federal authority decides, taking into consideration that assessment, if a particular project should be authorized and what follow-up measures, if any, are required to verify the accuracy of the assessment and the effectiveness of mitigation measures (ss. 37 and 38).

15 The purpose of environmental assessment was described by the Supreme Court of Canada in *Friends of the Oldman River Society v. Canada (Minister of Transport)*, [1992] 1 S.C.R. 3, [1992] S.C.J. No. 1 (S.C.C.), at para. 95. While the case involved assessment under the *Environmental Assessment and Review Process Guidelines Order*, S.O.R./84-467 (the "EARPGO", predecessor to the current CEAA), I find the general principles espoused to be particularly instructive:

> Environmental impact assessment is, in its simplest form, a planning tool that is now generally regarded as an integral component of sound decision-making. Its fundamental purpose is summarized by R. Cotton and D. P. Emond in "Environmental Impact Assessment", in J. Swaigen, ed., Environmental Rights in Canada (1981), 245, at p. 247:
>
> > The basic concepts behind environmental assessment are simply stated: (1) early identification and evaluation of all potential environmental consequences of a proposed undertaking; (2) decision making that both guarantees the adequacy of this process and reconciles, to the greatest extent possible, the proponent's development desires with environmental protection and preservation.
>
> As a planning tool it has both an information-gathering and a decision-making component which provide the decision maker with an objective basis for granting or denying approval for a proposed development; see M. I. Jeffery, Environmental Approvals in Canada (1989), at p. 1.2, (SS) 1.4; D. P. Emond, Environmental Assessment Law in Canada (1978), at p. 5. In short, environmental impact assessment is simply descriptive of a process of decision-making. [...]

The First Step: Environmental Assessment

16 With respect to the first step, the CEAA contemplates three "levels" of assessment: screening (ss. 18-20), comprehensive study (ss. 21-24), and mediation and panel reviews (ss. 29-36).

17 Mediation and panel reviews are the most stringent level of assessment and are to be carried out upon a referral to the Minister by the responsible authority *after consideration of a screening report and any comments filed* where: 1) the responsible authority is uncertain whether the project, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate, is likely to cause significant adverse environmental effects; 2) the responsible authority is of the opinion that, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate, the project is likely to cause significant adverse environmental effects; or 3) public concerns warrant a reference to this type of procedure (s. 20).

18 Further, s. 25 of the CEAA indicates that the responsible authority may also refer the project to the Minister for a panel review *at any time* where it is of the opinion that the project, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate, may cause significant adverse environmental effects, or where public concerns warrant a reference to this type of procedure.

19 Pursuant to s. 40 of the CEAA, joint review panels involving federal and provincial authorities may be constituted by agreement or arrangement. This agreement or arrangement shall provide that the "environmental assessment of the project shall include a consideration of the factors required to be considered under subsections 16(1) and (2) and be conducted in accordance with any additional requirements and procedures set out in the agreement" (s. 41). Further, s. 41(c) indicates that "the Minister shall fix or approve the terms of reference for the panel." The "terms of reference" shall determine the scope of certain factors to be taken into consideration by a review panel in its assessment (s. 16(3)(b)). These terms of reference may significantly increase the obligations incumbent upon the Panel (see *Alberta Wilderness Assn. v. Cardinal River Coals Ltd.*, [1999] 3 F.C. 425, [1999] F.C.J. No. 441 (Fed. T.D.)).

20 Specifically, the general duties that a review panel is mandated to fulfill are four-fold (s. 34). First, it must ensure that the information required for an assessment is obtained and made available to the public (s. 34(a)). Second, the panel is required to hold hearings in a manner that offers the public an opportunity to participate in the assessment (s. 34(b)). Third, the panel is charged with fulfilling a reporting function whereby it must prepare a report setting out "the rationale, conclusions and recommendations of the panel relating to the environmental assessment of the project, including any mitigation measures and follow-up program" as well as a summary of public comments received (s. 34(c)). Finally, it must submit that report to the Minister and the responsible authority (s. 34(d)).

21 Within the ambit of these general duties, a review panel shall include a consideration of the various specific factors enumerated in ss. 16(1) and (2). These factors include the environmental effects of a project including effects of accidents and

malfunctions, cumulative environmental effects, the significance of environmental and cumulative effects, public comments, technically and economically feasible mitigation measures, and any other matter relevant to a review panel assessment that the Minister, after consulting with the responsible authority, may require to be considered (s. 16(1)). Furthermore, the purpose of the project, alternative means of carrying it out, the need for and requirement of any follow-up programs, and the capacity of renewable resources that are likely to be significantly affected by the project to meet the needs of the present and those of the future are also to be considered (s. 16(2)).

22 With respect to assessing the significance of environmental effects, the jurisprudence reveals that this assessment is not a wholly objective exercise but rather contains "a large measure of opinion and judgement." The Federal Court of Appeal has asserted that "[r]easonable people can and do disagree about the adequacy and completeness of evidence which forecasts future results and about the significance of such results [...]" (*Alberta Wilderness Assn. v. Express Pipelines Ltd.*, [1996] F.C.J. No. 1016 (Fed. C.A.) at para. 10).

23 The adequacy and completeness of the evidence must be evaluated in light of the preliminary nature of a review panel's assessment. In *Express Pipelines*, *supra*, at para. 14, Hugessen J.A. discussed the predictive and preliminary nature of the panel's role:

> The panel's view that the evidence before it was adequate to allow it to complete that function "as early as is practicable in the planning stages ... and before irrevocable decisions are made" (see section 11(1)) is one with which we will not lightly interfere. By its nature the panel's exercise is predictive and it is not surprising that the statute specifically envisages the possibility of "follow up" programmes. Indeed, given the nature of the task we suspect that finality and certainty in environmental assessment can never be achieved.

This view was echoed in *Inverhuron & District Ratepayers' Assn. v. Canada (Minister of the Environment)*, 2001 FCA 203, [2001] F.C.J. No. 1008 (Fed. C.A.), at para. 55, by Sexton J.A. Therefore, given the predictive function of an environmental assessment and the existence of follow-up mechanisms envisioned by the CEAA, the Panel's assessment of significance does not extend to the elimination of uncertainty surrounding project effects.

24 Similarly, it is evident that the assessment of environmental effects, including mitigation measures, is not to be conceptualized as a single, discrete event. Instructively, in *Union of Nova Scotia Indians v. Canada (Attorney General)* (1996), [1997] 1 F.C. 325, [1996] F.C.J. No. 1373 (Fed. T.D.), Mackay J. indicated, at para. 32 that he was not persuaded that the CEAA requires that all the details of mitigating measures be resolved before the acceptance of a screening report. He further asserted that the nature of the process of assessment was "ongoing and dynamic" with continuing dialogue between the proponent, the responsible authorities and interested community groups.

25 Moreover, jurisprudence relating to the EARPGO is also instructive as to the content of the legal duty to consider mitigation measures. In *Canadian Wildlife Federation Inc. v. Canada (Minister of the Environment)* (1990), [1991] 1 F.C. 641 (Fed. C.A.) [hereinafter Tetzlaff], at p. 657, Iacobucci C.J.A. described the assessment of mitigation measures in s. 12(c) of the EARPGO in the following terms: "If the initial assessment procedure reveals that the potentially adverse environmental effects that may be caused by the proposal "are insignificant or mitigable with known technologies" the proposal [...] may proceed or proceed with mitigation, as the case may be." In the case of *Canadian Wildlife Federation Inc. v. Canada (Minister of the Environment)* (1989), 31 F.T.R. 1 (Fed. T.D.), at p. 12, the decision which was upheld by the Court in *Tetzlaff*, Muldoon J. analysed s. 12(c) of the EARPGO and asserted that "since the Minister did not identify any known technologies but only vague hopes for future technology, it is not possible to consider that the recited adverse water quality effects are mitigable". Thus, in the context of a panel assessment, the possibilities of future research and development do not constitute mitigation measures.

26 I note also that s. 16(1)(d) of the CEAA (the equivalent of s. 12(c) of the EARPGO), the provision mandating consideration of mitigation measures, adds the proviso that mitigation measures must be technically *and economically* feasible as opposed to solely technically feasible ("known technologies" in the wording of the EARPGO). This second condition, in effect, imposes an additional requirement for measures to be classified as mitigating under the CEAA: under the current Act mitigation measures must also be economically feasible in order to qualify as such.

The Second Step: Decision and Follow-up

27 Once the panel report is completed, the federal authority responsible for the decision must take the report into consideration, and shall take a course of action that is in conformity with the approval of the Governor in Council (s. 37(1.1)). The responsible authority may exercise any power or perform any duty or function that would permit the project to be carried out in whole or in part, either where the project is not likely to cause significant adverse environmental effects, or where it is likely to cause significant adverse environmental effects that can be justified in the circumstances (s. 37(1)).

28 Where a federal authority decides to authorize a project following a panel review, it is mandated to design a follow-up program for the project and ensure its implementation (s. 38(2)). The results of the follow-up program may be used to implement adaptive management measures or to improve the quality of future environmental assessments (s. 38(5)).

Guiding Tenets

29 The powers associated with the administration of the CEAA are to be exercised "in a manner that protects the environment and human health and applies the precautionary principle" (s. 4(2)).

30 In recent amendments to the CEAA, acting in a manner consistent with the precautionary principle was specifically introduced in s. 4 as a duty bearing upon "the Government of Canada, the Minister, the Agency and all bodies subject to the provisions of this Act, including federal authorities and responsible authorities" in the administration of the CEAA.

31 In the case of *114957 Canada Ltée (Spray-Tech, Société d'arrosage) v. Hudson (Ville)*, [2001] 2 S.C.R. 241, [2001] S.C.J. No. 42 (S.C.C.), at para. 31, the Supreme Court of Canada cited the definition of the precautionary principle from the Bergen Ministerial Declaration on Sustainable Development (1990):

> In order to achieve sustainable development, policies must be based on the precautionary principle. Environmental measures must anticipate, prevent and attack the causes of environmental degradation. Where there are threats of serious or irreversible damage, lack of full scientific certainty should not be used as a reason for postponing measures to prevent environmental degradation.

32 An approach that has developed in conjunction with the precautionary principle is that of "adaptive management". In *Canadian Parks & Wilderness Society v. Canada (Minister of Canadian Heritage)*, 2003 FCA 197, [2003] F.C.J. No. 703 (Fed. C.A.), at para. 24, Evans J.A. stated that "[t]he concept of "adaptive management" responds to the difficulty, or impossibility, of predicting all the environmental consequences of a project on the basis of existing knowledge" and indicated that adaptive management counters the potentially paralyzing effects of the precautionary principle. Thus, in my opinion, adaptive management permits projects with uncertain, yet potentially adverse environmental impacts to proceed based on flexible management strategies capable of adjusting to new information regarding adverse environmental impacts where sufficient information regarding those impacts and potential mitigation measures already exists.

33 Accordingly, the scope of the duties incumbent upon a panel must be viewed through the prism of these guiding tenets: the precautionary principle and adaptive management. As an early planning tool, environmental assessment is tasked with the management of future risk, thus a review panel has a duty to gather the information required to fulfill this charge.

34 In sum, the CEAA represents a sophisticated legislative system for addressing the uncertainty surrounding environmental effects. To this end, it mandates early assessment of adverse environmental consequences as well as mitigation measures, coupled with the flexibility of followup processes capable of adapting to new information and changed circumstances. The dynamic and fluid nature of the process means that perfect certainty regarding environmental effects is not required.

Issues

35 This application involves the determination of whether the Panel committed reviewable errors by failing to consider the factors enumerated in ss. 16(1) and 16(2) of the CEAA, more particularly by relying on mitigation measures that were

not technically and economically feasible and by failing to comply with the requirement to provide a rationale for its recommendations pursuant to s. 34(c)(i) of the CEAA.

36 The applicants focus on these reviewable errors in relation to the following three issues:

A) Cumulative Effects Management Association (CEMA), Watershed Management and Landscape Reclamation;

B) Endangered Species; and

C) Greenhouse Gas Emissions

Standard of Review

37 All parties agree that to the extent that the issues posed involve the interpretation of the CEAA, as questions of law, they are reviewable on a standard of correctness (*Friends of the West Country Assn. v. Canada (Minister of Fisheries & Oceans)* (1999), [2000] 2 F.C. 263, [1999] F.C.J. No. 1515 (Fed. C.A.), at para. 10; *Bow Valley Naturalists Society v. Canada (Minister of Canadian Heritage)*, [2001] 2 F.C. 461, [2001] F.C.J. No. 18 (Fed. C.A.), at para. 55). However, issues relating to weighing the significance of the evidence and conclusions drawn from that evidence including the significance of an environmental effect are reviewed on the standard of reasonableness *simpliciter* (*Bow Valley*, *supra*, at para. 55; *Inverhuron*, *supra*, at paras. 39-40).

38 The crux of the standard of review determination in the present case involves the *characterization* of the alleged errors. According to the applicants, the Panel report contains numerous legal errors relating to the interpretation of the CEAA that are reviewable on the standard of correctness. However, the respondents indicate that these alleged errors are in fact errors relating to the conclusions drawn from the evidence before the Panel and therefore are reviewable on the standard of reasonableness.

39 As noted by Campbell J. in *Cardinal River Coals Ltd.*, *supra*, at para. 24, "it is important to appropriately characterize a perceived failure to comply [with the requirements of the CEAA] as a question of law or merely an attack on the "quality" of the evidence and, therefore the "correctness" of the conclusions drawn on that evidence" (see also *Express Pipelines Ltd.*, *supra*, at para. 10).

40 With respect to the arguments relating to the Panel's reliance on mitigation measures that were not technically and economically feasible, there is no indication in the Report that the Panel misunderstood the legal interpretation of technically and economically feasible mitigation measures. In essence, what the applicants are challenging is the underlying completeness or quality of the evidence which in their view was not sufficient to allow the Panel to conclude as it did given the uncertainties that still remained regarding the Project. Thus, this question is reviewable on the standard of reasonableness *simpliciter*.

41 With respect to the question of providing a "rationale" for the conclusions and recommendations of the Panel, this question relates to the interpretation of the requirements of s. 34(c)(i) of CEAA. The applicants do not attack the rationale provided but rather question whether any rationale at all was put forth by the Panel. Whether or not the Panel has provided a rationale for its conclusions and recommendations is question of law, reviewable on a standard of correctness.

Analysis

A) CEMA, Watershed Management and Landscape Reclamation

i. CEMA

42 The applicants submit that while the Panel recognized that CEMA was vital in addressing the cumulative impacts of oil sands development and had the responsibility to address most of the critical cumulative effects challenges in the Athabasca oil sands region, it also expressed deep concern at the inability of CEMA "to establish and maintain priority for critical items such as the Water Management Framework for the Athabasca River, the Muskeg River Watershed Integrated Management Plan, and the Regional Terrestrial and Wildlife Management Framework" and cited specific examples of CEMA failing to meet timelines and complete its work.

43 The respondent, Imperial Oil, argues that the applicants' assertion is based on a narrow reading of the Report restricted to that portion dealing solely with integrated watershed planning which is only one of the many issues addressed by the Panel. I agree.

44 The Panel's discussion of CEMA was tied closely to regional watershed management planning. As a regional association comprised of industry and government representatives as well as community and civil society stakeholders, CEMA is expected to address the objectives of watershed management planning. Given this important role in regional effects management, it was therefore appropriate for the Panel to raise concerns regarding CEMA's functioning. Based on the Report, I could not conclude that the Panel considered CEMA as a mitigation measure, but rather as the proper vehicle for the development of environmental management frameworks.

45 While the Panel discussed CEMA extensively and highlighted the numerous problems associated with its functioning, it also made detailed recommendations regarding its operation in order to ensure that CEMA would function properly in years to come, and to provide the ultimate decision-maker with a concrete evaluation of this key stakeholder association. I note also the Panel's comments with respect to regulatory backstopping by Alberta Environment ("AENV") in the event that CEMA is unable to meet its timelines for management frameworks. I find this to be consistent with the precautionary principle in that if CEMA is unable to complete a management plan by March 2008, the regulator should be engaged to prevent potentially adverse environmental consequences.

ii. Watershed Management

46 With respect to Watershed Management, I am satisfied that the Panel took into consideration mitigation measures that were both technically and economically feasible. A fair reading of the Report shows that the Panel addressed the issue of surface water extensively. In fact, the Panel considered the issue under three distinct subheadings: in-stream flow needs, integrated watershed planning, and water quality, and additionally under fish and fish habitat.

47 Contrary to the applicants' assertion that there was no evidence or the scantest evidence upon which to evaluate the existence, nature and effectiveness of the mitigation measures, the Panel's recommendations on the issue of water quality refer to mitigation measures contained in Imperial Oil's EIA as well as the *Environmental Protection and Enhancement Act*, R.S.A. 2000, c. E-12 (the "EPEA") approval conditions. The Panel concludes:

> [...] the Joint Panel believes that by implementing a comprehensive monitoring plan, the suggested *EPEA* approval conditions, the Joint Panel's recommendation, and the mitigations identified by Imperial Oil in its EIA, the KOS [Kearl Oil Sands] Project is unlikely to result in significant adverse environmental effects on water quality. [Emphasis added] (p. 83 of the Report)

Further, as pertains to aquatic resources, the Panel concluded:

> [...] The Joint Panel concludes that with the implementation of Imperial Oil's mitigation measures, the completion of an NNLP [No Net Loss Plan] satisfactory to DFO, and the Joint Panel's recommendations, the KOS Project is unlikely to result in significant adverse environmental effects on aquatic resources. [Emphasis added] (p. 86 of the Report)

48 Specifically, the mitigation measures identified by Imperial Oil in its EIA for managing groundwater include the following:

> (a) Recycling of process-affected waters and runoff within the Kearl Project footprint in a closed-circuit system during operations;
>
> (b) Directing Muskeg drainage and overburden waters to polishing ponds equipped with oil separation capability, if required;
>
> (c) Diverting natural headwater flow around construction and mining areas and discharging it into receiving streams without contact with oil sands or process-affected waters;

(d) Using a perimeter ditch and pumping system to capture seepage and runoff from the external tailings area and pumping back into the process during operations;

(e) Using a drainage system to capture and direct seepage and runoff from the external tailings area to wetlands and terminal lakes with sufficient residence time after reclaiming the external tailings area;

(f) Using wetlands and pit lakes during and after closure to provide biological remediation and settling of particulate materials in reclamation waters prior to discharge;

(g) Designing pit lakes with sufficient residence time to enhance settling and biological remediation of reclamation waters;

(h) Using reclamation waters that collect in the pit as process water until the start of the closure management system;

(i) Placing of tailings only in the central pit lake which has a large volume and long residence time;

(j) Maintaining naturally occurring, low permeability material between Kearl Lake and its surrounding mine pits to minimize seepage into the lake.

• EIA, Volume 6, at p. 5-38 and 5-39 [Imperial's Record, Vol 2, Tab 4(b) at pp. 312 and 313]

49 Further, with respect to aquatic resources, Imperial Oil identified mitigation measures in its EIA which included the following:

a) Compensation habitat will be provided by the development of new habitat area in accordance with requirements and guidance through the appropriate regulators, such as DFO;

b) Potential changes in flow sections of the Muskeg River downstream of the Project development area will be minimized during the operational phases of the Project by flow augmentation;

c) Permanent diversion channels and drainage systems will be designed to facilitate development of sustainable aquatic ecosystems in order to mitigate losses of natural water courses habitats;

d) Drainage patterns in Wapasu Creek will be designed to mitigate flows that could change channel regime or increase downstream sedimentation or total suspended solids; and

e) The Kearl Project will include a system of environmental management protocols and construction practices designed to minimize possible effects to the aquatic environment.

• EIA, Volume 6, at p. 6-36 to 6-38 [Imperial's Record, Vol. 2, Tab 4(c) at pp. 314 to 316]

50 Thus, contrary to the applicants' submissions, I am satisfied that there was evidence upon which the Panel could reasonably assess technically and economically feasible measures that would mitigate any significant adverse environmental effects arising from the Project on the Muskeg watershed and fish and fish habitat.

51 When pressed at the hearing to provide specific cases of mitigation measures considered by the Panel that were not technically and economically feasible, the applicants pointed to the consolidated tailings technology and end pit lakes as two such examples.

52 First, with respect to consolidated tailings, the applicants contend that the Panel found this measure to be technically viable but not economically feasible; nevertheless, it proceeded to rely on this technology in its assessment, in contravention of the CEAA.

53 However, as explained by Imperial Oil's counsel, Mr. Ignasiak, and as indicated by a fair reading of the hearing transcript, it is clear that the Panel was concerned not by the tailings technology, but by one of the enhancements, a tailings thickener, proposed by Imperial Oil in order to improve on the existing technology that is used at other facilities. It is this tailings thickener, not the underlying consolidated tailings technology that has not been commercially demonstrated. The Panel then concluded that by implementing the tailings technology, of which a thickener was but a proposed enhancement, significant adverse environmental effects were unlikely to occur.

54 Thus, I disagree with the applicants that the Panel was relying on a technology that was yet to be developed. As the respondent, Imperial Oil, aptly pointed out, if the applicants' arguments are to be accepted, it would mean that under the CEAA process, proponents must provide the Panel with only those technologies that have been used in the past. In my view this would stifle innovation in the field, which could potentially result in future benefits to the environment.

55 Second, with respect to end pit lakes, the applicants submit that by recommending further testing of modelling predictions, the Panel erred in determining that this mitigation measure was technically and economically feasible. I cannot accept this argument. In my view, the Panel took a precautionary approach by demanding that an operator validate modelling predictions by testing end pit lake technology.

56 Indeed, this approach is broadly consistent with the principles of adaptive management. As Evans J.A asserted in *Canadian Parks & Wilderness Society*, *supra*, at para. 24, "[t]he concept of "adaptive management" responds to the difficulty, or impossibility, of predicting all the environmental consequences of a project on the basis of existing knowledge." The same holds true for the assessment of mitigation measures. While there does exist some uncertainty with respect to end pit lake technology, the existing level of uncertainty is not such that it should paralyze the entire project.

57 Thus, based on the information that was before it, including the modelling predictions, the Panel accepted the measure as technically and economically feasible. The fact that uncertainty remained regarding end pit lakes in the oil sands region is understandable given that they will only become operational upon mine site closures. Thus, the Panel recommended the validation of modelling results, including a physical test case and continued research, well in advance of the slated closure date in 60 years.

58 In my opinion, the Panel is permitted and indeed mandated to make these kinds of recommendations regarding the proposed Project, which should include recommendations for continued study of potential impacts on valued environmental components and the development of further mitigation strategies. This is consistent with the ongoing and dynamic nature of environmental assessment referred to above and ensures that new information is obtained which facilitates the adaptation of project implementation as required.

iii. Reclamation

59 The applicants further submit that the mitigation of certain aspects of oil sands mining, e.g., reclamation of peatlands, is not even known in general terms. Follow-up programs are not intended to replace mitigation measures under the CEAA or to be treated as vehicles for designing future mitigation measures. The applicants find support in the case of *Union of Nova Scotia Indians*, *supra*. In that particular case, mitigation measures were generally known, but the details of the specific measures had yet to be determined. For the applicants, relying on adaptive management to address uncertainty and future risk requires at least some general understanding initially of the mitigation system in play.

60 The respondents submit that the dynamic nature of follow-up measures and adaptive management will resolve initial uncertainties. Further, sufficient information was available to the Panel which enabled it to reasonably conclude as it did. I agree. The recommendations are not necessarily flawed because the evidence was insufficient to eliminate all uncertainty. The Panel had before it information indicating that while the reclamation of peat-accumulating wetlands remained uncertain, there is considerable experience with respect to wetland and marsh reconstruction and that Imperial Oil's closure plan called for the reconstruction of approximately 900 hectares of marsh. This type of replacement is consistent with s. 2(1) of the CEAA which

defines mitigation as including "restitution for any damage to the environment caused by such effects through replacement, restoration, compensation or any other means".

61 Again, I note that the Federal Court of Appeal explained in *Express Pipelines Ltd.*, *supra*, that as the nature of the Panel's task is predictive, finality and certainty in environmental assessment can never be achieved. Hugessen J. stated at para. 10:

> No information about the probable future effects of a project can ever be complete or exclude all possible future outcomes. The appreciation of the adequacy of such evidence is a matter properly left to the judgment of the panel which may be expected to have, as this one in fact did, a high degree of expertise in environmental matters. In addition, the principal criterion set by the statute is the "significance" of the environmental effects of the project: that is not a fixed or wholly objective standard and contains a large measure of opinion and judgment. Reasonable people can and do disagree about the adequacy and completeness of evidence which forecasts future results and about the significance of such results without thereby raising questions of law.

And further at para. 14, he states:

> Finally, we were asked to find that the panel had improperly delegated some of its functions when it recommended that certain further studies and ongoing reports to the National Energy Board should be made before, during and after construction. This argument misconceives the panel's function which is simply one of information gathering and recommending. The panel's view that the evidence before it was adequate to allow it to complete that function "as early as is practicable in the planning stages ... and before irrevocable decisions are made" (see section 11(1)) is one with which we will not lightly interfere. By its nature the panel's exercise is predictive and it is not surprising that the statute specifically envisages the possibility of "follow up" programmes. Indeed, given the nature of the task we suspect that finality and certainty in environmental assessment can never be achieved.

It would be impossible for a review panel to conduct the environmental assessment early in the planning stages of a project if the Panel was required to eliminate all uncertainty and precluded from commenting on follow-up activities.

62 Thus, while uncertainties with respect to reclamation of peat-accumulating wetlands remained, they could be addressed through adaptive management given the existence of generally known replacement measures contained in Imperial Oil's mine closure plan. Indeed, it is worth noting that the Panel cited with approval the reclamation milestones from Imperial Oil's Project Application in its Report.

B) Endangered Species

63 The applicants argue that the Panel failed to consider the significance of adverse environmental effects on endangered species, particularly the Yellow Rail (listed in the *Species at Risk Act*, S.C. 2002, c.29 ("SARA")), failed to provide the responsible authority with the requisite information in this regard, failed to consider mitigation measures that were technically and economically feasible, and failed to provide a rationale for its conclusion.

64 The applicants reference the Federal Government's written submission to the Kearl Panel wherein it indicated that:

> There are 1093 [hectares] of graminoid fen within the Kearl Project area that could provide suitable habitat for Yellow Rails. It is not known how large or widely distributed the local population is, and therefore it is difficult to draw conclusions on potential impacts to the species, or to make recommendations for mitigation actions.

Based on the information before it, the Panel recommended that Alberta conduct a regional review of cumulative impacts on Yellow Rail within the next two years.

65 For the applicants s. 79 of the SARA imposes requirements, in addition to those contained in the CEAA, on authorities mandated to ensure that an environmental assessment is conducted to "identify the adverse effects of the project on the listed wildlife species and its critical habitat and, if the project is carried out, [to] ensure that measures are taken to avoid or lessen those effects and to monitor them."

66 The federal respondent submits that the Panel clearly set out its concerns regarding the Yellow Rail and made recommendations for a regional review of cumulative impacts to determine mitigation options as well as the implementation of predevelopment surveys by Imperial Oil. Given the ongoing and dynamic nature of the environmental assessment process, complete details need not be provided at this stage: the Panel raised concerns, provided information, and made recommendations, and the final decision rested with DFO. Imperial Oil echoes the federal respondent and indicates that based on the evidence, the Panel's conclusions and recommendations were informed and rational.

67 While I note that the Panel could have included more information regarding Environment Canada's concerns with respect to the Yellow Rail, particularly, that suitable habitat for the Yellow Rail is found in localized patches throughout the region and that this habitat cannot be reclaimed with current technology, I find the assessment of the significance of environmental effects in the Panel report to be reasonable. In my view, the Panel met its duty in the present case by acknowledging that Environment Canada expressed concern regarding the effect on the Yellow Rail due to the intensity of regional development. It made no further assessment as the information upon which such assessment could be based was not before it.

68 The Panel recommended that in the next two years AENV in collaboration with Environment Canada, coordinate a regional review of the cumulative impacts on the Yellow Rail in the oil sands region, using appropriate regional nocturnal surveys in areas of potentially suitable habitat and that this initiative should determine the mitigation options to minimize impacts on the Yellow Rail. The Panel went on to recommend that AENV establish requirements within any *EPEA* approval to implement the findings of the Yellow Rail initiative for surveys, determination of effects, and mitigation strategies where appropriate. The Panel expressed its expectation that Imperial Oil would implement effective Yellow Rail predevelopment surveys and habitat mitigation strategies in its reclamation plans, unless these matters were dealt with on a regional basis. Finally, the Panel recommended that AENV require Imperial Oil to avoid land clearing during the period of April 1 to August 30 of each year due to potential impacts on migratory bird species.

69 Thus, while I agree with the applicants' assertion that further studies of the Yellow Rail population do not constitute mitigation measures, I do not believe that the Panel's recommendation was meant to be a mitigation measure. The Panel adopted an approach that was consistent with the dynamic nature of the assessment process; it highlighted concerns and made recommendations consistent with the information before it. I find the approach employed to manage the existing uncertainty to be reasonable.

C) Greenhouse Gas Emissions

70 The applicants submit that the Panel erred by failing to provide a cogent rationale for its conclusion that the adverse environmental effects of the greenhouse gas emissions of the Project would be insignificant, and by failing to comment on the effectiveness of intensity-based "mitigation". According to Imperial Oil's EIA, the Project will be responsible for average emissions of 3.7 million tonnes of carbon dioxide equivalent per year, which equals the annual greenhouse gas emissions of 800,000 passenger vehicles in Canada, and will contribute 0.51% and 1.7% respectively, of Canada and Alberta's annual greenhouse gas emissions (based on 2002 data).

71 The respondent, Imperial Oil, argues that the EIA that was before the Panel set out the annual greenhouse gas emissions, as well as the intensity of greenhouse gas emissions on a per barrel basis for the Project during the operating period. Further, the Project Application sets out Imperial Oil's approach to greenhouse gas management including the requirement that the most energy efficient, commercially proven and economic technology be selected to minimize emissions. There is no evidence to suggest that the Panel failed to consider all the evidence that was before it, and while it did not comment specifically on the effects of the greenhouse gas emissions, pursuant to *Cantwell v. Canada (Minister of the Environment)*, [1991] F.C.J. No. 27 (Fed. T.D.), the EARPGO (predecessor to the CEAA) does not specify a particular form for the report and thus, it is not the role of this Court to insist on a particular form in the present case. At the hearing, Imperial Oil's counsel added that for the Panel to comment on the proposed intensity based mitigation measures would shift its role into the realm of policy recommendation.

72 While I agree that the Panel is not to engage in policy recommendation, nevertheless, it is tasked with conducting a science and fact-based assessment of the potential adverse environmental effects of a proposed project. In the absence of this fact-based approach, the political determinations made by final decision-makers are left to occur in a vacuum.

73 I recognize that placing an administrative burden on the Panel to provide an in-depth explanation of the scientific data for all of its conclusions and recommendations would be disproportionately high. However, given that the Report is to serve as an objective basis for a final decision, the Panel must, in my opinion, explain in a general way why the potential environmental effects, either with or without the implementation of mitigation measures, will be insignificant.

74 Should the Panel determine that the proposed mitigation measures are incapable of reducing the potential adverse environmental effects of a project to insignificance, it has a duty to say so as well. The assessment of the environmental effects of a project and of the proposed mitigation measures occur outside the realm of government policy debate, which by its very nature must take into account a wide array of viewpoints and additional factors that are necessarily excluded by the Panel's focus on project related environmental impacts. In contrast, the responsible authority is authorized, pursuant to s. 37(1)(a)(ii), to permit the project to be carried out in whole or in part even where the project is likely to cause significant adverse environmental effects if those effects "can be justified in the circumstances". Therefore, it is the final decision-maker that is mandated to take into account the wider public policy factors in granting project approval.

75 I am fully aware of the level of expertise possessed by the Panel. The record shows that they had ample material before them relating to the issue of greenhouse gas emissions and climate change, and thus any articulated conclusions drawn from the evidence should be accorded a high measure of deference. However, this deference to expertise is only triggered when those conclusions are articulated. Instructively, in *Canada (Director of Investigation & Research) v. Southam Inc.*, [1997] 1 S.C.R. 748, [1996] S.C.J. No. 116 (S.C.C.), at para. 62, Iacobucci J. cited with approval the following excerpt from Kerans, R. P., *Standards of Review Employed by Appellate Courts* (Edmonton: Juriliber, 1994), p. 17 which dealt with deference to "expertise":

> Experts, in our society, are called that precisely because they can arrive at well-informed and rational conclusions. If that is so, they should be able to explain, to a fair-minded but less well-informed observer, the reasons for their conclusions. If they cannot, they are not very expert. If something is worth knowing and relying upon, it is worth telling. Expertise commands deference only when the expert is coherent. Expertise loses a right to deference when it is not defensible. That said, it seems obvious that [appellate courts] manifestly must give great weight to cogent views thus articulated. [Emphasis added]

Thus, deference to expertise is based on the cogent articulation of the rationale basis for conclusions reached.

76 In the present case, the Panel indicated its expectation that Imperial Oil would follow through on its commitment to:

- reduce NO_x emissions through combustion controls using low-NO_x burners for stationary sources,
- purchase and operate low-NO_x mine equipment as soon as it is commercially available, and
- participate in AENV's BATEA [Best Available Technology Economically Available] study and implement its findings. (p. 58 of the Report)

Further, the Panel agreed with EC and encouraged Imperial Oil to implement the use of ultra-lowsulphur diesel fuel for all of its construction and mining activities ahead of any mandatory requirements (p. 59 of the Report).

77 Finally, the Panel supported Alberta developing appropriate *EPEA* approval requirements to address greenhouse gas emission intensity targets:

> The Joint Panel supports Alberta developing appropriate *EPEA* approval requirements to address:
>
> - fugitive emissions control (LDAR [leak detection and repair] program),

> • continuous benzene and acrolein monitoring,
>
> • VOC [volatile organic compounds] emissions monitoring,
>
> • participation in CEMA and WBEA [Wood Buffalo Environmental Association] work to address trace air contaminants, including but not limited to benzene and acrolein,
>
> • participation in regional acid deposition and eutrophication monitoring programs, and
>
> • GHG [greenhouse gas] emission intensity targets.

The Panel then concluded that:

> The KOS Project is not likely to result in significant adverse environmental effects to air quality, provided that the mitigation measures and recommendations proposed are implemented. (p. 60 of the Report)

78 The evidence shows that intensity-based targets place limits on the amount of greenhouse gas emissions per barrel of bitumen produced. The absolute amount of greenhouse gas pollution from oil sands development will continue to rise under intensity-based targets because of the planned increase in total production of bitumen. The Panel dismissed as insignificant the greenhouse gas emissions without any rationale as to why the intensity-based mitigation would be effective to reduce the greenhouse gas emissions, equivalent to 800,000 passenger vehicles, to a level of insignificance. Without this vital link, the clear and cogent articulation of the reasons behind the Panel's conclusion, the deference accorded to its expertise is not triggered.

79 While I agree that the Panel is not required to comment specifically on each and every detail of the Project, given the amount of greenhouse gases that will be emitted to the atmosphere and given the evidence presented that the intensity based targets will not address the problem of greenhouse gas emissions, it was incumbent upon the Panel to provide a justification for its recommendation on this particular issue. By its silence, the Panel short circuits the two step decision making process envisioned by the CEAA which calls for an *informed decision* by a responsible authority. For the decision to be informed it must be nourished by a robust understanding of Project effects. Accordingly, given the absence of an explanation or rationale, I am of the view that the Panel erred in law by failing to provide reasoned basis for its conclusion as mandated by s. 34(c)(i) of the CEAA.

80 As this error relates solely to one of the many issues that the Panel was mandated to consider, I find that it would be inappropriate and ineffective to require the entire Panel review to be conducted a second time (*Nanda v. Canada (Public Service Commission Appeal Board)*, [1972] F.C. 277 (Fed. C.A.), at para. 55). Accordingly, the application for judicial review is allowed in part. The matter is remitted back to the same Panel with the direction to provide a rationale for its conclusion that the proposed mitigation measures will reduce the potentially adverse effects of the Project's greenhouse gas emissions to a level of insignificance.

81 As it was agreed upon at the hearing, the parties shall make representations in writing on the issue of costs. The applicants should file and serve their representation within 15 days from the date of this judgement. The respondents should file and serve their representations within 15 days from the date of service of the applicants' representations.

Judgment

THIS COURT ORDERS that

The application for judicial review is allowed in part. The matter is remitted back to the same Panel with the direction to provide a rationale for its conclusion that the proposed mitigation measures will reduce the potentially adverse effects of the Project's greenhouse gas emissions to a level of insignificance.

Application allowed in part.

Annex

Canadian Environmental Assessment Act, S.C. 1992, c.37

[...]

Purposes

Purposes

4. (1) The purposes of this Act are

(a) to ensure that projects are considered in a careful and precautionary manner before federal authorities take action in connection with them, in order to ensure that such projects do not cause significant adverse environmental effects;

(b) to encourage responsible authorities to take actions that promote sustainable development and thereby achieve or maintain a healthy environment and a healthy economy;

(b.1) to ensure that responsible authorities carry out their responsibilities in a coordinated manner with a view to eliminating unnecessary duplication in the environmental assessment process;

(b.2) to promote cooperation and coordinated action between federal and provincial governments with respect to environmental assessment processes for projects;

(b.3) to promote communication and cooperation between responsible authorities and Aboriginal peoples with respect to environmental assessment;

(c) to ensure that projects that are to be carried out in Canada or on federal lands do not cause significant adverse environmental effects outside the jurisdictions in which the projects are carried out; and

(d) to ensure that there be opportunities for timely and meaningful public participation throughout the environmental assessment process.

Duties of the Government of Canada

(2) In the administration of this Act, the Government of Canada, the Minister, the Agency and all bodies subject to the provisions of this Act, including federal authorities and responsible authorities, shall exercise their powers in a manner that protects the environment and human health and applies the precautionary principle.

1992, c. 37, s. 4; 1993, c. 34, s. 19(F); 1994, c. 46, s. 1; 2003, c. 9, s. 2.

Projects requiring environmental assessment

5. (1) An environmental assessment of a project is required before a federal authority exercises one of the following powers or performs one of the following duties or functions in respect of a project, namely, where a federal authority

(a) is the proponent of the project and does any act or thing that commits the federal authority to carrying out the project in whole or in part;

(b) makes or authorizes payments or provides a guarantee for a loan or any other form of financial assistance to the proponent for the purpose of enabling the project to be carried out in whole or in part, except where the financial assistance is in the form of any reduction, avoidance, deferral, removal, refund, remission or other form of relief from the payment of any tax, duty or impost imposed under any Act of Parliament, unless that financial assistance

is provided for the purpose of enabling an individual project specifically named in the Act, regulation or order that provides the relief to be carried out;

(c) has the administration of federal lands and sells, leases or otherwise disposes of those lands or any interests in those lands, or transfers the administration and control of those lands or interests to Her Majesty in right of a province, for the purpose of enabling the project to be carried out in whole or in part; or

(d) under a provision prescribed pursuant to paragraph 59(f), issues a permit or licence, grants an approval or takes any other action for the purpose of enabling the project to be carried out in whole or in part.

Projects requiring approval of Governor in Council

(2) Notwithstanding any other provision of this Act,

(a) an environmental assessment of a project is required before the Governor in Council, under a provision prescribed pursuant to regulations made under paragraph 59(g), issues a permit or licence, grants an approval or takes any other action for the purpose of enabling the project to be carried out in whole or in part; and

(b) the federal authority that, directly or through a Minister of the Crown in right of Canada, recommends that the Governor in Council take an action referred to in paragraph (a) in relation to that project

(i) shall ensure that an environmental assessment of the project is conducted as early as is practicable in the planning stages of the project and before irrevocable decisions are made,

(ii) is, for the purposes of this Act and the regulations, except subsection 11(2) and sections 20 and 37, the responsible authority in relation to the project,

(iii) shall consider the applicable reports and comments referred to in sections 20 and 37, and

(iv) where applicable, shall perform the duties of the responsible authority in relation to the project under section 38 as if it were the responsible authority in relation to the project for the purposes of paragraphs 20(1)(*a*) and 37(1)(*a*).

[...]

Factors to be considered

16. (1) Every screening or comprehensive study of a project and every mediation or assessment by a review panel shall include a consideration of the following factors:

(a) the environmental effects of the project, including the environmental effects of malfunctions or accidents that may occur in connection with the project and any cumulative environmental effects that are likely to result from the project in combination with other projects or activities that have been or will be carried out;

(b) the significance of the effects referred to in paragraph (a);

(c) comments from the public that are received in accordance with this Act and the regulations;

(d) measures that are technically and economically feasible and that would mitigate any significant adverse environmental effects of the project; and

(e) any other matter relevant to the screening, comprehensive study, mediation or assessment by a review panel, such as the need for the project and alternatives to the project, that the responsible authority or, except in the case of a screening, the Minister after consulting with the responsible authority, may require to be considered.

Additional factors

(2) In addition to the factors set out in subsection (1), every comprehensive study of a project and every mediation or assessment by a review panel shall include a consideration of the following factors:

(a) the purpose of the project;

(b) alternative means of carrying out the project that are technically and economically feasible and the environmental effects of any such alternative means;

(c) the need for, and the requirements of, any follow-up program in respect of the project; and

(d) the capacity of renewable resources that are likely to be significantly affected by the project to meet the needs of the present and those of the future.

Determination of factors

(3) The scope of the factors to be taken into consideration pursuant to paragraphs (1)(*a*), (*b*) and (*d*) and (2)(*b*), (*c*) and (*d*) shall be determined

(a) by the responsible authority; or

(b) where a project is referred to a mediator or a review panel, by the Minister, after consulting the responsible authority, when fixing the terms of reference of the mediation or review panel.

[...]

Decision of responsible authority following a screening

20. (1) The responsible authority shall take one of the following courses of action in respect of a project after taking into consideration the screening report and any comments filed pursuant to subsection 18(3):

(a) subject to subparagraph (c)(iii), where, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate, the project is not likely to cause significant adverse environmental effects, the responsible authority may exercise any power or perform any duty or function that would permit the project to be carried out in whole or in part;

(b) where, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate, the project is likely to cause significant adverse environmental effects that cannot be justified in the circumstances, the responsible authority shall not exercise any power or perform any duty or function conferred on it by or under any Act of Parliament that would permit the project to be carried out in whole or in part; or

(c) where

(i) it is uncertain whether the project, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate, is likely to cause significant adverse environmental effects,

(ii) the project, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate, is likely to cause significant adverse environmental effects and paragraph (b) does not apply, or

(iii) public concerns warrant a reference to a mediator or a review panel,

the responsible authority shall refer the project to the Minister for a referral to a mediator or a review panel in accordance with section 29.

[...]

Referral to Minister

25. Subject to paragraphs 20(1)(*b*) and (*c*), where at any time a responsible authority is of the opinion that

(a) a project, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate, may cause significant adverse environmental effects, or

(b) public concerns warrant a reference to a mediator or a review panel, the responsible authority may request the Minister to refer the project to a mediator or a review panel in accordance with section 29.

[...]

Assessment by review panel

34. A review panel shall, in accordance with any regulations made for that purpose and with its term of reference,

(a) ensure that the information required for an assessment by a review panel is obtained and made available to the public;

(b) hold hearings in a manner that offers the public an opportunity to participate in the assessment;

(c) prepare a report setting out

(i) the rationale, conclusions and recommendations of the panel relating to the environmental assessment of the project, including any mitigation measures and follow-up program, and

(ii) a summary of any comments received from the public; and

(d) submit the report to the Minister and the responsible authority.

Powers of review panel

35. (1) A review panel has the power of summoning any person to appear as a witness before the panel and of ordering the witness to

(a) give evidence, orally or in writing; and

(b) produce such documents and things as the panel considers necessary for conducting its assessment of the project.

Enforcement powers

(2) A review panel has the same power to enforce the attendance of witnesses and to compel them to give evidence and produce documents and other things as is vested in a court of record.

[...]

Decision of responsible authority

37. (1) Subject to subsections (1.1) to (1.3), the responsible authority shall take one of the following courses of action in respect of a project after taking into consideration the report submitted by a mediator or a review panel or, in the case of a project referred back to the responsible authority pursuant to subsection 23(1), the comprehensive study report:

(a) where, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate,

(i) the project is not likely to cause significant adverse environmental effects, or

(ii) the project is likely to cause significant adverse environmental effects that can be justified in the circumstances,

the responsible authority may exercise any power or perform any duty or function that would permit the project to be carried out in whole or in part; or

(b) where, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate, the project is likely to cause significant adverse environmental effects that cannot be justified in the circumstances, the responsible authority shall not exercise any power or perform any duty or function conferred on it by or under any Act of Parliament that would permit the project to be carried out in whole or in part.

Approval of Governor in Council

(1.1) Where a report is submitted by a mediator or review panel,

(a) the responsible authority shall take into consideration the report and, with the approval of the Governor in Council, respond to the report;

(b) the Governor in Council may, for the purpose of giving the approval referred to in paragraph (a), require the mediator or review panel to clarify any of the recommendations set out in the report; and

(c) the responsible authority shall take a course of action under subsection (1) that is in conformity with the approval of the Governor in Council referred to in paragraph (*a*).

[...]

Follow-up Program

Consideration of follow-up — decision under paragraph 20(1)(*a*)

38. (1) Where a responsible authority takes a course of action under paragraph 20(1)(*a*), it shall consider whether a follow-up program for the project is appropriate in the circumstances and, if so, shall design a follow-up program and ensure its implementation.

Mandatory follow-up — decision under paragraph 37(1)(a)

(2) Where a responsible authority takes a course of action under paragraph 37(1)(a), it shall design a follow-up program for the project and ensure its implementation.

[...]

Joint Review Panels Definition of "jurisdiction"

40. (1) For the purposes of this section and sections 41 and 42, "jurisdiction" includes

(a) a federal authority;

(b) the government of a province;

(c) any other agency or body established pursuant to an Act of Parliament or the legislature of a province and having powers, duties or functions in relation to an assessment of the environmental effects of a project;

(d) any body established pursuant to a land claims agreement referred to in section 35 of the Constitution Act, 1982 and having powers, duties or functions in relation to an assessment of the environmental effects of a project;

(e) a government of a foreign state or of a subdivision of a foreign state, or any institution of such a government; and

(f) an international organization of states or any institution of such an organization.

Review panels established jointly with another jurisdiction

(2) Subject to section 41, where the referral of a project to a review panel is required or permitted by this Act, the Minister

(a) may enter into an agreement or arrangement with a jurisdiction referred to in paragraph (1)(a), (b), (c) or (d) that has powers, duties or functions in relation to the assessment of the environmental effects of the project, respecting the joint establishment of a review panel and the manner in which the environmental assessment of the project is to be conducted by the review panel; and

(b) shall, in the case of a jurisdiction within the meaning of subsection 12(5) that has a responsibility or an authority to conduct an assessment of the environmental effects of the project or any part of it, offer to consult and cooperate with that other jurisdiction respecting the environmental assessment of the project.

[...]

Conditions

41. An agreement or arrangement entered into pursuant to subsection 40(2) or (3), and any document establishing a review panel under subsection 40(2.1), shall provide that the environmental assessment of the project shall include a consideration of the factors required to be considered under subsections 16(1) and (2) and be conducted in accordance with any additional requirements and procedures set out in the agreement and shall provide that

(a) the Minister shall appoint or approve the appointment of the chairperson or appoint a co-chairperson, and shall appoint at least one other member of the panel;

(b) the members of the panel are to be unbiased and free from any conflict of interest relative to the project and are to have knowledge or experience relevant to the anticipated environmental effects of the project;

(c) the Minister shall fix or approve the terms of reference for the panel;

(d) the review panel is to have the powers and immunities provided for in section 35;

(e) the public will be given an opportunity to participate in the assessment conducted by the panel;

(f) on completion of the assessment, the report of the panel will be submitted to the Minister; and

(g) the panel's report will be published.

1992, c. 37, s. 41; 1993, c. 34, s. 32(F);

1998, c. 25, s. 164; 2003, c. 9, s. 20.

Loi canadienne sur l'évaluation environnementale, 1992, ch. 37

[...]

Objet

Objet

4. (1) La présente loi a pour objet:

a) de veiller à ce que les projets soient étudiés avec soin et prudence avant que les autorités fédérales prennent des mesures à leur égard, afin qu'ils n'entraînent pas d'effets environnementaux négatifs importants;

b) d'inciter ces autorités à favoriser un développement durable propice à la salubrité de l'environnement et à la santé de l'économie;

b.1) de faire en sorte que les autorités responsables s'acquittent de leurs obligations afin d'éviter tout double emploi dans le processus d'évaluation environnementale;

b.2) de promouvoir la collaboration des gouvernements fédéral et provinciaux, et la coordination de leurs activités, dans le cadre du processus d'évaluation environnementale de projets;

b.3) de promouvoir la communication et la collaboration entre les autorités responsables et les peuples autochtones en matière d'évaluation environnementale;

c) de faire en sorte que les éventuels effets environnementaux négatifs importants des projets devant être réalisés dans les limites du Canada ou du territoire domanial ne débordent pas ces limites;

d) de veiller à ce que le public ait la possibilité de participer de façon significative et en temps opportun au processus de l'évaluation environnementale.

Mission du gouvernement du Canada

(2) Pour l'application de la présente loi, le gouvernement du Canada, le ministre, l'Agence et les organismes assujettis aux dispositions de celle-ci, y compris les autorités fédérales et les autorités responsables, doivent exercer leurs pouvoirs de manière à protéger l'environnement et la santé humaine et à appliquer le principe de la prudence.

1992, ch. 37, art. 4; 1993, ch. 34, art. 19(F); 1994, ch. 46, art. 1; 2003, ch. 9, art. 2.

Projets visés

5. (1) L'évaluation environnementale d'un projet est effectuée avant l'exercice d'une des attributions suivantes:

a) une autorité fédérale en est le promoteur et le met en oeuvre en tout ou en partie;

b) une autorité fédérale accorde à un promoteur en vue de l'aider à mettre en oeuvre le projet en tout ou en partie un financement, une garantie d'emprunt ou toute autre aide financière, sauf si l'aide financière est accordée sous forme d'allègement — notamment réduction, évitement, report, remboursement, annulation ou remise — d'une taxe ou d'un impôt qui est prévu sous le régime d'une loi fédérale, à moins que cette aide soit accordée en vue de permettre la mise en oeuvre d'un projet particulier spécifié nommément dans la loi, le règlement ou le décret prévoyant l'allègement;

c) une autorité fédérale administre le territoire domanial et en autorise la cession, notamment par vente ou cession à bail, ou celle de tout droit foncier relatif à celui-ci ou en transfère à Sa Majesté du chef d'une province l'administration et le contrôle, en vue de la mise en oeuvre du projet en tout ou en partie;

d) une autorité fédérale, aux termes d'une disposition prévue par règlement pris en vertu de l'alinéa 59f), délivre un permis ou une licence, donne toute autorisation ou prend toute mesure en vue de permettre la mise en oeuvre du projet en tout ou en partie.

Projets nécessitant l'approbation du gouverneur en conseil

(2) Par dérogation à toute autre disposition de la présente loi:

a) l'évaluation environnementale d'un projet est obligatoire, avant que le gouverneur en conseil, en vertu d'une disposition désignée par règlement aux termes de l'alinéa 59g), prenne une mesure, notamment délivre un permis ou une licence ou accorde une approbation, autorisant la réalisation du projet en tout ou en partie;

b) l'autorité fédérale qui, directement ou par l'intermédiaire d'un ministre fédéral, recommande au gouverneur en conseil la prise d'une mesure visée à l'alinéa a) à l'égard du projet:

(i) est tenue de veiller à ce que l'évaluation environnementale du projet soit effectuée le plus tôt possible au stade de la planification de celui-ci, avant la prise d'une décision irrévocable,

(ii) est l'autorité responsable à l'égard du projet pour l'application de la présente loi — à l'exception du paragraphe 11(2) et des articles 20 et 37 — et de ses règlements,

(iii) est tenue de prendre en compte les rapports et observations pertinents visés aux articles 20 et 37,

(iv) le cas échéant, est tenue d'exercer à l'égard du projet les attributions de l'autorité responsable prévues à l'article 38 comme si celle-ci était l'autorité responsable à l'égard du projet pour l'application des alinéas 20(1)*a*) et 37(1)*a*).

[...]

Éléments à examiner

16. (1) L'examen préalable, l'étude approfondie, la médiation ou l'examen par une commission d'un projet portent notamment sur les éléments suivants:

a) les effets environnementaux du projet, y compris ceux causés par les accidents ou défaillances pouvant en résulter, et les effets cumulatifs que sa réalisation, combinée à l'existence d'autres ouvrages ou à la réalisation d'autres projets ou activités, est susceptible de causer à l'environnement;

b) l'importance des effets visés à l'alinéa a);

c) les observations du public à cet égard, reçues conformément à la présente loi et aux règlements;

d) les mesures d'atténuation réalisables, sur les plans technique et économique, des effets environnementaux importants du projet;

e) tout autre élément utile à l'examen préalable, à l'étude approfondie, à la médiation ou à l'examen par une commission, notamment la nécessité du projet et ses solutions de rechange, — dont l'autorité responsable ou, sauf dans le cas d'un examen préalable, le ministre, après consultation de celle-ci, peut exiger la prise en compte.

Éléments supplémentaires

(2) L'étude approfondie d'un projet et l'évaluation environnementale qui fait l'objet d'une médiation ou d'un examen par une commission portent également sur les éléments suivants:

a) les raisons d'être du projet;

b) les solutions de rechange réalisables sur les plans technique et économique, et leurs effets environnementaux;

c) la nécessité d'un programme de suivi du projet, ainsi que ses modalités;

d) la capacité des ressources renouvelables, risquant d'être touchées de façon importante par le projet, de répondre aux besoins du présent et à ceux des générations futures.

Obligations

(3) L'évaluation de la portée des éléments visés aux alinéas (1)*a*), *b*) et *d*) et (2)*b*), *c*) et *d*) incombe:

a) à l'autorité responsable;

b) au ministre, après consultation de l'autorité responsable, lors de la détermination du mandat du médiateur ou de la commission d'examen.

[...]

Décision de l'autorité responsable

20. (1) L'autorité responsable prend l'une des mesures suivantes, après avoir pris en compte le rapport d'examen préalable et les observations reçues aux termes du paragraphe 18(3):

a) sous réserve du sous-alinéa c)(iii), si la réalisation du projet n'est pas susceptible, compte tenu de l'application des mesures d'atténuation qu'elle estime indiquées, d'entraîner des effets environnementaux négatifs importants, exercer ses attributions afin de permettre la mise en oeuvre totale ou partielle du projet;

b) si, compte tenu de l'application des mesures d'atténuation qu'elle estime indiquées, la réalisation du projet est susceptible d'entraîner des effets environnementaux négatifs importants qui ne peuvent être justifiés dans les circonstances, ne pas exercer les attributions qui lui sont conférées sous le régime d'une loi fédérale et qui pourraient lui permettre la mise en oeuvre du projet en tout ou en partie;

c) s'adresser au ministre pour une médiation ou un examen par une commission prévu à l'article 29:

(i) s'il n'est pas clair, compte tenu de l'application des mesures d'atténuation qu'elle estime indiquées, que la réalisation du projet soit susceptible d'entraîner des effets environnementaux négatifs importants,

(ii) si la réalisation du projet, compte tenu de l'application de mesures d'atténuation qu'elle estime indiquées, est susceptible d'entraîner des effets environnementaux négatifs importants et si l'alinéa b) ne s'applique pas,

(iii) si les préoccupations du public le justifient.

[...]

Examen par une commission

25. Sous réserve des alinéas 20(1)*b*) et *c*), à tout moment, si elle estime soit que le projet, compte tenu de l'application des mesures d'atténuation qu'elle estime indiquées, peut entraîner des effets environnementaux négatifs importants, soit que les préoccupations du public justifient une médiation ou un examen par une commission, l'autorité responsable peut demander au ministre d'y faire procéder conformément à l'article 29.

[...]

Commission d'évaluation environnementale

34. La commission, conformément à son mandat et aux règlements pris à cette fin:

a) veille à l'obtention des renseignements nécessaires à l'évaluation environnementale d'un projet et veille à ce que le public y ait accès;

b) tient des audiences de façon à donner au public la possibilité de participer à l'évaluation environnementale du projet;

c) établit un rapport assorti de sa justification, de ses conclusions et recommandations relativement à l'évaluation environnementale du projet, notamment aux mesures d'atténuation et au programme de suivi, et énonçant, sous la forme d'un résumé, les observations reçues du public;

d) présente son rapport au ministre et à l'autorité responsable.

Pouvoirs de la commission

35. (1) La commission a le pouvoir d'assigner devant elle des témoins et de leur ordonner de:

a) déposer oralement ou par écrit;

b) produire les documents et autres pièces qu'elle juge nécessaires en vue de procéder à l'examen dont elle est chargée.

Pouvoirs de contrainte

(2) La commission a, pour contraindre les témoins à comparaître, à déposer et à produire des pièces, les pouvoirs d'une cour d'archives.

[...]

Autorité responsable

37. (1) Sous réserve des paragraphes (1.1) à (1.3), l'autorité responsable, après avoir pris en compte le rapport du médiateur ou de la commission ou, si le projet lui est renvoyé aux termes du paragraphe 23(1), le rapport d'étude approfondie, prend l'une des décisions suivantes:

a) si, compte tenu de l'application des mesures d'atténuation qu'elle estime indiquées, la réalisation du projet n'est pas susceptible d'entraîner des effets environnementaux négatifs importants ou est susceptible d'en entraîner qui sont justifiables dans les circonstances, exercer ses attributions afin de permettre la mise en oeuvre totale ou partielle du projet;

b) si, compte tenu de l'application des mesures d'atténuation qu'elle estime indiquées, la réalisation du projet est susceptible d'entraîner des effets environnementaux qui ne sont pas justifiables dans les circonstances, ne pas exercer les attributions qui lui sont conférées sous le régime d'une loi fédérale et qui pourraient permettre la mise en oeuvre du projet en tout ou en partie.

Agrément du gouverneur en conseil

(1.1) Une fois pris en compte le rapport du médiateur ou de la commission, l'autorité responsable est tenue d'y donner suite avec l'agrément du gouverneur en conseil, qui peut demander des précisions sur l'une ou l'autre de ses conclusions; l'autorité responsable prend alors la décision visée au titre du paragraphe (1) conformément à l'agrément.

[...]

Programme de suivi Décision au titre de l'al. 20(1)a): suivi

38. (1) Si elle décide de la mise en oeuvre conformément à l'alinéa 20(1)*a*), l'autorité responsable examine l'opportunité d'un programme de suivi dans les circonstances; le cas échéant, elle procède à l'élaboration d'un tel programme et veille à son application.

Décision au titre de l'al. 37(1)a): suivi

(2) Si elle décide de la mise en oeuvre conformément à l'alinéa 37(1)a), l'autorité responsable élabore un programme de suivi et veille à son application.

[...]

Examen conjoint Définition d'« instance »

40. (1) Pour l'application du présent article et des articles 41 et 42, « instance » s'entend notamment:

a) d'une autorité fédérale;

b) du gouvernement d'une province;

c) de tout autre organisme établi sous le régime d'une loi provinciale ou fédérale ayant des attributions relatives à l'évaluation des effets environnementaux d'un projet;

d) de tout organisme, constitué aux termes d'un accord sur des revendications territoriales visé à l'article 35 de la Loi constitutionnelle de 1982, ayant des attributions relatives à l'évaluation des effets environnementaux d'un projet;

e) du gouvernement d'un État étranger, d'une subdivision politique d'un État étranger ou de l'un de leurs organismes;

f) d'une organisation internationale d'États ou de l'un de ses organismes.

Examen conjoint

(2) Sous réserve de l'article 41, dans le cas où il estime qu'un examen par une commission est nécessaire ou possible, le ministre:

a) peut conclure avec l'instance visée à l'alinéa (1)a), b), c) ou d) exerçant des attributions relatives à l'évaluation des effets environnementaux du projet un accord relatif à la constitution conjointe d'une commission et aux modalités de l'évaluation environnementale du projet par celle-ci;

b) est tenu, dans le cas d'une instance, au sens du paragraphe 12(5), qui a la responsabilité ou le pouvoir d'entreprendre l'évaluation des effets environnementaux de tout ou partie du projet, d'offrir de consulter et de coopérer avec celle-ci à l'égard de l'évaluation environnementale du projet.

[...]

Conditions de l'examen conjoint

41. Les accords conclus aux termes des paragraphes 40(2) ou (3) et les documents visés au paragraphe 40(2.1) contiennent une disposition selon laquelle l'évaluation environnementale du projet prend en compte les éléments prévus aux paragraphes 16(1) et (2) et est effectuée conformément aux exigences et modalités supplémentaires qui y sont contenues ainsi que les conditions suivantes:

a) le ministre nomme le président, ou approuve sa nomination, ou nomme le coprésident et nomme au moins un autre membre de la commission;

b) les membres de la commission sont impartiaux, non en conflit d'intérêts avec le projet et pourvus des connaissances et de l'expérience voulues touchant les effets environnementaux prévus du projet;

c) le ministre fixe ou approuve le mandat de la commission;

d) les pouvoirs et immunités prévus à l'article 35 sont conférés à la commission;

e) le public aura la possibilité de participer à l'examen;

f) dès l'achèvement de l'examen, la commission lui présentera un rapport;

g) le rapport sera publié.

1992, ch. 37, art. 41; 1993, ch. 34, art. 32(F);

1998, ch. 25, art. 164; 2003, ch. 9, art. 20.

Pickford v. British Columbia (Ministry of Environment)

British Columbia Environmental Appeal Board Decisions

British Columbia Environmental Appeal Board

Panel: Alan Andison, Chair

Heard: May 22, 2018 by written submissions.

Decision: July 27, 2018.

Decision Nos. 2016-EMA-130(b), 2016-EMA-144(b),

145(b), 146(b), 147(b) and

149(b), (Group File: 2016-EMA-G05)

[2018] B.C.E.A. No. 14 | 20 C.E.L.R. (4th) 181 | 2018 CarswellBC 2092

IN THE MATTER OF six appeals under section 100 of the Environmental Management Act, S.B.C. 2003, c. 53. Between John Pickford, John Henry Dressler, Rodger Hamilton, Ellis O'Toole, Angie Delainey, Tricia McLellan, Appellants, and Director, Environmental Management Act, Respondent, and Atlantic Power Preferred Equity Ltd., Applicant/ Third Party

(136 paras.)

Appearances

For the Appellants: John Pickford, John Henry Dressler, Rodger Hamilton.

For the Appellants:

Ellis O'Toole, Angie Delainey, Tricia McLellan, William J. Andrews, Counsel.

For the Respondent: Johnny Van Camp, Counsel, Meghan Butler, Counsel.

For the Third Party: Jonathan McLean, Counsel, Jonathan Buysen, Counsel.

PRELIMINARY APPLICATION

Mitchell Horkoff

1 On April 13, 2018, Atlantic Power Preferred Equity Ltd. ("Atlantic") applied to the Board to request dismissal of six appeals filed against the September 6, 2016 decision (the "Amendment Decision") of Brady Nelless, Delegate of the Director, *Environmental Management Act* (the "Director"), Ministry of Environment (the "Ministry"), to amend Air Emissions Permit #8808 (the "Air Permit") held by Atlantic.

2 Atlantic submits that the appeals should be dismissed on the basis that:

* the Appellants have failed to introduce any evidence from which a reasonable trier of fact could find in the Appellants' favour; and
* alternatively, pursuant to section 31(1)(f) of the *Administrative Tribunals Act*, *S.B.C. 2004, c. 45* (the "*ATA*"), there is no reasonable prospect that the appeals will succeed.

3 The application was heard by way of written submissions.

BACKGROUND

Atlantic's facility and air emissions permit

4 Atlantic owns and operates a 66 megawatt biomass-fired electricity generating facility located at 4455 Mackenzie Avenue North in Williams Lake, BC. The facility has operated since 1993, and has been using a combination of wood waste from sawmill operations and other waste wood as its fuel source.

5 Atlantic is authorized to discharge specified emissions from the facility to the air under the Air Permit, which was originally issued by the Ministry in 1991. The Air Permit addresses a number of subjects including: the operating parameters of the discharge, the authorized works, monitoring and reporting requirements, and the authorized fuel.

6 Prior to the Amendment Decision, the authorized fuel was "untreated wood residue", and "wood residue treated with creosote and/or a creosote- pentachlorophenol blended preservative (treated wood)" (e.g., rail ties), provided that:

* the treated wood component did not exceed 5% of the total biomass fuel supply calculated on an annual basis;1
* the treated wood was well mixed with untreated wood waste prior to incineration; and
* none of the wood residue had been treated with metal derived preservatives.

[underlining added]

7 Other authorized fuels were, and still are, set out in clause 2.7.1 of the Air Permit.

8 According to a "Frequently Asked Questions" sheet issued by Atlantic (updated June 2016), the facility burned rail ties between 2004 and 2010, and rail ties accounted for 4% of the fuel supply in 2009.

9 According to a "Fact Sheet" issued by Atlantic, and provided in evidence to the Board, Atlantic supplies power to BC Hydro under a long-term energy purchase agreement. In support of negotiations to renew that agreement, Atlantic wanted to secure additional fibre (feedstock) for the facility to supplement a diminishing local fibre supply. It determined that rail ties, among other alternative fuels, would be a viable option.

10 Atlantic decided to pursue an amendment to its Air Permit that would allow it to burn a 50/50 mix of rail ties and traditional wood fibre on a periodic basis.

Application to amend the Air Permit

11 On or about October 15, 2015, Atlantic applied to the Director for an amendment to its Air Permit to allow up to 50% treated rail ties of the total biomass fuel supply on an annual basis. The Ministry considered the application to be a "significant amendment", which triggered broad public notification requirements under the *Public Notification Regulation*, B.C. Reg. 2002/94 (the "*Regulation*"). Atlantic notified the public that, among other things, it was applying to raise the limit on waste rail ties as a proportion of the authorized fuel from 5% to 50%. Atlantic's Fact Sheet appears to have been produced as part of the notification/information distribution process.

12 Pursuant to section 7 of the *Regulation*, "a person who may be adversely affected" by the application may notify the Director, in writing, stating how that person is affected. Under subsection 7(2) of the *Regulation*, the Director "may" take that information into consideration.

13 Over the course of late 2015 and early-to-mid-2016, members of the public provided the Director with numerous comments and concerns regarding the proposed amendments. Some of the Appellants sent emails to the Director raising concerns about the adverse impact that burning rail ties may have on local air quality and the environment, as well as concerns with the impact of the resulting ash on the landfill and surrounding area.

The Director's decision

14 On September 6, 2016, the Director issued the Amendment Decision pursuant to section 16(1)(b) of the *Environmental Management Act* (the "*Act*"). The Amendment Decision allows Atlantic to increase the quantity of treated rail ties that can be incinerated at the facility, subject to various terms and conditions. Specifically, the Amendment Decision allows the "incineration of up to 50% by wet weight of rail tie material and clean, non-hazardous construction and demolition debris", and includes new clauses in relation to rail tie burning, handling, and storage. For example, the Amendment Decision requires that: rail tie material must be received at the facility in

an un-shredded state unless prior written permission is obtained from the Director; Atlantic must implement both a waste acceptance plan and a fire control and prevention plan, each certified by a qualified professional, before it may accept rail ties at the facility; un-shredded rail ties must be stored separately from clean biomass and must be protected from precipitation and storm water runoff; a maximum of 3,000 tonnes of shredded rail tie material may be stored at the site and must be in an enclosed bin, protected from the elements; and fugitive odour and polyaromatic hydrocarbons ("PAH") emissions, within the boundaries of the City of Williams Lake, from the transport, storage and processing of rail tie material, must be controlled and suppressed.

15 In addition, the Amendment Decision reduces the Total Particulate Matter maximum to 20 mg per cubic metre, from the previous maximum of 50 mg per cubic metre, and sets limits for the discharge of certain substances including hydrogen chloride (HCl), sulphur dioxide (SO_2), and PAH, which were not previously regulated in the Air Permit.

16 The Amendment Decision also sets out new emission monitoring and reporting requirements. In addition to continuously monitoring NO_2 emissions and opacity at the boiler's stack, which the Air Permit previously required to be monitored, Atlantic must continuously monitor SO_2 and HCl emissions at the stack. Particulates, which were previously required to be monitored in the stack on an annual basis, are now included in requirements for quarterly and annual stack testing. Atlantic must submit an ambient air quality monitoring plan, prepared by a qualified professional, to the Director for approval, and implement that plan before incinerating rail tie material at the facility. Annual reports of monitoring data must be provided to the Director by March 31 of each year, and must be made available to the public at the Williams Lake Public Library within 30 days of submission to the Ministry.

The Appeals

17 Nine individuals filed separate appeals against the Amendment Decision. Subsequently, three appeals were withdrawn and dismissed pursuant to section 17(1) of the *ATA*; namely, the appeals of Beverly Haskins (2016-EMA-131), Peter Luscombe (2016-EMA-133), and Becky Bravi (2016-EMA-148).

18 Of the six remaining Appellants, three (Ellis O'Toole, Angie Delainey, and Tricia McLellan) are represented by counsel, and made joint submissions on the appeals and the present application. They are referred to in this decision as the "Represented Appellants". John Pickford, John Henry Dressler, and Rodger Hamilton, are self-represented in the appeals and in this application.

19 On December 9, 2016, the Director applied to dismiss all nine appeals on the basis that the Appellants lacked standing to appeal the Amendment Decision under section 100(1) of the *Act*. The Director also applied to strike certain grounds for appeal and Notices of Appeal.

20 On March 29, 2017, the Board issued a decision denying the Director's application to dismiss the appeals for

lack of standing, but granting, in part, the application to strike portions of some Notices of Appeal (*John Pickford et al v. Director, Environmental Management Act*, Decision Nos. 2016-EMA-130(a), 131(a), 133(1), 144(a) to 149(a)).

21 In general, the remaining grounds for appeal raise concerns regarding whether the Amendment Decision adequately protects human health and the environment. The Appellants' specific concerns include: whether the Amendment Decision will adversely affect air quality in Williams Lake due to increases in the emission of SO_2, HCl, and PAH; whether the Amendment Decision provides adequate controls over the transportation and handling of rail ties; whether the Director erred by relying on the results of a trial burn conducted in 2001; and, whether the monitoring and reporting requirements in the Amendment Decision are adequate. The Appellants request that the Amendment Decision be reversed, or alternatively, that the Amendment Decision be varied to include numerous amendments to address their concerns regarding the storage, handling and incineration of rail ties.

Procedural matters

22 On June 1, 2017, the Board held a pre-hearing teleconference, and ruled that the appeals should be heard by way of an oral hearing. However, the Board advised that its ruling may be reviewed once the Appellants provided more information about the evidence and arguments they intended to rely on in support of their appeals.

23 On June 26, 2017, Mr. Hamilton provided his Statement of Points and supporting documents. Those documents include letters written by Mr. Hamilton, portions of a technical assessment report and consultation report that Atlantic had prepared in support of its application for the permit amendment, part of a Ministry technical report regarding the permit amendment application, and part of the "Williams Lake Airshed Management Plan: 2006 - 2016" dated June 2006.

24 On June 29, 2017, the Board received the Represented Appellants' Statement of Points and supporting documents. Their documents included the technical assessment report and a consultation report that Atlantic had prepared in support of its amendment application, the Ministry technical report regarding the amendment application, and a one-page report by Dr. Peter Jackman (together with his *curriculum vitae*) critiquing the air dispersion modelling that Atlantic relied on in support of its amendment application.

25 On July 2, 2017, the Board received Mr. Dressler's Statement of Points.

26 On July 7, 2017, the Board received Mr. Pickford's Statement of Points and supporting documents, including the Ministry's technical report regarding the amendment application.

27 On October 12, 2017, the Board held another pre-hearing teleconference. At that time, the oral hearing of the appeals was tentatively scheduled for four weeks commencing on April 30, 2018. The Board set a schedule for the parties to exchange their expert reports and Statements of Points prior to the oral hearing. The Board's letter setting

out the results of the teleconference stated that, in accordance with the Board's Rule 25, expert reports were due on February 5, 2018, 84 days before the oral hearing commenced, and reply expert reports were due on March 19, 2018, 42 days before the oral hearing commenced.

28 On December 21, 2017, the Director provided copies of his Statement of Points, the documents that he intended to tender as evidence at the oral hearing, and legal authorities.

29 On January 30, 2018, Atlantic provided copies of its Statement of Points, the documents that it intended to tender as evidence at the oral hearing, and legal authorities.

30 On February 2, 2018, the Director and Atlantic provided notices of their intentions to call expert witnesses, and provided copies of their expert witnesses' qualifications and the reports containing expert opinion evidence.

31 By that time, numerous documents had been provided by the Director and Atlantic. According to the Director, he produced 48 relevant documents. According to Atlantic, it provided five binders of documents including four expert reports.

32 On February 8, 2018, the Director advised that he was willing to attempt to resolve the appeals through mediation, and he requested that the Board facilitate the mediation. That same day, Atlantic advised that it agreed with the Director's proposal and was willing to participate in a mediation.

33 On February 16, 2018, Mr. Pickford advised that he was willing to participate in a mediation. However, that same day, Mr. Hamilton, Mr. Dressler, and the Represented Appellants advised that they were unwilling to participate in a mediation, and they requested that the appeals be heard by way of written submissions.

34 On February 19, 2018, the Board advised the parties that it would not convene a mediation, given that not all parties agreed to participate.

35 In a letter dated March 1, 2018, after considering submissions from the parties, the Board directed that the appeals would be heard by way of written submissions. Several of the Appellants had advised that they could not afford to participate in a four-week oral hearing, and were prepared to argue their appeals without the benefit of cross-examining the witnesses who would have appeared for the Director and Atlantic. However, the Director and Atlantic opposed proceeding by way of written submissions.

36 The Board's March 1, 2018 letter states, in part:

> In these appeals, the Board notes that there are complicated technical matters that will require the Board to understand and adjudicate matters that are best explained by experts in the field. The parties have filed expert reports, and other technical documentation, in support of their individual cases.

> Except for the reports submitted by the Represented Appellants, no further expert evidence will be tendered by the Appellants. Furthermore, the Represented Appellants advise that they are prepared to rely upon the information provided to date, without the benefit of cross-examining the witnesses for [Atlantic] or the [Director]. The other Appellants have submitted their relevant documents with their Statements of Points, and all believe that they can put in their cases -- present their information -- in writing. This suggests that, like the Represented Appellants, they are not seeking -- do not require -- an opportunity to cross-examine the witnesses for [Atlantic] or the [Director].
>
> While the Board notes that [Atlantic] intends to call 5 fact witnesses to address the issues under appeal, given that the Appellants are willing to forego cross-examination in order to secure a written hearing, such evidence may be provided in affidavit form. Similarly, any oral evidence that the Appellants would have given at the hearing, may be provided by affidavit.

37 The Board's March 1, 2018 letter established a schedule for the parties to provide written submissions and any affidavit evidence. The Appellants were directed to provide their written submissions and any affidavit evidence by no later than April 3, 2018.

38 In a letter dated March 16, 2018, Atlantic advised that it intended to "rely on and tender" as evidence numerous documents by four authors (who Atlantic had intended to tender as expert witnesses), including expert reports, which were originally disclosed with Atlantic's Statement of Points and notice of expert evidence. Atlantic also requested that the Board advise whether Atlantic need not file additional copies of those documents with its written submissions.

39 In a letter dated March 19, 2018, the Board confirmed that Atlantic's documents would be provided to the hearing panel, and Atlantic need not provide further copies of the documents that it intended to rely on.

40 On March 21, 2018, Mr. Hamilton provided his written submissions and supporting documents. The documents included his Notice of Appeal, which refers to several documents available on the internet, Atlantic's 2017 Annual Report for the Air Permit, and a January 6, 2017 letter from Mr. Hamilton to the Board.

41 On March 26, 2018, Mr. Pickford provided his written submissions and supporting documents. The documents included: a letter dated October 28, 2015 from the Interior Health Authority to Atlantic regarding the proposed permit amendment; a letter dated August 26, 2016 from the Interior Health Authority to the Director commenting on the proposed permit amendment; an email dated August 31, 2016 from the Ministry to the Interior Health Authority in response to the August 26, 2016 letter; and, excerpts of several documents including the Ministry's technical report on the amendment application, and a report titled "TransCanada Power Emission Survey Report", prepared in 2001 by A. Lanfranco and Associates Inc. (the "Lanfranco Report"). The Lanfranco Report documented the concentrations of certain air pollutants at the (then) TransCanada Power facility in Williams Lake, when burning normal hog fuel (wood waste), and alternatively, when burning 100% chipped railway ties. The information from the

2001 "trial burn" of rail ties was used in the emission modelling that Atlantic submitted to the Ministry in support of its application for a permit amendment.

42 On March 29, 2018, Mr. Dressler provided his written submissions. He provided no documents or internet links to documents, but his submissions refer to a June 2016 report titled "A Summary of Recent Trends in Levels of Particulate Matter", prepared for the Williams Lake Air Quality Roundtable, which appears to be a document that is available on the Ministry's website.

43 On April 3, 2018, the Represented Appellants provided their written submissions. They provided no documents with their submissions, but their submissions refer to several of the documents that were previously submitted with their Statement of Points, as well as several documents that the Director and Atlantic disclosed with their Statements of Points.

Atlantic's application

44 In a letter dated April 6, 2018, Atlantic noted that the Appellants had filed no affidavits with their written submissions, and advised that it intended to apply for an order that the appeals be dismissed on the basis that:

* the Appellants had failed to introduce any evidence from which a reasonable trier of fact could find in the Appellants' favour (i.e., a "no evidence" motion); and
* alternatively, pursuant to section 31(1)(f) of the *ATA*, there was "no reasonable prospect" that the appeals will succeed (i.e., a "summary dismissal" motion).

45 On April 13, 2018, Atlantic submitted its application.

46 The Director supports and consents to Atlantic's application.

47 All of the Appellants oppose the application.

ISSUES

48 The issues to be decided in this application are:

1. Whether the appeals should be dismissed on the basis of Atlantic's "no evidence" motion.
2. Alternatively, whether the appeals should be summarily dismissed pursuant to section 31(1)(f) of the *ATA*, on the basis that there is no reasonable prospect that the appeals will succeed.

RELEVANT LEGISLATION

49 Section 31(1)(f) of the *ATA* states as follows:

> **Summary dismissal**
>
> **31** (1) At any time after an application is filed, the tribunal may dismiss all or part of it if the tribunal determines that any of the following apply:
>
> ...
>
> (f) there is no reasonable prospect the application will succeed;
>
> ...

50 Section 1 of the *ATA* defines "application" as follows:

> **"application"** includes an appeal, a review or a complaint but excludes any interim or preliminary matter or an application to the court

51 Thus, for the Board's purposes, the word "application" in section 31 of the *ATA* effectively means "appeal".

52 The Amendment Decision was issued under section 16 of the *Act*, which states, in part, as follows:

> **Amendment of permits and approvals**
>
> **16** (1) A director may, subject to section 14(3), this section and the regulations, for the protection of the environment,
>
> (a) on the director's own initiative if he or she considers it necessary, or
>
> (b) on application by a holder of a permit or an approval, amend the requirements of the permit or approval.
>
> ...
>
> (4) A director's power to amend a permit or an approval includes all of the following:
>
> (a) authorizing or requiring the construction of new works in addition to or instead of works previously authorized or required;
>
> (b) authorizing or requiring the repair of, alteration to, improvement of, removal of or addition to existing works;
>

(h) altering the time specified for the construction of works or the time in which to meet other requirements imposed on the holder of the permit or approval;

(i) authorizing or requiring a change in the method of discharging, treating, handling or transporting the waste;

(j) changing or imposing any procedure or requirement that was imposed or could have been imposed under section 14 or 15.

53 Other relevant legislation is set out in the text of this decision, where it is referred to.

DISCUSSION AND ANALYSIS

1. Whether the appeals should be dismissed on the basis of Atlantic's "no evidence" motion.

The parties' submissions

54 Atlantic submits that the legal test for a "no evidence" motion is "whether the plaintiff [or Appellant, in this case] had led any evidence from which a reasonable trier of fact could find in the plaintiff's favour if the evidence were believed" (*Cost Plus Computer Solutions Ltd. v. VKI Studios*, *2015 BCCA 467*, at para. 44) [*Cost Plus*].

55 Atlantic submits that in *David Avren v. Regional Water Manager*, Decision No. 2006-WAT-003(a), June 29, 2007 [*Avren*], at paras. 65 - 67, the Board dismissed an appeal on the basis that:

* to meet the burden of proof, the appellants needed to deliver some expert evidence to support their concerns; and
* the appellants delivered no such evidence; rather, they expressed their own "concerns" about possible harm occurring.

56 Atlantic argues that the present appeals are analogous to *Avren*.

57 Atlantic submits that the Appellants provided no affidavit evidence, and none of the Appellants have been tendered as expert witnesses, yet some of them make unsworn statements that purport to give evidence in the nature of expert opinions on topics such as stack testing, air modelling, and secondary particulate formation.

Atlantic argues that such statements are inadmissible as expert opinion evidence or any other form of opinion evidence.

58 In addition, Atlantic submits that the Appellants have submitted or referred to documents that purport to give expert evidence, but the Appellants failed to provide proper notice of expert evidence, and in some cases the authors of the documents are unknown. Atlantic maintains that such documents cannot be admissible for any purpose.

59 Atlantic submits that the Appellants bear the evidentiary burden to establish each ground of appeal on a balance of probabilities, as stated on p. 31 of the Board's *Practice and Procedure Manual* and in previous Board decisions (e.g., *Avren*, at paras. 52 - 45; *Wilfred Boardman v. Regional Manager*, Decision No. 2013-WIL-021(a), September 9, 2014 [*Boardman*], at paras. 52 - 43; and, *City of Cranbrook v. Assistant Regional Waste Manager*, Decision No. 1999-WAS-023(c), April 9, 2009 [*Cranbrook*], at paras. 55 - 56).

60 In particular, Atlantic submits that the Appellants have the burden of establishing, on a balance of probabilities, that the Amendment Decision does not adequately protect human health and the environment, taking into account the legislative scheme in the *Act*, which authorizes the discharge of waste into the environment (*Shawnigan Residents Association v. Director, Environmental Management Act*, Decision Nos. 2013-EMA-015(c), 019(d), 020(b), 021(b), March 20, 2015, at para. 284; *Emily Toews and Elisabeth Stannus v. Director, Environmental Management Act*, Decision Nos. 2013-EMA-007(g) and 2013-EMA- 010(g), December 23, 2015, at paras. 232 - 235; and, *Lynda Gagne et al v. Director, Environmental Management Act*, Decision Nos. 2013-EMA-005(a), 007(a) to 012(a), October 31, 2013, at para. 54).

61 Regarding each document that the Appellants provided or referred to, Atlantic provided the Board with a document titled "Schedule A" which addresses each issue raised by the appeals, and contains Atlantic's submissions regarding why each document that the Appellants rely on is not evidence, is inadmissible, and/or is insufficient to meet the burden of proof.

62 The Director adopts Atlantic's legal analysis regarding the Appellants' evidentiary burden to prove their grounds of appeal. In addition, the Director submits that the Appellants' grounds and arguments imply that the Director and other Ministry staff failed to ensure that the Amendment Decision adequately protects human health and the environment. The Director maintains that the Appellants must present evidence to support such allegations, but they have failed to do so.

63 The Director notes that the appeals proceeded by way of written submissions at the Appellants' request. The Director submits that, having successfully applied to change from an oral hearing to a written hearing, it was incumbent upon the Appellants to provide evidence with their written submissions, and explain how the evidence proves their case. The Director maintains that some of the Appellants have improperly replied to the Director's

Statement of Points and supporting documents, rather than making submissions in support of their grounds of appeal. The Director submits that the parties' Statements of Points were merely statements of the arguments they intended to present at the oral hearing; they were not substitutes for written submissions on the merits, nor were the documents filed with the Statements of Points properly considered "evidence". Such documents were simply those that the parties intended to rely on at the oral hearing, at which time they would have been tendered as evidence subject to any objections.

64 Moreover, the Director submits that none of the Appellants provided sworn affidavits, and Mr. Dressler and the Represented Appellants adduced no evidence with their written submissions. Only Mr. Pickford and Mr. Hamilton provided document evidence with their written submissions.

65 Additionally, the Director objects to the admissibility of the documents that Mr. Pickford provided. The Director argues that some of those documents are inadmissible hearsay, one is an expert report that Mr. Pickford is not qualified to interpret or opine on, and one is unreliable because it appears to consist of excerpts of Ministry documents that were compiled by Mr. Pickford. The Director argues that, even if the hearsay documents and excerpted documents are admitted as evidence under the Board's less formal rules of evidence, they would not prove, on a balance of probabilities, that that the Amendment Decision unacceptably affects the environment and human health.

66 Similarly, the Director objects to the admissibility of the documents provided by Mr. Hamilton, on the basis that one is a report that Mr. Hamilton is not qualified to interpret or opine on, two of the documents consist of argument and not evidence, and those same two documents refer to, but do not include, other documents that consist of inadmissible expert and/or opinion evidence.

67 In particular, the Director submits that it would be an error for the Board to admit as evidence the Lanfranco Report (portions of which were provided by Mr. Pickford) or Atlantic's 2017 Annual Report for the Air Permit (portions of which were provided by Mr. Hamilton), given the procedural fairness that attaches to the Board's notice requirements regarding expert evidence (*Shawnigan Residents Association v. British Columbia*, *2017 BCSC 107*, at paras. 105 - 110). The Director submits that the LanFranco Report was listed as a reliance document in the Director's notice of expert evidence, and Mr. Pickford is improperly attempting to rely on it as expert evidence without giving notice as required by the Board's Rule 25. However, the Director maintains that even if the Lanfranco Report or Atlantic's 2017 Annual Report for the Air Permit were admitted into evidence, they would not prove, on a balance of probabilities, that the Amendment Decision did not adequately protect human health and the environment.

68 Similarly, the Director objects to any expert evidence relied on by the Represented Appellants, due to their failure to provide notice of expert evidence as required by Rule 25.

69 In addition, the Director submits that even if the unsworn statements in the Appellants' written submissions are accepted as evidence, they would amount to insufficient evidence because the Appellants need to provide expert evidence to prove their assertions regarding the Amendment Decision. The Director notes that the Board's March 1, 2018 letter stated, in part, "In these appeals, the Board notes that there are complicated technical matters that will require the Board to understand and adjudicate matters that are best explained by experts in the field." The Director argues that the Appellants have attempted to rely on the Director's documents to prove their cases, rather than providing their own evidence, and none of the Appellants are qualified to substantiate their assertions regarding technical matters. The Director argues that, as in *Avren*, the Appellants have simply stated their objections to the Amendment Decision and asserted that the Director should justify why and how the decision was made.

70 Finally, the Director submits that it would be untenable and unfair to require him to substantively respond to all 31 of the Appellants' grounds of appeal, when the Appellants have adduced no admissible evidence capable of supporting the grounds of appeal.

71 The Represented Appellants submit that the Board has abundant evidence on record from which the Board can determine the merits of the appeals. They submit that the Board should complete the written hearing process and decide the appeals on their merits. They further submit that the Board's March 1, 2018 letter stated that "The parties have filed expert reports, and other technical documentation, in support of their individual cases." The Represented Appellants maintain that, at the core of the Board's decision to hold a written hearing was the concept that the written information that was before the Board, along with the information that the parties might file later, would be the basis for the parties' submissions. They submit that it is unimportant who has filed the evidence that is now before the Board; what is important is whether the Board finds merits in the appeals, based on all of the parties' information and submissions.

72 The Represented Appellants submit that Atlantic and the Director filed substantial volumes of evidence, and all of the Appellants filed written arguments based on the evidence; therefore, the present circumstances are distinguishable from those in the Board's previous decisions in which "no evidence" motions were granted. In particular, the Represented Appellants submit that, in those cases, the respondent and/or third party moved for dismissal of the appeals before tendering their own evidence.

73 Moreover, the Represented Appellants argue that it would be wrong for the Board to reject the appeals without considering the evidence that has been tendered, regardless of which party filed the evidence, or to dismiss the appeals for lack of evidence. They submit that Atlantic's "no evidence" motion depends on the position that the only fair way to present the evidence would be at an oral hearing, whereby information does not become "evidence" until it is tendered by a witness. They also submit that Atlantic confuses the burden of proof with the method of proof. Although the Appellants bear the burden of showing that the Director erred, that does not mean that the Appellants must meet this burden only by relying on evidence tendered by them.

74 Additionally, the Represented Appellants submit that the decision in *Cost Plus* demonstrates that a no evidence motion is unavailable where, as here, the decision-maker has evidence from both the party (or parties) with the burden of proof as well as from the party (or parties) opposed. The Represented Appellants also submit that *Cost Plus* is distinguishable from the present case because it involved a civil trial where the plaintiff had to prove the facts comprising the essential elements of the cause of action, and the defendant could request dismissal, before presenting any evidence of its own, on the basis that the plaintiff failed to establish a *prima facie* case that required a response from the defendant. The Represented Appellants emphasize that the test for a no evidence motion does not involve the trier of fact weighing evidence, as the test includes the phrase "... if the evidence were believed." They submit that, in the present case, the evidence of the parties opposed (i.e., the Director and Atlantic) is already on the record, the Appellants made their written submissions based on all of the evidence, and the Board should proceed to weigh the evidence after receiving the remaining written submissions.

75 Mr. Pickford argues that his written submissions refer to documents provided by the Director and Atlantic which are publicly available on the internet. Regarding the excerpted documents that his written submissions refer to, he maintains that they were created by Atlantic and were posted online, in their entirety, by the Director. In these circumstances, he argues that it is disingenuous to claim that such documents are unreliable or inadmissible. He submits that it is unfair, and contrary to a full discussion of the issues, to claim that that the Appellants cannot discuss documents that were provided by the Director or Atlantic. He also submits that a person need not be an expert to read and interpret the Lanfranco Report, which he obtained from the internet.

76 Mr. Hamilton submits that none of his points of appeal challenge any technical facts, and a person need not be an expert to test the opinions in expert reports. Mr. Hamilton also submits that it is unreasonable to suggest that the documents provided with the Director's and Atlantic's Statements of Points are not "evidence" simply because the hearing was changed from an oral hearing to a written hearing, or because Mr. Hamilton did not give proper notice that he intended to rely on documents that the Director considered during the permit amendment application process. He argues that the Director and Atlantic rely on the same documents from the permit amendment application process as he does.

77 Mr. Dressler submits that there is evidence in this case, including evidence provided by the Director and Atlantic, that was considered by the Director before making the Amendment Decision. He objects to the suggestion that such information in inadmissible for any purpose.

78 In reply, Atlantic submits that the Board's March 1, 2018 letter did not amount to a decision regarding what was (and was not) evidence, nor did it decide any evidentiary issues. Atlantic also submits that neither it nor the Director have provided any "evidence" to the Board so far; rather, they have provided their Statements of Points, the supporting documents they intended to enter into evidence at the oral hearing, and notices of expert evidence.

The Panel's Findings

79 In *Cost Plus*, the Court of Appeal confirmed a no evidence motion that was granted at the trial level pursuant to the *Supreme Court Civil Rules*. At the trial, the defendant brought the no evidence motion after the plaintiff had closed its case, and the trial judge had ruled that a report, which the plaintiff sought to adduce as expert evidence regarding the quality of the defendant's work, was inadmissible pursuant to the *Supreme Court Civil Rules*. The plaintiff's witness was still permitted to testify, but was not permitted to offer an expert opinion. In those circumstances, the trial judge found that the plaintiff had provided no submissions or evidence regarding alleged misrepresentation by the defendant, and the plaintiff's evidence regarding an alleged breach of contract fell short of establishing a standard against which the defendant's performance could be measured. The trial judge granted the no evidence motion after concluding that the plaintiff's evidence was incapable of establishing the essential elements of the plaintiff's claims of misrepresentation and breach of contract.

80 As is further discussed below, the Board's powers and practices with respect to admitting evidence, including expert evidence, are more flexible than those in the *Supreme Court Civil Rules*. Given the differences in the evidentiary rules and requirements that apply to trials conducted pursuant to *Supreme Court Civil Rules*, versus those that apply in appeals conducted by the Board, the Panel finds that the test in *Cost Plus* is neither applicable nor relevant to Atlantic's no evidence motion.

81 In *Avren*, the Board granted a no evidence motion. However, when considering the Board's decision in *Avren*, it is important to bear in mind that the no evidence motion was granted during an oral hearing, after the appellants had presented their cases but before the respondent and third party had presented their cases. In contrast, the present appeals have proceeded in a hybrid manner. The appeals were originally scheduled to be heard orally, but were converted to a written hearing after the parties had already exchanged their Statements of Points, supporting documents, and notice of expert evidence. In an oral hearing process, documents disclosed with the Statements of Points and notices of expert evidence do not become "evidence" until they are tendered by a witness at the oral hearing (as per the Board's Rule 19), subject to any objections. In written hearings, any documents disclosed with a party's written submissions are assumed to be tendered by that party as evidence (as per the Board's Rule 20), subject to any objections. Thus, in a written hearing procedure, documents are typically considered part of the evidentiary record once they are provided to the Board and the other parties.

82 In the present case, all parties disclosed the documents they intended to rely on (at the oral hearing), before the written hearing process commenced, which is atypical of written hearings. In these circumstances, it is not surprising that some of the Appellants' written submissions include responses to the Director's and Atlantic's previously disclosed documents and arguments. Further, the Director and Atlantic have not yet provided their written arguments or tendered all of their evidence, and it is understandable that some of their evidence and arguments may now be different from what they had originally intended. However, the Panel finds that this process

has not caused prejudice to the Director or Atlantic, as they are still able to make objections to the Appellants' "evidence" (which they have done), and they still have a full opportunity to present their own evidence and respond to the Appellants' cases.

83 In addition, it is important to consider that although the application in *Avren* was framed as a "no evidence" motion, the Board's decision took into account not only the appellants' evidence (or lack thereof) regarding the facts they asserted, but also the appellants' assertions regarding alleged legal flaws in the appealed decision. At para. 54, the Board stated that the appellants were obliged to lead "some evidence that either the order [under appeal] was wrong in law or fact, or that the process leading to the order was flawed in some way" [underlining added]. Thus, the decision was not solely based on there being a lack of evidence to support the facts asserted by the appellants. It was also based on the Board's preliminary assessment of the appellants' arguments with respect to whether the order under appeal was "wrong in law", "or that the process leading to the order was flawed in some way." In that sense, the Board's decision in *Avren* was more akin to a preliminary assessment of the appellants' cases as a whole, to determine whether the respondent and third party should be required to respond.

84 It is also important to consider that the Board's decision in *Avren* was decided before section 31 of the *ATA* applied to the Board, and therefore, the Board was relying on its common law power to control its own procedures when it granted the "no evidence" motion. Arguably, an application under one of the specific subsections under section 31 of the *ATA* now provides a more appropriate means for a party to seek summary dismissal of an appeal.

85 The Panel also finds that *Boardman* is distinguishable from the present appeals. In *Boardman*, the appeal was conducted solely by way of written submissions, and the appellant filed a Notice of Appeal, but made no written submissions and provided no documents to support his appeal. Thus, unlike the present appeals, the appellant in *Boardman* provided nothing more than a Notice of Appeal. Also the respondent in that case provided detailed written submissions and information, and the Board went on to decide the merits of the appeal based on the respondent's materials.

86 In *Cranbrook*, the Board did not decide a no evidence motion; rather, the Board addressed the burden of proof in a decision on the merits of the appeal. At para. 56, the Board held that the appellant had the burden of proving the truth of the facts it asserted, on a balance of probabilities, and was responsible for leading sufficient evidence to meet that test. It was insufficient for the appellant to simply discredit the respondent's evidence or argue that the third party had not proved its case. The Panel agrees with those findings in *Cranbrook*.

87 In summary, the Panel finds that the Board's previous decisions in *Avren*, *Boardman*, and *Cranbrook* do not set out a test that is directly applicable to the present "no evidence" motion. However, some of the findings in those decisions provide guidance in this case. In particular, the Panel finds that the onus is on the Appellants to provide some evidence that is relevant to, and capable of supporting, the facts that they assert. Also, to the extent that the Appellants allege any legal errors by the Director, they must articulate some legal argument that could support a

finding that the Amendment Decision was wrong in law, or that the process leading to the Amendment Decision was flawed in some way. Furthermore, as was the case in *Avren*, Atlantic made this preliminary application before the Respondent (Director) and Third Party (Atlantic) have made their cases, and before the Board has begun to weigh any evidence or assess any arguments for the purposes of deciding the merits of the appeals. Consequently, the Panel must decide the "no evidence" motion based on a *prima facie* assessment of the Appellants' cases, to determine whether the Board should continue with a full hearing of the merits of the appeals.

88 Regarding what constitutes admissible "evidence", section 40 of the *ATA* provides the Board with a broad discretion to accept information, regardless of whether it would be admissible in the courts. Section 40 of the *ATA* states as follows:

> **40** (1) The tribunal may receive and accept information that it considers relevant, necessary and appropriate, whether or not the information would be admissible in a court of law.
>
> (2) Despite subsection (1), the tribunal may exclude anything unduly repetitious.
>
> (3) Nothing is admissible before the tribunal that is inadmissible in a court because of a privilege under the law of evidence.
>
> (4) Nothing in subsection (1) overrides the provisions of any Act expressly limiting the extent to or purposes for which any oral testimony, documents or things may be admitted or used in evidence.
>
> [underlining added]

89 In addition, the Board's *Practice and Procedure Manual*, states as follows at page 42:

> In an oral hearing, each party has the right to present evidence to support that party's case. "Evidence" is anything that has the potential of establishing or proving a fact. Evidence includes oral testimony, written records, demonstrations, physical objects, etc. It does not include argument or submissions made by a party for the purpose of persuading or convincing the Board to decide the case in a particular way.
>
> ...
>
> While most of the information under this heading relates primarily to oral hearings, the principles involved in weighing evidence and applying the correct burden of proof are common to all types of hearings.
>
> [underlining added]

90 Also, as stated at page 43 of the Board's *Practice and Procedure Manual*:

> The rules of evidence that apply to a hearing before the Board are less formal than the rules applied by the courts. Section 40 of the *Administrative Tribunals Act* states that the Board "may receive and accept information that it considers relevant, necessary and appropriate, whether or not the information would be admissible in a court of law." The Board may admit hearsay and circumstantial evidence if it is considered relevant.

> Relevance is the primary consideration for the Board when deciding whether to admit evidence. Relevant evidence can be described as evidence (oral or written) that will shed some light on a disputed matter or tends to prove or disprove a fact in issue.
>
> The Board may also exclude evidence. Section 40(2) of the *Administrative Tribunals Act* allows the Board to exclude anything unduly repetitious. In addition, in accordance with general legal principles, the Board may exclude evidence if it is of minimal relevance, is unreliable, may confuse the issues, or may prejudice the other parties. The Board may be obligated to exclude evidence that is privileged or is restricted by a statute such as the *Evidence Act*.
>
> ...
>
> All evidence admitted during the hearing will be assessed by the Board to determine what weight, if any, should be given to the evidence. Generally speaking, evidence that is not sufficiently reliable for the Board's purposes will be given less weight when the Board is making its decision on the merits of the appeal.
>
> [underlining added]

91 Thus, in conducting a *prima facie* assessment of the Appellants' assertions of fact, the Panel has considered whether the Appellants have provided and/or relied on some relevant information that has the potential of establishing or proving at least some of the facts that they assert in their grounds of appeal and written submissions, such that the Board should continue with a full hearing of the merits of the appeals. To the extent that there are concerns about the reliability of any information provided by the Appellants, the Board would take that into account later, after deciding whether the information is admissible as evidence. The Board decides how much weight to give the evidence as part of the process of deciding the merits of the appeals.

92 Taking into account the Appellants' written submissions and the documents they have provided or referred to, the Panel finds that this is not a case where the Appellants have provided no evidence that, on its face, is capable of supporting at least some of the facts asserted in their grounds of appeal and written submissions. Although the Appellants provided no sworn statements (i.e., affidavits) in support of their written submissions, it is not unusual for self-represented parties, which includes half of the Appellants in this case, to provide their evidence in the form of unsworn statements which may be intermingled with their written submissions. Although the Represented Appellants also provided no affidavit evidence, they have indicated that they have financial limitations regarding the appeal process. The Board's March 1, 2018 letter stated on page 4 that "The Board's mandate very clearly provides that it must make the hearing process accessible to all parties. Surely that is denied when the appellants to a proceeding cannot participate because of the cost of the hearing." Although those comments were made in the context of the Board's decision to convert the appeals from an oral hearing to a written hearing, the Panel finds that the same principles apply to the costs associated with obtaining sworn affidavits.

93 In any event, although the Board encourages parties to provide affidavit evidence when hearings are conducted in writing, such evidence is not mandatory. The appeal process, whether conducted orally or in writing, is intended

to be less formal and more accessible than the court process, and the Board takes a more flexible approach to admitting evidence than the courts do. Consistent with section 40 of the *ATA*, the Board will generally admit an unsworn statement into the evidentiary record, subject to any concerns about relevance, privilege, or procedural fairness. The fact that a statement is unsworn, as opposed to sworn, may be reflected in the weight it is accorded when the Board assesses the merits of the appeals.

94 Atlantic and the Director object to the Appellants referring to documents that were disclosed with Atlantic's and the Director's Statements of Points and notices of expert evidence. The Panel recognizes that Atlantic and the Director have not yet filed their written submissions and their "evidence" for the purposes of the written hearing. Although the documents that Atlantic and the Director previously disclosed have not yet been formally tendered by them as "evidence", the Panel finds that most of the documents that the Appellants' submissions refer to were obtained by the Appellants through the internet or another public source. The Panel finds that Atlantic and the Director have no monopoly on the use of public documents as "evidence" in the appeal process. Documents that are accessible to the public are available for any party to use as evidence in support of their case.

95 In addition, the Panel rejects Atlantic's claim that the Appellants cannot make submissions on the documents described in Atlantic's March 16, 2018 letter. In that letter, Atlantic advised that it intended to "rely on and tender" as evidence numerous documents that were disclosed with Atlantic's Statement of Points and notice of expert evidence. Atlantic requested that the Board advise whether Atlantic needed to file additional copies of those documents with its written submissions. The Board's March 19, 2018 letter in response confirmed that Atlantic's documents would be provided to the hearing panel, without the need for further copies to be filed with Atlantic's written submissions. Thus, Atlantic has confirmed that it intends to rely on those documents as its "evidence" for the purposes of the written hearing.

96 The Panel finds that all of the Appellants have provided unsworn statements, and all of their written submissions refer to documents, portions of documents, or internet links to documents that one or more Appellant provided or referred to in their written submissions or their Statement of Points. The documents include the "Williams Lake Airshed Management Plan: 2006-2016", the Lanfranco Report, the consultation report and technical report that Atlantic filed with its amendment application, the Ministry's technical assessment of Atlantic's amendment application, and other documents available on the websites of the Ministry or the Williams Lake Air Quality Roundtable. On their face, those documents appear to be relevant to at least some of the Appellants' grounds for appeal and assertions regarding the Amendment Decision, and admissible under section 40 of the *ATA*.

97 Atlantic and the Director have raised concerns about the Appellants failure to strictly comply with the Board's procedures, and whether this constitutes a breach of procedural fairness. According to the Board's rules for written hearings, the Appellants should have filed the documents that they rely on as evidence with their written submissions. Specifically, the Board's Rule 20, para. 2, states "All evidence (including affidavits and documents) must be included with the written submissions." In this case, some of the information that the Appellants rely on was

filed with their Statements of Points but was not filed a second time with their written submissions. However, the Panel finds that it would be unfair to strictly enforce that Rule against the Appellants but not against Atlantic, given that the Board has stated in its March 19, 2018 letter that Atlantic need not re-file the documents it previously provided with its Statements of Points and notice of expert evidence.

98 Moreover, the Panel finds that the intention behind Rule 20, para. 2, is to ensure that, when an appeal is conducted solely in writing (as opposed to initially being conducted as an oral hearing, but later converting to a written hearing), each party understands that it is responsible for providing its evidence to the Board and the other parties in an orderly fashion. This ensures that all parties have an opportunity to review the other parties' evidence when they prepare their written submissions. It also ensures that the Board receives all of the information that the parties rely on, recognizing that the Board does not have access to the information that was considered by the person who made the appealed decision.

99 In the present appeals, the documents referred to in the Appellants' written submissions were disclosed (in whole or in part, or an internet link was provided) either with their written submissions or Statements of Points. In either case, the Director and Atlantic have had ample opportunity to review, and consider their responses to, the Appellants' documents and submissions. In the circumstances, there is no prejudice to the Director or Atlantic if the Board admits documents that were previously disclosed in the Appellants' Statements of Points, but were not re-filed with their written submissions.

100 Regarding the concerns of Atlantic and the Director regarding any purported expert opinion evidence provided by the Appellants, the Panel acknowledges that the Board's Rule 25 sets out deadlines and other requirements for giving notice of expert evidence. However, Rule 25 does not appear to apply to any of the information that the Appellant rely on or refer to in their written submissions. None of the Appellants have asserted that their submissions, or the documents they refer to, contain expert opinion evidence. Although the Represented Appellants provided a one-page report by Dr. Peter Jackman (and his *curriculum vitae*) with their Statement of Points, they do not refer to it in their written submissions, and they no longer appear to rely on it. Although some of the documents that the Appellants refer to and discuss in their submissions are technical in nature, none of the Appellants claim to be offering expert opinion evidence. The fact that the Appellants are not qualified as expert witnesses does not preclude them from commenting or making submissions on technical documents. As stated at page 45 of the Board's *Practice and Procedure Manual*:

> ... To be "qualified" to give expert opinion evidence on a particular subject matter(s), the Board must be satisfied that the witness has the appropriate experience and training to be an expert in the matters for which he or she is giving expert opinion evidence.
>
> If a person is not qualified to give expert evidence on a particular subject matter, the Board may still receive the witness's evidence. The Board will determine what weight should be given to each witness's testimony. The qualifications and experience of the witness will be a factor in determining the weight to be given to that witness's testimony.

[underlining added]

101 Thus, any concerns regarding an Appellant's qualifications with regard to their comments on technical information would be taken into account by the Board when deciding how much weight should be accorded to the comments. Also, in terms of procedural fairness, the Panel finds that the Director and Atlantic have had ample time to review and prepare responses to the Appellants' 'non-expert' comments on the technical documents.

102 Atlantic and the Director also raise objections regarding the admissibility of the Appellants' documents based on concerns about hearsay and/or unreliability. As stated above, the Board takes a more flexible approach to admitting evidence than the courts do, and is not bound by the rules and legal principles on the admissibility of hearsay evidence that apply in court proceedings.

103 In summary, the Panel finds, on a *prima facie* basis, that the Appellants have provided and/or relied on some relevant information that is admissible and has the potential of establishing or proving at least some of the facts that they assert in their grounds of appeal and written submissions. The fact that some of that evidence had been disclosed or proffered by the Director or Atlantic does not preclude the Appellants from relying on it. Consequently, the "no evidence" motion should be denied. However, the Panel cautions that these findings are only made for the purpose of deciding whether to grant the no evidence motion. In making this preliminary decision, the Panel has not weighed any of the Appellants' evidence, and the Panel's findings have no bearing on the merits of the appeals.

104 For all of these reasons, the Panel denies Atlantic's request to dismiss the appeals based on a "no evidence" motion.

2. Whether the appeals should be summarily dismissed pursuant to section 31(1)(f) of the *ATA* on the basis that there is no reasonable prospect that the appeals will succeed

The parties' submissions

105 Atlantic submits that section 27(1) of the *Human Rights Code*, *R.S.B.C. 1996, c. 210* (the "*Code*"), contains language that is almost identical to that in section 31(1)(f) of the *ATA*. Section 27(1) of the *Code* states:

> **27** (1) A member or panel may, at any time after a complaint is filed and with or without a hearing, dismiss all or part of the complaint if that member or panel determines that any of the following apply:
>
> ...
>
> (c) there is no reasonable prospect that the complaint will succeed;

106 Atlantic submits that judicial decisions interpreting the test for summary dismissal under section 27(1)(c) of the *Code* are equally applicable to section 31(1)(f) of the *ATA*. In particular, Atlantic submits that the BC Court of Appeal provided guidance on how summary dismissal powers under the *Code* should be exercised by the BC

Human Rights Tribunal in *BC (Workers Compensation Appeal Tribunal) v. Hill*, 2011 BCCA 49 [*Hill*] at para. 27; and, *Lee v. British Columbia (Attorney General)*, 2004 BCCA 257 [*Lee*], at para. 26.

107 *Hill* states as follows at para. 27:

> It is useful to describe the nature of an application under s. 27 of the *Code* to provide context for the appellants' arguments. That provision creates a gate-keeping function that permits the Tribunal to conduct preliminary assessments of human rights complaints with a view to removing those that do not warrant the time and expense of a hearing. It is a discretionary exercise that does not require factual findings. Instead, a Tribunal member assesses the evidence presented by the parties with a view to determining if there is no reasonable prospect the complaint will succeed. The threshold is low. The complainant must only show the evidence takes the case out of the realm of conjecture. If the application is dismissed, the complaint proceeds to a full hearing before the Tribunal. If it is granted, the complaint comes to an end, subject to the complainant's right to seek judicial review: *Berezoutskaia v. British Columbia (Human Rights Tribunal)*, 2006 BCCA 95, 223 B.C.A.C. 71 at paras. 22-26, leave to appeal ref'd [2006] S.C.C.A. No. 171; *Gichuru v. British Columbia (Workers Compensation Appeal Tribunal)*, 2010 BCCA 191, 285 B.C.A.C. 276 at para. 31.
>
> [underlining added in Atlantic's submissions]

108 Similarly, *Lee* states as follows at para. 26:

> ... Thus the HRC [Human Rights Commission] had to assess this case in a preliminary way and make a judgment whether the matter warranted the time and expense of a full hearing. The threshold is not particularly high: whether the evidence takes the case "out of the realm of conjecture" ...

109 Atlantic argues that the following principles from *Hill* and *Lee* are applicable to the present application:

* section 31(1)(f) of the *ATA* creates a "gate-keeping" function that allows the Board to conduct a preliminary assessment of the appeal;
* the assessment is discretionary; and
* the Board is not required to find facts; rather, it should canvas the evidence that the parties intend to present, and come to a determination as to whether there is "no reasonable prospect" that the appeals will succeed.

110 Regarding Atlantic's intended evidence, Atlantic submits that the Board should consider the information in its Statement of Points, supporting documents, and expert reports. In particular, Atlantic refers to the five reports disclosed in its notice of expert evidence. Atlantic maintains that the Board's March 19, 2018 letter states that the expert reports would be accepted as evidence.

111 Atlantic also submits that the Appellants do not seek to cross-examine the witnesses that would have been tendered by the Director and Atlantic, and the Appellants have provided no admissible expert evidence of their own.

Atlantic submits that there is no challenge to any of its expert reports, and the Board is not entitled to reject the conclusions in the expert reports. In support of that proposition, Atlantic refers to *Page v. British Columbia (Workers' Compensation Appeal Tribunal)*, 2009 BCSC 493 [*Page*], at paras. 62 - 66:

> While the Hearing Panel is presumed to be an expert tribunal in relation to all matters over which it has exclusive jurisdiction, it is not presumed to have medical expertise.
>
> Where a WCAT panel is faced with a medical diagnosis as to a mental condition that is described in the *DSM-IV* at the time of the diagnosis, it is not equipped to reject that diagnosis, without an appropriate opinion to the contrary.
>
> Here, the Hearing Panel had a diagnosis of PTSD by Dr. Jhetam, a qualified psychiatrist, that it recognized was not "contradicted by other psychiatric or psychological opinion evidence". Although it was open to the Hearing Panel to require that a physician or psychologist appointed by WCAT review Dr. Jhetam's diagnosis, it instead rejected Dr. Jhetam's uncontradicted opinion by presuming that Dr. Meloche, who had not seen the petitioner since 1995, would have disagreed with the opinion of Dr. Jhetam in 2000, and thereafter. Moreover, the Hearing Panel rejected Dr. Jhetam's opinion in the face of his evidence, also uncontradicted, that Dr. Meloche's 1995 diagnosis of Adjustment Disorder with Anxiety "frequently precedes PTSD".
>
> This is not a case of the respondent's panel preferring one diagnosis to another. As there was no psychiatric or psychological opinion that contradicted the only opinion before them as to the petitioner's condition, this is a case of the Hearing Panel making its own diagnosis, when it clearly has no expertise upon which to do so.
>
> I find that such reasoning and the resulting findings are based upon the arbitrary exercise of the WCAT's discretion in terms of the use of the evidence before it, particularly its reliance predominantly if not entirely on an irrelevant factor, the 1995 opinion evidence of Dr. Meloche. In the result I find that the WCAT's decision on this issue is patently unreasonable.
>
> [underlining added in Atlantic's submissions]

112 Atlantic argues that, similar to *Page*, the Board has previously applied the principle that it must accept uncontradicted expert evidence on matters that are outside of its expertise: *Barry Burgoon et al v. Regional Water Manager*, Decision Nos. 2005-WAT-024(c) to 2005-WAT-026(c), June 28, 2010, at paras. 172 - 179 and 188 - 190.

113 In addition, Atlantic submits that the Appellants' written submissions inappropriately select single sentences from Atlantic's documents or the Ministry's technical report on the permit amendment application. Atlantic argues that, without contrary expert evidence, it is unfair and unacceptable to ignore the full recommendations in those documents.

114 Regarding each of the specific issues raised by the Appellants, Atlantic refers to its Schedule A setting out why, in Atlantic's view, there is "no reasonable prospect" that each issue will succeed. For example, regarding issue

#2 -- whether the Amendment Decision will lead to more contaminants and fine particulate matter in the airshed -- Atlantic submits, in part, that "The mere fact that there will be an increase in contaminant emissions is not the relevant test... The Appellants bear the burden to establish that the amendment Decision could cause unreasonable harm to the environment or human health." Atlantic further submits that to meet this burden, the Appellants must have led some evidence from which the Board could conclude what the expected levels of each contaminant will be, that those expected levels would be harmful, and that the harm is unreasonable. Atlantic submits that the Board is not presumed to have expertise in such matters, and the Board must rely on expert evidence to find such facts. Atlantic maintains that its uncontradicted expert evidence is that the increased emission levels are below air quality standards, and pose a "low" or "negligible" risk to human health and the environment. Therefore, there is no reasonable prospect that this issue will succeed.

115 In conclusion, Atlantic maintains that it is now known to the Board that Atlantic's expert reports will be accepted as uncontradicted expert evidence, and therefore, the Appellants' issues that assert contrary findings have no reasonable prospect of success and should be dismissed.

116 The Director did not address whether the appeals should be dismissed pursuant to section 31(1)(f) of the *ATA*.

117 The Represented Appellants submit that the Board's power under section 31(1)(f) of the *ATA* is discretionary, and the Board has rarely, if ever, utilized it. Although the Human Rights Tribunal utilizes a similar power, the Represented Appellants submit that *Hill* emphasizes that there is a low threshold to resist summary dismissal, stating at para. 27 that a complainant defending an application for summary dismissal "must only show [that] the evidence takes the case out of the realm of conjecture." The Represented Appellants maintain that the present appeals are far beyond the realm of conjecture, given that the Appellants' written submissions refer to a considerable body of evidence, and the Board has already found that the evidence warrants a written hearing.

118 Mr. Hamilton submits that there is sufficient evidence, beyond the realm of conjecture, available from the records of the permit amendment process that warrants consideration by the Board.

119 Mr. Pickford submits that the issues raised by the appeals have merit and deserve to be adjudicated by the Board. For example, he submits that a reasonable person would find, on a balance of probabilities, that flaws were evident in the 2001 trial burn of rail ties and stack test documented in the Lanfranco Report. Mr. Pickford submits that the evidence includes a document in which a Ministry meteorologist states that the 2001 test did not include background measurements for SO_2, HCl, and PAH in the Williams Lake airshed. Mr. Pickford argues that this raises concerns about the accuracy of the information obtained from that test, which was used in the emission modelling that Atlantic provided in support of its permit amendment application.

120 Mr. Dressler supports Mr. Hamilton's submission that there is sufficient evidence beyond the realm of conjecture, available in the records from the permit amendment process, that warrants consideration by the Board.

121 In reply, Atlantic submits that it is obvious that the appeals have no reasonable prospect of success. In deciding this application, the Board need not find facts or weigh evidence; rather, the Board should canvas the evidence that is expected to be tendered, and consider the fact that the Appellants have provided no expert evidence and agreed not to challenge the expert reports that are intended to be tendered by Atlantic and the Director.

The Panel's Findings

122 The Board recently considered the test for ordering summary dismissal of an appeal, or part of an appeal, under section 31(1)(f) of the *ATA*. In *Emily Toews et al v. Director, Environmental Management Act*, Decision Nos. 2014-EMA-003(d), 004(d), 005(d), June 25, 2018 [*Toews*], at paras. 120 - 123, the Board considered some decisions of the BC Court of Appeal and BC Supreme Court that, similar to *Hill* and *Lee*, involved reviews of the BC Human Rights Tribunal's summary dismissal of complaints pursuant to section 27(1)(c) of the *Code*. At para. 123 of *Toews*, the Board stated as follows regarding the test for summary dismissal under section 31(1)(f) of the *ATA*:

> The Panel finds that, given the similar wording in section 31(1)(f) of the *Administrative Tribunals Act* and section 27(1)(c) of the *Human Rights Code*, and in the absence of any arguments to the contrary from the Appellants, the test in *Berezoutskaia* and *Chiang* is equally applicable to applications for summary dismissal under section 31(1)(f) of the *Administrative Tribunals Act*. Thus, the question is whether the evidence takes the impugned ground for appeal "out of the realm of conjecture", such that the evidence justifies allowing that ground to be heard at a full hearing of the merits. The onus is on the applicant for dismissal to show that there is "no reasonable prospect that findings of fact that would support the [ground for appeal] could be made on a balance of probabilities after a full hearing of the evidence".
>
> [underlining added]

123 The Panel finds that this reasoning is consistent with the findings in *Hill* and *Lee*, and is equally applicable to the present case.

124 The Panel also agrees with the Appellants that, based on the judicial decisions cited by Atlantic, the threshold for denying an application for summary dismissal under section 31(1)(f) of the *ATA* is low: the appellant's evidence must simply take the appeal "out of the realm of conjecture".

125 In addition, the Panel rejects Atlantic's submission that the Board is not presumed to have expertise in the matters that are relevant to deciding key issues in these appeals, such as whether the Amendment Decision adequately protects human health and the environment. The courts have consistently recognized that the Board is an expert tribunal when it comes to adjudicating issues of fact that arise in appeals. As stated in *Lindelauf v. British Columbia*, *2017 BCSC 626*, at para.:

> The EAB [Board] is a specialized tribunal. The Legislature's decision to establish such a tribunal reflects "the complex and technical nature of the questions that might be raised" and that the tribunal "plays a role that is essential if the system is to be effective, while at the same time ensuring a balance between the conflicting interests involved in environmental protection": *R. v. Consolidated Maybrun Mines Ltd.*, *[1998] 1 S.C.R. 706* at para. 57.
>
> [underlining added]

126 Similarly, as stated in *Greater Vancouver (Regional District) v. Darvonda Nurseries Ltd.*, *2008 BCSC 1251*, at para. 59:

> The jurisprudence establishes that while the EAB has expertise in respect of the technical and factual matters arising in appeals ...
>
> [underlining added]

127 Similarly, as stated in para. 74 of *Shawnigan Residents' Association v. British Columbia (Director, Environmental Management Act)*, *2017 BCSC 107*:

> ... the Board's decision on this issue was one of mixed fact and law. In particular, the Board's decision that the site of the Facility was not a contaminated site was based on the Board's review of the evidence before it and on the Board's expertise in interpreting matters that arise under the *EMA*.
>
> [underlining added]

128 In addition, the courts have recognized that the Board has expertise in interpreting and applying the statutes under which it hears appeals, and is entitled to deference by the courts in that regard (e.g., see: *Burnaby (City) v. Environmental Appeal Board*, *2017 BCSC 2267*, at paras. 64 and 73).

129 Furthermore, given the nature of the appeal process and the Board's decision-making powers, the Panel rejects Atlantic's submission that the Board must accept the conclusions in Atlantic's expert reports without question simply because the Appellants have provided no contradictory expert evidence of their own. The fact that Atlantic's expert reports will be accepted (once tendered) as evidence does not necessarily mean that the Board will, when weighing that evidence, fully accept or agree with every opinion contained in that evidence.

130 The Board has the authority to conduct appeals as a new hearing of the matter (section 102(2) of the *Act*), and the Board has broad decision-making powers in deciding appeals including the power to make any decision that the Director could have made and that the Board considers appropriate in the circumstances (section 103 of the *Act*). The Board has the discretion to decide how much weight to accord a particular piece of evidence, including expert evidence, and to evaluate the evidence's reliability, relevance, and accuracy, among other things. With regard to expert opinion evidence, the Board is not obliged to unquestioningly accept expert evidence from one party simply because no opposing expert evidence was presented by another party, or because opposing parties have decided

not to cross-examine the expert witness. The qualifications and experience of the expert report's author will always be a factor in determining the weight to be given to their evidence. The Board must be satisfied that the report's author has the appropriate experience and training to be an expert in the matters for which he or she is giving expert opinion evidence.

131 The Panel has reviewed the arguments in Atlantic's Schedule A with respect to why each issue raised by the Appellants has no reasonable prospect of success. As noted by Atlantic, Mr. Hamilton's written submission state that he is withdrawing issues 14.1, 22, 23, 26. Accordingly, those issues are dismissed as having been withdrawn.

132 Turning to the remaining issues, the onus is on Atlantic, as the applicant for summary dismissal under section 31(1)(f) of the *ATA*, to establish that the Appellants' evidence and arguments are insufficient to take the appeals "out of the realm of conjecture". Atlantic's position that the remaining issues have no reasonable prospect of success relies on two main arguments: (1) that the Appellants have provided insufficient evidence (or none that is admissible) to succeed; and/or (2) that the Board "must accept" the conclusions in Atlantic's expert reports because they have not been challenged by the Appellants.

133 The Panel has already found that the Appellants have provided or relied on some relevant information that is admissible and, on a *prima facie* basis, has the potential of establishing or proving at least some of the facts that they assert in their submissions regarding the issues raised by the appeals. The Panel has also found that the Board is not obliged to unquestioningly accept expert evidence. For example, the qualifications and experience of the authors of Atlantic's expert reports must be considered before the Board determines how much weight it should give to their evidence. Although the Appellants have not presented opposing expert evidence, the Board is not obliged to unquestioningly adopt the opinions in Atlantic's expert reports. As a result, it is not a foregone conclusion that Atlantic's evidence necessarily leads to the conclusion that the appeals have no reasonable prospect of success.

134 The Panel finds that Atlantic has not met the onus of establishing that the Appellants' evidence and arguments are insufficient to take the appeals "out of the realm of conjecture". The Panel finds that the Appellants' evidence is, on a *prima facie* basis, sufficient to take the appeals out of the realm of conjecture. The Appellants do not simply express concerns, without any evidentiary support, about the potential effects of the Amendment Decision on human health and the environment. The Panel finds that the Board should proceed to assess the merits of the appeals by weighing the evidence and arguments that are to be presented by all parties, and applying the relevant legislation and legal authorities.

DECISION

135 In making this decision, the Panel of the Environmental Appeal Board has carefully considered all relevant documents and evidence before it, whether or not specifically reiterated herein.

136 For the reasons set out above, the Panel denies Atlantic's preliminary application to dismiss the appeals, with the exception of issues 14.1, 22, 23, 26 which have been withdrawn.

"Alan Andison"
Alan Andison, Chair
Environmental Appeal Board

---

1 While the Air Permit allowed up to 5% treated rail ties in the feedstock, Atlantic had not burned rail ties at the facility since 2010. (Atlantic's document titled "Frequently Asked Questions", page 2, attached to the affidavit of Rodger Hamilton).

ON APPEAL FROM THE COURT OF APPEAL FOR BRITISH COLUMBIA

Constitutional law — Honour of the Crown — Aboriginal peoples — Aboriginal rights — Right to consultation — British Columbia authorized project altering timing and flow of water in area claimed by First Nations

EN APPEL DE LA COUR D'APPEL DE LA COLOMBIE-BRITANNIQUE

Droit constitutionnel — Honneur de la Couronne — Peuples autochtones — Droits ancestraux — Droit à la consultation — La Colombie-Britannique a autorisé la construction d'un ouvrage modifiant le débit d'un cours

without consulting affected First Nations — Thereafter, provincial hydro and power authority sought British Columbia Utilities Commission's approval of agreement to purchase power generated by project from private producer — Duty to consult arises when Crown knows of potential Aboriginal claim or right and contemplates conduct that may adversely affect it — Whether Commission reasonably declined to consider adequacy of consultation in context of assessing whether agreement is in public interest — Whether duty to consult arose — What constitutes "adverse effect" — Constitution Act, 1982, s. 35 — Utilities Commission Act, R.S.B.C. 1996, c. 473, s. 71.

Administrative law — Boards and tribunals — Jurisdiction — British Columbia authorized project altering timing and flow of water in area claimed by First Nations without consulting affected First Nations — Thereafter, provincial hydro and power authority sought British Columbia Utilities Commission's approval of agreement to purchase power generated by project from private producer — Commission empowered to decide questions of law and to determine whether agreement is in public interest — Whether Commission had jurisdiction to discharge Crown's constitutional obligation to consult — Whether Commission had jurisdiction to consider adequacy of consultation — If so, whether it was required to consider adequacy of consultation in determining whether agreement is in public interest — Constitution Act, 1982, s. 35 — Utilities Commission Act, R.S.B.C. 1996, c. 473, s. 71.

In the 1950s, the government of British Columbia authorized the building of a dam and reservoir which altered the amount and timing of water flows in the Nechako River. The First Nations claim the Nechako Valley as their ancestral homeland, and the right to fish in the Nechako River, but, pursuant to the practice at the time, they were not consulted about the dam project.

Since 1961, excess power generated by the dam has been sold by Alcan to BC Hydro under Energy Purchase Agreements ("EPAs") which commit Alcan to supplying and BC Hydro to purchasing excess electricity. The government of British Columbia sought the

d'eau dans un territoire revendiqué par des Autochtones sans consulter au préalable les Premières nations touchées — La société d'État provinciale d'hydroélectricité a ensuite demandé à la British Columbia Utilities Commission d'approuver un contrat d'achat intervenu avec un producteur d'électricité privé — L'obligation de consulter naît lorsque la Couronne a connaissance de l'existence éventuelle d'une revendication autochtone ou d'un droit ancestral et qu'elle envisage une mesure susceptible d'avoir un effet défavorable sur cette revendication ou ce droit — La Commission a-t-elle agi raisonnablement en refusant de se pencher sur le caractère adéquat de la consultation alors qu'elle était appelée à déterminer si le contrat servait l'intérêt public? — L'obligation de consulter a-t-elle pris naissance? — Que faut-il entendre par « effet défavorable »? — Loi constitutionnelle de 1982, art. 35 — Utilities Commission Act, R.S.B.C. 1996, ch. 473, art. 71.

Droit administratif — Organismes et tribunaux administratifs — Compétence — La Colombie-Britannique a autorisé la construction d'un ouvrage modifiant le débit d'un cours d'eau dans un territoire revendiqué par des Autochtones sans consulter au préalable les Premières nations touchées — La société d'État provinciale d'hydroélectricité a ensuite demandé à la British Columbia Utilities Commission d'approuver un contrat d'achat intervenu avec un producteur d'électricité privé — La Commission avait le pouvoir de trancher des questions de droit et de décider si un contrat était dans l'intérêt public — Avait-elle compétence pour s'acquitter de l'obligation de la Couronne de consulter? — Avait-elle le pouvoir de se pencher sur le caractère adéquat de la consultation? — Dans l'affirmative, lui incombait-il de se pencher sur le caractère adéquat de la consultation pour décider si le contrat servait l'intérêt public? — Loi constitutionnelle de 1982, art. 35 — Utilities Commission Act, R.S.B.C. 1996, ch. 473, art. 71.

Dans les années 1950, le gouvernement de la Colombie-Britannique a autorisé la construction d'un barrage et d'un réservoir qui ont modifié les débits d'eau dans la rivière Nechako. Les Premières nations prétendent que la vallée de la Nechako fait partie de leurs terres ancestrales et elles revendiquent le droit de pêcher dans la rivière Nechako, mais comme ce n'était pas l'usage à l'époque, elles n'ont pas été consultées relativement au barrage projeté.

Depuis 1961, Alcan vend les surplus d'électricité du barrage à BC Hydro au moyen de contrats d'achat d'électricité (« CAÉ ») dans lesquels elle s'engage à vendre l'électricité excédentaire, et BC Hydro à l'acheter. Le gouvernement de la Colombie-Britannique a demandé

Commission's approval of the 2007 EPA. The First Nations asserted that the 2007 EPA should be subject to consultation under s. 35 of the *Constitution Act, 1982*.

The Commission accepted that it had the power to consider the adequacy of consultation with Aboriginal groups, but found that the consultation issue could not arise because the 2007 EPA would not adversely affect any Aboriginal interest. The British Columbia Court of Appeal reversed the Commission's orders and remitted the case to the Commission for evidence and argument on whether a duty to consult the First Nations exists and, if so, whether it had been met. Alcan and BC Hydro appealed.

Held: The appeal should be allowed and the decision of the British Columbia Utilities Commission approving the 2007 EPA should be confirmed.

The Commission did not act unreasonably in approving the 2007 EPA. Governments have a duty to consult with Aboriginal groups when making decisions which may adversely impact lands and resources to which Aboriginal peoples lay claim. The duty to consult is grounded in the honour of the Crown and is a corollary of the Crown's obligation to achieve the just settlement of Aboriginal claims through the treaty process. While the treaty claims process is ongoing, there is an implied duty to consult with Aboriginal claimants on matters that may adversely affect their treaty and Aboriginal rights, and to accommodate those interests in the spirit of reconciliation. The duty has both a legal and a constitutional character, and is prospective, fastening on rights yet to be proven. The nature of the duty and the remedy for its breach vary with the situation.

The duty to consult arises when the Crown has knowledge, real or constructive, of the potential existence of the Aboriginal right or title and contemplates conduct that might adversely affect it. This test can be broken down into three elements. First, the Crown must have real or constructive knowledge of a potential Aboriginal claim or right. While the existence of a potential claim is essential, proof that the claim will succeed is not. Second, there must be Crown conduct or a Crown decision. In accordance with the generous, purposive approach that must be brought to the duty to consult, the required decision or conduct is not confined to government exercise of statutory powers or to decisions or conduct which have an immediate impact

à la Commission d'approuver le CAÉ de 2007. Les Premières nations ont fait valoir que ce dernier devait faire l'objet d'une consultation suivant l'art. 35 de la *Loi constitutionnelle de 1982*.

La Commission a reconnu avoir le pouvoir d'examiner le caractère adéquat de la consultation des groupes autochtones, mais elle a conclu que la question de la consultation ne pouvait se poser étant donné que le CAÉ de 2007 n'allait pas avoir d'effet préjudiciable sur quelque intérêt autochtone. La Cour d'appel de la Colombie-Britannique a annulé ses ordonnances et lui a renvoyé l'affaire pour qu'elle entende preuve et arguments sur la question de savoir s'il existait ou non une obligation de consulter les Premières nations et, dans l'affirmative, si elle avait été respectée. Alcan et BC Hydro ont interjeté appel.

Arrêt : Le pourvoi est accueilli, et la décision de la British Columbia Utilities Commission approuvant le CAÉ de 2007 est confirmée.

La Commission n'a pas agi de manière déraisonnable en approuvant le CAÉ de 2007. Un gouvernement a l'obligation de consulter les peuples autochtones avant de prendre des décisions susceptibles d'avoir un effet préjudiciable sur les terres et les ressources revendiquées par eux. L'obligation de consulter s'origine de l'honneur de la Couronne et c'est un corollaire de celle d'arriver à un règlement équitable des revendications autochtones au terme du processus de négociation de traités. Lorsque ce processus est en cours, la Couronne a l'obligation tacite de consulter les demandeurs autochtones sur ce qui est susceptible d'avoir un effet préjudiciable sur leurs droits issus de traités et leurs droits ancestraux, et de trouver des mesures d'accommodement dans un esprit de conciliation. L'obligation revêt un caractère à la fois juridique et constitutionnel. Elle est de nature prospective et prend appui sur des droits dont l'existence reste à prouver. La nature de l'obligation et le recours pour manquement à celle-ci varient en fonction de la situation.

L'obligation de consulter prend naissance lorsque la Couronne a connaissance, concrètement ou par imputation, de l'existence potentielle du droit ou titre ancestral revendiqué et qu'elle envisage une mesure susceptible d'avoir un effet préjudiciable sur celui-ci. Cette condition comporte trois éléments. Premièrement, la Couronne doit avoir connaissance, concrètement ou par imputation, de l'existence possible d'une revendication autochtone ou d'un droit ancestral. L'existence possible d'une revendication est essentielle, mais il n'est pas nécessaire de prouver que la revendication connaîtra une issue favorable. Deuxièmement, il doit y avoir une mesure ou une décision de la Couronne. Conformément à l'approche généreuse et téléologique que commande l'obligation de

on lands and resources. The duty to consult extends to "strategic, higher level decisions" that may have an impact on Aboriginal claims and rights. Third, there must be a possibility that the Crown conduct may affect the Aboriginal claim or right. The claimant must show a causal relationship between the proposed government conduct or decision and a potential for adverse impacts on pending Aboriginal claims or rights. Past wrongs, speculative impacts, and adverse effects on a First Nation's future negotiating position will not suffice. Moreover, the duty to consult is confined to the adverse impacts flowing from the current government conduct or decision, not to larger adverse impacts of the project of which it is a part. Where the resource has long since been altered and the present government conduct or decision does not have any further impact on the resource, the issue is not consultation, but negotiation about compensation.

Tribunals are confined to the powers conferred on them by their constituent legislation, and the role of particular tribunals in relation to consultation depends on the duties and powers the legislature has conferred on them. The legislature may choose to delegate the duty to consult to a tribunal, and it may empower the tribunal to determine whether adequate consultation has taken place.

The power to engage in consultation itself, as distinct from the jurisdiction to determine whether a duty to consult exists, cannot be inferred from the mere power to consider questions of law. Consultation itself is not a question of law; it is a distinct, often complex, constitutional process and, in certain circumstances, a right involving facts, law, policy, and compromise. The tribunal seeking to engage in consultation must be expressly or impliedly empowered to do so and its enabling statute must give it the necessary remedial powers.

The duty to consult is a constitutional duty invoking the honour of the Crown. It must be met. If the tribunal structure set up by the legislature is incapable of dealing with a decision's potential adverse impacts on Aboriginal interests, then the Aboriginal peoples affected must seek appropriate remedies in the courts. These remedies have proven time-consuming and expensive, are often ineffective, and serve the interest of no one.

consulter, cette mesure ou cette décision ne s'entend pas uniquement de l'exercice d'un pouvoir conféré par la loi ni seulement d'une décision ou d'un acte qui a un effet immédiat sur des terres et des ressources. L'obligation de consulter naît aussi d'une « décision stratégique prise en haut lieu » qui est susceptible d'avoir un effet sur des revendications autochtones et des droits ancestraux. Troisièmement, il doit être possible que la mesure de la Couronne ait un effet sur une revendication autochtone ou un droit ancestral. Le demandeur doit établir un lien de causalité entre la mesure ou la décision envisagée par le gouvernement et un effet préjudiciable éventuel sur une revendication autochtone ou un droit ancestral. Un acte fautif antérieur, une simple répercussion hypothétique et un effet préjudiciable sur la position de négociation ultérieure d'une Première nation ne suffisent pas. Aussi, l'obligation de consulter ne vise que les effets préjudiciables de la mesure ou de la décision actuelle du gouvernement, à l'exclusion des effets préjudiciables globaux du projet dont elle fait partie. Lorsque la ressource est transformée depuis longtemps et que la mesure ou la décision actuelle du gouvernement n'a plus aucune incidence sur elle, il n'y a pas lieu de consulter, mais de négocier une indemnisation.

Un tribunal administratif doit s'en tenir à l'exercice des pouvoirs que lui confère sa loi habilitante, et son rôle en ce qui a trait à la consultation tient à ses obligations et à ses attributions légales. Le législateur peut décider de déléguer à un tribunal administratif l'obligation de la Couronne de consulter, et il peut lui conférer le pouvoir de décider si une consultation adéquate a eu lieu.

Le pouvoir de consulter, qui est distinct du pouvoir de déterminer s'il existe une obligation de consulter, ne peut être inféré du simple pouvoir d'examiner des questions de droit. La consultation comme telle n'est pas une question de droit. Il s'agit d'un processus constitutionnel distinct, souvent complexe, et dans certaines circonstances, d'un droit mettant en jeu faits, droit, politique et compromis. Le tribunal administratif désireux d'entreprendre une consultation doit y être expressément ou tacitement autorisé, et sa loi habilitante doit lui conférer la pouvoir de réparation nécessaire.

L'obligation de consulter est une obligation constitutionnelle qui fait intervenir l'honneur de la Couronne. Elle doit être respectée. Si le régime administratif mis en place par le législateur ne peut remédier aux éventuels effets préjudiciables d'une décision sur des intérêts autochtones, les Premières nations touchées doivent alors s'adresser à une cour de justice pour obtenir la réparation voulue. L'expérience enseigne que la voie judiciaire est longue, coûteuse et souvent vaine et qu'elle ne sert l'intérêt de personne.

In this case, the Commission had the power to consider whether adequate consultation had taken place. The *Utilities Commission Act* empowered it to decide questions of law in the course of determining whether an EPA is in the public interest, which implied a power to decide constitutional issues properly before it. At the time, it also required the Commission to consider "any other factor that the commission considers relevant to the public interest", including the adequacy of consultation. This conclusion is not altered by the *Administrative Tribunals Act*, which provides that a tribunal does not have jurisdiction over any "constitutional question", since the application for reconsideration does not fall within the narrow statutory definition of that term.

The Legislature did not delegate the Crown's duty to consult to the Commission. The Commission's power to consider questions of law and matters relevant to the public interest does not empower it to engage in consultation because consultation is a distinct constitutional process, not a question of law.

The Commission correctly accepted that it had the power to consider the adequacy of consultation with Aboriginal groups, and reasonably concluded that the consultation issue could not arise because the 2007 EPA would not adversely affect any Aboriginal interest. In this case, the Crown had knowledge of a potential Aboriginal claim or right and BC Hydro's proposal to enter into an agreement to purchase electricity from Alcan is clearly proposed Crown conduct. However, the 2007 EPA would have neither physical impacts on the Nechako River or the fishery nor organizational, policy or managerial impacts that might adversely affect the claims or rights of the First Nations. The failure to consult on the initial project was an underlying infringement, and was not sufficient to trigger a duty to consult. Charged with the duty to act in accordance with the honour of Crown, BC Hydro's representatives will nevertheless be required to take into account and consult as necessary with affected Aboriginal groups insofar as any decisions taken in the future have the potential to adversely affect them.

En l'espèce, la Commission avait le pouvoir de déterminer si une consultation adéquate avait eu lieu. La *Utilities Commission Act* l'investissait du pouvoir de trancher des questions de droit aux fins de déterminer si un CAÉ servait l'intérêt public, ce qui emportait celui de trancher une question constitutionnelle dont elle était régulièrement saisie. Au moment considéré, elle exigeait également de la Commission qu'elle tienne compte de « tout autre élément jugé pertinent eu égard à l'intérêt public », dont le caractère adéquat de la consultation. L'*Administrative Tribunals Act* ne modifie pas cette conclusion même si elle prévoit qu'un tribunal administratif n'a pas compétence à l'égard d'une « question constitutionnelle », car la demande de révision échappe à la définition restrictive de ce terme.

Le législateur n'a pas délégué à la Commission l'obligation de la Couronne de consulter. Le pouvoir de la Commission d'examiner les questions de droit et tout élément pertinent pour ce qui concerne l'intérêt public ne l'autorise pas à entreprendre la consultation, car celle-ci est un processus constitutionnel distinct, et non une question de droit.

La Commission a reconnu à juste titre avoir le pouvoir d'examiner le caractère adéquat de la consultation des groupes autochtones et elle a raisonnablement conclu que la question de la consultation ne pouvait se poser étant donné que le CAÉ de 2007 n'allait pas avoir d'effet préjudiciable sur quelque intérêt autochtone. Dans la présente affaire, la Couronne avait connaissance de l'existence possible d'une revendication autochtone ou d'un droit ancestral, et le projet de BC Hydro de conclure avec Alcan un contrat d'achat d'électricité constituait clairement une mesure projetée par la Couronne. Cependant, le CAÉ de 2007 n'allait pas avoir d'impact physique sur la rivière Nechako ou sur le poisson, ni entraîner de changements organisationnels, politiques ou de gestion susceptibles d'avoir un effet préjudiciable sur les revendications ou les droits des Premières nations. L'omission de consulter relativement au projet initial constituait une atteinte sous-jacente et ne suffisait pas pour faire naître l'obligation de consulter. Vu leur obligation d'agir conformément à l'honneur de la Couronne, les représentants de BC Hydro devront néanmoins tenir compte des groupes autochtones touchés et les consulter au besoin lorsqu'une décision ultérieure sera susceptible d'avoir un effet préjudiciable sur eux.

The judgment of the Court was delivered by

[1] THE CHIEF JUSTICE — In the 1950s, the government of British Columbia authorized the building of the Kenney Dam in Northwest British Columbia for the production of hydro power for the smelting of aluminum. The dam and reservoir altered the water flows to the Nechako River, which the Carrier Sekani Tribal Council ("CSTC") First Nations have since time immemorial used for fishing and sustenance. This was done without consulting with the CSTC First Nations. Now, the government of British Columbia seeks approval of a contract for the sale of excess power from the dam to British Columbia Hydro and Power Authority ("BC Hydro"), a Crown corporation. The question is whether the British Columbia Utilities Commission (the "Commission") is required to consider the issue of consultation with the CSTC First Nations in determining whether the sale is in the public interest.

Version française du jugement de la Cour rendu par

[1] LA JUGE EN CHEF — Dans les années 1950, le gouvernement de la Colombie-Britannique a autorisé la construction du barrage Kenney dans le nord-ouest de la province en vue de la production d'électricité destinée à l'alimentation d'une aluminerie. Le barrage et le réservoir ont modifié les débits d'eau dans la rivière Nechako, dont les Premières nations du Conseil tribal Carrier Sekani (« CTCS ») tirent leur subsistance (notamment grâce à la pêche) depuis des temps immémoriaux. Ces Premières nations n'ont pas été consultées avant la construction du complexe. Le gouvernement de la Colombie-Britannique demande aujourd'hui l'approbation d'un contrat de vente des surplus d'électricité produits par le barrage à une société d'État, British Columbia Hydro and Power Authority (« BC Hydro »). La Cour doit déterminer si la British Columbia Utilities Commission (la « Commission ») est tenue de se pencher sur la question de la consultation des Premières nations du CTCS pour déterminer si la vente sert l'intérêt public.

[2] In *Haida Nation v. British Columbia (Minister of Forests)*, 2004 SCC 73, [2004] 3 S.C.R. 511, this Court affirmed that governments have a duty to consult with Aboriginal groups when making decisions which may adversely impact lands and resources to which Aboriginal peoples lay claim. In the intervening years, government-Aboriginal consultation has become an important part of the resource development process in British Columbia especially; much of the land and resources there are subject to land claims negotiations. This case raises the issues of what triggers a duty to consult, and the place of government tribunals in consultation and the review of consultation. I would allow the appeal, while affirming the duty of BC Hydro to consult the CSTC First Nations on future developments that may adversely affect their claims and rights.

I. Background

A. *The Facts*

[3] In the 1950s, Alcan (now Rio Tinto Alcan) dammed the Nechako River in northwestern British Columbia for the purposes of power development in connection with aluminum production. The project was one of huge magnitude. It diverted water from the Nechako River into the Nechako Reservoir, where a powerhouse was installed for the production of electricity. After passing through the turbines of the powerhouse, the water flowed to the Kemano River and on to the Pacific Ocean to the west. The dam affected the amount and timing of water flows into the Nechako River to the east, impacting fisheries on lands now claimed by the CSTC First Nations. Alcan effected these water diversions under Final Water Licence No. 102324 which gives Alcan use of the water on a permanent basis.

[4] Alcan, the Province of British Columbia, and Canada entered into a Settlement Agreement in

[2] Dans l'arrêt *Nation Haïda c. Colombie-Britannique (Ministre des Forêts)*, 2004 CSC 73, [2004] 3 R.C.S. 511, la Cour affirme qu'un gouvernement a l'obligation de consulter les peuples autochtones avant de prendre des décisions susceptibles d'avoir un effet préjudiciable sur les terres et les ressources revendiquées par eux. Depuis lors, la consultation des Autochtones par le gouvernement constitue un volet important du processus d'exploitation des ressources, spécialement en Colombie-Britannique où beaucoup de terres et de ressources font l'objet de revendications territoriales. Le pourvoi soulève les questions suivantes : d'où naît l'obligation de consulter et quel rôle joue un tribunal administratif dans la consultation et le contrôle de celle-ci? Je suis d'avis d'accueillir le pourvoi, tout en confirmant l'obligation de BC Hydro de consulter les Premières nations du CTCS sur les activités d'exploitation ultérieures susceptibles d'avoir un effet préjudiciable sur leurs revendications et leurs droits.

I. Contexte

A. *Les faits*

[3] Dans les années 1950, Alcan (aujourd'hui Rio Tinto Alcan) a construit un barrage sur la rivière Nechako dans le nord-ouest de la Colombie-Britannique afin de produire de l'électricité destinée à la fabrication d'aluminium. Il s'agissait de travaux colossaux. L'eau de la rivière Nechako a été détournée dans le réservoir du même nom, où une centrale a été construite pour y produire de l'électricité. Après être passée dans les turbines de la centrale, l'eau se déversait ensuite dans la rivière Kemano, puis dans l'océan Pacifique à l'ouest. Le barrage a eu une incidence sur le débit de la rivière Nechako à l'est, ce qui a eu des répercussions sur les stocks de poissons dans les terres aujourd'hui revendiquées par les Premières nations du CTCS. Alcan a effectué ces dérivations d'eau conformément au permis d'exploitation hydraulique permanent nº 102324, qui lui accorde un droit perpétuel d'utilisation de l'eau.

[4] En 1987, Alcan, la province de la Colombie-Britannique et le Canada ont convenu de lâchers

1987 on the release of waters in order to protect fish stocks. Canada was involved because fisheries, whether seacoast-based or inland, fall within federal jurisdiction under s. 91(12) of the *Constitution Act, 1867*. The 1987 agreement directs the release of additional flows in July and August to protect migrating salmon. In addition, a protocol has been entered into between the Haisla Nation and Alcan which regulates water flows to protect eulachon spawning grounds.

[5] The electricity generated by the project has been used over the years primarily for aluminum smelting. Since 1961, however, Alcan has sold its excess power to BC Hydro, a Crown Corporation, for use in the local area and later for transmission to neighbouring communities. The Energy Purchase Agreement ("EPA") entered into in 2007, which is the subject of this appeal is the latest in a series of power sales from Alcan to BC Hydro. It commits Alcan to supplying and BC Hydro to purchasing excess electricity from the Kemano site until 2034. The 2007 EPA establishes a Joint Operating Committee to advise the parties on the administration of the EPA and the operation of the reservoir.

[6] The CSTC First Nations claim the Nechako Valley as their ancestral homeland, and the right to fish in the Nechako River. As was the practice at the time, they were not consulted about the diversion of the river effected by the 1950s dam project. They assert, however, that the 2007 EPA for the power generated by the project should be subject to consultation. This, they say, is their constitutional right under s. 35 of the *Constitution Act, 1982*, as defined in *Haida Nation*.

B. *The Commission Proceedings*

[7] The 2007 EPA was subject to review before the Commission. It was charged with determining whether the sale of electricity was in the public interest under s. 71 of the *Utilities Commission*

d'eau pour protéger les stocks de poissons. Le Canada était partie à l'accord, car les pêches, des côtes de la mer ou de l'intérieur, relèvent de la compétence fédérale suivant le par. 91(12) de la *Loi constitutionnelle de 1867*. L'accord de 1987 prévoit des lâchers supplémentaires en juillet et en août afin de protéger le saumon anadrome. De plus, un protocole est intervenu entre la nation Haisla et Alcan pour régulariser les débits d'eau et protéger les frayères d'eulachons.

[5] Au fil des ans, l'électricité générée par la centrale a principalement servi à alimenter une aluminerie. Toutefois, depuis 1961, Alcan vend ses surplus d'électricité à une société d'État, BC Hydro. Ces surplus ont d'abord été consommés localement, puis acheminés vers des collectivités avoisinantes. Le contrat d'achat d'électricité (le « CAÉ ») conclu en 2007, qui fait l'objet du pourvoi, est le plus récent intervenu entre Alcan et BC Hydro. Alcan s'y engage à vendre l'électricité excédentaire produite par la centrale de Kemano, et BC Hydro à l'acheter, jusqu'en 2034. Le CAÉ de 2007 crée un comité conjoint d'exploitation appelé à conseiller les parties sur l'administration du contrat et l'exploitation du réservoir.

[6] Les Premières nations du CTCS prétendent que la vallée de la Nechako fait partie de leurs terres ancestrales et elles revendiquent le droit de pêcher dans la rivière Nechako. Comme ce n'était pas l'usage à l'époque, elles n'ont pas été consultées au sujet du détournement de la rivière occasionné par la construction du barrage dans les années 1950. Elles font toutefois valoir que le CAÉ de 2007 conclu relativement à l'énergie produite par ce barrage devrait faire l'objet d'une consultation. Selon elles, il s'agit d'un droit constitutionnel découlant de l'art. 35 de la *Loi constitutionnelle de 1982*, au sens où l'entend la Cour dans l'arrêt *Nation Haïda*.

B. *Les procédures de la Commission*

[7] Le CAÉ de 2007 a été soumis à l'examen de la Commission, laquelle devait, en application de l'art. 71 de la *Utilities Commission Act*, R.S.B.C. 1996, ch. 473, déterminer si la vente d'électricité

Act, R.S.B.C. 1996, c. 473. The Commission had the power to declare a contract for the sale of electricity unenforceable if it found that it was not in the public interest having regard to the quantity of energy to be supplied, the availability of supplies, the price and availability of any other form of energy, the price of the energy supplied to a public utility company, and "any other factor that the commission considers relevant to the public interest".

[8] The Commission began its work by holding two procedural conferences to determine, among other things, the "scope" of its hearing. "Scoping" is the process by which the Commission determines what "information it considers necessary to determine whether the contract is in the public interest" pursuant to s. 71(1)(b) of the *Utilities Commission Act*. The question of the role of First Nations in the proceedings arose at this stage. The CSTC was not party to the proceedings but the Haisla Nation was. The Haisla people submitted that the Province and BC Hydro "ha[d] failed to act on their legal obligation" to them, but refrained from asking the Commission "to assess the adequacy [of consultation] and accommodation afforded . . . on the 2007 EPA": *Re: British Columbia Hydro & Power Authority Filing of Electricity Purchase Agreement with Alcan Inc. as an Energy Supply Contract Pursuant to Section 71*, British Columbia Utilities Commission, October 10, 2007 (the "Scoping Order"), unreported. The Commission's Scoping Order therefore addressed the consultation issue as follows:

> Evidence relevant to First Nations consultation may be relevant for the same purpose that the Commission often considers evidence of consultation with other stakeholders. Generally, insufficient evidence of consultation, including with First Nations is not determinative of matters before the Commission.

[9] On October 29, 2007, the CSTC requested late intervener status on the issue of consultation on the basis that the Commission's decision

était dans l'intérêt public. La Commission avait le pouvoir de déclarer inapplicable le contrat de vente d'électricité qui, selon elle, n'était pas dans l'intérêt public compte tenu de la quantité d'énergie fournie, de la disponibilité de l'approvisionnement, du prix et de la disponibilité de toute autre forme d'énergie, du prix de l'énergie fournie à une entreprise de services publics et de [TRADUCTION] « tout autre élément jugé pertinent eu égard à l'intérêt public ».

[8] La Commission a entrepris ses travaux par la tenue de deux conférences de nature procédurale pour déterminer notamment le « cadre » de l'audience. Le « cadrage » est le processus par lequel la Commission détermine [TRADUCTION] « les données qu'elle estime nécessaires pour décider si le contrat est ou non dans l'intérêt public » en application de l'al. 71(1)b) de la *Utilities Commission Act*. C'est à cette étape qu'a été soulevée la question de la participation des Premières nations à l'audience. Le CTCS n'était pas partie à la procédure, contrairement à la Nation Haisla, qui soutenait que la province et BC Hydro [TRADUCTION] « avaient manqué à leur obligation légale envers elle », mais qui ne demandait pas à la Commission « de se prononcer sur le caractère adéquat [de la consultation] et des mesures d'accommodement prises [. . .] relativement au CAÉ de 2007 » : *Re : British Columbia Hydro & Power Authority Filing of Electricity Power Purchase Agreement with Alcan Inc. as an Energy Supply Contract Pursuant to Section 71*, British Columbia Utilities Commission, 10 octobre 2007 (l'« ordonnance sur le cadre de l'audience »), inédite. Dans son ordonnance, la Commission se prononce donc comme suit sur la question de la consultation :

> [TRADUCTION] Les éléments de preuve se rapportant à la consultation des Premières nations peuvent être pertinents, et ce, pour les mêmes raisons que la Commission examine souvent la preuve de la consultation d'autres intéressés. De manière générale, une preuve de consultation insuffisante, notamment des Premières nations, n'est pas déterminante eu égard aux questions dont est saisie la Commission.

[9] Le 29 octobre 2007, le CTCS a tardivement demandé d'être constitué partie intervenante sur la question de la consultation au motif que la décision

might negatively impact Aboriginal rights and title which were the subject of its ongoing land claims. At the opening of the oral hearing on November 19, 2007, the CSTC applied for reconsideration of the Scoping Order and, in written submissions of November 20, 2007, it asked the Commission to include in the hearing's scope the issues of whether the duty to consult had been met, whether the proposed power sale under the 2007 EPA could constitute an infringement of Aboriginal rights and title in and of itself, and the related issue of the environmental impact of the 2007 EPA on the rights of the CSTC First Nations.

[10] The Commission established a two-stage process to consider the CSTC's application for reconsideration of the Scoping Order: an initial screening phase to determine whether there was a reasonable evidentiary basis for reconsideration, and a second phase to receive arguments on whether the rescoping application should be granted. At the first stage, the CSTC filed evidence, called witnesses and cross-examined the witnesses of BC Hydro and Alcan. The Commission confined the proceedings to the question of whether the 2007 EPA would adversely affect potential CSTC First Nations' interests by causing changes in water flows into the Nechako River or changes in water levels of the Nechako Reservoir.

[11] On November 29, 2007, the Commission issued a preliminary decision on the Phase I process called "Impacts on Water Flows". It concluded that the "responsibility for operation of the Nechako Reservoir remains with Alcan under the 2007 EPA", and that the EPA would not affect water levels in the Nechako River stating, "the 2007 EPA sets the priority of generation produced but does not set the priority for water". With or without the 2007 EPA, "Alcan operates the Nechako Reservoir to optimize power generation".

[12] As to fisheries, the Commission stated that "the priority of releases from the Nechako Reservoir [under the 1987 Settlement Agreement]

de la Commission risquait d'avoir un effet préjudiciable sur les droits ancestraux et le titre aborigène qu'il revendiquait alors. Le 19 novembre 2007, au début de l'audience, le CTCS a demandé la révision de l'ordonnance qui en définissait le cadre et, dans son argumentation écrite du 20 novembre 2007, il a demandé qu'à l'audience, la Commission examine en outre les questions de savoir si l'obligation de consultation avait été respectée et si la vente d'électricité projetée dans le CAÉ de 2007 pouvait en soi être préjudiciable aux droits ancestraux et au titre aborigène, ainsi que la question connexe des répercussions environnementales du CAÉ de 2007 sur les droits des Premières nations du CTCS.

[10] La Commission a établi un processus comportant deux étapes pour statuer sur la demande de révision. Elle devait d'abord déterminer si un fondement probatoire raisonnable justifiait la révision de l'ordonnance, puis entendre les arguments des parties sur la question de savoir s'il y avait lieu d'accueillir la demande de recadrage. À la première étape, le CTCS a produit des éléments de preuve, présenté des témoins et contre-interrogé ceux de BC Hydro et d'Alcan. La Commission s'en est tenue à la question de savoir si, en raison de la modification du débit de la rivière Nechako ou du niveau du réservoir Nechako qui en résulterait, le CAÉ de 2007 aurait un effet préjudiciable sur les droits éventuels des Premières nations du CTCS.

[11] Le 29 novembre 2007, la Commission a rendu à la première étape une décision préliminaire intitulée [TRADUCTION] « Impact sur le débit d'eau ». Elle y conclut que [TRADUCTION] « suivant le CAÉ de 2007, l'exploitation du réservoir Nechako continue d'incomber à Alcan » et que le contrat ne changera rien aux niveaux de la rivière Nechako, affirmant que [TRADUCTION] « le CAÉ de 2007 accorde la priorité à la production d'électricité, et non à l'eau ». Avec ou sans le CAÉ de 2007, [TRADUCTION] « Alcan exploite le réservoir Nechako dans le but d'optimiser la production d'électricité ».

[12] Au chapitre de la pêche, la Commission a estimé que [TRADUCTION] « les lâchers d'eau effectués à partir du réservoir Nechako [conformément

is first to fish flows and second to power service". While the timing of water releases from the Nechako Reservoir for power generation purposes may change as a result of the 2007 EPA, that change "will have no impact on the releases into the Nechako river system". This is because water releases for power generation flow not into the Nechako River system to the east, with which the CSTC First Nations are concerned, but into the Kemano River to the west. Nor, the Commission found, would the 2007 EPA bring about a change in control over water flows and water levels, or alter the management structure of the reservoir.

[13] The Commission then embarked on Phase II of the rescoping hearing and invited the parties to make written submissions on the reconsideration application — specifically, on whether it would be a jurisdictional error not to revise the Scoping Order to encompass consultation issues on these facts. The parties did so.

[14] On December 17, 2007, the Commission dismissed the CSTC's application for reconsideration of the scoping order on grounds that the 2007 EPA would not introduce new adverse effects to the interests of the First Nations: *Re British Columbia Hydro & Power Authority*, 2008 CarswellBC 1232 (B.C.U.C.) (the "Reconsideration Decision"). For the purposes of the motion, the Commission assumed the historic infringement of Aboriginal rights, Aboriginal title, and a failure by the government to consult. Referring to *Haida Nation*, it concluded that "more than just an underlying infringement" was required. The CSTC had to demonstrate that the 2007 EPA would "adversely affect" the Aboriginal interests of its member First Nations. Applying this test to its findings of fact, it stated that "a section 71 review does not approve, transfer or change control of licenses or authorization and therefore where there are no new physical impacts acceptance of a section 71 filing [without consultation] would not be a jurisdictional error". The Commission therefore concluded that its decision on the 2007 EPA would have no adverse effects on the CSTC First Nations' interests. The duty to consult was therefore not triggered, and no jurisdictional

à l'accord de 1987] visent en priorité le passage des poissons, puis la production d'électricité ». Bien que le calendrier des lâchers d'eau destinés à la production d'électricité puisse changer en raison du CAÉ de 2007, à son avis, cela [TRADUCTION] « n'aura aucun impact sur les apports dans le réseau hydrographique de la Nechako », car ces lâchers d'eau ne sont pas effectués dans la rivière Nechako à l'est — objet de la préoccupation des Premières nations du CTCS —, mais dans la rivière Kemano à l'ouest. La Commission a aussi conclu que le CAÉ de 2007 ne modifiera ni la gestion des débits et des niveaux d'eau, ni la structure de gestion du réservoir.

[13] À la deuxième étape, la Commission a invité les parties à présenter des observations écrites sur la demande de révision — plus précisément, sur la question de savoir si le refus de recadrer l'audience pour que les questions liées à la consultation y soient aussi abordées constituerait une erreur de compétence à la lumière de ces faits. Les parties ont répondu à l'invitation.

[14] Le 17 décembre 2007, la Commission a rejeté la demande du CTCS au motif que le CAÉ de 2007 ne créerait pas de nouveaux effets défavorables sur les intérêts des Premières nations en cause : *Re British Columbia Hydro & Power Authority*, 2008 CarswellBC 1232 (B.C.U.C.) (la « décision sur la demande de révision »). Pour statuer, elle a tenu pour avérés l'atteinte historique aux droits ancestraux et au titre aborigène et le manquement du gouvernement à son obligation de consulter. S'appuyant sur l'arrêt *Nation Haïda*, elle a conclu qu'il fallait [TRADUCTION] « davantage qu'une atteinte sous-jacente ». Le CTCS devait démontrer que le CAÉ de 2007 aurait un « effet préjudiciable » sur les droits ancestraux des Premières nations qui en faisaient partie. Après avoir appliqué ce critère à ses conclusions de fait, elle a statué que l'[TRADUCTION] « examen visé à l'article 71 n'a pas pour effet d'approuver ou de transférer une licence ou une autorisation ou d'en modifier le titulaire, de sorte qu'en l'absence de nouveaux impacts physiques, faire droit [sans consultation] à une demande présentée sous le régime de l'article 71 ne constituerait pas une erreur de compétence ». La Commission a donc estimé que sa décision

error was committed in failing to include consultation with the First Nations in the Scoping Order beyond the general consultation extended to all stakeholders.

[15] The Commission went on to conclude that the 2007 EPA was in the public interest and should be accepted. It stated:

> In the circumstances of this review, evidence regarding consultation with respect to the historical, continuing infringement can reasonably be expected to be of no assistance for the same reasons there is no jurisdictional error, that is, the limited scope of the section 71 review, and there are no new physical impacts.

[16] In essence, the Commission took the view that the 2007 EPA would have no physical impact on the existing water levels in the Nechako River and hence it would not change the current management of its fishery. The Commission further found that its decision would not involve any transfer or change in the project's licences or operations. Consequently, the Commission concluded that its decision would have no adverse impact on the pending claims or rights of the CSTC First Nations such that there was no need to rescope the hearing to permit further argument on the duty to consult.

C. *The Judgment of the Court of Appeal, 2009 BCCA 67, 89 B.C.L.R. (4th) 298 (Donald, Huddart and Bauman JJ.A.)*

[17] The CSTC appealed the Reconsideration Decision and the approval of the 2007 EPA to the British Columbia Court of Appeal. The Court, *per* Donald J.A., reversed the Commission's orders and remitted the case back to the Commission for "evidence and argument on whether a duty to consult and, if necessary, accommodate the [CSTC First Nations] exists and, if so, whether the duty has been met in respect of the filing of the 2007 EPA" (para. 69).

concernant le CAÉ de 2007 n'aurait pas d'effet préjudiciable sur les intérêts des Premières nations du CTCS. L'obligation de consulter n'avait donc pas pris naissance, et la Commission n'a pas commis d'erreur de compétence en refusant d'inclure dans le cadre de l'audience la consultation des Premières nations, en sus de la consultation générale de tous les intéressés.

[15] La Commission a ensuite conclu que le CAÉ de 2007 était dans l'intérêt public et devait être approuvé :

> [TRADUCTION] Dans les circonstances du présent examen, on peut raisonnablement tenir pour inutile la preuve relative à la consultation sur l'atteinte historique et continue pour les mêmes raisons qu'il n'y a pas d'erreur de compétence, soit la portée limitée de l'examen visé à l'article 71 et l'absence de nouveaux impacts physiques.

[16] Essentiellement, la Commission a opiné que le CAÉ de 2007 n'aurait pas d'impact physique sur les niveaux d'eau existants de la rivière Nechako, de sorte qu'il ne modifierait pas la gestion des stocks de poissons. Elle a aussi estimé que sa décision ne nécessiterait ni cession ni modification des licences ou des activités d'exploitation. Elle est donc arrivée à la conclusion que sa décision n'aurait aucun effet préjudiciable sur les revendications ou les droits des Premières nations du CTCS, de sorte qu'il n'était pas nécessaire de recadrer l'audience pour permettre que soit débattue plus avant la question de l'obligation de consulter.

C. *Le jugement de la Cour d'appel, 2009 BCCA 67, 89 B.C.L.R. (4th) 298 (les juges Donald, Huddart et Bauman)*

[17] Le CTCS a contesté devant la Cour d'appel de la Colombie-Britannique la décision sur la demande de révision et l'approbation du CAÉ de 2007. Au nom de la Cour d'appel, le juge Donald a annulé les ordonnances et renvoyé l'affaire à la Commission pour qu'elle entende [TRADUCTION] « preuve et arguments sur la question de savoir s'il existe ou non une obligation de consulter [les Premières nations du CTCS] et, au besoin, d'arriver à un accord avec elles et, dans l'affirmative, sur la question de savoir si l'obligation a été respectée relativement au dépôt du CAÉ de 2007 » (par. 69).

[18] The Court of Appeal found that the Commission had jurisdiction to consider the issue of consultation. The Commission had the power to decide questions of law, and hence constitutional issues relating to the duty to consult.

[19] The Court of Appeal went on to hold that the Commission acted prematurely by rejecting the application for reconsideration. Donald J.A., writing for the Court, stated:

> . . . the Commission wrongly decided something as a preliminary matter which properly belonged in a hearing of the merits. The logic flaw was in predicting that consultation could have produced no useful outcome. Put another way, the Commission required a demonstration that the [CSTC] would win the point as a precondition for a hearing into the very same point.
>
> I do not say that the Commission would be bound to find a duty to consult here. The fault in the Commission's decision is in not entertaining the issue of consultation within the scope of a full hearing when the circumstances demanded an inquiry. [paras. 61-62]

[20] The Court of Appeal held that the honour of the Crown obliged the Commission to decide the consultation issue, and that "the tribunal with the power to approve the plan must accept the responsibility to assess the adequacy of consultation" (para. 53). Unlike the Commission, the Court of Appeal did not consider whether the 2007 EPA was capable of having an adverse impact on a pending claim or right of the CSTC First Nations. The Court of Appeal did not criticize the Commission's adverse impacts finding. Rather, it appears to have concluded that despite these findings, the Commission was obliged to consider whether consultation could be "useful". In finding that the Commission should have considered the consultation issue, the Court of Appeal appears to have taken a broader view than did the Commission as to when a duty to consult may arise.

[21] The Court of Appeal suggested that a failure to consider consultation risked the approval of a contract in breach of the Crown's constitutional

[18] La Cour d'appel conclut que la Commission avait compétence pour se pencher sur la question de la consultation. La Commission pouvait trancher des questions de droit et, par conséquent, toute question constitutionnelle liée à l'obligation de consulter.

[19] La Cour d'appel opine ensuite que la Commission a prématurément rejeté la demande de révision. Le juge Donald dit ce qui suit au nom de la juridiction d'appel :

> [TRADUCTION] . . . la Commission a tranché une question tenue erronément pour préliminaire alors qu'il s'agissait d'une question de fond. La faille logique a consisté à présumer l'inutilité de la consultation. Autrement dit, la Commission a exigé comme condition préalable à l'examen des prétentions que [le CTCS] en démontre d'abord la justesse.
>
> Je ne dis pas que la Commission serait tenue de conclure à l'existence d'une obligation de consulter en l'espèce. L'erreur de la Commission est de ne pas avoir considéré la question de la consultation dans le cadre d'une audience en bonne et due forme alors que les circonstances exigeaient un examen. [par. 61-62]

[20] La Cour d'appel conclut que l'honneur de la Couronne obligeait la Commission à trancher la question de la consultation et que [TRADUCTION] « le tribunal administratif doté du pouvoir d'approuver le projet doit accepter l'obligation de se prononcer sur le caractère adéquat de la consultation » (par. 53). Contrairement à la Commission, la Cour d'appel ne se demande pas si le CAÉ de 2007 était susceptible d'avoir un effet préjudiciable sur quelque revendication ou droit des Premières nations du CTCS. Elle ne reproche pas à la Commission sa conclusion sur l'effet préjudiciable. Elle semble plutôt estimer que, malgré cette conclusion, la Commission était tenue de déterminer si la consultation pouvait être « utile ». En statuant que la Commission aurait dû examiner la question de la consultation, la Cour d'appel paraît interpréter plus largement que la Commission les conditions auxquelles il y a obligation de consulter.

[21] La Cour d'appel laisse entendre que l'omission de considérer la question de la consultation risquait d'entraîner l'approbation d'un contrat

duty. Donald J.A. asked, "How can a contract formed by a Crown agent in breach of a constitutional duty be in the public interest? The existence of such a duty and the allegation of the breach must form part and parcel of the public interest inquiry" (para. 42).

[22] Alcan and BC Hydro appeal to this Court. They argue that the Court of Appeal took too wide a view of the Crown's duty to consult and of the role of tribunals in deciding consultation issues. In view of the Commission's task under its constituent statute and the evidence before it, Alcan and BC Hydro submit that the Commission correctly concluded that it had no duty to consider the consultation issue raised by the CSTC, since, however much participation was accorded, there was no possibility of finding a duty to consult with respect to the 2007 EPA.

[23] The CSTC argues that the Court of Appeal correctly held that the Commission erred in refusing to rescope its proceeding to allow submissions on the consultation issue. It does not pursue earlier procedural arguments in this Court.

II. The Legislative Framework

A. *Legislation Regarding the Public Interest Determination*

[24] The 2007 EPA was subject to review before the Commission under the authority of s. 71 of the *Utilities Commission Act* to determine whether it was in the public interest. Prior to May 2008, this determination was to be based on the quantity of energy to be supplied; the availability of supplies; the price and availability of any other form of energy; the price of the energy supplied to a public utility company; and "any other factor that the commission considers relevant to the public interest":

au mépris de l'obligation constitutionnelle de la Couronne. Le juge Donald pose la question suivante : [TRADUCTION] « Comment un contrat conclu par un mandataire de la Couronne dans le non-respect d'une obligation constitutionnelle peut-il être dans l'intérêt public? L'existence d'une telle obligation et l'allégation de non-respect doivent faire partie intégrante de l'examen relatif à l'intérêt public » (par. 42).

[22] Alcan et BC Hydro interjettent appel devant notre Cour. Elles soutiennent que la Cour d'appel a interprété trop largement l'obligation de la Couronne de consulter et le pouvoir du tribunal administratif de trancher les questions touchant à la consultation. Vu le mandat incombant à la Commission suivant sa loi constitutive et la preuve dont elle disposait, Alcan et BC Hydro prétendent que la Commission a conclu à juste titre qu'elle n'était pas tenue d'examiner la question de la consultation soulevée par le CTCS, car peu importe l'importance du droit de participation reconnu, il était impossible de conclure à l'existence d'une obligation de consulter relativement au CAÉ de 2007.

[23] Le CTCS avance que la Cour d'appel a eu raison de conclure que la Commission avait refusé à tort de redéfinir le cadre de l'audience de manière à permettre la présentation d'observations sur la question de la consultation. Il ne fait plus valoir les arguments procéduraux invoqués devant les tribunaux inférieurs.

II. Le cadre législatif

A. *Dispositions législatives régissant la décision relative à l'intérêt public*

[24] L'article 71 de la *Utilities Commission Act* prévoyait que la Commission devait examiner le CAÉ de 2007 pour déterminer si son approbation était dans l'intérêt public. Avant le mois de mai 2008, la décision devait tenir compte de la quantité d'énergie fournie, de la disponibilité de l'approvisionnement, du prix et de la disponibilité de toute autre forme d'énergie, du prix de l'énergie fournie à une entreprise de services publics et de [TRADUCTION] « tout autre élément jugé pertinent

Utilities Commission Act, s. 71(2)(a) to (e). Effective May 2008, these considerations were expanded to include "the government's energy objectives" and its long-term resource plans: s. 71(2.1)(a) and (b). The public interest clause, however, was narrowed to considerations of the interests of potential British Columbia public utility customers: s. 71(2.1)(d).

B. *Legislation on the Commission's Remedial Powers*

[25] Based on the above considerations, the Commission may issue an order approving the proposed contract under s. 71(2.4) of the *Utilities Commission Act* if it is found to be in the public interest. If it is not found to be in the public interest, the Commission can issue an order declaring the contract unenforceable, either wholly or in part, or "make any other order it considers advisable in the circumstances": s. 71(2) and (3).

C. *Legislation on the Commission's Jurisdiction and Appeals*

[26] Section 79 of the *Utilities Commission Act* states that all findings of fact made by the Commission within its jurisdiction are "binding and conclusive". This is supplemented by s. 105 which grants the Commission "exclusive jurisdiction in all cases and for all matters in which jurisdiction is conferred on it by this or any other Act". An appeal, however, lies from a decision or order of the Commission to the Court of Appeal with leave: s. 101(1).

[27] Together, ss. 79 and 105 of the *Utilities Commission Act* constitute a "privative clause" as defined in s. 1 of the British Columbia *Administrative Tribunals Act*, S.B.C. 2004, c. 45. Under s. 58 of the *Administrative Tribunals Act*, this privative clause attracts a "patently unreasonable" standard of judicial review to "a finding of fact or law or

eu égard à l'intérêt public » : al. 71(2)a) à e) de la *Utilities Commission Act*. À compter de mai 2008, se sont ajoutées les considérations suivantes : les [TRADUCTION] « objectifs énergétiques du gouvernement » et son plan à long terme en matière de ressources : al. 71(2.1)a) et b). Or, la disposition portant sur l'intérêt public a vu sa portée ramenée à la prise en compte des intérêts des clients éventuels d'une entreprise de services publics de la Colombie-Britannique : al. 71(2.1)d).

B. *Dispositions législatives régissant le pouvoir de réparation de la Commission*

[25] Au vu des considérations susmentionnées, la Commission peut, si elle juge qu'il est dans l'intérêt public de le faire, rendre une ordonnance approuvant le contrat projeté en application du par. 71(2.4) de la *Utilities Commission Act*. Si elle arrive à la conclusion contraire concernant l'intérêt public, elle peut, par voie d'ordonnance, déclarer le contrat inapplicable, en totalité ou en partie, ou [TRADUCTION] « rendre toute autre ordonnance qu'elle juge indiquée dans les circonstances » : par. 71(2) et (3).

C. *Dispositions législatives régissant la compétence de la Commission et le droit d'appel*

[26] L'article 79 de la *Utilities Commission Act* dispose que les conclusions de fait tirées par la Commission dans les limites de sa compétence sont [TRADUCTION] « opposables et définitives ». L'article 105 confère en outre à la Commission le [TRADUCTION] « pouvoir exclusif de statuer dans toute affaire et sur toute question relevant de sa compétence suivant la présente loi ou un autre texte législatif ». Ses décisions et ordonnances peuvent cependant être contestées devant la Cour d'appel, sur autorisation : par. 101(1).

[27] Ensemble, les art. 79 et 105 de la *Utilities Commission Act* constituent une [TRADUCTION] « disposition d'inattaquabilité » au sens de l'article premier de l'*Administrative Tribunals Act* de la Colombie-Britannique, S.B.C. 2004, ch. 45. Suivant l'art. 58 de l'*Administrative Tribunals Act*, cette disposition d'inattaquabilité assujettit à la norme de

an exercise of discretion by the tribunal in respect of a matter over which it has exclusive jurisdiction under a privative clause"; a standard of correctness is to be applied in the review of "all [other] matters".

[28] The jurisdiction of the commission is also arguably affected by s. 44(1) of the *Administrative Tribunals Act* which applies to the Commission by virtue of s. 2(4) of the *Utilities Commission Act*. Section 44(1) of the *Administrative Tribunals Act* states that "[t]he tribunal does not have jurisdiction over constitutional questions". A "constitutional question" is defined in s. 1 of the *Administrative Tribunals Act* by s. 8 of the *Constitutional Question Act*, R.S.B.C. 1996, c. 68. Section 8(2) says:

> **8.** . . .
>
> (2) If in a cause, matter or other proceeding
>
> (a) the constitutional validity or constitutional applicability of any law is challenged, or
>
> (b) an application is made for a constitutional remedy,
>
> the law must not be held to be invalid or inapplicable and the remedy must not be granted until after notice of the challenge or application has been served on the Attorney General of Canada and the Attorney General of British Columbia in accordance with this section.

A "constitutional remedy" is defined as "a remedy under section 24(1) of the *Canadian Charter of Rights and Freedoms* other than a remedy consisting of the exclusion of evidence or consequential on such exclusion": *Constitutional Question Act*, s. 8(1).

D. *Section 35 of the Constitution Act, 1982*

[29] Section 35 of the *Constitution Act, 1982* reads:

contrôle de la décision « manifestement déraisonnable » [TRADUCTION] « la conclusion de fait ou de droit ou l'exercice du pouvoir discrétionnaire relatifs à une question sur laquelle le tribunal a compétence exclusive du fait de l'existence d'une disposition d'inattaquabilité ». La norme de contrôle de la décision correcte vaut pour [TRADUCTION] « toute [autre] question ».

[28] On peut aussi soutenir que le par. 44(1) de l'*Administrative Tribunals Act* a une incidence sur la compétence de la Commission en ce qu'il s'applique à celle-ci suivant le par. 2(4) de la *Utilities Commission Act*. Le paragraphe 44(1) de l'*Administrative Tribunals Act* dispose qu'[TRADUCTION] « [u]n tribunal administratif n'a pas compétence pour trancher une question constitutionnelle ». L'article premier de l'*Administrative Tribunals Act* délimite cette matière par renvoi à l'art. 8 de la *Constitutional Question Act*, R.S.B.C. 1996, ch. 68. Voici le texte du par. 8(2) de cette loi :

[TRADUCTION]

> **8.** . . .
>
> (2) Lorsque dans une instance, y compris un dossier ou une affaire,
>
> a) la validité ou l'applicabilité constitutionnelle d'une loi est contestée ou
>
> b) une réparation constitutionnelle est demandée,
>
> la loi ne doit pas être tenue pour invalide ou inapplicable, et la réparation ne doit pas être accordée sans qu'un avis de la contestation ou de la demande n'ait été signifié au procureur général du Canada et au procureur général de la Colombie-Britannique.

La [TRADUCTION] « réparation constitutionnelle » est définie comme étant « la réparation visée au par. 24(1) de la *Loi constitutionnelle de 1982*, hormis celle consistant à écarter un élément de preuve ou découlant d'une telle mesure » : *Constitutional Question Act*, par. 8(1).

D. *L'article 35 de la Loi constitutionnelle de 1982*

[29] Voici le libellé de l'art. 35 de la *Loi constitutionnelle de 1982* :

35. (1) The existing aboriginal and treaty rights of the aboriginal peoples of Canada are hereby recognized and affirmed.

(2) In this Act, "aboriginal peoples of Canada" includes the Indian, Inuit and Métis peoples of Canada.

(3) For greater certainty, in subsection (1) "treaty rights" includes rights that now exist by way of land claims agreements or may be so acquired.

(4) Notwithstanding any other provision of this Act, the aboriginal and treaty rights referred to in subsection (1) are guaranteed equally to male and female persons.

III. The Issues

[30] The main issues that must be resolved are: (1) whether the Commission had jurisdiction to consider consultation; and (2) if so, whether the Commission's refusal to rescope the inquiry to consider consultation should be set aside. In order to resolve these issues, it is necessary to consider when a duty to consult arises and the role of tribunals in relation to the duty to consult. These reasons will therefore consider:

1. When a duty to consult arises;
2. The role of tribunals in consultation;
3. The Commission's jurisdiction to consider consultation;
4. The Commission's Reconsideration Decision;
5. The Commission's conclusion that approval of the 2007 EPA was in the public interest.

IV. Analysis

A. *When Does the Duty to Consult Arise?*

[31] The Court in *Haida Nation* answered this question as follows: the duty to consult arises "when

35. (1) Les droits existants — ancestraux ou issus de traités — des peuples autochtones du Canada sont reconnus et confirmés.

(2) Dans la présente loi, « peuples autochtones du Canada » s'entend notamment des Indiens, des Inuits et des Métis du Canada.

(3) Il est entendu que sont compris parmi les droits issus de traités, dont il est fait mention au paragraphe (1), les droits existants issus d'accords sur des revendications territoriales ou ceux susceptibles d'être ainsi acquis.

(4) Indépendamment de toute autre disposition de la présente loi, les droits — ancestraux ou issus de traités — visés au paragraphe (1) sont garantis également aux personnes des deux sexes.

III. Les questions en litige

[30] Les principales questions à trancher sont les suivantes : (1) la Commission avait-elle compétence pour se prononcer sur la consultation et (2), dans l'affirmative, le refus de la Commission de redéfinir le cadre de l'audience pour que la question de la consultation soit abordée devrait-il être annulé? Il faut dès lors déterminer les conditions auxquelles il y a obligation de consulter et examiner le rôle du tribunal administratif à l'égard de cette obligation. J'examinerai donc successivement ce qui suit :

1. les conditions auxquelles il y a obligation de consulter;
2. le rôle du tribunal administratif à l'égard de la consultation;
3. le pouvoir de la Commission de se prononcer sur la consultation;
4. la décision de la Commission sur la demande de révision;
5. la conclusion de la Commission portant que l'approbation du CAÉ de 2007 servait l'intérêt public.

IV. Analyse

A. *À quelles conditions y a-t-il obligation de consulter?*

[31] Dans l'arrêt *Nation Haïda*, notre Cour établit que l'obligation de consulter prend naissance

the Crown has knowledge, real or constructive, of the potential existence of the Aboriginal right or title and contemplates conduct that might adversely affect it" (para. 35). This test can be broken down into three elements: (1) the Crown's knowledge, actual or constructive, of a potential Aboriginal claim or right; (2) contemplated Crown conduct; and (3) the potential that the contemplated conduct may adversely affect an Aboriginal claim or right. I will discuss each of these elements in greater detail. First, some general comments on the source and nature of the duty to consult are in order.

[32] The duty to consult is grounded in the honour of the Crown. It is a corollary of the Crown's obligation to achieve the just settlement of Aboriginal claims through the treaty process. While the treaty claims process is ongoing, there is an implied duty to consult with the Aboriginal claimants on matters that may adversely affect their treaty and Aboriginal rights, and to accommodate those interests in the spirit of reconciliation: *Haida Nation*, at para. 20. As stated in *Haida Nation*, at para. 25:

> Put simply, Canada's Aboriginal peoples were here when Europeans came, and were never conquered. Many bands reconciled their claims with the sovereignty of the Crown through negotiated treaties. Others, notably in British Columbia, have yet to do so. The potential rights embedded in these claims are protected by s. 35 of the *Constitution Act, 1982*. The honour of the Crown requires that these rights be determined, recognized and respected. This, in turn, requires the Crown, acting honourably, to participate in processes of negotiation. While this process continues, the honour of the Crown may require it to consult and, where indicated, accommodate Aboriginal interests.

[33] The duty to consult described in *Haida Nation* derives from the need to protect Aboriginal interests while land and resource claims are ongoing or when the proposed action may impinge on an Aboriginal right. Absent this duty, Aboriginal groups seeking to protect their interests pending a

« lorsque la Couronne a connaissance, concrètement ou par imputation, de l'existence potentielle du droit ou titre ancestral revendiqué et envisage des mesures susceptibles d'avoir un effet préjudiciable sur celui-ci » (par. 35). Ce critère comporte trois volets : (1) la connaissance par la Couronne, réelle ou imputée, de l'existence possible d'une revendication autochtone ou d'un droit ancestral, (2) la mesure envisagée de la Couronne et (3) la possibilité que cette mesure ait un effet préjudiciable sur une revendication autochtone ou un droit ancestral. J'examinerai chacun de ces volets plus en détail. D'abord, quelques remarques générales sont de mise concernant la source et la nature de l'obligation de consulter.

[32] L'obligation de consulter s'origine de l'honneur de la Couronne. Elle est un corollaire de celle d'arriver à un règlement équitable des revendications autochtones au terme du processus de négociation de traités. Lorsque les négociations sont en cours, la Couronne a l'obligation tacite de consulter les demandeurs autochtones sur ce qui est susceptible d'avoir un effet préjudiciable sur leurs droits issus de traités et leurs droits ancestraux, et de trouver des mesures d'accommodement dans un esprit de conciliation : *Nation Haïda*, par. 20. Comme le dit la Cour au par. 25 de cet arrêt :

> En bref, les Autochtones du Canada étaient déjà ici à l'arrivée des Européens; ils n'ont jamais été conquis. De nombreuses bandes ont concilié leurs revendications avec la souveraineté de la Couronne en négociant des traités. D'autres, notamment en Colombie-Britannique, ne l'ont pas encore fait. Les droits potentiels visés par ces revendications sont protégés par l'art. 35 de la *Loi constitutionnelle de 1982*. L'honneur de la Couronne commande que ces droits soient déterminés, reconnus et respectés. Pour ce faire, la Couronne doit agir honorablement et négocier. Au cours des négociations, l'honneur de la Couronne peut obliger celle-ci à consulter les Autochtones et, s'il y a lieu, à trouver des accommodements à leurs intérêts.

[33] L'obligation de consulter dont il est fait état dans l'arrêt *Nation Haïda* découle de la nécessité de protéger les intérêts autochtones lorsque des terres ou des ressources font l'objet de revendications ou que la mesure projetée peut empiéter sur un droit ancestral. Sans le respect de cette

final settlement would need to commence litigation and seek interlocutory injunctions to halt the threatening activity. These remedies have proven time-consuming, expensive, and are often ineffective. Moreover, with a few exceptions, many Aboriginal groups have limited success in obtaining injunctions to halt development or activities on the land in order to protect contested Aboriginal or treaty rights.

[34] Grounded in the honour of the Crown, the duty has both a legal and a constitutional character: *R. v. Kapp*, 2008 SCC 41, [2008] 2 S.C.R. 483, at para. 6. The duty seeks to provide protection to Aboriginal and treaty rights while furthering the goals of reconciliation between Aboriginal peoples and the Crown. Rather than pitting Aboriginal peoples against the Crown in the litigation process, the duty recognizes that both must work together to reconcile their interests. It also accommodates the reality that often Aboriginal peoples are involved in exploiting the resource. Shutting down development by court injunction may serve the interest of no one. The honour of the Crown is therefore best reflected by a requirement for consultation with a view to reconciliation.

[35] *Haida Nation* sets the framework for dialogue prior to the final resolution of claims by requiring the Crown to take contested or established Aboriginal rights into account *before* making a decision that may have an adverse impact on them: J. Woodward, *Native Law*, vol. 1 (loose-leaf), at p. 5-35. The duty is *prospective*, fastening on rights yet to be proven.

[36] The nature of the duty varies with the situation. The richness of the required consultation increases with the strength of the *prima facie* Aboriginal claim and the seriousness of the impact on the underlying Aboriginal or treaty right: *Haida Nation*, at paras. 43-45, and *Taku River Tlingit First Nation v. British Columbia (Project Assessment*

obligation, un groupe autochtone désireux de protéger ses intérêts jusqu'au règlement d'une revendication devrait s'adresser au tribunal pour obtenir une injonction interlocutoire ordonnant la cessation de l'activité préjudiciable. L'expérience enseigne qu'il s'agit d'une démarche longue, coûteuse et souvent vaine. De plus, sauf quelques exceptions, les groupes autochtones réussissent rarement à obtenir une injonction pour mettre fin à la mise en valeur des terres ou aux activités qui y sont exercées et ainsi protéger des droits ancestraux ou issus de traités qui sont contestés.

[34] Fondée sur l'honneur de la Couronne, l'obligation revêt un caractère à la fois juridique et constitutionnel : *R. c. Kapp*, 2008 CSC 41, [2008] 2 R.C.S. 483, par. 6. Elle vise la protection des droits ancestraux et issus de traités, ainsi que la réalisation de l'objectif de conciliation des intérêts des Autochtones et de ceux de la Couronne. Elle reconnaît que les deux parties doivent collaborer pour concilier leurs intérêts au lieu de s'opposer dans un litige. Elle tient aussi compte du fait que les peuples autochtones participent souvent à l'exploitation des ressources. Empêcher la mise en valeur par voie d'injonction risque de ne servir l'intérêt de personne. L'honneur de la Couronne est donc davantage compatible avec une obligation de consulter axée sur la conciliation des intérêts respectifs des parties.

[35] L'arrêt *Nation Haïda* jette les bases du dialogue préalable au règlement définitif des revendications en obligeant la Couronne à tenir compte des droits ancestraux contestés ou établis *avant* de prendre une décision susceptible d'avoir un effet préjudiciable sur ces droits : J. Woodward, *Native Law*, vol. 1 (feuilles mobiles), p. 5-35. Il s'agit d'une obligation de nature *prospective* prenant appui sur des droits dont l'existence reste à prouver.

[36] La nature de l'obligation varie en fonction de la situation. La consultation exigée est plus approfondie lorsque la revendication autochtone paraît de prime abord fondée et que l'effet sur le droit ancestral ou issu de traité sous-jacent est grave : *Nation Haïda*, par. 43-45, et *Première nation Tlingit de Taku River c. Colombie-Britannique (Directeur*

Director), 2004 SCC 74, [2004] 3 S.C.R. 550, at para. 32.

[37] The remedy for a breach of the duty to consult also varies with the situation. The Crown's failure to consult can lead to a number of remedies ranging from injunctive relief against the threatening activity altogether, to damages, to an order to carry out the consultation prior to proceeding further with the proposed government conduct: *Haida Nation*, at paras. 13-14.

[38] The duty to consult embodies what Brian Slattery has described as a "generative" constitutional order which sees "section 35 as serving a dynamic and not simply static function" ("Aboriginal Rights and the Honour of the Crown" (2005), 29 *S.C.L.R.* (2d) 433, at p. 440). This dynamicism was articulated in *Haida Nation* as follows, at para. 32:

> . . . the duty to consult and accommodate is part of a process of fair dealing and reconciliation that begins with the assertion of sovereignty and continues beyond formal claims resolution. Reconciliation is not a final legal remedy in the usual sense. Rather, it is a process flowing from rights guaranteed by s. 35(1) of the *Constitution Act, 1982*.

As the post-*Haida Nation* case law confirms, consultation is "[c]oncerned with an ethic of ongoing relationships" and seeks to further an ongoing process of reconciliation by articulating a preference for remedies "that promote ongoing negotiations": D. G. Newman, *The Duty to Consult: New Relationships with Aboriginal Peoples* (2009), at p. 21.

[39] Against this background, I now turn to the three elements that give rise to a duty to consult.

(1) Knowledge by the Crown of a Potential Claim or Right

[40] To trigger the duty to consult, the Crown must have real or constructive knowledge of a

d'évaluation de projet), 2004 CSC 74, [2004] 3 R.C.S. 550, par. 32.

[37] Le recours pour manquement à l'obligation de consulter varie également en fonction de la situation. L'omission de la Couronne de consulter les intéressés peut donner lieu à un certain nombre de mesures allant de l'injonction visant l'activité préjudiciable, à l'indemnisation, voire à l'ordonnance enjoignant au gouvernement de consulter avant d'aller de l'avant avec son projet : *Nation Haïda*, par. 13-14.

[38] L'obligation de consulter s'inscrit dans ce que Brian Slattery qualifie d'ordre constitutionnel [TRADUCTION] « génératif » où « l'article 35 a une fonction dynamique et non purement statique » (« Aboriginal Rights and the Honour of the Crown » (2005), 29 *S.C.L.R.* (2d) 433, p. 440). Ce dynamisme a été formulé comme suit dans l'arrêt *Nation Haïda* (par. 32) :

> . . . l'obligation de consulter et d'accommoder fait partie intégrante du processus de négociation honorable et de conciliation qui débute au moment de l'affirmation de la souveraineté et se poursuit au-delà du règlement formel des revendications. La conciliation ne constitue pas une réparation juridique définitive au sens usuel du terme. Il s'agit plutôt d'un processus découlant des droits garantis par le par. 35(1) de la *Loi constitutionnelle de 1982*.

Comme le confirme la jurisprudence postérieure à cet arrêt, la consultation [TRADUCTION] « s'attache au maintien de relations constantes » et à l'établissement d'un processus permanent de conciliation en ce qu'elle privilégie les mesures « qui favorisent la continuité des négociations » : D. G. Newman, *The Duty to Consult : New Relationships with Aboriginal Peoples* (2009), p. 21.

[39] Sur cette toile de fond, j'examine maintenant les trois éléments qui font naître l'obligation de consulter.

(1) Connaissance par la Couronne de l'existence possible d'une revendication ou d'un droit

[40] Pour qu'elle ait l'obligation de consulter, la Couronne doit avoir connaissance, concrètement

claim to the resource or land to which it attaches: *Haida Nation*, at para. 35. The threshold, informed by the need to maintain the honour of the Crown, is not high. Actual knowledge arises when a claim has been filed in court or advanced in the context of negotiations, or when a treaty right may be impacted: *Mikisew Cree First Nation v. Canada (Minister of Canadian Heritage)*, 2005 SCC 69, [2005] 3 S.C.R. 388, para. 34. Constructive knowledge arises when lands are known or reasonably suspected to have been traditionally occupied by an Aboriginal community or an impact on rights may reasonably be anticipated. While the existence of a potential claim is essential, proof that the claim will succeed is not. What is required is a credible claim. Tenuous claims, for which a strong *prima facie* case is absent, may attract a mere duty of notice. As stated in *Haida Nation*, at para. 37:

Knowledge of a credible but unproven claim suffices to trigger a duty to consult and accommodate. The content of the duty, however, varies with the circumstances, as discussed more fully below. A dubious or peripheral claim may attract a mere duty of notice, while a stronger claim may attract more stringent duties. The law is capable of differentiating between tenuous claims, claims possessing a strong *prima facie* case, and established claims.

[41] The claim or right must be one which actually exists and stands to be affected by the proposed government action. This flows from the fact that the purpose of consultation is to protect unproven or established rights from irreversible harm as the settlement negotiations proceed: Newman, at p. 30, citing *Haida Nation*, at paras. 27 and 33.

(2) Crown Conduct or Decision

[42] Second, for a duty to consult to arise, there must be Crown conduct or a Crown decision that

ou par imputation, d'une revendication visant la ressource ou la terre qui s'y rattache : *Nation Haïda*, par. 35. La norme de preuve applicable, eu égard à la nécessité de préserver l'honneur de la Couronne, n'est pas stricte. Il y a connaissance réelle lorsqu'une revendication a été formulée dans une instance judiciaire ou lors de négociations, ou lorsqu'un droit issu de traité peut être touché : *Première nation crie Mikisew c. Canada (Ministre du Patrimoine canadien)*, 2005 CSC 69, [2005] 3 R.C.S. 388, par. 34. Il y a connaissance par imputation lorsque l'on sait ou que l'on soupçonne raisonnablement que les terres ont été traditionnellement occupées par une collectivité autochtone ou que l'on peut raisonnablement prévoir qu'il y aura une incidence sur des droits. L'existence possible d'une revendication est essentielle, mais il n'est pas nécessaire de prouver que la revendication connaîtra une issue favorable. La revendication doit seulement être crédible. La revendication à l'assise fragile, dont le fondement ne paraît pas plausible à première vue, peut ne faire naître qu'une obligation d'informer. Comme l'affirme notre Cour dans l'arrêt *Nation Haïda* (par. 37) :

La connaissance d'une revendication crédible mais non encore établie suffit à faire naître l'obligation de consulter et d'accommoder. Toutefois, le contenu de l'obligation varie selon les circonstances, comme nous le verrons de façon plus approfondie plus loin. Une revendication douteuse ou marginale peut ne requérir qu'une simple obligation d'informer, alors qu'une revendication plus solide peut faire naître des obligations plus contraignantes. Il est possible en droit de différencier les revendications reposant sur une preuve ténue des revendications reposant sur une preuve à première vue solide et de celles déjà établies.

[41] Il faut que la revendication ou le droit existe réellement et risque d'être compromis par la mesure gouvernementale, car l'objectif de la consultation est de protéger un droit, établi ou non, d'un préjudice irréparable, pendant les négociations en vue d'un règlement : Newman, p. 30, citant *Nation Haïda*, par. 27 et 33.

(2) Mesure ou décision de la Couronne

[42] Deuxièmement, pour que naisse l'obligation de consulter, la mesure ou la décision de la

engages a potential Aboriginal right. What is required is conduct that may adversely impact on the claim or right in question.

[43] This raises the question of what government action engages the duty to consult. It has been held that such action is not confined to government exercise of statutory powers: *Huu-Ay-Aht First Nation v. British Columbia (Minister of Forests)*, 2005 BCSC 697, [2005] 3 C.N.L.R. 74, at paras. 94 and 104; *Wii'litswx v. British Columbia (Minister of Forests)*, 2008 BCSC 1139, [2008] 4 C.N.L.R. 315, at paras. 11-15. This accords with the generous, purposive approach that must be brought to the duty to consult.

[44] Further, government action is not confined to decisions or conduct which have an immediate impact on lands and resources. A potential for adverse impact suffices. Thus, the duty to consult extends to "strategic, higher level decisions" that may have an impact on Aboriginal claims and rights (Woodward, at p. 5-41 (emphasis omitted)). Examples include the transfer of tree licences which would have permitted the cutting of old-growth forest (*Haida Nation*); the approval of a multi-year forest management plan for a large geographic area (*Klahoose First Nation v. Sunshine Coast Forest District (District Manager)*, 2008 BCSC 1642, [2009] 1 C.N.L.R. 110); the establishment of a review process for a major gas pipeline (*Dene Tha' First Nation v. Canada (Minister of Environment)*, 2006 FC 1354, [2007] 1 C.N.L.R. 1, aff'd 2008 FCA 20, 35 C.E.L.R. (3d) 1); and the conduct of a comprehensive inquiry to determine a province's infrastructure and capacity needs for electricity transmission (*An Inquiry into British Columbia's Electricity Transmission Infrastructure & Capacity Needs for the Next 30 Years, Re*, 2009 CarswellBC 3637 (B.C.U.C.)). We leave for another day the question of whether government conduct includes legislative action: see *R. v. Lefthand*, 2007 ABCA 206, 77 Alta. L.R. (4th) 203, at paras. 37-40.

Couronne doit mettre en jeu un droit ancestral éventuel. La mesure doit être susceptible d'avoir un effet préjudiciable sur la revendication ou le droit en question.

[43] Dès lors, la question qui se pose est celle de savoir quelle mesure oblige le gouvernement à consulter. Il a été établi que cette mesure ne s'entend pas uniquement de l'exercice d'un pouvoir conféré par la loi : *Huu-Ay-Aht First Nation c. British Columbia (Minister of Forests)*, 2005 BCSC 697, [2005] 3 C.N.L.R. 74, par. 94 et 104; *Wii'litswx c. British Columbia (Minister of Forests)*, 2008 BCSC 1139, [2008] 4 C.N.L.R. 315, par. 11-15. Cette conclusion s'inscrit dans l'approche généreuse et téléologique que commande l'obligation de consulter.

[44] En outre, une mesure gouvernementale ne s'entend pas uniquement d'une décision ou d'un acte qui a un effet immédiat sur des terres et des ressources. Un simple risque d'effet préjudiciable suffit. Ainsi, l'obligation de consulter naît aussi d'une [TRADUCTION] « décision stratégique prise en haut lieu » qui est susceptible d'avoir un effet sur des revendications autochtones et des droits ancestraux (Woodward, p. 5-41 (italiques omis)). Mentionnons quelques exemples : la cession de concessions de ferme forestière qui auraient permis l'abattage d'arbres dans de vieilles forêts (*Nation Haïda*), l'approbation d'un plan pluriannuel de gestion forestière visant un vaste secteur géographique (*Khaloose First Nation c. Sunshine Coast Forest District (District Manager)*, 2008 BCSC 1642, [2009] 1 C.N.L.R. 110), la création d'un processus d'examen relativement à un gazoduc important (*Première nation Dene Tha' c. Canada (Ministre de l'Environnement)*, 2006 CF 1354 (CanLII), conf. par 2008 CAF 20 (CanLII)), et l'examen approfondi des besoins d'infrastructure et de capacité de transport d'électricité d'une province (*An Inquiry into British Columbia's Electricity Transmission Infrastructure & Capacity Needs for the Next 30 Years, Re*, 2009 CarswellBC 3637 (B.C.U.C.)). La question de savoir si une mesure gouvernementale s'entend aussi d'une mesure législative devra être tranchée dans une affaire ultérieure : voir *R. c. Lefthand*, 2007 ABCA 206, 77 Alta. L.R. (4th) 203, par. 37-40.

(3) Adverse Effect of the Proposed Crown Conduct on an Aboriginal Claim or Right

[45] The third element of a duty to consult is the possibility that the Crown conduct may affect the Aboriginal claim or right. The claimant must show a causal relationship between the proposed government conduct or decision and a potential for adverse impacts on pending Aboriginal claims or rights. Past wrongs, including previous breaches of the duty to consult, do not suffice.

[46] Again, a generous, purposive approach to this element is in order, given that the doctrine's purpose, as stated by Newman, is "to recognize that actions affecting unproven Aboriginal title or rights or treaty rights can have irreversible effects that are not in keeping with the honour of the Crown" (p. 30, citing *Haida Nation*, at paras. 27 and 33). Mere speculative impacts, however, will not suffice. As stated in *R. v. Douglas*, 2007 BCCA 265, 278 D.L.R. (4th) 653, at para. 44, there must an "appreciable adverse effect on the First Nations' ability to exercise their aboriginal right". The adverse effect must be on the future exercise of the right itself; an adverse effect on a First Nation's future negotiating position does not suffice.

[47] Adverse impacts extend to any effect that may prejudice a pending Aboriginal claim or right. Often the adverse effects are physical in nature. However, as discussed in connection with what constitutes Crown conduct, high-level management decisions or structural changes to the resource's management may also adversely affect Aboriginal claims or rights even if these decisions have no "immediate impact on lands and resources": Woodward, at p. 5-41. This is because such structural changes to the resources management may set the stage for further decisions that will have a *direct* adverse impact on land and resources. For example,

(3) Effet préjudiciable de la mesure projetée par la Couronne sur une revendication autochtone ou un droit ancestral

[45] Le troisième élément requis pour qu'il y ait obligation de consulter est la possibilité que la mesure de la Couronne ait un effet sur une revendication autochtone ou un droit ancestral. Le demandeur doit établir un lien de causalité entre la mesure ou la décision envisagée par le gouvernement et un effet préjudiciable éventuel sur une revendication autochtone ou un droit ancestral. Un acte fautif commis dans le passé, telle l'omission de consulter, ne suffit pas.

[46] Une approche généreuse et téléologique est aussi de mise à l'égard de ce troisième élément puisque, comme le dit Newman, l'objectif poursuivi est [TRADUCTION] « de reconnaître que les actes touchant un titre aborigène ou un droit ancestral non encore établi, ou des droits issus de traités, peuvent avoir des répercussions irréversibles qui sont incompatibles avec l'honneur de la Couronne » (p. 30, citant l'arrêt *Nation Haïda*, par. 27 et 33). Cependant, de simples répercussions hypothétiques ne suffisent pas. Comme il appert de l'arrêt *R. c. Douglas*, [2007] BCCA 265, 278 D.L.R. (4th) 653, au par. 44, il doit y avoir un [TRADUCTION] « effet préjudiciable important sur la possibilité qu'une Première nation puisse exercer son droit ancestral ». Le préjudice doit toucher l'exercice futur du droit lui-même, et non seulement la position de négociation ultérieure de la Première nation.

[47] L'effet préjudiciable comprend toute répercussion risquant de compromettre une revendication autochtone ou un droit ancestral. Il est souvent de nature physique. Cependant, comme on l'a vu relativement à ce qui constitue une mesure de la Couronne, la décision prise en haut lieu ou la modification structurelle apportée à la gestion de la ressource risque aussi d'avoir un effet préjudiciable sur une revendication autochtone ou un droit ancestral, et ce, même si elle n'a pas d'[TRADUCTION] « effet immédiat sur les terres et les ressources » : Woodward, p. 5-41. La raison en est qu'une telle modification structurelle de la

a contract that transfers power over a resource from the Crown to a private party may remove or reduce the Crown's power to ensure that the resource is developed in a way that respects Aboriginal interests in accordance with the honour of the Crown. The Aboriginal people would thus effectively lose or find diminished their constitutional right to have their interests considered in development decisions. This is an adverse impact: see *Haida Nation*, at paras. 72-73.

[48] An underlying or continuing breach, while remediable in other ways, is not an adverse impact for the purposes of determining whether a particular government decision gives rise to a duty to consult. The duty to consult is designed to prevent damage to Aboriginal claims and rights while claim negotiations are underway: *Haida Nation*, at para. 33. The duty arises when the Crown has *knowledge*, real or constructive, of the potential or actual existence of the Aboriginal right or title "and contemplates conduct that might adversely affect it": *Haida Nation*, at para. 35 (emphasis added). This test was confirmed by the Court in *Mikisew Cree* in the context of treaty rights, at paras. 33-34.

[49] The question is whether there is a claim or right that potentially may be adversely impacted by the *current* government conduct or decision in question. Prior and continuing breaches, including prior failures to consult, will only trigger a duty to consult if the present decision has the potential of causing a novel adverse impact on a present claim or existing right. This is not to say that there is no remedy for past and continuing breaches, including previous failures to consult. As noted in *Haida Nation*, a breach of the duty to consult may be remedied in various ways, including the awarding of damages. To trigger a fresh duty of consultation — the matter which is here at issue — a contemplated

gestion de la ressource peut ouvrir la voie à d'autres décisions ayant un effet préjudiciable *direct* sur les terres et les ressources. Par exemple, le contrat par lequel la Couronne cède à une partie privée la maîtrise d'une ressource risque de supprimer ou de réduire le pouvoir de la Couronne de faire en sorte que la ressource soit exploitée dans le respect des intérêts autochtones, conformément à l'honneur de la Couronne. Les Autochtones seraient alors dépouillés en tout ou en partie de leur droit constitutionnel de voir leurs intérêts pris en considération dans les décisions de mise en valeur, ce qui constitue un effet préjudiciable : voir l'arrêt *Nation Haïda*, par. 72-73.

[48] Une atteinte sous-jacente ou continue, même si elle ouvre droit à d'autres recours, ne constitue pas un effet préjudiciable lorsqu'il s'agit de déterminer si une décision gouvernementale particulière emporte l'obligation de consulter. La raison d'être de cette obligation est d'empêcher que les revendications autochtones et les droits ancestraux ne soient compromis pendant les négociations auxquelles ils donnent lieu : *Nation Haïda*, par. 33. L'obligation naît lorsque la Couronne a *connaissance*, concrètement ou par imputation, de l'existence potentielle ou réelle du droit ou titre ancestral revendiqué et qu'elle « envisage des mesures susceptibles d'avoir un effet préjudiciable sur celui-ci » : *Nation Haïda*, par. 35 (je souligne). Ce critère est repris par notre Cour relativement à des droits issus de traités dans l'arrêt *Première nation crie Mikisew*, par. 33-34.

[49] Il faut déterminer si une revendication ou un droit est susceptible d'être compromis par la mesure ou la décision *actuelle* du gouvernement. L'atteinte antérieure et continue, y compris l'omission de consulter, ne fait naître l'obligation de consulter que si la décision actuelle risque d'avoir un nouvel effet défavorable sur une revendication actuelle ou un droit existant. Il peut néanmoins y avoir recours pour une atteinte antérieure et continue, y compris l'omission de consulter. Comme le signale la Cour dans l'arrêt *Nation Haïda*, le non-respect de l'obligation de consulter peut donner droit à diverses réparations, dont l'indemnisation. Pour que naisse une nouvelle obligation de

Crown action must put current claims and rights in jeopardy.

[50] Nor does the definition of what constitutes an adverse effect extend to adverse impacts on the negotiating position of an Aboriginal group. The duty to consult, grounded in the need to protect Aboriginal rights and to preserve the future use of the resources claimed by Aboriginal peoples while balancing countervailing Crown interests, no doubt may have the ulterior effect of delaying ongoing development. The duty may thus serve not only as a tool to settle interim resource issues but also, and incidentally, as a tool to achieve longer term compensatory goals. Thus conceived, the duty to consult may be seen as a necessary element in the overall scheme of satisfying the Crown's constitutional duties to Canada's First Nations. However, cut off from its roots in the need to preserve Aboriginal interests, its purpose would be reduced to giving one side in the negotiation process an advantage over the other.

(4) An Alternative Theory of Consultation

[51] As we have seen, the duty to consult arises when: (1) the Crown has knowledge, actual or constructive, of potential aboriginal claims or rights; (2) the Crown proposes conduct or a decision; and (3) that conduct or decision may have an adverse impact on the Aboriginal claims or rights. This requires demonstration of a causal connection between the proposed Crown conduct and a potential adverse impact on an Aboriginal claim or right.

[52] The respondent's submissions are based on a broader view of the duty to consult. It argues that even if the 2007 EPA will have no impact on the Nechako River water levels, the Nechako fisheries

consulter — ce dont il est question en l'espèce —, une mesure envisagée par la Couronne doit mettre en péril une revendication actuelle ou un droit existant.

[50] L'effet préjudiciable ne s'entend pas non plus d'une répercussion négative sur la position de négociation d'un groupe autochtone. L'obligation de consulter, que justifie la nécessité de protéger les droits ancestraux et de préserver l'utilisation ultérieure des ressources revendiquées par les peuples autochtones, compte tenu des intérêts opposés de la Couronne, peut assurément retarder au final la mise en valeur entreprise. Elle peut donc servir non seulement à régler provisoirement une question relative aux ressources, mais aussi, accessoirement, à atteindre un objectif d'indemnisation à long terme. Vue sous cet angle, l'obligation de consulter peut être considérée comme un maillon essentiel du dispositif global permettant à la Couronne de s'acquitter de ses obligations constitutionnelles envers les Premières nations du Canada. Toutefois, dissociée de sa raison d'être qu'est la nécessité de préserver les intérêts autochtones, l'obligation de consulter viserait seulement à favoriser une partie par rapport à une autre dans le processus de négociation.

(4) Interprétation nouvelle de l'obligation de consulter

[51] Rappelons que l'obligation de consulter prend naissance lorsque (1) la Couronne a connaissance, concrètement ou par imputation, de l'existence possible d'une revendication autochtone ou d'un droit ancestral, (2) qu'elle envisage une mesure ou une décision et (3) que cette mesure ou cette décision est susceptible d'avoir un effet préjudiciable sur la revendication autochtone ou le droit ancestral. Il faut donc établir un lien de causalité entre la mesure projetée par la Couronne et l'effet préjudiciable possible sur une revendication autochtone ou un droit ancestral.

[52] L'intimé fonde ses prétentions sur une interprétation plus large de l'obligation de consulter. Il prétend que même si le CAÉ de 2007 n'aura aucun impact sur les niveaux d'eau de la rivière

or the management of the contested resource, the duty to consult may be triggered because the 2007 EPA is part of a larger hydro-electric project which continues to impact its rights. The effect of this proposition is that if the Crown proposes an action, however limited, that relates to a project that impacts Aboriginal claims or rights, a fresh duty to consult arises. The current government action or decision, however inconsequential, becomes the hook that secures and reels in the constitutional duty to consult on the entire resource.

[53] I cannot accept this view of the duty to consult. *Haida Nation* negates such a broad approach. It grounded the duty to consult in the need to preserve Aboriginal rights and claims pending resolution. It confines the duty to consult to adverse impacts flowing from the specific Crown proposal at issue — not to larger adverse impacts of the project of which it is a part. The subject of the consultation is the impact on the claimed rights of the *current* decision under consideration.

[54] The argument for a broader duty to consult invokes the logic of the fruit of the poisoned tree — an evidentiary doctrine that holds that past wrongs preclude the Crown from subsequently benefiting from them. Thus, it is suggested that the failure to consult with the CSTC First Nations on the initial dam and water diversion project prevents any further development of that resource without consulting on the entirety of the resource and its management. Yet, as *Haida Nation* pointed out, the failure to consult gives rise to a variety of remedies, including damages. An order compelling consultation is only appropriate where the proposed Crown conduct, immediate or prospective, may adversely impact on established or claimed rights. Absent this, other remedies may be more appropriate.

Nechako, ses stocks de poissons ou la gestion de la ressource visée par le litige, il peut y avoir obligation de consulter, car le CAÉ de 2007 fait partie d'un projet hydroélectrique qui continue d'avoir des répercussions sur ses droits. Dès lors, si la Couronne projette quelque mesure — aussi modeste soit-elle — se rapportant à un projet qui touche une revendication autochtone ou un droit ancestral, une nouvelle obligation de consulter voit le jour. La mesure ou la décision gouvernementale en cause, qu'elle ait peu de conséquences, voire aucune, devient le fondement de l'obligation constitutionnelle de consulter relativement à la totalité de la ressource.

[53] Je ne peux adhérer à cette interprétation de l'obligation de consulter. L'arrêt *Nation Haïda* écarte une interprétation aussi large. La Cour y fait reposer l'obligation de consulter sur la nécessité de préserver les droits ancestraux allégués jusqu'au règlement des revendications. L'objet de la consultation se limite donc aux seuls effets préjudiciables de la mesure précise projetée par la Couronne, à l'exclusion des effets préjudiciables globaux du projet dont elle fait partie. La consultation s'intéresse à l'effet de la décision *actuellement* considérée sur les droits revendiqués.

[54] La thèse d'une obligation de consulter plus étendue s'appuie sur un principe en matière de preuve — celui du fruit de l'arbre empoisonné — selon lequel la Couronne ne saurait aujourd'hui tirer avantage de ses fautes d'hier. L'intimé prétend donc que l'omission de consulter les Premières nations du CTCS au sujet du projet initial de barrage et de dérivation d'eau empêche toute poursuite de l'exploitation de cette ressource tant qu'il n'y a pas eu consultation sur l'ensemble de la ressource et de sa gestion. Or, comme le fait observer la Cour dans l'arrêt *Nation Haïda*, l'absence de consultation ouvre droit à diverses réparations, y compris l'indemnisation. L'ordonnance de consulter n'est indiquée que lorsque la mesure projetée par la Couronne, qu'elle soit immédiate ou prospective, est susceptible d'avoir un effet préjudiciable sur des droits établis ou revendiqués. Sinon, d'autres réparations peuvent être plus indiquées.

B. *The Role of Tribunals in Consultation*

[55] The duty on a tribunal to consider consultation and the scope of that inquiry depends on the mandate conferred by the legislation that creates the tribunal. Tribunals are confined to the powers conferred on them by their constituent legislation: *R. v. Conway*, 2010 SCC 22, [2010] 1 S.C.R. 765. It follows that the role of particular tribunals in relation to consultation depends on the duties and powers the legislature has conferred on it.

[56] The legislature may choose to delegate to a tribunal the Crown's duty to consult. As noted in *Haida Nation*, it is open to governments to set up regulatory schemes to address the procedural requirements of consultation at different stages of the decision-making process with respect to a resource.

[57] Alternatively, the legislature may choose to confine a tribunal's power to determinations of whether adequate consultation has taken place, as a condition of its statutory decision-making process. In this case, the tribunal is not itself engaged in the consultation. Rather, it is reviewing whether the Crown has discharged its duty to consult with a given First Nation about potential adverse impacts on their Aboriginal interest relevant to the decision at hand.

[58] Tribunals considering resource issues touching on Aboriginal interests may have neither of these duties, one of these duties, or both depending on what responsibilities the legislature has conferred on them. Both the powers of the tribunal to consider questions of law and the remedial powers granted it by the legislature are relevant considerations in determining the contours of that tribunal's jurisdiction: *Conway*. As such, they are also relevant to determining whether a particular tribunal has a duty to consult, a duty to consider consultation, or no duty at all.

[59] The decisions below and the arguments before us at times appear to merge the different

B. *Le rôle du tribunal administratif dans la consultation*

[55] L'obligation du tribunal administratif de se pencher sur la consultation et sur la portée de celle-ci dépend de la mission que lui confie sa loi constitutive. Un tribunal administratif doit s'en tenir à l'exercice des pouvoirs que lui confère sa loi habilitante : *R. c. Conway*, 2010 CSC 22, [2010] 1 R.C.S. 765. Il s'ensuit que le rôle d'un tribunal administratif en ce qui a trait à la consultation tient à ses obligations et à ses attributions légales.

[56] Le législateur peut décider de lui déléguer l'obligation de la Couronne de consulter. Comme le signale la Cour dans l'arrêt *Nation Haïda*, il est loisible aux gouvernements de mettre en place des régimes de réglementation fixant les exigences procédurales de la consultation aux différentes étapes du processus décisionnel relatif à une ressource.

[57] Sinon, il peut lui confier le seul pouvoir de décider si une consultation adéquate a eu lieu, l'exercice de ce pouvoir faisant dès lors partie de son processus décisionnel. En pareil cas, le tribunal administratif ne participe pas à la consultation. Il s'assure plutôt que la Couronne s'est acquittée de son obligation de consulter une Première nation en particulier sur un éventuel effet préjudiciable de la décision en cause sur ses droits ancestraux.

[58] Le tribunal administratif appelé à examiner une question ayant trait à une ressource et ayant une incidence sur des intérêts autochtones peut n'avoir ni l'une ni l'autre de ces obligations, n'avoir que l'une d'elles ou avoir les deux, selon les attributions que lui confère le législateur. Tant son pouvoir légal d'examiner une question de droit que celui d'accorder réparation sont pertinents pour circonscrire sa compétence : *Conway*. Ils sont donc aussi pertinents pour déterminer si un tribunal administratif particulier est tenu d'effectuer une consultation ou de se pencher sur la consultation, ou s'il n'a aucune obligation en la matière.

[59] Les décisions des tribunaux inférieurs et les prétentions formulées devant notre Cour paraissent

duties of consultation and its review. In particular, it is suggested that every tribunal with jurisdiction to consider questions of law has a constitutional duty to consider whether adequate consultation has taken place and, if not, to itself fulfill the requirement regardless of whether its constituent statute so provides. The reasoning seems to be that this power flows automatically from the power of the tribunal to consider legal and hence constitutional questions. Lack of consultation amounts to a constitutional vice that vitiates the tribunal's jurisdiction and, in the case before us, makes it inconsistent with the public interest. In order to perform its duty, it must rectify the vice by itself engaging in the missing consultation.

[60] This argument cannot be accepted, in my view. A tribunal has only those powers that are expressly or implicitly conferred on it by statute. In order for a tribunal to have the power to enter into interim resource consultations with a First Nation, pending the final settlement of claims, the tribunal must be expressly or impliedly authorized to do so. The power to engage in consultation itself, as distinct from the jurisdiction to determine whether a duty to consult exists, cannot be inferred from the mere power to consider questions of law. Consultation itself is not a question of law; it is a distinct and often complex constitutional process and, in certain circumstances, a right involving facts, law, policy, and compromise. The tribunal seeking to engage in consultation itself must therefore possess remedial powers necessary to do what it is asked to do in connection with the consultation. The remedial powers of a tribunal will depend on that tribunal's enabling statute, and will require discerning the legislative intent: *Conway*, at para. 82.

[61] A tribunal that has the power to consider the adequacy of consultation, but does not itself have the power to enter into consultations, should provide whatever relief it considers appropriate in the circumstances, in accordance with the remedial powers expressly or impliedly conferred upon it by

parfois amalgamer les différentes obligations en ce qui concerne la consultation et le contrôle de leur exécution. On prétend plus particulièrement que tout tribunal administratif compétent pour examiner une question de droit a l'obligation constitutionnelle de s'assurer qu'il y a eu consultation adéquate et, s'il n'y en a pas eu, de consulter lui-même les intéressés, que sa loi constitutive le prévoie ou non. Le raisonnement veut que ce pouvoir découle automatiquement du pouvoir du tribunal administratif d'examiner des questions de droit et, par conséquent, des questions constitutionnelles. L'absence de consultation équivaudrait à un vice constitutionnel qui annulerait la compétence du tribunal administratif et qui, en l'espèce, la rendrait contraire à l'intérêt public. Pour s'acquitter de son obligation, le tribunal administratif devrait remédier au vice en effectuant lui-même la consultation.

[60] À mon avis, on ne peut faire droit à cette thèse. Un tribunal administratif n'a que les pouvoirs qui lui sont expressément ou implicitement conférés par la loi. Pour qu'il puisse consulter une Première nation au sujet d'une ressource avant le règlement définitif de revendications, il doit y être expressément ou implicitement autorisé. Le pouvoir de consulter, qui est distinct du pouvoir de déterminer s'il existe une obligation de consulter, ne peut être inféré du simple pouvoir d'examiner une question de droit. La consultation comme telle n'est pas une question de droit. Il s'agit d'un processus constitutionnel distinct, souvent complexe, et dans certaines circonstances, d'un droit mettant en jeu faits, droit, politique et compromis. Par conséquent, le tribunal administratif désireux d'effectuer lui-même la consultation doit avoir le pouvoir de réparation nécessaire pour faire ce à quoi on l'exhorte relativement à la consultation. Le pouvoir de réparation d'un tribunal administratif tient à sa loi habilitante et à l'intention du législateur : *Conway*, par. 82.

[61] Le tribunal administratif doté du pouvoir de se prononcer sur le caractère adéquat de la consultation, mais non du pouvoir d'effectuer celle-ci, doit accorder la réparation qu'il juge indiquée dans les circonstances, conformément aux pouvoirs de réparation qui lui sont expressément ou implicitement

statute. The goal is to protect Aboriginal rights and interests and to promote the reconciliation of interests called for in *Haida Nation*.

[62] The fact that administrative tribunals are confined to the powers conferred on them by the legislature, and must confine their analysis and orders to the ambit of the questions before them on a particular application, admittedly raises the concern that governments may effectively avoid their duty to consult by limiting a tribunal's statutory mandate. The fear is that if a tribunal is denied the power to consider consultation issues, or if the power to rule on consultation is split between tribunals so as to prevent any one from effectively dealing with consultation arising from particular government actions, the government might effectively be able to avoid its duty to consult.

[63] As the B.C. Court of Appeal rightly found, the duty to consult with Aboriginal groups, triggered when government decisions have the potential to adversely affect Aboriginal interests, is a constitutional duty invoking the honour of the Crown. It must be met. If the tribunal structure set up by the legislature is incapable of dealing with a decision's potential adverse impacts on Aboriginal interests, then the Aboriginal peoples affected must seek appropriate remedies in the courts: *Haida Nation*, at para. 51.

[64] Before leaving the role of tribunals in relation to consultation, it may be useful to review the standard of review that courts should apply in addressing the decisions of tribunals. The starting point is *Haida Nation*, at para. 61:

> The existence or extent of the duty to consult or accommodate is a legal question in the sense that it defines a legal duty. However, it is typically premised on an assessment of the facts. It follows that a degree of deference to the findings of fact of the initial adjudicator may be appropriate. . . . Absent error on legal issues, the tribunal may be in a better position to evaluate the issue than the reviewing court, and some degree of

conférés par sa loi habilitante. L'objectif est de protéger les droits et les intérêts des Autochtones et de favoriser la conciliation d'intérêts que préconise notre Cour dans l'arrêt *Nation Haïda*.

[62] Qu'un tribunal administratif doive s'en tenir à l'exercice de ses pouvoirs légaux et ne faire porter son analyse et ses décisions que sur les questions particulières dont il est saisi comporte certes le risque qu'un gouvernement se soustraie de fait à l'obligation de consulter en limitant le mandat d'un tribunal administratif. On peut craindre en effet qu'en privant un tribunal administratif du pouvoir d'examiner les questions relatives à la consultation ou en répartissant le pouvoir de statuer en la matière entre plusieurs tribunaux administratifs de manière qu'aucun d'eux ne puisse se pencher sur l'obligation de consulter que font naître certaines mesures gouvernementales, le gouvernement se soustraie de fait à cette obligation.

[63] Comme le conclut à juste titre la Cour d'appel, l'obligation de consulter les peuples autochtones, qui naît lorsque le gouvernement prend une décision susceptible d'avoir un effet préjudiciable sur leurs intérêts, est une obligation constitutionnelle qui fait intervenir l'honneur de la Couronne et qui doit être respectée. Si le régime administratif mis en place par le législateur ne peut remédier aux éventuels effets préjudiciables d'une décision sur des intérêts autochtones, les Premières nations touchées doivent alors s'adresser à une cour de justice pour obtenir la réparation voulue : *Nation Haïda*, par. 51.

[64] Avant de passer au volet suivant de l'analyse, il me paraît indiqué de préciser quelle norme de contrôle s'applique à la décision du tribunal administratif. Prenons comme point de départ le par. 61 de l'arrêt *Nation Haïda* :

> L'existence et l'étendue de l'obligation de consulter ou d'accommoder sont des questions de droit en ce sens qu'elles définissent une obligation légale. Cependant, la réponse à ces questions repose habituellement sur l'appréciation des faits. Il se peut donc qu'il convienne de faire preuve de déférence à l'égard des conclusions de fait du premier décideur. [. . .] En l'absence d'erreur sur des questions de droit, il est possible que le tribunal

deference may be required. In such a case, the standard of review is likely to be reasonableness. To the extent that the issue is one of pure law, and can be isolated from the issues of fact, the standard is correctness. However, where the two are inextricably entwined, the standard will likely be reasonableness . . . .

[65] It is therefore clear that some deference is appropriate on matters of mixed fact and law, invoking the standard of reasonableness. This, of course, does not displace the need to take express legislative intention into account in determining the appropriate standard of review on particular issues: *Canada (Citizenship and Immigration) v. Khosa*, 2009 SCC 12, [2009] 1 S.C.R. 339. It follows that it is necessary in this case to consider the provisions of the *Administrative Tribunals Act* and the *Utilities Commission Act* in determining the appropriate standard of review, as will be discussed more fully below.

C. *The Commission's Jurisdiction to Consider Consultation*

[66] Having considered the law governing when a duty to consult arises and the role of tribunals in relation to the duty to consult, I return to the questions at issue on appeal.

[67] The first question is whether consideration of the duty to consult was within the mandate of the Commission. This being an issue of jurisdiction, the standard of review at common law is correctness. The relevant statutes, discussed earlier, do not displace that standard. I therefore agree with the Court of Appeal that the Commission did not err in concluding that it had the power to consider the issue of consultation.

[68] As discussed above, issues of consultation between the Crown and Aboriginal groups arise from s. 35 of the *Constitution Act, 1982*. They therefore have a constitutional dimension. The question is whether the Commission possessed the power to

administratif soit mieux placé que le tribunal de révision pour étudier la question, auquel cas une certaine déférence peut s'imposer. Dans ce cas, la norme de contrôle applicable est vraisemblablement la norme de la décision raisonnable. Dans la mesure où la question est une question de droit pur et peut être isolée des questions de fait, la norme applicable est celle de la décision correcte. Toutefois, lorsque les deux types de questions sont inextricablement liées entre elles, la norme de contrôle applicable est vraisemblablement celle de la décision raisonnable . . .

[65] Il est donc clair qu'une certaine déférence s'impose à l'égard d'une décision sur une question mixte de fait et de droit, d'où l'application de la norme de la raisonnabilité. Ce qui n'écarte évidemment pas la nécessité de tenir compte de l'intention expresse du législateur pour déterminer la norme de contrôle qu'il convient d'appliquer dans un cas donné : *Canada (Citoyenneté et Immigration) c. Khosa*, 2009 CSC 12, [2009] 1 R.C.S. 339. Il faut donc, en l'espèce, considérer les dispositions de l'*Administrative Tribunals Act* et de la *Utilities Commission Act* pour arrêter la bonne norme de contrôle, ce dont il est question plus en détail ci-après.

C. *Le pouvoir de la Commission de se pencher sur la consultation*

[66] Après examen du droit régissant l'existence de l'obligation de consulter et le rôle du tribunal administratif relativement à celle-ci, je reviens sur les questions en litige dans le pourvoi.

[67] D'abord, l'examen de l'obligation de consulter relevait-elle du mandat de la Commission? S'agissant d'une question de compétence, la norme de contrôle est, en common law, celle de la décision correcte. Les lois applicables considérées précédemment n'écartent pas cette norme. Je conviens donc avec la Cour d'appel que la Commission n'a pas eu tort de conclure qu'elle avait le pouvoir de se pencher sur la question de la consultation.

[68] Rappelons que la consultation des peuples autochtones par la Couronne découle de l'art. 35 de la *Loi constitutionnelle de 1982*, de sorte qu'elle revêt une dimension constitutionnelle. Il faut déterminer si la Commission avait le pouvoir d'en faire

consider such an issue. As discussed, above, tribunals are confined to the powers conferred on them by the legislature: *Conway*. We must therefore ask whether the *Utilities Commission Act* conferred on the Commission the power to consider the issue of consultation, grounded as it is in the Constitution.

[69] It is common ground that the *Utilities Commission Act* empowers the Commission to decide questions of law in the course of determining whether the 2007 EPA is in the public interest. The power to decide questions of law implies a power to decide constitutional issues that are properly before it, absent a clear demonstration that the legislature intended to exclude such jurisdiction from the tribunal's power (*Conway*, at para. 81; *Paul v. British Columbia (Forest Appeals Commission)*, 2003 SCC 55, [2003] 2 S.C.R. 585, at para. 39). "[S]pecialized tribunals with both the expertise and authority to decide questions of law are in the best position to hear and decide constitutional questions related to their statutory mandates": *Conway*, at para. 6.

[70] Beyond its general power to consider questions of law, the factors the Commission is required to consider under s. 71 of the *Utilities Commission Act*, while focused mainly on economic issues, are broad enough to include the issue of Crown consultation with Aboriginal groups. At the time, s. 71(2)(e) required the Commission to consider "any other factor that the commission considers relevant to the public interest". The constitutional dimension of the duty to consult gives rise to a special public interest, surpassing the dominantly economic focus of the consultation under the *Utilities Commission Act*. As Donald J.A. asked, "How can a contract formed by a Crown agent in breach of a constitutional duty be in the public interest?" (para. 42).

[71] This conclusion is not altered by the *Administrative Tribunals Act*, which provides that a tribunal does not have jurisdiction over

un objet de son examen. Je le répète, un tribunal administratif doit s'en tenir à l'exercice des pouvoirs conférés par le législateur : arrêt *Conway*. Nous devons donc nous demander si la *Utilities Commission Act* reconnaissait à la Commission le pouvoir d'examiner la question de la consultation du fait de l'assise constitutionnelle de celle-ci.

[69] Il est reconnu que la *Utilities Commission Act* investit la Commission du pouvoir de trancher des questions de droit aux fins de déterminer si le CAÉ de 2007 sert l'intérêt public. Le pouvoir d'un tribunal administratif de statuer en droit emporte celui de trancher une question constitutionnelle dont il est régulièrement saisi, sauf lorsqu'il est clairement établi que le législateur a voulu le priver d'un tel pouvoir (*Conway*, par. 81; *Paul c. Colombie-Britannique (Forest Appeals Commission)*, 2003 CSC 55, [2003] 2 R.C.S. 585, par. 39). « [U]n tribunal spécialisé jouissant à la fois de l'expertise et du pouvoir requis pour trancher une question de droit est le mieux placé pour trancher une question constitutionnelle se rapportant à son mandat légal » : *Conway*, par. 6.

[70] Outre les questions de droit qu'elle a le pouvoir général d'examiner, les éléments dont la Commission doit tenir compte suivant l'art. 71 de la *Utilities Commission Act*, bien qu'ils soient surtout axés sur l'économie, sont suffisamment généraux pour englober la consultation des Autochtones par la Couronne. L'alinéa 71(2)e) exigeait aussi de la Commission qu'elle tienne compte de [TRADUCTION] « tout autre élément jugé pertinent eu égard à l'intérêt public ». L'aspect constitutionnel de l'obligation de consulter fait naître un intérêt public spécial qui écarte la prédominance de l'angle économique dans la consultation prévue par la *Utilities Commission Act*. Comme le demande le juge Donald de la Cour d'appel, [TRADUCTION] « Comment un contrat conclu par un mandataire de la Couronne dans le non-respect d'une obligation constitutionnelle peut-il être dans l'intérêt public? » (par. 42).

[71] L'*Administrative Tribunals Act* de la Colombie-Britannique ne modifie pas cette conclusion même si elle prévoit qu'un tribunal administratif

constitutional matters. Section 2(4) of the *Utilities Commission Act* makes certain sections of the *Administrative Tribunals Act* applicable to the Commission. This includes s. 44(1) which provides that "[t]he tribunal does not have jurisdiction over constitutional questions." However, "constitutional question" is defined narrowly in s. 1 of the *Administrative Tribunals Act* as "any question that requires notice to be given under section 8 of the *Constitutional Question Act*". Notice is required only for challenges to the constitutional validity or constitutional applicability of any law, or are application for a constitutional remedy.

[72] The application to the Commission by the CSTC for a rescoping order to address consultation issues does not fall within this definition. It is not a challenge to the constitutional validity or applicability of a law, nor a claim for a constitutional remedy under s. 24 of the *Charter* or s. 52 of the *Constitution Act, 1982*. In broad terms, consultation under s. 35 of the *Constitution Act, 1982* is a constitutional question: *Paul*, para. 38. However, the provisions of the *Administrative Tribunals Act* and the *Constitutional Question Act* do not indicate a clear intention on the part of the legislature to exclude from the Commission's jurisdiction the duty to consider whether the Crown has discharged its duty to consult with holders of relevant Aboriginal interests. It follows that, in applying the test articulated in *Paul* and *Conway*, the Commission has the constitutional jurisdiction to consider the adequacy of Crown consultation in relation to matters properly before it.

[73] For these reasons, I conclude that the Commission had the power to consider whether adequate consultation with concerned Aboriginal peoples had taken place.

[74] While the *Utilities Commission Act* conferred on the Commission the power to consider whether adequate consultation had taken place,

n'a pas compétence en matière constitutionnelle. Le paragraphe 2(4) de la *Utilities Commission Act* assujettit la Commission à certaines dispositions de l'*Administrative Tribunals Act*, dont le par. 44(1), qui dispose qu'[TRADUCTION] « [u]n tribunal administratif n'a pas compétence pour trancher une question constitutionnelle. » Or, le terme [TRADUCTION] « question constitutionnelle » est défini de manière stricte à l'article premier comme s'entendant de « toute question exigeant qu'un avis soit donnée en application de l'article 8 de la *Constitutional Question Act* ». L'avis n'est requis que lorsque la validité ou l'applicabilité constitutionnelle d'une loi est contestée ou qu'une réparation constitutionnelle est demandée.

[72] L'objet de la demande présentée à la Commission par le CTCS pour que le cadre de l'audience soit redéfini de manière à englober la question de la consultation ne correspond pas à cette définition. Il n'y avait ni contestation de la validité ou de l'applicabilité constitutionnelle d'une loi, ni demande de réparation fondée sur l'art. 24 de la *Charte* ou l'art. 52 de la *Loi constitutionnelle de 1982*. De manière générale, la consultation visée à l'art. 35 de la *Loi constitutionnelle de 1982* correspond à une question constitutionnelle : *Paul*, par. 38. Toutefois, l'intention du législateur de soustraire à la compétence de la Commission la question de savoir si la Couronne s'est acquittée de son obligation de consulter les titulaires des droits ancestraux en cause ne ressort ni de l'*Administrative Tribunals Act* ni de la *Constitutional Question Act*. Dès lors, suivant le critère dégagé dans les arrêts *Paul* et *Conway*, la Commission a compétence constitutionnelle pour se pencher sur le caractère adéquat de la consultation effectuée par la Couronne relativement aux questions dont elle est régulièrement saisie.

[73] C'est pourquoi j'estime que la Commission avait le pouvoir de déterminer si les peuples autochtones touchés avaient été convenablement consultés.

[74] Même si la *Utilities Commission Act* confère à la Commission le pouvoir de déterminer si une consultation adéquate a eu lieu, elle ne va pas jusqu'à

its language did not extend to empowering the Commission to engage in consultations in order to discharge the Crown's constitutional obligation to consult. As discussed above, legislatures may delegate the Crown's duty to consult to tribunals. However, the Legislature did not do so in the case of the Commission. Consultation itself is not a question of law, but a distinct constitutional process requiring powers to effect compromise and do whatever is necessary to achieve reconciliation of divergent Crown and Aboriginal interests. The Commission's power to consider questions of law and matters relevant to the public interest does not empower it to itself engage in consultation with Aboriginal groups.

[75] As the Court of Appeal rightly found, the duty to consult with Aboriginal groups, triggered when government decisions have the potential to adversely affect Aboriginal interests, is a constitutional duty invoking the honour of the Crown. It must be met. If the tribunal structure set up by the Legislature is incapable of dealing with a decision's potential adverse impacts on Aboriginal interests, then the Aboriginal peoples affected must seek appropriate remedies in the courts: *Haida Nation*, at para. 51.

D. *The Commission's Reconsideration Decision*

[76] The Commission correctly accepted that it had the power to consider the adequacy of consultation with Aboriginal groups. The reason it decided it would not consider this issue was not for want of power, but because it concluded that the consultation issue could not arise, given its finding that the 2007 EPA would not adversely affect any Aboriginal interest.

[77] As reviewed earlier in these reasons, the Commission held a hearing into the issue of whether the main hearing should be rescoped to permit exploration of the consultation issue. The evidence at this hearing was directed to the issue

l'autoriser à entreprendre elle-même la consultation et à s'acquitter de l'obligation constitutionnelle de la Couronne. Je rappelle que le législateur peut déléguer à un tribunal administratif l'obligation de la Couronne de consulter. Toutefois, en l'espèce, il ne l'a pas fait vis-à-vis de la Commission. La consultation ne constitue pas comme telle une question de droit, mais une démarche constitutionnelle distincte exigeant le pouvoir de transiger et d'accomplir tout ce qui est nécessaire pour concilier les intérêts divergents de la Couronne et des Autochtones. Le pouvoir de la Commission d'examiner les questions de droit et tout élément pertinent pour ce qui concerne l'intérêt public ne l'autorise pas à entreprendre elle-même la consultation des groupes autochtones.

[75] Comme le conclut à juste titre la Cour d'appel, l'obligation de consulter les peuples autochtones, qui naît lorsque le gouvernement prend une décision susceptible d'avoir un effet préjudiciable sur leurs intérêts, est une obligation constitutionnelle qui fait intervenir l'honneur de la Couronne et qui doit être respectée. Lorsque le régime administratif mis en place par le législateur ne peut remédier aux éventuels effets préjudiciables d'une décision sur des intérêts autochtones, les Premières nations touchées doivent s'adresser à une cour de justice pour obtenir la réparation voulue : *Nation Haïda*, par. 51.

D. *La décision de la Commission sur la demande de révision*

[76] La Commission a reconnu à juste titre avoir le pouvoir d'examiner le caractère adéquat de la consultation des groupes autochtones. Elle a décidé de ne pas se pencher sur la question non pas parce qu'elle n'en avait pas le pouvoir, mais parce qu'elle estimait que la question ne pouvait se poser étant donné sa conclusion que le CAÉ de 2007 n'aurait pas d'effet préjudiciable sur quelque intérêt autochtone.

[77] Comme nous l'avons vu, la Commission a tenu une audience sur la question de savoir s'il fallait recadrer l'audience principale de manière à permettre l'examen de la question de la consultation. La preuve alors produite portait sur l'effet

of whether approval of the 2007 EPA would have any adverse impact on the interests of the CSTC First Nations. The Commission considered both the impact of the 2007 EPA on river levels (physical impact) and on the management and control of the resource. The Commission concluded that the 2007 EPA would not have any adverse physical impact on the Nechako River and its fishery. It also concluded that the 2007 EPA did not "transfer or change control of licenses or authorization", negating adverse impacts from management or control changes. The Commission held that an underlying infringement (i.e. failure to consult on the initial project) was not sufficient to trigger a duty to consult. It therefore dismissed the application for reconsideration and declined to rescope the hearing to include consultation issues.

[78] The determination that rescoping was not required because the 2007 EPA could not affect Aboriginal interests is a mixed question of fact and law. As directed by *Haida Nation*, the standard of review applicable to this type of decision is normally reasonableness (understood in the sense that any conclusion resting on incorrect legal principles of law would not be reasonable). However, the provisions of the relevant statutes, discussed earlier, must be considered. The *Utilities Commission Act* provides that the Commission's findings of fact are "binding and conclusive", attracting a patently unreasonable standard under the *Administrative Tribunals Act*. Questions of law must be correctly decided. The question before us is a question of mixed fact and law. It falls between the legislated standards and thus attracts the common law standard of "reasonableness" as set out in *Haida Nation* and *Dunsmuir v. New Brunswick*, 2008 SCC 9, [2008] 1 S.C.R. 190.

[79] A duty to consult arises, as set out above, when there is: (a) knowledge, actual or constructive, by the Crown of a potential Aboriginal claim or right, (b) contemplated Crown conduct, and (c) the potential that the contemplated conduct may

préjudiciable éventuel de l'approbation du CAÉ de 2007 sur les intérêts des Premières nations du CTCS. La Commission a examiné l'effet du CAÉ de 2007 tant sur les niveaux d'eau (impact physique) que sur la gestion de la ressource et sa maîtrise. Elle a conclu que le CAÉ de 2007 n'aurait aucun impact physique négatif sur la rivière Nechako et ses ressources halieutiques. Elle a aussi estimé que le CAÉ de 2007 n'entraînerait [TRADUCTION] « ni transfert ni modification des licences ou des autorisations », écartant du coup tout effet préjudiciable causé par une modification touchant à la gestion ou à la maîtrise. Selon elle, une atteinte sous-jacente (soit l'omission de consulter relativement au projet initial) ne suffisait pas pour faire naître une obligation de consulter. Elle a donc rejeté la demande de révision et refusé de recadrer l'audience de manière que celle-ci porte aussi sur la consultation.

[78] La décision selon laquelle le recadrage n'était pas nécessaire parce que le CAÉ de 2007 ne pouvait avoir d'incidence sur des intérêts autochtones porte sur une question mixte de fait et de droit. Suivant l'arrêt *Nation Haïda*, la norme de contrôle applicable à ce genre de décision est habituellement celle de la raisonnabilité (au sens où toute conclusion fondée sur un principe de droit erroné n'est pas raisonnable). Cependant, il faut tenir compte des dispositions des lois applicables examinées précédemment. La *Utilities Commission Act* prévoit que les conclusions de fait de la Commission sont [TRADUCTION] « opposables et définitives », ce qui appelle la norme de la décision manifestement déraisonnable suivant l'*Administrative Tribunals Act*. La décision portant sur une question de droit doit être correcte. Or, la question dont nous sommes saisis est une question mixte de fait et de droit. Elle appelle une norme se situant entre celles établies par la loi, à savoir la norme de la raisonnabilité, issue de la common law et consacrée par les arrêts *Nation Haïda* et *Dunsmuir c. Nouveau-Brunswick*, 2008 CSC 9, [2008] 1 R.C.S. 190.

[79] Rappelons que l'obligation de consulter prend naissance lorsque les éléments suivants sont réunis : a) connaissance par la Couronne, réelle ou imputée, de l'existence possible d'une revendication autochtone ou d'un droit ancestral, b) mesure

adversely affect the Aboriginal claim or right. If, in applying the test set out in *Haida Nation*, it is arguable that a duty to consult could arise, the Commission would have been wrong to dismiss the rescoping order.

[80] The first element of the duty to consult — Crown knowledge of a potential Aboriginal claim or right — need not detain us. The CSTC First Nations' claims were well-known to the Crown; indeed, it was lodged in the Province's formal claims resolution process.

[81] Nor need the second element — proposed Crown conduct or decision — detain us. BC Hydro's proposal to enter into an agreement to purchase electricity from Alcan is clearly proposed Crown conduct. BC Hydro is a Crown corporation. It acts in place of the Crown. No one seriously argues that the 2007 EPA does not represent a proposed action of the Province of British Columbia.

[82] The third element — adverse impact on an Aboriginal claim or right caused by the Crown conduct — presents greater difficulty. The Commission, referring to *Haida Nation*, took the view that to meet the adverse impact requirement, "more than just an underlying infringement" was required. In other words, it must be shown that the 2007 EPA could "adversely affect" a current Aboriginal interest. The Court of Appeal rejected, or must be taken to have rejected, the Commission's view of the matter.

[83] In my view, the Commission was correct in concluding that an underlying infringement in and of itself would not constitute an adverse impact giving rise to a duty to consult. As discussed above, the constitutional foundation of consultation articulated in *Haida Nation* is the potential for adverse impacts on Aboriginal interests of state-authorized

projetée par la Couronne et c) risque que celle-ci ait un effet préjudiciable sur la revendication ou le droit. Si, au regard du critère établi dans l'arrêt *Nation Haïda*, on peut soutenir qu'une obligation de consulter pouvait exister, la Commission a eu tort de rejeter la demande de recadrage de l'audience.

[80] Il n'y a pas lieu de s'arrêter au premier élément — la connaissance par la Couronne de l'existence possible d'une revendication autochtone ou d'un droit ancestral. Les revendications des Premières nations du CTCS étaient bien connues de la Couronne et avaient en fait été formulées dans le cadre du processus formel mis sur pied par la province pour le règlement des revendications autochtones.

[81] Il n'y a pas lieu non plus de s'attarder au deuxième élément — la mesure ou la décision projetée par la Couronne. Le projet de BC Hydro de conclure avec Alcan un contrat d'achat d'électricité constitue clairement une mesure projetée par la Couronne. BC Hydro est une société d'État qui agit au nom de la Couronne. Nul ne prétend sérieusement que le CAÉ de 2007 n'équivaut pas à une mesure projetée par la province de la Colombie-Britannique.

[82] Le troisième élément — l'effet préjudiciable de la mesure de la Couronne sur une revendication autochtone ou un droit ancestral — présente une plus grande difficulté. S'appuyant sur l'arrêt *Nation Haïda*, la Commission a estimé que pour satisfaire à l'exigence de l'effet préjudiciable, il fallait [TRADUCTION] « davantage qu'une atteinte sous-jacente ». En d'autres termes, il fallait démontrer que le CAÉ de 2007 était susceptible d'avoir un « effet préjudiciable » sur un intérêt autochtone actuel. La Cour d'appel rejette le point de vue de la Commission sur ce point, ou c'est du moins ce qu'il faut retenir de sa décision.

[83] À mon sens, la Commission a eu raison de conclure qu'une atteinte sous-jacente ne constitue pas comme telle un effet préjudiciable faisant naître une obligation de consulter. Nous l'avons vu, il appert de l'arrêt *Nation Haïda* que le fondement constitutionnel de la consultation réside dans le risque qu'un projet autorisé par l'État ait

developments. Consultation centres on how the resource is to be developed in a way that prevents irreversible harm to existing Aboriginal interests. Both parties must meet in good faith, in a balanced manner that reflects the honour of the Crown, to discuss development with a view to accommodation of the conflicting interests. Such a conversation is impossible where the resource has long since been altered and the present government conduct or decision does not have any further impact on the resource. The issue then is not consultation about the further development of the resource, but negotiation about compensation for its alteration without having properly consulted in the past. The Commission applied the correct legal test.

[84] It was argued that the Crown breached the rights of the CSTC when it allowed the Kenney Dam and electricity production powerhouse with their attendant impacts on the Nechako River to be built in the 1950s and that this breach is ongoing and shows no sign of ceasing in the foreseeable future. But the issue before the Commission was whether a fresh duty to consult could arise *with respect to the Crown decision before the Commission*. The question was whether the *2007 EPA* could *adversely* impact the claim or rights advanced by the CSTC First Nations in the ongoing claims process. The issue of ongoing and continuing breach was not before the Commission, given its limited mandate, and is therefore not before this Court.

[85] What then is the potential impact of the 2007 EPA on the claims of the CSTC First Nations? The Commission held there could be none. The question is whether this conclusion was reasonable based on the evidence before the Commission on the rescoping inquiry.

[86] The Commission considered two types of potential impacts. The first type of impact was the

un effet préjudiciable sur des intérêts autochtones. La consultation porte principalement sur la façon dont la ressource doit être exploitée pour qu'un préjudice irréparable ne soit pas infligé aux intérêts autochtones existants. Les deux parties doivent se rencontrer de bonne foi, dans un climat de mesure compatible avec l'honneur de la Couronne, pour discuter de mise en valeur dans une optique de conciliation des intérêts divergents. Or, un tel échange est impossible lorsque la ressource est transformée depuis longtemps et que la mesure ou la décision actuelle du gouvernement n'a plus aucune incidence sur elle. Il ne s'agit plus dès lors de consulter sur l'exploitation ultérieure de la ressource, mais plutôt de négocier une indemnisation pour sa transformation intervenue sans consultation adéquate préalable. La Commission a appliqué le bon critère juridique.

[84] Le CTCS fait valoir que la Couronne a porté atteinte à ses droits lorsque, dans les années 1950, elle a autorisé la construction du barrage Kenney et de la centrale électrique, qui a eu des répercussions sur la rivière Nechako, et que cette atteinte est continue et que rien ne permet de croire qu'elle cessera dans un avenir prévisible. Cependant, la question que devait trancher la Commission était celle de savoir si une nouvelle obligation de consulter pouvait prendre naissance *à l'égard de la décision de la Couronne dont était saisie la Commission*. Il lui fallait déterminer si le CAÉ de 2007 pouvait avoir un effet *préjudiciable* sur les droits revendiqués par les Premières nations du CTCS dans le cadre du processus de règlement en cours. Étant donné les limites de son mandat, la Commission n'était pas saisie de la question de l'atteinte continue et se poursuivant toujours, en sorte que notre Cour ne l'est pas non plus.

[85] Quel est donc l'impact possible du CAÉ de 2007 sur les revendications des Premières nations du CTCS? La Commission a conclu qu'il ne pouvait y en avoir. La question est donc celle de savoir si la conclusion était raisonnable au vu de la preuve offerte à l'appui de la demande de recadrage.

[86] La Commission a considéré deux types d'effet possible. Le premier était l'impact physique du

physical impact of the 2007 EPA on the Nechako River and thus on the fishery. The Commission conducted a detailed review of the evidence on the impact the 2007 EPA could have on the river's water levels and concluded it would have none. This was because the levels of water on the river were entirely governed by the water licence and the 1987 agreement between the Province, Canada, and Alcan. The Commission rejected the argument that not approving the 2007 EPA could potentially raise water levels in the Nechako River, to the benefit of the fishery, on the basis of uncontradicted evidence that if Alcan could not sell its excess electricity to BC Hydro it would sell it elsewhere. The Commission concluded that with or without the 2007 EPA, "Alcan operates the Nechako Reservoir to optimize power generation". Finally, the Commission concluded that changes in the timing of water releases for power generation have no effect on water levels in the Nechako River because water releases for power generation flow into the Kemano River to the west, rather than the Nechako River to the east.

[87] The Commission also considered whether the 2007 EPA might bring about organizational, policy, or managerial changes that might adversely affect the claims or rights of the CSTC First Nations. As discussed above, a duty to consult may arise not only with respect to specific physical impacts, but with respect to high-level managerial or policy decisions that may potentially affect the future exploitation of a resource to the detriment of Aboriginal claimants. It noted that a "section 71 review does not approve, transfer or change control of licenses or authorization". Approval of the 2007 EPA would not effect management changes, ruling out any attendant adverse impact. This, plus the absence of physical impact, led the Commission to conclude that the 2007 EPA had no potential to adversely impact on Aboriginal interests.

CAÉ de 2007 sur la rivière Nechako et, par conséquent, sur le poisson. La Commission a examiné minutieusement les éléments de preuve sur les effets que le CAÉ de 2007 pouvait avoir sur les niveaux d'eau de la rivière et elle a conclu qu'il n'y en aurait pas. En fait, les niveaux d'eau de la rivière relevaient entièrement du permis d'exploitation hydraulique et de l'accord de 1987 intervenu entre la province, le Canada et Alcan. La Commission a rejeté l'argument voulant que l'omission d'approuver le CAÉ de 2007 puisse entraîner une augmentation des niveaux d'eau de la rivière Nechako, et favoriser ainsi la pêche, eu égard à la preuve non contredite selon laquelle si Alcan ne pouvait vendre ses surplus d'électricité à BC Hydro, elle trouverait un autre preneur. Elle a conclu qu'avec ou sans le CAÉ de 2007, [TRADUCTION] « Alcan exploite le réservoir Nechako dans le but d'optimiser la production d'énergie ». Enfin, la Commission a conclu que la modification du calendrier des lâchers d'eau destinés à la production d'électricité n'avait aucun impact sur les niveaux d'eau de la rivière Nechako puisque l'eau était déversée dans la rivière Kemano à l'ouest, et non dans la Nechako à l'est.

[87] La Commission s'est aussi penchée sur la question de savoir si le CAÉ de 2007 pouvait entraîner des changements organisationnels, politiques ou de gestion susceptibles d'avoir un effet préjudiciable sur les revendications ou les droits des Premières nations du CTCS. Je le répète, il peut y avoir obligation de consulter à l'égard non seulement d'impacts physiques particuliers, mais aussi de décisions de gestion ou politiques qui sont prises en haut lieu et qui peuvent avoir une incidence sur l'exploitation future de la ressource au détriment des demandeurs autochtones. La Commission fait remarquer que l'[TRADUCTION] « examen visé à l'art. 71 n'a pas pour effet d'approuver ou de transférer une licence ou une autorisation ou d'en modifier le titulaire ». L'approbation du CAÉ de 2007 n'allait pas entraîner de changements de gestion, ce qui écartait tout effet préjudiciable concomitant. Ces éléments, joints à l'absence d'impact physique, ont amené la Commission à conclure que le CAÉ de 2007 ne risquait pas d'avoir un effet préjudiciable sur des intérêts autochtones.

[88] It is necessary, however, to delve further. The 2007 EPA calls for the creation of a Joint Operating Committee, with representatives of Alcan and BC Hydro (s. 4.13). The duties of the committee are to provide advice to the parties regarding the administration of the 2007 EPA and to perform other functions that may be specified or that the parties may direct (s. 4.14). The 2007 EPA also provides that the parties will jointly develop, maintain, and update a reservoir operating model based on Alcan's existing operating model and "using input data acceptable to both Parties, acting reasonably" (s. 4.17).

[89] The question is whether these clauses amount to an authorization of organizational changes that have the potential to adversely impact on Aboriginal interests. Clearly the Commission did not think so. But our task is to examine that conclusion and ask whether this view of the Commission was reasonable, bearing in mind the generous approach that should be taken to the duty to consult, grounded in the honour of the Crown.

[90] Assuming that the creation of the Joint Operating Committee and the ongoing reservoir operation plan can be viewed as organizational changes effected by the 2007 EPA, the question is whether they have the potential to adversely impact the claims or rights of the CSTC First Nations. In cases where adverse impact giving rise to a duty to consult has been found as a consequence of organizational or power-structure changes, it has generally been on the basis that the operational decision at stake may affect the Crown's future ability to deal honourably with Aboriginal interests. Thus, in *Haida Nation*, the Crown proposed to enter into a long-term timber sale contract with Weyerhaeuser. By entering into the contract, the Crown would have reduced its power to control logging of trees, some of them old growth forest, and hence its ability to exercise decision making over the forest consistent with the honour of the Crown. The resource would have been harvested without the consultation discharge that the honour of the Crown required. The Haida people would have been robbed of their

[88] Il est toutefois nécessaire de pousser quelque peu l'analyse. Le CAÉ de 2007 prévoit la création d'un comité conjoint d'exploitation formé de représentants d'Alcan et de BC Hydro (clause 4.13). Le comité a pour fonction de conseiller les parties sur l'administration du CAÉ de 2007 et d'accomplir d'autres tâches qui sont précisées ou que lui assignent les parties (clause 4.14). Le CAÉ de 2007 prévoit aussi que, conjointement, les parties élaborent, appliquent et actualisent un modèle d'exploitation du réservoir inspiré de celui d'Alcan et [TRADUCTION] « utilisant des données jugées acceptables par les deux parties, qui sont tenues de se montrer raisonnables » (clause 4.17).

[89] La question est celle de savoir si ces clauses équivalent à autoriser des modifications d'ordre organisationnel qui sont susceptibles d'avoir un effet préjudiciable sur des intérêts autochtones. La Commission ne le croit manifestement pas. Or, il nous faut examiner cette conclusion et nous demander si elle est raisonnable eu égard à l'approche généreuse qui s'impose relativement à l'obligation de consulter, laquelle a pour assise l'honneur de la Couronne.

[90] À supposer que la création du comité conjoint et du modèle d'exploitation du réservoir existant puissent être considérés comme des modifications d'ordre organisationnel apportées par le CAÉ de 2007, la question est celle de savoir si ces dernières sont susceptibles d'avoir un effet préjudiciable sur les revendications ou les droits des Premières nations du CTCS. Lorsqu'il est établi que l'effet préjudiciable faisant naître l'obligation de consulter résulte d'une modification de l'organisation, notamment celle du pouvoir, c'est généralement parce que la décision opérationnelle en cause risque dès lors d'empêcher la Couronne d'agir honorablement à l'égard des intérêts autochtones. Ainsi, dans l'affaire *Nation Haïda*, la Couronne projetait la conclusion avec Weyerhaeuser d'un contrat à long terme de vente de bois d'œuvre. En concluant le contrat, la Couronne réduisait sa maîtrise de l'exploitation forestière, notamment dans certaines vieilles forêts, et, partant, sa faculté d'exercer son pouvoir décisionnel en la matière de façon conforme à l'honneur de la Couronne. La ressource aurait été

constitutional entitlement. A more telling adverse impact on Aboriginal interests is difficult to conceive.

[91] By contrast, in this case, the Crown remains present on the Joint Operating Committee and as a participant in the reservoir operating model. Charged with the duty to act in accordance with the honour of Crown, BC Hydro's representatives would be required to take into account and consult as necessary with affected Aboriginal groups insofar as any decisions taken in the future have the potential to adversely affect them. The CSTC First Nations' right to Crown consultation on any decisions that would adversely affect their claims or rights would be maintained. I add that the honour of the Crown would require BC Hydro to give the CSTC First Nations notice of any decisions under the 2007 EPA that have the potential to adversely affect their claims or rights.

[92] This ongoing right to consultation on future changes capable of adversely impacting Aboriginal rights does not undermine the validity of the Commission's decision on the narrow issue before it: whether approval of the 2007 EPA could have an adverse impact on claims or rights of the CSTC First Nations. The Commission correctly answered that question in the negative. The uncontradicted evidence established that Alcan would continue to produce electricity at the same rates *regardless of whether the 2007 EPA is approved or not*, and that Alcan will sell its power elsewhere if BC Hydro does not buy it, as is their entitlement under Final Water Licence No. 102324 and the 1987 Agreement on waterflows. Moreover, although the Commission did not advert to it, BC Hydro, as a participant on the Joint Operating Committee and the resevoir management team, must in the future consult with the CSTC First Nations on any decisions that may adversely impact their claims or rights. On this evidence, it was not unreasonable for the Commission to conclude that the 2007 EPA will not adversely affect the claims and rights

exploitée sans que la Couronne ne se soit acquittée au préalable de l'obligation de consulter que commande l'honneur de la Couronne. Le peuple Haïda aurait été dépouillé de son droit constitutionnel. Difficile de concevoir un effet préjudiciable plus manifeste sur un intérêt autochtone.

[91] En l'espèce, par contre, la Couronne demeure un membre du comité conjoint d'exploitation et un participant en ce qui concerne le modèle d'exploitation du réservoir. Comme ils ont l'obligation d'agir conformément à l'honneur de la Couronne, les représentants de BC Hydro devront tenir compte des groupes autochtones touchés et les consulter au besoin lorsqu'une décision ultérieure sera susceptible d'avoir un effet préjudiciable sur eux. Le droit des Premières nations du CTCS d'être consultées sur toute décision susceptible de compromettre leurs revendications ou leurs droits est préservé. J'ajoute que l'honneur de la Couronne oblige BC Hydro à les informer de toute décision prise en application du CAÉ de 2007 qui est susceptible d'avoir un effet préjudiciable sur leurs revendications ou leurs droits.

[92] Ce droit permanent qu'ont les Premières nations du CTCS d'être consultées pour toute modification ultérieure susceptible d'avoir un effet préjudiciable sur leurs droits ancestraux ne remet pas en cause le bien-fondé de la décision rendue par la Commission relativement à la seule question dont elle était saisie : l'approbation du CAÉ de 2007 pouvait-elle avoir un effet préjudiciable sur leurs revendications ou leurs droits? La Commission a eu raison de répondre par la négative. La preuve non contredite établissait qu'Alcan continuerait de produire la même quantité d'électricité, *que le CAÉ de 2007 soit approuvé ou non*, et qu'elle trouverait un autre acheteur si BC Hydro déclinait l'offre, comme l'y autorisaient le permis d'exploitation hydraulique permanent nº 102324 et l'accord de 1987 sur les niveaux d'eau. De plus, bien que la Commission n'en fasse pas mention, BC Hydro, en tant que membre du comité conjoint d'exploitation et de l'équipe de gestion du réservoir, doit dorénavant consulter les Premières nations du CTCS sur toute décision susceptible d'avoir un effet préjudiciable sur leurs revendications ou leurs droits. À la

currently under negotiation of the CSTC First Nations.

[93] I conclude that the Commission took a correct view of the law on the duty to consult and hence on the question before it on the application for reconsideration. It correctly identified the main issue before it as whether the 2007 EPA had the potential to adversely affect the claims and rights of the CSTC First Nations. It then examined the evidence on this question. It looked at the organizational implications of the 2007 EPA and at the physical changes it might bring about. It concluded that these did not have the potential to adversely impact the claims or rights of the CSTC First Nations. It has not been established that the Commission acted unreasonably in arriving at these conclusions.

E. *The Commission's Decision That Approval of the 2007 EPA Was in the Public Interest*

[94] The attack on the Commission's decision to approve the 2007 EPA was confined to the Commission's failure to consider the issue of adequate consultation over the affected interests of the CSTC First Nations. The conclusion that the Commission did not err in rejecting the application to consider this matter removes this objection. It follows that the argument that the Commission acted unreasonably in approving the 2007 EPA fails.

V. Disposition

[95] I would allow the appeal and confirm the decision of the British Columbia Utilities Commission approving the 2007 EPA. Each party will bear their costs.

Appeal allowed; British Columbia Utilities Commission's approval of 2007 Energy Purchase Agreement confirmed.

lumière de cette preuve, il n'est pas déraisonnable que la Commission conclue que le CAÉ de 2007 n'aura pas d'effet préjudiciable sur les revendications et les droits de ces Premières nations qui faisaient alors l'objet de négociations.

[93] J'arrive à la conclusion que la Commission a bien interprété le droit en ce qui concerne l'obligation de consulter et, par conséquent, la question qu'elle était appelée à trancher pour statuer sur la demande de révision. Elle a bien cerné la question principale dont elle était saisie, à savoir si le CAÉ de 2007 pouvait avoir un effet préjudiciable sur les revendications et les droits des Premières nations du CTCS. Elle a ensuite examiné la preuve pertinente. Elle a considéré les répercussions organisationnelles du CAÉ de 2007 et les changements physiques qui pouvaient en résulter. Elle a conclu que ces modifications ne risquaient pas de compromettre les revendications ou les droits en cause. Il n'a pas été établi qu'elle a agi de manière déraisonnable en tirant ces conclusions.

E. *La décision de la Commission portant que l'approbation du CAÉ de 2007 était dans l'intérêt public*

[94] Le seul motif de contestation de la décision d'approuver le CAÉ de 2007 était l'omission de la Commission d'examiner la question du caractère adéquat de la consultation portant sur les intérêts en cause des Premières nations du CTCS. La conclusion que la Commission n'a pas eu tort de rejeter la demande d'examen de cette question écarte ce motif de contestation. Ainsi, la thèse selon laquelle la Commission a agi de manière déraisonnable en approuvant le CAÉ de 2007 ne saurait être retenue.

V. Dispositif

[95] Je suis d'avis d'accueillir le pourvoi et de confirmer la décision de la Commission approuvant le CAÉ de 2007. Chacune des parties paie ses propres frais de justice.

Pourvoi accueilli; décision de la British Columbia Utilities Commission approuvant le contrat d'achat d'électricité de 2007 confirmée.

JUDGMENT AND REASONS

I. INTRODUCTION

[1] This is an application for judicial review of a Review Panel Report [respectively Panel and Report] concerning the proposed New Prosperity Gold-Copper Mine that was made pursuant to the *Canadian Environmental Assessment Act, 2012*, SC 2012, c 19, s 52 [*CEAA 2012*]. In the this case, the judicial review centers on findings in the Report with respect to water seepage and impact on water quality in Fish Lake (Teztan Biny) and the surrounding area.

[2] The related file T-744-14 is an application for judicial review of subsequent decisions by the Minister of the Environment [Minister] and the Governor in Council [GIC]. The judicial review of those decisions is found in *Taseko Mines Limited v Canada (Environment)*, 2017 FC 1100.

[3] The key dispute is the Panel's conclusion that toxic water seepage will be greater than Taseko Mines Limited [Taseko] estimated. This conclusion ultimately led to decisions not approving the proposed mine.

[4] Taseko seeks the following relief in respect of the Panel and its Report:

> [92] Taseko seeks a declaration that the following findings of the Panel are invalid and are quashed or set aside:
>
> (i) the Panel's determination that Taseko underestimated the volume of tailings pore water seepage leaving the TSF;

(ii) the Panel's decision to accept NRCan's upper bound estimate as the expected seepage rate from TSF; and

(iii) the Panel's conclusion that the concentration of water quality variables in Fish Lake and Wasp Lake would likely be a significant adverse environmental effect

(the "Impugned Findings").

[93] Taseko also seeks a declaration that the Panel failed to observe principles of procedural fairness in its conduct of the public hearing process related to the environmental assessment of the Project.

[94] Should the declarations sought by Taseko be granted in whole or in part, it follows that the matter must be remitted to the Panel to reconsider the Impugned Findings and remedy the breaches in the Panel's process (as applicable), and to then make new determinations in accordance with the directions provided by this Court.

[Footnotes omitted.]

[5] To set the background, the relevant legislation is outlined below.

Canadian Environmental Assessment Act, 2012, SC 2012, c 19, s 52

43 (1) A review panel must, in accordance with its terms of reference,	**43 (1)** La commission, conformément à son mandat :
(a) conduct an environmental assessment of the designated project;	**a)** procède à l'évaluation environnementale du projet désigné;

or by document referred to in subsection 41(2) of this Act.	paragraphe 41(2) de la présente loi.

II. BACKGROUND FACTS

[6] The New Prosperity Gold-Copper Mine [the Project] is a proposed open pit gold and copper mine in British Columbia, 125 km southwest of Williams Lake (in the traditional territories of the Tsilhqot'in peoples). The $1.5 billion Project is said to provide a number of jobs as well as (allegedly) a $340 million contribution to British Columbia's gross domestic product.

[7] The Project is the successor to another proposed mine, Prosperity, that was rejected by the GIC in 2010 following a federal environmental assessment. The original design of the mine would have necessitated draining the lake Teztan Biny.

[8] In this second Project, Teztan Biny would not be drained because the proposal relocates the tailings storage facility [TSF] and introduces a lake recirculation water management scheme.

[9] On November 7, 2011, the Minister stated that the Project would undergo a federal environmental assessment under the *Canadian Environmental Assessment Act*, SC 1992, c 37 [*CEAA*] (later continued according to the transition provisions of the *CEAA 2012*).

[10] On August 3, 2012, the Panel was issued Amended Terms of Reference that were consistent with the new *CEAA 2012* provisions. The Amended Terms of Reference dictated that the Panel must consider a number of factors in assessing the environmental effects of the proposed project:

a. the environmental effects of the Project including the environmental effects of malfunctions or accidents that may occur in connection with the Project and any cumulative environmental effects that are likely to result from the Project in combination with other projects or activities that have been or will be carried out;

b. the significance of the environmental effects referred to in the above paragraph;

c. comments from the public and Aboriginal groups that are received during the review;

d. measures that are technically and economically feasible and that would mitigate any significant adverse environmental effects of the Project;

e. the need for the Project and alternatives to the Project;

f. the purpose of the Project;

g. alternative means of carrying out the Project that are technically and economically feasible, and the environmental effects of any such alternative means;

h. the need for, and the requirements of, any follow-up program in respect of the Project; and

i. the capacity of renewable resources that are likely to be significantly affected by the Project to meet the needs of the present and those of the future.

[11] The Panel published Guidelines for the Environmental Impact Statement [EIS] on March 16, 2012.

[12] Taseko submitted an EIS on September 27, 2012, purporting to deal with the deficiencies in the initial Prosperity project proposal.

[13] The Panel then engaged in discussions with respect to the technical merits and adequacy of the EIS with "federal departments, the BC Ministry of Energy and Mines ("BC MEM"), aboriginal groups, including the Tsilhqot'in National Government ("TNG"), and Taseko."

[14] Taseko's EIS described features of the proposed TSF and predicted seepage using two computer models: a 3-dimensional model representing the TSF as a horizontal plane, and 2-dimensional model representing the TSF as a vertical plane.

[15] Natural Resources Canada [NRCan] identified significant concerns with the EIS including "deficiencies with both of Taseko's models, the data upon which they were based, Taseko's proposal to rely on adding estimates from both models, and Taseko's proposed mitigation measures."

[16] As a result of these concerns, NRCan recommended the Panel request that Taseko provide a more comprehensive model of 3D numerical groundwater flow, which would address the deficiencies in the models provided in the EIS.

[17] In addition, other participants raised various other concerns with respect to "proposed mitigation measures, lack of hydrogeological data and uncertainty related to the range of till hydraulic conductivities, and significant underestimation in Taseko's seepage estimates."

[18] On February 20, 2013, the Panel released its Public Hearing Procedures, which outlined requirements for the conduct of public hearings and topic-specific hearing sessions.

[19] In a letter dated May 24, 2013, Taseko sought to postpone dealing with the deficiencies. It indicated that differences in technical issues could be dealt with after the Project received approval: "any difference in interpretation of technical data that exists between NRCan and Taseko can be resolved by a specifically focused pump test program, one which Taseko will undertake to refine the pit dewatering system prior to development."

[20] Taseko therefore declined to develop the 3D numerical groundwater flow model requested by the Panel.

[21] On June 14, 2013, NRCan indicated that it was "in the process of developing a numerical groundwater flow model to assess seepage from the base of the tailings storage facility, similar to that requested by the Panel in SIR 12/14(A-a)" and offered to make the findings of this study available to the Panel.

[22] The Panel accepted this offer in a letter dated June 21, 2013. At this time, the Panel also indicated that this information would be made publicly available (online) by way of the project registry.

[23] By June 20, 2013, the Panel found that the environmental assessment could proceed to public hearings. These hearings began on July 22, 2013, and were completed on August 23, 2013, when the final oral arguments took place. The topic-specific, technical hearings took place between July 25, 2013, and August 1, 2013.

[24] On July 4, 2013, NRCan provided the Panel with its 3D numerical model. On July 19, 2013, NRCan provided the Panel with written submissions. In its July 2013 submissions, NRCan stated that "[s]eepage from the TSF was estimated at 8650 m^3/d (100 L/s) which is more than an order of magnitude greater than the proponent's 3D model prediction [of 9 L/s]."

[25] Taseko disputes the accuracy of this seepage estimate characterization.

[26] On August 21, 2013, NRCan submitted a Technical Memorandum that provided "further clarification related to the modeling approaches taken by Taseko and NRCan."

[27] The Panel issued its Report on October 31, 2013. It is the NRCan Technical Memorandum on seepage and the Panel's reliance on these submissions in concluding that the seepage of toxic water from the TSF would be greater than estimated by Taseko that lie at the heart of this judicial review.

[28] In addition to the Applicant Taseko and the Respondent Attorney General of Canada [AG], the Court had the benefit of submissions as Respondents by the Tsilhqot'in National Government [TNG] and Joey Alphonse on his own behalf and on behalf of all members of the Tsilhqot'in Nation. The Mining Association and MiningWatch Canada also appeared, but as intervenors.

[29] The Panel Report is lengthy; however, the impugned findings with respect to seepage are contained within a rather small section of the Report. The majority of the impugned "findings"

and statements are located in a section of the Report titled "5.3.1.2 **Views of Participants**." In this section, the Panel summarized the conclusions and recommendations of NRCan, as well as the conclusions of the independent expert Dr. Leslie Smith.

[30] To put the matter in context, Table 5 of the Report shows a "Comparison of Seepage Estimates taken from the August 21, 2013, Natural Resources Canada Technical Memorandum to the Panel." As this Table is the subject of a great deal of debate, it is reproduced here in full:

	Taseko estimates (based on two different models)	**Natural Resources Canada base case, based on its 3-D model**
Post Closure seepage through bottom of the tailings storage facility	9 L/s (760 m^3/d) From 3-D model	100 L/s (8650 m^3/d)
Main Embankment seepage (towards Fish Lake)	28 L/s (2420 m^3/d) From 2-D model	58 L/s (5087 m^3/d)
South and West Embankment seepage	27 L/s (2333 m^3/d) From 2-D model	29 L/s (2552 m^3/d)
Deep basin seepage (greater than 200 mbgs)	0 L/s (Natural Resources Canada claims Taseko's 2D model precludes this flux component)	20 L/s (1699 m^3/d)

[31] Continuing on its summary of NRCan's conclusions and recommendations, the Panel stated:

> As indicated in the above table, pore water seepage from the tailings storage facility basin was estimated by Natural Resources Canada to be 100 L/s (8 650 m^3/d) which was more than an order of magnitude greater than what it considered to be Taseko's comparative prediction of 9 L/s. The Natural Resources Canada model showed that a further 20 L/s (1 699 m^3/d) of seepage was predicted to flow to the deep groundwater zone beneath the basalt flows that underlie the tailings storage facility. Natural Resources

> Canada claimed that this latter flux was not modeled in the Taseko's 2D approach because an impermeable boundary was assumed at the base of the basalt flows.

[32] This section of the Report went on to summarize the submissions of Dr. Smith, who stated that the framework used by Taseko was developed according to accepted practice; however, "the Natural Resources Canada model has greater flexibility if the tailings storage facility was explicitly included within the model grid."

[33] Dr. Smith explained the differences in seepage estimates between Taseko and NRCan likely arose from differences in the hydraulic conductivity used (that is, tailings, till, shallow bedrock), as well as differences in till layers.

[34] Dr. Smith ultimately estimated the TSF seepage to be between 20 L/s and 100 L/s, and in his opinion "the value would be likely towards the upper end of this range."

[35] In the section titled "5.3.1.3 **Panel's Conclusions and Recommendations**," the Panel identified three potential seepage pathways from the TSF, and concluded that seepage of tailings pore water from the TSF was the largest potential source of contaminant loadings that would impact water quality in the area.

[36] The Panel also identified the "fractured basalt intercalated with the glacial till in the valley bottom" as a potential major seepage pathway.

[37] Further, the Panel found that there was a dearth of data: there was a "lack of detailed geotechnical site investigations required to more reliably characterize the foundation of the tailings storage facility, particularly till thickness, variability in the overburden units, the likely existence of preferred pathways through the fractured upper bedrock units, and the nature and extent of the seeps and springs at the toe of the ridge west of the tailings storage facility."

[38] The Panel then summarized Taseko's estimates of solute migration in the absence of mitigation, as well as its predictions of unrecovered seepage after mitigation. It found that despite the substantial heterogeneity of the overburden and shallow bedrock, Taseko had represented all overburden deposits "as one unit and assigned a bulk hydraulic conductivity value." Further, Taseko did not account for spatial variation of particle size of the tailings.

[39] Of particular relevance, the Panel accepted the upper bound estimate put forward by NRCan and found that Taseko had underestimated the rate of seepage from the TSF. The Panel concluded as follows:

> The Panel has determined that Taseko has underestimated the volume of tailings pore water seepage leaving the tailings storage facility and the rate at which the water plume would reach the various lakes and streams downslope of the tailings storage facility, even with the mitigations proposed.
>
> The Panel accepts Natural Resource Canada's upper bound estimate as the expected seepage rate from the tailings storage facility (see Table 5 above).
>
> The Panel concludes that there is strong evidence that the seepage from the tailings storage facility would be significantly higher than estimated by Taseko, resulting in potentially higher loading of contaminants in the receiving environment.

[40] The Panel went on to make a number of recommendations with respect to further monitoring, testing, and collecting data, in the event that the Project proceeded.

III. ISSUES

[41] Each of the parties phrased their issues slightly differently but in the end the issues the Court considers that must be addressed are:

1. Did the Panel fail to observe principles of procedural fairness by accepting and relying upon the Technical Memorandum without giving Taseko a fair opportunity to respond?
2. Was the Panel's determination that Taseko underestimated the volume of tailings pore water seepage leaving the TSF unreasonable?
3. Was the Panel's decision to accept NRCan's upper bound estimate as the expected seepage rate from the TSF unreasonable?
4. Was the Panel's conclusion that the concentration of water quality variables in Fish Lake (Teztan Biny) and Wasp Lake would likely be a significant adverse environmental effect unreasonable?

IV. STANDARD OF REVIEW

[42] Procedural fairness is subject to a correctness standard of review: *Canada (Citizenship and Immigration) v Khosa*, 2009 SCC 12 at para 43, [2009] 1 SCR 339 [*Khosa*].

[43] The Panel findings with respect to seepage and water quality are subject to a reasonableness standard of review. In a decision concerning the old *CEAA*, *Greenpeace Canada v Canada (Attorney General)*, 2014 FC 1124 at para 37, 468 FTR 299, aff'd 2016 FCA 114, the Federal Court of Appeal [FCA] stated: "issues raised by the Applicants which challenge the exercise of discretion or assessment of evidence attract a reasonableness standard of review."

[44] In *Dunsmuir v New Brunswick*, 2008 SCC 9 at para 47, [2008] 1 SCR 190, the SCC indicated that a reasonable decision is one that is intelligible, transparent, and justifiable, and "falls within a range of possible, acceptable outcomes which are defensible in respect of the facts and law." Reasonableness is a deferential standard, and "as long as the process and the outcome fit comfortably with the principles of justification, transparency and intelligibility, it is not open to a reviewing court to substitute its own view of a preferable outcome" (*Khosa* at para 59).

V. ANALYSIS

A. *Issue 1: Did the Panel fail to observe principles of procedural fairness by accepting and relying upon the Technical Memorandum?*

[45] Taseko argues the following points:

- acceptance of NRCan's Technical Memorandum was late which deprived Taseko's experts of the opportunity to question the author or provide technical submissions;
- the Technical Memorandum contained errors, particularly as to seepage, and these errors were incorporated into the Report;

- the Technical Memorandum went beyond summarizing NRCan's perspective and introduced new evidence in a manner not contemplated by the Public Hearings Procedures;
- Taseko was owed a degree of procedural fairness in accordance with the factors in *Baker v Canada (Minister of Citizenship and Immigration)*, [1999] 2 SCR 817 at paras 22-27, 174 DLR (4th) 193 [*Baker*];
- Taseko asserts that, given the nature of the decision, the Panel essentially performed a judicial function where procedural fairness interests are heightened, especially as the Report was part of the Minister and GIC's decision making process under section 52 of *CEAA 2012*; and
- the acceptance of the Technical Memorandum breached the duty of fairness owed as new evidence was introduced favourable to one party and to which the other party had no opportunity to respond further. (*CEP Union of Canada v Power Engineers et al*, 2001 BCCA 743, 209 DLR (4th) 208 [*CEP Union*] (sometimes reported as *CEP, Local 76 v British Columbia (Power Engineers & Boiler & Pressure Vessel Safety Appeal Board)*), relied upon where the British Columbia Court of Appeal [BCCA] held that merely restating evidence previously given may breach this principle.)

[46] For the reasons below, Taseko was owed, and was in fact afforded, a high degree of procedural fairness during the review process.

(1) High Degree of Procedural Fairness owed to Taseko

[47] Despite the Respondents' submissions that a party is not promised procedural perfection in any decision making process, it appears that in this case the parties agree that Taseko was owed a high degree of procedural fairness. The major disagreement between the parties is whether the requisite degree of procedural fairness was in fact met.

[48] A review of the *Baker* factors indicates that Taseko was indeed owed a high degree of procedural fairness during the Panel process:

a) **Nature of the decision:** the Panel process was geared towards making findings of fact, and was designed so that all of the parties could put forward evidence and test the evidence adduced in a quasi-judicial manner (including, for example, cross-examination of experts). While the Public Hearing Procedures note that the Panel will not be "bound by the strict rules of procedure and evidence applicable to judicial proceedings" that does not, *per se*, lessen the degree of procedural fairness.

b) **Nature of the statutory scheme:** there is no formal appeal mechanism to challenge the Report (however, judicial review is available).

c) **Importance of the decision:** although this is not the final decision in the process (the Minister and the GIC made further decisions), it is undeniably crucial in terms of providing the facts and information that the Minister and the GIC require to make their determinations. (Indeed, in this case, the decisions of the Minister and the GIC were consistent with the conclusions of the Report.)

d) **Legitimate expectations:** the Public Hearing Procedures clearly laid out, in a fairly detailed manner, how the Panel process would proceed. The Public Hearing Procedures specifically state that the process should be "fair and orderly." However, the Panel had the power to and did in fact deviate from these Procedures at times.

e) **Procedural choices made by the decision maker:** as noted above, the Panel had the power to deviate from its own procedures (and it did so). Sometimes this was to Taseko's benefit (i.e. allowing Taseko "a few extra days" to respond to late submissions), and sometimes it was not. Deference should be given to a decision maker's choice of process (*Baker* at para 27).

[49] *Canada (Attorney General) v Mavi*, 2011 SCC 30, [2011] 2 SCR 504 [*Mavi*], cited by the Minister/AG, is not particularly dispositive. *Mavi* indicated that a balance must be struck between the cost of a "fair" process and the public interest in the government acting (and being perceived to be acting) fairly. In this case, with strong public interests on either side (economic and environmental interests, for example), the pendulum would seem to weigh heavily in favour of ensuring fairness. Furthermore, this process was likely quite expensive, and the Respondents have not provided any evidence that additional procedural fairness measures would have been prohibitively expensive.

(2) ***Audi Alteram Partem***

[50] In *Canadian Cable Television Assn v American College Sports Collective of Canada, Inc*, [1991] 3 FC 626 at 639, 81 DLR (4th) 376 (CA), MacGuigan J.A. for the Federal Court of Appeal defined the principle of *audi alteram partem* thus:

> The common law embraces two principles in its concept of natural justice, both usually expressed in Latin phraseology: *audi alteram partem* (hear the other side), which means that **parties must be made aware of the case being made against them and given an opportunity to answer it**.
>
> [Emphasis added.]

[51] Although the Minister/AG cite *Charkaoui v Canada (Citizenship and Immigration)*, 2007 SCC 9 at para 57, [2007] 1 SCR 350 [*Charkaoui*] for the proposition that the "right to know the case to be met is not absolute," I do not find that decision to be particularly persuasive in this context.

[52] *Charkaoui* was decided in the context of national security concerns; indeed, shortly after the Supreme Court of Canada [SCC] made the statement cited by the Minister/AG, McLachlin CJC stated that "the Court has repeatedly recognized that national security considerations can limit the extent of disclosure of information to the affected individual" (at para 58). This case does not present any similar circumstances that would warrant infringement of the *audi alteram partem* principle.

[53] Taseko's position is that the submission of the Technical Memorandum breaches this principle, and its argument is based on two contentions: (1) that the Technical Memorandum was

new evidence favouring NRCan's position; and (2) that Taseko did not have an adequate opportunity to respond to this evidence.

[54] Both of Taseko's premises are flawed. The Technical Memorandum did not contain new information; rather, this document summarized the information that had already been presented to the Panel, and to Taseko, in NRCan's written and oral submissions. Therefore, Taseko already knew the case that it had to meet before the submission of the Technical Memorandum, and the case it had to meet did not change following the submission of the Technical Memorandum.

[55] Taseko's argument that this was "new information" is premised on the contention that Dr. Desbarats had, during cross-examination, abandoned the "order of magnitude position." However, the "order of magnitude" comparison was only used when referencing the difference between the two 3D models, and the "factor of two" acknowledgement before the Panel was made with reference to Taseko's 2D model.

[56] Furthermore, this statement by Dr. Desbarats was preceded by comments regarding the deficiencies of the 2D model and the statement that it was "difficult to compare the two." As stated by the Minister/AG, "NRCan's expert merely acknowledged the math that "if" one was to include the 2D results in the comparison – which he never accepted should be done – then Taseko still would have underestimated seepage by a factor of two (2)."

[57] Therefore, the Technical Memorandum did not contain new information, and it did not constitute a departure from NRCan's previously stated position.

[58] Further, *CEP Union* (relied upon by Taseko) is distinguishable from this case. In *CEP Union*, the BCCA found that the acceptance of written submissions that merely reiterated evidence already given in oral submissions may breach the *audi alteram partem* principle. However, in that case, only one of the parties was given the opportunity to provide written submissions, and the opposing party was not provided with a copy of these submissions (despite their request). The outcome in *CEP Union* turned on the fact that only one party was given the opportunity to provide written submissions. The BCCA stated:

> [14] This takes me to the nub of this case. Is there here a breach of the *audi alteram partem* rule? It appears to me that the learned Chambers judge considered that there was not such a breach on the basis that the written submissions merely restated information that either the Director or Pacifica Paper had expressed aloud in the hearing. With respect, I do not agree. The opportunity to present information and argument in written form is valuable to a party. The opportunity after oral hearing, to reorganize and restate a submission cannot be considered of no import, else to poach upon a line from Browning, "What is writing for?"

[59] This case is therefore distinguishable because Taseko had the opportunity to provide final written submissions. Taseko was also provided with a copy of NRCan's submissions and given an opportunity to respond.

[60] The impugned language of "clarification" does not indicate that the Technical Memorandum contained new information. As put forward by Taseko at the hearing, it believed that it and NRCan had reached some sort of agreement on seepage (that is, that the estimates were within a factor of two); NRCan's Technical Memorandum simply clarified its position that there was no such agreement. As noted by the Minister/AG, this "clarification" language indicated that NRCan wished to convey that its position was unchanged following cross-

examination and Taseko's arguments. Taseko had already responded to the information in the Technical Memorandum and had cross-examined the relevant expert during the course of the review process. As noted below, Taseko recognized during its final submissions that there was no convergence between its own views and those of NRCan.

[61] Finally, even if the Technical Memorandum was found to contain new information, Taseko's second premise is flawed because it had the opportunity to respond to this information. Taseko had sought and received permission to provide responses to any late-in-the-day technical submissions. It chose to provide such responses to several documents, but not to the Technical Memorandum.

[62] Moreover, Taseko's final Closing Submission explicitly states that Taseko was aware that there was no convergence of views between Taseko and NRCan on seepage. Taseko stated:

> In any Tailings Storage Facility ("**TSF**") some seepage is normal – in fact it is an integral part of the design of a TSF. While we had thought there was a convergence of views on seepage predications between Natural Resources Canada ("**NRCan**") and Environment Canada on these issues during the hearing we have recently – somewhat surprisingly – seen those agencies say they remain of different views.
>
> [Bold emphasis in original; Underline emphasis added]

[63] In my view, this indicates that Taseko was aware of the Technical Memorandum's content; it also undercuts Taseko's position at the hearing that it believed there was an agreement between Taseko and NRCan that the difference in seepage estimates was within a factor of two.

[64] In summary, I can find no breach of the *audi alteram partem* rule.

(3) Legitimate Expectations

[65] The general rule of "legitimate expectations" provides that the content of the duty of procedural fairness will be impacted if an individual is found to have a legitimate expectation in the procedure to be followed or the outcome of a decision. However, this is a procedural right, not a substantive one (*Baker* at para 26). Of relevance to this case is the quote, "[i]f the claimant has a legitimate expectation that a certain procedure will be followed, this procedure will be required by the duty of fairness" (*Baker* at para 26).

[66] Taseko suggests that its legitimate expectations may have been breached in two ways: (1) the Panel did not follow the Public Hearing Procedures, and (2) Taseko had an expectation that it would be able to respond to new evidence (in the Technical Memorandum) which was not satisfied.

[67] In *Mount Sinai Hospital Center v Quebec (Minister of Health and Social Services)*, 2001 SCC 41 at para 29, [2001] 2 SCR 281, the SCC stated that "[t]he doctrine of legitimate expectations, on the other hand, looks to the *conduct* of the public authority in the exercise of that power… including established practices, conduct or representations that can be characterized as clear, unambiguous and unqualified." In this case, although the Public Hearing Procedures were clear, they were not unambiguous nor were they unqualified. In my view, Taseko did not have any legitimate expectations that the Public Hearing Procedures would be followed in every instance rigidly because the Panel had broad discretion to deviate from its own Public Hearing Procedures. In addition, the Panel explicitly told all of the parties that it would be accepting

closing submissions up until a certain date, and that following this date, Taseko would have a few days to respond to any technical submissions. The Panel thus outlined the procedures that it intended to follow, and did precisely that - it followed them.

[68] Taseko has not shown that these Public Hearing Procedures were not met in this case. Taseko identified two provisions in particular that it claims were breached, as noted above:

> 2.7 If a participant files an expert report as part of its submission, then that participant must arrange to have the expert available to answer questions as part of the hearing when the submission is presented…
>
> 2.18 Closing remarks must not be used to present new information but should summarize the Interested Party's perspective on the hearing record and recommendations to the Panel.

[69] The Technical Memorandum does not breach either of these provisions. First, Dr. Desbarats was available for cross-examination on NRCan's Report. Second, the Technical Memorandum did not present new information. Taseko did not request further cross-examination of Dr. Desbarats, and given the fact that he had previously been cross-examined on the same information, it is not clear what this would have accomplished. The Procedures do not provide for further cross-examination following closing submissions.

[70] As to the second point, Taseko did have a legitimate expectation that it would have the opportunity to respond to any final technical submissions. The Panel clearly, unambiguously, and repeatedly affirmed that Taseko would have the opportunity to do so. However, these expectations were satisfied in this case as discussed above in relation to *audi alteram partem*.

[71] Taseko had the opportunity to respond to the Technical Memorandum in its closing submissions and in additional written submissions. As noted above, Taseko had sought and received permission to have "a few days" to respond to submissions concerning technical or specialized knowledge, and it referenced NRCan's position (that there was no convergence of the parties' views on seepage) in its final written submissions to the Panel.

[72] Taseko's decision not to substantively respond to the Technical Memorandum is not a breach of any alleged legitimate expectations.

[73] Finally, as noted by the Minister/AG, the Court may choose not to intervene if there is a lack of prejudice (*Omer v Canada (Citizenship and Immigration)*, 2015 FC 494 at para 9). In this case, it is not clear that Taseko faced any prejudice as a result of the purported procedural irregularities it identified.

(4) Failure to Object

[74] If Taseko was concerned that any of the closing submissions or memoranda breached procedural fairness, it had the obligation to raise these concerns with the Panel. As in *Geza v Canada (Minister of Citizenship and Immigration)*, 2006 FCA 124, [2006] 4 FCR 377, and *Hennessy v Canada*, 2016 FCA 180, 484 NR 77, it is not open to Taseko to hold this complaint in reserve as fuel for a judicial review.

[75] In this instance, Taseko did object to the late submissions in general. Before the Panel, Taseko's representative stated:

> So my suggestion would be, **number 1, that we put a stop to these late submissions**, particularly those by persons having expertise or specialized knowledge that should be cut off, and **we need to have a few days at least to be able to assess those and respond**.
>
> And I don't mind having the opportunity to do that after final argument, if that is acceptable to the Panel. But we do definitely need an opportunity to put an end to it.
>
> As well, **we're not going to have an opportunity to ask Mr. McCrory any questions**, which is also part of unfairness in the process. We won't have an opportunity to challenge his material.
>
> [Emphasis added]

The Panel responded thus:

> And just before we go to the next speaker, I indicated to Mr. Gustafson this morning that I would attempt to respond to his request this afternoon, and we are **comfortable affording you several days of time from the receipt of any new technical documents to respond to us** and - - yeah.
>
> With that as our plan, that will possibly, probably entail an extension past the closing remarks for any response by you to new technical documents received.
>
> [Emphasis added]

[76] Taseko received what it asked for. It asked for "a few days" to deal with technical submissions if the Panel accepted such submissions, and this concern was dealt with promptly and appropriately by the Panel.

[77] The obligation to raise concerns is relevant to Taseko's claim that the Technical Memorandum contained new evidence. Taseko did not, at that time, claim that the reception of the Technical Memorandum was unfair because it constituted new evidence. In addition, Taseko

did not at any point inquire as to the authorship of the Technical Memorandum or indicate that failing to identify the individual author was a breach of procedural fairness.

(5) Industry Interveners

[78] In my view, it would be inappropriate to impose any sort of rules of general application on review panels (as proposed by the Industry Interveners) given the need for procedural flexibility and deference to chosen procedures (and the broad discretion with respect to procedure conferred by the *CEAA 2012*). What constitutes a reasonable opportunity to be heard may vary according to the particular circumstances of each review panel.

[79] In conclusion, the Panel did not fail to observe principles of procedural fairness by accepting and relying upon the Technical Memorandum.

B. *Issue 2: Was the Panel's determination that Taseko underestimated the volume of tailings pore water seepage leaving the TSF unreasonable?*

[80] The Panel found that Taseko underestimated the volume of tailings pore water seepage that would leave the TSF. Taseko submits that this finding is unreasonable due to the Panel's misapprehension of Taseko's TSF seepage estimation. In comparing a component of Taseko's TSF seepage estimate with the entire NRCan seepage estimate, Taseko claims "the Panel made an apples-to-oranges comparison that was manifestly unreasonable."

[81] Taseko admits that the Panel correctly stated Taseko's seepage estimates at Table 3 of the Report for a total of 70 L/s of seepage leaving the TSF. However, when summarizing NRCan's

comparison at Table 5 of the Report, Taseko argues that the Panel ignored its own accurate summary of Taseko's estimates. In Table 5, Taseko's estimate of deep basin seepage changes from 15 L/s to 0 L/s.

[82] Taseko also takes issue with comparisons made by NRCan which, along with other errors, led to the Panel's conclusion that Taseko had significantly underestimated seepage from the TSF.

[83] In my view, the Panel's determination (for which deference is owed) that Taseko had underestimated the volume of tailings pore water seepage leaving the TSF, was reasonable.

[84] The Panel was tasked with weighing scientific evidence and making findings of fact thereon, and the Panel had the relevant expertise to do so (the three member panel consisted of Dr. Bill Ross, a professor in the area of environmental design, Dr. George Kupfer, a community consultant, and Dr. Ron Smyth, a geologist). As discussed in *Inverhuron & District Ratepayers' Association v Canada (Minister of the Environment)* (2000), 191 FTR 20 (FCTD), aff'd 2001 FCA 203 [*Inverhuron*], these circumstances are relevant to the reasonableness assessment:

> [71] It is worth noting again that the function of the Court in judicial review is not to act as an "academy of science" or a "legislative upper chamber". In dealing with any of the statutory criteria, the range of factual possibilities is practically unlimited. No matter how many scenarios are considered, it is possible to conceive of one which has not been. The nature of science is such that reasonable people can disagree about relevance and significance. In disposing of these issues, the Court's function is not to assure comprehensiveness but to assess, in a formal rather than substantive sense, whether there has been some consideration of those factors which the **Act** requires the comprehensive study to

> address. If there has been some consideration, it is irrelevant that there could have been further and better consideration.
>
> [Bold emphasis in original; Underline emphasis added]

[85] Taseko argues that Table 5 and the subsequent discussion are a mischaracterization of Taseko's seepage estimates. However, this section of the Report is simply a summary of NRCan's position, and it does not represent any of the Panel's conclusions.

[86] It is important to keep in mind, when reviewing Table 5 and the summary of NRCan's conclusions in the Report, that NRCan had serious concerns with the modelling done by Taseko. Table 5 does not simply repeat the estimates put forward by Taseko (and summarized earlier in the Report). The "errors" cited by Taseko actually represent scientific disagreements with respect to what NRCan believed could reasonably be concluded from the Taseko models, in comparison with the conclusions from its own model.

[87] Therefore, it is inaccurate to say that NRCan made "erroneous comparisons." Explanations were provided for the differences between Taseko's own estimates (in Table 3) and the numbers in NRCan's conclusions (in Table 5), such as that NRCan believed that Taseko's 2D model precluded any conclusions on deep basin seepage (greater than 200 mbgs) (bottom row of Table 5) and that only Taseko's 3D model accounted for seepage through the bottom of the TSF (top row of Table 5).

[88] The "corrected" Table 5 presented in Taseko's Memorandum is therefore misleading and problematic, as it does not accurately represent NRCan's views. NRCan was not bound to accept

Taseko's models or estimates; as noted in *Inverhuron*, "[t]he nature of science is such that reasonable people can disagree about relevance and significance" (para 71).

[89] At no point in the Report does the Panel indicate that it thought Taseko's total seepage estimate was 9 L/s or that it otherwise misunderstood Taseko's seepage estimates. It summarized both Taseko's position and NRCan's position, and it did so accurately.

[90] At the hearing, Taseko invited the Court to conclude that the Panel compared NRCan's estimate of 100 L/s seepage against an erroneous Taseko estimate of 9 L/s total seepage. However, the Panel did not indicate that it relied on the comparisons in Table 5 in reaching its conclusion.

[91] It was open to the Panel to accept the modelling and the estimates put forward by NRCan regardless of how they compared to Taseko's modelling and estimates. Furthermore, NRCan had raised concerns with respect to the accuracy of simply combining Taseko's 2D and 3D model estimates, given the difference in methodologies; for this reason alone, it was open to the Panel to treat Taseko's "combined" estimate of 70 L/s with some suspicion.

[92] The Panel ultimately accepted NRCan's upper bound estimate: "[t]he Panel accepts Natural Resources Canada's upper bound estimate as the expected seepage rate from the tailings storage facility (see Table 5 above)." There is no suggestion that the Panel thought that Table 5 represented Taseko's own estimates.

[93] Moreover, even if the Court accepted that the appropriate comparison was between Taseko's estimate of 70 L/s and NRCan's estimate of 100 L/s, it was open to the Panel to conclude that Taseko had nonetheless significantly underestimated the volume of seepage. No evidence has been put forward by Taseko to show that a difference of a factor of two is insignificant or inconsequential, and it would be inappropriate for the Court to conclude that this is the case.

[94] As discussed during the hearing, this is a difference of 30 L/s more seepage every second of every day for decades – it was open to the Panel to conclude that this was an underestimation of the volume of seepage on Taseko's part. Further, as noted by the TNG, the Panel was not required to base its findings on any particular "scientific threshold," and Taseko failed to identify any such "scientific thresholds" that the Panel's conclusions failed to meet.

[95] In conclusion, by arguing that Table 5 is mistaken, Taseko is essentially attempting to reargue the technical and scientific positions it took before the Panel. The Panel rejected Taseko's conclusions. In my view, it would be inappropriate for this Court to reweigh the evidence and reach a different conclusion.

[96] Furthermore, Taseko's attempts to inject ambiguity into the Panel's findings would require a misreading of the Report in a manner that defies common sense.

C. ***Issue 3: Was the Panel's decision to accept NRCan's upper bound estimate as the expected seepage rate from the TSF unreasonable?***

[97] Taseko submits that the Panel's acceptance of NRCan's upper bound estimate as the expected seepage rate is unreasonable because:

a) it relies directly upon the erroneous conclusion that Taseko severely underestimated TSF seepage; and

b) it accepts NRCan's model even though it is materially different than the actual design of the TSF proposed by Taseko.

[98] In summary, I have concluded that the Panel's decision to accept NRCan's upper bound estimate as the expected seepage rate from the TSF was reasonable. As discussed above (see Issue 2), the Panel's conclusion that Taseko underestimated seepage was reasonable; therefore, its reliance on this conclusion in accepting NRCan's upper bound estimate is reasonable.

[99] The SCC's comments in *Newfoundland and Labrador Nurses' Union v Newfoundland and Labrador (Treasury Board)*, 2011 SCC 62, [2011] 3 SCR 708 [*Newfoundland Nurses*], with respect to reasonableness are relevant in this case:

> [14] Read as a whole, I do not see *Dunsmuir* as standing for the proposition that the "adequacy" of reasons is a stand-alone basis for quashing a decision, or as advocating that a reviewing court undertake two discrete analyses — one for the reasons and a separate one for the result (Donald J. M. Brown and John M. Evans, *Judicial Review of Administrative Action in Canada* (loose-leaf), at §§12:5330 and 12:5510). It is a more organic exercise — the reasons must be read together with the outcome and serve the purpose of showing whether the result falls within a range of possible outcomes. This, it seems to me, is what the Court was saying in *Dunsmuir* when it told reviewing courts to look at "the

> qualities that make a decision reasonable, referring both to the process of articulating the reasons and to outcomes" (para. 47).
>
> [15] In assessing whether the decision is reasonable in light of the outcome and the reasons, courts must show "respect for the decision-making process of adjudicative bodies with regard to both the facts and the law" (*Dunsmuir*, at para. 48). This means that courts should not substitute their own reasons, but they may, if they find it necessary, look to the record for the purpose of assessing the reasonableness of the outcome.
>
> [16] Reasons may not include all the arguments, statutory provisions, jurisprudence or other details the reviewing judge would have preferred, but that does not impugn the validity of either the reasons or the result under a reasonableness analysis. **A decision-maker is not required to make an explicit finding on each constituent element, however subordinate, leading to its final conclusion** (*Service Employees' International Union, Local No. 333 v. Nipawin District Staff Nurses Assn.*, [1975] 1 S.C.R. 382, at p. 391). In other words, **if the reasons allow the reviewing court to understand why the tribunal made its decision and permit it to determine whether the conclusion is within the range of acceptable outcomes, the *Dunsmuir* criteria are met**.
>
> [Emphasis added]

[100] In this case, the Panel's in-depth review of the submissions made by all of the interested parties provides more than enough support for its ultimate conclusions. Even if the Court found that the Panel did not make its rationale for rejecting Taseko's mitigation measures sufficiently clear, in my view the record supports the Panel's conclusions.

[101] Various participants submitted concerns regarding the mitigation measures put forward by Taseko, and Taseko responded by stating that additional studies would be done following the approval of the Project. Given the conceptual and unproven nature of the mitigation measures and this lacklustre response from Taseko, it was open to the Panel to not recommend that these

mitigation measures were reasonable. There was nothing unreasonable in finding that satisfactory mitigation measures should precede project approval rather than follow it.

[102] Furthermore, when Taseko's efficiency ratios were applied to NRCan's pre-recovery seepage estimate, the result was far greater than Taseko's post-recovery seepage estimate (11.8 L/s instead of 2.40 L/s).

[103] With respect to the differences between the proposed TSF and the NRCan model, the evidence indicates that the Panel understood these differences. Further, it is not clear how the purported "wrong design" in NRCan's model prejudiced Taseko.

[104] Taseko submitted that NRCan assumed that no seepage would go through the embankments, and that this was problematic because the fact that there was to be seepage out of the sides was a mitigation function (the embankments filter the water). However, the Panel had found that Taseko had assigned homogenous values to the overburden deposits and the particle size of tailings; therefore, the Panel did not accept that this "mitigation function" would function exactly as described by Taseko.

[105] The other differences identified by Taseko, such as till thickness (which Taseko did not even promise to deliver) and calibration, were also understood by the Panel. There is no indication that the Panel improperly assessed NRCan's model instead of the actual proposed model – simply preferring one model over the other is not sufficient to establish that the Panel assessed the "wrong design."

[106] Further, as noted by the Minister/AG, NRCan's assumption actually benefitted Taseko: if NRCan had modelled seepage through the embankments, this undoubtedly would have increased its total seepage estimate.

[107] Taseko claims that the Panel's failure to address seepage mitigation breaches section 43(1)(d)(i) of the *CEAA 2012* and section 2.2(d) of the Amended Terms of Reference. However, section 19(1)(d) of the *CEAA 2012* indicates that the environmental assessment must take into account "mitigation measures that are technically and economically feasible and that would mitigate any significant adverse environmental effects of the designated project" (emphasis added).

[108] Therefore, if the Panel did not agree that Taseko's proposed mitigation measures were feasible or that they would mitigate the significant adverse effects, it did not need to take these into account. Further, the Amended Terms of Reference indicate that the Panel is only required to identify mitigation measures that it recommends.

[109] It should not be assumed that the Panel breached the statutory requirements. In *Ontario Power Generation Inc v Greenpeace Canada*, 2015 FCA 186, 388 DLR (4th) 685, rev'g 2014 FC 463, leave to appeal to SCC refused, 36711 (28 April 2016), the FCA considered an appeal from a decision of Russell J., wherein Russell J. had concluded that a joint review panel report created under the *CEAA* did not comply with the legislation. The FCA stated:

> [123] In the circumstances, the Panel made no specific finding that it had complied with the consideration requirements in paragraphs 16(1)(*a*) and (*b*) of the Act. However, **it is our view that in conducting the EA and preparing the EA Report, the**

> **Panel must be taken to have implicitly satisfied itself that it was in compliance with those statutory requirements**. In applying the reasonableness standard to this question, we must consider the Panel's decision as a whole, in the context of the underlying record, to determine whether the Panel's implicit conclusion that it had complied with the consideration requirements is reasonable (see *Agraira* at paragraph 53).
>
> [Emphasis added]

[110] Similarly, in this case, when the Report is considered as a whole it is clear that the Panel considered the seepage mitigation measures put forward by Taseko. The Report reviewed Dr. Smith's comments on mitigation measures, which were critical of Taseko's failure to provide detailed information: "the suite of seepage interception measures Taseko had proposed had been evaluated at a conceptual level only."

[111] Further, the Report reviewed the critique by the British Columbia Ministry of Energy, Mines, and Petroleum Resources (i.e., "there remained uncertainties around the ability to limit and collect the expected volume of seepage from the [TSF], and the ability to effectively treat water to maintain water quality in Fish Lake and its tributaries"). Therefore, unlike in the case of *Bow Valley Naturalists Society v Alberta (Minister of Environmental Protection)* (1995), [1996] 2 WWR 749, 177 AR 161 (ABQB), cited by Taseko, the Panel did not reach its conclusions by flying in the face of "uncontradicted evidence."

[112] In addition, the Panel's acceptance of NRCan's upper bound estimate was supported by the evidence of independent expert Dr. Smith, who stated that the total TSF seepage was likely towards the upper end of a range of 20 to 100 L/s. Finally, it must be noted that, contrary to what is implied in Taseko's submissions, interested parties such as NRCan were not required to

"refute" Taseko's analysis – the Panel was not required to assume that Taseko was correct unless shown otherwise.

D. *Issue 4: Was the Panel's conclusion that the concentration of water quality variables in Fish Lake (Teztan Biny) and Wasp Lake would likely be a significant adverse environmental effect unreasonable?*

[113] Taseko submits that the findings with respect to seepage, discussed above, "permeated" the Report. In a section on the water quality of Fish Lake (Teztan Biny), the Report stated:

> The Panel also notes that the seepage from the tailings storage facility expected by Natural Resources Canada is considerably greater than estimated by Taseko. On balance, the Panel concludes, as did most presenters on this subject, that there would be higher concentrations of water quality contaminants of concern in Fish Lake than modelled by Taseko.
>
> [Emphasis added]

[114] Taseko argues the impugned seepage finding was directly responsible for the Panel's conclusion that the Project would lead to significant adverse environmental effects on the water quality of Fish Lake (Teztan Biny) and Wasp Lake. The water quality finding relies on the unreasonable seepage finding; therefore, it cannot stand and is inconsistent with the requirements under the Amended Terms of Reference.

[115] The Panel's conclusion that the concentration of water quality variables in Fish Lake (Teztan Biny) and Wasp Lake would likely be a significant adverse environmental effect was reasonable. As discussed above, the impugned seepage findings were also reasonable; therefore, the Panel's reliance on these findings in reaching a conclusion on water quality was reasonable.

[116] Furthermore, the water quality findings were supported by additional evidence, including Taseko's own admission that the water quality would not be in line with guidelines for the protection of aquatic life. The likely effectiveness of Taseko's water treatment mitigation measures were questioned by presenters for the TNG ("details on the effectiveness of the treatment were not provided or modelled"), the British Columbia Ministry of Environment ("unproven technology over the long term [and] potentially costly"), and the British Columbia Ministry of Energy, Mines, and Petroleum Resources ("[w]ater treatment for the Project did not provide confirmation that the proposed water quality objectives for Fish Lake (Teztan Biny) were likely to be either technically or financially achievable").

[117] Therefore, it was open to the Panel to reject the "unproven and unprecedented" proposals put forward by Taseko.

[118] The Panel stated:

> Based on the evidence, the Panel finds it is unable to accept Taseko's conclusion that the water treatment options proposed would effectively mitigate the adverse effects of the Project on Fish Lake (Teztan Biny) water quality. The Panel concludes that the proposed recirculation scheme, the adaptive management plan and the water treatment options are unlikely to work effectively in the long-term. On this basis, the Panel concludes the "proof of concept" test proposed by Taseko for the environmental assessment has failed.

[119] The Panel therefore did not rely solely on the impugned seepage findings in reaching its conclusions on water quality.

[120] With respect to the precautionary principle, there does not appear to be any dispute between the parties that the Panel was required to assess the proposal in a precautionary manner. The purpose section of the *CEAA 2012* states:

4 (1) The purposes of this Act are	**4 (1)** La présente loi a pour objet :
(a) to protect the components of the environment that are within the legislative authority of Parliament from significant adverse environmental effects caused by a designated project;	**a)** de protéger les composantes de l'environnement qui relèvent de la compétence législative du Parlement contre tous effets environnementaux négatifs importants d'un projet désigné;
(b) to ensure that designated projects that require the exercise of a power or performance of a duty or function by a federal authority under any Act of Parliament other than this Act to be carried out, are considered in a careful and precautionary manner to avoid significant adverse environmental effects;	**b)** de veiller à ce que les projets désignés dont la réalisation exige l'exercice, par une autorité fédérale, d'attributions qui lui sont conférées sous le régime d'une loi fédérale autre que la présente loi soient étudiés avec soin et prudence afin qu'ils n'entraînent pas d'effets environnementaux négatifs importants;
(c) to promote cooperation and coordinated action between federal and provincial governments with respect to environmental assessments;	**c)** de promouvoir la collaboration des gouvernements fédéral et provinciaux et la coordination de leurs activités en matière d'évaluation environnementale;
(d) to promote communication and cooperation with aboriginal peoples with respect to environmental assessments;	**d)** de promouvoir la communication et la collaboration avec les peuples autochtones en matière d'évaluation environnementale;

(e) to ensure that opportunities are provided for meaningful public participation during an environmental assessment;	**e)** de veiller à ce que le public ait la possibilité de participer de façon significative à l'évaluation environnementale;
(f) to ensure that an environmental assessment is completed in a timely manner;	**f)** de veiller à ce que l'évaluation environnementale soit menée à terme en temps opportun;
(g) to ensure that projects, as defined in section 66, that are to be carried out on federal lands, or those that are outside Canada and that are to be carried out or financially supported by a federal authority, are considered in a careful and precautionary manner to avoid significant adverse environmental effects;	**g)** de veiller à ce que soient étudiés avec soin et prudence, afin qu'ils n'entraînent pas d'effets environnementaux négatifs importants, les projets au sens de l'article 66 qui sont réalisés sur un territoire domanial, qu'une autorité fédérale réalise à l'étranger ou pour lesquels elle accorde une aide financière en vue de leur réalisation à l'étranger;
(h) to encourage federal authorities to take actions that promote sustainable development in order to achieve or maintain a healthy environment and a healthy economy; and	**h)** d'inciter les autorités fédérales à favoriser un développement durable propice à la salubrité de l'environnement et à la santé de l'économie;
(i) to encourage the study of the cumulative effects of physical activities in a region and the consideration of those study results in environmental assessments.	**i)** d'encourager l'étude des effets cumulatifs d'activités concrètes dans une région et la prise en compte des résultats de cette étude dans le cadre des évaluations environnementales.
(2) The Government of Canada, the Minister, the Agency, federal authorities and responsible authorities, in the administration of this Act, must exercise their powers in a	**(2)** Pour l'application de la présente loi, le gouvernement du Canada, le ministre, l'Agence, les autorités fédérales et les autorités responsables doivent exercer

manner that protects the environment and human health and applies the precautionary principle.	leurs pouvoirs de manière à protéger l'environnement et la santé humaine et à appliquer le principe de précaution.
(Court's underlining)	(La Cour souligne)

[121] However, there is clearly a conflict between the parties as to what this entails. Taseko's proposal relied on adaptive management; that is, Taseko proposed that environmental risks and mitigation measures could be dealt with during further stages of development. Other parties considered this an inadequate approach, and sought more information on the risks and feasibility of mitigation.

[122] The Panel recognized the possibility of adaptive management, but found that it could not defer important decisions to the next stage of the process. In the Report, the Panel referenced the requirement that it act in a precautionary manner and stated, with respect to water quality in particular:

> Taseko declined to provide some materials requested by the Panel and by other participants (e.g., description of water quality model for Fish Lake). To deal with the resulting uncertainties, the Panel considered various risk management strategies, including adaptive management in some circumstances. **However, when the Panel concluded the potential adverse environmental effects were potentially "significant", it did not agree that deferring decisions on the approach to manage the risk to subsequent regulatory processes is appropriate**. It is necessary at the environmental assessment stage for the Panel to determine if a significant adverse effect is likely and to consider if and how the risk can be managed to acceptable levels.

> If, after reviewing the record of information for the review, the Panel decided that there were serious uncertainties about a potential adverse environmental effect and the ability to manage that effect and the risk of serious or irreversible environmental harm was high, then the Panel adopted a precautionary approach.
>
> [Emphasis added]

[123] It was reasonable for the Panel not to accept Taseko's "vague assurances" that it would engage in adaptive management in order to deal with adverse environmental effects. The Panel sought information on environmental effects and mitigation measures, and Taseko refused to provide this information. It was entirely reasonable, and in line with the Panel's (reasonable) interpretation of the precautionary principle, for the Panel to conclude that the concentration of water quality variables in Fish Lake (Teztan Biny) and Wasp Lake would likely be a significant adverse environmental effect.

[124] Indeed, acceptance of vague adaptive management schemes in circumstances such as these would, in my view, tend to call into question the value of the entire review panel process – if all such decisions could be left to a later stage, then the review panel process would simply be for the sake of appearances.

VI. CONCLUSION

[125] For these reasons, the Court concludes that:

a) The Panel did not breach any procedural fairness / *audi alteram partem* / legitimate expectation principles; and

b) The Panel's factual findings were open for it to make and were reasonable.

[126] Therefore, this judicial review will be dismissed with costs to the Respondents.

JUDGMENT in T-1977-13

THIS COURT'S JUDGMENT is that the application for judicial review is dismissed with costs to the Respondents.

"Michael L. Phelan"
Judge

FEDERAL COURT

For centuries the Tsilhqot'in Nation, a semi-nomadic grouping of six bands sharing common culture and history, have lived in a remote valley bounded by rivers and mountains in central British Columbia. It is one of hundreds of indigenous groups in B.C. with unresolved land claims. In 1983, B.C. granted a commercial logging licence on land considered by the Tsilhqot'in to be part of their traditional territory. The band objected and sought a declaration prohibiting commercial logging on the land. Talks with the Province reached an impasse and the original land claim was amended to include a claim for Aboriginal title to the land at issue on behalf of all Tsilhqot'in people. The federal and provincial governments opposed the title claim.

Depuis des siècles, la Nation Tsilhqot'in, un regroupement de six bandes semi-nomades ayant une culture et une histoire communes, vit dans une vallée éloignée entourée de rivières et de montagnes dans le centre de la Colombie-Britannique. Ce n'est qu'un groupe autochtone parmi des centaines en Colombie-Britannique dont les revendications territoriales ne sont pas réglées. En 1983, la province a accordé un permis commercial de coupe de bois sur des terres que les Tsilhqot'in considèrent faire partie de leur territoire ancestral. La bande s'y est opposée et a sollicité un jugement déclaratoire interdisant l'exploitation forestière commerciale sur le territoire. La négociation avec la province a mené à une impasse et la revendication territoriale initiale a été modifiée de manière à inclure une revendication du titre ancestral sur le territoire en cause au nom de tous les Tsilhqot'in. Les gouvernements fédéral et provincial ont contesté la revendication du titre.

The Supreme Court of British Columbia held that occupation was established for the purpose of proving title by showing regular and exclusive use of sites or territory within the claim area, as well as to a small area outside that area. Applying a narrower test based on site-specific occupation requiring proof that the Aboriginal group's ancestors intensively used a definite tract of land with reasonably defined boundaries at the time of European sovereignty, the British Columbia Court of Appeal held that the Tsilhqot'in claim to title had not been established.

La Cour suprême de la Colombie-Britannique a conclu que l'occupation était établie dans le but de fonder l'existence du titre par la démonstration d'une utilisation régulière et exclusive de certains sites ou du territoire revendiqué ainsi que d'un petit secteur à l'extérieur de ce territoire. Appliquant un critère plus restreint fondé sur l'occupation d'un site spécifique exigeant la preuve qu'au moment de l'affirmation de la souveraineté européenne, les ancêtres du groupe autochtone utilisaient intensément une parcelle de terrain spécifique dont les limites sont raisonnablement définies, la Cour d'appel de la Colombie-Britannique a conclu que l'existence du titre revendiqué par les Tsilhqot'in n'avait pas été établie.

Held: The appeal should be allowed and a declaration of Aboriginal title over the area requested should be granted. A declaration that British Columbia breached its duty to consult owed to the Tsilhqot'in Nation should also be granted.

The trial judge was correct in finding that the Tsilhqot'in had established Aboriginal title to the claim area at issue. The claimant group, here the Tsilhqot'in, bears the onus of establishing Aboriginal title. The task is to identify how pre-sovereignty rights and interests can properly find expression in modern common law terms. Aboriginal title flows from occupation in the sense of regular and exclusive use of land. To ground Aboriginal title "occupation" must be sufficient, continuous (where present occupation is relied on) and exclusive. In determining what constitutes sufficient occupation, which lies at the heart of this appeal, one looks to the Aboriginal culture and practices, and compares them in a culturally sensitive way with what was required at common law to establish title on the basis of occupation. Occupation sufficient to ground Aboriginal title is not confined to specific sites of settlement but extends to tracts of land that were regularly used for hunting, fishing or otherwise exploiting resources and over which the group exercised effective control at the time of assertion of European sovereignty.

In finding that Aboriginal title had been established in this case, the trial judge identified the correct legal test and applied it appropriately to the evidence. While the population was small, he found evidence that the parts of the land to which he found title were regularly used by the Tsilhqot'in, which supports the conclusion of sufficient occupation. The geographic proximity between sites for which evidence of recent occupation was tendered and those for which direct evidence of historic occupation existed also supports an inference of continuous occupation. And from the evidence that prior to the assertion of sovereignty the Tsilhqot'in repelled other people from their land and demanded permission from outsiders who wished to pass over it, he concluded that the Tsilhqot'in treated the land as exclusively theirs. The Province's criticisms of the trial judge's findings on the facts are primarily rooted in the erroneous thesis that only specific, intensively occupied areas can support Aboriginal title. Moreover, it was the trial judge's task to sort out conflicting evidence and make findings of fact.

Arrêt : Le pourvoi est accueilli et la Cour reconnaît l'existence du titre ancestral sur le territoire que vise la revendication. La Cour déclare également que la Colombie-Britannique a manqué à son obligation de consultation envers la Nation Tsilhqot'in.

Le juge de première instance a eu raison de conclure que les Tsilhqot'in avaient établi l'existence du titre ancestral sur le territoire revendiqué en cause. Il incombe au groupe revendicateur, en l'espèce les Tsilhqot'in, d'établir l'existence du titre ancestral. Il faut déterminer la façon dont les droits et intérêts qui existaient avant l'affirmation de la souveraineté peuvent trouver leur juste expression en common law moderne. Le titre ancestral découle de l'occupation, c'est-à-dire d'une utilisation régulière et exclusive des terres. Pour fonder l'existence du titre ancestral, l'« occupation » doit être suffisante, continue (si l'occupation actuelle est invoquée) et exclusive. Pour déterminer ce qui constitue une occupation suffisante, l'exigence qui se trouve au cœur du présent pourvoi, il faut examiner la culture et les pratiques des Autochtones et les comparer, tout en tenant compte de leurs particularités culturelles, à ce qui était requis en common law pour établir l'existence d'un titre fondé sur l'occupation. L'occupation suffisante pour fonder l'existence d'un titre ancestral ne se limite pas aux lieux spécifiques d'établissement, mais s'étend aux parcelles de terre régulièrement utilisées pour y pratiquer la chasse, la pêche ou d'autres types d'exploitation des ressources et sur lesquelles le groupe exerçait un contrôle effectif au moment de l'affirmation de la souveraineté européenne.

En concluant que l'existence du titre ancestral avait été établie en l'espèce, le juge de première instance a identifié le bon critère juridique et l'a correctement appliqué à la preuve. Le territoire était peu peuplé, mais il a relevé des éléments de preuve indiquant que les parties du territoire sur lesquelles il a conclu à l'existence du titre étaient régulièrement utilisées par les Tsilhqot'in, ce qui appuyait sa conclusion quant à la possession suffisante. La proximité géographique entre les sites à l'égard desquels une preuve d'occupation récente a été produite et ceux à l'égard desquels il existait une preuve directe d'occupation passée appuyait également l'inférence d'une occupation continue. Au vu de la preuve indiquant que les Tsilhqot'in, avant l'affirmation de la souveraineté, ont repoussé d'autres peuples de leurs terres et ont exigé que les étrangers qui désiraient passer sur leurs terres leur demandent la permission, il a conclu que les Tsilhqot'in considéraient qu'ils possédaient leurs terres en exclusivité. Les critiques de la province à l'endroit des conclusions de fait du juge de première

The presence of conflicting evidence does not demonstrate palpable and overriding error. The Province has not established that the conclusions of the trial judge are unsupported by the evidence or otherwise in error. Nor has it established his conclusions were arbitrary or insufficiently precise. Absent demonstrated error, his findings should not be disturbed.

The nature of Aboriginal title is that it confers on the group that holds it the exclusive right to decide how the land is used and the right to benefit from those uses, subject to the restriction that the uses must be consistent with the group nature of the interest and the enjoyment of the land by future generations. Prior to establishment of title, the Crown is required to consult in good faith with any Aboriginal groups asserting title to the land about proposed uses of the land and, if appropriate, accommodate the interests of such claimant groups. The level of consultation and accommodation required varies with the strength of the Aboriginal group's claim to the land and the seriousness of the potentially adverse effect upon the interest claimed.

Where Aboriginal title has been established, the Crown must not only comply with its procedural duties, but must also justify any incursions on Aboriginal title lands by ensuring that the proposed government action is substantively consistent with the requirements of s. 35 of the *Constitution Act, 1982*. This requires demonstrating both a compelling and substantial governmental objective and that the government action is consistent with the fiduciary duty owed by the Crown to the Aboriginal group. This means the government must act in a way that respects the fact that Aboriginal title is a group interest that inheres in present and future generations, and the duty infuses an obligation of proportionality into the justification process: the incursion must be necessary to achieve the government's goal (rational connection); the government must go no further than necessary to achieve it (minimal impairment); and the benefits that may be expected to flow from that goal must not be outweighed by adverse effects on the Aboriginal interest (proportionality of impact). Allegations of infringement or failure to adequately consult can be avoided by obtaining the consent of the interested Aboriginal group. This s. 35

instance reposent principalement sur la thèse erronée voulant que le titre ancestral s'attache uniquement à des secteurs spécifiques occupés intensivement. En outre, il appartenait au juge de première instance de faire la part des éléments de preuve contradictoires et de tirer des conclusions de fait. La présence d'éléments de preuve contradictoires ne démontre pas l'existence d'une erreur manifeste et dominante. La province n'a pas démontré que les conclusions du juge de première instance ne sont pas étayées par la preuve ou qu'elles sont autrement erronées. Elle n'a pas non plus démontré que ses conclusions étaient arbitraires ou manquaient de précision. En l'absence d'une erreur manifeste, ses conclusions ne devraient pas être modifiées.

De par sa nature, le titre ancestral confère au groupe qui le détient le droit exclusif de déterminer l'utilisation qu'il est fait des terres et de bénéficier des avantages que procure cette utilisation, pourvu que les utilisations respectent la nature collective de ce droit et préservent la jouissance des terres pour les générations futures. Avant que l'existence du titre soit établie, la Couronne est tenue de consulter de bonne foi les groupes autochtones qui revendiquent le titre sur des terres au sujet de ses projets d'utilisation des terres et, s'il y a lieu, de trouver des accommodements aux intérêts de ces groupes. Le niveau de consultation et d'accommodement requis varie en fonction de la solidité de la revendication du groupe autochtone et de la gravité de l'effet préjudiciable éventuel du projet sur l'intérêt revendiqué.

Lorsque l'existence du titre ancestral a été établie, la Couronne doit non seulement se conformer à ses obligations procédurales, mais elle doit aussi justifier toute incursion sur les terres visées par le titre ancestral en s'assurant que la mesure gouvernementale proposée est fondamentalement conforme aux exigences de l'art. 35 de la *Loi constitutionnelle de 1982*. Elle doit à cette fin démontrer l'existence d'un objectif public réel et impérieux, et la compatibilité de la mesure gouvernementale avec l'obligation fiduciaire qu'a la Couronne envers le groupe autochtone. Le gouvernement doit donc agir d'une manière qui respecte le fait que le titre ancestral est un droit collectif inhérent aux générations actuelles et futures et que l'obligation fiduciaire de la Couronne insuffle une obligation de proportionnalité dans le processus de justification : l'atteinte doit être nécessaire pour atteindre l'objectif gouvernemental (lien rationnel); le gouvernement ne doit pas aller au-delà de ce qui est nécessaire pour atteindre cet objectif (atteinte minimale); et les effets préjudiciables sur l'intérêt autochtone ne doivent pas l'emporter sur les avantages qui devraient découler de cet objectif (proportionnalité de l'incidence).

framework permits a principled reconciliation of Aboriginal rights with the interests of all Canadians.

The alleged breach in this case arises from the issuance by the Province of licences affecting the land in 1983 and onwards, before title was declared. The honour of the Crown required that the Province consult the Tsilhqot'in on uses of the lands and accommodate their interests. The Province did neither and therefore breached its duty owed to the Tsilhqot'in.

While unnecessary for the disposition of the appeal, the issue of whether the *Forest Act* applies to Aboriginal title land is of pressing importance and is therefore addressed. As a starting point, subject to the constitutional constraints of s. 35 of the *Constitution Act, 1982* and the division of powers in the *Constitution Act, 1867*, provincial laws of general application apply to land held under Aboriginal title. As a matter of statutory construction, the *Forest Act* on its face applied to the land in question at the time the licences were issued. The British Columbia legislature clearly intended and proceeded on the basis that lands under claim remain "Crown land" for the purposes of the *Forest Act* at least until Aboriginal title is recognized. Now that title has been established, however, the timber on it no longer falls within the definition of "Crown timber" and the *Forest Act* no longer applies. It remains open to the legislature to amend the Act to cover lands over which Aboriginal title has been established, provided it observes applicable constitutional restraints.

This raises the question of whether provincial forestry legislation that on its face purports to apply to Aboriginal title lands, such as the *Forest Act*, is ousted by the s. 35 framework or by the limits on provincial power under the *Constitution Act, 1867*. Under s. 35, a right will be infringed by legislation if the limitation is unreasonable, imposes undue hardship, or denies the holders of the right their preferred means of exercising the right. General regulatory legislation, such as legislation aimed at managing the forests in a way that deals with pest invasions or prevents forest fires, will often pass this test and

Les allégations d'atteinte aux droits ou de manquement à l'obligation de consulter adéquatement le groupe peuvent être évitées par l'obtention du consentement du groupe autochtone en question. Ce cadre d'analyse relatif à l'art. 35 permet une conciliation rationnelle des droits ancestraux et des intérêts de tous les Canadiens.

En l'espèce, le manquement allégué découle de la délivrance, par la province, de permis de coupe de bois sur les terres à compter de 1983, avant que l'existence du titre soit reconnue. Le principe de l'honneur de la Couronne obligeait la province à consulter les Tsilhqot'in à propos des utilisations des terres et à trouver des accommodements à leurs intérêts. La province n'a fait ni l'un ni l'autre et a donc manqué à son obligation envers les Tsilhqot'in.

La question de l'application de la *Forest Act* aux terres visées par un titre ancestral revêt une grande importance, et bien qu'il ne soit pas nécessaire de la trancher pour les besoins du présent pourvoi, il convient de l'examiner. Comme point de départ, sous réserve des contraintes constitutionnelles qu'imposent l'art. 35 de la *Loi constitutionnelle de 1982* et le partage des compétences prévu dans la *Loi constitutionnelle de 1867*, les lois provinciales d'application générale s'appliquent aux terres détenues en vertu d'un titre ancestral. Suivant les règles d'interprétation législative, la *Forest Act* s'appliquait, à première vue, aux terres en question à l'époque où les permis ont été délivrés. Le législateur de la Colombie-Britannique entendait clairement que les terres revendiquées demeurent des « terres publiques » pour les besoins de la *Forest Act*, du moins jusqu'à ce que le titre ancestral soit reconnu; c'est sur quoi la province s'est fondée pour accorder le permis. Cependant, maintenant que l'existence du titre a été établie, la définition de « bois des terres publiques » ne s'applique plus au bois qui se trouve sur ces terres et la *Forest Act* ne s'applique plus à ces terres. Le législateur peut toujours modifier la *Forest Act* afin qu'elle s'applique au territoire sur lequel le titre ancestral a été établi, à la condition de respecter les contraintes constitutionnelles applicables.

Cela soulève la question de savoir si le cadre d'analyse relatif à l'art. 35, ou les limites à la compétence que la *Loi constitutionnelle de 1867* accorde à la province, écartent les lois provinciales régissant l'exploitation forestière, telle la *Forest Act*, qui sont à première vue censées s'appliquer aux terres visées par un titre ancestral. Aux termes de l'art. 35, une loi portera atteinte à un droit si la restriction est déraisonnable, si elle est indûment rigoureuse ou si elle refuse aux titulaires du droit le recours à leur moyen préféré de l'exercer. Une loi de nature réglementaire de portée générale, par

no infringement will result. However, the issuance of timber licences on Aboriginal title land is a direct transfer of Aboriginal property rights to a third party and will plainly be a meaningful diminution in the Aboriginal group's ownership right amounting to an infringement that must be justified in cases where it is done without Aboriginal consent.

Finally, for purposes of determining the validity of provincial legislative incursions on lands held under Aboriginal title, the framework under s. 35 displaces the doctrine of interjurisdictional immunity. There is no role left for the application of the doctrine of interjurisdictional immunity and the idea that Aboriginal rights are at the core of the federal power over "Indians" under s. 91(24) of the *Constitution Act, 1867*. The doctrine of interjurisdictional immunity is directed to ensuring that the two levels of government are able to operate without interference in their core areas of exclusive jurisdiction. This goal is not implicated in cases such as this. Aboriginal rights are a limit on both federal and provincial jurisdiction. The problem in cases such as this is not competing provincial and federal power, but rather tension between the right of the Aboriginal title holders to use their land as they choose and the province which seeks to regulate it, like all other land in the province. Interjurisdictional immunity — premised on a notion that regulatory environments can be divided into watertight jurisdictional compartments — is often at odds with modern reality. Increasingly, as our society becomes more complex, effective regulation requires cooperation between interlocking federal and provincial schemes. Interjurisdictional immunity may thwart such productive cooperation.

In the result, provincial regulation of general application, including the *Forest Act*, will apply to exercises of Aboriginal rights such as Aboriginal title land, subject to the s. 35 infringement and justification framework. This carefully calibrated test attempts to reconcile general legislation with Aboriginal rights in a sensitive way as required by s. 35 of the *Constitution Act, 1982* and is fairer and more practical from a policy perspective than the blanket inapplicability imposed by the doctrine of interjurisdictional immunity. The result is a balance that

exemple une loi visant la gestion des forêts en prévenant les infestations de ravageurs ou les feux de forêt, satisfera souvent à ce critère et il n'en résultera aucune atteinte. Toutefois, la délivrance de permis de coupe de bois sur des terres grevées du titre ancestral constitue un transfert direct à des tiers de droits de propriété des Autochtones et entraîne manifestement une diminution significative du droit de propriété du groupe autochtone assimilable à une atteinte qui doit être justifiée dans les cas où les Autochtones n'y ont pas consenti.

Enfin, lorsqu'il s'agit de déterminer la validité d'une atteinte causée par l'application des lois provinciales à des terres visées par un titre ancestral, le cadre d'analyse relatif à l'art. 35 écarte la doctrine de l'exclusivité des compétences. L'application de la doctrine de l'exclusivité des compétences et la notion que les droits ancestraux font partie du contenu essentiel du pouvoir fédéral sur les « Indiens » prévu au par. 91(24) de la *Loi constitutionnelle de 1867* ne sont alors d'aucune utilité. La doctrine de l'exclusivité des compétences vise à faire en sorte que les deux niveaux de gouvernement soient en mesure de fonctionner sans que l'un empiète sur le contenu essentiel des domaines de compétence exclusive de l'autre. Cet objectif n'est pas en cause dans les affaires telles que celle qui nous occupe. Les droits ancestraux constituent une limite à l'exercice des compétences tant fédérales que provinciales. Le problème dans des cas comme celui-ci ne résulte pas d'une confrontation entre le pouvoir des provinces et celui du gouvernement fédéral mais plutôt d'une tension entre le droit des titulaires du titre ancestral d'utiliser leurs terres comme ils l'entendent et la volonté de la province de réglementer ces terres au même titre que toutes les autres terres dans la province. La doctrine de l'exclusivité des compétences — fondée sur l'idée que les contextes réglementaires peuvent être divisés en compartiments étanches — va souvent à l'encontre de la réalité moderne. Notre société devient plus complexe, et pour être efficace, la réglementation exige de plus en plus la coopération des régimes fédéral et provincial interreliés. La doctrine de l'exclusivité des compétences peut contrecarrer une telle coopération.

En conséquence, la réglementation provinciale d'application générale, notamment la *Forest Act*, s'appliquera à l'exercice des droits ancestraux tels que le titre ancestral sur des terres, sous réserve de l'application du cadre d'analyse relatif à l'art. 35 qui permet de justifier une atteinte. Ce critère soigneusement conçu vise à concilier la loi d'application générale et les droits ancestraux avec la délicatesse qu'exige l'art. 35 de la *Loi constitutionnelle de 1982*, et il est plus équitable et pratique du point de vue de la politique générale que l'inapplicabilité générale

preserves the Aboriginal right while permitting effective regulation of forests by the province. In this case, however, the Province's land use planning and forestry authorizations under the *Forest Act* were inconsistent with its duties owed to the Tsilhqot'in people.

qu'impose la doctrine de l'exclusivité des compétences. Il en résulte un équilibre qui préserve le droit ancestral tout en permettant une réglementation efficace des forêts par la province. En l'espèce toutefois, le projet d'aménagement du territoire prévu par la province et les autorisations d'exploitation forestière qu'elle a accordées en vertu de la *Forest Act* étaient incompatibles avec les obligations qu'elle avait envers le peuple Tsilhqot'in.

POURVOI contre un arrêt de la Cour d'appel de la Colombie-Britannique (les juges Levine, Tysoe et Groberman), 2012 BCCA 285, 33 B.C.L.R. (5th) 260, 324 B.C.A.C. 214, 551 W.A.C. 214, [2012] 3 C.N.L.R. 333, [2012] 10 W.W.R. 639, 26 R.P.R. (5th) 67, [2012] B.C.J. No. 1302 (QL), 2012 CarswellBC 1860, qui a confirmé l'ordonnance du juge Vickers, 2007 BCSC 1700, [2008] 1 C.N.L.R. 112, 65 R.P.R. (4th) 1, [2007] B.C.J. No. 2465 (QL), 2007 CarswellBC 2741. Pourvoi accueilli.

David M. Rosenberg, *c.r.*, *Jay Nelson*, *David M. Robbins* et *Dominique Nouvet*, pour l'appelant.

Patrick G. Foy, *c.r.*, et *Kenneth J. Tyler*, pour les intimés Sa Majesté la Reine du chef de la province de la Colombie-Britannique et le chef régional de la région de Cariboo Forest.

Mark R. Kindrachuk, *c.r.*, *Brian McLaughlin* et *Jan Brongers*, pour l'intimé le procureur général du Canada.

Alain Gingras et *Hubert Noreau-Simpson*, pour l'intervenant le procureur général du Québec.

Heather Leonoff, *c.r.*, pour l'intervenant le procureur général du Manitoba.

P. Mitch McAdam, *c.r.*, et *Sonia Eggerman*, pour l'intervenant le procureur général de la Saskatchewan.

Sandra Folkins, pour l'intervenant le procureur général de l'Alberta.

Robert J. M. Janes et *Karey Brooks*, pour l'intervenante l'Association du traité des Te'mexw.

Charles F. Willms and *Kevin O'Callaghan*, for the interveners the Business Council of British Columbia, the Council of Forest Industries, the Coast Forest Products Association, the Mining Association of British Columbia and the Association for Mineral Exploration British Columbia.

Joseph J. Arvay, *Q.C.*, *Catherine J. Boies Parker* and *Patrick Macklem*, for the intervener the Assembly of First Nations.

Diane Soroka, for the interveners the Gitanyow Hereditary Chiefs of Gwass Hlaam, Gamlaxyeltxw, Malii, Gwinuu, Haizimsque, Watakhayetsxw, Luuxhon and Wii'litswx, on their own behalf and on behalf of all Gitanyow, and the Office of the Wet'suwet'en Chiefs.

Robert B. Morales and *Renée Racette*, for the intervener the Hul'qumi'num Treaty Group.

Written submissions only by *Louise Mandell*, *Q.C.*, *Stuart Rush*, *Q.C.*, *Michael Jackson*, *Q.C.*, *Terri-Lynn Williams-Davidson*, *David Paterson* and *Angela D'Elia*, for the intervener the Council of the Haida Nation.

David C. Nahwegahbow and *Guy Régimbald*, for the intervener the Indigenous Bar Association in Canada.

Maria Morellato, *Q.C.*, *Cheryl Sharvit* and *Stacey Edzerza Fox*, for the intervener the First Nations Summit.

Written submissions only by *John W. Gailus* and *Christopher G. Devlin*, for the interveners the Tsawout First Nation, the Tsartlip First Nation, the Snuneymuxw First Nation and the Kwakiutl First Nation.

Louise Mandell, *Q.C.*, *Michael Jackson*, *Q.C.*, *Ardith Walkem* and *Nicole Schabus*, for the intervener the Coalition of the Union of British Columbia Indian Chiefs, the Okanagan Nation Alliance and the Shuswap Nation Tribal Council and their member communities, Okanagan, Adams Lake, Neskonlith and Splatsin Indian Bands.

Charles F. Willms et *Kevin O'Callaghan*, pour les intervenants Business Council of British Columbia, Council of Forest Industries, Coast Forest Products Association, Mining Association of British Columbia et Association for Mineral Exploration British Columbia.

Joseph J. Arvay, *c.r.*, *Catherine J. Boies Parker* et *Patrick Macklem*, pour l'intervenante l'Assemblée des Premières Nations.

Diane Soroka, pour les intervenants les chefs héréditaires Gitanyow de Gwass Hlaam, Gamlaxyeltxw, Malii, Gwinuu, Haizimsque, Watakhayetsxw, Luuxhon et Wii'litswx, en leur nom et au nom de tous les Gitanyow, et le Bureau des chefs Wet'suwet'en.

Robert B. Morales et *Renée Racette*, pour l'intervenant le Groupe du traité Hul'qumi'num.

Argumentation écrite seulement par *Louise Mandell*, *c.r.*, *Stuart Rush*, *c.r.*, *Michael Jackson*, *c.r.*, *Terri-Lynn Williams-Davidson*, *David Paterson* et *Angela D'Elia*, pour l'intervenant le Conseil de la Nation haïda.

David C. Nahwegahbow et *Guy Régimbald*, pour l'intervenante l'Association du barreau autochtone au Canada.

Maria Morellato, *c.r.*, *Cheryl Sharvit* et *Stacey Edzerza Fox*, pour l'intervenant le Sommet des Premières Nations.

Argumentation écrite seulement par *John W. Gailus* et *Christopher G. Devlin*, pour les intervenantes la Première Nation Tsawout, la Première Nation Tsartlip, la Première Nation Snuneymuxw et la Première Nation Kwakiutl.

Louise Mandell, *c.r.*, *Michael Jackson*, *c.r.*, *Ardith Walkem* et *Nicole Schabus*, pour l'intervenante la Coalition de l'Union des chefs indiens de la Colombie-Britannique, l'Alliance des Nations de l'Okanagan, le Conseil tribal de la Nation Shuswap et leurs communautés membres, les bandes indiennes d'Okanagan, d'Adams Lake, de Neskonlith et de Splatsin.

Justin Safayeni and *Paul Joffe*, for the interveners Amnesty International and the Canadian Friends Service Committee.

Tim A. Dickson, for the intervener the Gitxaala Nation.

Gregory J. McDade, *Q.C.*, and *F. Matthew Kirchner*, for the interveners the Chilko Resorts and Community Association and the Council of Canadians.

Justin Safayeni et *Paul Joffe*, pour les intervenants Amnistie internationale et Secours Quaker canadien.

Tim A. Dickson, pour l'intervenante la Nation Gitxaala.

Gregory J. McDade, *c.r.*, et *F. Matthew Kirchner*, pour les intervenants Chilko Resorts and Community Association et le Conseil des Canadiens.

The judgment of the Court was delivered by

THE CHIEF JUSTICE —

I. Introduction

[1] What is the test for Aboriginal title to land? If title is established, what rights does it confer? Does the British Columbia *Forest Act*, R.S.B.C. 1996, c. 157, apply to land covered by Aboriginal title? What are the constitutional constraints on provincial regulation of land under Aboriginal

Version française du jugement de la Cour rendu par

LA JUGE EN CHEF —

I. Introduction

[1] Quel critère permet d'établir l'existence d'un titre ancestral sur un territoire? Si l'existence d'un titre est établie, quels droits confère-t-il? La *Forest Act*, R.S.B.C. 1996, ch. 157, de la Colombie-Britannique s'applique-t-elle aux terres visées par un titre ancestral? Quelles contraintes

title? Finally, how are broader public interests to be reconciled with the rights conferred by Aboriginal title? These are among the important questions raised by this appeal.

[2] These reasons conclude:

- Aboriginal title flows from occupation in the sense of regular and exclusive use of land.
- In this case, Aboriginal title is established over the area designated by the trial judge.
- Aboriginal title confers the right to use and control the land and to reap the benefits flowing from it.
- Where title is asserted, but has not yet been established, s. 35 of the *Constitution Act, 1982* requires the Crown to consult with the group asserting title and, if appropriate, accommodate its interests.
- Once Aboriginal title is established, s. 35 of the *Constitution Act, 1982* permits incursions on it only with the consent of the Aboriginal group or if they are justified by a compelling and substantial public purpose and are not inconsistent with the Crown's fiduciary duty to the Aboriginal group; for purposes of determining the validity of provincial legislative incursions on lands held under Aboriginal title, this framework displaces the doctrine of interjurisdictional immunity.
- In this case, the Province's land use planning and forestry authorizations were inconsistent with its duties owed to the Tsilhqot'in people.

constitutionnelles sont imposées à la réglementation, par la province, des terres visées par un titre ancestral? Enfin, comment concilier l'intérêt public général et les droits conférés par un titre ancestral? Voilà quelques questions importantes soulevées dans le présent pourvoi.

[2] Voici les conclusions tirées dans les présents motifs :

- Le titre ancestral découle de l'occupation, c'est-à-dire d'une utilisation régulière et exclusive des terres.
- En l'espèce, l'existence d'un titre ancestral est établie à l'égard du territoire désigné par le juge de première instance.
- Le titre ancestral confère le droit d'utiliser et de contrôler le territoire et de tirer les avantages qui en découlent.
- Lorsque le titre est revendiqué, mais que son existence n'a pas encore été établie, l'art. 35 de la *Loi constitutionnelle de 1982* oblige la Couronne à consulter le groupe qui revendique ce titre et, s'il y a lieu, à trouver des accommodements à ses intérêts.
- Une fois établie l'existence du titre ancestral, l'art. 35 de la *Loi constitutionnelle de 1982* permet d'y porter atteinte seulement si le groupe autochtone y consent ou si l'atteinte est justifiée par un objectif public réel et impérieux et si elle est compatible avec l'obligation fiduciaire de la Couronne envers le groupe autochtone; lorsqu'il s'agit de déterminer la validité d'une atteinte causée par l'application des lois provinciales aux terres visées par un titre ancestral, ce cadre d'analyse écarte la doctrine de l'exclusivité des compétences.
- En l'espèce, le projet d'aménagement du territoire de la province et les autorisations d'exploitation forestière accordées par elle étaient incompatibles avec les obligations qu'elle avait envers le peuple Tsilhqot'in.

II. The Historic Backdrop

[3] For centuries, people of the Tsilhqot'in Nation — a grouping of six bands sharing common culture and history — have lived in a remote valley bounded by rivers and mountains in central British Columbia. They lived in villages, managed lands for the foraging of roots and herbs, hunted and trapped. They repelled invaders and set terms for the European traders who came onto their land. From the Tsilhqot'in perspective, the land has always been theirs.

[4] Throughout most of Canada, the Crown entered into treaties whereby the indigenous peoples gave up their claim to land in exchange for reservations and other promises, but, with minor exceptions, this did not happen in British Columbia. The Tsilhqot'in Nation is one of hundreds of indigenous groups in British Columbia with unresolved land claims.

[5] The issue of Tsilhqot'in title lay latent until 1983, when the Province granted Carrier Lumber Ltd. a forest licence to cut trees in part of the territory at issue. The Xeni Gwet'in First Nations government (one of the six bands that make up the Tsilhqot'in Nation) objected and sought a declaration prohibiting commercial logging on the land. The dispute led to the blockade of a bridge the forest company was upgrading. The blockade ceased when the Premier promised that there would be no further logging without the consent of the Xeni Gwet'in. Talks between the Ministry of Forests and the Xeni Gwet'in ensued, but reached an impasse over the Xeni Gwet'in claim to a right of first refusal to logging. In 1998, the original claim was amended to include a claim for Aboriginal title on behalf of all Tsilhqot'in people.

[6] The claim is confined to approximately five percent of what the Tsilhqot'in — a total of about

II. Le contexte historique

[3] Depuis des siècles, le peuple de la nation Tsilhqot'in — un regroupement de six bandes ayant une culture et une histoire communes — vit dans une vallée éloignée entourée de rivières et de montagnes dans le centre de la Colombie-Britannique. Les membres de cette nation ont vécu dans des villages, géré des terres pour y récolter des végétaux à racine et des herbes; ils ont chassé et piégé. Ils ont repoussé les envahisseurs et imposé des conditions aux marchands européens qui entraient sur leur territoire. De leur point de vue, le territoire leur a toujours appartenu.

[4] La Couronne a conclu presque partout au Canada des traités en vertu desquels les peuples autochtones ont renoncé à leurs revendications territoriales en échange de réserves et d'autres promesses, mais, à quelques exceptions près, ce n'est pas ce qui s'est produit en Colombie-Britannique. La nation Tsilhqot'in n'est qu'un groupe autochtone parmi des centaines en Colombie-Britannique dont les revendications territoriales ne sont pas réglées.

[5] La question du titre des Tsilhqot'in est demeurée latente jusqu'en 1983, quand la province a accordé à Carrier Lumber Ltd. un permis d'exploitation forestière l'autorisant à abattre des arbres dans une partie du territoire en question. Le gouvernement de la Première Nation Xeni Gwet'in (une des six bandes qui constituent la nation Tsilhqot'in) s'y est opposé et a sollicité un jugement déclaratoire interdisant l'exploitation forestière commerciale sur le territoire. Le litige a mené au barrage d'un pont que l'entreprise forestière voulait moderniser. Le barrage a été levé quand le premier ministre a promis qu'il n'y aurait aucune autre exploitation forestière sans le consentement des Xeni Gwet'in. Le ministère des Forêts et les Xeni Gwet'in ont négocié, mais ils n'ont pu s'entendre sur le droit de premier refus revendiqué par les Xeni Gwet'in à l'égard de l'exploitation forestière. En 1998, la revendication initiale a été modifiée de manière à inclure une revendication du titre ancestral au nom de tous les Tsilhqot'in.

[6] La revendication se limite à environ cinq pour cent de ce que les Tsilhqot'in — approximativement

3,000 people — regard as their traditional territory. The area in question is sparsely populated. About 200 Tsilhqot'in people live there, along with a handful of non-indigenous people who support the Tsilhqot'in claim to title. There are no adverse claims from other indigenous groups. The federal and provincial governments both oppose the title claim.

[7] In 2002, the trial commenced before Vickers J. of the British Columbia Supreme Court, and continued for 339 days over a span of five years. The trial judge spent time in the claim area and heard extensive evidence from elders, historians and other experts. He found that the Tsilhqot'in people were in principle entitled to a declaration of Aboriginal title to a portion of the claim area as well as to a small area outside the claim area. However, for procedural reasons which are no longer relied on by the Province, he refused to make a declaration of title (2007 BCSC 1700, [2008] 1 C.N.L.R. 112).

[8] In 2012, the British Columbia Court of Appeal held that the Tsilhqot'in claim to title had not been established, but left open the possibility that in the future, the Tsilhqot'in might be able to prove title to specific sites within the area claimed. For the rest of the claimed territory, the Tsilhqot'in were confined to Aboriginal rights to hunt, trap and harvest (2012 BCCA 285, 33 B.C.L.R. (5th) 260).

[9] The Tsilhqot'in now ask this Court for a declaration of Aboriginal title over the area designated by the trial judge, with one exception. A small portion of the area designated by the trial judge consists of either privately owned or underwater lands and no declaration of Aboriginal title over these lands is sought before this Court. With respect to those areas designated by the trial judge that are not privately owned or submerged lands, the Tsilhqot'in ask this Court to restore the trial judge's finding, affirm their title to the area he designated, and confirm that issuance of forestry licences on the

3 000 personnes — considèrent comme étant leur territoire traditionnel. Ce territoire est peu peuplé. Environ 200 membres des Tsilhqot'in y vivent, ainsi que quelques non-Autochtones qui appuient la revendication du titre des Tsilhqot'in. Aucun autre groupe autochtone n'a revendiqué un titre sur ce territoire. Les gouvernements fédéral et provincial s'opposent tous deux à la revendication du titre.

[7] Le procès a débuté en 2002 devant le juge Vickers de la Cour suprême de la Colombie-Britannique et a duré 339 jours sur une période de cinq ans. Le juge de première instance s'est rendu sur le territoire revendiqué et a entendu de nombreux témoignages des aînés, des historiens et d'autres experts. Il a conclu que les Tsilhqot'in avaient droit, en principe, à un jugement déclarant l'existence d'un titre ancestral sur une partie du territoire revendiqué ainsi que sur un petit secteur à l'extérieur de ce territoire. Cependant, pour des raisons d'ordre procédural que la province n'invoque plus, il a refusé dans son jugement de déclarer l'existence d'un titre ancestral (2007 BCSC 1700, [2008] 1 C.N.L.R. 112).

[8] En 2012, la Cour d'appel de la Colombie-Britannique a conclu que l'existence du titre revendiqué par les Tsilhqot'in n'avait pas été établie, mais n'a pas écarté la possibilité que les Tsilhqot'in puissent éventuellement établir l'existence d'un titre sur certains sites à l'intérieur du territoire revendiqué. En ce qui concerne le reste du territoire revendiqué, les Tsilhqot'in n'ont obtenu que les droits ancestraux de chasse, de piégeage et de récolte (2012 BCCA 285, 33 B.C.L.R. (5th) 260).

[9] Les Tsilhqot'in demandent maintenant à notre Cour de reconnaître l'existence du titre ancestral sur le territoire désigné par le juge de première instance, sous réserve d'une exception. Sur une petite partie du territoire désigné par le juge se trouvent des terrains privés ou des terres submergées à l'égard desquels la reconnaissance du titre ancestral n'est pas demandée devant notre Cour. Pour ce qui est des terres désignées par le juge qui ne sont pas des terrains privés ou des terres submergées, les Tsilhqot'in demandent à notre Cour de rétablir les conclusions du juge de première instance, de

land unjustifiably infringed their rights under that title.

confirmer qu'ils possèdent le titre ancestral sur le secteur qu'il a désigné et de confirmer que la délivrance de permis d'exploitation forestière sur les terres a indûment porté atteinte aux droits que leur confère ce titre.

III. The Jurisprudential Backdrop

III. Le contexte jurisprudentiel

[10] In 1973, the Supreme Court of Canada ushered in the modern era of Aboriginal land law by ruling that Aboriginal land rights survived European settlement and remain valid to the present unless extinguished by treaty or otherwise: *Calder v. Attorney-General of British Columbia*, [1973] S.C.R. 313. Although the majority in *Calder* divided on whether title had been extinguished, its affirmation of Aboriginal rights to land led the Government of Canada to begin treaty negotiations with First Nations without treaties — mainly in British Columbia — resuming a policy that had been abandoned in the 1920s: P. W. Hogg, "The Constitutional Basis of Aboriginal Rights", in M. Morellato, ed., *Aboriginal Law Since Delgamuukw* (2009), 3.

[10] En 1973, la Cour suprême du Canada a marqué le début de l'ère moderne du droit inhérent aux terres ancestrales en statuant que les droits fonciers des Autochtones avaient subsisté à l'établissement des Européens et qu'ils étaient toujours valides s'ils n'avaient pas été éteints par traité ou autrement : *Calder c. Procureur général de la Colombie-Britannique*, [1973] R.C.S. 313. Bien que les juges majoritaires dans *Calder* étaient divisés quant à savoir si le titre avait été éteint, leur confirmation des droits fonciers ancestraux a incité le gouvernement du Canada à entamer des négociations avec les Premières Nations non assujetties à des traités en vue de conclure des traités — principalement en Colombie-Britannique — reprenant ainsi une politique qui avait été abandonnée dans les années 1920 : P. W. Hogg, « The Constitutional Basis of Aboriginal Rights », dans M. Morellato, dir., *Aboriginal Law Since Delgamuukw* (2009), 3.

[11] Almost a decade after *Calder*, the enactment of s. 35 of the *Constitution Act, 1982* "recognized and affirmed" existing Aboriginal rights, although it took some time for the meaning of this section to be fully fleshed out.

[11] Presque 10 ans après l'arrêt *Calder*, les droits existants des Autochtones ont été « reconnus et confirmés » avec l'adoption de l'art. 35 de la *Loi constitutionnelle de 1982*, bien qu'il ait fallu un certain temps pour bien préciser le sens de cette disposition.

[12] In *Guerin v. The Queen*, [1984] 2 S.C.R. 335, this Court confirmed the potential for Aboriginal title in ancestral lands. The actual dispute concerned government conduct with respect to reserve lands. The Court held that the government had breached a fiduciary duty to the Musqueam Indian Band. In a concurring opinion, Justice Dickson (later Chief Justice) addressed the theory underlying Aboriginal title. He held that the Crown acquired radical or underlying title to all the land in British Columbia at the time of sovereignty. However, this title was burdened by the "pre-existing legal right" of

[12] Dans l'arrêt *Guerin c. La Reine*, [1984] 2 R.C.S. 335, notre Cour a confirmé qu'il était possible que les Autochtones détiennent un titre sur les terres ancestrales. Le litige se rapportait à la conduite du gouvernement à l'égard de terres situées sur une réserve. La Cour a conclu que le gouvernement avait manqué à une obligation fiduciaire envers la bande indienne Musqueam. Dans une opinion concourante, le juge Dickson (plus tard Juge en chef) a examiné la théorie sous-jacente au titre ancestral. Selon lui, la Couronne a acquis un titre absolu ou sous-jacent sur toutes les terres situées

Aboriginal people based on their use and occupation of the land prior to European arrival (pp. 379-82). Dickson J. characterized this Aboriginal interest in the land as "an independent legal interest" (at p. 385), which gives rise to a *sui generis* fiduciary duty on the part of the Crown.

[13] In 1990, this Court held that s. 35 of the *Constitution Act, 1982* constitutionally protected all Aboriginal rights that had not been extinguished prior to April 17, 1982, and imposed a fiduciary duty on the Crown with respect to those rights: *R. v. Sparrow*, [1990] 1 S.C.R. 1075. The Court held that under s. 35, legislation can infringe rights protected by s. 35 only if it passes a two-step justification analysis: the legislation must further a "compelling and substantial" purpose and account for the "priority" of the infringed Aboriginal interest under the fiduciary obligation imposed on the Crown (pp. 1113-19).

[14] The principles developed in *Calder*, *Guerin* and *Sparrow* were consolidated and applied in the context of a claim for Aboriginal title in *Delgamuukw v. British Columbia*, [1997] 3 S.C.R. 1010. This Court confirmed the *sui generis* nature of the rights and obligations to which the Crown's relationship with Aboriginal peoples gives rise, and stated that what makes Aboriginal title unique is that it arises from possession *before* the assertion of British sovereignty, as distinguished from other estates such as fee simple that arise *afterward*. The dual perspectives of the common law and of the Aboriginal group bear equal weight in evaluating a claim for Aboriginal title.

[15] The Court in *Delgamuukw* summarized the content of Aboriginal title by two propositions, one positive and one negative. Positively, "[A]boriginal

en Colombie-Britannique au moment de l'affirmation de la souveraineté. Cependant, ce titre était grevé du « droit, en *common law*, qui existait déjà » que détiennent les peuples autochtones du fait de leur utilisation et de leur occupation des terres avant l'arrivée des Européens (p. 379-382). Le juge Dickson a affirmé que le droit des Autochtones sur leurs terres avait « une existence juridique indépendante » (p. 385), lequel donne naissance à une obligation fiduciaire *sui generis* de la Couronne.

[13] En 1990, notre Cour a conclu que l'art. 35 de la *Loi constitutionnelle de 1982* accordait une protection constitutionnelle à tous les droits ancestraux qui n'avaient pas été éteints avant le 17 avril 1982 et imposait à la Couronne une obligation fiduciaire relativement à ces droits : *R. c. Sparrow*, [1990] 1 R.C.S. 1075. La Cour a déclaré que, sous le régime de l'art. 35, un texte de loi ne peut porter atteinte aux droits protégés par cet article que si l'atteinte résiste à une analyse de la justification en deux étapes : le texte de loi doit poursuivre un objectif « impérieux et réel » et doit reconnaître la « priorité » du droit ancestral en cause qui découle de l'obligation fiduciaire imposée à la Couronne (p. 1113-1119).

[14] Les principes établis dans les arrêts *Calder*, *Guerin* et *Sparrow* ont été réunis et appliqués dans le contexte d'une revendication du titre ancestral dans l'arrêt *Delgamuukw c. Colombie-Britannique*, [1997] 3 R.C.S. 1010. Notre Cour a confirmé le caractère *sui generis* des droits et des obligations auxquels la relation entre la Couronne et les peuples autochtones donne naissance, et elle a déclaré que ce qui rend le titre ancestral unique est le fait qu'il découle d'une possession *antérieure* à l'affirmation de la souveraineté britannique, contrairement aux autres domaines, comme le fief simple, qui ont pris naissance *par la suite*. Il faut accorder une importance égale à la common law et au point de vue des Autochtones au moment d'évaluer une revendication du titre ancestral.

[15] Dans l'arrêt *Delgamuukw*, la Cour a résumé le contenu du titre ancestral au moyen de deux énoncés, l'un positif et l'autre négatif. De façon

title encompasses the right to exclusive use and occupation of the land held pursuant to that title for a variety of purposes, which need not be aspects of those [A]boriginal practices, customs and traditions which are integral to distinctive [A]boriginal cultures" (para. 117). Negatively, the "protected uses must not be irreconcilable with the nature of the group's attachment to that land" (*ibid.*) — that is, it is group title and cannot be alienated in a way that deprives future generations of the control and benefit of the land.

[16] The Court in *Delgamuukw* confirmed that infringements of Aboriginal title can be justified under s. 35 of the *Constitution Act, 1982* pursuant to the *Sparrow* test and described this as a "necessary part of the reconciliation of [A]boriginal societies with the broader political community of which they are part" (at para. 161), quoting *R. v. Gladstone*, [1996] 2 S.C.R. 723, at para. 73. While *Sparrow* had spoken of *priority* of Aboriginal rights infringed by regulations over non-aboriginal interests, *Delgamuukw* articulated the "different" (at para. 168) approach of involvement of Aboriginal peoples — varying depending on the severity of the infringement — in decisions taken with respect to their lands.

[17] In *Haida Nation v. British Columbia (Minister of Forests)*, 2004 SCC 73, [2004] 3 S.C.R. 511, the Court applied the *Delgamuukw* idea of involvement of the affected Aboriginal group in decisions about its land to the situation where development is proposed on land over which Aboriginal title is asserted but has not yet been established. The Court affirmed a spectrum of consultation. The Crown's duty to consult and accommodate the asserted Aboriginal interest "is proportionate to a preliminary assessment of the strength of the case supporting the existence of the right or title, and to the seriousness of the potentially adverse effect upon the right or title claimed" (para. 39). Thus, the idea of proportionate balancing implicit in *Delgamuukw* reappears in *Haida.* The Court in

positive, « le titre aborigène comprend le droit d'utiliser et d'occuper de façon exclusive les terres détenues en vertu de ce titre pour diverses fins qui ne doivent pas nécessairement être des aspects de coutumes, pratiques et traditions autochtones faisant partie intégrante d'une culture autochtone distinctive » (par. 117). De façon négative, ces « utilisations protégées ne doivent pas être incompatibles avec la nature de l'attachement qu'a le groupe concerné pour ces terres » (*ibid.*) — c'est-à-dire que le titre appartient au groupe et qu'il ne peut pas être aliéné d'une manière qui prive les générations futures du contrôle et du bénéfice des terres.

[16] Dans *Delgamuukw*, la Cour a confirmé que les atteintes au titre ancestral peuvent être justifiées au regard de l'art. 35 de la *Loi constitutionnelle de 1982* suivant le critère énoncé dans l'arrêt *Sparrow* et a décrit les droits ancestraux comme un « élément nécessaire de la conciliation de l'existence des sociétés autochtones avec la communauté politique plus large à laquelle ces dernières appartiennent » (par. 161), citant *R. c. Gladstone*, [1996] 2 R.C.S. 723, par. 73. Alors que dans l'arrêt *Sparrow* il était question de la *priorité* des droits ancestraux violés par des dispositions réglementaires sur les intérêts non autochtones, l'arrêt *Delgamuukw* a exposé « autrement » (au par. 168) l'approche selon laquelle les peuples autochtones participent — participation qui varie en fonction de la gravité de l'atteinte — à la prise des décisions concernant leurs terres.

[17] Dans l'arrêt *Nation haïda c. Colombie-Britannique (Ministre des Forêts)*, 2004 CSC 73, [2004] 3 R.C.S. 511, la Cour a appliqué l'idée exprimée dans l'arrêt *Delgamuukw*, soit que le groupe autochtone visé participe à la prise des décisions concernant ses terres, à un cas où il est proposé que des activités d'exploitation soient menées sur des terres sur lesquelles le titre ancestral est revendiqué mais n'est pas encore établi. La Cour a reconnu un continuum de consultation. L'obligation de la Couronne de consulter les Autochtones et de trouver des accommodements aux droits qu'ils revendiquent « dépend de l'évaluation préliminaire de la solidité de la preuve étayant l'existence du droit ou du titre revendiqué, et de la gravité des effets préjudiciables potentiels sur le droit ou le

Haida stated that the Crown had not only a moral duty, but a legal duty to negotiate in good faith to resolve land claims (para. 25). The governing ethos is not one of competing interests but of reconciliation.

[18] The jurisprudence just reviewed establishes a number of propositions that touch on the issues that arise in this case, including:

- Radical or underlying Crown title is subject to Aboriginal land interests where they are established.
- Aboriginal title gives the Aboriginal group the right to use and control the land and enjoy its benefits.
- Governments can infringe Aboriginal rights conferred by Aboriginal title but only where they can justify the infringements on the basis of a compelling and substantial purpose and establish that they are consistent with the Crown's fiduciary duty to the group.
- Resource development on claimed land to which title has not been established requires the government to consult with the claimant Aboriginal group.
- Governments are under a legal duty to negotiate in good faith to resolve claims to ancestral lands.

Against this background, I turn to the issues raised in this appeal.

IV. Pleadings in Aboriginal Land Claims Cases

[19] The Province, to its credit, no longer contends that the claim should be barred because of

titre » (par. 39). Ainsi, la notion de mise en balance proportionnée qui ressort implicitement de l'arrêt *Delgamuukw* est reprise dans *Nation haïda*. Dans ce dernier arrêt, la Cour a indiqué que la Couronne n'avait pas seulement une obligation morale, mais une obligation légale de négocier de bonne foi dans le but de régler les revendications territoriales (par. 25). Le principe directeur ne repose pas sur les intérêts opposés mais sur la conciliation.

[18] Les arrêts que nous venons d'examiner établissent un certain nombre de postulats qui touchent à des questions soulevées en l'espèce, notamment :

- Le titre absolu ou sous-jacent de la Couronne est assujetti aux droits qu'ont les Autochtones sur les terres où ils sont établis.
- Le titre ancestral confère au groupe autochtone le droit d'utiliser et de contrôler le territoire, et de bénéficier des avantages qu'il procure.
- Les gouvernements peuvent porter atteinte aux droits ancestraux que confère le titre ancestral, mais seulement dans la mesure où ils peuvent démontrer que les atteintes poursuivent un objectif impérieux et réel et qu'elles sont compatibles avec l'obligation fiduciaire qu'a la Couronne envers le groupe.
- L'exploitation des ressources sur des terres revendiquées dont le titre n'a pas été établi exige du gouvernement qu'il consulte la nation autochtone revendicatrice.
- Les gouvernements ont l'obligation légale de négocier de bonne foi dans le but de régler les revendications de terres ancestrales.

C'est dans ce contexte que j'aborde les questions soulevées dans le présent pourvoi.

IV. Les actes de procédure dans les instances relatives aux revendications territoriales des Autochtones

[19] À sa décharge, la province ne soutient plus que la revendication doive être rejetée en raison

defects in the pleadings. However, it may be useful to address how to approach pleadings in land claims, in view of their importance to future land claims.

[20] I agree with the Court of Appeal that a functional approach should be taken to pleadings in Aboriginal cases. The function of pleadings is to provide the parties and the court with an outline of the material allegations and relief sought. Where pleadings achieve this aim, minor defects should be overlooked, in the absence of clear prejudice. A number of considerations support this approach.

[21] First, in a case such as this, the legal principles may be unclear at the outset, making it difficult to frame the claim with exactitude.

[22] Second, in these cases, the evidence as to how the land was used may be uncertain at the outset. As the claim proceeds, elders will come forward and experts will be engaged. Through the course of the trial, the historic practices of the Aboriginal group in question will be expounded, tested and clarified. The Court of Appeal correctly recognized that determining whether Aboriginal title is made out over a pleaded area is not an "all or nothing" proposition (at para. 117):

> The occupation of traditional territories by First Nations prior to the assertion of Crown sovereignty was not an occupation based on a Torrens system, or, indeed, on any precise boundaries. Except where impassable (or virtually impassable) natural boundaries existed, the limits of a traditional territory were typically ill-defined and fluid. . . . [Therefore] requir[ing] proof of Aboriginal title precisely mirroring the claim would be too exacting. [para. 118]

[23] Third, cases such as this require an approach that results in decisions based on the best

de vices qui entachent les actes de procédure. Cependant, il peut être utile de déterminer l'approche à adopter à l'égard des actes de procédure dans les revendications territoriales compte tenu de leur importance pour de futures revendications territoriales.

[20] Je suis d'accord avec la Cour d'appel pour dire qu'il convient d'adopter une approche fonctionnelle à l'égard des actes de procédure dans les affaires intéressant les Autochtones. Les actes de procédure visent à fournir aux parties et au tribunal un aperçu des allégations importantes et de la réparation sollicitée. Quand les actes de procédure permettent l'atteinte de cet objectif, en l'absence d'un préjudice évident, il ne faut pas tenir compte des vices mineurs. Un certain nombre de considérations étayent cette approche.

[21] Premièrement, dans un cas comme celui qui nous occupe, les principes juridiques sont parfois ambigus de prime abord, de sorte qu'il est difficile de formuler la demande avec exactitude.

[22] Deuxièmement, en de telles circonstances, la preuve quant à la façon dont le territoire était utilisé peut être incertaine au départ, mais à mesure que la demande progresse, des aînés se manifestent et les services d'experts sont retenus. Pendant le procès, les pratiques historiques du groupe autochtone en question sont exposées, vérifiées et précisées. La Cour d'appel a reconnu à juste titre que la question de savoir si le bien-fondé de la revendication d'un titre ancestral est établi sur un territoire n'est pas une affaire de [TRADUCTION] « tout ou rien » (par. 117) :

> [TRADUCTION] L'occupation des territoires traditionnels par les Premières Nations avant l'affirmation de la souveraineté de la Couronne n'était pas une occupation fondée sur le régime Torrens, ni sur des limites précises. Sauf dans les cas où il existait des limites naturelles infranchissables (ou quasi infranchissables), les limites d'un territoire traditionnel étaient habituellement mal définies et variables. [. . .] [Par conséquent] il serait trop exigeant de demander une preuve du titre ancestral qui reflète précisément la revendication. [par. 118]

[23] Troisièmement, les cas comme celui-ci requièrent une approche qui permet de rendre des

evidence that emerges, not what a lawyer may have envisaged when drafting the initial claim. What is at stake is nothing less than justice for the Aboriginal group and its descendants, and the reconciliation between the group and broader society. A technical approach to pleadings would serve neither goal. It is in the broader public interest that land claims and rights issues be resolved in a way that reflects the substance of the matter. Only thus can the project of reconciliation this Court spoke of in *Delgamuukw* be achieved.

V. Is Aboriginal Title Established?

A. *The Test for Aboriginal Title*

[24] How should the courts determine whether a semi-nomadic indigenous group has title to lands? This Court has never directly answered this question. The courts below disagreed on the correct approach. We must now clarify the test.

[25] As we have seen, the *Delgamuukw* test for Aboriginal title to land is based on "occupation" prior to assertion of European sovereignty. To ground Aboriginal title this occupation must possess three characteristics. It must be *sufficient*; it must be *continuous* (where present occupation is relied on); and it must be *exclusive*.

[26] The test was set out in *Delgamuukw*, *per* Lamer C.J., at para. 143:

> In order to make out a claim for [A]boriginal title, the [A]boriginal group asserting title must satisfy the following criteria: (i) the land must have been occupied prior to sovereignty, (ii) if present occupation is relied on as proof of occupation pre-sovereignty, there must be a continuity between present and pre-sovereignty occupation, and (iii) at sovereignty, that occupation must have been exclusive.

décisions fondées sur la meilleure preuve disponible, et non sur ce qu'un avocat a pu envisager quand il a rédigé la demande initiale. L'enjeu n'est rien de moins que la possibilité pour le groupe autochtone et ses descendants d'obtenir justice et la conciliation des intérêts du groupe et de la société en général. Le formalisme à l'égard des actes de procédure ne servirait aucun de ces objectifs. L'intérêt public général commande que les questions relatives aux revendications territoriales et aux droits soient tranchées dans le respect du fond du litige. Ce n'est qu'ainsi que peut se réaliser la conciliation dont notre Cour a fait état dans *Delgamuukw*.

V. L'existence du titre ancestral est-elle établie?

A. *Le critère applicable en matière de titre ancestral*

[24] Comment les tribunaux devraient-ils déterminer si un groupe autochtone semi-nomade détient un titre sur des terres? Notre Cour n'a jamais répondu directement à cette question. Les tribunaux d'instance inférieure ne se sont pas entendus sur l'approche qu'il convient d'adopter. Nous devons donc maintenant préciser le critère.

[25] Je le répète, le critère relatif au titre ancestral énoncé dans l'arrêt *Delgamuukw* est fondé sur l'« occupation » antérieure à l'affirmation de la souveraineté européenne. Pour fonder le titre ancestral, l'occupation doit posséder trois caractéristiques : elle doit être *suffisante*, elle doit être *continue* (si l'occupation actuelle est invoquée) et elle doit être *exclusive*.

[26] Le critère a été énoncé par le juge en chef Lamer dans l'arrêt *Delgamuukw*, par. 143 :

> Pour établir le bien-fondé de la revendication d'un titre aborigène, le groupe autochtone qui revendique ce titre doit satisfaire aux exigences suivantes : (i) il doit avoir occupé le territoire avant l'affirmation de la souveraineté; (ii) si l'occupation actuelle est invoquée comme preuve de l'occupation avant l'affirmation de la souveraineté, il doit exister une continuité entre l'occupation actuelle et l'occupation antérieure à l'affirmation de la souveraineté; (iii) au moment de l'affirmation de la souveraineté, cette occupation doit avoir été exclusive.

[27] The trial judge in this case held that "occupation" was established for the purpose of proving title by showing regular and exclusive use of sites or territory. On this basis, he concluded that the Tsilhqot'in had established title not only to village sites and areas maintained for the harvesting of roots and berries, but to larger territories which their ancestors used regularly and exclusively for hunting, fishing and other activities.

[28] The Court of Appeal disagreed and applied a narrower test for Aboriginal title — site-specific occupation. It held that to prove sufficient occupation for title to land, an Aboriginal group must prove that its ancestors *intensively* used a definite tract of land with reasonably defined boundaries at the time of European sovereignty.

[29] For semi-nomadic Aboriginal groups like the Tsilhqot'in, the Court of Appeal's approach results in small islands of title surrounded by larger territories where the group possesses only Aboriginal rights to engage in activities like hunting and trapping. By contrast, on the trial judge's approach, the group would enjoy title to all the territory that their ancestors regularly and exclusively used at the time of assertion of European sovereignty.

[30] Against this backdrop, I return to the requirements for Aboriginal title: sufficient pre-sovereignty occupation; continuous occupation (where present occupation is relied on); and exclusive historic occupation.

[31] Should the three elements of the *Delgamuukw* test be considered independently, or as related aspects of a single concept? The High Court of Australia has expressed the view that there is little merit in considering aspects of occupancy separately. In *Western Australia v. Ward* (2002), 213 C.L.R. 1, the court stated as follows, at para 89:

[27] En l'espèce, le juge de première instance a conclu que l'« occupation » était établie dans le but de fonder le titre par la démonstration d'une utilisation régulière et exclusive de certains sites ou du territoire. De ce fait, il a estimé que les Tsilhqot'in avaient établi l'existence d'un titre non seulement sur des villages et des sites utilisés pour la récolte de végétaux à racine et de fruits, mais sur des territoires plus vastes que leurs ancêtres utilisaient régulièrement et exclusivement pour la chasse, la pêche et d'autres activités.

[28] La Cour d'appel a rejeté cette conclusion et a appliqué un critère plus restreint à l'égard du titre ancestral — celui de l'occupation d'un site spécifique. Elle a conclu que, pour faire la preuve d'une occupation suffisante établissant l'existence d'un titre, un groupe autochtone doit démontrer qu'au moment de l'affirmation de la souveraineté européenne, ses ancêtres utilisaient *intensément* une parcelle de terrain spécifique dont les limites sont raisonnablement définies.

[29] Pour des groupes autochtones semi-nomades comme les Tsilhqot'in, la démarche de la Cour d'appel lui permet de reconnaître un titre sur de petites parcelles entourées de territoires plus vastes où le groupe possède seulement le droit ancestral d'exercer certaines activités comme la chasse et le piégeage. Par contre, suivant la démarche retenue par le juge de première instance, le groupe détiendrait un titre sur l'ensemble du territoire régulièrement et exclusivement utilisé par ses ancêtres au moment de l'affirmation de la souveraineté européenne.

[30] Dans ce contexte, je reviens sur les exigences de la preuve du titre ancestral : une occupation suffisante avant l'affirmation de la souveraineté, une occupation continue (si l'occupation actuelle est invoquée) et une occupation historique exclusive.

[31] Les trois éléments du critère énoncé dans l'arrêt *Delgamuukw* devraient-ils être examinés séparément ou comme les aspects interreliés d'un concept unique? La Haute Cour d'Australie s'est dite d'avis qu'il y a peu d'intérêt à examiner séparément les aspects de l'occupation. Dans l'affaire *Western Australia c. Ward* (2002), 213 C.L.R. 1, cette cour a indiqué ce qui suit au par. 89 :

The expression "possession, occupation, use and enjoyment . . . to the exclusion of all others" is a composite expression directed to describing a particular measure of control over access to land. To break the expression into its constituent elements is apt to mislead. In particular, to speak of "possession" of the land, as distinct from possession to the exclusion of all others, invites attention to the common law content of the concept of possession and whatever notions of control over access might be thought to be attached to it, rather than to the relevant task, which is to identify how rights and interests possessed under traditional law and custom can properly find expression in common law terms.

[32] In my view, the concepts of sufficiency, continuity and exclusivity provide useful lenses through which to view the question of Aboriginal title. This said, the court must be careful not to lose or distort the Aboriginal perspective by forcing ancestral practices into the square boxes of common law concepts, thus frustrating the goal of faithfully translating pre-sovereignty Aboriginal interests into equivalent modern legal rights. Sufficiency, continuity and exclusivity are not ends in themselves, but inquiries that shed light on whether Aboriginal title is established.

1. Sufficiency of Occupation

[33] The first requirement — and the one that lies at the heart of this appeal — is that the occupation be *sufficient* to ground Aboriginal title. It is clear from *Delgamuukw* that not every passing traverse or use grounds title. What then constitutes *sufficient* occupation to ground title?

[34] The question of sufficient occupation must be approached from both the common law perspective and the Aboriginal perspective (*Delgamuukw*, at para. 147); see also *R. v. Van der Peet*, [1996] 2 S.C.R. 507.

[TRADUCTION] L'expression « possession, occupation, utilisation et jouissance [. . .] à l'exclusion de toute autre personne » est une expression composite qui vise à décrire une mesure particulière de contrôle de l'accès aux terres. Décomposer l'expression en ses éléments constitutifs risque d'induire en erreur. Plus particulièrement, parler de « possession » des terres, une possession distincte de la possession à l'exclusion de toute autre personne, attire l'attention sur le contenu de la notion de possession en common law et sur toute notion de contrôle de l'accès que l'on pourrait considérer comme y étant liée, plutôt que sur ce qu'il nous incombe de faire, à savoir déterminer comment les droits et intérêts que les Aborigènes possédaient en vertu des lois ou coutumes traditionnelles peuvent trouver leur juste expression en common law.

[32] À mon avis, les concepts de suffisance, de continuité et d'exclusivité offrent un angle intéressant pour apprécier la question du titre ancestral. Cela étant dit, le tribunal doit veiller à ne pas perdre de vue la perspective autochtone, ou à ne pas la dénaturer, en assimilant les pratiques ancestrales aux concepts rigides de la common law, ce qui irait à l'encontre de l'objectif qui consiste à traduire fidèlement les droits que possédaient les Autochtones avant l'affirmation de la souveraineté en droits juridiques contemporains équivalents. La suffisance, la continuité et l'exclusivité ne sont pas des fins en soi, mais plutôt des façons de savoir si l'existence du titre ancestral est établie.

1. La suffisance de l'occupation

[33] La première exigence — et celle qui se trouve au cœur du présent pourvoi — est celle selon laquelle l'occupation doit être *suffisante* pour fonder un titre ancestral. Il ressort clairement de l'arrêt *Delgamuukw* que le titre ne peut se fonder sur la présence passagère sur un territoire ou sur son utilisation passagère. Alors, en quoi consiste une occupation *suffisante* pour fonder un titre?

[34] Il faut aborder la question de l'occupation suffisante en tenant compte à la fois de la common law et du point de vue des Autochtones (*Delgamuukw*, par. 147); voir aussi *R. c. Van der Peet*, [1996] 2 R.C.S. 507.

[35] The Aboriginal perspective focuses on laws, practices, customs and traditions of the group (*Delgamuukw*, at para. 148). In considering this perspective for the purpose of Aboriginal title, "one must take into account the group's size, manner of life, material resources, and technological abilities, and the character of the lands claimed": B. Slattery, "Understanding Aboriginal Rights" (1987), 66 *Can. Bar Rev.* 727, at p. 758, quoted with approval in *Delgamuukw*, at para. 149.

[36] The common law perspective imports the idea of possession and control of the lands. At common law, possession extends beyond sites that are physically occupied, like a house, to surrounding lands that are used and over which effective control is exercised.

[37] Sufficiency of occupation is a context-specific inquiry. "[O]ccupation may be established in a variety of ways, ranging from the construction of dwellings through cultivation and enclosure of fields to regular use of definite tracts of land for hunting, fishing or otherwise exploiting its resources" (*Delgamuukw*, at para. 149). The intensity and frequency of the use may vary with the characteristics of the Aboriginal group asserting title and the character of the land over which title is asserted. Here, for example, the land, while extensive, was harsh and was capable of supporting only 100 to 1,000 people. The fact that the Aboriginal group was only about 400 people must be considered in the context of the carrying capacity of the land in determining whether regular use of definite tracts of land is made out.

[38] To sufficiently occupy the land for purposes of title, the Aboriginal group in question must show that it has historically acted in a way that would communicate to third parties that it held the land for its own purposes. This standard does not demand notorious or visible use akin to proving a claim for adverse possession, but neither can the occupation be purely subjective or internal. There

[35] Le point de vue des Autochtones est axé sur les règles de droit, les pratiques, les coutumes et les traditions du groupe (*Delgamuukw*, par. 148). Dans l'examen de ce point de vue, [TRADUCTION] « il faut tenir compte de la taille, du mode de vie, des ressources matérielles et des habiletés technologiques du groupe concerné, ainsi que de la nature des terres revendiquées » : B. Slattery, « Understanding Aboriginal Rights » (1987), 66 *R. du B. can.* 727, p. 758, cité avec approbation dans *Delgamuukw*, par. 149.

[36] La common law comporte la notion de possession et de contrôle des terres. En common law, la notion de possession ne se limite pas aux sites physiquement occupés, comme une maison, mais s'étend aux terres environnantes qui sont utilisées et sur lesquelles un contrôle effectif est exercé.

[37] La suffisance de l'occupation est une question qui tient au contexte. « L'occupation [. . .] peut être prouvée par différents faits, allant de la construction de bâtiments à l'utilisation régulière de secteurs bien définis du territoire pour y pratiquer la chasse, la pêche ou d'autres types d'exploitation de ses ressources, en passant par la délimitation et la culture de champs » (*Delgamuukw*, par. 149). L'intensité et la fréquence de l'utilisation peuvent varier en fonction des caractéristiques du groupe autochtone qui revendique le titre et en fonction de la nature du territoire sur lequel le titre est revendiqué. En l'espèce, par exemple, le territoire, bien que vaste, était ingrat et ne pouvait assurer la subsistance que de 100 à 1 000 personnes. Le fait que le groupe autochtone ne comptait qu'environ 400 personnes doit être pris en compte dans le contexte de la capacité d'utilisation du territoire pour déterminer si l'utilisation régulière de secteurs bien définis est établie.

[38] Pour établir une occupation suffisante des terres dans le but de fonder l'existence d'un titre, le groupe autochtone en question doit démontrer qu'il a toujours agi de façon à informer les tiers qu'il détenait la terre pour ses propres besoins. Cette norme n'exige pas une preuve de l'utilisation notoire ou visible qui s'apparente à la preuve d'une revendication de possession adversative, mais

must be evidence of a strong presence on or over the land claimed, manifesting itself in acts of occupation that could reasonably be interpreted as demonstrating that the land in question belonged to, was controlled by, or was under the exclusive stewardship of the claimant group. As just discussed, the kinds of acts necessary to indicate a permanent presence and intention to hold and use the land for the group's purposes are dependent on the manner of life of the people and the nature of the land. Cultivated fields, constructed dwelling houses, invested labour, and a consistent presence on parts of the land may be sufficient, but are not essential to establish occupation. The notion of occupation must also reflect the way of life of the Aboriginal people, including those who were nomadic or seminomadic.

[39] In *R. v. Marshall*, 2003 NSCA 105, 218 N.S.R. (2d) 78, at paras. 135-38, Cromwell J.A. (as he then was), in reasoning I adopt, likens the sufficiency of occupation required to establish Aboriginal title to the requirements for general occupancy at common law. A general occupant at common law is a person asserting possession of land over which no one else has a present interest or with respect to which title is uncertain. Cromwell J.A. cites (at para. 136) the following extract from K. McNeil, *Common Law Aboriginal Title* (1989), at pp. 198-200:

> What, then, did one have to do to acquire a title by occupancy? . . . [I]t appears . . . that . . . a casual entry, such as riding over land to hunt or hawk, or travelling across it, did not make an occupant, such acts "being only transitory and to a particular purpose, which leaves no marks of an appropriation, or of an intention to possess for the separate use of the rider". There must, therefore, have been an actual entry, and some act or acts from which an intention to occupy the land could be inferred. Significantly, the acts and intention had to relate only to the occupation — it was quite unnecessary for a potential occupant to claim, or even wish to acquire, the

l'occupation ne peut pas non plus être purement subjective ou interne. Il faut une preuve d'une forte présence des Autochtones sur les terres revendiquées, qui se manifeste par des actes d'occupation qui pourraient raisonnablement être interprétés comme une preuve que les terres en question ont appartenu au groupe revendicateur ou que ce groupe y exerçait son contrôle ou une gestion exclusive. Je le répète, les actes nécessaires pour indiquer la présence permanente d'un groupe sur des terres et son intention de conserver et d'utiliser les terres pour ses besoins dépendent de son mode de vie et de la nature des terres. Pour établir l'occupation, il suffira peut-être de montrer que des champs ont été cultivés, que des habitations ont été érigées, que des travaux ont été effectués et qu'il y a eu une présence constante sur certaines parties du territoire, mais ce n'est pas essentiel. La notion d'occupation doit aussi refléter le mode de vie des peuples autochtones, y compris ceux qui étaient nomades ou seminomades.

[39] Dans l'arrêt *R. c. Marshall*, 2003 NSCA 105, 218 N.S.R. (2d) 78, par. 135-138, le juge Cromwell (maintenant juge de notre Cour), pour des motifs que j'approuve, établit un parallèle entre la suffisance de l'occupation nécessaire pour établir l'existence d'un titre ancestral et les exigences de l'occupation ordinaire en common law. En common law, un occupant ordinaire est une personne qui revendique la possession d'une terre sur laquelle personne n'a un intérêt actuel ou pour laquelle l'existence du titre est incertaine. Le juge Cromwell cite (au par. 136) le passage suivant tiré de l'ouvrage de K. McNeil, *Common Law Aboriginal Title* (1989), p. 198-200 :

> [TRADUCTION] Alors, que fallait-il faire pour acquérir un titre fondé sur l'occupation? [. . .] [I]l semble [. . .] [qu']une entrée occasionnelle, par exemple le fait pour une personne de sillonner un territoire pour y chasser ou y faire du commerce, ou de le parcourir d'un bout à l'autre, ne faisait pas d'elle un occupant, puisque ces actes n'« étaient que passagers et qu'ils visaient une fin particulière, qu'ils ne laissaient aucune marque d'une appropriation ou d'une intention de posséder à son usage distinct ». Il doit donc y avoir eu une entrée réelle et un ou des actes permettant de conclure à l'existence de l'intention d'occuper le territoire. Fait important, les actes et

vacant estate, for the law cast it upon him by virtue of his occupation alone. . . .

Further guidance on what constitutes occupation can be gained from cases involving land to which title is uncertain. Generally, any acts on or in relation to land that indicate an intention to hold or use it for one's own purposes are evidence of occupation. Apart from the obvious, such as enclosing, cultivating, mining, building upon, maintaining, and warning trespassers off land, any number of other acts, including cutting trees or grass, fishing in tracts of water, and even perambulation, may be relied upon. The weight given to such acts depends partly on the nature of the land, and the purposes for which it can reasonably be used. [Emphasis added.]

[40] Cromwell J.A. in *Marshall* went on to state that this standard is different from the doctrine of constructive possession. The goal is not to *attribute* possession in the absence of physical acts of occupation, but to define the quality of the physical acts of occupation that demonstrate possession at law (para. 137). He concluded:

I would adopt, in general terms, Professor McNeil's analysis that the appropriate standard of occupation, from the common law perspective, is the middle ground between the minimal occupation which would permit a person to sue a wrong-doer in trespass and the most onerous standard required to ground title by adverse possession as against a true owner. . . . Where, as here, we are dealing with a large expanse of territory which was not cultivated, acts such as continual, though changing, settlement and wide-ranging use for fishing, hunting and gathering should be given more weight than they would be if dealing with enclosed, cultivated land. Perhaps most significantly, . . . it is impossible to confine the evidence to the very precise spot on which the cutting was done: Pollock and Wright at p. 32. Instead, the question must be whether the acts of occupation in particular areas show that the whole area was occupied by the claimant. [para. 138]

[41] In summary, what is required is a culturally sensitive approach to sufficiency of occupation

l'intention devaient se rapporter seulement à l'occupation — il était pour ainsi dire inutile pour un occupant éventuel de revendiquer, ou même de souhaiter acquérir, le domaine vacant, puisque le titre lui est conféré par la loi du seul fait de son occupation. . .

D'autres indices de ce qui constitue une occupation peuvent être dégagés de certaines affaires portant sur des terres sur lesquelles le titre est incertain. En général, toute activité sur une terre ou en lien avec une terre qui laisse voir une intention de la détenir ou de l'utiliser pour ses propres fins constitue une preuve d'occupation. Outre les actes évidents, comme délimiter la terre, la cultiver, s'y livrer à des activités minières, de construction ou d'entretien, et empêcher les intrus d'y entrer, bien d'autres actes peuvent être invoqués, comme couper des arbres ou de l'herbe, pêcher dans des cours d'eau, ou même parcourir la région. L'importance accordée à ces actes dépend en partie de la nature des terres et des fins auxquelles elles peuvent raisonnablement être utilisées. [Je souligne.]

[40] Dans *Marshall*, le juge Cromwell a ensuite déclaré que cette norme est différente de la doctrine de la possession de droit. Le but n'est pas d'*attribuer* la possession en l'absence d'actes d'occupation, mais de définir la qualité des actes d'occupation qui démontrent la possession en droit (par. 137). Il a conclu comme suit :

[TRADUCTION] J'adopterais, de façon générale, l'analyse faite par le professeur McNeil selon laquelle la norme d'occupation appropriée, en common law, se trouve à mi-chemin entre la norme minimale d'occupation qui permettrait à une personne de poursuivre un intrus et la norme la plus stricte à laquelle il faut satisfaire pour établir un titre obtenu par possession adversative opposable au véritable propriétaire. [. . .] Lorsque, comme en l'espèce, il est question d'un vaste territoire qui n'a pas été cultivé, des actes tels que l'établissement constant, bien que changeant, et l'utilisation générale pour la pêche, la chasse et la cueillette devraient se voir accorder plus de poids que s'il était question d'un territoire délimité et cultivé. L'aspect sans doute le plus éloquent, [. . .] il est impossible de limiter la preuve à l'endroit bien précis où la coupe a eu lieu : Pollock et Wright, p. 32. La question est plutôt de savoir si les actes d'occupation dans certains lieux démontrent que le revendicateur occupait tout le secteur. [par. 138]

[41] En résumé, la preuve de l'occupation doit procéder d'une approche visant à déterminer le

based on the dual perspectives of the Aboriginal group in question — its laws, practices, size, technological ability and the character of the land claimed — and the common law notion of possession as a basis for title. It is not possible to list every indicia of occupation that might apply in a particular case. The common law test for possession — which requires an intention to occupy or hold land for the purposes of the occupant — must be considered alongside the perspective of the Aboriginal group which, depending on its size and manner of living, might conceive of possession of land in a somewhat different manner than did the common law.

caractère suffisant de l'occupation qui soit adaptée aux particularités culturelles et qui repose sur les points de vue du groupe autochtone en question — ses règles de droit, ses pratiques, sa taille, son savoir-faire technologique et la nature de la terre — ainsi que sur la notion de possession qui établit l'existence d'un titre en common law. Il est impossible d'énumérer chaque indice d'occupation qui pourrait s'appliquer dans un cas déterminé. Le critère de la common law en matière de possession — lequel exige une intention d'occuper ou de conserver la terre pour les besoins de l'occupant — doit être pris en compte tout comme le point de vue du groupe autochtone qui, selon sa taille et son mode de vie, pourrait concevoir la possession de la terre d'une façon quelque peu différente de la possession en common law.

[42] There is no suggestion in the jurisprudence or scholarship that Aboriginal title is confined to specific village sites or farms, as the Court of Appeal held. Rather, a culturally sensitive approach suggests that regular use of territories for hunting, fishing, trapping and foraging is "sufficient" use to ground Aboriginal title, provided that such use, on the facts of a particular case, evinces an intention on the part of the Aboriginal group to hold or possess the land in a manner comparable to what would be required to establish title at common law.

[42] La jurisprudence et la doctrine ne donnent pas à penser que le titre ancestral se limite à certains villages ou à des fermes, comme l'a conclu la Cour d'appel. Au contraire, suivant une approche qui tient compte des particularités culturelles, l'utilisation régulière des terres pour la chasse, la pêche, le piégeage et la cueillette constitue une utilisation « suffisante » pour fonder un titre ancestral dans la mesure où cette utilisation, eu égard aux faits de l'espèce, révèle une intention de la part du groupe autochtone de détenir ou de posséder les terres d'une manière comparable à celle exigée pour établir l'existence d'un titre en common law.

[43] The Province argues that this Court in *R. v. Marshall; R. v. Bernard*, 2005 SCC 43, [2005] 2 S.C.R. 220, rejected a territorial approach to title, relying on a comment by Professor K. McNeil that the Court there "appears to have rejected the territorial approach of the Court of Appeal" ("Aboriginal Title and the Supreme Court: What's Happening?" (2006), 69 *Sask. L. Rev.* 281, cited in British Columbia factum, para. 100). In fact, this Court in *Marshall; Bernard* did not reject a territorial approach, but held only (at para. 72) that there must be "proof of sufficiently regular and exclusive use" of the land in question, a requirement established in *Delgamuukw*.

[43] La province plaide que dans *R. c. Marshall; R. c. Bernard*, 2005 CSC 43, [2005] 2 R.C.S. 220, notre Cour a rejeté une approche territoriale à l'égard du titre; elle s'appuie sur une remarque du professeur K. McNeil selon laquelle la Cour [TRADUCTION] « semble avoir rejeté l'approche territoriale de la Cour d'appel » (« Aboriginal Title and the Supreme Court : What's Happening? » (2006), 69 *Sask. L. Rev.* 281, cité dans le mémoire de la Colombie-Britannique, par. 100). En fait, dans *Marshall; Bernard*, notre Cour n'a pas rejeté l'approche fondée sur le territoire, mais a seulement estimé (au par. 72) qu'il fallait « la preuve d'une utilisation suffisamment régulière et exclusive » du territoire en question, une exigence établie dans l'arrêt *Delgamuukw*.

[44] The Court in *Marshall; Bernard* confirmed that nomadic and semi-nomadic groups could establish title to land, provided they establish sufficient physical possession, which is a question of fact. While "[n]ot every nomadic passage or use will ground title to land", the Court confirmed that *Delgamuukw* contemplates that "regular use of definite tracts of land for hunting, fishing or otherwise exploiting its resources" could suffice (para. 66). While the issue was framed in terms of whether the common law test for possession was met, the Court did not resile from the need to consider the perspective of the Aboriginal group in question; sufficient occupation is a "question of fact, depending on all the circumstances, in particular the nature of the land and the manner in which it is commonly used" (*ibid.*).

2. Continuity of Occupation

[45] Where present occupation is relied on as proof of occupation pre-sovereignty, a second requirement arises — continuity between present and pre-sovereignty occupation.

[46] The concept of continuity does not require Aboriginal groups to provide evidence of an unbroken chain of continuity between their current practices, customs and traditions, and those which existed prior to contact (*Van der Peet*, at para. 65). The same applies to Aboriginal title. Continuity simply means that for evidence of present occupation to establish an inference of pre-sovereignty occupation, the present occupation must be rooted in pre-sovereignty times. This is a question for the trier of fact in each case.

3. Exclusivity of Occupation

[47] The third requirement is *exclusive* occupation of the land at the time of sovereignty. The

[44] Dans *Marshall; Bernard*, notre Cour a confirmé que les groupes nomades et semi-nomades peuvent établir l'existence d'un titre s'ils établissent une possession physique suffisante d'un territoire, ce qui constitue une question de fait. « Le passage dans un territoire ou son utilisation dans le cadre d'un mode de vie nomade ne fondera pas nécessairement un titre sur celui-ci », mais la Cour a confirmé que, selon l'arrêt *Delgamuukw*, « l'utilisation régulière de secteurs bien définis du territoire pour y pratiquer la chasse, la pêche ou d'autres types d'exploitation de ses ressources » peut être suffisante (par. 66). Bien que la question consistait à savoir si le critère de la common law relatif à la possession avait été respecté, la Cour n'a pas nié la nécessité de tenir compte du point de vue du groupe autochtone en question; la possession suffisante est une « question de fait qui dépend de l'ensemble des circonstances, en particulier de la nature du territoire et de la façon dont il a été utilisé collectivement » (*ibid.*).

2. La continuité de l'occupation

[45] Le fait que l'occupation actuelle soit invoquée comme preuve de l'occupation antérieure à l'affirmation de la souveraineté donne lieu à une deuxième condition — la continuité entre l'occupation actuelle et l'occupation antérieure à l'affirmation de la souveraineté.

[46] Le concept de la continuité n'exige pas que les groupes autochtones fassent la preuve d'une continuité parfaite entre leurs pratiques, coutumes et traditions actuelles et celles qui existaient avant le contact avec les Européens (*Van der Peet*, par. 65). Il en va de même pour le titre ancestral. La continuité signifie simplement que, pour qu'une preuve de l'occupation actuelle permette de conclure à l'occupation antérieure à l'affirmation de la souveraineté, l'occupation actuelle doit tirer son origine de l'époque antérieure à l'affirmation de la souveraineté. Il appartient au juge des faits d'examiner cette question.

3. L'exclusivité de l'occupation

[47] La troisième exigence est l'occupation *exclusive* des terres au moment de l'affirmation de la

Aboriginal group must have had "the intention and capacity to retain exclusive control" over the lands (*Delgamuukw*, at para. 156, quoting McNeil, *Common Law Aboriginal Title*, at p. 204 (emphasis added)). Regular use without exclusivity may give rise to usufructory Aboriginal rights; for Aboriginal title, the use must have been exclusive.

[48] Exclusivity should be understood in the sense of intention and capacity to control the land. The fact that other groups or individuals were on the land does not necessarily negate exclusivity of occupation. Whether a claimant group had the intention and capacity to control the land at the time of sovereignty is a question of fact for the trial judge and depends on various factors such as the characteristics of the claimant group, the nature of other groups in the area, and the characteristics of the land in question. Exclusivity can be established by proof that others were excluded from the land, or by proof that others were only allowed access to the land with the permission of the claimant group. The fact that permission was requested and granted or refused, or that treaties were made with other groups, may show intention and capacity to control the land. Even the lack of challenges to occupancy may support an inference of an established group's intention and capacity to control.

[49] As with sufficiency of occupation, the exclusivity requirement must be approached from both the common law and Aboriginal perspectives, and must take into account the context and characteristics of the Aboriginal society. The Court in *Delgamuukw* explained as follows, at para. 157:

> A consideration of the [A]boriginal perspective may also lead to the conclusion that trespass by other [A]boriginal groups does not undermine, and that presence of those groups by permission may reinforce, the exclusive occupation of the [A]boriginal group asserting title. For example, the [A]boriginal group asserting the claim to

souveraineté. Le groupe autochtone doit avoir eu « l'intention et [. . .] la capacité de garder le contrôle exclusif » des terres (*Delgamuukw*, par. 156, citant McNeil, *Common Law Aboriginal Title*, p. 204 (je souligne)). L'utilisation régulière, mais non exclusive, peut donner naissance à des droits ancestraux usufructuaires; en ce qui concerne le titre ancestral, l'utilisation doit avoir été exclusive.

[48] L'exclusivité doit s'entendre au sens de l'intention et de la capacité de contrôler le territoire. Le fait que d'autres groupes ou des particuliers se soient trouvés sur le territoire ne nie pas nécessairement l'exclusivité de l'occupation. La question de savoir si le groupe revendicateur avait l'intention et la capacité de contrôler le territoire au moment de l'affirmation de la souveraineté est une question de fait qui relève du juge de première instance et qui dépend de divers facteurs tels que les caractéristiques du groupe, la nature des autres groupes de la région et les caractéristiques du territoire en question. L'exclusivité peut être établie au moyen d'une preuve démontrant que les autres groupes ont été exclus du territoire, ou d'une preuve démontrant que certains groupes n'avaient accès au territoire qu'avec la permission du groupe revendicateur. Le fait qu'une permission était demandée, et qu'elle était accordée ou refusée, ou que des traités ont été conclus avec d'autres groupes, peut démontrer l'intention et la capacité de contrôler le territoire. Même le fait que l'occupation n'ait jamais été contestée peut permettre de conclure que le groupe avait l'intention et la capacité de contrôler le territoire.

[49] Tout comme c'était le cas de la suffisance de l'occupation, il faut aborder l'exigence de l'exclusivité en tenant compte de la common law et du point de vue des Autochtones, ainsi que du contexte et des caractéristiques de la société autochtone. Dans l'arrêt *Delgamuukw*, la Cour a expliqué ce qui suit au par. 157 :

> La prise en considération du point de vue des [A]utochtones peut également amener à conclure qu'une intrusion par d'autres groupes autochtones ne fait pas obstacle à l'occupation exclusive du territoire visé par le groupe autochtone qui en revendique le titre, et que la présence autorisée de ces autres groupes peut renforcer cette

[A]boriginal title may have trespass laws which are proof of exclusive occupation, such that the presence of trespassers does not count as evidence against exclusivity. As well, [A]boriginal laws under which permission may be granted to other [A]boriginal groups to use or reside even temporarily on land would reinforce the finding of exclusive occupation. Indeed, if that permission were the subject of treaties between the [A]boriginal nations in question, those treaties would also form part of the [A]boriginal perspective.

4. Summary

[50] The claimant group bears the onus of establishing Aboriginal title. The task is to identify how pre-sovereignty rights and interests can properly find expression in modern common law terms. In asking whether Aboriginal title is established, the general requirements are: (1) "sufficient occupation" of the land claimed to establish title at the time of assertion of European sovereignty; (2) continuity of occupation where present occupation is relied on; and (3) exclusive historic occupation. In determining what constitutes sufficient occupation, one looks to the Aboriginal culture and practices, and compares them in a culturally sensitive way with what was required at common law to establish title on the basis of occupation. Occupation sufficient to ground Aboriginal title is not confined to specific sites of settlement but extends to tracts of land that were regularly used for hunting, fishing or otherwise exploiting resources and over which the group exercised effective control at the time of assertion of European sovereignty.

B. *Was Aboriginal Title Established in This Case?*

[51] The trial judge applied a test of regular and exclusive use of the land. This is consistent with

occupation exclusive. À titre d'exemple, le groupe autochtone qui revendique le titre aborigène peut avoir, en matière d'intrusion, des règles de droit qui sont des preuves de l'occupation exclusive, de sorte que la présence d'intrus n'est pas considérée comme une preuve à l'encontre de l'exclusivité. De plus, l'existence de règles de droit autochtones en vertu desquelles d'autres groupes autochtones peuvent être autorisés à utiliser les terres ou même à y résider temporairement étayerait la conclusion d'occupation exclusive. De fait, si cette permission a fait l'objet de traités entre les nations autochtones concernées, ces traités feraient également partie du point de vue des [A]utochtones.

4. Résumé

[50] Il incombe au groupe revendicateur d'établir l'existence du titre ancestral. Il faut déterminer la façon dont les droits et intérêts qui existaient avant l'affirmation de la souveraineté peuvent trouver leur juste expression en common law moderne. Dans l'examen de la question de savoir si l'existence d'un titre ancestral est établie, les conditions générales sont les suivantes : (1) une « occupation suffisante » du territoire revendiqué afin d'établir l'existence d'un titre au moment de l'affirmation de la souveraineté européenne; (2) la continuité de l'occupation lorsque l'occupation actuelle est invoquée; et (3) l'exclusivité de l'occupation historique. Pour déterminer ce qui constitue une occupation suffisante, il faut examiner la culture et les pratiques des Autochtones et les comparer, tout en tenant compte de leurs particularités culturelles, à ce qui était requis en common law pour établir l'existence d'un titre fondé sur l'occupation. L'occupation suffisante pour fonder l'existence d'un titre ancestral ne se limite pas aux lieux spécifiques d'établissement, mais s'étend aux parcelles de terre régulièrement utilisées pour y pratiquer la chasse, la pêche ou d'autres types d'exploitation des ressources et sur lesquelles le groupe exerçait un contrôle effectif au moment de l'affirmation de la souveraineté européenne.

B. *L'existence du titre ancestral a-t-elle été établie en l'espèce?*

[51] Le juge de première instance a appliqué un critère fondé sur l'utilisation régulière et exclusive

the correct legal test. This leaves the question of whether he applied it appropriately to the evidence in this case.

[52] Whether the evidence in a particular case supports Aboriginal title is a question of fact for the trial judge: *Marshall; Bernard*. The question therefore is whether the Province has shown that the trial judge made a palpable and overriding error in his factual conclusions.

[53] I approach the question through the lenses of sufficiency, continuity and exclusivity discussed above.

[54] I will not repeat my earlier comments on what is required to establish sufficiency of occupation. Regular use of the territory suffices to establish sufficiency; the concept is not confined to continuously occupied village sites. The question must be approached from the perspective of the Aboriginal group as well as the common law, bearing in mind the customs of the people and the nature of the land.

[55] The evidence in this case supports the trial judge's conclusion of sufficient occupation. While the population was small, the trial judge found evidence that the parts of the land to which he found title were regularly used by the Tsilhqot'in. The Court of Appeal did not take serious issue with these findings.

[56] Rather, the Court of Appeal based its rejection of Aboriginal title on the legal proposition that regular use of territory could not ground Aboriginal title — only the regular presence on or intensive occupation of particular tracts would suffice. That view, as discussed earlier, is not supported by the jurisprudence; on the contrary, *Delgamuukw* affirms a territorial use-based approach to Aboriginal title.

du territoire. Son critère est conforme au bon critère juridique. Reste à savoir s'il l'a correctement appliqué à la preuve dont il disposait.

[52] La question de savoir si la preuve présentée dans une affaire donnée permet de conclure à l'existence d'un titre ancestral est une question de fait que doit trancher le juge de première instance : *Marshall; Bernard*. Il s'agit donc de savoir si la province a démontré que le juge de première avait commis une erreur manifeste et dominante dans ses conclusions de fait.

[53] J'aborde la question sous les angles susmentionnés de la suffisance, de la continuité et de l'exclusivité.

[54] Je ne répéterai pas les commentaires que j'ai formulés précédemment sur ce qui est requis pour établir la suffisance de l'occupation. L'utilisation régulière du territoire suffit pour établir la suffisance; le concept ne se limite pas aux villages qui ont été occupés de façon continue. Il faut aborder la question en tenant compte du point de vue du groupe autochtone et de la common law, sans oublier les coutumes du peuple et la nature du territoire.

[55] La preuve en l'espèce appuie la conclusion du juge de première instance quant à l'occupation suffisante. Le territoire était peu peuplé, mais le juge de première instance a relevé des éléments de preuve indiquant que les parties du territoire sur lesquelles il a conclu à l'existence du titre étaient régulièrement utilisées par les Tsilhqot'in. La Cour d'appel n'a pas vraiment contesté ces conclusions.

[56] La Cour d'appel a plutôt fondé son rejet de l'existence du titre ancestral sur la proposition de droit selon laquelle l'utilisation régulière du territoire ne pouvait pas fonder le titre ancestral — seules la présence régulière sur des parcelles spécifiques ou leur occupation intensive étaient suffisantes. Cette interprétation, comme je l'ai déjà mentionné, ne trouve pas d'appui dans la jurisprudence; l'arrêt *Delgamuukw* confirme plutôt à l'égard du titre ancestral une approche fondée sur l'utilisation du territoire.

[57] This brings me to continuity. There is some reliance on present occupation for the title claim in this case, raising the question of continuity. The evidence adduced and later relied on in parts 5 to 7 of the trial judge's reasons speak of events that took place as late as 1999. The trial judge considered this direct evidence of more recent occupation alongside archeological evidence, historical evidence, and oral evidence from Aboriginal elders, all of which indicated a continuous Tsilhqot'in presence in the claim area. The geographic proximity between sites for which evidence of recent occupation was tendered, and those for which direct evidence of historic occupation existed, further supported an inference of continuous occupation. Paragraph 945 states, under the heading of "Continuity", that the "Tsilhqot'in people have continuously occupied the Claim Area before and after sovereignty assertion". I see no reason to disturb this finding.

[58] Finally, I come to exclusivity. The trial judge found that the Tsilhqot'in, prior to the assertion of sovereignty, repelled other people from their land and demanded permission from outsiders who wished to pass over it. He concluded from this that the Tsilhqot'in treated the land as exclusively theirs. There is no basis upon which to disturb that finding.

[59] The Province goes on to argue that the trial judge's conclusions on how particular parts of the land were used cannot be sustained. The Province says:

- The boundaries drawn by the trial judge are arbitrary and contradicted by some of the evidence (factum, at paras. 141-42).

- The trial judge relied on a map the validity of which the Province disputes (para. 143).

[57] Cela m'amène à la continuité. La revendication du titre présentée en l'espèce est fondée dans une certaine mesure sur l'occupation actuelle, ce qui soulève la question de la continuité. La preuve produite et acceptée ensuite dans les parties 5 à 7 des motifs du juge de première instance se rapporte aux événements qui remontent jusqu'en 1999. Le juge de première instance a pris en considération cette preuve directe d'une occupation plus récente conjointement avec la preuve archéologique, la preuve historique et les témoignages d'aînés, qui indiquaient tous une présence continue des Tsilhqot'in dans la région visée par la revendication. La proximité géographique entre les sites à l'égard desquels une preuve d'occupation récente a été produite et ceux à l'égard desquels il existait une preuve directe d'occupation passée renforçait l'inférence d'une occupation continue. Au paragraphe 945, il est indiqué, sous la rubrique [TRADUCTION] « Continuité », que « le peuple Tsilhqot'in a occupé le secteur revendiqué de façon continue avant et après l'affirmation de la souveraineté ». Je ne vois aucune raison de modifier cette conclusion.

[58] Enfin, j'en viens à l'exclusivité. Le juge de première instance a conclu que les Tsilhqot'in, avant l'affirmation de la souveraineté, ont repoussé d'autres peuples de leurs terres et ont exigé que les étrangers qui désiraient passer sur leurs terres leur demandent la permission. Il en a conclu que les Tsilhqot'in considéraient qu'ils possédaient leurs terres en exclusivité. Il n'y a aucune raison de modifier cette conclusion.

[59] La province plaide en outre que les conclusions du juge de première instance quant à la manière dont certaines parties du territoire étaient utilisées ne peuvent être retenues. La province affirme ce qui suit :

- Les limites du territoire établies par le juge de première instance sont arbitraires et contredites par certains éléments de preuve (mémoire, par. 141-142).

- Le juge de première instance s'est fondé sur une carte dont la province conteste la validité (par. 143).

- The Tsilhqot'in population, that the trial judge found to be 400 at the time of sovereignty assertion, could not have physically occupied the 1,900 sq. km of land over which title was found (para. 144).

- The trial judge failed to identify specific areas with adequate precision, instead relying on vague descriptions (para. 145).

- A close examination of the details of the inconsistent and arbitrary manner in which the trial judge defined the areas subject to Aboriginal title demonstrates the unreliability of his approach (para. 147).

[60] Most of the Province's criticisms of the trial judge's findings on the facts are rooted in its erroneous thesis that only specific, intensively occupied areas can support Aboriginal title. The concern with the small size of the Tsilhqot'in population in 1846 makes sense only if one assumes a narrow test of intensive occupation and if one ignores the character of the land in question which was mountainous and could not have sustained a much larger population. The alleged failure to identify particular areas with precision likewise only makes sense if one assumes a narrow test of intensive occupation. The other criticisms amount to pointing out conflicting evidence. It was the trial judge's task to sort out conflicting evidence and make findings of fact. The presence of conflicting evidence does not demonstrate palpable and overriding error.

[61] The Province has not established that the conclusions of the trial judge are unsupported by the evidence or otherwise in error. Nor has it established his conclusions were arbitrary or insufficiently precise. The trial judge was faced with the herculean task of drawing conclusions from a huge

- Le peuple Tsilhqot'in qui, selon le juge de première instance, comptait 400 personnes au moment de l'affirmation de la souveraineté, ne pouvait pas occuper les 1 900 km^2 de terres sur lesquelles l'existence d'un titre a été établie (par. 144).

- Le juge de première instance n'a pas identifié des secteurs de manière suffisamment précise; il s'est plutôt appuyé sur de vagues descriptions (par. 145).

- Un examen attentif de la façon incohérente et arbitraire dont le juge de première instance a défini les secteurs grevés d'un titre ancestral démontre le manque de fiabilité de son approche (par. 147).

[60] La plupart des critiques de la province à l'égard des conclusions de fait du juge de première instance reposent sur la thèse erronée voulant que le titre ancestral s'attache uniquement à des secteurs spécifiques occupés intensivement. La préoccupation que suscite la petite taille de la population des Tsilhqot'in en 1846 n'a de sens que si l'on adopte le critère étroit de l'occupation intensive et que l'on ne tient pas compte de la nature du territoire en question, un territoire montagneux qui n'aurait pas pu assurer la subsistance d'une population beaucoup plus importante. De même, l'allégation selon laquelle le juge de première instance aurait omis d'identifier certains secteurs avec précision n'a de sens que si l'on adopte le critère étroit de l'occupation intensive. Les autres critiques ne servent qu'à souligner le caractère contradictoire de la preuve. Il appartenait au juge de première instance de faire la part des éléments de preuve contradictoires et de tirer des conclusions de fait. La présence d'éléments de preuve contradictoires ne démontre pas l'existence d'une erreur manifeste et dominante.

[61] La province n'a pas démontré que les conclusions du juge de première instance ne sont pas étayées par la preuve ou qu'elles sont autrement erronées. Elle n'a pas non plus démontré que ses conclusions étaient arbitraires ou manquaient de précision. Le juge de première instance avait la

body of evidence produced over 339 trial days spanning a five-year period. Much of the evidence was historic evidence and therefore by its nature sometimes imprecise. The trial judge spent long periods in the claim area with witnesses, hearing evidence about how particular parts of the area were used. Absent demonstrated error, his findings should not be disturbed.

[62] This said, I have accepted the Province's invitation to review the maps and the evidence and evaluate the trial judge's conclusions as to which areas support a declaration of Aboriginal title. For ease of reference, I attach a map showing the various territories and how the trial judge treated them (Appendix; see Appellant's factum, "Appendix A"). The territorial boundaries drawn by the trial judge and his conclusions as to Aboriginal title appear to be logical and fully supported by the evidence.

[63] The trial judge divided the claim area into six regions and then considered a host of individual sites within each region. He examined expert archeological evidence, historical evidence and oral evidence from Aboriginal elders referring to these specific sites. At some of these sites, although the evidence did suggest a Tsilhqot'in presence, he found it insufficient to establish regular and exclusive occupancy. At other sites, he held that the evidence did establish regular and exclusive occupancy. By examining a large number of individual sites, the trial judge was able to infer the boundaries within which the Tsilhqot'in regularly and exclusively occupied the land. The trial judge, in proceeding this way, made no legal error.

[64] The Province also criticises the trial judge for offering his opinion on areas outside the claim area. This, the Province says, went beyond the

tâche colossale de tirer des conclusions à partir d'une quantité énorme d'éléments de preuve produits au cours d'un procès de 339 jours étalé sur une période de cinq ans. Une grande partie de la preuve était historique et donc, de par sa nature, parfois imprécise. Le juge de première instance a passé de longues périodes de temps dans le territoire revendiqué en compagnie de témoins et a entendu des témoignages sur la façon dont différents secteurs étaient utilisés. En l'absence d'une erreur manifeste, ses conclusions ne devraient pas être modifiées.

[62] Cela étant dit, j'ai accepté la proposition de la province d'examiner les cartes et les éléments de preuve et d'apprécier les conclusions du juge de première instance au sujet des secteurs auxquels devrait s'appliquer un jugement déclarant l'existence d'un titre ancestral. Par souci de clarté, je joins en annexe une carte qui montre les divers territoires et la façon dont le juge de première instance les a considérés (Annexe; voir l'annexe « A » du mémoire de l'appelant). Les limites territoriales définies par le juge de première instance et ses conclusions quant au titre ancestral semblent logiques et entièrement étayées par la preuve.

[63] Le juge de première instance a divisé le territoire revendiqué en six régions et a ensuite examiné de nombreux sites à l'intérieur de chaque région. Il a examiné des éléments de preuve archéologique et historique ainsi que les récits oraux des aînés autochtones faisant état de ces sites. À certains de ces sites, bien que la preuve donnait à penser que les Tsilhqot'in y avaient été présents, il a conclu que la preuve ne permettait pas d'établir une occupation régulière et exclusive. À d'autres sites, il a estimé que la preuve établissait une telle occupation. Après avoir examiné un grand nombre de sites, le juge de première instance a pu inférer les limites à l'intérieur desquelles les Tsilhqot'in occupaient régulièrement et exclusivement le territoire. En procédant de cette façon, le juge de première instance n'a commis aucune erreur.

[64] La province critique également le juge de première instance parce qu'il a donné son avis sur des terres qui se trouvent à l'extérieur du territoire

mandate of a trial judge who, should pronounce only on pleaded matters.

[65] In my view, this criticism is misplaced. It is clear that no declaration of title could be made over areas outside those pleaded. The trial judge offered his comments on areas outside the claim area, not as binding rulings in the case, but to provide assistance in future land claims negotiations. Having canvassed the evidence and arrived at conclusions on it, it made economic and practical sense for the trial judge to give the parties the benefit of his views. Moreover, as I noted earlier in discussing the proper approach to pleadings in cases where Aboriginal title is at issue, these cases raise special considerations. Often, the ambit of a claim cannot be drawn with precision at the commencement of proceedings. The true state of affairs unfolds only gradually as the evidence emerges over what may be a lengthy period of time. If at the end of the process the boundaries of the initial claim and the boundaries suggested by the evidence are different, the trial judge should not be faulted for pointing that out.

[66] I conclude that the trial judge was correct in his assessment that the Tsilhqot'in occupation was both sufficient and exclusive at the time of sovereignty. There was ample direct evidence of occupation at sovereignty, which was additionally buttressed by evidence of more recent continuous occupation.

VI. What Rights Does Aboriginal Title Confer?

[67] As we have seen, *Delgamuukw* establishes that Aboriginal title "encompasses the right to exclusive use and occupation of the land held pursuant to that title for a variety of purposes" (para. 117), including non-traditional purposes, provided these

revendiqué. Selon la province, cela outrepassait le mandat d'un juge de première instance, qui doit se prononcer seulement sur les questions soulevées.

[65] À mon avis, cette critique est inappropriée. Il est évident qu'aucun jugement déclarant l'existence d'un titre n'aurait pu être rendu à l'égard de terres se trouvant à l'extérieur du territoire revendiqué. Les commentaires du juge de première instance à propos de secteurs non revendiqués n'étaient pas de la nature d'une décision, mais visaient simplement à fournir des pistes pour de futures négociations relatives aux revendications territoriales. Après avoir examiné la preuve et en avoir tiré des conclusions, il était logique, sur les plans économique et pratique, que le juge de première instance donne son opinion aux parties. De plus, ainsi que je l'ai fait remarquer lorsque je me suis penchée sur l'approche qu'il convient d'adopter à l'égard des actes de procédure dans les cas où un titre ancestral est en cause, ces affaires soulèvent des considérations particulières. Souvent, la portée d'une revendication ne peut être établie avec précision au début des procédures. La situation s'éclaircit au fur et à mesure que les éléments de preuve se dégagent sur une période qui peut être longue. Si, à la fin du processus, les limites de la revendication initiale et les limites établies suivant la preuve sont différentes, il ne faudrait pas reprocher au juge de première instance de le souligner.

[66] J'estime que le juge de première instance a eu raison de conclure que l'occupation des Tsilhqot'in était suffisante et exclusive au moment de l'affirmation de la souveraineté. Il y avait amplement d'éléments de preuve démontrant une occupation antérieure à l'affirmation de la souveraineté, et cette preuve était renforcée par des éléments de preuve démontrant une occupation continue plus récente.

VI. Quels droits confère le titre ancestral?

[67] Je le rappelle, l'arrêt *Delgamuukw* établit que le titre ancestral « comprend le droit d'utiliser et d'occuper de façon exclusive les terres détenues en vertu de ce titre pour diverses fins » (par. 117), y compris des fins non traditionnelles, dans la mesure

uses can be reconciled with the communal and ongoing nature of the group's attachment to the land. Subject to this inherent limit, the title-holding group has the right to choose the uses to which the land is put and to enjoy its economic fruits (para. 166).

[68] I will first discuss the legal characterization of the Aboriginal title. I will then offer observations on what Aboriginal title provides to its holders and what limits it is subject to.

A. *The Legal Characterization of Aboriginal Title*

[69] The starting point in characterizing the legal nature of Aboriginal title is Dickson J.'s concurring judgment in *Guerin*, discussed earlier. At the time of assertion of European sovereignty, the Crown acquired radical or underlying title to all the land in the province. This Crown title, however, was burdened by the pre-existing legal rights of Aboriginal people who occupied and used the land prior to European arrival. The doctrine of *terra nullius* (that no one owned the land prior to European assertion of sovereignty) never applied in Canada, as confirmed by the *Royal Proclamation* of 1763. The Aboriginal interest in land that burdens the Crown's underlying title is an independent legal interest, which gives rise to a fiduciary duty on the part of the Crown.

[70] The content of the Crown's underlying title is what is left when Aboriginal title is subtracted from it: s. 109 of the *Constitution Act, 1867*; *Delgamuukw*. As we have seen, *Delgamuukw* establishes that Aboriginal title gives "the right to exclusive use and occupation of the land . . . for a variety of purposes", not confined to traditional or "distinctive" uses (para. 117). In other words, Aboriginal title is a beneficial interest in the land: *Guerin*, at p. 382. In simple terms, the title holders have the right to the benefits associated with the land — to use it, enjoy it and profit from its economic development. As such, the Crown does

où ces utilisations peuvent se concilier avec la nature collective et continue de l'attachement qu'a le groupe pour le territoire visé. Sous réserve de cette limite intrinsèque, le groupe qui détient le titre a le droit de choisir les utilisations qui sont faites de ces terres et de bénéficier des avantages économiques qu'elles procurent (par. 166).

[68] Je vais d'abord examiner la qualification juridique du titre ancestral. J'exposerai ensuite mes observations sur ce que le titre ancestral confère à ses titulaires et sur les limites auxquelles il est assujetti.

A. *La qualification juridique du titre ancestral*

[69] Le point de départ de la qualification de la nature juridique du titre ancestral est le jugement concordant du juge Dickson dans l'arrêt *Guerin*, dont il est question précédemment. Au moment de l'affirmation de la souveraineté européenne, la Couronne a acquis un titre absolu ou sous-jacent sur toutes les terres de la province. Ce titre était toutefois grevé des droits préexistants des peuples autochtones qui occupaient et utilisaient les terres avant l'arrivée des Européens. La doctrine de la *terra nullius* (selon laquelle nul ne possédait la terre avant l'affirmation de la souveraineté européenne) ne s'est jamais appliquée au Canada, comme l'a confirmé la *Proclamation royale* de 1763. Le droit des Autochtones sur les terres qui grève le titre sous-jacent de la Couronne a une existence juridique indépendante qui donne naissance à une obligation fiduciaire de la part de la Couronne.

[70] Le contenu du titre sous-jacent de la Couronne est ce qui reste après la soustraction du titre ancestral : art. 109 de la *Loi constitutionnelle de 1867*; *Delgamuukw*. Comme nous l'avons déjà vu, l'arrêt *Delgamuukw* établit que le titre ancestral accorde « le droit d'utiliser et d'occuper de façon exclusive les terres détenues en vertu de ce titre pour diverses fins », lesquelles ne se limitent pas aux utilisations traditionnelles ou « distinctives » (par. 117). Autrement dit, le titre ancestral est un intérêt bénéficiaire sur les terres : *Guerin*, p. 382. En termes simples, les titulaires du titre ont droit aux avantages associés aux terres — de les utiliser,

not retain a beneficial interest in Aboriginal title land.

[71] What remains, then, of the Crown's radical or underlying title to lands held under Aboriginal title? The authorities suggest two related elements — a fiduciary duty owed by the Crown to Aboriginal people when dealing with Aboriginal lands, and the right to encroach on Aboriginal title if the government can justify this in the broader public interest under s. 35 of the *Constitution Act, 1982*. The Court in *Delgamuukw* referred to this as a process of reconciling Aboriginal interests with the broader public interests under s. 35 of the *Constitution Act*, *1982*.

[72] The characteristics of Aboriginal title flow from the special relationship between the Crown and the Aboriginal group in question. It is this relationship that makes Aboriginal title *sui generis* or unique. Aboriginal title is what it is — the unique product of the historic relationship between the Crown and the Aboriginal group in question. Analogies to other forms of property ownership — for example, fee simple — may help us to understand aspects of Aboriginal title. But they cannot dictate precisely what it is or is not. As La Forest J. put it in *Delgamuukw*, at para. 190, Aboriginal title "is not equated with fee simple ownership; nor can it be described with reference to traditional property law concepts".

B. *The Incidents of Aboriginal Title*

[73] Aboriginal title confers ownership rights similar to those associated with fee simple, including: the right to decide how the land will be used; the right of enjoyment and occupancy of the land; the right to possess the land; the right to the economic benefits of the land; and the right to proactively use and manage the land.

d'en jouir et de profiter de leur développement économique. Par conséquent, la Couronne ne conserve pas un intérêt bénéficiaire sur les terres visées par un titre ancestral.

[71] Alors, que reste-t-il du titre absolu ou sous-jacent de la Couronne sur les terres détenues en vertu d'un titre ancestral? Il ressort de la doctrine et de la jurisprudence deux éléments connexes — une obligation fiduciaire de la Couronne envers les Autochtones à l'égard des terres ancestrales et le droit de porter atteinte au titre ancestral si le gouvernement peut démontrer que l'atteinte est justifiée dans l'intérêt général du public en vertu de l'art. 35 de la *Loi constitutionnelle de 1982*. Dans l'arrêt *Delgamuukw*, la Cour a dit qu'il s'agissait d'un processus de conciliation des intérêts autochtones et de l'intérêt général du public en vertu de l'art. 35 de la *Loi constitutionnelle de 1982*.

[72] Les caractéristiques du titre ancestral découlent de la relation particulière entre la Couronne et le groupe autochtone en question. C'est cette relation qui rend le titre ancestral *sui generis*, ou unique. Le titre ancestral est ce qu'il est — le résultat unique de la relation historique entre la Couronne et le groupe autochtone en question. Des analogies avec d'autres formes de propriété — par exemple, la propriété en fief simple — peuvent être utiles pour mieux comprendre certains aspects du titre ancestral. Cependant, elles ne peuvent pas dicter précisément en quoi il consiste ou ne consiste pas. Comme le juge La Forest l'a indiqué dans *Delgamuukw*, par. 190, le titre ancestral « n'équivaut pas à la propriété en fief simple et il ne peut pas non plus être décrit au moyen des concepts traditionnels du droit des biens ».

B. *Les attributs du titre ancestral*

[73] Le titre ancestral confère des droits de propriété semblables à ceux associés à la propriété en fief simple, y compris le droit de déterminer l'utilisation des terres, le droit de jouissance et d'occupation des terres, le droit de posséder les terres, le droit aux avantages économiques que procurent les terres et le droit d'utiliser et de gérer les terres de manière proactive.

[74] Aboriginal title, however, comes with an important restriction — it is collective title held not only for the present generation but for all succeeding generations. This means it cannot be alienated except to the Crown or encumbered in ways that would prevent future generations of the group from using and enjoying it. Nor can the land be developed or misused in a way that would substantially deprive future generations of the benefit of the land. Some changes — even permanent changes — to the land may be possible. Whether a particular use is irreconcilable with the ability of succeeding generations to benefit from the land will be a matter to be determined when the issue arises.

[74] Cependant, le titre ancestral comporte une restriction importante — il s'agit d'un titre collectif détenu non seulement pour la génération actuelle, mais pour toutes les générations futures. Cela signifie qu'il ne peut pas être cédé, sauf à la Couronne, ni être grevé d'une façon qui empêcherait les générations futures du groupe d'utiliser les terres et d'en jouir. Les terres ne peuvent pas non plus être aménagées ou utilisées d'une façon qui priverait de façon substantielle les générations futures de leur utilisation. Il peut être possible d'apporter certaines modifications — même permanentes — aux terres. La question de savoir si une utilisation particulière est irréconciliable avec la possibilité pour les générations futures de bénéficier des terres constituera une question qu'il faudra trancher lorsqu'elle se posera.

[75] The rights and restrictions on Aboriginal title flow from the legal interest Aboriginal title confers, which in turn flows from the fact of Aboriginal occupancy at the time of European sovereignty which attached as a burden on the underlying title asserted by the Crown at sovereignty. Aboriginal title post-sovereignty reflects the fact of Aboriginal occupancy pre-sovereignty, with all the pre-sovereignty incidents of use and enjoyment that were part of the collective title enjoyed by the ancestors of the claimant group — most notably the right to control how the land is used. However, these uses are not confined to the uses and customs of pre-sovereignty times; like other landowners, Aboriginal title holders of modern times can use their land in modern ways, if that is their choice.

[75] Les droits et restrictions afférents au titre ancestral découlent de l'intérêt que ce titre confère, intérêt qui découle à son tour de l'occupation autochtone à l'époque de la souveraineté européenne et qui grève le titre sous-jacent revendiqué par la Couronne au moment de l'affirmation de la souveraineté. Le titre ancestral postérieur à l'affirmation de la souveraineté reflète le fait que les Autochtones occupaient le territoire avant l'affirmation de la souveraineté, avec tous les attributs que constituent les droits d'utilisation et de jouissance qui existaient avant l'affirmation de la souveraineté et qui composaient le titre collectif détenu par les ancêtres du groupe revendicateur — notamment le droit de contrôler l'utilisation des terres. Cependant, les utilisations ne se limitent pas aux utilisations et aux coutumes antérieures à l'affirmation de la souveraineté; tout comme les autres propriétaires fonciers, les titulaires du titre ancestral des temps modernes peuvent utiliser leurs terres de façon moderne, s'ils le veulent.

[76] The right to control the land conferred by Aboriginal title means that governments and others seeking to use the land must obtain the consent of the Aboriginal title holders. If the Aboriginal group does not consent to the use, the government's only recourse is to establish that the proposed incursion on the land is justified under s. 35 of the *Constitution Act, 1982*.

[76] Le droit de contrôler la terre que confère le titre ancestral signifie que les gouvernements et les autres personnes qui veulent utiliser les terres doivent obtenir le consentement des titulaires du titre ancestral. Si le groupe autochtone ne consent pas à l'utilisation, le seul recours du gouvernement consiste à établir que l'utilisation proposée est justifiée en vertu de l'art. 35 de la *Loi constitutionnelle de 1982*.

C. *Justification of Infringement*

[77] To justify overriding the Aboriginal title-holding group's wishes on the basis of the broader public good, the government must show: (1) that it discharged its procedural duty to consult and accommodate; (2) that its actions were backed by a compelling and substantial objective; and (3) that the governmental action is consistent with the Crown's fiduciary obligation to the group: *Sparrow*.

[78] The duty to consult is a procedural duty that arises from the honour of the Crown prior to confirmation of title. Where the Crown has real or constructive knowledge of the potential or actual existence of Aboriginal title, and contemplates conduct that might adversely affect it, the Crown is obliged to consult with the group asserting Aboriginal title and, if appropriate, accommodate the Aboriginal right. The duty to consult must be discharged prior to carrying out the action that could adversely affect the right.

[79] The degree of consultation and accommodation required lies on a spectrum as discussed in *Haida*. In general, the level of consultation and accommodation required is proportionate to the strength of the claim and to the seriousness of the adverse impact the contemplated governmental action would have on the claimed right. "A dubious or peripheral claim may attract a mere duty of notice, while a stronger claim may attract more stringent duties" (para. 37). The required level of consultation and accommodation is greatest where title has been established. Where consultation or accommodation is found to be inadequate, the government decision can be suspended or quashed.

[80] Where Aboriginal title is unproven, the Crown owes a procedural duty imposed by the honour of the Crown to consult and, if appropriate, accommodate the unproven Aboriginal interest. By contrast,

C. *La justification de l'atteinte*

[77] Pour justifier qu'il puisse passer outre aux volontés du groupe qui détient le titre ancestral au motif que l'atteinte sert l'intérêt général du public, le gouvernement doit établir : (1) qu'il s'est acquitté de son obligation procédurale de consultation et d'accommodement; (2) que ses actes poursuivaient un objectif impérieux et réel; et (3) que la mesure gouvernementale est compatible avec l'obligation fiduciaire qu'a la Couronne envers le groupe : *Sparrow*.

[78] L'obligation de consultation est une obligation procédurale que fait naître l'honneur de la Couronne avant que l'existence du titre soit confirmée. Lorsque la Couronne a connaissance, concrètement ou par imputation, de l'existence potentielle ou réelle du titre ancestral et qu'elle envisage une mesure susceptible d'avoir un effet préjudiciable sur ce titre, elle est tenue de consulter le groupe qui revendique le titre ancestral et, s'il y a lieu, de trouver des accommodements au droit ancestral. L'obligation de consultation doit être respectée avant la prise de mesures pouvant avoir un effet préjudiciable sur le droit.

[79] L'obligation de consultation et d'accommodement se situe à l'intérieur d'un continuum, comme il en a été question dans l'arrêt *Nation haïda*. En général, le niveau de consultation et d'accommodement nécessaire est proportionnel à la solidité de la revendication et à la gravité de l'incidence négative que la mesure gouvernementale proposée aurait sur le droit revendiqué. « Une revendication douteuse ou marginale peut ne requérir qu'une simple obligation d'informer, alors qu'une revendication plus solide peut faire naître des obligations plus contraignantes » (par. 37). Le niveau de consultation et d'accommodement nécessaire est le plus élevé lorsque l'existence du titre a été établie. Lorsque la consultation ou l'accommodement est jugé insuffisant, la décision du gouvernement peut être suspendue ou annulée.

[80] Lorsque l'existence du titre ancestral n'est pas établie, l'honneur de la Couronne lui impose une obligation procédurale de consultation et, s'il y a lieu, d'accommodement de l'intérêt autochtone

where title has been established, the Crown must not only comply with its procedural duties, but must also ensure that the proposed government action is substantively consistent with the requirements of s. 35 of the *Constitution Act, 1982*. This requires both a compelling and substantial governmental objective and that the government action is consistent with the fiduciary duty owed by the Crown to the Aboriginal group.

[81] I agree with the Court of Appeal that the compelling and substantial objective of the government must be considered from the Aboriginal perspective as well as from the perspective of the broader public. As stated in *Gladstone*, at para. 72:

> . . . the objectives which can be said to be compelling and substantial will be those directed at either the recognition of the prior occupation of North America by [A]boriginal peoples or — and at the level of justification it is this purpose which may well be most relevant — at the reconciliation of [A]boriginal prior occupation with the assertion of the sovereignty of the Crown. [Emphasis added.]

[82] As *Delgamuukw* explains, the process of reconciling Aboriginal interests with the broader interests of society as a whole is the *raison d'être* of the principle of justification. Aboriginals and non-Aboriginals are "all here to stay" and must of necessity move forward in a process of reconciliation (para. 186). To constitute a compelling and substantial objective, the broader public goal asserted by the government must further the goal of reconciliation, having regard to both the Aboriginal interest and the broader public objective.

[83] What interests are potentially capable of justifying an incursion on Aboriginal title? In *Delgamuukw*, this Court, *per* Lamer C.J., offered this:

> In the wake of *Gladstone*, the range of legislative objectives that can justify the infringement of [A]boriginal title is fairly broad. Most of these objectives can

non encore établi. Par contre, lorsque l'existence du titre a été établie, la Couronne doit non seulement se conformer à ses obligations procédurales, mais doit aussi s'assurer que la mesure gouvernementale proposée est fondamentalement conforme aux exigences de l'art. 35 de la *Loi constitutionnelle de 1982*. Pour cela, le gouvernement doit poursuivre un objectif impérieux et réel et il doit démontrer que la mesure proposée est compatible avec l'obligation fiduciaire de la Couronne envers le groupe autochtone.

[81] Je conviens avec la Cour d'appel que l'objectif impérieux et réel du gouvernement doit être examiné du point de vue des Autochtones ainsi que du point de vue de l'intérêt général du public. Comme il est indiqué au par. 72 de l'arrêt *Gladstone* :

> . . . sont considérés comme des objectifs impérieux et réels les objectifs visant soit la reconnaissance de l'occupation antérieure de l'Amérique du Nord par les peuples autochtones soit — et, à l'étape de la justification, ce genre d'objectifs pourrait bien être le plus pertinent — la conciliation de cette occupation avec l'affirmation par Sa Majesté de sa souveraineté sur ce territoire. [Je souligne.]

[82] Comme l'explique la Cour dans l'arrêt *Delgamuukw*, le processus de conciliation des intérêts autochtones avec l'intérêt général de la société dans son ensemble constitue la raison d'être du principe de la justification. Les Autochtones et les non-Autochtones sont « tous ici pour y rester » et doivent forcément favoriser un processus de conciliation (par. 186). Pour constituer un objectif impérieux et réel, l'objectif général du public invoqué par le gouvernement doit poursuivre l'objectif de conciliation, compte tenu des intérêts autochtones et de l'objectif général du public.

[83] Quels objectifs peuvent justifier une atteinte au titre ancestral? Dans *Delgamuukw*, le juge en chef Lamer a fait les remarques suivantes au nom de la Cour :

> Depuis *Gladstone*, l'éventail d'objectifs législatifs qui peuvent justifier une atteinte au titre aborigène est assez large. La plupart de ces objectifs peuvent être rattachés

be traced to the reconciliation of the prior occupation of North America by [A]boriginal peoples with the assertion of Crown sovereignty, which entails the recognition that "distinctive [A]boriginal societies exist within, and are a part of, a broader social, political and economic community" (at para. 73). In my opinion, the development of agriculture, forestry, mining, and hydroelectric power, the general economic development of the interior of British Columbia, protection of the environment or endangered species, the building of infrastructure and the settlement of foreign populations to support those aims, are the kinds of objectives that are consistent with this purpose and, in principle, can justify the infringement of [A]boriginal title. Whether a particular measure or government act can be explained by reference to one of those objectives, however, is ultimately a question of fact that will have to be examined on a case-by-case basis. [Emphasis added; emphasis in original deleted; para. 165.]

à la conciliation de l'occupation antérieure de l'Amérique du Nord par les peuples autochtones avec l'affirmation de la souveraineté de la Couronne, ce qui nécessite la reconnaissance du fait que les « sociétés autochtones distinctives existent au sein d'une communauté sociale, politique et économique plus large, communauté dont elles font partie » (au par. 73). À mon avis, l'extension de l'agriculture, de la foresterie, de l'exploitation minière et de l'énergie hydroélectrique, le développement économique général de l'intérieur de la Colombie-Britannique, la protection de l'environnement et des espèces menacées d'extinction, ainsi que la construction des infrastructures et l'implantation des populations requises par ces fins, sont des types d'objectifs compatibles avec cet objet et qui, en principe, peuvent justifier une atteinte à un titre aborigène. Toutefois, la question de savoir si une mesure ou un acte donné du gouvernement peut être expliqué par référence à l'un de ces objectifs est, en dernière analyse, une question de fait qui devra être examinée au cas par cas. [Je souligne; soulignement dans l'original omis; par. 165.]

[84] If a compelling and substantial public purpose is established, the government must go on to show that the proposed incursion on the Aboriginal right is consistent with the Crown's fiduciary duty towards Aboriginal people.

[84] Si le gouvernement démontre qu'il poursuit un objectif impérieux et réel, il doit ensuite prouver que l'atteinte proposée au droit ancestral est compatible avec l'obligation fiduciaire de la Couronne envers les peuples autochtones.

[85] The Crown's fiduciary duty in the context of justification merits further discussion. The Crown's underlying title in the land is held for the benefit of the Aboriginal group and constrained by the Crown's fiduciary or trust obligation to the group. This impacts the justification process in two ways.

[85] Dans le contexte de la justification, l'obligation fiduciaire de la Couronne mérite une analyse plus approfondie. Le titre sous-jacent de la Couronne sur les terres est détenu au profit du groupe autochtone et encadré par l'obligation fiduciaire de la Couronne envers le groupe. Cela influence le processus de justification de deux façons.

[86] First, the Crown's fiduciary duty means that the government must act in a way that respects the fact that Aboriginal title is a group interest that inheres in present and future generations. The beneficial interest in the land held by the Aboriginal group vests communally in the title-holding group. This means that incursions on Aboriginal title cannot be justified if they would substantially deprive future generations of the benefit of the land.

[86] Premièrement, l'obligation fiduciaire de la Couronne signifie que le gouvernement doit agir d'une manière qui respecte le fait que le titre ancestral est un droit collectif inhérent aux générations actuelles et futures. L'intérêt bénéficiaire sur les terres que détient le groupe autochtone est dévolu à l'ensemble des membres du groupe titulaire du titre. Les atteintes au titre ancestral ne peuvent donc pas être justifiées si elles priveront de façon substantielle les générations futures des avantages que procurent les terres.

[87] Second, the Crown's fiduciary duty infuses an obligation of proportionality into the justification process. Implicit in the Crown's fiduciary duty

[87] Deuxièmement, l'obligation fiduciaire de la Couronne insuffle une obligation de proportionnalité dans le processus de justification. Il ressort

to the Aboriginal group is the requirement that the incursion is necessary to achieve the government's goal (rational connection); that the government go no further than necessary to achieve it (minimal impairment); and that the benefits that may be expected to flow from that goal are not outweighed by adverse effects on the Aboriginal interest (proportionality of impact). The requirement of proportionality is inherent in the *Delgamuukw* process of reconciliation and was echoed in *Haida*'s insistence that the Crown's duty to consult and accommodate at the claims stage "is proportionate to a preliminary assessment of the strength of the case supporting the existence of the right or title, and to the seriousness of the potentially adverse effect upon the right or title claimed" (para. 39).

[88] In summary, Aboriginal title confers on the group that holds it the exclusive right to decide how the land is used and the right to benefit from those uses, subject to one carve-out — that the uses must be consistent with the group nature of the interest and the enjoyment of the land by future generations. Government incursions not consented to by the title-holding group must be undertaken in accordance with the Crown's procedural duty to consult and must also be justified on the basis of a compelling and substantial public interest, and must be consistent with the Crown's fiduciary duty to the Aboriginal group.

D. *Remedies and Transition*

[89] Prior to establishment of title by court declaration or agreement, the Crown is required to consult in good faith with any Aboriginal groups asserting title to the land about proposed uses of the land and, if appropriate, accommodate the interests of such claimant groups. The level of consultation and accommodation required varies with the strength of the Aboriginal group's claim to the land and the seriousness of the potentially adverse effect upon the interest claimed. If the Crown fails

implicitement de l'obligation fiduciaire qu'a la Couronne envers le groupe autochtone que l'atteinte doit être nécessaire pour atteindre l'objectif gouvernemental (lien rationnel), que le gouvernement ne va pas au-delà de ce qui est nécessaire pour atteindre cet objectif (atteinte minimale) et que les effets préjudiciables sur l'intérêt autochtone ne l'emportent pas sur les avantages qui devraient découler de cet objectif (proportionnalité de l'incidence). L'exigence de proportionnalité est inhérente au processus de conciliation énoncé dans l'arrêt *Delgamuukw* et elle a été reprise dans l'arrêt *Nation haïda*, où la Cour insiste sur le fait que l'obligation de la Couronne de consulter et d'accommoder à l'étape des revendications « dépend de l'évaluation préliminaire de la solidité de la preuve étayant l'existence du droit ou du titre revendiqué, et de la gravité des effets préjudiciables potentiels sur le droit ou le titre » (par. 39).

[88] En résumé, le titre ancestral confère au groupe qui le détient le droit exclusif de déterminer l'utilisation qu'il est fait des terres et le droit de bénéficier des avantages que procure cette utilisation, sous réserve d'une seule exception, soit que les utilisations respectent sa nature collective et préservent la jouissance des terres pour les générations futures. Lorsque le gouvernement porte atteinte au titre ancestral sans le consentement du groupe titulaire du titre, il doit le faire en respectant l'obligation procédurale de la Couronne de consulter le groupe. L'atteinte doit également être justifiée par la poursuite d'un objectif public impérieux et réel et elle doit être compatible avec l'obligation fiduciaire qu'a la Couronne envers le groupe autochtone.

D. *Mesures de réparation et période transitoire*

[89] Avant que l'existence du titre soit établie par un jugement déclaratoire ou une entente, la Couronne est tenue de consulter de bonne foi les groupes autochtones qui revendiquent le titre sur des terres au sujet de ses projets d'utilisation des terres et, s'il y a lieu, de trouver des accommodements aux intérêts de ces groupes. Le niveau de consultation et d'accommodement requis varie en fonction de la solidité de la revendication du groupe autochtone et de la gravité de l'effet

to discharge its duty to consult, various remedies are available including injunctive relief, damages, or an order that consultation or accommodation be carried out: *Rio Tinto Alcan Inc. v. Carrier Sekani Tribal Council*, 2010 SCC 43, [2010] 2 S.C.R. 650, at para. 37.

[90] After Aboriginal title to land has been established by court declaration or agreement, the Crown must seek the consent of the title-holding Aboriginal group to developments on the land. Absent consent, development of title land cannot proceed unless the Crown has discharged its duty to consult and can justify the intrusion on title under s. 35 of the *Constitution Act, 1982*. The usual remedies that lie for breach of interests in land are available, adapted as may be necessary to reflect the special nature of Aboriginal title and the fiduciary obligation owed by the Crown to the holders of Aboriginal title.

[91] The practical result may be a spectrum of duties applicable over time in a particular case. At the claims stage, prior to establishment of Aboriginal title, the Crown owes a good faith duty to consult with the group concerned and, if appropriate, accommodate its interests. As the claim strength increases, the required level of consultation and accommodation correspondingly increases. Where a claim is particularly strong — for example, shortly before a court declaration of title — appropriate care must be taken to preserve the Aboriginal interest pending final resolution of the claim. Finally, once title is established, the Crown cannot proceed with development of title land not consented to by the title-holding group unless it has discharged its duty to consult and the development is justified pursuant to s. 35 of the *Constitution Act, 1982*.

préjudiciable éventuel sur l'intérêt revendiqué. Le manquement par la Couronne à son obligation de consultation peut donner lieu à diverses mesures de réparation, notamment une injonction, des dommages-intérêts ou une ordonnance enjoignant la tenue de consultations ou la prise de mesures d'accommodement : *Rio Tinto Alcan Inc. c. Conseil tribal Carrier Sekani*, 2010 CSC 43, [2010] 2 R.C.S. 650, par. 37.

[90] Une fois l'existence du titre ancestral sur des terres établie par un jugement déclaratoire ou une entente, le gouvernement doit demander le consentement du groupe autochtone titulaire du titre pour ses projets d'aménagement du territoire. En l'absence de consentement, les projets d'aménagement sur les terres assujetties au titre ne peuvent aller de l'avant si le gouvernement ne s'est pas acquitté de son obligation de consultation et ne peut justifier une atteinte à ce titre aux termes de l'art. 35 de la *Loi constitutionnelle de 1982*. Les mesures de réparation habituelles en cas d'atteinte à des intérêts sur des terres sont disponibles, en les adaptant au besoin en fonction de la nature particulière du titre ancestral et de l'obligation fiduciaire de la Couronne envers les titulaires du titre ancestral.

[91] Il s'ensuit d'un point de vue pratique que des obligations différentes puissent être applicables au fil du temps dans un cas donné. À l'étape de la revendication, avant que soit établie l'existence du titre ancestral, le gouvernement a une obligation de consulter de bonne foi le groupe en cause et, s'il y a lieu, d'accommoder ses intérêts. Alors que la validité de la revendication devient plus apparente, le niveau requis de consultation et d'accommodement augmente proportionnellement. Lorsqu'une revendication est particulièrement solide — par exemple, peu avant qu'un tribunal confirme l'existence du titre — il faut bien prendre soin de préserver l'intérêt autochtone en attendant le règlement définitif de la revendication. Enfin, une fois l'existence du titre établie, le gouvernement ne peut réaliser, sur les terres grevées d'un titre ancestral, un projet d'aménagement auquel le groupe titulaire du titre n'a pas consenti à moins qu'il se soit acquitté de son obligation de consultation et que le projet d'aménagement soit justifié au sens de l'art. 35 de la *Loi constitutionnelle de 1982*.

[92] Once title is established, it may be necessary for the Crown to reassess prior conduct in light of the new reality in order to faithfully discharge its fiduciary duty to the title-holding group going forward. For example, if the Crown begins a project without consent prior to Aboriginal title being established, it may be required to cancel the project upon establishment of the title if continuation of the project would be unjustifiably infringing. Similarly, if legislation was validly enacted before title was established, such legislation may be rendered inapplicable going forward to the extent that it unjustifiably infringes Aboriginal title.

E. *What Duties Were Owed by the Crown at the Time of the Government Action?*

[93] Prior to the declaration of Aboriginal title, the Province had a duty to consult and accommodate the claimed Tsilhqot'in interest in the land. As the Tsilhqot'in had a strong *prima facie* claim to the land at the time of the impugned government action and the intrusion was significant, the duty to consult owed by the Crown fell at the high end of the spectrum described in *Haida* and required significant consultation and accommodation in order to preserve the Tsilhqot'in interest.

[94] With the declaration of title, the Tsilhqot'in have now established Aboriginal title to the portion of the lands designated by the trial judge with the exception as set out in para. 9 of these reasons. This gives them the right to determine, subject to the inherent limits of group title held for future generations, the uses to which the land is put and to enjoy its economic fruits. As we have seen, this is not merely a right of first refusal with respect to Crown land management or usage plans. Rather, it is the right to proactively use and manage the land.

[92] Une fois l'existence du titre établie, il peut être nécessaire pour le gouvernement de réévaluer sa conduite passée compte tenu de cette nouvelle réalité afin de s'acquitter fidèlement par la suite de son obligation fiduciaire envers le groupe titulaire du titre. Par exemple, si, avant que le titre ancestral soit établi, le gouvernement a entrepris un projet sans le consentement du groupe autochtone, il peut être tenu de l'annuler une fois l'existence du titre établie si la poursuite du projet porte indûment atteinte aux droits des Autochtones. De même, si une loi a été valablement adoptée avant que l'existence du titre soit établie, elle pourra être déclarée inapplicable pour l'avenir dans la mesure où elle porte injustement atteinte au titre ancestral.

E. *Quelles étaient les obligations de la Couronne au moment de la prise de la mesure gouvernementale?*

[93] Avant le jugement déclarant l'existence du titre ancestral, la province était tenue de consulter les Tsilhqot'in et de trouver des accommodements aux intérêts qu'ils revendiquaient. Au moment de la prise de la mesure gouvernementale contestée, la revendication du titre sur les terres par les Tsilhqot'in était à première vue solide et l'obligation de consultation de la Couronne se situait au haut du continuum décrit dans *Nation haïda* et exigeait un niveau élevé de consultation et d'accommodement afin de préserver les intérêts des Tsilhqot'in.

[94] Maintenant qu'un jugement a reconnu l'existence du titre, le peuple Tsilhqot'in détient un titre ancestral sur la partie du territoire désignée par le juge de première instance, sous réserve de l'exception indiquée au par. 9 des présents motifs. Cela donne au peuple Tsilhqot'in, sous réserve des limites inhérentes au titre collectif détenu au bénéfice des générations futures, le droit de déterminer les utilisations des terres et de bénéficier des avantages économiques qu'elles procurent. Comme nous l'avons déjà vu, il ne s'agit pas simplement d'un droit de premier refus sur la gestion des terres de la Couronne ou sur les plans de leur utilisation. Il s'agit plutôt du droit d'utiliser et de gérer les terres de façon proactive.

VII. Breach of the Duty to Consult

[95] The alleged breach in this case arises from the issuance by the Province of licences permitting third parties to conduct forestry activity and construct related infrastructure on the land in 1983 and onwards, before title was declared. During this time, the Tsilhqot'in held an interest in the land that was not yet legally recognized. The honour of the Crown required that the Province consult them on uses of the lands and accommodate their interests. The Province did neither and breached its duty owed to the Tsilhqot'in.

[96] The Crown's duty to consult was breached when Crown officials engaged in the planning process for the removal of timber. The inclusion of timber on Aboriginal title land in a timber supply area, the approval of cut blocks on Aboriginal title land in a forest development plan, and the allocation of cutting permits all occurred without any meaningful consultation with the Tsilhqot'in.

[97] I add this. Governments and individuals proposing to use or exploit land, whether before or after a declaration of Aboriginal title, can avoid a charge of infringement or failure to adequately consult by obtaining the consent of the interested Aboriginal group.

VIII. Provincial Laws and Aboriginal Title

[98] As discussed, I have concluded that the Province breached its duty to consult and accommodate the Tsilhqot'in interest in the land. This is sufficient to dispose of the appeal.

[99] However, the parties made extensive submissions on the application of the *Forest Act* to Aboriginal title land. This issue was dealt with by the courts below and is of pressing importance to the Tsilhqot'in people and other Aboriginal groups in British Columbia and elsewhere. It is therefore appropriate that we deal with it.

VII. Le manquement à l'obligation de consultation

[95] En l'espèce, le manquement allégué découle de la délivrance, par la province, de permis permettant à des tiers de mener des activités forestières et de construire des infrastructures connexes sur les terres à compter de 1983, avant que l'existence du titre soit reconnue. Au cours de cette période, les Tsilhqot'in détenaient sur les terres un intérêt qui n'était pas encore légalement reconnu. Le principe de l'honneur de la Couronne obligeait la province à les consulter à propos des utilisations des terres et à trouver des accommodements à leurs intérêts. La province n'a fait ni l'un ni l'autre et a manqué à son obligation envers les Tsilhqot'in.

[96] La Couronne a manqué à son obligation de consultation quand ses représentants ont planifié l'enlèvement du bois. L'inclusion des terres visées par un titre ancestral dans une région d'approvisionnement en bois, l'autorisation de blocs de coupe sur les terres visées par un titre ancestral dans le cadre d'un plan d'aménagement forestier et la délivrance de permis de coupe ont eu lieu sans aucune consultation significative avec les Tsilhqot'in.

[97] J'ajoute ceci. Les gouvernements et particuliers qui proposent d'utiliser ou d'exploiter la terre, que ce soit avant ou après une déclaration de titre ancestral, peuvent éviter d'être accusés de porter atteinte aux droits ou de manquer à l'obligation de consulter adéquatement le groupe en obtenant le consentement du groupe autochtone en question.

VIII. Les lois provinciales et le titre ancestral

[98] Je le rappelle, j'ai conclu que la province a manqué à son obligation de consulter les Tsilhqot'in et de trouver des accommodements à leur intérêt sur les terres. Cela suffit à trancher le pourvoi.

[99] Cependant, les parties ont présenté des observations détaillées sur l'application de la *Forest Act* aux terres visées par un titre ancestral. Les tribunaux d'instance inférieure ont traité de cette question, laquelle prend une grande importance pour le peuple des Tsilhqot'in et pour les autres groupes autochtones de la Colombie-Britannique et d'ailleurs. Il convient donc que nous l'examinions.

[100] The following questions arise: (1) Do provincial laws of general application apply to land held under Aboriginal title and, if so, how? (2) Does the British Columbia *Forest Act* on its face apply to land held under Aboriginal title? and (3) If the *Forest Act* on its face applies, is its application ousted by the operation of the Constitution of Canada? I will discuss each of these questions in turn.

A. *Do Provincial Laws of General Application Apply to Land Held Under Aboriginal Title?*

[101] Broadly put, provincial laws of general application apply to lands held under Aboriginal title. However, as we shall see, there are important constitutional limits on this proposition.

[102] As a general proposition, provincial governments have the power to regulate land use within the province. This applies to all lands, whether held by the Crown, by private owners, or by the holders of Aboriginal title. The foundation for this power lies in s. 92(13) of the *Constitution Act, 1867*, which gives the provinces the power to legislate with respect to property and civil rights in the province.

[103] Provincial power to regulate land held under Aboriginal title is constitutionally limited in two ways. First, it is limited by s. 35 of the *Constitution Act, 1982*. Section 35 requires any abridgment of the rights flowing from Aboriginal title to be backed by a compelling and substantial governmental objective and to be consistent with the Crown's fiduciary relationship with title holders. Second, a province's power to regulate lands under Aboriginal title may in some situations also be limited by the federal power over "Indians, and Lands reserved for the Indians" under s. 91(24) of the *Constitution Act, 1867*.

[100] Les questions qui se posent sont les suivantes : (1) Les lois provinciales d'application générale s'appliquent-elles aux terres visées par un titre ancestral et, dans l'affirmative, comment s'appliquent-elles? (2) À première vue, la *Forest Act* de la Colombie-Britannique s'applique-t-elle aux terres visées par un titre ancestral? Et (3) si, à première vue, la *Forest Act* s'applique, son application est-elle écartée par l'application de la Constitution du Canada? Je vais examiner successivement chacune de ces questions.

A. *Les lois provinciales d'application générale s'appliquent-elles aux terres visées par un titre ancestral?*

[101] De façon générale, les lois provinciales d'application générale s'appliquent aux terres visées par un titre ancestral. Cependant, comme nous le verrons, cet énoncé est assorti de limites constitutionnelles importantes.

[102] En règle générale, les gouvernements provinciaux ont le pouvoir de réglementer l'utilisation des terres situées à l'intérieur de la province. Cette règle s'applique à toutes les terres, qu'elles soient détenues par le gouvernement, par des propriétaires privés ou par les titulaires d'un titre ancestral. Le fondement de ce pouvoir réside dans le par. 92(13) de la *Loi constitutionnelle de 1867*, lequel accorde à la province le pouvoir de légiférer en matière de propriété et de droits civils dans la province.

[103] Le pouvoir provincial de réglementer les terres détenues en vertu d'un titre ancestral est constitutionnellement limité de deux façons. Premièrement, il est limité par l'art. 35 de la *Loi constitutionnelle de 1982*. Aux termes de cet article, toute atteinte aux droits découlant du titre ancestral doit poursuivre un objectif gouvernemental impérieux et réel et doit être compatible avec la relation fiduciaire entre la Couronne et les titulaires du titre. Deuxièmement, le pouvoir d'une province de réglementer les terres visées par un titre ancestral peut aussi, dans certains cas, être limité par le pouvoir fédéral sur les « Indiens et les terres réservées pour les Indiens » prévu au par. 91(24) de la *Loi constitutionnelle de 1867*.

[104] This Court suggested in *Sparrow* that the following factors will be relevant in determining whether a law of general application results in a meaningful diminution of an Aboriginal right, giving rise to breach: (1) whether the limitation imposed by the legislation is unreasonable; (2) whether the legislation imposes undue hardship; and (3) whether the legislation denies the holders of the right their preferred means of exercising the right (p. 1112). All three factors must be considered; for example, even if laws of general application are found to be reasonable or not to cause undue hardship, this does not mean that there can be no infringement of Aboriginal title. As stated in *Gladstone*:

> Simply because one of [the *Sparrow*] questions is answered in the negative will not prohibit a finding by a court that a *prima facie* infringement has taken place; it will just be one factor for a court to consider in its determination of whether there has been a *prima facie* infringement. [para. 43]

[105] It may be predicted that laws and regulations of general application aimed at protecting the environment or assuring the continued health of the forests of British Columbia will usually be reasonable, not impose an undue hardship either directly or indirectly, and not interfere with the Aboriginal group's preferred method of exercising their right. And it is to be hoped that Aboriginal groups and the provincial government will work cooperatively to sustain the natural environment so important to them both. This said, when conflicts arise, the foregoing template serves to resolve them.

[106] Subject to these constitutional constraints, provincial laws of general application apply to land held under Aboriginal title.

B. *Does the Forest Act on its Face Apply to Aboriginal Title Land?*

[107] Whether a statute of general application such as the *Forest Act* was *intended* to apply to lands subject to Aboriginal title — the question

[104] Dans l'arrêt *Sparrow*, notre Cour a laissé entendre que les facteurs suivants seront pertinents au moment de déterminer si une loi d'application générale entraîne une diminution appréciable d'un droit ancestral, ce qui donne lieu à une atteinte : (1) si la restriction imposée par la loi est déraisonnable; (2) si la loi est indûment rigoureuse; et (3) si la loi refuse aux titulaires du droit le recours à leur moyen préféré d'exercer ce droit (p. 1112). Les trois facteurs doivent être pris en compte; par exemple, même s'il est jugé que les lois d'application générale ne sont pas déraisonnables ou indûment rigoureuses, cela ne signifie pas qu'il ne peut pas y avoir d'atteinte au titre ancestral. Comme la Cour l'a affirmé dans l'arrêt *Gladstone* :

> Le simple fait qu'on réponde par la négative à l'une de ces questions [formulées dans l'arrêt *Sparrow*] n'empêche pas le tribunal de conclure à l'existence d'une atteinte à première vue. Cette réponse négative n'est qu'un des facteurs que le tribunal doit prendre en considération pour déterminer s'il y a eu atteinte à première vue. [par. 43]

[105] On peut prévoir que les lois et règlements d'application générale visant à protéger l'environnement ou à assurer, à long terme, la santé des forêts de la Colombie-Britannique seront habituellement raisonnables, qu'ils ne seront pas, directement ou indirectement, indûment rigoureux et qu'ils ne refuseront pas au groupe autochtone leur moyen préféré d'exercer leur droit. Et il faut espérer que les groupes autochtones et le gouvernement provincial collaboreront pour assurer la pérennité de l'environnement naturel qui leur est si important. Cela dit, lorsque survient un conflit, l'analyse qui précède sert à le régler.

[106] Sous réserve de ces contraintes constitutionnelles, les lois provinciales d'application générale s'appliquent aux terres détenues en vertu d'un titre ancestral.

B. *À première vue, la Forest Act s'applique-t-elle aux terres visées par un titre ancestral?*

[107] À ce stade-ci, la question de savoir si une loi d'application générale telle la *Forest Act* était *censée* s'appliquer aux terres visées par un titre

at this point — is always a matter of statutory interpretation.

[108] The basic rule of statutory interpretation is that "the words of an Act are to be read in their entire context, in their grammatical and ordinary sense harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament": R. Sullivan, *Sullivan on the Construction of Statutes* (5th ed. 2008), at p. 1.

[109] Under the *Forest Act*, the Crown can only issue timber licences with respect to "Crown timber". "Crown timber" is defined as timber that is on "Crown land", and "Crown land" is defined as "land, whether or not it is covered by water, or an interest in land, vested in the Crown" (s. 1). The Crown is not empowered to issue timber licences on "private land", which is defined as anything that is not Crown land. The Act is silent on Aboriginal title land, meaning that there are three possibilities: (1) Aboriginal title land is "Crown land"; (2) Aboriginal title land is "private land"; or (3) the *Forest Act* does not apply to Aboriginal title land at all. For the purposes of this appeal, there is no practical difference between the latter two.

[110] If Aboriginal title land is "vested in the Crown", then it falls within the definition of "Crown land" and the timber on it is "Crown timber".

[111] What does it mean for a person or entity to be "vested" with property? In property law, an interest is vested when no condition or limitation stands in the way of enjoyment. Property can be vested in possession or in interest. Property is vested in possession where there is a present entitlement to enjoyment of the property. An example of this is a life estate. Property is vested in interest where there is a fixed right to taking possession in the future. A remainder interest is vested in interest but not

ancestral est toujours une question d'interprétation législative.

[108] Selon la règle fondamentale en matière d'interprétation législative, [TRADUCTION] « il faut interpréter les termes d'une loi dans leur contexte global en suivant le sens ordinaire et grammatical qui s'harmonise avec l'économie de la loi, son objet et l'intention du législateur » : R. Sullivan, *Sullivan on the Construction of Statutes* (5e éd. 2008), p. 1.

[109] Aux termes de la *Forest Act*, le gouvernement ne peut délivrer des permis de coupe que pour le [TRADUCTION] « bois des terres publiques », défini comme étant le bois qui se trouve sur les « terres publiques », lesquelles sont définies comme étant les « terres dévolues à la Couronne, qu'elles soient ou non recouvertes d'eau, ou un droit sur ces terres » (art. 1). Le gouvernement n'a pas le pouvoir de délivrer des permis de coupe de bois sur les « terres privées », elles-mêmes définies comme étant toutes les terres qui ne sont pas des terres publiques. La *Forest Act* ne fait pas mention des terres visées par un titre ancestral et nous laisse devant trois possibilités : (1) les terres visées par un titre ancestral sont des « terres publiques »; (2) les terres visées par un titre ancestral sont des « terres privées »; ou (3) la *Forest Act* ne s'applique nullement aux terres visées par un titre ancestral. Pour les besoins du présent pourvoi, il n'y a pas de différence en pratique entre les deux dernières possibilités.

[110] Si les terres visées par un titre ancestral sont « dévolues à la Couronne », la définition des « terres publiques » s'y applique et le bois qui s'y trouve est du « bois des terres publiques ».

[111] Que signifie pour une personne ou une entité le fait qu'un bien lui soit « dévolu »? En droit des biens, un intérêt est dévolu lorsqu'aucune condition ou restriction n'en restreint la jouissance. Un bien peut être dévolu en possession ou en intérêt. Un bien est dévolu en possession lorsque la personne a le droit actuel de jouir du bien. Le domaine viager en est un exemple. Un bien est dévolu en intérêt lorsque le droit d'en prendre possession ultérieurement est figé. Un intérêt

in possession: B. Ziff, *Principles of Property Law* (5th ed. 2010), at p. 245; *Black's Law Dictionary* (9th ed. 2009), *sub verbo* "vested".

[112] Aboriginal title confers a right to the land itself and the Crown is obligated to justify any incursions on title. As explained above, the content of the Crown's underlying title is limited to the fiduciary duty owed and the right to encroach subject to justification. It would be hard to say that the Crown is presently entitled to enjoyment of the lands in the way property that is vested in possession would be. Similarly, although Aboriginal title can be alienated to the Crown, this does not confer a fixed right to future enjoyment in the way property that is vested in interest would. Rather, it would seem that Aboriginal title vests the lands in question in the Aboriginal group.

[113] The second consideration in statutory construction is more equivocal. Can the legislature have intended that the vast areas of the province that are potentially subject to Aboriginal title be immune from forestry regulation? And what about the long period of time during which land claims progress and ultimate Aboriginal title remains uncertain? During this period, Aboriginal groups have no legal right to manage the forest; their only right is to be consulted, and if appropriate, accommodated with respect to the land's use: *Haida*. At this stage, the Crown may continue to manage the resource in question, but the honour of the Crown requires it to respect the potential, but yet unproven claims.

[114] It seems clear from the historical record and the record in this case that in this evolving context, the British Columbia legislature proceeded on the basis that lands under claim remain "Crown land" under the *Forest Act*, at least until Aboriginal title is recognized by a court or an agreement. To proceed otherwise would have left no one in charge of the forests that cover hundreds of thousands

résiduel est dévolu en intérêt mais non en possession : B. Ziff, *Principles of Property Law* (5e éd. 2010), p. 245; *Black's Law Dictionary* (9e éd. 2009), à l'article « *vested* » (dévolu).

[112] Le titre ancestral confère un droit sur les terres-mêmes, et la Couronne est tenue de justifier toute atteinte au titre. J'ai déjà expliqué que le contenu du titre sous-jacent de la Couronne se limite à l'obligation fiduciaire envers les Autochtones et au droit de porter atteinte au titre ancestral dans la mesure où l'atteinte est justifiée. On pourrait difficilement affirmer que la Couronne a le droit actuel de jouir des terres comme elle pourrait le faire dans le cas d'un bien dévolu en possession. De même, bien que le titre ancestral puisse être aliéné en faveur de la Couronne, cela ne confère pas un droit figé de jouir ultérieurement du titre comme elle pourrait le faire dans le cas d'un bien dévolu en intérêt. Il semblerait plutôt que par l'effet du titre ancestral, les terres en question sont dévolues au groupe autochtone.

[113] La deuxième considération en matière d'interprétation législative est plus équivoque. Le législateur peut-il avoir voulu que les vastes territoires de la province susceptibles d'être visés par un titre ancestral soient soustraits à la réglementation de l'exploitation forestière? Et que dire de la longue période pendant laquelle les revendications territoriales font l'objet de négociation et le titre ancestral demeure incertain? Pendant cette période, les groupes autochtones n'ont pas le droit de gérer les forêts; ils ont seulement droit qu'on les consulte et, s'il y a lieu, qu'on les accommode relativement à l'utilisation des terres : *Nation haïda*. À cette étape, le gouvernement peut continuer à gérer la ressource en question, mais l'honneur de la Couronne l'oblige à respecter la revendication non encore prouvée.

[114] Il semble ressortir clairement du dossier historique et du dossier en l'espèce que dans ce contexte évolutif, le législateur de la Colombie-Britannique s'est fondé sur le fait que les terres revendiquées demeurent des [TRADUCTION] « terres publiques » au sens de la *Forest Act*, du moins jusqu'à ce que le titre ancestral soit reconnu par un tribunal ou une entente. Autrement, personne

of hectares and represent a resource of enormous value. Looked at in this very particular historical context, it seems clear that the legislature must have intended the words "vested in the Crown" to cover at least lands to which Aboriginal title had not yet been confirmed.

[115] I conclude that the legislature intended the *Forest Act* to apply to lands under claims for Aboriginal title, *up to the time title is confirmed by agreement or court order.* To hold otherwise would be to accept that the legislature intended the forests on such lands to be wholly unregulated, and would undercut the premise on which the duty to consult affirmed in *Haida* was based. Once Aboriginal title is confirmed, however, the lands are "vested" in the Aboriginal group and the lands are no longer Crown lands.

[116] Applied to this case, this means that as a matter of statutory construction, the lands in question were "Crown land" under the *Forest Act* at the time the forestry licences were issued. Now that title has been established, however, the beneficial interest in the land vests in the Aboriginal group, not the Crown. The timber on it no longer falls within the definition of "Crown timber" and the *Forest Act* no longer applies. I add the obvious — it remains open to the legislature to amend the Act to cover lands held under Aboriginal title, provided it observes applicable constitutional restraints.

C. *Is the Forest Act Ousted by the Constitution?*

[117] The next question is whether the provincial legislature lacks the constitutional power to legislate with respect to forests on Aboriginal title land. Currently, the *Forest Act* applies to lands under claim, but not to lands over which Aboriginal title has been confirmed. However, the provincial

ne se serait occupé des forêts qui couvrent des centaines de milliers d'hectares et qui représentent une ressource d'une valeur inestimable. Compte tenu de ce contexte historique très particulier, il semble clair que le législateur doit avoir voulu que les mots « dévolues à la Couronne » s'appliquent au moins aux terres sur lesquelles l'existence du titre ancestral n'était pas encore confirmée.

[115] Je conclus que le législateur voulait que la *Forest Act* s'applique aux terres visées par une revendication de titre ancestral, *jusqu'à ce que l'existence du titre soit confirmée par une entente ou une ordonnance judiciaire.* Conclure autrement reviendrait à accepter que le législateur voulait que les forêts se trouvant sur ces terres ne soient pas du tout réglementées et minerait la prémisse sur laquelle était fondée l'obligation de consulter confirmée dans l'arrêt *Nation haïda*. Cependant, une fois que l'existence du titre ancestral est confirmée, les terres sont « dévolues » au groupe autochtone et ne sont plus des terres publiques.

[116] L'application de cette conclusion en l'espèce signifie que, selon les règles d'interprétation législative, les terres en question étaient des [TRADUCTION] « terres publiques » aux termes de la *Forest Act* au moment où les permis d'exploitation forestière ont été délivrés. Cependant, maintenant que l'existence du titre a été établie, l'intérêt bénéficiaire sur les terres est dévolu au groupe autochtone et non à la Couronne. La définition de « bois des terres publiques » ne s'applique plus au bois qui se trouve sur ces terres et la *Forest Act* ne s'y applique plus. J'aimerais préciser un point évident — le législateur peut toujours modifier la *Forest Act* afin qu'elle s'applique sur les terres visées par un titre ancestral, à la condition de respecter les contraintes constitutionnelles applicables.

C. *La Forest Act est-elle écartée par la Constitution?*

[117] La question suivante consiste à savoir si la Constitution permet au législateur provincial de légiférer sur les forêts qui se trouvent sur des terres visées par un titre ancestral. Actuellement, la *Forest Act* s'applique aux terres visées par une revendication du titre ancestral, mais pas aux terres

legislature could amend the Act so as to explicitly apply to lands over which title has been confirmed. This raises the question of whether provincial forestry legislation that on its face purports to apply to Aboriginal title lands is ousted by the Constitution.

sur lesquelles l'existence de ce titre a été confirmée. Cependant, le législateur provincial pourrait modifier la *Forest Act* de manière à ce qu'elle s'applique explicitement aux terres sur lesquelles l'existence du titre ancestral a été confirmée. Cela soulève la question de savoir si la Constitution écarte les lois provinciales régissant l'exploitation forestière qui, à première vue, sont censées s'appliquer aux terres visées par un titre ancestral.

1. Section 35 of the *Constitution Act, 1982*

[118] Section 35 of the *Constitution Act, 1982* represents "the culmination of a long and difficult struggle in both the political forum and the courts for the constitutional recognition of [A]boriginal rights" (*Sparrow*, at p. 1105). It protects Aboriginal rights against provincial and federal legislative power and provides a framework to facilitate negotiations and reconciliation of Aboriginal interests with those of the broader public.

[119] Section 35(1) states that existing Aboriginal rights are hereby "recognized and affirmed". In *Sparrow*, this Court held that these words must be construed in a liberal and purposive manner. Recognition and affirmation of Aboriginal rights constitutionally entrenches the Crown's fiduciary obligations towards Aboriginal peoples. While rights that are recognized and affirmed are not absolute, s. 35 requires the Crown to reconcile its power with its duty. "[T]he best way to achieve that reconciliation is to demand the justification of any government regulation that infringes upon or denies [A]boriginal rights" (*Sparrow*, at p. 1109). Dickson C.J. and La Forest J. elaborated on this purpose as follows, at p. 1110:

> The constitutional recognition afforded by the provision therefore gives a measure of control over government conduct and a strong check on legislative power. While it does not promise immunity from government regulation in a society that, in the twentieth century, is increasingly more complex, interdependent and sophisticated, and where exhaustible resources need protection and management, it does hold the Crown to a substantive

1. L'article 35 de la *Loi constitutionnelle de 1982*

[118] L'article 35 de la *Loi constitutionnelle de 1982* représente « l'aboutissement d'une bataille longue et difficile à la fois dans l'arène politique et devant les tribunaux pour la reconnaissance de droits ancestraux » (*Sparrow*, p. 1105). Il protège les droits ancestraux contre l'exercice, par les provinces et le fédéral, de leur compétence législative et prévoit un cadre qui facilite les négociations et la conciliation des intérêts autochtones avec ceux du public en général.

[119] Selon le par. 35(1), les droits ancestraux existants sont « reconnus et confirmés ». Dans *Sparrow*, notre Cour a conclu que ces mots devaient être interprétés de façon libérale en fonction de l'objet qu'ils visent. La reconnaissance et la confirmation des droits ancestraux consacrent dans la Constitution les obligations fiduciaires de la Couronne envers les peuples autochtones. Bien que les droits reconnus et confirmés ne soient pas absolus, l'art. 35 oblige la Couronne à concilier son pouvoir avec son obligation. « [L]a meilleure façon d'y parvenir est d'exiger la justification de tout règlement gouvernemental qui porte atteinte à des droits ancestraux » (*Sparrow*, p. 1109). Le juge en chef Dickson et le juge La Forest ont précisé cet objectif comme suit à la p. 1110 :

> La reconnaissance constitutionnelle exprimée dans la disposition en cause permet donc, dans une certaine mesure, de contrôler la conduite du gouvernement et de limiter fortement le pouvoir du législateur. Bien qu'elle ne constitue pas une promesse d'immunité contre la réglementation gouvernementale dans une société qui, au XX^{e} siècle, devient de plus en plus complexe et interdépendante et où il est nécessaire

promise. The government is required to bear the burden of justifying any legislation that has some negative effect on any [A]boriginal right protected under s. 35(1).

de protéger et de gérer les ressources épuisables, cette reconnaissance représente un engagement important de la part de la Couronne. Le gouvernement se voit imposer l'obligation de justifier toute mesure législative qui a un effet préjudiciable sur un droit ancestral protégé par le par. 35(1).

[120] Where legislation affects an Aboriginal right protected by s. 35 of the *Constitution Act, 1982*, two inquiries are required. First, does the legislation interfere with or infringe the Aboriginal right (this was referred to as *prima facie* infringement in *Sparrow*)? Second, if so, can the infringement be justified?

[120] Lorsqu'une mesure législative porte atteinte à un droit ancestral protégé par l'art. 35 de la *Loi constitutionnelle de 1982*, il faut se poser deux questions. Premièrement, la mesure porte-t-elle atteinte au droit ancestral (une atteinte à première vue, dans l'arrêt *Sparrow*)? Deuxièmement, dans l'affirmative, l'atteinte peut-elle être justifiée?

[121] A court must first examine the characteristics or incidents of the right at stake. In the case of Aboriginal title, three relevant incidents are: (1) the right to exclusive use and occupation of the land; (2) the right to determine the uses to which the land is put, subject to the ultimate limit that those uses cannot destroy the ability of the land to sustain future generations of Aboriginal peoples; and (3) the right to enjoy the economic fruits of the land (*Delgamuukw*, at para. 166).

[121] Le tribunal doit d'abord examiner les caractéristiques ou les attributs du droit en question. Dans le cas du titre ancestral, trois attributs sont pertinents : (1) le droit d'utiliser et d'occuper les terres de façon exclusive; (2) le droit de choisir les utilisations qui peuvent être faites des terres, sous réserve de la restriction ultime que ces usages ne sauraient détruire la capacité de ces terres d'assurer la subsistance des générations futures des peuples autochtones; (3) le droit de bénéficier des avantages économiques que procurent les terres (*Delgamuukw*, par. 166).

[122] Next, in order to determine whether the right is infringed by legislation, a court must ask whether the legislation results in a meaningful diminution of the right: *Gladstone*. As discussed, in *Sparrow*, the Court suggested that the following three factors will aid in determining whether such an infringement has occurred: (1) whether the limitation imposed by the legislation is unreasonable; (2) whether the legislation imposes undue hardship; and (3) whether the legislation denies the holders of the right their preferred means of exercising the right (p. 1112).

[122] Ensuite, pour déterminer si la mesure législative porte atteinte au droit, le tribunal doit se demander si la mesure entraîne une diminution appréciable du droit : *Gladstone*. Comme je l'ai déjà expliqué, dans *Sparrow*, la Cour a laissé entendre que les trois facteurs suivants peuvent permettre de déterminer s'il y a eu atteinte : (1) si la restriction imposée par la loi est déraisonnable; (2) si la loi est indûment rigoureuse; et (3) si la loi refuse aux titulaires du droit le recours à leur moyen préféré de l'exercer (p. 112).

[123] General regulatory legislation, such as legislation aimed at managing the forests in a way that deals with pest invasions or prevents forest fires, will often pass the *Sparrow* test as it will be reasonable, not impose undue hardship, and not deny the holders of the right their preferred means of exercising it. In such cases, no infringement will result.

[123] Une loi de nature réglementaire de portée générale, par exemple une loi visant la gestion des forêts en prévenant les infestations de ravageurs ou les feux de forêt, satisfera souvent au critère énoncé dans *Sparrow* car elle sera raisonnable, ne sera pas indûment rigoureuse et ne refusera pas aux titulaires du droit le recours à leur moyen préféré de l'exercer. Dans un tel cas, il n'y a aucune atteinte.

[124] General regulatory legislation, which may affect the manner in which the Aboriginal right can be exercised, differs from legislation that assigns Aboriginal property rights to third parties. The issuance of timber licences on Aboriginal title land for example — a direct transfer of Aboriginal property rights to a third party — will plainly be a meaningful diminution in the Aboriginal group's ownership right and will amount to an infringement that must be justified in cases where it is done without Aboriginal consent.

[125] As discussed earlier, to justify an infringement, the Crown must demonstrate that: (1) it complied with its procedural duty to consult with the right holders and accommodate the right to an appropriate extent at the stage when infringement was contemplated; (2) the infringement is backed by a compelling and substantial legislative objective in the public interest; and (3) the benefit to the public is proportionate to any adverse effect on the Aboriginal interest. This framework permits a principled reconciliation of Aboriginal rights with the interests of all Canadians.

[126] While unnecessary for the disposition of this appeal, the issue of whether British Columbia possessed a compelling and substantial legislative objective in issuing the cutting permits in this case was addressed by the courts below, and I offer the following comments for the benefit of all parties going forward. I agree with the courts below that no compelling and substantial objective existed in this case. The trial judge found the two objectives put forward by the Province — the economic benefits that would be realized as a result of logging in the claim area and the need to prevent the spread of a mountain pine beetle infestation — were not supported by the evidence. After considering the expert evidence before him, he concluded that the proposed cutting sites were not economically viable and that they were not directed at preventing the spread of the mountain pine beetle.

[124] Une loi de nature réglementaire de portée générale susceptible de modifier le mode d'exercice du droit ancestral diffère d'une loi qui a pour effet de céder à des tiers des droits de propriété des Autochtones. La délivrance de permis de coupe de bois sur des terres grevées du titre ancestral par exemple — un transfert direct à des tiers de droits de propriété des Autochtones — constituera manifestement une diminution significative du droit de propriété du groupe autochtone assimilable à une atteinte qui doit être justifiée dans les cas où les Autochtones n'y ont pas consenti.

[125] J'ai déjà expliqué que, pour justifier une atteinte, la Couronne doit démontrer : (1) qu'elle s'est acquittée de son obligation procédurale de consulter les titulaires d'un droit et de trouver des accommodements au droit, dans la mesure appropriée, à l'étape où l'atteinte était envisagée; (2) que l'atteinte poursuit un objectif législatif impérieux et réel dans l'intérêt du public; (3) que l'intérêt du public est proportionnel à tout effet négatif sur l'intérêt autochtone. Ce cadre permet une conciliation rationnelle des droits ancestraux et des intérêts de tous les Canadiens.

[126] Bien qu'il ne soit pas nécessaire de trancher cette question pour les besoins du présent pourvoi, les tribunaux d'instance inférieure ont abordé la question de savoir si la Colombie-Britannique poursuivait un objectif impérieux et réel en délivrant dans ce cas des permis de coupe, et je vais formuler les observations suivantes au bénéfice de toutes les parties éventuelles. Je conviens avec les tribunaux d'instance inférieure qu'il n'existait aucun objectif impérieux et réel en l'espèce. Le juge de première instance a conclu que les deux objectifs invoqués par la province — les avantages économiques liés à l'exploitation forestière sur les terres visées par une revendication du titre et la nécessité d'empêcher la propagation d'une infestation du dendroctone du pin ponderosa — n'étaient pas étayés par la preuve. Après avoir examiné les témoignages d'experts dont il disposait, il a conclu que les sites de coupe proposés n'étaient pas rentables et qu'ils ne visaient pas à empêcher la propagation du dendroctone du pin ponderosa.

[127] Before the Court of Appeal, the Province no longer argued that the forestry activities were undertaken to combat the mountain pine beetle, but maintained the position that the trial judge's findings on economic viability were unreasonable, because unless logging was economically viable, it would not have taken place. The Court of Appeal rejected this argument on two grounds: (1) levels of logging must sometimes be maintained for a tenure holder to keep logging rights, even if logging is not economically viable; and (2) the focus is the economic value of logging compared to the detrimental effects it would have on Tsilhqot'in Aboriginal rights, not the economic viability of logging from the sole perspective of the tenure holder. In short, the Court of Appeal found no error in the trial judge's reasoning on this point. I would agree. Granting rights to third parties to harvest timber on Tsilhqot'in land is a serious infringement that will not lightly be justified. Should the government wish to grant such harvesting rights in the future, it will be required to establish that a compelling and substantial objective is furthered by such harvesting, something that was not present in this case.

2. The Division of Powers

[128] The starting point, as noted, is that, as a general matter, the regulation of forestry within the Province falls under its power over property and civil rights under s. 92(13) of the *Constitution Act, 1867*. To put it in constitutional terms, regulation of forestry is in "pith and substance" a provincial matter. Thus, the *Forest Act* is consistent with the division of powers unless it is ousted by a competing federal power, even though it may incidentally affect matters under federal jurisdiction.

[129] "Indians, and Lands reserved for the Indians" falls under federal jurisdiction pursuant to s. 91(24) of the *Constitution Act, 1867*. As such, forestry on Aboriginal title land falls under both

[127] Devant la Cour d'appel, la province ne prétendait plus que les activités forestières visaient à combattre l'infestation du dendroctone du pin ponderosa, mais elle a continué de soutenir que les conclusions du juge de première instance sur la rentabilité étaient déraisonnables parce que, si les travaux d'exploitation forestière n'avaient pas été rentables, ils n'auraient pas été effectués. La Cour d'appel a rejeté cet argument pour deux raisons : (1) les titulaires d'une tenure forestière doivent parfois maintenir l'exploitation forestière pour conserver leurs droits, même si ce n'est pas rentable; (2) l'accent porte sur la valeur économique de l'exploitation forestière par rapport aux effets préjudiciables qu'elle aurait sur les droits ancestraux des Tsilhqot'in, et non sur la rentabilité de l'exploitation forestière uniquement du point de vue du titulaire de la tenure forestière. En bref, la Cour d'appel n'a relevé aucune erreur dans le raisonnement du juge de première instance sur ce point. Je suis d'accord. Accorder à des tiers le droit de récolter du bois sur les terres des Tsilhqot'in constitue une atteinte grave qui ne sera pas justifiée à la légère. Si le gouvernement souhaite à l'avenir accorder de tels droits de récolte, il devra établir qu'il poursuit par la récolte un objectif impérieux et réel, ce qui n'a pas été fait en l'espèce.

2. Le partage des compétences

[128] Comme je l'ai déjà indiqué, le point de départ est que, de façon générale, la réglementation de l'exploitation forestière dans la province relève du pouvoir que le par. 92(13) de la *Loi constitutionnelle de 1867* accorde à la province en matière de propriété et de droits civils. Sur le plan constitutionnel, la réglementation de l'exploitation forestière est, « de par son caractère véritable », une compétence provinciale. Ainsi, la *Forest Act* respecte le partage des compétences à moins qu'elle soit écartée par une compétence fédérale, même si elle peut, de manière incidente, toucher les matières relevant de la compétence fédérale.

[129] « Les Indiens et les terres réservées pour les Indiens » relèvent de la compétence fédérale en vertu du par. 91(24) de la *Loi constitutionnelle de 1867*. Par conséquent, les ressources forestières

the provincial power over forestry in the province and the federal power over "Indians". Thus, for constitutional purposes, forestry on Aboriginal title land possesses a double aspect, with both levels of government enjoying concurrent jurisdiction. Normally, such concurrent legislative power creates no conflicts — federal and provincial governments cooperate productively in many areas of double aspect such as, for example, insolvency and child custody. However, in cases where jurisdictional disputes arise, two doctrines exist to resolve them.

qui se trouvent sur des terres visées par un titre ancestral relèvent à la fois de la compétence provinciale en matière de ressources forestières dans la province et de la compétence fédérale sur les « Indiens ». Ainsi, sur le plan constitutionnel, les ressources forestières qui se trouvent sur les terres visées par un titre ancestral comportent un double aspect puisque les deux paliers de gouvernement exercent sur elles une compétence concurrente. Habituellement, une telle compétence concurrente ne crée pas de conflit — les gouvernements fédéral et provinciaux collaborent de manière productive dans plusieurs domaines qui comportent un double aspect, par exemple l'insolvabilité et la garde des enfants. Cependant, lorsque se présente un conflit de compétence, deux doctrines permettent de le résoudre.

[130] First, the doctrine of paramountcy applies where there is conflict or inconsistency between provincial and federal law, in the sense of impossibility of dual compliance or frustration of federal purpose. In the case of such conflict or inconsistency, the federal law prevails. Therefore, if the application of valid provincial legislation, such as the *Forest Act*, conflicts with valid federal legislation enacted pursuant to Parliament's power over "Indians", the latter would trump the former. No such inconsistency is alleged in this case.

[130] Premièrement, la doctrine de la prépondérance s'applique en cas de conflit ou d'incompatibilité entre une loi provinciale et une loi fédérale, en ce sens qu'il est impossible de se conformer aux deux textes de loi ou que la réalisation de l'objet d'une loi fédérale est entravée. Dans un tel cas, la loi fédérale l'emporte. Par conséquent, si l'application d'une loi provinciale valide, comme la *Forest Act*, entre en conflit avec une loi fédérale valide adoptée en vertu du pouvoir du Parlement sur les « Indiens », la seconde aurait priorité sur la première. On n'a allégué l'existence d'aucune incompatibilité de la sorte en l'espèce.

[131] Second, the doctrine of interjurisdictional immunity applies where laws enacted by one level of government impair the protected core of jurisdiction possessed by the other level of government. Interjurisdictional immunity is premised on the idea that since federal and provincial legislative powers under ss. 91 and 92 of the *Constitution Act, 1867* are exclusive, each level of government enjoys a basic unassailable core of power on which the other level may not intrude. In considering whether provincial legislation such as the *Forest Act* is ousted pursuant to interjurisdictional immunity, the court must ask two questions. First, does the provincial legislation touch on a protected core of federal power? And second, would application of the provincial law significantly trammel or impair the federal power? (*Quebec (Attorney General) v.*

[131] Deuxièmement, la doctrine de l'exclusivité des compétences s'applique lorsque des lois adoptées par un palier de gouvernement entravent le contenu essentiel protégé d'une compétence de l'autre palier de gouvernement. Cette doctrine repose sur la prémisse que, puisque les compétences fédérales et provinciales prévues aux art. 91 et 92 de la *Loi constitutionnelle de 1867* sont exclusives, chaque palier de gouvernement exerce sa compétence sur un contenu minimum essentiel et irréductible auquel l'autre palier de gouvernement ne peut toucher. Pour déterminer si une loi provinciale comme la *Forest Act* est écartée par l'application de la doctrine de l'exclusivité des compétences, le tribunal doit se poser deux questions. Premièrement, la loi provinciale touche-t-elle un aspect du contenu essentiel protégé de la compétence fédérale? Et

Canadian Owners and Pilots Association, 2010 SCC 39, [2010] 2 S.C.R. 536).

[132] The trial judge held that interjurisdictional immunity rendered the provisions of the *Forest Act* inapplicable to land held under Aboriginal title because provisions authorizing management, acquisition, removal and sale of timber on such lands affect the core of the federal power over "Indians". He placed considerable reliance on *R. v. Morris*, 2006 SCC 59, [2006] 2 S.C.R. 915, in which this Court held that only Parliament has the power to derogate from rights conferred by a treaty because treaty rights are within the core of the federal power over "Indians". It follows, the trial judge reasoned, that, since Aboriginal rights are akin to treaty rights, the Province has no power to legislate with respect to forests on Aboriginal title land.

[133] The reasoning accepted by the trial judge is essentially as follows. Aboriginal rights fall at the core of federal jurisdiction under s. 91(24) of the *Constitution Act, 1867*. Interjurisdictional immunity applies to matters at the core of s. 91(24). Therefore, provincial governments are constitutionally prohibited from legislating in a way that limits Aboriginal rights. This reasoning leads to a number of difficulties.

[134] The critical aspect of this reasoning is the proposition that Aboriginal rights fall at the core of federal regulatory jurisdiction under s. 91(24) of the *Constitution Act, 1867*.

[135] The jurisprudence on whether s. 35 rights fall at the core of the federal power to legislate with respect to "Indians" under s. 91(24) is somewhat mixed. While no case has held that Aboriginal

deuxièmement, l'application de la loi provinciale pourrait-elle entraver de façon importante la compétence fédérale? (*Québec (Procureur général) c. Canadian Owners and Pilots Association*, 2010 CSC 39, [2010] 2 R.C.S. 536).

[132] Le juge de première instance a conclu que l'exclusivité des compétences rendait les dispositions de la *Forest Act* inapplicables aux terres détenues en vertu d'un titre ancestral parce que les dispositions autorisant la gestion, l'acquisition, l'enlèvement et la vente du bois sur ces terres touchent au contenu essentiel de la compétence fédérale sur les « Indiens ». Il a accordé une grande importance à l'arrêt *R. c. Morris*, 2006 CSC 59, [2006] 2 R.C.S. 915, dans lequel la Cour a conclu que seul le Parlement a le pouvoir de déroger aux droits reconnus dans un traité parce que les droits issus de traités se rattachent au contenu essentiel de la compétence fédérale sur les « Indiens ». Le juge de première instance a donc estimé que, comme les droits ancestraux s'apparentent aux droits issus de traités, la province n'a pas le pouvoir de légiférer relativement aux forêts qui se trouvent sur les terres visées par un titre ancestral.

[133] Le raisonnement adopté par le juge de première instance est essentiellement le suivant. Les droits ancestraux font partie du contenu essentiel de la compétence fédérale prévue au par. 91(24) de la *Loi constitutionnelle de 1867*. La doctrine de l'exclusivité des compétences s'applique aux matières qui font partie du contenu essentiel du par. 91(24). Par conséquent, la Constitution empêche les gouvernements provinciaux de légiférer d'une manière qui limite les droits ancestraux. Ce raisonnement suscite un certain nombre de difficultés.

[134] La proposition suivant laquelle les droits ancestraux font partie du contenu essentiel de la compétence fédérale en matière de réglementation prévue au par. 91(24) de la *Loi constitutionnelle de 1867* constitue l'aspect crucial de ce raisonnement.

[135] La jurisprudence est quelque peu ambiguë quant à savoir si les droits visés à l'art. 35 font partie du contenu essentiel du pouvoir fédéral de faire des lois relatives aux « Indiens » prévu au

rights, such as Aboriginal title to land, fall at the core of the federal power under s. 91(24), this has been stated in *obiter dicta.* However, this Court has also stated in *obiter dicta* that provincial governments are constitutionally permitted to infringe Aboriginal rights where such infringement is justified pursuant to s. 35 of the *Constitution Act, 1982* — this latter proposition being inconsistent with the reasoning accepted by the trial judge.

par. 91(24). Aucune décision n'a conclu que les droits ancestraux, par exemple le titre ancestral sur des terres, font partie du contenu essentiel de la compétence fédérale prévue au par. 91(24), mais on l'indique dans des remarques incidentes. Toutefois, notre Cour a également indiqué dans des remarques incidentes que la Constitution permet aux gouvernements provinciaux de porter atteinte aux droits ancestraux lorsque ces atteintes sont justifiées au sens de l'art. 35 de la *Loi constitutionnelle de 1982* — et cette proposition va à l'encontre du raisonnement que le juge de première instance a accepté.

[136] In *R. v. Marshall*, [1999] 3 S.C.R. 533, this Court suggested that interjurisdictional immunity did not apply where provincial legislation conflicted with treaty rights. Rather, the s. 35 *Sparrow* framework was the appropriate tool with which to resolve the conflict:

[136] Dans l'arrêt *R. c. Marshall*, [1999] 3 R.C.S. 533, notre Cour a supposé que l'exclusivité des compétences ne s'appliquait pas en cas de conflit entre une loi provinciale et des droits issus d'un traité. Le cadre d'analyse relatif à l'art. 35 énoncé dans *Sparrow* a plutôt été retenu comme le moyen permettant de résoudre le conflit :

> . . . the federal and provincial governments [have the authority] within their respective legislative fields to regulate the exercise of the treaty right subject to the constitutional requirement that restraints on the exercise of the treaty right have to be justified on the basis of conservation or other compelling and substantial public objectives . . . . [para. 24]

> . . . les gouvernements fédéral et provinciaux [ont le pouvoir] de réglementer, dans les limites de leurs champs respectifs de compétences législatives, l'exercice du droit issu du traité, sous réserve du fait que la Constitution exige que les restrictions imposées à l'exercice de ce droit soient justifiées pour des raisons de conservation ou pour d'autres objectifs d'intérêt public réels et impérieux . . . [par. 24]

[137] More recently however, in *Morris*, this Court distinguished *Marshall* on the basis that the treaty right at issue in *Marshall* was a commercial right. The Court in *Morris* went on to hold that interjurisdictional immunity prohibited any provincial infringement of the non-commercial treaty right in that case, whether or not such an infringement could be justified under s. 35 of the *Constitution Act, 1982*.

[137] Plus récemment cependant, dans l'arrêt *Morris*, notre Cour a fait une distinction avec l'arrêt *Marshall* puisque le droit issu du traité en question dans *Marshall* était un droit de nature commerciale. Dans *Morris*, la Cour a conclu que l'exclusivité des compétences interdisait à la province de porter atteinte au droit issu du traité — un droit de nature non commerciale dans cette affaire — indépendamment du fait que l'atteinte puisse ou non être justifiée en vertu de l'art. 35 de la *Loi constitutionnelle de 1982*.

[138] Beyond this, the jurisprudence does not directly address the relationship between interjurisdictional immunity and s. 35 of the *Constitution Act, 1982*. The ambiguous state of the jurisprudence has created unpredictability. It is clear that where valid *federal* law interferes with an Aboriginal or treaty right, the s. 35 *Sparrow* framework governs the law's applicability. It is less clear, however, that

[138] Cela mis à part, la jurisprudence ne traite pas directement du lien entre l'exclusivité des compétences et l'art. 35 de la *Loi constitutionnelle de 1982*. L'ambiguïté de la jurisprudence a engendré l'imprévisibilité. Il est clair que lorsqu'une loi *fédérale* valide porte atteinte à un droit ancestral ou issu d'un traité, le cadre d'analyse relatif à l'art. 35 énoncé dans *Sparrow* régit l'applicabilité de la loi. Il est

it is so where valid *provincial* law interferes with an Aboriginal or treaty right. The jurisprudence leaves the following questions unanswered. Does interjurisdictional immunity prevent provincial governments from ever limiting Aboriginal rights even if a particular infringement would be justified under the *Sparrow* framework? Is provincial interference with Aboriginal rights treated differently than treaty rights? And, are commercial Aboriginal rights treated differently than non-commercial Aboriginal rights? No case has addressed these questions explicitly, as I propose to do now.

toutefois moins évident que ce soit le cas lorsqu'une loi *provinciale* valide porte atteinte à un droit ancestral ou issu d'un traité. La jurisprudence laisse sans réponse les questions suivantes : L'exclusivité des compétences empêche-t-elle absolument les gouvernements provinciaux de limiter les droits ancestraux même si le cadre d'analyse énoncé dans *Sparrow* permettrait de justifier l'atteinte en question? Une atteinte à un droit ancestral de la part de la province est-elle traitée différemment d'une atteinte à un droit issu d'un traité? Et les droits ancestraux de nature commerciale sont-ils traités différemment des droits ancestraux de nature non commerciale? Comme aucune décision n'a examiné explicitement ces questions, je propose de le faire maintenant.

[139] As discussed, s. 35 of the *Constitution Act, 1982* imposes limits on how both the federal and provincial governments can deal with land under Aboriginal title. Neither level of government is permitted to legislate in a way that results in a meaningful diminution of an Aboriginal or treaty right, unless such an infringement is justified in the broader public interest and is consistent with the Crown's fiduciary duty owed to the Aboriginal group. The result is to protect Aboriginal and treaty rights while also allowing the reconciliation of Aboriginal interests with those of the broader society.

[139] J'ai déjà indiqué que l'art. 35 de la *Loi constitutionnelle de 1982* impose des limites quant à la façon dont les gouvernements, tant fédéral que provinciaux, peuvent traiter les terres visées par un titre ancestral. Ces gouvernements ne peuvent faire des lois qui entraînent une diminution appréciable d'un droit ancestral ou issu d'un traité à moins que l'atteinte soit justifiée dans l'intérêt public général et qu'elle soit compatible avec l'obligation fiduciaire qu'a la Couronne envers le groupe autochtone. L'objectif consiste à protéger les droits ancestraux et issus d'un traité tout en permettant la conciliation des intérêts autochtones avec ceux de la société en général.

[140] What role then is left for the application of the doctrine of interjurisdictional immunity and the idea that Aboriginal rights are at the core of the federal power over "Indians" under s. 91(24) of the *Constitution Act, 1867*? The answer is none.

[140] Alors, à quoi peuvent encore servir l'application de la doctrine de l'exclusivité des compétences et la notion que les droits ancestraux font partie du contenu essentiel du pouvoir fédéral sur les « Indiens » prévu au par. 91(24) de la *Loi constitutionnelle de 1867*? Il faut répondre comme suit : elles ne servent à rien.

[141] The doctrine of interjurisdictional immunity is directed to ensuring that the two levels of government are able to operate without interference in their core areas of exclusive jurisdiction. This goal is not implicated in cases such as this. Aboriginal rights are a limit on both federal and provincial jurisdiction.

[141] La doctrine de l'exclusivité des compétences vise à faire en sorte que les deux niveaux de gouvernement soient en mesure de fonctionner sans que l'un empiète sur le contenu essentiel des domaines de compétence exclusive de l'autre. Cet objectif n'est pas en cause dans les affaires telles que celle qui nous occupe. Les droits ancestraux constituent une limite à l'exercice des compétences tant fédérales que provinciales.

[142] The guarantee of Aboriginal rights in s. 35 of the *Constitution Act, 1982*, like the *Canadian Charter of Rights and Freedoms*, operates as a limit on federal and provincial legislative powers. The *Charter* forms Part I of the *Constitution Act, 1982*, and the guarantee of Aboriginal rights forms Part II. Parts I and II are sister provisions, both operating to limit governmental powers, whether federal or provincial. Part II Aboriginal rights, like Part I *Charter* rights, are held *against* government — they operate to *prohibit* certain types of regulation which governments could otherwise impose. These limits have nothing to do with whether something lies at the core of the federal government's powers.

[143] An analogy with *Charter* jurisprudence may illustrate the point. Parliament enjoys exclusive jurisdiction over criminal law. However, its criminal law power is circumscribed by s. 11 of the *Charter* which guarantees the right to a fair criminal process. Just as Aboriginal rights are fundamental to Aboriginal law, the right to a fair criminal process is fundamental to criminal law. But we do not say that the right to a fair criminal process under s. 11 falls at the core of Parliament's criminal law jurisdiction. Rather, it is a *limit* on Parliament's criminal law jurisdiction. If s. 11 rights were held to be at the core of Parliament's criminal law jurisdiction such that interjurisdictional immunity applied, the result would be absurd: provincial breaches of s. 11 rights would be judged on a different standard than federal breaches, with only the latter capable of being saved under s. 1 of the *Charter*. This same absurdity would result if interjurisdictional immunity were applied to Aboriginal rights.

[142] Tout comme le fait la *Charte canadienne des droits et libertés*, la protection des droits ancestraux garantie à l'art. 35 de la *Loi constitutionnelle de 1982* vient limiter l'exercice des pouvoirs législatifs fédéraux et provinciaux. La *Charte* constitue la partie I de la *Loi constitutionnelle de 1982*, et la protection des droits ancestraux constitue la partie II. Les parties I et II sont apparentées et limitent toutes deux l'exercice des pouvoirs gouvernementaux, qu'ils soient fédéraux ou provinciaux. Les droits garantis à la partie II, tout comme les droits garantis par la *Charte* à la partie I, sont *opposables* au gouvernement — ils ont pour effet d'*interdire* certains types de réglementation que les gouvernements pourraient autrement imposer. Ces limites n'ont rien à voir avec la question de savoir si une activité fait partie du contenu essentiel des pouvoirs du gouvernement fédéral.

[143] Une analogie avec la jurisprudence relative à la *Charte* peut illustrer ce point. Le Parlement a une compétence exclusive en matière de droit criminel. Cependant, l'exercice de son pouvoir en droit criminel est circonscrit par l'art. 11 de la *Charte* qui garantit le droit à l'équité du processus criminel. Tout comme les droits ancestraux sont un aspect fondamental du droit autochtone, le droit à l'équité du processus criminel est un aspect fondamental du droit criminel. Mais nous ne disons pas que le droit à l'équité du processus criminel prévu à l'art. 11 fait partie du contenu essentiel de la compétence du Parlement en matière de droit criminel. Il s'agit plutôt d'une *limite* à la compétence du Parlement en matière de droit criminel. Si l'on considérait que les droits garantis à l'art. 11 font partie du contenu essentiel de la compétence du Parlement en matière de droit criminel de sorte que l'exclusivité des compétences s'applique, on aboutirait à un résultat absurde : les violations, par les provinces, des droits garantis à l'art. 11 seraient jugées suivant une norme différente de celle applicable aux violations par le gouvernement fédéral, et seules ces dernières seraient susceptibles d'être sauvegardées en vertu de l'article premier de la *Charte*. L'application de l'exclusivité des compétences aux droits ancestraux aboutirait au même résultat absurde.

[144] The doctrine of interjurisdictional immunity is designed to deal with conflicts between provincial powers and federal powers; it does so by carving out areas of exclusive jurisdiction for each level of government. But the problem in cases such as this is not competing provincial and federal powers, but rather tension between the right of the Aboriginal title holders to use their land as they choose and the province which seeks to regulate it, like all other land in the province.

[145] Moreover, application of interjurisdictional immunity in this area would create serious practical difficulties.

[146] First, application of interjurisdictional immunity would result in two different tests for assessing the constitutionality of provincial legislation affecting Aboriginal rights. Pursuant to *Sparrow*, provincial regulation is unconstitutional if it results in a meaningful diminution of an Aboriginal right that cannot be justified pursuant to s. 35 of the *Constitution Act, 1982*. Pursuant to interjurisdictional immunity, provincial regulation would be unconstitutional if it impaired an Aboriginal right, whether or not such limitation was reasonable or justifiable. The result would be dueling tests directed at answering the same question: How far can provincial governments go in regulating the exercise of s. 35 Aboriginal rights?

[147] Second, in this case, applying the doctrine of interjurisdictional immunity to exclude provincial regulation of forests on Aboriginal title lands would produce uneven, undesirable results and may lead to legislative vacuums. The result would be patchwork regulation of forests — some areas of the province regulated under provincial legislation, and other areas under federal legislation or no legislation at all. This might make it difficult, if not impossible, to deal effectively with problems such as

[144] La doctrine de l'exclusivité des compétences vise à régler les conflits entre les compétences provinciales et les compétences fédérales; elle y parvient en créant des domaines de compétence exclusive pour chaque palier de gouvernement. Cependant, le problème dans des cas comme celui-ci ne résulte pas d'une confrontation entre le pouvoir des provinces et ceux du gouvernement fédéral mais plutôt d'une tension entre le droit des titulaires du titre ancestral d'utiliser leurs terres comme ils l'entendent et la volonté de la province de réglementer ces terres au même titre que toutes les autres terres dans la province.

[145] En outre, l'application de la doctrine de l'exclusivité des compétences dans ce domaine créerait de sérieuses difficultés d'ordre pratique.

[146] Premièrement, l'application de l'exclusivité des compétences aurait pour effet d'établir deux critères différents pour l'appréciation de la constitutionnalité d'une loi provinciale touchant aux droits ancestraux. Suivant l'arrêt *Sparrow*, la réglementation provinciale est inconstitutionnelle si elle entraîne une diminution appréciable d'un droit ancestral qui ne saurait être justifiée au regard de l'art. 35 de la *Loi constitutionnelle de 1982*. Suivant la doctrine de l'exclusivité des compétences, la réglementation provinciale serait inconstitutionnelle si elle portait atteinte à un droit ancestral, peu importe que l'atteinte soit raisonnable ou justifiable. Il y aurait donc deux critères contradictoires censés répondre à la même question : Jusqu'où les gouvernements provinciaux peuvent-ils aller dans la réglementation de l'exercice des droits ancestraux protégés par l'art. 35?

[147] Deuxièmement, en l'espèce, appliquer la doctrine de l'exclusivité des compétences dans le but d'exclure la réglementation provinciale des forêts se trouvant sur les terres visées par un titre ancestral entraînerait des résultats inégaux et indésirables et pourrait créer des vides législatifs. Il en résulterait une réglementation morcelée en matière de ressources forestières — certaines régions de la province seraient assujetties aux lois provinciales et d'autres régions seraient réglementées par les lois

pests and fires, a situation desired by neither level of government.

[148] Interjurisdictional immunity — premised on a notion that regulatory environments can be divided into watertight jurisdictional compartments — is often at odds with modern reality. Increasingly, as our society becomes more complex, effective regulation requires cooperation between interlocking federal and provincial schemes. The two levels of government possess differing tools, capacities, and expertise, and the more flexible double aspect and paramountcy doctrines are alive to this reality: under these doctrines, jurisdictional cooperation is encouraged up until the point when actual conflict arises and must be resolved. Interjurisdictional immunity, by contrast, may thwart such productive cooperation. In the case of forests on Aboriginal title land, courts would have to scrutinize provincial forestry legislation to ensure that it did not impair the core of federal jurisdiction over "Indians" and would also have to scrutinize any federal legislation to ensure that it did not impair the core of the province's power to manage the forests. It would be no answer that, as in this case, both levels of government agree that the laws at issue should remain in force.

[149] This Court has recently stressed the limits of interjurisdictional immunity. "[C]onstitutional doctrine must facilitate, not undermine what this Court has called 'co-operative federalism'" and as such "a court should favour, where possible, the ordinary operation of statutes enacted by both levels of government" (*Canadian Western Bank v. Alberta*, 2007 SCC 22, [2007] 2 S.C.R. 3, at paras. 24 and 37 (emphasis deleted)). Because of this, interjurisdictional immunity is of "limited application" and should be applied "with restraint"

fédérales ou ne seraient pas réglementées du tout. Cela pourrait rendre difficile, voire impossible, la résolution efficace de problèmes comme les ravageurs ou le feu : une situation souhaitée par ni l'un ni l'autre des paliers de gouvernement.

[148] La doctrine de l'exclusivité des compétences — fondée sur l'idée que les contextes réglementaires peuvent être divisés en compartiments étanches — va souvent à l'encontre de la réalité moderne. Notre société devient plus complexe, et pour être efficace, la réglementation exige de plus en plus la coopération des régimes fédéral et provincial interreliés. Les deux paliers de gouvernement possèdent des outils, compétences et expertises différents, et les doctrines plus souples du double aspect et de la prépondérance fédérale sont sensibles à cette réalité : suivant ces doctrines, on encourage la coopération intergouvernementale jusqu'au moment où survient un conflit qu'il faut régler. Par contre, la doctrine de l'exclusivité des compétences peut contrecarrer une telle coopération. Dans le cas des forêts qui se trouvent sur les terres visées par un titre ancestral, les tribunaux devraient examiner la loi provinciale sur les ressources forestières afin de s'assurer qu'elle ne porte pas atteinte au contenu essentiel de la compétence fédérale sur les « Indiens » et devraient également examiner la loi fédérale afin de s'assurer qu'elle ne porte pas atteinte au contenu essentiel du pouvoir provincial de gérer les forêts. Suggérer, comme en l'espèce, que les deux paliers de gouvernement conviennent que les lois en question devraient rester en vigueur ne règle pas la question.

[149] Notre Cour a récemment souligné les limites de l'exclusivité des compétences. Les doctrines constitutionnelles « doivent faciliter et non miner ce que notre Cour a appelé un "fédéralisme coopératif" » et, par conséquent, « les tribunaux privilégient, dans la mesure du possible, l'application régulière des lois édictées par les deux ordres de gouvernement » (*Banque canadienne de l'Ouest c. Alberta*, 2007 CSC 22, [2007] 2 R.C.S. 3, par. 24 et 37 (italiques dans l'original omis)). Pour cette raison, la doctrine de l'exclusivité des compétences

(paras. 67 and 77). These propositions have been confirmed in more recent decisions: *Marine Services International Ltd. v. Ryan Estate*, 2013 SCC 44, [2013] 3 S.C.R. 53; *Canada (Attorney General) v. PHS Community Services Society*, 2011 SCC 44, [2011] 3 S.C.R. 134.

[150] *Morris*, on which the trial judge relied, was decided prior to this Court's articulation of the modern approach to interjurisdictional immunity in *Canadian Western Bank* and *Canadian Owners and Pilots Association*, and so is of limited precedential value on this subject as a result (see *Marine Services*, at para. 64). To the extent that *Morris* stands for the proposition that provincial governments are categorically barred from regulating the exercise of Aboriginal rights, it should no longer be followed. I find that, consistent with the statements in *Sparrow* and *Delgamuukw*, provincial regulation of general application will apply to exercises of Aboriginal rights, including Aboriginal title land, subject to the s. 35 infringement and justification framework. This carefully calibrated test attempts to reconcile general legislation with Aboriginal rights in a sensitive way as required by s. 35 of the *Constitution Act, 1982* and is fairer and more practical from a policy perspective than the blanket inapplicability imposed by the doctrine of interjurisdictional immunity.

[151] For these reasons, I conclude that the doctrine of interjurisdictional immunity should not be applied in cases where lands are held under Aboriginal title. Rather, the s. 35 *Sparrow* approach should govern. Provincial laws of general application, including the *Forest Act*, should apply unless they are unreasonable, impose a hardship or deny the title holders their preferred means of exercising their rights, and such restrictions cannot be justified pursuant to the justification framework outlined above. The result is a balance that preserves

est d'une « application restreinte » et elle devrait être appliquée « avec retenue » (par. 67 et 77). Ces principes ont été confirmés dans des arrêts plus récents : *Marine Services International Ltd. c. Ryan (Succession)*, 2013 CSC 44, [2013] 3 R.C.S. 53; *Canada (Procureur général) c. PHS Community Services Society*, 2011 CSC 44, [2011] 3 R.C.S. 134.

[150] L'arrêt *Morris*, sur lequel le juge de première instance s'est appuyé, a été rendu avant que la Cour formule une approche moderne de l'application de la doctrine de l'exclusivité des compétences dans les arrêts *Banque canadienne de l'Ouest* et *Canadian Owners and Pilots Association* et, par conséquent, il confère peu de valeur jurisprudentielle sur ce sujet (voir *Marine Services*, par. 64). Dans la mesure où l'arrêt *Morris* appuie la proposition voulant qu'il soit catégoriquement interdit aux gouvernements provinciaux de réglementer l'exercice des droits ancestraux, il ne devrait plus être suivi. J'estime que, conformément aux commentaires formulés dans les arrêts *Sparrow* et *Delgamuukw*, la réglementation provinciale d'application générale s'appliquera à l'exercice des droits ancestraux, notamment au titre ancestral sur des terres, sous réserve de l'application du cadre d'analyse relatif à l'art. 35 qui permet de justifier une atteinte. Ce critère soigneusement conçu vise à concilier la loi d'application générale et les droits ancestraux avec la délicatesse qu'exige l'art. 35 de la *Loi constitutionnelle de 1982*, et il est plus équitable et pratique du point de vue de la politique générale que l'inapplicabilité générale qu'impose la doctrine de l'exclusivité des compétences.

[151] Pour ces raisons, je conclus que la doctrine de l'exclusivité des compétences ne devrait pas être appliquée dans les cas où les terres sont détenues en vertu du titre ancestral. C'est plutôt la démarche axée sur le critère fondé sur l'art. 35, énoncée dans *Sparrow*, qui devrait être retenue. Les lois provinciales d'application générale, y compris la *Forest Act*, devraient s'appliquer à moins qu'elles soient déraisonnables ou indûment rigoureuses ou qu'elles refusent aux titulaires du titre le recours à leur moyen préféré d'exercer leurs droits et

the Aboriginal right while permitting effective regulation of forests by the province, as required by s. 35 of the *Constitution Act, 1982*.

[152] The s. 35 framework applies to exercises of both provincial and federal power: *Sparrow*; *Delgamuukw*. As such, it provides a complete and rational way of confining provincial legislation affecting Aboriginal title land within appropriate constitutional bounds. The issue in cases such as this is not at base one of conflict between the federal and provincial levels of government — an issue appropriately dealt with by the doctrines of paramountcy and interjurisdictional immunity where precedent supports this — but rather how far the provincial government can go in regulating land that is subject to Aboriginal title or claims for Aboriginal title. The appropriate constitutional lens through which to view the matter is s. 35 of the *Constitution Act*, *1982*, which directly addresses the requirement that these interests must be respected by the government, unless the government can justify incursion on them for a compelling purpose and in conformity with its fiduciary duty to affected Aboriginal groups.

IX. Conclusion

[153] I would allow the appeal and grant a declaration of Aboriginal title over the area at issue, as requested by the Tsilhqot'in. I further declare that British Columbia breached its duty to consult owed to the Tsilhqot'in through its land use planning and forestry authorizations.

que ces restrictions ne puissent pas être justifiées conformément au cadre d'analyse de la justification décrit précédemment. Il en résulte un équilibre qui préserve le droit ancestral tout en assurant une réglementation efficace des forêts par la province, comme l'exige l'art. 35 de la *Loi constitutionnelle de 1982*.

[152] Le cadre d'analyse relatif à l'art. 35 s'applique à l'exercice des compétences tant provinciales que fédérales : *Sparrow*; *Delgamuukw*. Par conséquent, il offre un moyen exhaustif et rationnel de circonscrire les lois provinciales touchant les terres visées par un titre ancestral dans les limites fixées par la Constitution. La question qui se pose dans des cas comme celui-ci ne porte pas, à la base, sur le conflit entre les paliers fédéral et provincial de gouvernement — les doctrines de la prépondérance fédérale et de l'exclusivité des compétences permettent de traiter cette question selon que l'indique la jurisprudence — il s'agit plutôt de savoir dans quelle mesure le gouvernement provincial peut réglementer des terres visées par un titre ancestral ou faisant l'objet d'une revendication du titre ancestral. L'article 35 de la *Loi constitutionnelle de 1982* constitue le cadre approprié à l'intérieur duquel doit être considérée une telle question puisqu'il oblige directement le gouvernement à respecter ces droits ou à démontrer que l'atteinte se rapporte à la poursuite d'un objectif impérieux et réel et qu'elle est compatible avec son obligation fiduciaire envers les groupes autochtones.

IX. Conclusion

[153] Je suis d'avis d'accueillir le pourvoi et de rendre un jugement déclarant l'existence d'un titre ancestral sur la région en question, comme l'ont demandé les Tsilhqot'in. Je déclare également que la Colombie-Britannique a manqué à l'obligation de consultation qu'elle avait envers les Tsilhqot'in en raison du plan d'aménagement du territoire qu'elle a établi et des autorisations d'exploitation forestière qu'elle a accordées.

REASONS FOR JUDGMENT

DAWSON J.A.

Para.

Para.

Para.

I. Introduction

[1] On May 19, 2016, the National Energy Board issued its report concerning the proposed expansion of the Trans Mountain pipeline system. The Board's report recommended that the Governor in Council approve the expansion. The Board's recommendation was based on the Board's findings that the expansion is in Canada's public interest, and that if certain environmental protection procedures and mitigation measures are implemented, and if the conditions the Board recommended are implemented, the expansion is not likely to cause significant adverse environmental effects.

[2] On November 29, 2016, the Governor in Council accepted the Board's recommendation and issued Order in Council P.C. 2016-1069. The Order in Council recited the Governor in Council's acceptance of the Board's recommendation, and directed the Board to issue a certificate of public convenience and necessity approving the construction and operation of the expansion project, subject to the conditions recommended by the Board.

[3] A number of applications for judicial review of the Board's report and the Order in Council were filed in this Court. These applications were consolidated. These are the Court's reasons for judgment in respect of the consolidated proceeding. Pursuant to the order consolidating the applications, a copy of these reasons shall be placed in each file.

A. Summary of Conclusions

[4] While a number of applicants challenge the report of the National Energy Board, as explained below, the Order in Council is legally the only decision under review. Its validity is challenged on two principal grounds: first, the Board's process and findings were so flawed that the Governor in Council could not reasonably rely on the Board's report; second, Canada failed to fulfil the duty to consult owed to Indigenous peoples.

[5] Applying largely uncontested legal principles established by the Supreme Court of Canada to the factual record, a factual record that is also largely not contested, I conclude that most of the flaws asserted against the Board's process and findings are without merit. However, the Board made one critical error. The Board unjustifiably defined the scope of the Project under review not to include Project-related tanker traffic. The unjustified exclusion of marine shipping from the scope of the Project led to successive, unacceptable deficiencies in the Board's report and recommendations. As a result, the Governor in Council could not rely on the Board's report and recommendations when assessing the Project's environmental effects and the overall public interest.

[6] Applying the largely uncontested legal principles that underpin the duty to consult Indigenous peoples and First Nations set out by the Supreme Court, I also conclude that Canada acted in good faith and selected an appropriate consultation framework. However, at the last stage of the consultation process prior to the decision of the Governor in Council, a stage called Phase III, Canada's efforts fell well short of the mark set by the Supreme Court of Canada. Canada failed in Phase III to engage, dialogue meaningfully and grapple with the real concerns of the Indigenous applicants so as to explore possible accommodation of those concerns. The duty to consult was not adequately discharged.

[7] Accordingly, for the following reasons, I would quash the Order in Council and remit the matter back to the Governor in Council for appropriate action, if it sees fit, to address these flaws and, later, proper redetermination.

[8] These reasons begin by describing: (i) the expansion project; (ii) the applicants who challenge the Board's report and the Order in Council; (iii) the pending applications for judicial review; (iv) the legislative regime; (v) the report of the Board; and, (vi) the decision of the Governor in Council. The reasons then set out the factual background relevant to the challenges before the Court before turning to the issues raised in these applications and the consideration of those issues.

II. The Project

[9] No company may operate an interprovincial or international pipeline in Canada unless the National Energy Board has issued a certificate of public convenience and necessity, and given

leave to the company to open the pipeline (subsection 30(1) of the *National Energy Board Act*, R.S.C. 1985, c. N-7).

[10] Trans Mountain Pipeline ULC is the general partner of Trans Mountain Pipeline L.P. (together referred to as Trans Mountain). Trans Mountain owns and holds operating certificates issued by the National Energy Board for the existing Trans Mountain pipeline system. This system includes a pipeline approximately 1,147 kilometres long that moves crude oil, and refined and semi-refined petroleum products from Edmonton, Alberta to marketing terminals and refineries in the central region and lower mainland area of British Columbia, as well as to the Puget Sound area in Washington State.

[11] On December 16, 2013, Trans Mountain submitted an application to the National Energy Board for a certificate of public convenience and necessity (and certain amended certificates) for the Trans Mountain Expansion Project (Project).

[12] The application described the Project to consist of a number of components, including: (i) twinning the existing pipeline system with approximately 987 kilometres of new pipeline segments, including new proposed pipeline corridors and rights-of-way, for the purpose of transporting diluted bitumen from Edmonton, Alberta to Burnaby, British Columbia; (ii) new and modified facilities, including pump stations and tanks (in particular, an expanded petroleum tank farm in Burnaby which would be expanded from 13 to 26 storage tanks); (iii) a new and expanded dock facility, including three new berths, at the Westridge Marine Terminal in

Burnaby; and, (iv) two new pipelines running from the Burnaby storage facility to the Westridge Marine Terminal.

[13] The Project would increase the number of tankers loaded at the Westridge Marine Terminal from approximately five Panamax and Aframax class tankers per month to approximately 34 Aframax class tankers per month. Aframax tankers are larger and carry more product than Panamax tankers. The Project would increase the overall capacity of Trans Mountain's existing pipeline system from 300,000 barrels per day to 890,000 barrels per day.

[14] Trans Mountain's application stated that the primary purpose of the Project is to provide additional capacity to transport crude oil from Alberta to markets in the Pacific Rim, including Asia. If built, the system would continue to transport crude oil—primarily diluted bitumen.

III. The Applicants

[15] A number of First Nations and two large cities are significantly concerned about the Project and its impact upon them, and challenge its approval. Two non-governmental agencies also challenge the Project. These applicants are described below.

A. Tsleil-Waututh Nation

[16] The applicant Tsleil-Waututh Nation is a Coast Salish Nation. It is a band within the meaning of the *Indian Act*, R.S.C. 1985, c. I-5 and its members are Aboriginal peoples within the

meaning of section 35 of the *Constitution Act, 1982* and paragraph 5(1)(*c*) of the *Canadian Environmental Assessment Act, 2012*, S.C. 2012, c. 19, s. 52.

[17] In the traditional dialect of Halkomelem, the name Tsleil-Waututh means "People of the Inlet". Tsleil-Waututh's asserted traditional territory extends approximately from the vicinity of Mount Garibaldi to the north to the 49th parallel and beyond to the south. The traditional territory extends west to Gibsons and east to Coquitlam Lake. The traditional territory includes areas across British Columbia's Lower Mainland, including sections of the Lower Fraser River, Howe Sound, Burrard Inlet and Indian Arm.

[18] Tsleil-Waututh's traditional territory encompasses the proposed Westridge Marine Terminal and fuel storage facility expansion, and approximately 18 kilometres of pipeline right-of-way. Approximately 45 kilometres of marine shipping route will pass within Tsleil-Waututh's asserted traditional territory.

[19] Much of Tsleil-Waututh's population of 500 people live in its primary community of Tsleil-Waututh, which is located on the north shore of Burrard Inlet, approximately 3 kilometres across the Inlet from the Westridge Marine Terminal.

[20] Tsleil-Waututh asserts Aboriginal title to the land, water, air, marine foreshore and resources in Eastern Burrard Inlet. It also asserts freestanding stewardship, harvesting and cultural rights in this area. The Crown states that it assessed its duty to consult with Tsleil-Waututh on the deeper end of the consultation spectrum.

B. City of Vancouver

[21] The City of Vancouver is the third most densely populated city in North America, after New York City and San Francisco. It has 69.8 kilometres of waterfront along Burrard Inlet, English Bay, False Creek and the Fraser River, with 18 kilometres of beaches and a 22-kilometre long seawall.

[22] Approximately 25,000 residents of Vancouver live within 300 metres of the Burrard Inlet and English Bay shorelines.

C. City of Burnaby

[23] The City of Burnaby is the third largest city in British Columbia, with a population of over 223,000 people.

[24] A number of elements of the Project infrastructure will be located in Burnaby: (i) the new Westridge Marine Terminal; (ii) the Burnaby Terminal, including thirteen new storage tanks and one replacement storage tank; (iii) two new delivery lines following a new route connecting the Burnaby Terminal to the Westridge Marine Terminal through a new tunnel to be drilled under the Burnaby Mountain Conservation Area; and, (iv) a portion of the main pipeline along a new route to the Burnaby Terminal.

D. The Squamish Nation

[25] The applicant Squamish Nation is a Coast Salish Nation. It is a band within the meaning of the *Indian Act* and its members are Aboriginal peoples within the meaning of section 35 of the *Constitution Act, 1982* and paragraph 5(1)(*c*) of the *Canadian Environmental Assessment Act, 2012*. There are currently just over 4,000 registered members of the Squamish Nation.

[26] The Squamish assert that since a time before contact with Europeans, Squamish have used and occupied lands and waters on the southwest coast of what is now British Columbia, extending from the Lower Mainland north to Whistler. This territory includes Burrard Inlet, English Bay, Howe Sound and the Squamish Valley. The boundaries of asserted Squamish territory thus encompass all of Burrard Inlet, English Bay and Howe Sound, as well as the rivers and creeks that flow into these bodies of water.

[27] Squamish has three reserves located in and at the entrance to Burrard Inlet:

i. Seymour Creek Reserve No. 2 (ch'ích'elxwi7kw) on the North shore close to the Westridge Marine Terminal;
ii. Mission Reserve No. 1 (eslhá7an); and,
iii. Capilano Reserve No. 5 (xwmelchstn).

Also located in the area are Kitsilano Reserve No. 6 (senákw) near the entrance to False Creek, and three other waterfront reserves in Howe Sound.

[28] Project infrastructure, including portions of the main pipeline, the Westridge Marine Terminal, the Burnaby Terminal, two new delivery lines connecting the terminals, and sections of the tanker routes for the Project will be located in Squamish's asserted traditional territory and close to its reserves across the Burrard Inlet. The shipping route for the Project will also travel past three Squamish reserves through to the Salish Sea.

[29] Squamish asserts Aboriginal rights, including title and self-government, within its traditional territory. Squamish also asserts Aboriginal rights to fish in the Fraser River and its tributaries. The Crown assessed its duty to consult Squamish at the deeper end of the consultation spectrum.

E. Coldwater Indian Band

[30] The applicant Coldwater is a band within the meaning of section 2 of the *Indian Act*. Its members are Aboriginal peoples within the meaning of section 35 of the *Constitution Act, 1982* and paragraph 5(1)(*c*) of the *Canadian Environmental Assessment Act, 2012*. Coldwater, together with 14 other bands, comprise the Nlaka'pamux Nation.

[31] The Nlaka'pamux Nation's asserted traditional territory encompasses part of south-central British Columbia extending from the northern United States to north of Kamloops. This territory includes the Lower Thompson River area, the Fraser Canyon, the Nicola and Coldwater Valleys and the Coquihalla area.

[32] Coldwater's registered population is approximately 850 members. Approximately 330 members live on Coldwater's reserve lands. Coldwater holds three reserves: (i) Coldwater Indian Reserve No. 1 (Coldwater Reserve) approximately 10 kilometres southwest of Merritt, British Columbia; (ii) Paul's Basin Indian Reserve No. 2 located to the southwest of the Coldwater Reserve, upstream on the Coldwater River; and, (iii) Gwen Lake Indian Reserve No. 3 located on Gwen Lake.

[33] Approximately 226 kilometres of the proposed pipeline right-of-way and four pipeline facilities (the Kamloops Terminal, the Stump Station, the Kingsvale Station and the Hope Station) will be located within the Nlaka'pamux Nation's asserted traditional territory. The Kingsvale Station is located in the Coldwater Valley. The approved pipeline right-of-way skirts the eastern edges of the Coldwater Reserve. The existing Trans Mountain pipeline system transects both the Coldwater Reserve and the Coldwater Valley.

[34] Coldwater asserts Aboriginal rights and title in, and the ongoing use of, the Coldwater and Nicola Valleys and the Nlaka'pamux territory more generally. The Crown assessed its duty to consult Coldwater at the deeper end of the consultation spectrum.

F. The Stó:lō Collective

[35] One translation of the term "Stó:lō" is "People of the River", referencing the Fraser River. The Stó:lō are a Halkomelem-speaking Coast Salish people. Traditionally, they have been tribally organized.

[36] The "Stó:lō Collective" was formed for the sole purpose of coordinating and representing the interests of its membership before the National Energy Board and in Crown consultations about the Project. The Stó:lō Collective represents the following applicants:

(a) Aitchelitz, Skowkale, Tzeachten, Squiala First Nation, Yakweakwioose, Shxwa:y Village and Soowahlie, each of which are villages and also bands within the meaning of section 2 of the *Indian Act* (the Ts'elxweyeqw Villages). The Ts'elxweyeqw Villages collectively comprise the Ts'elxweyeqw Tribe. Members of the Ts'elxweyeqw Villages are Stó:lō people and Aboriginal peoples within the meaning of section 35 of the *Constitution Act, 1982* and paragraph 5(1)(*c*) of the *Canadian Environmental Assessment Act, 2012*; and,

(b) Skwah and Kwaw-Kwaw-Apilt, each of whom are villages and also bands within the meaning of section 2 of the *Indian Act* (the Pil'Alt Villages). The Pil'Alt Villages are members of the Pil'Alt Tribe. Members of the Pil'Alt Villages are Stó:lō people and Aboriginal peoples within the meaning of section 35 of the *Constitution Act, 1982* and paragraph 5(1)(*c*) of the *Canadian Environmental Assessment Act, 2012*. The Pil'Alt Villages are represented by the Ts'elxweyeqw Tribe in matters relating to the Project. (On March 6, 2018, Kwaw-Kwaw-Apilt filed a notice of discontinuance.)

[37] The Stó:lō's asserted traditional territory, known as S'olh Temexw, includes the lower Fraser River watershed.

[38] The Stó:lō live in many villages, all of which are located in the lower Fraser River watershed.

[39] The existing Trans Mountain pipeline crosses, and the Project's proposed new pipeline route would cross, approximately 170 kilometres of the Stó:lō Collective applicants' asserted

traditional territory, beginning from an eastern point of entry near the Coquihalla Highway and continuing to the Burrard Inlet.

[40] The Stó:lō possess established Aboriginal fishing rights on the Fraser River (*R. v. Van der Peet*, [1996] 2 S.C.R. 507, 137 D.L.R. (4th) 289). The Crown assessed its duty to consult Stó:lō at the deeper end of the consultation spectrum.

G. Upper Nicola Band

[41] The applicant Upper Nicola is a member community of the Syilx (Okanagan) Nation and a band within the meaning of section 2 of the *Indian Act*. Upper Nicola and Syilx are an Aboriginal people within the meaning of section 35 of the *Constitution Act, 1982* and paragraph 5(1)(*c*) of the *Canadian Environmental Assessment Act, 2012*.

[42] The Syilx Nation's asserted traditional territory extends from the north past Revelstoke around Kinbasket to the south to the vicinity of Wilbur, Washington. It extends from the east near Kootenay Lake to the west to the Nicola Valley. Upper Nicola currently has eight Indian Reserves within Upper Nicola's/Syilx's asserted territory. The primary residential communities are Spaxomin, located on Upper Nicola Indian Reserve No. 3 on the western shore of Douglas Lake, and Quilchena, located on Upper Nicola Indian Reserve No. 1 on the eastern shore of Nicola Lake.

[43] Approximately 130 kilometres of the Project's proposed new pipeline will cross through Upper Nicola's area of responsibility within Syilx territory. The Stump Station and the Kingsvale Station are also located within Syilx/Upper Nicola's asserted territory.

[44] Upper Nicola asserts responsibility to protect and preserve the claimed Aboriginal title and harvesting and other rights held collectively by the Syilx, particularly within its area of responsibility in the asserted Syilx territory. The Crown assessed its duty to consult Upper Nicola at the deeper end of the consultation spectrum.

H. Stk'emlupsemc te Secwepemc of the Secwepemc Nation

[45] The Secwepemc are an Aboriginal people living in the area around the confluence of the Fraser and Thompson Rivers. The Secwepemc Nation is comprised of seven large territorial groupings referred to as "Divisions". The Stk'emlupsemc te Secwepemc Division (SSN) is comprised of the Skeetchestn Indian Band and the Kamloops (or Tk'emlups) Indian Band. Both are bands within the meaning of section 2 of the *Indian Act*. SSN's members are also Aboriginal peoples within the meaning of section 35 of the *Constitution Act, 1982* and paragraph 5(1)(*c*) of the *Canadian Environmental Assessment Act, 2012*.

[46] The Skeetchestn Indian Band is located along the northern bank of the Thompson River, approximately 50 kilometres west of Kamloops and has four reserves. Its total registered population is 533. The Tk'emlups Indian Band is located in the Kamloops area and has six reserves. Its total registered population is 1,322. Secwepemc Territory is asserted to be a

substantial landmass which encompasses many areas, including the area in the vicinity of Kamloops Lake.

[47] The existing and proposed pipeline right-of-way crosses through SSN's asserted traditional territory for approximately 350 kilometres. Approximately 80 kilometres of the proposed pipeline right-of-way and two pipeline facilities, the Black Pines Station and the Kamloops Terminal, will be located within SSN's asserted traditional territory.

[48] The SSN claim Aboriginal title over its traditional territory. The Crown assessed its duty to consult SSN at the deeper end of the consultation spectrum.

I. Raincoast Conservation Foundation and Living Oceans Society

[49] These applicants are not-for-profit organizations. Their involvement in the National Energy Board review process focused primarily on the effects of Project-related marine shipping.

IV. The applications challenging the report of the National Energy Board and the Order in Council

[50] As will be discussed in more detail below, two matters are challenged in this consolidated proceeding: first, the report of the National Energy Board which recommended that the Governor in Council approve the Project and direct the Board to issue the necessary certificate of public convenience and necessity; and, second, the decision of the Governor in Council to accept the recommendation of the Board and issue the Order in Council directing the Board to issue the certificate.

[51] The following applicants applied for judicial review of the report of the National Energy Board:

- Tsleil-Waututh Nation (Court File A-232-16)
- City of Vancouver (Court File A-225-16)
- City of Burnaby (Court File A-224-16)
- The Squamish Nation and Xálek/Sekyú Siý am, Chief Ian Campbell on his own behalf and on behalf of all members of Squamish (Court File A-217-16)
- Coldwater Indian Band and Chief Lee Spahan in his capacity as Chief of Coldwater on behalf of all members of Coldwater (Court File A-223-16)
- Raincoast Conservation Foundation and Living Oceans Society (Court File A-218-16).

[52] The following applicants applied, with leave, for judicial review of the decision of the Governor in Council:

- Tsleil-Waututh Nation (Court File A-78-17)
- City of Burnaby (Court File A-75-17)
- The Squamish Nation and Xálek/Sekyú Siý am, Chief Ian Campbell on his own behalf and on behalf of all members of Squamish (Court File A-77-17)
- Coldwater Indian Band and Chief Lee Spahan in his capacity as Chief of Coldwater on behalf of all members of Coldwater (Court File A-76-17)
- The Stó:lō Collective applicants (Court File A-86-17)
- Upper Nicola Band (Court File A-74-17)
- Chief Ron Ignace and Chief Fred Seymour, on their own behalf and on behalf of all other members of Stk'emlupsemc te Secwepemc of the Secwepemc Nation (Court File A-68-17)
- Raincoast Conservation Foundation and Living Oceans Society (Court File A-84-17).

V. The legislative regime

[53] For ease of reference the legislative provisions referred to in this section of the reasons are set out in the Appendix to these reasons.

A. The requirements of the *National Energy Board Act*

[54] As explained above, no company may operate an interprovincial or international pipeline in Canada unless the National Energy Board has issued a certificate of public convenience and necessity, and, after the pipeline is built, has given leave to the company to open the pipeline.

[55] Trans Mountain's completed application for a certificate of public convenience and necessity for the Project triggered the National Energy Board's obligation to assess the Project pursuant to section 52 of the *National Energy Board Act*. Subsection 52(1) of that Act requires the Board to prepare and submit to the Minister of Natural Resources, for transmission to the Governor in Council, a report which sets out the Board's recommendation as to whether the certificate should be granted, together with all of the terms and conditions that the Board considers the certificate should be subject to if issued. The Board is to provide its reasons for its recommendation. When considering whether to recommend issuance of a certificate the Board is required to take into account "whether the pipeline is and will be required by the present and future public convenience and necessity".

[56] The Board's recommendation is, pursuant to subsection 52(2) of the *National Energy Board Act*, to be based on "all considerations that appear to it to be directly related to the

pipeline and to be relevant" and the Board may have regard to five specifically enumerated factors which include "any public interest that in the Board's opinion may be affected by the issuance of the certificate or the dismissal of the application."

[57] If an application relates to a "designated" project, as defined in section 2 of the *Canadian Environmental Assessment Act, 2012*, the Board's report must also set out the Board's environmental assessment of the project. This assessment is to be prepared under the *Canadian Environmental Assessment Act, 2012* (subsection 52(3) of the *National Energy Board Act*). A designated project is defined in section 2 of the *Canadian Environmental Assessment Act, 2012*:

designated project means one or more physical activities that	projet désigné Une ou plusieurs activités concrètes :
(*a*) are carried out in Canada or on federal lands;	*a*) exercées au Canada ou sur un territoire domanial;
(*b*) are designated by regulations made under paragraph 84(*a*) or designated in an order made by the Minister under subsection 14(2); and	*b*) désignées soit par règlement pris en vertu de l'alinéa 84*a*), soit par arrêté pris par le ministre en vertu du paragraphe 14(2);
(*c*) are linked to the same federal authority as specified in those regulations or that order.	*c*) liées à la même autorité fédérale selon ce qui est précisé dans ce règlement ou cet arrêté.
It includes any physical activity that is incidental to those physical activities.	Sont comprises les activités concrètes qui leur sont accessoires.

[58] The remaining subsections in section 52 deal with the timeframe in which the Board must complete its report. Generally, a report must be submitted to the Minister within the time limit specified by the Chair of the Board. The specified time limit must not be longer than 15 months after the completed application has been submitted to the Board.

B. The requirements of the *Canadian Environmental Assessment Act, 2012*

[59] Pursuant to subsection 4(3) of the *Regulations Designating Physical Activities*, SOR/2012-147, and section 46 of the Schedule thereto, because the Project includes a new onshore pipeline longer than 40 kilometres, the Project is a designated project as defined in part (*b*) of the definition of "designated project" set out in paragraph 57 above. In consequence, the Board was required to conduct an environmental assessment under the *Canadian Environmental Assessment Act, 2012*. For this purpose, subsection 15(*b*) of the *Canadian Environmental Assessment Act, 2012* designated the National Energy Board to be the sole responsible authority for the environmental assessment.

[60] As the responsible authority, the Board was required to take into account the environmental effects enumerated in subsection 5(1) of the *Canadian Environmental Assessment Act, 2012*. These effects include changes caused to the land, water or air and to the life forms that inhabit these elements of the environment. The effects to be considered are to include the effects upon Aboriginal peoples' health and socio-economic conditions, their physical and cultural heritage, their current use of lands and resources for traditional purposes, and any structure, site or thing that is of historical, archaeological, paleontological or architectural significance.

[61] Subsection 19(1) of the *Canadian Environmental Assessment Act, 2012* required the Board to take into account a number of enumerated factors when conducting the environmental assessment, including:

- the environmental effects of the designated project (including the environmental effects of malfunctions or accidents that may occur in connection with the

designated project) and any cumulative environmental effects that are likely to result from the designated project in combination with other physical activities that have been or will be carried out;

- mitigation measures that are technically and economically feasible and that would mitigate any significant adverse environmental effects of the designated project;
- alternative means of carrying out the designated project that are technically and economically feasible, and the environmental effects of any such alternative means; and
- any other matter relevant to the environmental assessment that the responsible authority, here the Board, requires to be taken into account.

[62] The Board was also required under subsection 29(1) of the *Canadian Environmental Assessment Act, 2012* to make recommendations to the Governor in Council with respect to the decision to be made by the Governor in Council under paragraph 31(1)(*a*) of that Act—a decision about the existence of significant adverse environmental effects and whether those effects can be justified in the circumstances.

C. Consideration by the Governor in Council

[63] Once in receipt of the report prepared in accordance with the requirements of the *National Energy Board Act* and the *Canadian Environmental Assessment Act, 2012*, the Governor in Council may make its decision concerning the proponent's application for a certificate.

[64] Three decisions are available to the Governor in Council. It may, by order:

i. "direct the Board to issue a certificate in respect of the pipeline or any part of it and to make the certificate subject to the terms and conditions set out in the report" (paragraph 54(1)(*a*) of the *National Energy Board Act*); or

ii. "direct the Board to dismiss the application for a certificate" (paragraph 54(1)(*b*) of the *National Energy Board Act*); or

iii. "refer the recommendation, or any of the terms and conditions, set out in the report back to the Board for reconsideration" and specify a time limit for the reconsideration (subsections 53(1) and (2) of the *National Energy Board Act*).

[65] Subsection 54(2) of the *National Energy Board Act* requires that the Governor in Council's order "must set out the reasons for making the order."

[66] Subsection 54(3) of the *National Energy Board Act* requires the Governor in Council to issue its order within three months after the Board's report is submitted to the Minister. The Governor in Council may, on the recommendation of the Minister, extend this time limit.

[67] Additionally, once the National Energy Board as the responsible authority for the designated project has submitted its report with respect to the environmental assessment, pursuant to subsection 31(1) of the *Canadian Environmental Assessment Act, 2012*, the Governor in Council may, by order made under subsection 54(1) of the *National Energy Board Act*, "decide, taking into account the implementation of any mitigation measures specified in the report with respect to the environmental assessment … that the designated project":

(i) is not likely to cause significant adverse environmental effects,	(i) n'est pas susceptible d'entraîner des effets environnementaux négatifs et importants,
(ii) is likely to cause significant adverse environmental effects that can	(ii) est susceptible d'entraîner des effets environnementaux négatifs et importants qui sont justifiables dans

be justified in the circumstances, or	les circonstances,
(iii) is likely to cause significant adverse environmental effects that cannot be justified in the circumstances;	(iii) est susceptible d'entraîner des effets environnementaux négatifs et importants qui ne sont pas justifiables dans les circonstances;

VI. The report of the National Energy Board

[68] On May 19, 2016, the Board issued its report which recommended approval of the Project. The recommendation was based on a number of findings, including:

- With the implementation of Trans Mountain's environmental protection procedures and mitigation measures, and the Board's recommended conditions, the Project is not likely to cause significant adverse environmental effects.
- However, effects from the operation of Project-related marine vessels would contribute to the total cumulative effects on the Southern resident killer whales, and would further impede the recovery of that species. Southern resident killer whales are an endangered species that reside in the Salish Sea. Project-related marine shipping follows a route through the Salish Sea to the open ocean that travels through the whales' critical habitat as identified in the Recovery Strategy for the Northern and Southern resident killer whales. The Board's finding was that "the operation of Project-related marine vessels is likely to result in significant adverse effects to the Southern resident killer whale, and that it is likely to result in significant adverse effects on Aboriginal cultural uses associated with these marine mammals."
- The likelihood of a spill from the Project or from a Project-related tanker would be very low in light of the mitigation and safety measures to be implemented. However, the consequences of large spills could be high.
- The Board's recommendation and decisions with respect to the Project were consistent with subsection 35(1) of the *Constitution Act, 1982*.

- The Project would be in the Canadian public interest and would be required by the present and future public convenience and necessity.
- If approved, the Board would attach 157 conditions to the certificate of public convenience and necessity. The conditions dealt with a broad range of matters, including the safety and integrity of the pipeline, emergency preparedness and response and ongoing consultation with affected entities, including Indigenous communities.

VII. The decision of the Governor in Council

[69] On November 29, 2016, the Governor in Council issued the Order in Council, accepting the Board's recommendation that the Project be approved and directing the Board to issue a certificate of public convenience and necessity to Trans Mountain.

[70] The Order in Council contained a number of recitals, two of which are relevant to these applications. First, the Governor in Council stated its satisfaction "that the consultation process undertaken is consistent with the honour of the Crown and the [Aboriginal] concerns and interests have been appropriately accommodated". Second, the Governor in Council accepted the Board's recommendation that the Project is required by present and future public convenience and necessity and that it will not likely cause significant adverse environmental effects.

[71] The Order in Council was followed by a 20-page explanatory note which was stated not to form part of the Order in Council. The Explanatory Note described the Project and its objectives and the review process before the National Energy Board, and summarized the issues raised before the Board. The Explanatory Note also dealt with matters that post-dated the Board's report and set out the government's "response to what was heard".

VIII. Factual background

A. Canada's consultation process

[72] The first step in the consultation process was determining the Indigenous groups whose rights and interests might be adversely impacted by the Project. In order to do this, a number of federal departments and the National Energy Board coordinated research and analysis on the proximity of Indigenous groups' traditional territories to elements of the Project, including the proposed pipeline right-of-way, the marine terminal expansion, and the designated shipping lanes. Approximately 130 Indigenous groups were identified, including all of the Indigenous applicants.

[73] On August 12, 2013, the National Energy Board wrote to the identified Indigenous groups to advise that Trans Mountain had filed a Project description on May 23, 2013, and to provide preliminary information about the upcoming review process. This letter also attached a letter from the Major Projects Management Office of Natural Resources Canada. The Major Projects Management Office's letter advised that Canada would rely on the National Energy Board's public hearing process:

> to the extent possible, to fulfil any Crown duty to consult Aboriginal groups for the proposed Project. Through the [National Energy Board] process, the [Board] will consider issues and concerns raised by Aboriginal groups. The Crown will utilise the [National Energy Board] process to identify, consider and address the potential adverse impacts of the proposed Project on established or potential Aboriginal and treaty rights.

[74] In subsequent letters sent to Indigenous groups between August 2013 and February 19, 2016, the Major Projects Management Office directed Indigenous groups that could be impacted

by the Project to participate in and communicate their concerns through the National Energy Board public hearings. Additionally, Indigenous groups were advised that Canada viewed the consultation process to be as follows:

i. Canada would rely, to the extent possible, on the Board's process to fulfil its duty to consult Indigenous peoples about the Project;

ii. There would be four phases of Crown consultation:

   a. "Phase I": early engagement, from the submission of the Project description to the start of the National Energy Board hearing;

   b. "Phase II": the National Energy Board hearing, commencing with the start of the Board hearing and continuing until the close of the hearing record;

   c. "Phase III": consideration by the Governor in Council, commencing with the close of the hearing record and continuing until the Governor in Council rendered its decision in relation to the Project; and

   d. "Phase IV": regulatory authorization should the Project be approved, commencing with the decision of the Governor in Council and continuing until the issuance of department regulatory approvals, if required.

iii. Natural Resources Canada's Major Projects Management Office would serve as the Crown Consultation Coordinator for the Project.

iv. Following Phase III consultations, an adequacy of consultation assessment would be prepared by the Crown. The assessment would be based upon the depth of consultation owed to each Indigenous group. The depth of consultation owed would in turn be based upon the Project's potential impact on each group and the strength of the group's claim to potential or established Aboriginal or treaty rights.

[75] On May 25, 2015, towards the end of Phase II, the Major Projects Management Office wrote to Indigenous groups, including the applicants, to provide additional information on the scope and timing of Phase III Crown consultation. Indigenous groups were advised that:

i. Canada intended to submit summaries of the concerns and issues Indigenous groups had brought forward to date and to seek feedback on the completeness and accuracy of the summaries. The summaries would be issued in the form of Information Requests, a Board hearing process explained below. Canada would also seek Indigenous groups' views on adverse impacts not yet addressed by Trans Mountain's mitigation measures. The Crown would use the information provided by Indigenous groups to "refine our current understanding of the potential impacts of the project on asserted or established Aboriginal or treaty rights."

ii. Phase III consultation would focus on two questions:

   a. Are there outstanding concerns with respect to Project-related impacts to potential or established Aboriginal or treaty rights?

   b. Are there incremental accommodation measures that should be considered by the Crown to address any outstanding concerns?

iii. Information made available to the Crown throughout each phase of the consultation process would be consolidated into a "Crown Consultation Report". "This report will summarize both the procedural aspects of consultations undertaken and substantive issues raised by Aboriginal groups, as well as how these issues may be addressed in the process". The section of the Crown Consultation Report dealing with each Indigenous group would be provided to the group for review and comment before the report was placed before the Governor in Council.

iv. If Indigenous groups identified outstanding concerns there were a number of options which might "be considered and potentially acted upon." The options were described to be:

> The Governor in Council has the option of asking the [National Energy Board] to reconsider its recommendation and conditions. Federal and provincial governments could undertake additional consultations prior to issuing additional permits and/or authorizations. Finally, federal and provincial governments can also use existing or new policy and program measures to address outstanding concerns.

(underlining added)

B. Prehearing matters and the Project application

[76] To facilitate participation in the National Energy Board hearing process, the Board operates a participant funding program. On July 22, 2013, the Board announced that it was making funding available under this program to assist landowners, Indigenous groups and other interested parties to participate in the Board's consideration of the Project. To apply for funding, a party required standing as an intervener in the Board's process.

[77] On July 29, 2013, the Board released its "list of issues" which identified the topics the Board would consider in its review of the Project. The following issues of relevance to these applications were included:

- the need for the proposed Project.
- the potential environmental and socio-economic effects of the proposed Project, including any cumulative environmental effects that were likely to result from the Project, including those the Board's Filing Manual required to be considered.
- the potential environmental and socio-economic effects of marine shipping activities that would result from the proposed Project, including the potential effects of accidents or malfunctions that might occur.
- the terms and conditions to be included in any recommendation to approve the Project that the Board might issue.
- the potential impacts of the Project on Indigenous interests.
- contingency plans for spills, accidents or malfunctions, during construction and operation of the Project.

[78] On September 10, 2013, the Board issued "Filing Requirements Related to the Potential Environmental and Socio-Economic Effects of Increased Marine Shipping Activities." This was

a guidance document intended to assist the proponent. The document described requirements that supplemented those set out in the Board's Filing Manual.

[79] In particular, this guidance document required Trans Mountain's assessment of accidents and malfunctions to deal with a number of things, including measures to reduce the potential for accidents and malfunctions, credible worst case spill scenarios together with smaller spill scenarios and information on the fate and behaviour of any spilled hydrocarbons. For all mitigation measures Trans Mountain proposed, it was required to describe the roles, responsibilities and capabilities of each relevant organization in implementing mitigation measures, and the level of care and control Trans Mountain would have in overseeing or implementing the measures.

[80] On December 16, 2013, Trans Mountain formally filed its application, seeking approval to construct and operate the Project.

C. The scoping decision and the hearing order

[81] On April 2, 2014, the Board issued a number of decisions setting the parameters of the Project's environmental assessment and establishing the hearing process for the Project. Three of these decisions are of particular relevance to these applications.

[82] First, the Board issued a hearing order which set out timelines and a process for the hearing. The hearing order did not allow any right of oral cross-examination. Instead, the hearing order provided a process whereby interveners and the Board could submit written interrogatories,

referred to as Information Requests, to Trans Mountain. The hearing order also set out a process for interveners and the Board to compel adequate responses to their Information Requests, an opportunity for Indigenous groups to provide oral traditional evidence, and allowed both written arguments in chief and summary oral arguments.

[83] Next, in the decision referred to as the "scoping" decision, the Board defined the "designated project" to be assessed, and described the factors to be assessed under the *Canadian Environmental Assessment Act, 2012* (and the scope of each factor). In defining the "designated project", the Board did not include marine shipping activities as part of the "designated project". Rather, the Board stated that it would consider the effects of increased marine shipping under the *National Energy Board Act*. To the extent there was potential for environmental effects of the designated project to interact with the effects of the marine shipping, the Board would consider those effects under the cumulative effects portion of the *Canadian Environmental Assessment Act, 2012* environmental assessment.

[84] Finally, the Board ruled on participation rights in the hearing. The Board granted participation status to 400 interveners and 1,250 commentators. All of the applicants before the Court applied for, and were granted, intervener status. Additionally, a number of government departments were granted intervener status; both Health Canada and the Pacific Pilotage Authority were granted commentator status.

D. Challenges to the hearing order and the scoping decision

[85] Of relevance to issues raised in these applications are two challenges brought against the hearing order and the scoping decision.

[86] The first challenge requested that all evidence filed in the hearing be subject to oral cross-examination. The Board dismissed this request in Ruling No. 14. In Ruling No. 51, the Board dismissed motions seeking reconsideration of Ruling No. 14.

[87] The second challenge was brought by Tsleil-Waututh to aspects of both the hearing order and the scoping decision. Tsleil-Waututh asserted, among other things, that the Board erred in law by failing to include marine shipping activities in the Project description. This Court granted Tsleil-Waututh leave to appeal this and other issues. On September 6, 2016, this Court dismissed the appeal (2016 FCA 219). The dismissal of the appeal was expressly stated, at paragraph 21 of the Court's reasons, to be without prejudice to Tsleil-Waututh's right to raise the issue of the proper scope of the Project "in subsequent proceedings".

E. The TERMPOL review process

[88] In view of the Project's impact on marine shipping, it is useful to describe this process.

[89] Trans Mountain requested that the marine transportation components of the Project be assessed under the voluntary Technical Review Process of Marine Terminal Systems and Transshipment Sites (TERMPOL). The review process was chaired by Transport Canada and the

review committee was composed of representatives of other federal agencies and Port Metro Vancouver.

[90] The purpose of the review process was to objectively appraise operational vessel safety, route safety and cargo transfer operations associated with the Project, with a focus on improving, where possible, elements of the Project.

[91] The review committee did not identify regulatory concerns for the tankers, tanker operations, the proposed route, navigability, other waterway users or the marine terminal operations associated with tankers supporting the Project. It found that Trans Mountain's commitments to the existing marine safety regime would provide for a higher level of safety for tanker operations appropriate to the increase in traffic.

[92] The review committee also proposed certain measures to provide for a high level of safety for tanker operations. Examples of such proposed measures were the extended use of tethered and untethered tug escorts and the extension of the pilot disembarkation zone. Trans Mountain agreed to adopt each of the recommended measures.

[93] The TERMPOL report formed part of Transport Canada's written evidence before the National Energy Board.

F. The applicants' participation in the hearing before the Board

[94] The applicants, as interveners before the Board, were entitled to:

- issue Information Requests to Trans Mountain and others;
- file motions, including motions to compel adequate responses to Information Requests;
- file written evidence;
- comment on draft conditions; and,
- present written and oral summary argument.

[95] All of the applicants issued Information Requests, filed or supported motions and filed written evidence. Interveners who filed evidence were required to respond in writing to written questions about their evidence from the Board, Trans Mountain or other interveners.

[96] All of the applicants filed written submissions commenting on draft conditions except for the City of Vancouver and SSN.

[97] All of the applicants filed written arguments and all of the applicants except SSN delivered oral summary arguments.

[98] Indigenous interveners could adduce traditional Indigenous evidence, either orally or in writing. Oral evidence could be questioned orally by other interveners, Trans Mountain or the Board. Tsleil-Waututh, Squamish, Coldwater, SSN, and Upper Nicola provided oral, Indigenous traditional evidence. The Stó:lō Collective formally objected to the Board's procedure for introducing Indigenous oral traditional evidence and did not provide such evidence.

G. Participant funding

[99] As previously mentioned, the Board operated a participant funding program. Additional funding was available through the Major Projects Management Office and Trans Mountain.

[100] It is fair to say that the participant funding provided to the applicants by the Board and the Major Projects Management Office was generally viewed to be inadequate by them (see for example the affidavit of Chief Ian Campbell of the Squamish Nation). Concerns were also expressed about delays in funding. Funds provided by the Board could only be applied to work conducted after the funding was approved and a funding agreement was executed.

[101] The following funds were paid or offered.

1. Tsleil-Waututh Nation

[102] Tsleil-Waututh requested $766,047 in participant funding. It was awarded $40,000, plus travel costs for two members to attend the hearing. Additionally, the Major Projects Management Office offered to pay $14,000 for consultation following the close of the hearing record and $12,000 following the release of the Board's report. These offers were not accepted.

2. The Squamish Nation

[103] Squamish applied for $293,350 in participant funding. It was awarded $44,720, plus travel costs for one person to attend the hearing. The Major Projects Management Office offered

$12,000 for consultations following the close of the Board's hearing record, and $14,000 to support participation in consultations following the release of the Board's report. These funds were paid.

3. Coldwater Indian Band

[104] Coldwater was awarded $48,490 in participant funding from the Board. Additionally, the Major Projects Management Office offered an additional $52,000 in participant funding.

4. The Stó:lō Collective

[105] The Stó:lō Collective was awarded $42,307 per First Nation band in participant funding from the Board. Additionally, the Major Projects Management Office offered $4,615.38 per First Nation band for consultation following the close of the Board's hearing record, and $5,384.61 per First Nation band following the release of the Board's report.

5. Upper Nicola Band

[106] Upper Nicola was awarded $40,000 plus travel costs for two members to attend the hearing and an additional $10,000 in special funding through the Board's participant funding program. Additionally, the Major Projects Management Office offered Upper Nicola Band and the Okanagan Nation Alliance $11,977 and $24,000 respectively in participant funding for consultations following the close of the Board's hearing record. The Okanagan Nation Alliance was offered an additional $26,000 following the release of the Board's report.

6. SSN

[107] SSN applied for participant funding in excess of $300,000 in order to participate in the Board's hearing. It was awarded $36,920 plus travel costs for two members to attend the hearing. Additionally, the Major Projects Management Office offered $18,000 in participation funding for consultations following the close of the Board's hearing record and $21,000 for consultations following the release of the Board's report.

7. Raincoast Conservation Foundation and Living Oceans Society

[108] Raincoast was awarded $111,100 plus travel costs for two people to attend the hearing from the Board's participant funding program. Living Oceans was awarded $89,100 plus travel costs for two persons to attend the hearing through the participant funding program.

H. Crown consultation efforts—a brief summary

1. Phase I (from 2013 to April 2014)

[109] In this initial engagement phase some correspondence was exchanged between the Crown and some of the Indigenous applicants. Canada does not suggest that any of this correspondence contained any discussion about any substantive matter.

2. Phase II (from April 2014 to February 2016)

[110] During the Board's hearing process and continuing until the close of its hearing record, Canada continued to exchange correspondence with some of the Indigenous applicants.

Additionally, some informational meetings were held; however, these meetings did not allow for any substantive discussion about any group's title, rights or interests, or the impact of the Project on the group's title, rights or interests.

[111] To illustrate, Crown representatives met with Squamish officials on September 11, 2015, and November 27, 2015. At these meetings Squamish raised a number of concerns, including its concerns that Squamish had not been involved in the design of the consultation process, that the consultation process was inadequate to assess impacts on Squamish rights and title and that inadequate funding was provided for participation in the Board's hearing. Squamish also expressed confusion about the respective roles of the Board and Trans Mountain in consultations with Squamish.

[112] Similarly, informational meetings were held with the Stó:lō Collective on July 18, 2014 and December 3, 2015. Again, no substantive discussion took place about Stó:lō's title, rights and interests or the impact of the Project thereon. The Stó:lō also expressed their concerns about the consultation process, including their concerns that the Board failed to compel Trans Mountain to respond adequately to Information Requests and the lack of specificity of the Board's draft terms and conditions.

[113] Informational hearings of this nature were also held with Upper Nicola and SSN in 2014.

[114] It is fair to say that in Phase II Canada continued to rely upon the National Energy Board process to fulfil the Crown's duty to consult. Canada's efforts in Phase II were largely directed to

using the Information Request process to solicit concerns and potential mitigation measures from First Nations. Canada prepared tables to record potential Project impacts and concerns and to record and monitor whether those potential impacts and concerns were addressed in Trans Mountain's commitments, the Board's draft terms and conditions or other mitigation measures.

3. Phase III (February to November 2016)

[115] Crown representatives met with all of the Indigenous applicants in Phase III. Generally, the Indigenous applicants expressed dissatisfaction with the National Energy Board process and the Crown's reliance on that process. Individual concerns raised by individual Indigenous applicants will be discussed in the context of consideration of the adequacy of Canada's consultation efforts.

[116] Towards the latter part of Phase III, on August 16, 2016, the Major Projects Management Office and the British Columbia Environmental Assessment Office jointly sent a letter to Indigenous groups confirming that they were responsible for conducting consultation efforts for the Project, and that they were coordinating by participating in joint consultation meetings, sharing information and by preparing the draft "Joint Federal/Provincial Consultation and Accommodation Report for the Trans Mountain Expansion Project" (Crown Consultation Report).

[117] Canada summarized its consultation efforts in the Crown Consultation Report, which included appendices specific to individual Indigenous groups. Indigenous groups were generally provided with a first draft of the Crown Consultation Report, together with the appendix relevant

to that group, in August of 2016. Comments and corrections were to be provided in September 2016. A second draft of the Crown Consultation Report, together with relevant appendices, was provided to Indigenous groups in November of 2016, with comments due by mid-November.

I. Post National Energy Board report events

1. The Interim Measures for Pipeline Reviews

[118] On January 27, 2016, Canada introduced this initiative as part of a strategy to review Canada's environmental assessment processes. The Interim Measures set out five guiding principles to guide the approval of major pipeline projects:

i. No proponent would be required to return to the beginning of the approval process. That is, no proponent would be required to begin the approval process afresh.
ii. Decisions about pipeline approval would be based on science, traditional knowledge of Indigenous peoples and other relevant evidence.
iii. The views of the public and affected communities would be sought and considered.
iv. Indigenous peoples would be meaningfully consulted, and, where appropriate, accommodated.
v. The direct and upstream greenhouse gas emissions linked to a project under review would be assessed.

[119] Canada advised that it planned to apply the Interim Measures to the Project and that in order to do so it would: undertake deeper consultations with Indigenous peoples and provide funding to support participation in these deeper consultations; assess the upstream gas emissions associated with the Project and make this information public; and, appoint a ministerial

representative to engage local communities and Indigenous groups in order to obtain their views and report those views back to the responsible Minister.

[120] The Minister of Natural Resources sought and obtained a four-month extension of time to permit implementation of the Interim Measures. The deadline for the Governor in Council to make its decision on Project approval was, therefore, on or before December 19, 2016.

2. The Ministerial Panel

[121] On May 17, 2016, the Minister announced he was striking a three-member independent Ministerial Panel that would engage local communities and Indigenous groups as contemplated in Canada's implementation of the Interim Measures for the Project.

[122] The Ministerial Panel held a series of public meetings in Alberta and British Columbia, received emails and received responses to an online questionnaire. The Ministerial Panel submitted its report to the Minister on November 1, 2016, in which it identified six "high-level questions" that "remain unanswered" that it commended to Canada for serious consideration.

[123] The report of the Ministerial Panel expressly stated that the panel's work was "not intended as part of the federal government's concurrent commitment to direct consultation with First Nations" and that "full-scale consultation" was never the intent of the panel "especially in the case of First Nations, where the responsibility for consultation fell elsewhere". It follows that no further consideration of the Ministerial Panel is required in the context of consideration of the adequacy of Canada's consultation efforts.

3. Greenhouse gas assessment

[124] For completeness, I note that in November 2016, Environment Canada did publish an assessment estimating the upstream greenhouse gas emissions from the Project.

IX. The issues to be determined

[125] Broadly speaking, the applicants' submissions require the Court to address the following questions.

[126] First, is there merit in any of the preliminary issues raised by the parties?

[127] Second, under the applicable legislative scheme, can the report of the National Energy Board be judicially reviewed?

[128] Finally, should the decision of the Governor in Council be set aside? This in turn requires the Court to consider:

i. What is the standard of review to be applied to the decision of the Governor in Council?

ii. Did the Governor in Council err in determining whether the Board's process of assembling, analyzing, assessing and studying the evidence before it was so deficient that the report submitted by it to the Governor in Council did not qualify as a "report" within the meaning of the *National Energy Board Act*? This will require the Court to consider:

   a. was the process adopted by the Board procedurally fair?

   b. did the Board err by failing to assess Project-related marine shipping under the *Canadian Environmental Assessment Act, 2012*?

c. did the Board err in its treatment of the *Species at Risk Act*, S.C. 2002, c. 29?

d. did the Board impermissibly fail to decide certain issues before it recommended approval of the Project?

e. did the Board impermissibly fail to consider alternatives to the Westridge Marine Terminal?

iii. Did the Governor in Council fail to comply with the statutory requirement to give reasons?

iv. Did the Governor in Council err by concluding that the Indigenous applicants were adequately consulted and, if necessary, accommodated?

X. Consideration of the issues

A. The preliminary issues

[129] Before turning to the substantive issues raised in this application it is necessary to deal with three preliminary issues raised by the parties. They may be broadly characterized as follows.

[130] First, as described above, a number of the applicants commenced applications challenging the report of the National Energy Board. Trans Mountain moves to strike on a preliminary basis the six applications for judicial review commenced in respect of the report of the National Energy Board on the ground that the report is not amenable to judicial review.

[131] Second, the applicants ask that the two affidavits sworn on behalf of Trans Mountain by Robert Love, or portions thereof, be struck or given no weight on a number of grounds, including that Mr. Love had no personal knowledge of the bulk of the matters sworn to in his affidavits.

[132] Finally, the applicants object to the "Consultation Chronologies" found in Canada's compendium.

1. Trans Mountain's motion to strike

[133] In *Gitxaala Nation v. Canada*, 2016 FCA 187, [2016] 4 F.C.R. 418, at paragraph 125, this Court concluded that applications for judicial review do not lie against reports made pursuant to section 52 of the *National Energy Board Act* recommending whether a certificate of public convenience and necessity should issue for all or any portion of a pipeline. Accordingly, Trans Mountain seeks orders striking the six notices of application (listed above at paragraph 51) that challenge the Board's report.

[134] A comparison of the parties enumerated in paragraph 51 with those parties who challenge the decision of the Governor in Council (enumerated in paragraph 52) shows that all but one of the applicants who challenge the report of the National Energy Board also challenge the decision of the Governor in Council. For reasons not apparent on the record, the City of Vancouver elected to challenge only the report of the Board.

[135] The City of Vancouver, supported by the City of Burnaby, Tsleil-Waututh, Raincoast and Living Oceans, responds to Trans Mountain by arguing that *Gitxaala* was wrongly decided on this point and that in any event, the applications should not be struck on a preliminary basis.

[136] Those applicants who challenge both decisions are able to argue, and do argue, that in *Gitxaala* this Court determined that the decision of the Governor in Council cannot be

considered in isolation from the Board's report; it is for the Governor in Council to determine whether the process followed by the Board in assembling, analyzing, assessing, and studying the evidence before it was so deficient that its report does not qualify as a "report" within the meaning of the *National Energy Board Act*.

[137] Put another way, a statutory pre-condition for a valid Order in Council is a report from the Board prepared in accordance with all legislative requirements. The Governor in Council is therefore required to be satisfied that the report was prepared in accordance with the governing legislation. This makes practical sense as well because the Board's report formed the factual basis for the decision of the Governor in Council.

[138] It is in the context of these arguments that I turn to consider whether the applications should be struck on a preliminary basis.

[139] The jurisprudence of this Court is uniformly to the effect that motions to strike applications for judicial review are to be resorted to sparingly: see, for example, *Odynsky v. League for Human Rights of B'Nai Brith Canada*, 2009 FCA 82, 387 N.R. 376, at paragraph 5, citing *David Bull Laboratories (Canada) Inc. v. Pharmacia Inc.*, [1995] 1 F.C.R. 588, (1994), 176 N.R. 48.

[140] The rationale for this approach is that judicial review proceedings are designed to proceed with celerity; motions to strike carry the potential to unduly and unnecessarily delay the

expeditious determination of an application. Therefore justice is better served by allowing the Court to deal at one time with all of the issues raised by an application.

[141] This rationale is particularly applicable in the present case where striking the applications would still leave intact the ability of all but one of the applicants to argue the asserted flaws in the Board's report in the context of the Court's review of the decision of the Governor in Council. Little utility would be achieved in deciding the motions when the arguments in support of them will be considered now, in the Court's determination of the merits of the applications.

[142] For this reason, in the exercise of my discretion I would dismiss Trans Mountain's motion to strike the applications brought challenging the report of the National Energy Board. I deal with the merits of the argument that the report is not amenable to judicial review below at paragraph 170 and following.

2. The applicants' motion asking that the two affidavits of Robert Love, or portions thereof, be struck or given no weight

[143] The applicants argue that the Love affidavits, or portions thereof, should be struck or given no weight on three grounds. First, the applicants argue that Mr. Love had no personal knowledge of the bulk of the matters sworn to in his affidavits so that his evidence should be disregarded as inadmissible hearsay. Second, the applicants argue that the affidavits contain irrelevant and impermissible evidence about Trans Mountain's engagement and consultations with the Indigenous applicants. Finally, the applicants argue that the second affidavit impermissibly augments the evidence that was before the Board and the Governor in Council.

(a) The hearsay objection

[144] In both impugned affidavits Mr. Love swore that "I have personal knowledge of the matters in this Affidavit, except where stated to be based on information and belief, in which case I believe the same to be true." Notwithstanding this statement, on cross-examination, Mr. Love admitted that his first affidavit was based almost entirely on facts of which he had no personal knowledge and that his affidavit failed to disclose that he relied on information and belief to assert those facts. He largely relied on Trans Mountain's lawyers to prepare the paragraphs of his affidavit of which he had no direct knowledge. The basis of his belief that his affidavit was truthful and accurate was his "trust in other people". He frequently admitted that there were other Trans Mountain employees who had direct knowledge of the matters set out in his affidavit (cross-examination of Robert Love, June 19, 2017, by counsel for the City of Burnaby, page 14, line 17 to page 50, line 8).

[145] Similarly, under cross-examination Mr. Love admitted that he had no personal knowledge of the contents of his second affidavit which dealt with Trans Mountain's consultation with Squamish (cross-examination Robert Love, June 22, 2017, by counsel for Squamish, page 2, line 7 to page 11, line 4). When cross-examined by counsel for Coldwater, Mr. Love admitted that he was "largely" not involved with Trans Mountain's engagement with Coldwater. Rather, "[i]t was the aboriginal engagement team who did the communications." (cross-examination of Robert Love, June 22, 2017, by counsel for Coldwater, page 2, line 9 to page 2, line 21).

[146] Mr. Love is the Manager, Land and Rights-of-Way for Kinder Morgan Canada Inc., a company related to Trans Mountain. During his cross-examination by counsel for Squamish he described his role to be responsible for securing "all of the private land interest for the Trans Mountain Expansion Project and to obtain all utility crossings". He was also responsible "for undertaking the land rights necessary to go through about 10 reserves that we have agreements with." Later, on his cross-examination, he explained that prior to swearing his affidavit he "sat down with Regan Schlecker and went through most of the First Nation's engagement and high-level [government] engagements that were happening here" because he had no direct involvement in those engagements. Regan Schlecker was Trans Mountain's Aboriginal affairs manager.

[147] On the basis of Mr. Love's many admissions the applicants argue that Mr. Love's evidence should be struck or given no weight.

[148] Trans Mountain argues in response that the City of Burnaby failed to object to the Love affidavits on a timely basis. It also argues that on judicial review the parties can provide background explanations and summaries regarding the administrative proceeding below and that no applicant points to any important statements in the affidavits that were shown to be based on hearsay.

[149] I begin by rejecting Trans Mountain's argument that the arguments raised by Burnaby were raised too late and so should not be considered. While Burnaby may well not have raised its hearsay objection on a timely basis (see the order of the case management Judge issued on July

25, 2017), both the City of Vancouver and Squamish did object to the Love affidavits on a timely basis. Squamish adopts Burnaby's objections (Squamish's memorandum of fact and law, paragraph 133) and the City of Vancouver relies upon the cross-examination of Mr. Love conducted by counsel for Burnaby (Vancouver's memorandum of fact and law, paragraph 109). On this basis, in my view, Burnaby's arguments are properly before the Court.

[150] With respect to Trans Mountain's argument on the merits, I begin by noting that to the extent background statements and summaries are admissible on an application for judicial review, this admissibility is for the sole and limited purpose of orienting the reviewing Court. In any event and more importantly, affidavits must always fully and candidly disclose if an affiant is relying on information and belief and what portions of the affidavit are based on information and belief. In that event, the affiant must disclose both the sources of the information relied upon and the bases for the affiant's belief in the truth of the information sworn to. This was not done in the present case.

[151] Notwithstanding this failure, I do not see the need to strike portions of the Love affidavits. The affidavits are relevant for the purpose of orienting the Court. However, it is unsafe to rely on the contents of the Love affidavits for the purpose of establishing the truth of their contents unless Mr. Love had personal knowledge of a particular fact or matter. Because Mr. Love did not demonstrate any material, personal knowledge of Trans Mountain's engagement with the Indigenous applicants, and because there is no explanation as to why an individual directly involved in that engagement could not have provided evidence, evidence of

Trans Mountain's engagement must come from other sources—such as the consultation logs Trans Mountain placed in evidence before the Board.

[152] As I have determined that it is unsafe except in limited circumstances to rely upon the contents of the Love affidavits to establish the truth of their contents, it is unnecessary for me to consider the applicants' objection to the second affidavit on the ground that it impermissibly supplemented the consultation logs in evidence before the Board.

(b) Relevance of evidence of Trans Mountain's engagement with the Indigenous applicants

[153] In answer to an Information Request issued by Squamish inquiring whether Canada delegated any procedural aspects of consultation to Trans Mountain, Canada responded:

> The Crown has not delegated the procedural aspects of its duty to consult to Trans Mountain. The Crown does rely on the [National Energy Board] review process to the extent possible to fulfill this duty, a process that requires the proponent to work with and potentially accommodate Aboriginal groups impacted by the project. The [National Energy Board] filing manual provides information to the proponent on the requirement to engage potentially affected Aboriginal groups. This does not constitute delegation of the duty to consult.
>
> (underlining added)

[154] Based on this response, the Indigenous applicants argue that evidence of Trans Mountain's engagement with them is irrelevant. It is necessary to consider this submission because it is an issue that transcends the Love affidavits—there is other evidence of Trans Mountain's engagement.

[155] I accept Trans Mountain's submission that proper evidence of its engagement with the Indigenous applicants is relevant. I reach this conclusion for the following reasons.

[156] First, the Indigenous applicants were informed by the Major Projects Management Office's letter of August 12, 2013, that Canada would rely on the Board's public hearing process "to the extent possible" to fulfil the Crown's duty to consult. As Canada noted in its response to the Information Request, the Board's hearing process required Trans Mountain to work with, and potentially accommodate, Indigenous groups impacted by the Project. Thus the Major Projects Management Office's August 12 letter encouraged Indigenous groups with Project-related concerns to discuss those concerns directly with Trans Mountain. Unresolved concerns were to be directed to the National Energy Board. It follows from this that the Indigenous applicants were informed before the commencement of the Board's hearing process that the Board and, in turn, Canada would rely in part on Trans Mountain's engagement with them.

[157] Thereafter, the Board required Trans Mountain "to make all reasonable efforts to consult with potentially affected Aboriginal groups and to provide information about those consultations to the Board." The Board expressly required this information to include "evidence on the nature of the interests potentially affected, the concerns that were raised and the manner and degree to which those concerns have been addressed. Trans Mountain was expected to report to the Board on all Aboriginal concerns that were expressed to it, even if it was unable or unwilling to address those concerns". (Report of the National Energy Board, page 46).

[158] Trans Mountain's consultation was guided by the Board's Filing Manual requirements and directions given by the Board during the Project Description phase.

[159] This demonstrates that Trans Mountain's consultation was central to the decision of the Board. Therefore, evidence of Trans Mountain's efforts is relevant.

[160] My second reason for finding proper evidence of Trans Mountain's engagement to be relevant is that, consistent with Canada's response to Squamish's Information Request, a review of the Crown Consultation Report shows that in Section 3 Canada summarized "the procedural elements and chronology of Aboriginal consultations and engagement activities undertaken by the proponent, the [Board] and the Crown." Elements of Trans Mountain's engagement were summarized in the Crown Consultation Report, and therefore put before the Governor in Council so it could assess the adequacy of consultation. Elements that were summarized include Trans Mountain's Aboriginal Engagement Program and the Mutual Benefit Agreements Trans Mountain entered into with Indigenous groups. Trans Mountain's Aboriginal Engagement Program was noted to have provided approximately $12 million in capacity funding to potentially affected groups. As well, Trans Mountain provided funding to conduct traditional land and resource use and traditional marine resource use studies. As for the Mutual Benefit Agreements, as of November 2016, Canada was aware that 33 potentially affected Indigenous groups had signed such agreements with Trans Mountain. These included a letter of support for the Project.

[161] Canada's reliance on Trans Mountain's engagement also makes evidence about that engagement relevant.

[162] Finally on this point, some Indigenous applicants assert that Trans Mountain's engagement efforts were inadequate. Evidence of Trans Mountain's engagement, including its provision of capacity funding, is relevant to this allegation and to the issue of the adequacy of available funding.

3. Canada's compendium—The Consultation Chronologies

[163] In its compendium, Canada included schedules in the form of charts (referred to as "Consultation Chronologies") which describe events said to have taken place. The Indigenous applicants assert that the schedules are interpretive, inaccurate, and incomplete and that they should not be received by the Court for two reasons.

[164] First, the Indigenous applicants argue that the Consultation Chronologies summarize the facts as perceived by the Crown. As such, the material should have appeared in Canada's affidavit and in its memorandum of fact and law. It is argued that Canada should not be permitted to circumvent page length restrictions on the length of its memorandum by creating additional resources in its compendium.

[165] Second, the Indigenous applicants argue that the Consultation Chronologies are not evidence. Instead, the summaries are newly created documents that were not before the Board or

the Governor in Council. Their admission is also argued to be prejudicial to the Indigenous applicants.

[166] Canada responds that, as the case management Judge noted in his direction of September 7, 2017, "parties often include material in their compendia as an aid to argument. As long as the aid to argument is brief and helpful and is not anything resembling a memorandum of fact and law and as long as the aid to argument presents or is based entirely upon facts and data from the evidentiary record without adding to it, hearing panels of this Court usually permit it. Of course, there is a limit to this."

[167] I agree with the Indigenous applicants that the Consultation Chronologies must be approached with caution. For example, the Consultation Chronology in respect of the Coldwater Indian Band recites that on May 3, 2016, Canada emailed Coldwater a letter dated November 3, 2015 sent in response to Coldwater's letter of August 20, 2015. The Consultation Chronology also recites that the letter contained an offer to meet with Coldwater to discuss the consultation process and Project-related issues. However, Coldwater points to the sworn evidence of its Chief Councillor to the effect that the November 3, 2015 letter did not actually address the concerns detailed in Coldwater's letter of August 20, 2015, and that the meeting was never arranged because the November 3, 2015 letter was not provided to Coldwater until May 3, 2016.

[168] Thus, I well understand the concern of the Indigenous applicants. This said, this Court's understanding of the evidence is not based upon a summary in chart form which briefly summarizes the consultation process. The Court will base its decision upon the evidentiary

record properly before it, which includes the record before the Board and the Governor in Council, the affidavits sworn in this proceeding, the cross-examinations thereon, the statement of agreed facts, and the contents of the agreed book of documents. The sole permissible use of the Consultation Chronologies is as a form of table of contents or finding aid that directs a reader to a particular document in the record. On the basis of this explanation of the limited permissible use of the Consultation Chronologies there is no need to strike them, a point conceded by counsel for Coldwater and Squamish in oral argument.

[169] For completeness, I note that Upper Nicola moved on a preliminary basis to strike portions of the second Love affidavit on the ground that the affidavit impermissibly recited confidential information. That motion is the subject of brief, confidential reasons issued contemporaneously with these reasons. After the parties to the motion have the opportunity to make submissions, a public version of the confidential reasons will issue.

B. Is the report of the National Energy Board amenable to judicial review?

[170] While I would dismiss Trans Mountain's motion to strike the application on a preliminary basis, because some applicants do challenge the report of the National Energy Board it is necessary to decide whether judicial review lies, notwithstanding this Court's conclusion to the contrary in *Gitxaala*.

[171] The applicants who argue that, contrary to *Gitxaala*, the Board's report is amenable to judicial review acknowledge the jurisprudence of this Court to the effect that the test applied for overruling a decision of another panel of this Court is whether the previous decision is

"manifestly wrong" in the narrow sense that the Court overlooked a relevant statutory provision, or a case that ought to have been followed: see, for example, *Miller v. Canada (Attorney General)*, 2002 FCA 370, 220 D.L.R. (4th) 149, at paragraph 10. The applicants argue that *Gitxaala* was manifestly wrong in deciding that the Board's report was not justiciable. The specific errors asserted are:

a. *Gitxaala* was manifestly wrong in holding that only "decisions about legal or practical interests are judicially reviewable". The Court did not address case law that has interpreted subsection 18.1(1) of the *Federal Courts Act*, R.S.C. 1985, c. F-7 more broadly.
b. The Court failed to deal with the prior decision of this Court in *Forestethics Advocacy v. Canada (Attorney General)*, 2014 FCA 71, 390 D.L.R. (4th) 376.
c. The Court failed to deal with prior jurisprudence of the Federal Court and this Court which did review environmental assessment reports prepared by a joint review panel.
d. The Court referred to provisions of the *Canadian Environmental Assessment Act, 2012* that were inapplicable.
e. The *Gitxaala* decision impermissibly thwarts the right to seek judicial review of the decision of the National Energy Board.

[172] I will deal with each argument in turn after first reviewing this Court's analysis in *Gitxaala*.

1. The decision of this Court in *Gitxaala*

[173] The Court's consideration of the justiciability of the report of the Joint Review Panel began with its detailed analysis of the legislative scheme (reasons, paragraphs 99 to 118). The Court then turned to consider the proper characterization of the legislative scheme, which the

Court described to be "a complete code for decision-making regarding certificate applications."

The Court then reasoned:

> [120] The legislative scheme shows that for the purposes of review the only meaningful decision-maker is the Governor in Council.
>
> [121] Before the Governor in Council decides, others assemble information, analyze, assess and study it, and prepare a report that makes recommendations for the Governor in Council to review and decide upon. In this scheme, no one but the Governor in Council decides anything.
>
> [122] In particular, the environmental assessment under the *Canadian Environmental Assessment Act, 2012* plays no role other than assisting in the development of recommendations submitted to the Governor in Council so it can consider the content of any decision statement and whether, overall, it should direct that a certificate approving the project be issued.
>
> [123] This is a different role—a much attenuated role—from the role played by environmental assessments under other federal decision-making regimes. It is not for us to opine on the appropriateness of the policy expressed and implemented in this legislative scheme. Rather, we are to read legislation as it is written.
>
> [124] Under this legislative scheme, the Governor in Council alone is to determine whether the process of assembling, analyzing, assessing and studying is so deficient that the report submitted does not qualify as a "report" within the meaning of the legislation:
>
> - In the case of the report or portion of the report setting out the environmental assessment, subsection 29(3) of the *Canadian Environmental Assessment Act, 2012* provides that it is "final and conclusive," but this is "[s]ubject to sections 30 and 31." Sections 30 and 31 provide for review of the report by the Governor in Council and, if the Governor in Council so directs, reconsideration and submission of a reconsideration report by the Governor in Council.
>
> - In the case of the report under section 52 of the *National Energy Board Act*, subsection 52(11) of the *National Energy Board Act* provides that it too is "final and conclusive," but this is "[s]ubject to sections 53 and 54." These sections empower the Governor in Council to consider the report and decide what to do with it.
>
> [125] In the matter before us, several parties brought applications for judicial review against the Report of the Joint Review Panel. Within this legislative

> scheme, those applications for judicial review did not lie. No decisions about legal or practical interests had been made. Under this legislative scheme, as set out above, any deficiency in the Report of the Joint Review Panel was to be considered only by the Governor in Council, not this Court. It follows that these applications for judicial review should be dismissed.
>
> [126] Under this legislative scheme, the National Energy Board also does not really decide anything, except in a formal sense. After the Governor in Council decides that a proposed project should be approved, it directs the National Energy Board to issue a certificate, with or without a decision statement. The National Energy Board does not have an independent discretion to exercise or an independent decision to make after the Governor in Council has decided the matter. It simply does what the Governor in Council has directed in its Order in Council.
>
> (underlining added)

[174] Having reviewed *Gitxaala*, I now turn to the asserted errors.

> 2. Was *Gitxaala* wrongly decided on this point?
>
> (a) Did the Court err by stating that only "decisions about legal or practical interests" are judicially reviewable?

[175] Subsection 18.1(1) of the *Federal Courts Act* provides that an application for judicial review may be made by "anyone directly affected by the matter in respect of which relief is sought" (underlining added). In *Air Canada v. Toronto Port Authority*, 2011 FCA 347, [2013] 3 F.C.R. 605, this Court considered the scope of subsection 18.1(1) as follows:

> [24] Subsection 18.1(1) of the *Federal Courts Act* provides that an application for judicial review may be made by the Attorney General of Canada or by anyone directly affected by "the matter in respect of which relief is sought." A "matter" that can be subject of judicial review includes not only a "decision or order," but any matter in respect of which a remedy may be available under section 18 of the *Federal Courts Act*: *Krause v. Canada*, [1999] 2 F.C. 476 (C.A.). Subsection 18.1(3) sheds further light on this, referring to relief for an "act or thing," a failure, refusal or delay to do an "act or thing," a "decision," an "order" and a "proceeding." Finally, the rules that govern applications for judicial review apply

> to "applications for judicial review of administrative action," not just applications for judicial review of "decisions or orders": Rule 300 of the *Federal Courts Rules*.
>
> …
>
> [28] The jurisprudence recognizes many situations where, by its nature or substance, an administrative body's conduct does not trigger rights to bring a judicial review.
>
> [29] One such situation is where the conduct attacked in an application for judicial review fails to affect legal rights, impose legal obligations, or cause prejudicial effects: *Irving Shipbuilding Inc. v. Canada (Attorney General)*, 2009 FCA 116, [2010] 2 F.C.R. 488; *Democracy Watch v. Conflict of Interest and Ethics Commission*, 2009 FCA 15, (2009), 86 Admin. L.R. (4th) 149.
>
> (underlining added)

[176] To similar effect, in *Democracy Watch v. Conflict of Interest and Ethics Commissioner*, 2009 FCA 15, 387 N.R. 365, the Court wrote, at paragraph 10, that when "administrative action does not affect an applicant's rights or carry legal consequences, it is not amenable to judicial review".

[177] On the basis of these authorities the City of Vancouver, supported by the City of Burnaby and Raincoast and Living Oceans, argues that this Court erred by writing in paragraph 125 in *Gitxaala* that only "decisions about legal or practical interests" are reviewable. The Court is said to have overlooked the established jurisprudence to the effect that "matter" as used in subsection 18.1(1) denotes a broader category than merely decisions.

[178] In my view, when the Court's analysis in *Gitxaala* is read in its entirety no such statement was made and no such error was made.

[179] In *Gitxaala*, the Court found that the only action to carry legal consequences was the decision of the Governor in Council. The environmental assessment conducted by the Joint Review Panel under the *Canadian Environmental Assessment Act, 2012* did not affect legal rights or carry legal consequences. Instead, the assessment played "no role other than assisting in the development of recommendations submitted to the Governor in Council" (reasons, paragraph 122). The same could be said of the balance of the report prepared pursuant to the requirements of the *National Energy Board Act*.

[180] Put another way, on the basis of the legislative scheme enacted by Parliament, the report of the Joint Review Panel constituted a set of recommendations to the Governor in Council that lacked any independent legal or practical effect. It followed that judicial review did not lie from it.

[181] Both the determination about the effect of the report of the Joint Review Panel and the conclusion that it was not justiciable were wholly consistent with *Air Canada* and *Democracy Watch*. It was therefore unnecessary for the Court to expressly deal with these decisions, or with subsection 18.1(1).

[182] To complete this analysis, I note that the City of Vancouver also argues that it was prejudiced because the report of the National Energy Board did not comply with section 19 of the *Canadian Environmental Assessment Act, 2012* and because the Board's process was unfair. However, any detrimental effects upon the City of Vancouver could have been remedied through a challenge to the decision of the Governor in Council; the City has not asserted that it suffered

any prejudice in the interval between the issuance of the Board's report and the issuance of the Order in Council by the Governor in Council.

(b) *Forestethics Advocacy v. Canada (Attorney General)*

[183] In this decision, a single Judge of this Court decided whether this Court or the Federal Court had jurisdiction to entertain applications for judicial review brought in respect of the Report of the Joint Review Panel for the Enbridge Northern Gateway Project. Justice Sharlow found jurisdiction to lie in this Court. The City of Vancouver argues that implicit in this decision is the conclusion the reports prepared by joint review panels under the *Canadian Environmental Assessment Act, 2012* are judicially reviewable.

[184] I respectfully disagree. At issue in *Forestethics* was the proper interpretation of section 28 of the *Federal Courts Act*. The Court made no finding about whether the report is amenable to judicial review—its only finding was that the propriety of the report (which would include whether it was amenable to judicial review) was a matter for this Court, not the Federal Court.

(c) The jurisprudence which reviewed environmental assessment reports

[185] The City of Vancouver also points to jurisprudence in which environmental assessment reports prepared by joint review panels were judicially reviewed, and argues that this Court erred by failing to deal with this jurisprudence. The authorities relied upon by Vancouver are: *Alberta Wilderness Assn. v. Cardinal River Coals Ltd.*, [1999] 3 F.C. 425, 15 Admin. L.R. (3d) 25, (F.C.); *Friends of the West Country Assn. v. Canada (Minister of Fisheries and Oceans)*, [2000]

2 F.C.R. 263, (1999), 169 F.T.R. 298 (C.A.); *Pembina Institute for Appropriate Development v. Canada (Attorney General)*, 2008 FC 302, 80 Admin. L.R. (4th) 74; *Grand Riverkeeper, Labrador Inc. v. Canada (Attorney General)*, 2012 FC 1520, 422 F.T.R. 299; and, *Greenpeace Canada v. Canada (Attorney General)*, 2014 FC 463, 455 F.T.R. 1, rev'd on appeal, 2015 FCA 186, 475 N.R. 247.

[186] All of these authorities predate *Gitxaala*. They do not deal with the "complete code" of legislation that was before the Court in *Gitxaala*. But, more importantly, in none of these decisions was the availability of judicial review put in issue—this availability was assumed. In *Gitxaala* the Court reviewed the legislative scheme and explained why the report of the Joint Review Panel was not justiciable. The Court did not err by failing to refer to case law that had not considered this issue.

(d) The reference to inapplicable provisions of the *Canadian Environmental Assessment Act, 2012*

[187] The City of Vancouver also argues that *Gitxaala* is distinguishable because it dealt with section 38 of the *Canadian Environmental Assessment Act, 2012*, a provision that has no application to the process at issue here. The City also notes that *Gitxaala*, at paragraph 124, referred to sections 30 and 31 of the *Canadian Environmental Assessment Act, 2012*. These sections are said not to apply to the Joint Review Panel at issue in *Gitxaala*.

[188] I accept that pursuant to subsection 126(1) of the *Canadian Environmental Assessment Act, 2012* the environmental assessment of the Northern Gateway project (at issue in *Gitxaala*)

was continued under the process established under the *Canadian Environmental Assessment Act, 2012*. Subsection 126(1) specified that such continuation was to be as if the assessment had been referred to a review panel under section 38 of the *Canadian Environmental Assessment Act, 2012*, and that the Joint Review Panel which continued the environmental assessment was considered to have been established under section 40 of the *Canadian Environmental Assessment Act, 2012*.

[189] It followed that sections 29 through 31 of the *Canadian Environmental Assessment Act, 2012* did not apply to the Northern Gateway project, and ought not to have been referenced by the Court in *Gitxaala* in its analysis of the legislative scheme.

[190] This said, the question that arises is whether these references were material to the Court's analysis. To assess the materiality, if any, of this error I begin by reviewing the content of the provisions said to be erroneously referred to in *Gitxaala*.

[191] Section 29 of the *Canadian Environmental Assessment Act, 2012*, discussed above at paragraph 62, requires a responsible authority to ensure that its environmental assessment report sets out its recommendation to the Governor in Council concerning the decision the Governor in Council must make under paragraph 31(1)(*a*) of the *Canadian Environmental Assessment Act, 2012*. Section 30 allows the Governor in Council to refer any recommendation made by a responsible authority back to the responsible authority for reconsideration. Section 31 sets out the options available to the Governor in Council after it receives a report from a responsible authority. Paragraph 31(1)(*a*), discussed at paragraph 67 above, sets out the three choices

available to the Governor in Council with respect to its assessment of the likelihood that a project will cause significant adverse environmental effects and, if so, whether such effects can be justified.

[192] These provisions, without doubt, do apply to the Project at issue in these proceedings. Therefore, the Project is to be assessed under the legislative scheme analyzed in *Gitxaala*. It follows that *Gitxaala* cannot be meaningfully distinguished.

[193] As to the effect, if any, of the erroneous references in *Gitxaala*, the statutory framework applicable to the Northern Gateway project originated in three sources: the *National Energy Board Act*; the *Canadian Environmental Assessment Act, 2012*; and, transitional provisions found in section 104 of the *Jobs, Growth and Long-Term Prosperity Act*, S.C. 2012, c.19 (Jobs Act).

[194] Provisions relevant to the present analysis are:

- subsection 104(3) of the Jobs Act which required the Joint Review Panel to set out in its report an environmental assessment prepared under the *Canadian Environmental Assessment Act, 2012*;
- subsection 126(1) of the *Canadian Environmental Assessment Act, 2012* which continued the environmental assessment under the process established under that Act; and,
- paragraph 104(4)(*a*) of the Jobs Act which made the Governor in Council the decision-maker under section 52 of the *Canadian Environmental Assessment Act, 2012* (thus, it was for the Governor in Council to determine if the Project was likely to cause significant adverse environmental effects and, if so, whether such effects could be justified).

[195] These provisions are to the same effect as sections 29 and 31 of the *Canadian Environmental Assessment Act, 2012*. I dismiss the relevance of section 30 to this analysis because it had no application to the environmental assessment under review in *Gitxaala*. Further, and more importantly, section 30 played no significant role in the Court's analysis.

[196] It follows that the analysis in *Gitxaala* was based upon a proper understanding of the legislative scheme, notwithstanding the Court's reference to sections 29 and 31 of the *Canadian Environmental Assessment Act, 2012* instead of the applicable provisions.

[197] Put another way, the error was in no way material to the Court's analysis of the respective roles of the Joint Review Panel, which prepared the report to the Governor in Council, and the Governor in Council, which received the panel's recommendations and made the decisions required under the legislative scheme.

[198] Indeed, the technical nature of the erroneous references was acknowledged by Raincoast in its application for leave to appeal the *Gitxaala* decision to the Supreme Court of Canada. At paragraph 49 of its memorandum of argument it described the Court's error to be "technical in nature" (Trans Mountain's Compendium, volume 2, tab 35). To the same effect, Vancouver does not argue that the Court's error was material to its analysis. Vancouver simply notes the error in footnote 118 of its memorandum of fact and law.

[199] Accordingly, I see no error in the *Gitxaala* decision that merits departing from its analysis.

(e) *Gitxaala* thwarts review of the decision of the National Energy Board

[200] Finally, Vancouver argues that subsection 54(1) of the *National Energy Board Act* and 31(1) of the *Canadian Environmental Assessment Act, 2012* both make the Board's report a prerequisite to the decision of the Governor in Council. As the Governor in Council is not an adjudicative body, meaningful review must come in the form of judicial review of the report of the Board. The decision in *Gitxaala* thwarts such review.

[201] I respectfully disagree. As this Court noted in *Gitxaala* at paragraph 125, the Governor in Council is required to consider any deficiency in the report submitted to it. The decision of the Governor in Council is then subject to review by this Court under section 55 of the *National Energy Board Act*. The Court must be satisfied that the decision of the Governor in Council is lawful, reasonable and constitutionally valid. If the decision of the Governor in Council is based upon a materially flawed report the decision may be set aside on that basis. Put another way, under the legislation the Governor in Council can act only if it has a "report" before it; a materially deficient report, such as one that falls short of legislative standards, is not such a report. In this context the Board's report may be reviewed to ensure that it was a "report" that the Governor in Council could rely upon. The report is not immune from review by this Court and the Supreme Court.

(f) Conclusion on whether the report of the National Energy Board is amenable to judicial review

[202] For these reasons, I have concluded that the report of the National Energy Board is not justiciable. It follows that I would dismiss the six applications for judicial review which challenge that report. In the circumstance where the arguments about justiciability played a small part in the hearing I would not award costs in respect of these six applications.

[203] As the City of Vancouver did not seek and obtain leave to challenge the Order in Council, it follows that the City is precluded from challenging the Order in Council.

C. Should the decision of the Governor in Council be set aside on administrative law grounds?

1. The standard of review to be applied to the decision of the Governor in Council

[204] In *Gitxaala*, when considering the standard of review to be applied to the decision of the Governor in Council, the Court wrote that it was not legally permissible to adopt a "one-size-fits-all" approach to any particular administrative decision-maker. Rather, the standard of review must be assessed in light of the relevant legislative provisions, the structure of the legislation and the overall purpose of the legislation (*Gitxaala*, paragraph 137).

[205] I agree. Particularly in the present case it is necessary to draw a distinction between the standard of review applied to what I will refer to as the administrative law components of the Governor in Council's decision and that applied to the constitutional component which required

the Governor in Council to consider the adequacy of the process of consultation and, if necessary, accommodation. This is an approach accepted and urged by the parties.

(a) The administrative law components of the decision

[206] In *Gitxaala*, the Court conducted a lengthy standard of review analysis (*Gitxaala*, paragraphs 128-155) and concluded that, because the Governor in Council's decision was a discretionary decision founded on the widest considerations of policy and public interest, the standard of review was reasonableness (*Gitxaala*, paragraph 145).

[207] Canada, Trans Mountain and the Attorney General of Alberta submit that *Gitxaala* was correctly decided on this point.

[208] Tsleil-Waututh, Raincoast and Living Oceans submit that the governing authority is not *Gitxaala*, but rather is the earlier decision of this Court in *Council of the Innu of Ekuanitshit v. Canada (Attorney General*), 2014 FCA 189, 376 D.L.R. (4th) 348. In this case the Court found the reasonableness standard of review applied to a decision of the Governor in Council approving the federal government's response to a report of a joint review panel prepared under the now repealed *Canadian Environmental Assessment Act*, S.C. 1992, c. 37 (*Canadian Environmental Assessment Act, 1992*). The Court rejected the submission that the correctness standard applied to the question of whether the Governor in Council and the responsible authorities had respected the requirements of the *Canadian Environmental Assessment Act, 1992* before making their decisions under subsections 37(1) and 37(1.1) of that Act. Under these provisions the Governor in Council and the responsible authorities were required to review the

report of the joint review panel and determine whether the project at issue was justified despite its adverse environmental effects.

[209] This said, while deference was owed to decisions made pursuant to subsections 37(1) and 37(1.1), the Court wrote that "a reviewing court must ensure that the exercise of power delegated by Parliament remains within the bounds established by the statutory scheme." (*Innu of Ekuanitshit*, paragraph 44).

[210] To the submission that *Innu of Ekuanitshit* is the governing authority, Tsleil-Waututh adds two additional points: first and, in any event, the "margin of appreciation" approach followed in *Gitxaala* is no longer good law; and, second, issues of procedural fairness are to be reviewed on the standard of correctness. Tsleil-Waututh's additional submissions are adopted by the City of Burnaby.

[211] I see no inconsistency between the *Innu of Ekuanitshit* and *Gitxaala* for the following reasons.

[212] First, the Court in *Gitxaala* acknowledged that it was bound by *Innu of Ekuanitshit*. However, because of the very different legislative scheme at issue in *Gitxaala*, the earlier decision did not satisfactorily determine the standard of review to be applied to the decision of the Governor in Council at issue in *Gitxaala* (*Gitxaala*, paragraph 136). This Court did not doubt the correctness of *Innu of Ekuanitshit* or purport to overturn it.

[213] Second, in each case the Court determined the standard of review to be applied to the decision of the Governor in Council was reasonableness. It was within the reasonableness standard that the Court found in *Innu of Ekuanitshit* that the Governor in Council's decision must still be made within the bounds of the statutory scheme.

[214] Third, and finally, the conclusion in *Innu of Ekuanitshit* that a reviewing court must ensure that the Governor in Council's decision was exercised "within the bounds established by the statutory scheme" (*Innu of Ekuanitshit*, paragraph 44) is consistent with the requirement in *Gitxaala* that the Governor in Council must determine and be satisfied that the Board's process and assessment complied with the legislative requirements, so that the Board's report qualified as a proper prerequisite to the decision of the Governor in Council. Then, it is for this Court to be satisfied that the decision of the Governor in Council was lawful, reasonable and constitutionally valid. To be lawful and reasonable the Governor in Council must comply with the purview and rationale of the legislative scheme.

[215] Reasonableness review requires a court to assess whether the decision under review falls within a range of possible, acceptable outcomes which are defensible on the facts and the law (*Dunsmuir v. New Brunswick*, 2008 SCC 9, [2008] 1 S.C.R. 190, at paragraph 47).

[216] Reasonableness review is a contextual inquiry. Reasonableness "takes its colour from the context" (*Canada (Citizenship and Immigration) v. Khosa*, 2009 SCC 12, [2009] 1 S.C.R. 339, at paragraph 59; *Canada (Attorney General) v. Igloo Vikski Inc.*, 2016 SCC 38, [2016] 2 S.C.R. 80, at paragraph 57); in every case the fundamental question "is the scope of decision-making power

conferred on the decision-maker by the governing legislation." (*Catalyst Paper Corp. v. North Cowichan (District)*, 2012 SCC 2, [2012] 1 S.C.R. 5, at paragraph 18).

[217] Thus, when a court reviews a decision made in the exercise of a statutory power, reasonableness review requires the decision to have been made in accordance with the terms of the statute: see, for example, *Globalive Wireless Management Corp. v. Public Mobile Inc.*, 2011 FCA 194, [2011] 3 F.C.R. 344, at paragraphs 29-30. Put another way, an administrative decision-maker is constrained in the outcomes it may reach by the statutory wording (*Canada (Attorney General) v. Almon Equipment Limited*, 2010 FCA 193, [2011] 4 F.C.R. 203, at paragraph 21).

[218] The Supreme Court recently considered this in the context of a review of a decision of the Specific Claims Tribunal. The Tribunal is required by its governing legislation to adjudicate specific claims "in accordance with law and in a just and timely manner." The majority of the Court observed that the Tribunal's mandate expressly tethered "the scope of its decision-making power to the applicable legal principles." and went on to note that the "range of reasonable outcomes available to the Tribunal is therefore constrained by these principles" (*Williams Lake Indian Band v. Canada (Aboriginal Affairs and Northern Development)*, 2018 SCC 4, 417 D.L.R. (4th) 239, at paragraphs 33-34).

[219] With respect to Tsleil-Waututh's two additional points, I believe the first point was addressed above. Reasonableness "takes its colour from the context." To illustrate, reasonableness review of a policy decision affecting many entities is of a different nature than

reasonableness review of, say, a decision on the credibility of evidence before an adjudication tribunal.

[220] The second point raises the question of the standard of review to be applied to questions of procedural fairness.

[221] As this Court noted in *Bergeron v. Canada (Attorney General)*, 2015 FCA 160, 474 N.R. 366, at paragraph 67, the standard of review for questions of procedural fairness is currently unsettled.

[222] As Trans Mountain submits, in cases such as *Forest Ethics Advocacy Association v. Canada (National Energy Board)*, 2014 FCA 245, [2015] 4 F.C.R. 75, at paragraphs 70-72, this Court has applied the standard of correctness with some deference to the decision-maker's choice of procedure (see also *Mission Institution v. Khela*, 2014 SCC 24, [2014] 1 S.C.R. 502, at paragraphs 79 and 89).

[223] This said, in my view it is not necessary to resolve any inconsistency in the jurisprudence because, as will be explained below, even on a correctness review I find there is no basis to set aside the Order in Council on the basis of procedural fairness concerns.

(b) The constitutional component

[224] As explained above, a distinction exists between the standard of review applied to the administrative law components of the Governor in Council's decision and the standard applied to

the component which required the Governor in Council to consider the adequacy of the process of consultation with Indigenous peoples, and if necessary, accommodation.

[225] Citing *Haida Nation v. British Columbia (Minister of Forests)*, 2004 SCC 73, [2004] 3 S.C.R. 511, at paragraphs 61-63, the parties agree that the existence and extent of the duty to consult are legal questions reviewable on the standard of correctness. The adequacy of the consultation is a question of mixed fact and law which is reviewable on the standard of reasonableness. I agree.

[226] Reasonableness review does not require perfect satisfaction (*Gitxaala*, paragraphs 182-183 and the cases cited therein). The question to be answered is whether the government action "viewed as a whole, accommodates the collective aboriginal right in question". Thus, "[s]o long as every reasonable effort is made to inform and to consult, such efforts would suffice." (*Haida Nation*, paragraph 62, citing *R. v. Gladstone*, [1996] 2 S.C.R. 723 and *R. v. Nikal*, [1996] 1 S.C.R. 1013). The focus of the analysis should not be on the outcome, but rather on the process of consultation and accommodation (*Haida Nation*, paragraph 63).

[227] Having set out the governing standards of review, I next consider the various flaws that are said to vitiate the decision of the Governor in Council.

2. Did the Governor in Council err in determining that the Board's report qualified as a report so as to be a proper condition precedent to the Governor in Council's decision?

[228] The Board's errors said to vitiate the decision of the Governor in Council were briefly summarized above at paragraph 128. For ease of reference I reorganize and repeat that the applicants variously assert that the Board erred by:

a. breaching the requirements of procedural fairness;
b. failing to decide certain issues before it recommended approval of the Project;
c. failing to consider alternatives to the Westridge Marine Terminal;
d. failing to assess Project-related marine shipping under the *Canadian Environmental Assessment Act, 2012*; and,
e. erring in its treatment of the *Species at Risk Act*.

The effect of each of these errors is said to render the Board's report materially deficient such that it was not a "report" that the Governor in Council could rely upon. A decision made by the Governor in Council without a "report" before it must be unreasonable; the statute makes it clear that the Governor in Council can only reach a decision when informed by a "report" of the Board.

[229] I now turn to consider each alleged deficiency.

(a) Was the Board's process procedurally fair?

(i) Applicable legal principles

[230] The Board, as a public authority that makes administrative decisions that affect the rights, privileges or interests of individuals, owes a duty of procedural fairness to the parties before it. However, the existence of a duty of fairness does not determine what fairness requires in a particular circumstance.

[231] It is said that the concept of procedural fairness is eminently variable, and that its content is to be decided in the context and circumstances of each case. The concept is animated by the desire to ensure fair play. The purpose of the participatory rights contained within the duty of fairness has been described to be:

> … to ensure that administrative decisions are made using a fair and open procedure, appropriate to the decision being made and its statutory, institutional, and social context, with an opportunity for those affected by the decision to put forward their views and evidence fully and have them considered by the decision-maker.

(*Baker v. Canada (Minister of Citizenship and Immigration)*, [1999] 2 S.C.R. 817, 174 D.L.R. (4th) 193, at paragraph 22).

[232] In *Baker*, the Supreme Court articulated a non-exhaustive list of factors to be considered when determining what procedural fairness requires in a given set of circumstances: the nature of the decision being made and the process followed in making it; the nature of the statutory scheme, including the existence of an appeal procedure; the importance of the decision to the

lives of those affected; the legitimate expectations of the person challenging the decision; and, the choice of procedures made by the decision-maker.

[233] Applying these factors, the City of Burnaby argues that the content of the procedural duty owed to it was significant.

[234] Other applicants and the respondents did not make submissions on the content of the procedural duty of fairness.

[235] Having regard to the adjudicative nature of the decision at issue, the court-like procedures prescribed by the *National Energy Board Rules of Practice and Procedure, 1995*, SOR/95-208, the absence of an unrestricted statutory right of appeal (subsection 22(1) of the *National Energy Board Act* permits an appeal on a question of law or jurisdiction only with leave of this Court) and the importance of the Board's decision to the parties, I accept Burnaby's submission that the content of the duty of fairness owed by the Board to the parties was significant. The parties were entitled to a meaningful opportunity to present their cases fully and fairly. Included in the right to present a case fully is the right to effectively challenge evidence that contradicts that case. I will consider below more precisely the content of this duty.

[236] Having briefly summarized the legal principles that apply to issues of procedural fairness, I next enumerate the assertions of procedural unfairness.

(ii) The asserted breaches of procedural fairness

[237] The City of Burnaby asserts that the Board breached a duty of fairness owed to it by:

a. failing to hold an oral hearing;
b. failing to provide Burnaby with an opportunity to test Trans Mountain's evidence by cross-examination;
c. failing to require Trans Mountain to respond to Burnaby's written Information Requests and denying Burnaby's motions to compel further and better responses to the Information Requests;
d. delegating the assessment of critically important information until after the Board's report and the Governor in Council's decision;
e. failing to provide sufficient reasons concerning:
    i. alternative means of carrying out the Project;
    ii. the risks, including seismic risk, related to fire and spills;
    iii. the suitability of the Burnaby Mountain Tunnel;
    iv. the protection of municipal water sources; and,
    v. whether, and on what basis, the Project is in the public interest.

[238] Tsleil-Waututh submits that the Board breached the duty of fairness by restricting its ability to test Trans Mountain's evidence and by permitting Trans Mountain to file improper reply evidence.

[239] The Stó:lō submit that it was procedurally unfair to subject their witnesses who gave oral traditional Indigenous evidence to cross-examination when Trans Mountain's witnesses were not cross-examined.

[240] Squamish briefly raised the issue of inadequate response to their Information Request to Natural Resources Canada, and the Board's terse rejection of their requests for further and better responses from Natural Resources Canada, the Department of Fisheries and Oceans and Trans Mountain.

[241] Each assertion will be considered.

(iii) The failure to hold a full oral hearing and to allow cross-examination of Trans Mountain's witnesses

[242] It is convenient to deal with these two asserted errors together.

[243] The applicants argue that the Board's decision precluding oral cross-examination was "a stark departure from the previous practice for a project of this scale." (Burnaby's memorandum of fact and law, paragraph 160) that deprived the Board of an important and established method for determining the truth. The applicants argue that this was particularly unfair because Trans Mountain failed to participate in good faith in the Information Request process with the result that the process did not provide an effective, alternative method to test Trans Mountain's evidence.

[244] The respondents Canada and Trans Mountain answer that:

- The Board has discretion to determine whether a hearing proceeds as a written or oral hearing, and the Board is entitled to deference with respect to its choice of procedure.

- The process was tailored to take into account the number of participants, the volume of evidence and the technical nature of the information to be received by the Board.
- Many aspects of the hearing were conducted orally: the oral Indigenous traditional evidence, Trans Mountain's oral summary argument, the interveners' oral summary arguments and any reply arguments.
- Cross-examination is never an absolute right. A decision-maker may refuse or limit cross-examination so long as there is an effective means to challenge and test evidence.

[245] I acknowledge the importance of cross-examination at common law. However, because the content of the duty of fairness varies according to context and circumstances, the duty of fairness does not always require the right of cross-examination. For example, in a multi-party public hearing related to the public interest, fairness was held not to require oral cross-examination (*Unicity Taxi Ltd. v. Manitoba Taxicab Board* (1992), 80 Man. R. (2d) 241, [1992] 6 W.W.R. 35 (Q.B.); aff'd (1992) 83 Man. R. (2d) 305, [1992] M.J. No. 608 (C.A.)). The Court dismissed the allegation of unfairness because "in the conduct of multi-faceted and multi-party public hearings [cross-examination] tends to become an unwieldy and even dangerous weapon that may lead to disturbance, disruption and delay."

[246] Similarly, in *Chippewas of the Thames First Nation v. Enbridge Pipelines Inc.*, 2017 SCC 41, [2017] 1 S.C.R. 1099, the Supreme Court found that the Chippewas of the Thames were given an adequate opportunity to participate in the decision-making process of the Board (reasons, paragraph 51). This finding was supported by the Court's enumeration of the following facts: the Board held an oral hearing; provided early notice of the hearing process to affected Indigenous groups and sought their formal participation; granted intervener status to the

Chippewas of the Thames; provided participant funding to allow the Chippewas of the Thames to tender evidence and pose formal Information Requests to the project proponent, to which they received written responses; and permitted the Chippewas of the Thames to make oral closing submissions. No right of oral cross-examination was granted (reasons, paragraph 52), yet the process provided an adequate right to participate.

[247] These decisions are of course not determinative of the requirements of fairness in the present context.

[248] The relevant context is discussed by the Board in its Ruling No. 14, which dealt with a motion requesting that the hearing order be amended to include a phase for oral cross-examination of witnesses. After quoting an administrative law text to the effect that procedural fairness is not a fixed concept, but rather is one that varies with the context and the interest at stake, the Board wrote:

> Here, the context is that the Board will be making a recommendation to the Governor in Council. The recommendation will take into account whether the pipeline is and will be required by the present and future public convenience and necessity. The Board's recommendation will be polycentric in nature as it involves a wide variety of considerations and interests. Persons directly affected by the Application include Aboriginal communities, land owners, governments, commercial interests, and other stakeholders. The motion and several of the comments in support of it appear to place significant reliance on the potential credibility of witnesses. The Board notes that this is not a criminal or civil trial. The Board's hearing also does not involve an issue of individual liberty. It is a process for gathering and testing evidence for the Board's preparation, as an expert tribunal, of its recommendation to the Governor in Council about whether to issue a certificate under section 52 of the NEB Act. The Board will also be conducting an environmental assessment and making a recommendation under CEAA 2012.
>
> Hearing processes are designed individually and independently by the Board based on the specific circumstances of the application. Each process is designed to provide for a fair hearing, but the processes are not necessarily the same. For

this Application, the Hearing Order provides two opportunities to ask written information requests. There is also an opportunity to file written evidence, and to provide both written and oral final argument. For Aboriginal groups that also wish to present Aboriginal traditional evidence orally, there is an opportunity to do this.

Regarding the nature of the statutory scheme, section 8 of the NEB Act authorizes the Board to make rules about the conduct of hearings before the Board. The Rules provide that public hearings may be oral or written, as determined by the Board. The Board has previously held fully written hearings for section 52 oil and gas pipeline applications. Hearings can also be oral, with significant written components, as is the case here. In addition to the hearing procedures set out in the Rules, the Board makes rules about hearing procedures in its Hearing Order and associated rulings and bulletins.

….

Additional legislative requirements for the Board's public hearings are found in subsection 11(4) of the NEB Act, which requires that applications before the Board are to be dealt with as expeditiously as the circumstances and considerations of fairness permit, and within the time limit provided. This subsection of the NEB Act was added in 2012. For this Application, the legislated time limit, which is 15 months after the completeness determination is made, is 2 July 2015.

As the legislative time limits are recent, there is no legitimate expectation as to the hearing procedures that will be used to test the evidence. In this case, the Board has provided notice about the procedures that will apply.

In the Board's view, the legislation makes it clear that the Board is master of its own procedure and can establish its own procedures for each public hearing with regard to the conduct of hearings. This includes the authority to determine for a particular public hearing the manner in which evidence will be received and tested. In the circumstances of this hearing, where there are 400 intervenors and much of the information is technical in nature, the Board has determined that it is appropriate to test the evidence through written processes. All written evidence submitted will be subject to written questioning by up to 400 parties, and the Board.

(underlining added, footnotes omitted)

[249] Further aspects of the relevant context are discussed in the Board's final report at page 4:

For the Board's review of the Project application, the hearing had significant written processes as well as oral components. With the exception of oral traditional evidence described below, evidence was presented in writing, and

> testing of that evidence was carried out through written questions, known as Information Requests (IRs). Intervenors submitted over 15,000 questions to Trans Mountain over two major rounds of IRs. Hundreds of other questions were asked in six additional rounds of IRs on specific evidence. If an intervenor believed that Trans Mountain provided inadequate responses to its questions, it could ask the Board to compel Trans Mountain to provide a more complete response. Trans Mountain could do the same in respect of IRs it posed to intervenors on their evidence. There was also written questioning on various additional evidence, including supplemental, replacement, late and Trans Mountain's reply evidence.
>
> The Board decided, in its discretion in determining its hearing procedure, to allow testing of evidence by IRs and determined that there would not be cross examination in this hearing. The Board decided that, in the circumstances of this hearing where there were 400 intervenors and legislated time limits, and taking into consideration the technical nature of the information to be examined, it was appropriate to test the evidence through written processes. In the final analysis, the written evidence submitted was subjected to extensive written questioning by up to 400 participants and the Board. The Board is satisfied that the evidence was appropriately tested in its written process and that its hearing was fair for all parties and met natural justice requirements. …
>
> (underlining added, footnote omitted)

[250] Having set out the context relevant to determining the content of the duty of fairness, and the Board's discussion of the context, the next step is to apply the contextual factors enumerated in *Baker* to determine whether the absence of oral cross-examination was inconsistent with the participatory rights required by the duty of fairness. The heart of this inquiry is directed to whether the parties had a meaningful opportunity to present their case fully and fairly.

[251] Applying the first *Baker* factor, the nature of the Board's decision is different from a judicial decision. The Board is required to apply its expertise to the record before it in order to make recommendations about whether the Project is and will be required by public convenience and necessity, and whether the Project is likely to cause significant adverse environmental effects that can or cannot be justified in the circumstances. Each recommendation requires the Board to

consider a broad spectrum of considerations and interests, many of which depend on the Board's discretion. For example, subsection 52(2) of the *National Energy Board Act* requires the Board's recommendation to be based on "all considerations that appear to it to be directly related to the pipeline and to be relevant". The Board's environmental assessment is to take into account "any other matter relevant to the environmental assessment that the [Board] requires to be taken into account" (paragraph 19(1)(*j*) of the *Canadian Environmental Assessment Act, 2012*). The nature of the decision points in favour of more relaxed requirements under the duty of fairness.

[252] The statutory scheme also points to more relaxed requirements. The Board may determine that a pipeline application be dealt with wholly in writing (Rule 22(1), *National Energy Board Rules of Practice and Procedure, 1995*). The Board is required to deal with matters expeditiously, and within the legislated time limit. When the hearing order providing for Information Requests, not oral cross-examination, was issued on April 2, 2014, the Board was required to deliver its report by July 2, 2015. In legislating this time limit Parliament must be presumed to have contemplated that pipeline approval projects could garner significant public interest such that, as in this case, 400 parties successfully applied for leave to intervene. One aspect of the statutory scheme does point to a higher duty of fairness: the legislation does not provide for a right of appeal (save with leave on a question of law or jurisdiction). However, as discussed at length above, the Board's decision is subject to scrutiny in proceedings such as this.

[253] The importance of the decision is a factor that points toward a heightened fairness requirement.

[254] For the reasons given by the Board, I do not see any basis for a legitimate expectation that oral cross-examination would be permitted. To the Board's reasons I would add that such an expectation would be contrary to the Board's right to determine that an application be reviewed wholly in writing. While the Board did permit oral cross-examination in its review of the Northern Gateway Pipeline, in that case the Board's report discloses that intervener status was granted to 206 entities—roughly half the number of entities given intervener status in this case.

[255] Finally, the Board's choice of procedure, while not determinative, must be given some respect, particularly where the legislation gives the Board broad leeway to choose its own procedure, and the Board has experience in deciding appropriate hearing procedures.

[256] I note that when the Board rendered its decision on the request that it reconsider Ruling No. 14 so as to allow oral cross-examination, the applicants had received Trans Mountain's responses to their first round of Information Requests; many had brought motions seeking fuller and better answers. The Board ruled on the objections on September 26, 2014. Therefore, the Board was well familiar with the applicants' stated concerns, as is seen in Ruling No. 51 when it declined to reconsider its earlier ruling refusing to amend the hearing order to allow oral cross-examination.

[257] Overall, while the importance of the decision and the lack of a statutory appeal point to stricter requirements under the duty of fairness, the other factors point to more relaxed requirements. Balancing these factors, I conclude that the duty of fairness was significant. Nevertheless, the duty of fairness was not breached by the Board's decisions not to allow oral

cross-examination and not to allow a full oral hearing. The Board's procedure did allow the applicants a meaningful opportunity to present their cases fully and fairly.

[258] Finally on this issue, the Board allowed oral traditional Indigenous evidence because "Aboriginal people have an oral tradition that cannot always be shared adequately in writing." (Ruling No. 14, page 5). With respect to Stó:lō's concerns about permitting oral questioning of oral traditional evidence, the Board permitted "Aboriginal groups [to] choose to answer any questions in writing or orally, whichever is practical or appropriate by their determination." (Ruling No. 14, page 5). This is a complete answer to the concerns of the Stó:lō.

[259] I now turn to the next asserted breach of procedural fairness.

(iv) Trans Mountain's responses to the Information Requests

[260] The City of Burnaby and Squamish argue that Trans Mountain provided generic, incomplete answers to the Information Requests and the Board failed in its duty to compel further and better responses.

[261] During the oral hearing before this Court Burnaby reviewed in detail: Burnaby's first Information Request questioning Trans Mountain about its consideration of alternatives to expanding the pipeline, tank facilities and marine terminal in a major metropolitan area; Trans Mountain's response; the Board's denial of Burnaby's request for a fuller answer; Burnaby's second Information Request; Trans Mountain's response; the Board's denial of Burnaby's request for a fuller answer; the Board's first Information Request to Trans Mountain questioning

alternative means of carrying out the Project; Trans Mountain's response; the Board's second Information Request; and, Trans Mountain's response to the Board's second Information Request. Burnaby argues that Trans Mountain provided significantly more information to the Board than it did to Burnaby, but the information Trans Mountain provided was still insufficient.

[262] Squamish made brief reference in oral argument to the Board's failure to order fuller answers about the Crown's assessment of the strength of its claims to Aboriginal rights and title.

[263] As can be seen from Burnaby's oral submission, it brought motions before the Board to compel better answers in respect of both of Trans Mountain's responses to Burnaby's Information Requests.

[264] I begin consideration of this issue by acknowledging that most, but not all, of Burnaby's requests for fuller answers were denied by the Board. However, procedural fairness does not guarantee a completely successful outcome. The Board did order some further and better answers in respect of each motion. Burnaby must prove more than just that the Board did not uphold all of its objections.

[265] The Board's reasons for declining to compel further answers are found in two of the Board's rulings: Ruling No. 33 (A4 C4 H7) in respect of the first round of Information Requests directed to Trans Mountain by the interveners, and Ruling No. 63 (A4 K8 G4) in respect of the second round of the interveners' Information Requests. Each ruling was set out in the form of a letter which attached an appendix. The appendix listed each question included in the motions to

compel, organized by intervener, and provided "the primary reason" the motion to compel was granted or denied. Each ruling also provided in the body of the decision "overall comments about the motions and the Board's decision".

[266] The Board set out the test it applied when considering motions to compel in the following terms:

> …the Board looks at the relevance of the information sought, its significance, and the reasonableness of the request. The Board balances these factors so as to satisfy the purpose of the [Information Request] process, while preventing an intervenor from engaging in a 'fishing expedition' that could unfairly burden the applicant.

[267] In its decision the Board also provided general information describing circumstances that led it to decline to compel further answers. Of relevance are the following two situations:

- In some instances, Trans Mountain provided a full answer to the question asked, but the intervener disagreed with the answer. In these cases, rather than seeking to compel a further answer, the Board advised the interveners to file their own evidence in response or to provide their views during final argument.
- In some cases, Trans Mountain may not have answered all parts of an intervener's Information Request. However, in those cases where the Board was of the view that the response provided sufficient information and detail for the Board to consider the application, the Board declined to compel a further response.

[268] It is clear that the Board viewed Burnaby's requests for fuller answers about Trans Mountain's consideration and rejection of alternate locations for the marine terminal to fall within the second situation described above.

[269] The Board's second Information Request to Trans Mountain on this point was answered by Trans Mountain on July 21, 2014, and its answer was served upon all of the interveners. Therefore, the Board was aware of this response when on September 26, 2014, it rejected Burnaby's motion in Ruling No. 33.

[270] That the Board found Trans Mountain's answer to its second Information Request to be sufficient is reflected in the Board's report, where at pages 241 to 242 the Board relied on the content of Trans Mountain's response to its second Information Request to articulate Trans Mountain's consideration of the alternatives to the Westridge Marine Terminal. At page 244 of the report, the Board found Trans Mountain's "alternative means assessment" to be appropriate. The Board went on to acknowledge Burnaby's concern that Trans Mountain had not provided an assessment of the risks, impacts and effects of the alternate marine terminal locations at Kitimat or Roberts Bank. However, the Board disagreed, finding that "Trans Mountain has provided an adequate assessment, including consideration of the technical, socio-economic and environmental effects, of technically and economically feasible alternative marine terminal locations."

[271] Obviously, Burnaby disagrees with this assessment. However, it has not demonstrated how the Board's conduct concerning Burnaby's Information Requests breached the requirements of procedural fairness. For example, Burnaby has not pointed to evidence that contradicted Trans Mountain's stated reasons for rejecting alternative marine terminal locations. Trans Mountain stated that its assessment was based on feasibility of coincident marine and pipeline access, and technical, economic and environmental considerations of the screened alternative locations. Any

demonstrated conflict in the evidence on these points may have supported a finding that meaningful participation required Trans Mountain to provide more detailed information.

[272] In support of its submission concerning procedural fairness Squamish pointed to a question it directed to Natural Resources Canada. It asked whether that entity had "assessed the strength of Squamish's claim to aboriginal rights in the area of the proposed Project" and if so, to provide "that assessment and any material upon which that assessment is based."

[273] The response Squamish received to its Information Request was:

> The Crown has conducted preliminary depth of consultation assessments for all Aboriginal groups, including Squamish Nation, whose traditional territory intersects with or is proximate to the proposed pipeline right of way, marine terminal expansion and designated marine shipping lanes. (Depth of consultation assessments consider both potential impacts to rights and the strength of claim to rights.) The Crown's depth of consultation assessment is iterative and is expected to evolve as the [Board] review process unfolds and as Aboriginal groups submit their evidence to the [Board] and engage in Phase III consultations with the Crown. The Crown has assessed depth of consultation for the Squamish Nation as "high." This preliminary conclusion was filed into evidence [by the Major Projects Management Office] on May 27, 2015.
>
> The starting point for these assessments is to work with information the Crown has in hand, but Squamish Nation is invited to provide information that they believe could assist the Crown in understanding the nature and scope of their rights.
>
> (underlining added)

[274] Squamish objected to the Board that its request was only partly addressed, and requested that Natural Resources Canada provide the material on which its assessment was based.

[275] In reply to Squamish's motion to compel a further answer, Natural Resources Canada responded:

> In the context of the current hearing process, it is the view of [the Major Projects Management Office] that the further information and records sought by Squamish Nation will not be of assistance to the Panel in fulfilling its mandate.
>
> However, the Crown will communicate with the Squamish Nation in August 2015 to provide further information on Phase III Crown consultation and the Crown's approach to considering adverse impacts of the Project on potential or established Aboriginal and treaty rights. This forthcoming correspondence will summarize the Crown's understanding of the strength of Squamish Nation's claim for rights and title.

[276] The Board denied Squamish's request for a fuller answer on the primary ground that the information Squamish sought "would not contribute to the record in any substantive way and, therefore, would not be material to the Board's assessment."

[277] Given the mandate of the Board, the iterative nature of the consultation process and the fact that direct Crown consultation would take place in Phase III following the release of the Board's report, Squamish has not shown that it was a breach of procedural fairness for the Board not to compel a fuller answer to its question.

(v) The asserted deferral and delegation of the assessment of important information

[278] The City of Burnaby next argues that the Board impermissibly deferred "the provision of critically important information to after the Report stage, and after the [Governor in Council's decision]" (memorandum of fact and law, paragraph 164). Burnaby says that by doing so, the Board acted contrary to the statutory regime and breached the principle of *delegatus non potest*

delegare. At this point in its submissions, Burnaby did not suggest what specific aspect of the statutory regime was contravened, or how the Board or the Governor in Council improperly delegated their statutory responsibility. At this stage, Burnaby deals with this as an issue of procedural fairness. I deal with the statutory scheme argument commencing at paragraph 322.

[279] Burnaby points to a number of issues where it alleges that the Board failed to weigh the evidence and expert opinions put before it. Burnaby says:

- It provided expert evidence that the Project presents serious and unacceptable safety risks to the neighbourhoods that are proximate to the Burnaby Terminal as a result of fire, explosion and boil-over, and that Trans Mountain had failed to assess these risks.
- It established gaps in Trans Mountain's geotechnical investigation of the tunnel option and a lack of analysis of the feasibility of the tunnel option.
- It identified significant information gaps with respect to the Westridge Marine Terminal, including gaps concerning: the final design; spill risk; fire risk; geotechnical risk; and, the ability to respond to these risks.
- It adduced evidence that the available fire response resources were inadequate.
- It demonstrated the risk to Simon Fraser University following an incident at the Burnaby Terminal because of the tunnel's proximity to the only evacuation route from the University.

[280] Burnaby argues that the Board declined to compel further information from Trans Mountain on these points, and instead imposed conditions that required Trans Mountain to do certain specified things in the future. For example, the Board imposed conditions requiring Trans Mountain to file with the Board for approval a report to revise the terminal risk assessments, including the Burnaby Terminal risk assessment, to include consideration of the risks not assessed (Board Conditions 22 and 129). Board Condition 22 had to be met at least six months

before Trans Mountain commenced construction; Condition 129 had to be met at least three months before Trans Mountain applied to open each terminal. Burnaby also notes that many conditions imposed by the Board were not subject to subsequent Board approval.

[281] Burnaby argues that this process prevented meaningful testing of information filed after the Board issued its report recommending that the Project be approved. Further, the Governor in Council did not have access to the material to be filed in response to the Board's conditions when it made its determination of the public interest.

[282] Underpinning these arguments is Burnaby's assertion that the "Board's rulings deprived Burnaby of the ability to review and assess the validity of the alternatives assessment (or to confirm that one was made)." (memorandum of fact and law, paragraph 41).

[283] I can well understand Burnaby's concern—the consequence of a serious spill or explosion and fire in a densely populated metropolitan area might be catastrophic. However, in my respectful view, Burnaby's understandable desire to be able to independently review and assess the validity of the assessment of alternatives to the expansion of the Westridge Marine Terminal, or other matters that affect the City, is inconsistent with the regulatory scheme enacted by Parliament. Parliament has vested in the Board the authority and responsibility to consider and then make recommendations to the Governor in Council on matters of public interest; the essence of the Board's responsibility is to balance the Project-related benefits against the Project-related burdens and residual burdens, and to then make recommendations to the Governor in Council. In this legislative scheme, the Board is not required to facilitate an interested party's

independent review and assessment of a project. It is not for this Court to opine on the appropriateness of the policy expressed and implemented in the *National Energy Board Act*. Rather, the Court's role is to apply the legislation as Parliament has enacted.

[284] The Supreme Court has recognized the Board's "expertise in the supervision and approval of federally regulated pipeline projects" and described the Board to be "particularly well positioned to assess the risks posed by such projects". The Supreme Court went on to note the Board's "broad jurisdiction to impose conditions on proponents to mitigate those risks" and to acknowledge that it is the Board's "ongoing regulatory role in the enforcement of safety measures [which] permits it to oversee long-term compliance with such conditions" (*Chippewas of the Thames First Nation*, paragraph 48). While the Supreme Court was particularly focused on the Board's expertise in the context of its ability to assess risks posed to Indigenous groups, the Board's expertise extends to the full range of risks inherent in the operation of a pipeline, including the risks raised by Burnaby.

[285] Burnaby's submission must be assessed in the light of the Board's approval process. I will set out the Board's approval process at some length because of the importance of this issue to the City of Burnaby and other applicants.

[286] The Board described its approval process in Section 1.3 of its report:

> Trans Mountain's Application was filed while the Project was at an initial phase of the regulatory lifecycle, as is typical of applications under section 52 of the NEB Act. As set out in the Board's Filing Manual, the Board requires a broad range of information when a section 52 application is filed. At the end of the hearing, the level of information available to the Board must be sufficient to allow it to make a recommendation to the GIC that the Project is or is not in the public

interest. There also must be sufficient information to allow the Board to draft conditions that would attach to any new and amended CPCNs, and other associated regulatory instruments (Instruments), should the Project be approved by the GIC.

The Board does not require final information about every technical detail during the application stage of the regulatory process. For example, much of the information filed with respect to the engineering design would be at the conceptual or preliminary level. Site-specific engineering information would not be filed with the Board until after the detailed routing is confirmed, which would be one of the next steps in the regulatory process should the Project be approved. Completion of the detailed design of the project, as well as subsequent construction and operations, would have to comply with:

- the NEB Act, regulations, including the National Energy Board Onshore Pipeline Regulations (OPR), referenced standards and applicable codes;

- the company's conceptual design presented, and commitments made in the Application and hearing proceedings; and

- conditions which the Board considers necessary.

The Board may impose conditions requiring a company to submit detailed information for review (and in some cases, for approval) by the Board before the company is permitted to begin construction. Further information, such as pressure testing results, could be required in future leave to open applications before a company would be permitted to begin pipeline operations. In compliance with the OPR, a company is also required to fully develop an emergency response plan prior to beginning operations. In some cases, the Board has imposed conditions with specific requirements for the development, content and filing of the emergency response plan (see Table 1). This would be filed and fully assessed at a condition compliance stage once detailed routing is known. Because the detailed routing information is necessary to perform this assessment, it would be premature to require a fully detailed emergency response plan to be filed at the time of the project application.

While the project application stage is important, as set out in Chapter 3, there are further detailed plans, studies and specifications that are required before the project can proceed. Some of these are subject to future Board approval, and others are filed with the Board for information, disclosure, and/or future compliance enforcement purposes. The Board's recommendation on the project application is not a final determination of all issues. While some hearing participants requested the final detailed engineering or emergency response plans, the Board does not require further detailed information and final plans at this stage of the regulatory lifecycle.

> To set the context for its reasons for recommendation, the Board finds it helpful to identify the fundamental consideration used in reaching any section 52 determination. The overarching consideration for the Board's public interest determination at the application stage is: can this pipeline be constructed, operated and maintained in a safe manner. The Board found this to be the case. While this initial consideration is fundamental, a finding that a pipeline could be constructed, operated and maintained in a safe manner does not mean a pipeline is necessarily in the public interest as there are other considerations that the Board must weigh, as discussed below. However, the analysis would go no further if the answer to this fundamental question were answered in the negative, as an unsafe pipeline can never be in the public interest.
>
> (underlining added, footnote omitted)

[287] The Board went on to describe how projects are regulated through their lifecycle in Chapter 3, particularly in Sections 3.1 to 3.5:

> 3.0 Regulating through the Project lifecycle
>
> The approval of a project, through issuance of one or more Certificate of Public Convenience and Necessity (CPCN) and/or orders incorporating applicable conditions, forms just one phase in the Board's lifecycle regulation. The Board's public interest determination relies upon the subsequent execution of detailed design, construction, operation, maintenance and, ultimately, abandonment of a project in compliance with applicable codes, commitments and conditions, such as those discussed in Chapter 1. Throughout the lifecycle of an approved project, as illustrated in Figure 4, the Board holds the pipeline company accountable for meeting its regulatory requirements in order to keep its pipelines and facilities safe and secure, and protect people, property and the environment. To accomplish this, the Board reviews or assesses condition filings, tracks condition compliance, verifies compliance with regulatory requirements, and employs appropriate enforcement measures where necessary to quickly and effectively obtain compliance, prevent harm, and deter future non-compliance.
>
> After a project application is assessed and the Board makes its section 52 recommendation (as described in Chapter 2, section 2.1), the project cannot proceed until and unless the Governor in Council approves the project and directs the Board to issue the necessary CPCN. If approved, the company would then prepare plans showing the proposed detailed route of the pipeline and notify landowners. A detailed route hearing may be required, subject to section 35 of the *National Energy Board Act* (NEB Act). The company would also proceed with the detailed design of the project and could be required to undertake additional studies, prepare plans or meet other requirements pursuant to NEB conditions on any CPCN or related NEB order. The company would be required to comply with

all conditions to move forward with its project, prior to and during construction, and before commencing operations. While NEB specialists would review all condition filings, those requiring approval of the Board would require this approval before the project could proceed.

Once construction is complete, the company would need to apply for the Board's permission (or "leave") to open the project and begin operations. While some conditions may apply for the life of a pipeline, typically the majority must be satisfied prior to beginning operations or within the first few months or years of operation. However, the company must continue to comply with the *National Energy Board Onshore Pipeline Regulations* (OPR) and other regulatory requirements to operate the pipeline safely and protect the environment.

…

If the Project is approved, the Board would employ its established lifecycle compliance verification and enforcement approach to hold Trans Mountain accountable for implementing the proposed conditions and other regulatory requirements during construction, and the subsequent operation and maintenance of the Project.

3.1 Condition compliance

If the Project is approved and Trans Mountain decides to proceed, it would be required to comply with all conditions that are included in the CPCNs and associated regulatory instruments (Instruments). The types of filings that would be required to fulfill the conditions imposed on the Project, if approved, are summarized in Table 4.

If the Project is approved, the Board would oversee condition compliance, make any necessary decisions respecting such conditions, and eventually determine, based on filed results of field testing, whether the Project could safely be granted leave to open.

Documents filed by Trans Mountain on condition compliance and related Board correspondence would be available to the public on the NEB website. All condition filings, whether or not they are for approval, would be reviewed and assessed to determine whether the company has complied with the condition, and whether the filed information is acceptable within the context of regulatory requirements and standards, best practices, professional judgement and the goals the condition sought to achieve. If a condition is "for approval," the company must receive formal approval, by way of a Board letter, for the condition to be fulfilled.

If a filing fails to fulfill the condition requirements or is determined to be inadequate, the Board would request further information or revisions from the company by a specified deadline, or may direct the company to undertake additional steps to meet the goals that the condition was set out to achieve.

> 3.2 Construction phase
>
> During construction, the Board would require Trans Mountain to have qualified inspectors onsite to oversee construction activities. The Board would also conduct field inspections and other compliance verification activities (as described in section 3.5) to confirm that construction activities meet the conditions of the Project approval and other regulatory requirements, to observe whether the company is implementing its own commitments and to monitor the effectiveness of the measures taken to meet the condition goals, and ensure worker and public safety and protection of the environment.
>
> 3.3 Leave to open
>
> If the Project is approved and constructed, the Board will require Trans Mountain to also apply, under section 47 of the NEB Act, for leave to open the pipelines and most related facilities. This is a further step that occurs after conditions applicable to date have been met and the company wishes to begin operating its pipeline and facilities. The Board reviews the company's submissions for leave to open, including the results of field pressure testing, and may seek additional information from the company. Before granting leave to open, the Board must be satisfied that the pipeline or facility has been constructed in compliance with requirements and that it can be operated safely. The Board can impose further terms and conditions on a leave to open order, if needed.
>
> (underlining added, figures and tables omitted)

[288] In Section 3.5 the Board set out its compliance and enforcement programs noting that:

> While all companies are subject to regulatory oversight, some companies receive more than others. In other words, high consequence facilities, challenging projects and those companies who are not meeting the Board's regulatory expectations and goals can expect to see the Board more often than those companies and projects with routine operations.

[289] No applicant challenged the accuracy of the Board's formulation of its approval process and subsequent compliance verification and enforcement approach. The City of Burnaby has not shown how the Board's multi-step approval process is either procedurally unfair or an improper delegation of authority. Implicit in the Board's imposition of a condition, such as a condition requiring a revised risk assessment, or a condition requiring information regarding tunnel

location, construction methods, and the like, is the Board's expectation that the condition may realistically be complied with, and that compliance with the condition will allow the pipeline to be constructed, operated and maintained in a safe manner. Also implicit in the Board's imposition of a condition is its understanding of its ability to assess condition filings (whether or not the condition requires formal approval), and its ability to oversee compliance with its conditions.

[290] Transparency with respect to Trans Mountain's compliance with conditions is provided by the Board publishing on its website all documents filed by Trans Mountain relating to condition compliance and all related, responsive Board correspondence.

[291] As for the role of the Governor in Council in such a tiered approval process, the recitals to the Order in Council show that the Board's conditions were placed before the Governor in Council. Therefore, the Governor in Council must be seen to have been aware of the extent of the matters left for future review by the Board, and to have accepted the Board's assessment and recommendation about the public interest on that basis.

(vi) Failing to provide adequate reasons

[292] The City of Burnaby next argues that the Board erred by failing to provide sufficient reasons on the following issues:

a. alternative means of carrying out the Project;
b. risks relating to fire and spills (including seismic risk);
c. the suitability of the Burnaby Mountain Tunnel;
d. the protection of municipal water sources; and,

e. whether, and on what basis, the Project is in the public interest.

[293] I begin my analysis by noting that the adequacy of reasons is not a "stand-alone basis for quashing a decision". Rather, reasons are relevant to the overall assessment of reasonableness. Further, reasons "must be read together with the outcome and serve the purpose of showing whether the result falls within a range of possible outcomes." (*Newfoundland and Labrador Nurses' Union v. Newfoundland and Labrador (Treasury Board)*, 2011 SCC 62, [2011] 3 S.C.R. 708, at paragraph 14).

[294] This is consistent with the Court's reasoning in *Dunsmuir* where the Supreme Court explained the notion of reasonableness review and spoke of the role reasons play in reasonableness review:

> [47] Reasonableness is a deferential standard animated by the principle that underlies the development of the two previous standards of reasonableness: certain questions that come before administrative tribunals do not lend themselves to one specific, particular result. Instead, they may give rise to a number of possible, reasonable conclusions. Tribunals have a margin of appreciation within the range of acceptable and rational solutions. A court conducting a review for reasonableness inquires into the qualities that make a decision reasonable, referring both to the process of articulating the reasons and to outcomes. In judicial review, reasonableness is concerned mostly with the existence of justification, transparency and intelligibility within the decision-making process. But it is also concerned with whether the decision falls within a range of possible, acceptable outcomes which are defensible in respect of the facts and law.
>
> [48] The move towards a single reasonableness standard does not pave the way for a more intrusive review by courts and does not represent a return to pre-*Southam* formalism. In this respect, the concept of deference, so central to judicial review in administrative law, has perhaps been insufficiently explored in the case law. What does deference mean in this context? Deference is both an attitude of the court and a requirement of the law of judicial review. It does not mean that courts are subservient to the determinations of decision makers, or that courts must show blind reverence to their interpretations, or that they may be content to pay lip service to the concept of reasonableness review while in fact imposing their own view. Rather, deference imports respect for the decision-making process

> of adjudicative bodies with regard to both the facts and the law. The notion of deference "is rooted in part in a respect for governmental decisions to create administrative bodies with delegated powers" *(Canada (Attorney General) v. Mossop*, 2008 SCC 9, [1993] 1 S.C.R. 554, at p. 596, *per* L'Heureux-Dubé J., dissenting). We agree with David Dyzenhaus where he states that the concept of "deference as respect" requires of the courts "not submission but a respectful attention to the reasons offered or which could be offered in support of a decision": "The Politics of Deference: Judicial Review and Democracy", in M. Taggart, ed., *The Province of Administrative Law* (1997), 279, at p. 286 (quoted with approval in *Baker*, at para. 65, *per* L'Heureux-Dubé J.; *Ryan*, at para. 49).
>
> (underlining added)

[295] Reasons need not include all of the relevant arguments, statutory provisions or jurisprudence. A decision-maker need not make an explicit finding on each constituent element leading to the final conclusion. Reasons are adequate if they allow the reviewing court to understand why the decision-maker made its decision and permit the reviewing court to determine whether the conclusion is within the range of acceptable outcomes.

[296] I now turn to consider Burnaby's submissions in the context of the Board's reasons.

Alternative means of carrying out the Project

[297] Burnaby's concern about alternative means of carrying out the Project centers on the Board's treatment of alternative locations for the marine terminal. In Section 11.1.2 the Board dealt with the requirement imposed by paragraph 19(1)(*g*) of the *Canadian Environmental Assessment Act, 2012* that an environmental assessment of a designated project must take into account "alternative means of carrying out the designated project that are technically and economically feasible". The views of the Board are expressed in this section on pages 244 through 245.

[298] Of particular relevance to Burnaby's concern are the first two paragraphs of the Board's reasons:

> The Board finds that Trans Mountain's route selection process, route selection criteria, and level of detail for its alternative means assessment are appropriate. The Board further finds that aligning the majority of the proposed pipeline route alongside, and contiguous to, existing linear disturbances is reasonable, as this would minimize the environmental and socio-economic impacts of the Project.
>
> The Board acknowledges the concern raised by the City of Burnaby that Trans Mountain did not provide an assessment of the risks, impacts and effects of the alternate marine terminal locations at Kitimat, B.C., or Roberts Bank in Delta, B.C. The Board finds that Trans Mountain has provided an adequate assessment, including consideration of technical, socio-economic and environmental effects, of technically and economically feasible alternative marine terminal locations.

[299] In my view, these reasons allowed the Governor in Council and allow this Court to know why the Board found Trans Mountain's assessment of alternative means to be adequate or appropriate—the Board accepted the facts conveyed by Trans Mountain and found that these facts provided an appropriately detailed consideration of the alternative means. In my further view, the reasons, when read with the record, also allow the Court to consider whether the Board's treatment of alternatives to the Westridge Marine Terminal were so materially flawed that the Board's report was not a "report" that the Governor in Council could rely upon. This is a substantive issue I deal with below commencing at paragraph 322.

Assessment of risks

[300] Burnaby's concerns about the assessment of risks centre on the Burnaby Terminal risk assessment, the Westridge Marine Terminal risk assessment, the Emergency Fire Response plan and the evacuation of Simon Fraser University.

Burnaby Terminal

[301] The Board's consideration of terminal expansions generally is found in Section 6.4 of its report. The Burnaby Terminal is discussed at pages 92 through 95 of the Board's report. After setting out the evidence, including Burnaby's evidence, at page 95 the Board expressed its reasons on the Burnaby Terminal as follows:

> The Burnaby Terminal is uphill of the neighborhood of Forest Grove. An issue of potential concern is the possibility, however remote, of a multiple-tank failure in a common impounding area exceeding the available secondary containment capacity under certain conditions. The Board would impose a condition requiring Trans Mountain to demonstrate that the secondary containment system would be capable of draining large spills away from Tank 96, 97 or 98 to the partial RI. Trans Mountain must also demonstrate that the secondary containment system has the capacity to contain a spill from a multiple-tank rupture scenario (Condition 24).
>
> The City of Burnaby and the City of Burnaby Fire Department raised concerns about fire and safety risks at the Burnaby Terminal following, in particular, those associated with boil-overs. Trans Mountain claimed that boil-over events are unlikely, yet did not quantify the risks through rigorous analysis. The Board is of the view that a complete assessment of risk requires consideration of the cumulative risk from all tanks at a terminal. The Board would impose conditions requiring Trans Mountain to revise the terminal risk assessments, including the Burnaby Terminal, to demonstrate how the mitigation measures will reduce the risks to levels that are As Low As Reasonably Practicable (ALARP) while complying with the Major Industrial Accidents Council of Canada (MIACC) criteria considering all tanks in each respective terminal (Conditions 22 and 129).

[302] With respect to the geotechnical design, the Board wrote at page 97:

> The Board acknowledges the concerns of participants regarding the preliminary nature of the geotechnical design evidence provided. However, the Board is of the view that the design information and the level of detail provided by Trans Mountain with respect to the geotechnical design for the Edmonton Terminal West Tank Area and the Burnaby Terminal are sufficient for the Board at the application stage. The Board notes that more extensive geotechnical work will be completed for the detailed engineering and design phase of the Project.
>
> …

> With regard to the selection of Seismic Use Group (SUG) for the design of the tanks, the Board notes that Trans Mountain has not made a final determination. Nevertheless, should the Project be approved, the Board will verify that Trans Mountain's tanks have secondary controls to prevent public exposure, in accordance with SUG I design criteria, by way of Conditions 22, 24 and 129.

[303] In my view, these reasons adequately allow the Court to understand why the Board rejected Burnaby's evidence and why it imposed the conditions it did.

Westridge Marine Terminal

[304] The Board dealt with the Westridge Marine Terminal expansion in Section 6.5 of its report.

[305] The Board expressed its views at pages 100 through 102. With respect to the design approach the Board wrote:

> Trans Mountain has committed to design, construct, and operate the Westridge Marine Terminal (WMT) in accordance with applicable regulations, standards, codes and industry best practices. The Board accepts Trans Mountain's design approach, including Trans Mountain's effort to eliminate two vapour recovery tanks in the expanded WMT by modifying the vapour recovery technology. The Board considers this to be a good approach for eliminating potential spills and fire hazards. The Board would impose Condition 21 requiring Trans Mountain to provide its decision as well as its rationale to either retain or eliminate the proposed relief tank.

[306] With respect to the geotechnical design, the Board wrote:

> The Board acknowledges the City of Burnaby's concern regarding the level of detail of the geotechnical information provided in the hearing for the Westridge Marine Terminal (WMT) offshore facilities. However, the Board is of the view that Trans Mountain has demonstrated its awareness of the requirements for the geotechnical design of the offshore facilities and accepts Trans Mountain's geotechnical design approach.

> To confirm that soil conditions have been adequately assessed for input to the final design of the WMT offshore facilities, the Board would impose conditions requiring Trans Mountain to file a final preliminary geotechnical report for the design of the offshore facilities, and the final design basis for the offshore pile foundation layout once Trans Mountain has selected the pile design (Conditions 34 and 83).
>
> To verify the geotechnical design approach for the WMT onshore facilities the Board would impose Condition 33 requiring Trans Mountain to file a preliminary geotechnical report for the onshore facilities prior to the commencement of construction.
>
> The Board would examine the geotechnical reports upon receipt and advise Trans Mountain of any further requirements for the fulfilment of the above conditions prior to the commencement of construction.

[307] I have previously dealt with Burnaby's concern with the Board's failure to compel further and better information from Trans Mountain at the hearing stage, and to instead impose conditions requiring Trans Mountain to do certain things in future. Burnaby's concerns relating to the assessment of risks centre on this approach taken by the Board. Burnaby has not demonstrated how the Board's reasons with respect to the Westridge Marine Terminal risk assessment are inadequate.

Emergency fire response

[308] The Board responded to Burnaby's concerns about adequate resources to respond to a fire as follows at page 156:

> The Board shares concerns raised by the City of Burnaby Fire Department and others about the need for adequate resources to respond in the case of a fire. The Board finds the 6-12 hour response time proposed by Trans Mountain for industrial firefighting contractors to arrive on site as inadequate, should they be needed immediately for a response to a fire at the Burnaby Terminal. The Board would impose conditions requiring Trans Mountain to complete a needs assessment with respect to the development of appropriate firefighting capacity for a safe, timely, and effective response to a fire at the Westridge Marine Terminal (WMT) and at the Edmonton, Sumas, and Burnaby Terminals. The

> conditions would require Trans Mountain to assess and evaluate resources and equipment to address fires, and a summary of consultation with appropriate municipal authorities and first responders that will help inform a Firefighting Capacity Framework (Conditions 118 and 138).

[309] Again, Burnaby's concern is not so much with respect to the adequacy of the Board's reasons, but rather with the Board's approach to dealing with Burnaby's concerns through the imposition of conditions—in this case conditions that do not require formal Board approval. On this last point, the Board's explanation of its process for the review of conditions supports the conclusion that an inadequate response to a condition, even a condition not requiring formal Board approval, would be detected by the Board's specialists. Further, the Board oversees compliance with the conditions it imposes.

[310] In any event, I see no inadequacy in the Board's reasons.

Suitability of the Burnaby Mountain Tunnel

[311] The Board deals with the Burnaby Mountain Tunnel in Sections 6.2.2 and 6.2.3. The Board's views, in part, are expressed as follows at pages 81 and 82:

> Regarding the City of Burnaby's concern with Trans Mountain's geotechnical investigation, the Board is of the view that the level of detail of the geotechnical investigation for the tunnel option is sufficient for the purpose of assessing the feasibility of constructing the tunnel. The Board notes that a second phase of drilling is planned for the development of construction plans at the tunnel portals, and that additional surface boreholes or probe holes could be drilled from the tunnel face during construction. The Board is of the view that both the tunnel and street options are technically feasible, and accepts Trans Mountain's proposal that the streets option be considered as an alternative to the tunnel option.
>
> The Board is not aware of the use of the concrete or grout-filled tunnel installation method for other hydrocarbon pipelines in Canada. The Board is concerned that damage to the pipe or coating may occur during installation of the pipelines or grouting, and that there will be limited accessibility for future maintenance and

> repairs. The Board is also concerned that there may be voids or that cracks could form in the grout. The Board would require Trans Mountain to address these and other matters, including excavation, pipe handing, backfilling, pressure testing, cathodic protection, and leak detection, through the fulfillment of Conditions 26, 27 and 28 on tunnel design, construction, and operation.
>
> The Board would impose Condition 29 regarding the quality and quantity of waste rock from the tunnel and Trans Mountain's plans for its disposal.
>
> The Board would also impose Condition 143 requiring Trans Mountain to conduct baseline inspections, including in-line inspection surveys, of the new delivery pipelines in accordance with the timelines and descriptions set out in the condition. The Board is of the view that these inspections would aid in mitigating any manufacturing and construction related defects, and in establishing re-inspection intervals.

[312] Burnaby has not demonstrated how these reasons are inadequate.

Protection of municipal water sources

[313] While Burnaby enumerated this as an issue on which the Board gave inadequate reasons, Burnaby made no submissions on this point and did not point to any particular section of the Board's reasons said to be deficient. In the absence of submissions on the point, Burnaby has not demonstrated the reasons to be inadequate.

Public interest

[314] Again, while Burnaby enumerated this issue as an issue on which the Board gave inadequate reasons, Burnaby made no submissions on the point.

[315] The Board's finding with respect to public interest is contained in Chapter 2 of the Board's report where, among other things, the Board described the respective benefits and burdens of the Project and then balanced the benefits and burdens in order to conclude that the

Project “is in the present and future public convenience and necessity, and in the Canadian public interest”. In the absence of submissions on the point, Burnaby has not demonstrated the reasons to be inadequate.

(vii) Trans Mountain’s reply evidence

[316] At paragraph 71 of its memorandum of fact and law, Tsleil-Waututh makes the bare assertion that the Board “permitted [Trans Mountain] to file improper reply evidence”. While Tsleil-Waututh referenced in a footnote its motion record filed in response to Trans Mountain’s reply evidence, it did not make any submissions on how the Board erred or how the reply evidence was improper. Nor did Tsleil-Waututh reference the Board’s reasons issued in response to its motion.

[317] Tsleil-Waututh argued before the Board that, rather than testing Tsleil-Waututh’s evidence through Information Requests, Trans Mountain filed extensive new or supplementary evidence in reply. Tsleil-Waututh alleged that the reply evidence was substantially improper in nature. Tsleil-Waututh sought an order striking portions of Trans Mountain’s reply evidence. In the alternative Tsleil-Waututh sought, among other relief, an order allowing it to issue Information Requests to Trans Mountain about its reply evidence and allowing it to file sur-reply evidence.

[318] The Board, in Ruling No. 96, found that Trans Mountain’s reply evidence was not improper. In response to the objections raised before it, the Board found that:

- Trans Mountain's reply evidence was not evidence that Trans Mountain ought to have brought forward as evidence-in-chief in order to meet its onus.
- Trans Mountain's reply evidence was filed in response to new evidence adduced by the interveners.
- Given the large volume of evidence filed by the interveners, the length of Trans Mountain's reply evidence was not a sufficient basis on which to find it to be improper.
- To the extent that portions of the reply evidence repeated evidence already presented, this caused no prejudice to the interveners who had already had an opportunity to test the evidence and respond to it.

[319] The Board allowed Tsleil-Waututh to test the reply evidence through one round of Information Requests. The Board noted that the final argument stage was the appropriate stage for interveners and Trans Mountain to make submissions to the Board about the weight to be given to the evidence.

[320] Tsleil-Waututh has not demonstrated any procedural unfairness arising from the Board's dismissal of its motion to strike portions of Trans Mountain's reply evidence.

(viii) Conclusion on procedural fairness

[321] For all the above reasons the applicants have not demonstrated that the Board breached any duty of procedural fairness.

(b) Did the Board fail to decide certain issues before recommending approval of the Project?

[322] Both Burnaby and Coldwater make submissions on this issue. Additionally, Coldwater, Squamish and Upper Nicola make submissions about the Board's failure to decide certain issues in the context of the Crown's duty to consult. The latter submissions will be considered in the analysis of the adequacy of the Crown's consultation process.

[323] Burnaby's and Coldwater's submissions may be summarized as follows.

[324] Burnaby raises two principal arguments: first, the Board failed to consider and assess the risks and impacts of the Project to Burnaby, instead deferring the collection of information relevant to the risks and impacts and consideration of that information until after the decision of the Governor in Council when Trans Mountain was required to comply with the Board's conditions; and, second, the Board failed to consider alternative means of carrying out the Project and their environmental effects. Instead, contrary to paragraph 19(1)(*g*) of the *Canadian Environmental Assessment Act, 2012*, the Board failed to require Trans Mountain to include with its application an assessment of the Project's alternatives and failed to require Trans Mountain to provide adequate answers in response to Burnaby's multiple Information Requests about alternatives to the Project.

[325] With respect to the first error, Burnaby asserts that it is a "basic principle of law that a tribunal or a court must weigh and decide conflicting evidence. It cannot defer determinations post-judgment." (Burnaby's memorandum of fact and law, paragraph 142). In breach of this

principle, the Board did not require Trans Mountain to provide further evidence, nor did the Board weigh or decide conflicting evidence. Instead, the Board deferred assessment of critical issues by imposing a series of conditions on Trans Mountain.

[326] With respect to the second error, Burnaby states that Trans Mountain failed to provide evidence about alternative routes and locations for portions of the Project, including the Burnaby Terminal and the Westridge Marine Terminal. Thus, Burnaby says the Board "had no demonstrated basis on the record to decide" about preferred options or to decide that Trans Mountain used "criteria that justify and demonstrate how the proposed option was selected and why it is the preferred option." (Burnaby's memorandum of fact and law, paragraph 133).

[327] Coldwater asserts that contrary to paragraph 19(1)(*g*) of the *Canadian Environmental Assessment Act, 2012*, the Board failed to look at the West Alternative as an alternative means of carrying out the Project. Briefly stated, the West Alternative is an alternative route for a segment of the new pipeline. The approved route for this segment of the new pipeline passes through the recharge zone of the aquifer that supplies the sole source of drinking water for 90% of the residents of the Coldwater Reserve and crosses two creeks which are the only known, consistent sources of water that feed the aquifer. The West Alternative is said by Coldwater to pose the least apparent danger to the aquifer.

[328] Trans Mountain responds that the Board considered the risks and impacts of the Project to Burnaby and determined that there was sufficient evidence to conclude that the Project can be constructed, operated and maintained in a safe manner. Further, it was reasonable for the Board

to implement conditions requiring Trans Mountain to submit additional information for Board review or approval throughout the life of the Project. This Court's role is not to reweigh evidence considered by the Board.

[329] Trans Mountain notes that the proponent's application and the subsequent Board hearing represent the process by which the Board collects enough information to ensure that a project can be developed safely and that its impacts are mitigated. At the end of the hearing, the Board requires sufficient information to assess the Project's impacts, and whether the Project can be constructed, operated and maintained safely, and to draft terms and conditions to attach to a certificate of public convenience and necessity, should the Governor in Council approve the Project. It follows that the Board did not improperly defer its consideration of Project impacts to the conditions.

[330] To the extent that some applicants suggest that the Board acted contrary to the "precautionary principle" Trans Mountain responds that the precautionary principle must be applied with the corollary principle of "adaptive management". Adaptive management responds to the difficulty, or impossibility, of predicting all of the environmental consequences of a project on the basis of existing knowledge. Adaptive management permits a project with uncertain, yet potentially adverse, environmental impacts to proceed based on mitigation measures and adaptive management techniques designed to identify and deal with unforeseen effects (*Canadian Parks and Wilderness Society v. Canada (Minister of Canadian Heritage)*, 2003 FCA 197, [2003] 4 F.C. 672, at paragraph 24).

[331] With respect to the assessment of alternative means, Trans Mountain notes that it presented evidence that it had conducted a feasibility analysis of alternative locations to the Westridge Marine Terminal and the Burnaby Terminal. Based on technical, economic and environmental considerations Trans Mountain had eliminated these options because of the significantly increased costs and larger environmental impacts associated with these alternatives.

[332] Trans Mountain also argues that it presented evidence to confirm that its routing criteria followed the existing pipeline alignment and other linear facilities wherever possible. Additionally, it presented various routing alternatives to the Board. Trans Mountain's preferred corridor through Burnaby Mountain was developed in response to requests that it consider a trenchless option through Burnaby Mountain (as opposed to routing the new pipeline through residential streets). Further, while it had initially considered the West Alternative route around the Coldwater Reserve, Trans Mountain rejected this alternative because it necessitated two crossings of the Coldwater River and involved geo-technical challenges and greater environmental disturbances.

[333] Based on the evidence before it the Board found that:

- Trans Mountain provided an adequate assessment of technically and economically feasible alternatives, including alternative locations;
- the Burnaby Mountain corridor minimized Project impacts and risks;
- Trans Mountain's route selection process and criteria, and the level of detail it provided for its alternative means assessment, were appropriate; and
- the Board imposed Condition 39 to deal with Coldwater's concerns regarding the aquifer. This condition required Trans Mountain to file with the Board, at least six months prior to commencing construction between two specified points, a

> hydrogeological report relating to Coldwater's aquifer. This report must describe, delineate and characterize a number of things. For example, based on the report's quantification of the risks posed to the groundwater supplies for the Coldwater Reserve, the report must "describe proposed measures to address identified risks, including but not limited to considerations related to routing, project design, operational measures, or monitoring".

[334] Trans Mountain submits that while the applicants disagree with the Board's finding about the range of alternatives, the Board has discretion to determine the range of alternatives it must consider and it is not this Court's role to reweigh the Board's assessment of the facts.

(i) Did the Board fail to assess the risks and impacts posed by the Project to Burnaby?

[335] At paragraphs 278 to 291 I dealt with Burnaby's argument that the Board breached the duty of procedural fairness by deferring and delegating the assessment of important information. This argument covers much of the same ground, except it is not couched in terms of procedural fairness.

[336] The gist of Burnaby's concern is reflected in its argument that "[i]t is a basic principle of law that a tribunal or court must weigh and decide conflicting evidence. It cannot defer determinations post-judgment."

[337] This submission is best considered in concrete terms. The risks the Board is said not to have assessed are the risks posed by the Burnaby Terminal, the tunnel route through Burnaby Mountain, the Westridge Marine Terminal, the lack of available emergency fire response

resources to respond to a fire at the Westridge Marine and Burnaby terminals and, finally, the risk in relation to the evacuation of Simon Fraser University following an incident at the Burnaby Terminal. Illustrative of Burnaby's concerns is its specific and detailed argument with respect to the assessment of the risk associated with the Burnaby Terminal.

[338] With respect to the assessment of the risks associated with the Burnaby Terminal, Burnaby points to the report of its expert, Dr. Ivan Vince, which identified deficiencies or information gaps in Trans Mountain's risk assessment for the Burnaby Terminal. A second report prepared by Burnaby's Deputy Fire Chief identified gaps in Trans Mountain's analysis of fire risks and fire response capability.

[339] Burnaby acknowledges that the Board recognized these gaps and deficiencies. Thus, it found that while Trans Mountain claimed that boil-over events are unlikely, Trans Mountain "did not quantify the risks through a rigorous analysis" and that "a complete assessment of risk requires consideration of the cumulative risk from all tanks at a terminal". Burnaby argues, however, that despite recognizing this deficiency, the Board then failed to require Trans Mountain to provide further information and assessment prior to the issuance of the Board's report. Instead, the Board imposed conditions requiring Trans Mountain to file for the Board's approval a report revising the terminal risk assessments, including the Burnaby Terminal risk assessment, and including consideration of the risks not assessed (Conditions 22 and 129).

[340] Condition 22 specifically required the revised risk assessment to quantify and/or include the following:

a. the effect of any revised spill burn rates;
b. the potential consequences of a boil-over;
c. the potential consequences of flash fires and vapour cloud explosions;
d. the cumulative risk based on the total number of tanks in the terminal, considering all potential events (pool fire, boil-over, flash fire, vapour cloud explosion);
e. the domino (knock-on) effect caused by a release of the contents of one tank on other tanks within the terminals and impoundment area(s), or other tanks in adjacent impoundment areas; and,
f. risk mitigation measures, including ignition source control methods.

[341] The Board required that for those risks that could not be eliminated "Trans Mountain must demonstrate in each risk assessment that mitigation measures will reduce the risks to levels that are As Low As Reasonably Practicable (ALARP) while complying with the Major Industrial Accidents Council of Canada (MIACC) criteria for risk acceptability."

[342] Burnaby concludes its argument on this point by stating that this demonstrates that when the Board completed its report and made its recommendation to the Governor in Council the Board did not have information on the risks enumerated in Condition 22, or information on whether these risks could be mitigated. It follows, Burnaby submits, that the Board failed in its duty to weigh and decide conflicting evidence.

[343] Burnaby advances similar arguments in respect of the other risks described above.

[344] In my view, Burnaby's argument illustrates that the Board did look critically at the competing expert evidence about risk assessment. After weighing the competing expert reports, the Board determined that Burnaby's evidence did reveal gaps and deficiencies in Trans

Mountain's risk assessments. Burnaby's real complaint is not that the Board did not consider and weigh conflicting evidence. Rather, its complaint is that the Board did not then require Trans Mountain to in effect re-do its risk assessment.

[345] However this, in my respectful view, overlooks the Board's project approval process, a process described in detail at paragraphs 285 to 287 above.

[346] This process does not require a proponent to file in its application information about every technical engineering detail. What is required is that by the end of the Board's hearing the Board have sufficient information before it to allow it to form its recommendation to the Governor in Council about whether the project is in the public interest and, if approved, what conditions should attach to the project. Included in the consideration of the public interest is whether the project can be constructed, operated and maintained safely.

[347] This process reflects the technical complexity of projects put before the Board for approval. What was before the Board for consideration was Trans Mountain's study and application for approval of a 150 metre-wide pipeline corridor for the proposed pipeline route. At the hearing stage much of the information filed with the Board about the engineering design was at a conceptual or preliminary level.

[348] Once a project is approved, one of the next steps in the regulatory process is a further hearing for the purpose of confirming the detailed routing of a project. Only after the detailed route is approved by the Board can site-specific engineering information be prepared and filed

with the Board. Similarly, detailed routing information is necessary before things such as a fully detailed emergency response plan acceptable to the Board may be prepared and filed (report, page 7).

[349] The Board describes the approval of a project to be "just one phase" in the Board's lifecycle regulation. Thereafter the Board's public interest determination "relies upon the subsequent execution of detailed design, construction, operation, maintenance and, ultimately, abandonment of a project in compliance with applicable codes, commitments and conditions" (report, page 19).

[350] As stated above, implicit in the Board's imposition of a condition is the Board's expert view that the condition can realistically be complied with, and that compliance with the condition will allow the pipeline to be constructed, operated and maintained in a safe manner. After the Board imposes conditions, mechanisms exist for the Board to assess information filed in response to its conditions and to oversee compliance with its conditions.

[351] Burnaby obviously disagrees with the Board's assessment of risk. However, Burnaby has not shown that the Board's approval process is in any way contrary to the legislative scheme. Nor has it demonstrated that the approval process impermissibly defers determinations post-judgment. Courts cannot determine issues after a final judgment is rendered because of the principle of *functus officio*. While this principle has some application to administrative decision-makers it has less application to the Board whose mandate is ongoing to regulate through a project's entire lifecycle.

(ii) Did the Board fail to consider alternative means of carrying out the Project?

[352] As explained above, Burnaby's concern is that Trans Mountain did not provide sufficient information to allow the Board to conclude that Trans Mountain's assessment of alternatives was adequate. Burnaby says that the Board simply accepted Trans Mountain's unsupported assertion that the alternatives would result in "significantly greater cost, larger footprint and additional environmental effects, as compared to expanding existing facilities" without testing Trans Mountain's assertion. Burnaby argues that evidence is required to support that assertion "so that the evidence may be tested by intervenors and weighed by the Board in determining whether the preferred location is the best environmental alternative and in the public interest." (Burnaby's memorandum of fact and law, paragraph 136).

[353] I begin consideration of Burnaby's submission with the observation that Burnaby's challenge is a challenge to the Board's assessment of the sufficiency of the evidence before it. The Board, as an expert Tribunal, is entitled to significant deference when making such a fact-based assessment.

[354] Moreover, in my respectful view, Burnaby's submission fails to take into account that paragraph 19(1)(*g*) of the *Canadian Environmental Assessment Act, 2012* does not require the Board to have regard to any and all alternative means of carrying out a designated project. The Board is required to consider only those alternative means that are "technically and economically feasible".

[355] While Burnaby relies upon guidance from the Canadian Environmental Assessment Agency as to the steps to be followed in the assessment of alternative means, and also relies upon the guidance set out in the Board's Filing Manual about the filing requirements for the consideration of alternatives, these criteria apply only to the treatment of true alternatives, that is alternatives that are technically and economically feasible.

[356] I now turn to Burnaby's specific concern that the Board simply accepted Trans Mountain's assertion that Project alternatives would result in "significantly greater cost, larger footprint and additional environmental effects, as compared to expanding existing facilities" without testing this assertion. Burnaby argues that the Board was obliged to require that Trans Mountain provide evidence about alternative routes and locations for the Burnaby Terminal and the Westridge Marine Terminal so that the evidence could be tested by it and other interveners.

[357] The impugned quotation comes from Trans Mountain's response to Burnaby's first Information Request (Exhibit H to the affidavit of Derek Corrigan). As previously referred to above at paragraph 269, in addition to Burnaby's Information Requests, the Board also served two Information Requests on Trans Mountain questioning it about alternative marine terminals.

[358] The preamble to the Board's second Information Request referenced Trans Mountain's first response to the Board in which it stated that it had considered potential alternative marine terminal locations based on the feasibility of coincident marine and pipeline access, and screened them based on technical, economic, and environmental considerations. The preamble also referenced Trans Mountain's response that it had ultimately concluded that constructing and

operating a new marine terminal and supporting infrastructure would result in significantly greater cost, a larger footprint and significantly greater environmental effects as compared to the existing facilities. Based on this conclusion Trans Mountain did not continue with a further assessment of alternative termini for the Project.

[359] One of the specific inquiries directed to Trans Mountain by the Board in its second Information Request was:

> Please elaborate on Trans Mountain's rationale for the Westridge Marine Terminal as the preferred alternative, including details to justify Trans Mountain's statement in [Trans Mountain's response to the Board's first Information Request] that constructing and operating a new marine terminal and supporting infrastructure would result in significantly greater cost, a larger footprint, and additional environmental effects, as compared to expanding existing facilities.

[360] In its response to the Board, Trans Mountain began by explaining the consideration it had given the option of a northern terminal. Trans Mountain's assessment ultimately "favoured expansion of the existing system south over a new northern lateral [pipeline] and terminal." This assessment was based on the following considerations. The northern option involved:

- A 250 kilometre longer pipeline with a concomitant 10% to 20% higher project capital cost.
- Greater technical challenges, including routing through high alpine areas of the Coast Mountains, or extensive tunneling to avoid these areas. These technical challenges, while not determined to be insurmountable, resulted in greater uncertainty for both cost and construction schedule.
- Fewer opportunities to benefit from existing operations, infrastructure and relationships. These benefits involved both using the existing Trans Mountain right-of-way, facilities, programs and personnel, and the synergies flowing from other existing infrastructure such as road access, power, and marine infrastructure.

> The inability to benefit from existing operations would increase the footprint and the potential impact of the northern option.

[361] Based on these considerations, Trans Mountain concluded that expansion along the existing Trans Mountain pipeline route was the more favourable option because of the higher costs and the greater uncertainty of both cost and schedule that accompanied the northern option.

[362] Trans Mountain then turned to explain its consideration of the alternative southern terminals. Five southern alternative locations were considered: (i) Howe Sound, which was eliminated because there was no feasible pipeline access west of Hope, it would require a new lateral pipeline from the Kamloops area, it involved extreme terrain and there was limited land available in close proximity for storage facilities; (ii) Vancouver Harbour, which was eliminated because there were no locations with coincident feasible pipeline access and no land for storage facilities; (iii) Sturgeon Bank, which was eliminated because there was no feasible land available in close proximity for storage facilities; (iv) Washington State, which was eliminated because it involved a longer pipeline and complex regulatory issues (including additional permits required by both Washington State and federal authorities); and, (v) Boundary Bay, which was eliminated because of insufficient water depth.

[363] This left for consideration Roberts Bank. Trans Mountain conducted a screening level assessment based on “desktop studies” of technical, economic and environmental considerations for marine access, storage facilities and pipeline routing for a terminal at that location.

[364] After setting out the assumed technical configuration for the Roberts Bank dock, storage and pipeline, Trans Mountain reviewed the engineering and geotechnical considerations. While no unsurmountable engineering or geotechnical issues were identified, Trans Mountain's assessment showed that relative to the Westridge Marine Terminal, the Roberts Bank alternative "required a significantly larger dock structure, a large new footprint for the storage terminal, a longer right of way, and a greater diversion from the existing corridor. The extent and cost of ground improvement necessary for the dock and storage terminal also presented a significant source of uncertainty."

[365] Trans Mountain then reviewed the relevant environmental considerations. Trans Mountain's assessment showed that while both Westridge and Roberts Bank:

> … have unique and important environmental values, based on the setting the environmental conditions at Roberts Bank appeared to be more substantial and uncertain than at Westridge Terminal, particularly given the larger footprint required for the dock and storage terminal. Without effective mitigation accidents or malfunctions at Roberts Bank could result in greater and more immediate consequences for the natural [environment].

[366] Trans Mountain then detailed the salient First Nations' considerations. For the purpose of the screening assessment, Trans Mountain assumed First Nation concerns and interests to be similar to those for the Westridge Terminal and likely to include concerns for impacts on traditional rights, environmental protection, and potential interest in economic opportunities.

[367] Trans Mountain then reviewed the land use considerations, concluding that relative to the Westridge Terminal "the Roberts Bank alternative would result in a greater change in land use both for the storage terminal and the dock structure. As surrounding development is less than that

for Westridge accidents or malfunctions at this location would be expected to affect fewer people."

[368] Trans Mountain's assessment next looked to the estimated cost differences. While operating costs were not quantified for comparison purposes, "given the additional dock and storage terminal required these costs would be higher for the Roberts Bank alternative."

[369] The assessment then looked at marine access considerations. While Roberts Bank offered a shorter and relatively less complex marine transit:

> [T]here is an existing well established marine safety system for vessels calling at Westridge. Although Roberts Bank would allow service to larger vessels which would result in potentially lower transport costs for shippers and lower probability of oil spill accidents larger cargos result in potentially larger spill volumes. While the overall effect on marine spill risk was not determined it is expected that larger cargos would require a greater investment in spill response.

[370] Trans Mountain then set out the conclusions it drew from its assessment. While the Westridge and Roberts Bank terminal alternatives each had positive and negative attributes, especially when viewed from any one perspective, overall Trans Mountain's rationale for the Westridge Marine Terminal as a preferred alternative was based on the expectation that Roberts Bank would result in:

- Significantly greater cost—Trans Mountain estimated a $1.2 billion higher capital cost and assumed higher operating costs for the Roberts Bank alternative.
- A larger footprint and additional environmental effects—Roberts Bank would result in an additional storage terminal with an estimated 100 acres of land required, a larger dock structure with a 7 kilometre trestle, and a 14 kilometre longer pipeline that diverges further from the existing pipeline corridor.

[371] I have set out Trans Mountain's response to the Board at some length because of the importance of this issue to Burnaby. In my view, two points arise from Trans Mountain's response to the Board.

[372] First, its response was not as conclusory as Burnaby's submission might suggest. Second, Trans Mountain's explanation for eliminating a northern alternative and the six, southern alternatives on the ground they were not technically or economically feasible was based on factual and technical considerations well within the expertise of the Board. To illustrate, the Board would have an understanding of the technical challenges posed when routing through high alpine areas. It would also be familiar with considerations such as the expense and environmental impact that accompany the construction of a longer pipeline, away from an existing pipeline corridor, or a new storage facility. The Board would have an appreciation of the need for coincident pipeline access and land for storage facilities and of the efficiencies that flow from things such as the use of existing infrastructure and relationships.

[373] In relevant part, the Board's conclusion on alternative means was:

> The Board finds that Trans Mountain's route selection process, route selection criteria, and level of detail for its alternative means assessment are appropriate. The Board further finds that aligning the majority of the proposed pipeline route alongside, and contiguous to, existing linear disturbances is reasonable, as this would minimize the environmental and socio-economic impacts of the Project.
>
> The Board acknowledges the concern raised by the City of Burnaby that Trans Mountain did not provide an assessment of the risks, impacts and effects of the alternate marine terminal locations at Kitimat, B.C., or Roberts Bank in Delta, B.C. The Board finds that Trans Mountain has provided an adequate assessment, including consideration of technical, socio-economic and environmental effects, of technically and economically feasible alternative marine terminal locations.
>
> (underlining added)

[374] Burnaby has not demonstrated that the Board's finding that Trans Mountain provided an appropriate level of detail in its alternative means assessment was flawed. This was a fact-based assessment well within the Board's area of expertise.

(iii) Did the Board fail to look at the West Alternative as an alternative route for the new pipeline?

[375] In its project application, Trans Mountain initially proposed four alternative routes for the new pipeline through the Coldwater River Valley. These were referred to as the Modified Reserve Route, the East Alternative, the Modified East Alternative and the West Alternative. While initially its preferred route was identified to be the East Alternative, Trans Mountain later changed its preferred route to be the Modified East Alternative. Coldwater alleges that at some point early in the process Trans Mountain unilaterally withdrew the West Alternative from consideration without notice to Coldwater. Coldwater also alleges that the East and Modified East Alternatives pose the greatest risk of contaminating the aquifer that supplies drinking water to the Coldwater Reserve, and that the West Alternative is the only route to pose no apparent threat to the aquifer.

[376] Before the Board, Coldwater argued that Trans Mountain did not adequately assess alternative locations for the new pipeline through the Coldwater River Valley. Coldwater requested that the Board require a re-examination of routing options for the Coldwater River Valley before any recommendation on the Project was made.

[377] The Board, in its report, acknowledged Coldwater's concerns at pages 241, 285 and 289.

[378] The Board noted, at page 245, that "the detailed route for the Project has not been finalized, and that this hearing assessed the general route for the Project, the potential environmental and socio-economic effects of the Project, as well as all evidence and commitments made by Trans Mountain regarding the design, construction and safe operation of the pipeline and associated facilities."

[379] At page 290 the Board found that Trans Mountain had not sufficiently shown that there was no potential interaction between the aquifer underlying the Coldwater Reserve and the proposed Project route. Therefore, the Board imposed Condition 39 requiring Trans Mountain to file a hydrogeological study to more precisely determine the potential for interactions and impacts on the aquifer and to assess the need for any additional measures to protect the aquifer, including monitoring measures (Condition 39 was described in greater detail above at paragraph 333).

[380] Coldwater argues that the Board breached its statutory obligation to consider alternative means of carrying out the designated project. Further, this breach cannot be cured at the detailed route hearing because at a detailed route hearing the Board can only consider limited routing options within the approved pipeline corridor. The West Alternative is well outside the approved corridor. Coldwater submits that the Board's only option at the detailed route hearing is to decline to approve the detailed routing and to reject Trans Mountain's Plan, Profile and Book of Reference (PPBoR); Coldwater says this is an option the Board would be unwilling to pursue given the Project's post-approval momentum.

[381] I agree that at a detailed route hearing the Board may only approve, or refuse to approve, a proponent's PPBoR. However, this does not mean that at a detailed route hearing the Board is precluded from considering routes outside of the approved pipeline corridor.

[382] Subsection 36(1) of the *National Energy Board Act* requires the Board "to determine the best possible detailed route of the pipeline and the most appropriate methods and timing of constructing the pipeline." This provision does not limit the Board to considering the best possible detailed route within the approved pipeline corridor. This was recognized by the Board in *Emera Brunswick Pipeline Company Ltd. (Re)*, 2008 LNCNEB 10, at page 30.

[383] Additionally, section 21 of the *National Energy Board Act* permits the Board to review, vary or rescind any decision or order, and in *Emera* the Board recognized, at page 31, that where a proposed route is denied on the basis of evidence of a better route outside of the approved pipeline corridor an application may be made under section 21 to vary the corridor in that location.

[384] It follows that the Board would be able to vary the route of the new pipeline should the hydrogeological study to be filed pursuant to Condition 39 require an alternative route, such as the West Alternative route, in order to avoid risk to the Coldwater aquifer.

[385] As the pipeline route through the Coldwater River Valley remains a live issue, depending on the findings of the hydrogeological report, it follows that Coldwater has not demonstrated that the Board breached its statutory obligation to consider alternative means.

[386] The next error said to vitiate the Board's report is its alleged failure to consider alternatives to the Westridge Marine Terminal.

> (c) Did the Board fail to consider alternatives to the Westridge Marine Terminal?

[387] In my view, this issue was fully canvassed in the course of considering Burnaby's argument that the Board impermissibly failed to decide certain issues for recommended approval of the Project.

> (d) Did the Board err by failing to assess Project-related marine shipping under the *Canadian Environmental Assessment Act, 2012*?

[388] Tsleil-Waututh argues that the Board breached the requirements of the *Canadian Environmental Assessment Act, 2012* by excluding Project-related marine shipping from the definition of the "designated project" which was to be assessed under that Act. In turn, the Governor in Council is said to have unreasonably exercised its discretion when it relied upon the Board's materially flawed report—in effect the Governor in Council did not have a "report" before it and, thus, could not proceed to its decision. Tsleil-Waututh adds that the Board failed to comply with the requirements of subsection 31(1) of the *Canadian Environmental Assessment Act, 2012* by:

i. failing to determine whether the environmental effects of Project-related marine shipping are likely, adverse and significant;
ii. concluding that the Project is not likely to cause significant adverse environmental effects; and,

iii. failing to determine whether the significant adverse environmental effects likely to be caused by Project-related marine shipping can be justified under the circumstances.

[389] The significant adverse effect of particular concern to Tsleil-Waututh are the Project's significant adverse effects upon the endangered Southern resident killer whales and their use by Indigenous peoples.

[390] Tsleil-Waututh's submissions are adopted by Raincoast and Living Oceans. To these submissions they add that the Board's decision to exclude Project-related shipping from the definition of the "designated project" was not a discretionary scoping decision as Trans Mountain argues. Rather, the Board erroneously interpreted the statutory definition of "designated project".

[391] The definition of "designated project" is found in section 2 of the *Canadian Environmental Assessment Act, 2012*: see paragraph 57 above. The parties agree that the issue of whether Project-related marine shipping ought to have been included as part of the defined designated project turns on whether Project-related marine shipping is a "physical activity that is incidental" to the pipeline component of the Project. This is not a pure issue of statutory interpretation. Rather, it is a mixed question of fact and law heavily suffused by evidence.

[392] In response to the submissions of Tsleil-Waututh, Raincoast and Living Oceans, Canada and Trans Mountain make two submissions. First, they submit that the Board reasonably concluded that the increase in marine shipping was not part of the designated project. Second,

and in any event, they argue that the Board conducted an extensive review of marine shipping. Therefore, the question for the Court becomes whether the Board's assessment was substantively adequate, such that the Governor in Council still had a "report" before it such that the Board's assessment could be relied upon. Canada and Trans Mountain answer that question in the affirmative.

[393] Before commencing my analysis, it is important to situate the Board's scoping decision and the exclusion of Project-related shipping from the definition of the Project. The definition of the designated project truly frames the scope of the Board's analysis. Activities included as part of the designated project are assessed under the *Canadian Environmental Assessment Act, 2012* with its prescribed list of factors to be considered. Further, as the Board acknowledged in Chapter 10 of its report, the *Species at Risk Act* imposes additional obligations on the Board when a designated project is likely to affect a listed wildlife species. These obligations are discussed below, commencing at paragraph 442.

[394] This assessment is to be contrasted with the assessment of activities not included in the definition of the designated project. These excluded activities are assessed under the *National Energy Board Act* if the Board is of the opinion that any public interest may be affected by the issuance of a certificate of public convenience and necessity, or by the dismissal of the proponent's application. On this assessment the Board is to have regard to all considerations that "appear to it to be directly related to the pipeline and to be relevant". Parenthetically, to the extent that there is potential for the effects of excluded activities to interact with the

environmental effects of a project, these effects are generally assessed under the cumulative effects portion of the *Canadian Environmental Assessment Act, 2012* environmental assessment.

[395] I begin my analysis with Trans Mountain's application to the Board for a certificate of public convenience and necessity for the Project. In Volume 1 of the application, at pages 1-4, Trans Mountain describes the primary purpose of the Project to be "to provide additional transportation capacity for crude oil from Alberta to markets in the Pacific Rim including BC, Washington State, California and Asia." In Volume 2 of the application, at pages 2-27, Trans Mountain describes the marine shipping activities associated with the Project. Trans Mountain notes that of the 890,000 barrels per day capacity of the expanded system, up to 630,000 barrels per day, or 71%, could be delivered to the Westridge Marine Terminal for shipment by tanker. To place this in perspective, currently in a typical month five tankers are loaded with diluted bitumen at the Westridge Marine Terminal, some of which are the smaller, Panamax tankers. The expanded system would be capable of serving up to 34 of the larger, Aframax tankers per month (with actual demand influenced by market conditions).

[396] This evidence demonstrates that marine shipping is, at the least, an element that accompanies the Project. Canada argues that an element that accompanies a physical activity while not being a major part of the activity is not "incidental" to the physical activity. Canada says that this was what the Board implicitly found.

[397] The difficulty with this submission is that it is difficult to infer that this was indeed the Board's finding, albeit an implicit finding. I say this because in its scoping decision the Board

gave no reasons for its conclusion. In the second paragraph of the decision, under the introductory heading, the Board simply set out its conclusion:

> For the purposes of the environmental assessment under the CEAA 2012, the designated project includes the various components and physical activities as described by Trans Mountain in its 16 December 2013 application submitted to the NEB. The Board has determined that the potential environmental and socio-economic effects of increased marine shipping activities to and from the Westridge Marine Terminal that would result from the designated project, including the potential effects of accidents or malfunctions that may occur, will be considered under the NEB Act (see the NEB's Letter of 10 September 2013 for filing requirements specific to these marine shipping activities). To the extent that there is potential for environmental effects of the designated project to interact with the effects of the marine shipping, the Board will consider those effects under the cumulative effects portion of the CEAA 2012 environmental assessment.
>
> (underlining added)

[398] Having defined the designated project not to include the increase in marine shipping, the Board dealt with the Project-related increase in marine shipping activities in Chapter 14 of its report. Consistent with the scoping decision, at the beginning of Chapter 14 the Board stated, at page 323:

> As described in Section 14.2, marine vessel traffic is regulated by government agencies, such as Transport Canada, Port Metro Vancouver, Pacific Pilotage Authority and the Canadian Coast Guard, under a broad and detailed regulatory framework. The Board does not have regulatory oversight of marine vessel traffic, whether or not the vessel traffic relates to the Project. There is an existing regime that oversees marine vessel traffic. The Board's regulatory oversight of the Project, as well as the scope of its assessment of the Project under the *Canadian Environmental Assessment Act* (CEAA 2012), reaches from Edmonton to Burnaby, up to and including the Westridge Marine Terminal (WMT). However, the Board determined that potential environmental and socio-economic effects of Project-related tanker traffic, including the potential effects of accidents or malfunctions that may occur, are relevant to the Board's consideration of the public interest under the NEB Act. Having made this determination, the Board developed a set of Filing Requirements specific to the issue of the potential effects of Project-related marine shipping activities to complement the Filing Manual.

(underlining added, footnotes omitted)

[399] Two points emerge from this passage. The first point is the closest the Board came to explaining its scoping decision was that the Board did not have regulatory oversight over marine vessel traffic. There is no indication that the Board grappled with this important issue.

[400] The issue is important because the Project is intended to bring product to tidewater; 71% of this product could be delivered to the Westridge Marine Terminal for shipment by tanker. Further, as explained below, if Project-related shipping forms part of the designated project additional requirements apply under the *Species at Risk Act*. Finally, Project-related tankers carry the risk of significant, if not catastrophic, adverse environmental and socio-economic effects should a spill occur.

[401] Neither Canada nor Trans Mountain point to any authority to the effect that a responsible authority conducting an environmental assessment under the *Canadian Environmental Assessment Act, 2012* must itself have regulatory oversight over a particular subject matter in order for the responsible authority to be able to define a designated project to include physical activities that are properly incidental to the Project. The effect of the respondents' submission is to impermissibly write the following italicized words into the definition of "designated project": "It includes any physical activity that is incidental to those physical activities *and that is regulated by the responsible authority*."

[402] In addition to being impermissibly restrictive, the Board's view that it was required to have regulatory authority over shipping in order to include shipping as part of the Project is

inconsistent with the purposes of the *Canadian Environmental Assessment Act, 2012* enumerated in subsection 4(1). These purposes include protecting the components of the environment that are within the legislative authority of Parliament and ensuring that designated projects are considered in a careful and precautionary manner to avoid significant adverse environmental effects.

[403] The second point that arises is that the phrase "incidental to" is not defined in the *Canadian Environmental Assessment Act, 2012*. It is not clear that the Board expressly directed its mind to whether Project-related marine shipping was in fact an activity "incidental" to the Project. Had it done so, the Canadian Environmental Assessment Agency's "Guide to Preparing a Description of a Designated Project under the Canadian Environmental Assessment Act, 2012" provides a set of criteria relevant to the question of whether certain activities should be considered "incidental" to a project. These criteria are:

i. the nature of the proposed activities and whether they are subordinate or complementary to the designated project;
ii. whether the activity is within the care and control of the proponent;
iii. if the activity is to be undertaken by a third party, the nature of the relationship between the proponent and the third party and whether the proponent has the ability to "direct or influence" the carrying out of the activity;
iv. whether the activity is solely for the benefit of the proponent or is available for other proponents as well; and,
v. the federal and/or provincial regulatory requirements for the activity.

[404] The Board does not advert to, or grapple with, these criteria in its report. Had the Board grappled with these criteria it would have particularly considered whether marine shipping is

subordinate or complementary to the Project and whether Trans Mountain is able to "direct or influence" aspects of tanker operations.

[405] In this regard, Trans Mountain stated in its application, on pages 8A-33 to 8A-34, that while it did not own or operate the vessels calling at the Westridge Marine Terminal, "it is an active member in the maritime community and works with BC maritime agencies to promote best practices and facilitate improvements to ensure the safety and efficiency of tanker traffic in the Salish Sea." Trans Mountain also referenced its Tanker Acceptance Standard whereby it can prevent any tanker not approved by it from loading at the Westridge Marine Terminal.

[406] The Board recognized Trans Mountain's ability to give directions to tanker operators in Conditions 133, 134 and 144 where, among other things, the Board required Trans Mountain to:

- confirm that it had implemented its commitments to enhanced tug escort by prescribing minimum tug capabilities required to escort outbound, laden tankers and by including these minimum capabilities as part of its Tanker Acceptance Standard;
- file an updated Tanker Acceptance Standard and a summary of any revisions made to the Standard; and,
- file annually a report documenting the continued implementation of Trans Mountain's marine shipping-related commitments noted in Condition 133, any instances of non-compliance with Trans Mountain's requirements and the steps taken to correct instances of non-compliance.

[407] To similar effect, as discussed below in more detail, Trans Mountain committed in the TERMPOL review process to require, through its tanker acceptance process, that tankers steer a certain course upon exiting the Juan de Fuca Strait.

[408] Trans Mountain's ability to "direct or influence" tanker operations was a relevant factor for the Board to consider.

[409] The Board's reasons do not well-explain its scoping decision, do not grapple with the relevant criteria and appear to be based on a rationale that is not supported by the statutory scheme. As explained in more detail below, it follows that the Board failed to comply with its statutory obligation to scope and assess the Project so as to provide the Governor in Council with a "report" that permitted the Governor in Council to make its decision.

[410] It follows that it is necessary to consider the respondents' alternate submission that the assessment the Board conducted was, nevertheless, substantially adequate such that the Governor in Council could rely upon it for the purpose of assessing the public interest and the environmental effects of the Project. To do this I will first consider the deficiencies said to arise from the assessment of Project-related shipping under the *National Energy Board Act*, as opposed to its assessment under the *Canadian Environmental Assessment Act, 2012*. I will then turn to the Board's findings, as set out in its report, in order to determine whether the Board's report was materially deficient or substantially adequate.

(i) The deficiencies said to arise from the Board's assessment of Project-related marine shipping under the *National Energy Board Act*

[411] Had the Project been defined to include Project-related marine shipping, subsection 19(1) of the *Canadian Environmental Assessment Act, 2012* would have required the Board to

consider, and make findings, concerning the factors enumerated in section 19. In the present case, these include:

- the environmental effects of marine shipping, including the environmental effects of malfunctions or accidents that may occur in connection with the designated project, and any cumulative effects likely to result from the designated project in combination with other physical activities that have or will be carried out;
- the significance of these effects;
- mitigation measures that are technically and economically feasible that would mitigate any significant adverse effects of marine shipping; and,
- alternative means of carrying out the designated project that are technically and economically feasible. This would include alternate shipping routes.

[412] I now turn to address the Board's consideration of Project-related shipping.

(ii) The Board's consideration of Project-related marine shipping and its findings

[413] I begin by going back to the Board's statement, quoted above at paragraph 398, that "potential environmental and socio-economic effects of Project-related tanker traffic, including the potential effects of accidents or malfunctions that may occur" were relevant to the Board's consideration of the public interest under the *National Energy Board Act*. In this context, in order to ensure that the Board had sufficient information about those effects, the Board developed the specific filing requirements referred to by the Board in the passage quoted above.

[414] These filing requirements required Trans Mountain to provide a detailed description of the increase in marine shipping activities including: the frequency of passages, passage routing,

speed, and passage transit time; and, the alternatives considered, such as passage routing, frequency of passages and tanker type utilized.

[415] Trans Mountain's assessment of accidents and malfunctions related to the increase in marine shipping was required to include descriptions of matters such as:

- measures to reduce the potential for accidents and malfunctions to occur, including an overview of relevant regulatory regimes;
- credible worst case spill scenarios and smaller spill scenarios;
- the fate and behaviour of any hydrocarbons that may be spilled;
- the potential environmental and socio-economic effects of credible worst case spill scenarios and smaller spill scenarios, taking into account the season-specific behaviour, trajectory, and fate of the hydrocarbon(s) spilled, as well as the range of weather and marine conditions that could prevail during the spill event; and,
- Trans Mountain's preparedness and response planning, including an overview of the relevant regulatory regimes.

[416] Trans Mountain was required to provide information on navigation and safety including:

- an overview of the relevant regulatory regimes and the role of the different organizations involved;
- any additional mitigation measures in compliance with, or exceeding regulatory requirements, proposed by Trans Mountain to further facilitate marine shipping safety; and,
- an explanation of how the regulatory regimes and any additional measures promote the safety of the increase in marine shipping activities.

[417] The filing requirements also required specific information relating to all mitigation measures related to the increase in marine shipping activities.

[418] I now turn to specifically consider Chapter 14 of the Board's report and its consideration of the Project-related increase in marine shipping activities. Because the applicants' primary concern centers on the Project's impact on the Southern resident killer whales and their use, I will focus on the Board's consideration of this endangered species, including spill prevention and the effects of spills. The Board did also consider and make findings about the impact of increased Project-related shipping on air emissions, greenhouse gases, marine and fish habitat, marine birds, socio-economic effects, heritage resources and human health effects.

[419] The Board began by describing the extent of existing, future, and Project-related shipping activities. It then moved to a review of the regulatory framework and some federal improvement initiatives. The Board's report describes how marine shipping is regulated under the *Canada Shipping Act, 2001*, S.C. 2001, c. 26 and administered by Transport Canada, the Canadian Coast Guard and other government departments.

[420] The Board then moved, in Section 14.3, to the assessment of the effects of increased marine shipping, focusing on changes to the environmental and socio-economic setting caused by the routine operation of Project-related marine vessels. It noted that while it assessed the potential environmental and socio-economic factors of increased marine shipping as part of its public interest determination under the *National Energy Board Act*, the Board "followed an approach similar to the environmental assessment conducted under [the *Canadian Environmental Assessment Act, 2012*] … to the extent it was appropriate, to inform the Board's public interest determination."

[421] The Board went on to explain that in order to consider whether the effects of marine shipping were likely to cause significant environmental effects, it considered the existing regulatory scheme in the absence of any specific mitigation measures. This reflected the Board's view that since marine shipping was beyond its regulatory authority, it did not have the ability to impose specific mitigation conditions to address environmental effects of Project-related marine shipping. The Board also explained that it considered any cumulative effects that were likely to arise from Project-related shipping, in combination with environmental effects arising from other current or reasonably foreseeable marine vessel traffic in the area.

[422] Finally, before turning to its assessment of the Project's effects, the Board stated that its assessment had considered:

- adverse impacts of Project-related marine shipping on *Species at Risk Act* (SARA)-listed wildlife species and their critical habitat;
- all reasonable alternatives to Project-related marine shipping that would reduce impact on SARA-listed species' critical habitat; and,
- measures to avoid or lessen any adverse impacts, consistent with applicable recovery strategies or action plans.

[423] The Board then went on to make the following findings and statements with respect to marine mammals generally:

- Underwater noise from Project-related marine vessels would result in sensory disturbances to marine mammals. The disturbance is expected to be long-term as it is likely to occur for the duration of operations of Project-related vessel traffic.
- When assessing the impact of Project-related shipping on specific species, the Board's approach was to consider the temporal and spatial impact, and its reversibility.

- Project-related marine vessels have the potential to strike a marine mammal, which could result in lethal or non-lethal effects. Further, the increase in Project-related marine traffic would contribute to the cumulative risk of marine mammal vessel strikes. The Board acknowledged Trans Mountain's commitment to provide explicit guidance for reporting both marine mammal vessel strikes and mammals in distress to appropriate authorities.
- The Board accepted the evidence of the Department of Fisheries and Oceans and Trans Mountain to the effect that there were no direct mitigation measures that Trans Mountain could apply to reduce or eliminate potential adverse effects from Project-related tankers. It recognized that altering vessel operations, for example by shifting shipping lanes away from marine mammal aggregation areas or reducing marine vessel speed, could be an effective mitigation measure. However, these specific measures were outside of the Board's regulatory authority, and out of Trans Mountain's control. The Board encouraged other regulatory authorities, such as Transport Canada or Fisheries and Oceans Canada to explore initiatives that would aim to reduce the potential effects of marine vessels on marine mammals.
- The Board recognized initiatives currently underway, or proposed, and noted Trans Mountain's commitment to participate in some of these initiatives. The Board imposed Condition 132 requiring Trans Mountain to develop a Marine Mammal Protection Program, and to undertake or support initiatives that focus on understanding and mitigating Project-related effects. Such Protection Program is to be filed prior to the commencement of Project operations.
- The Board explained that Condition 132 was meant to ensure that Trans Mountain fulfilled its commitments to participate in the development of industry-wide shipping practices in conjunction with the appropriate authorities. At the same time, the Board recognized that the Marine Mammal Protection Program offered no assurance that effective mitigation would be developed and implemented to address Project-related effects on marine mammals.
- The Board acknowledged the recommendation of the Department of Fisheries and Oceans that Trans Mountain explore the use of marine mammal on-board

> observers on Project-related marine vessels. The Board expressed its agreement and set out its expectation that it would see an initiative of this type incorporated as part of Trans Mountain's Marine Mammal Protection Program.

[424] The Board also acknowledged Trans Mountain's commitment to require Project-related marine vessels to meet any future guidelines or standards for reducing underwater noise from commercial vessels as they come into force.

[425] The Board went on to make the following findings with specific reference to the Southern resident killer whale:

- The Southern resident killer whale population has crossed a threshold where any additional adverse environmental effects would be considered significant. The current level of vessel traffic in the regional study area and the predicted future increase of vessel traffic in that area, even excluding Project-related marine vessels, "have and would increase the pressure on the Southern resident killer whale population."
- The Board expressed its expectation that Project-related marine vessels would represent a maximum of 13.9% of all vessel traffic in the regional study area, excluding the Burrard Inlet, and would decrease over time as the volume of marine vessel movements in the area is anticipated to grow. Therefore, while the effects from Project-related marine vessels would be a small fraction of the total cumulative effects, the Board acknowledged that this increase in marine vessels associated with the Project "would further contribute to cumulative effects that are already jeopardizing the recovery of the Southern resident killer whale. The effects associated with Project-related marine vessels will impact numerous individuals of the Southern resident killer whale population in a habitat identified as critical to the recovery". The Board classified these effects as "high magnitude". Consequently, the Board found that "the operation of Project-related

marine vessels is likely to result in significant adverse effects to the Southern resident killer whale."

- The Board recognized that the "Recovery Strategy for the Northern and Southern Resident Killer Whale" prepared by the Department of Fisheries and Oceans identified vessel noise as "a threat to the acoustic integrity of Southern resident killer whale critical habitat, and that physical and acoustic disturbance from human activities may be key factors causing depletion or preventing recovery of resident killer whale populations."
- The Board noted that the death of a Southern resident killer whale from a Project-related marine vessel collision, despite the low likelihood of such an event, would have population level consequences. The Board acknowledged that Project-related marine vessels would encounter a killer whale relatively often, however, "given the limited number of recorded killer whale marine vessel strikes and the potential avoidance behaviors of killer whales" the Board accepted the evidence of Trans Mountain and the Department of Fisheries and Oceans that the probability of a Project-related marine mammal vessel strike on a Southern resident killer whale was low.
- The Board expressed the view that the recovery of the Southern resident killer whale requires complex, multi-party initiatives, and that the Department of Fisheries and Oceans and other organizations are currently undertaking numerous initiatives to support the recovery of the species, including finalizing an action plan. The Board acknowledged Trans Mountain's commitment to support the objectives and recovery measures identified in the action plan. The draft action plan included a detailed prioritized list of initiatives. The Board expressed its expectation that Trans Mountain would support these initiatives within the Marine Mammal Protection Program. The Board encouraged initiatives, including initiatives of the federal government, to prioritize and implement specific measures to promote recovery of the species.
- Finally, the Board concluded that "the operation of Project-related marine vessels is likely to result in significant adverse effects to the Southern resident killer whale."

[426] The Board then considered the impact of marine shipping on the traditional use of marine resources by Indigenous communities, finding that:

- There would be disruptions to Indigenous marine vessels and harvesters, and this may disrupt activities or access to specific sites. However, in the Board's view these disruptions would be temporary, occurring only during the period of time when Project-related tanker vessels are in transit. Thus, it was of the view that Indigenous marine vessel users would maintain the ability to continue to harvest marine resources and to access subsistence and cultural sites in the presence of these periodic and short-term disruptions.
- Therefore, the Board found that, with the exception of the effects on the Southern resident killer whale, the magnitude of effects of Project-related marine vessel traffic on traditional marine resource uses, activities and sites would be low.
- Given the low frequency, duration and magnitude of effects associated with potential disruptions, and Trans Mountain's commitments to provide regular updated information on Project-related marine vessel traffic to Indigenous communities, the Board found that adverse effects on traditional marine resource uses, activities and sites were not likely and that, overall, Project-related marine traffic's contribution to overall effects related to changes in traditional marine use patterns was not likely to be significant.
- Project-related marine traffic's contribution to cumulative effects was found to be of low to medium magnitude, and reversible in the long term. The Board therefore found significant adverse cumulative effects associated with Project-related marine vessel traffic on traditional marine resource use was not likely to be significant, with the exception of effects associated with the traditional use of the Southern resident killer whale, which were considered significant.
- Recognizing the cultural importance of the killer whale to certain Indigenous groups, the Board found that "the increase in marine vessel traffic associated with the Project is likely to result in significant adverse effects on the traditional Aboriginal use associated with the Southern resident killer whale."

[427] Finally, in Sections 14.4 to 14.6 the Board considered spill prevention. It made the following findings:

- The Board accepted the evidence filed by Trans Mountain regarding marine shipping navigation and safety, including the reports filed as part of the TERMPOL Review Process.
- Although a large spill from a tanker associated with the Project would result in significant adverse environmental and socio-economic effects, such an event is not likely.
- Even with response efforts, any large spill would result in significant adverse environmental and socio-economic effects.
- Trans Mountain, in conjunction with the Western Canada Marine Response Corporation, proposed appropriate measures to respond to potential oil spills from Project-related tankers. These proposed measures exceed regulatory requirements and would result in a response capacity that is double, and a delivery time that is half, that required by the existing planning standards. The Board gave substantial weight to the fact that the TERMPOL Review Committee and the Canadian Coast Guard did not identify any particular concerns with marine spill response planning associated with the Project.
- The environmental effects of a spill from a tanker would be highly dependent on the particular circumstances, such as the amount and the type of product(s) spilled, the location of the spill, the response time, the effectiveness of containment and cleanup, the valued components that were impacted, and the weather and time of year of the spill.
- A small spill, quickly contained, could have adverse effects of low magnitude, whereas a credible worst-case spill could have adverse effects of larger geographic extent and longer duration, and such effects would probably be significant. Moreover, spills could impact key marine habitats such as salt marshes, eelgrass beds and kelp forests, which could, in turn, affect the numerous species that rely upon them. Spills could also affect terrestrial species along the coastline, including SARA-listed terrestrial plant species.

- Although impacts from a credible worst-case spill would probably be adverse and significant, natural recovery of the impacted areas and species would likely return most biological conditions to a state generally similar to pre-spill conditions. Such recovery might be as quick as a year or two for some valued components, or might take as long as a decade or more for others. Valuable environmental values and uses could be lost or diminished in the interim. For some valued components, including certain SARA-species, recovery to pre-spill conditions might not occur.
- Mortality of individuals of SARA-listed species could result in population level impacts and could jeopardize recovery. For example, the impact on a Southern resident killer whale of exposure to an oil spill potentially would be catastrophic.
- There is a very low probability of a credible worst-case event.
- The effects of a credible worst-case spill on the current use of lands, waters and resources for traditional purposes by Indigenous people would likely be adverse and significant. However, the probability of such a worst-case event is very low.

[428] With respect to the Board's reference to the report of the TERMPOL Review Committee, one of the topics dealt with in that report was Project routing. It was noted, in Section 3.2, that the "shipping route to and from Trans Mountain's terminal to the open sea is well-established and used by deep sea tankers as well as other vessel types such as cargo vessels, cruise ships and ferries." Later in the report it was noted that "Aframax class tankers currently use the proposed route, demonstrating that tanker manoeuvrability issues are not a concern."

[429] Notwithstanding, the Review Committee did make one finding with respect to the shipping route. Finding 9 was to the effect that "Trans Mountain's commitment to require via its tanker acceptance process that Project tankers steer a course no more northerly than due West (270°) upon exiting the Juan de Fuca Strait will enhance safety and protection of the marine environment by providing the shortest route out of the Canadian" economic exclusion zone.

[430] Returning to the Board's report, the end result of the Board's assessment of the Project was that, notwithstanding the impacts of the Project upon the Southern resident killer whales and Indigenous cultural uses associated with them, with the implementation of Trans Mountain's environmental protection procedures and mitigation, and the Board's recommended conditions, the Project is not likely to cause significant adverse environmental effects. This was the Board's recommendation under section 29 of the *Canadian Environmental Assessment Act, 2012*.

(iii) Was the Board's assessment of Project-related marine shipping substantially adequate?

[431] I begin with the Board's description of its approach to the assessment of marine shipping. It "followed an approach similar to the environmental assessment conducted under" the *Canadian Environmental Assessment Act, 2012* "to the extent it was appropriate". Consistent with this approach, the Board's filing requirements in respect of marine shipping required Trans Mountain to provide information about mitigation measures and alternatives—factors which subsection 19(1) of the *Canadian Environmental Assessment Act, 2012* require be considered in an environmental assessment.

[432] Bearing in mind that the primary focus of the applicants' concern about the Board's assessment of Project-related marine shipping is the Board's assessment of the adverse effects of the Project on Southern resident killer whales, the previous review of the Board's findings demonstrates that the Board considered the Project's effects on the Southern resident killer whales, including the environmental effects of malfunctions or accidents that might occur, the significance of those effects and the cumulative effects of the Project on efforts to promote

recovery of the species. The Board found the operation of the Project-related tankers was likely to result in significant, adverse effects to the Southern resident killer whale population.

[433] Given the Board's finding that the Project was likely to result in significant adverse effects on the Southern resident killer whale, and its finding that Project-related marine vessel traffic would further contribute to the total cumulative effects (which were determined to be significant), the Board found that the increase in marine vessel traffic associated with the Project is likely to result in significant adverse effects on the traditional Indigenous use associated with the Southern resident killer whale.

[434] The Board then considered mitigation measures through the limited lens of its regulatory authority. It found there were no direct mitigation measures Trans Mountain could apply to reduce or eliminate potential adverse effects from Project-related tankers.

[435] The Board stated that it considered all reasonable alternatives to Project-related marine shipping that would reduce the impact on SARA-listed species' critical habitat. This would include the critical habitat of the Southern resident killer whale. As part of this consideration, the Board directed Information Request No. 2 to Trans Mountain. In material part, Trans Mountain responded that the only known potential mitigation measures relevant to the Salish Sea to reduce the risk of marine mammal vessel strikes would be to alter the shipping lanes in order to avoid sensitive habitat (that is areas where whales aggregate), and to set speed restrictions. Trans Mountain advised that shipping lanes and speed restrictions are set at the discretion of Transport Canada.

[436] Thereafter, the Board issued an Information Request to Transport Canada that, among other things, requested Transport Canada to summarize any initiatives it was currently supporting or undertaking that evaluated potential alternative shipping lanes or vessel speed reductions along the southern coast of British Columbia with the intent of reducing impacts on marine mammals from marine shipping. Transport Canada responded that it was "not currently contemplating alternative shipping lanes or vessel speed restrictions for the purpose of reducing impacts on marine mammals from marine shipping in British Columbia". However, Transport Canada noted it was participating in the Enhancing Cetacean Habitat and Observation Program led by Port Metro Vancouver.

[437] Transport Canada's statement that it had no current intent to make alterations to shipping lanes or to impose vessel speed restrictions would seem to have pre-empted further consideration of routing alternatives by the Board.

[438] This review of the Board's report has shown that the Board in its assessment of Project-related marine shipping considered:

- the effects of Project-related marine shipping on Southern resident killer whales;
- the significance of the effects;
- the cumulative effect of Project-related marine shipping on the recovery of the Southern resident killer whale population;
- the resulting significant, adverse effects on the traditional Indigenous use associated with the Southern resident killer whale;
- mitigation measures within its regulatory authority; and,
- reasonable alternatives to Project-related marine shipping.

[439] Given the Board's approach to the assessment and its findings, the Board's report was adequate for the purpose of informing the Governor in Council about the effects of Project-related marine shipping on the Southern resident killer whales and their use by Indigenous groups. The Board's report adequately informed the Governor in Council of the significance of these effects, the Board's view there were no direct mitigation measures Trans Mountain could apply to reduce potential adverse effects from Project-related tankers, and that there were potential mitigation measures beyond the Board's regulatory authority and so not the subject of proper consideration by the Board or conditions. Perhaps most importantly, the report put the Governor in Council on notice that the Board defined the Project not to include Project-related marine shipping. This decision excluded the effects of Project-related shipping from the definition of the Project as a designated project and allowed the Board to conclude that, as it defined the Project, the Project was not likely to cause significant adverse effects.

[440] The Order in Council and its accompanying Explanatory Note demonstrate that the Governor in Council was fully aware of the manner in which the Board had assessed Project-related marine shipping under the *National Energy Board Act*. The Governor in Council was also fully aware of the effects of Project-related marine shipping identified by the Board and that the operation of Project-related vessels is likely to result in significant adverse effects upon both the Southern resident killer whale and Indigenous cultural uses of this endangered species.

[441] Having found that the Governor in Council understood the Board's approach and resulting conclusions, it remains to consider the reasonableness of the Governor in Council's

reliance on the Board's report to approve the Project. This is considered below, after considering the applicants' submissions with respect to the *Species at Risk Act*.

(e) Did the Board err in its treatment of the *Species at Risk Act*?

[442] The purposes of the *Species at Risk Act* are: to prevent wildlife species from being extirpated or becoming extinct; to provide for the recovery of wildlife species that are extirpated, endangered or threatened as a result of human activity; and, to manage species of special concern to prevent them from becoming endangered or threatened (section 6).

[443] Important protections are found in section 77 of the Act, which is intended to protect the critical habitat of listed wildlife species, and section 79, which is intended to protect listed wildlife species and their critical habitat from new projects. Listed wildlife species are those species listed in Schedule 1 of the Act, a list of wildlife species at risk. Sections 77 and 79 are set out in the Appendix to these reasons.

[444] Raincoast and Living Oceans argue that as a result of unreasonably defining the designated project not to include Project-related marine shipping, the Board failed to meet the requirement of subsection 79(2) of the *Species at Risk Act*. As a result of this error they say it was unreasonable for the Governor in Council to rely upon the Board's report without first ensuring that the Board had complied with subsection 79(2) of the Act with respect to Southern resident killer whales. They also argue that it was unreasonable for the Governor in Council not to comply with its additional, independent obligations under subsection 77(1) of the *Species at Risk Act*.

[445] I will deal first with the applicability of section 79 of the Act.

(i) Did the Board err by concluding that section 79 of the *Species at Risk Act* did not apply to its consideration of the effects of Project-related marine shipping?

[446] Section 79 obligates every person required "to ensure that an assessment of the environmental effects of a project is conducted" to:

i. promptly notify the competent minister or ministers if the project "is likely to affect a listed wildlife species or its critical habitat." (subsection 79(1));
ii. identify the adverse effects of the project on the listed wildlife species and its critical habitat (subsection 79(2)); and,
iii. if the project is carried out, ensure that measures are taken "to avoid or lessen those effects and to monitor them." The measures taken must be taken in a way that is consistent with any applicable recovery strategy and action plans (subsection 79(2)).

[447] Subsection 79(3) defines a "project" to mean, among other things, a designated project as defined in subsection 2(1) of the *Canadian Environmental Assessment Act, 2012*.

[448] The Board acknowledged its obligations under section 79 of the *Species at Risk Act* in the course of its environmental assessment (Chapter 10, page 161). However, because it had not defined the designated project to include Project-related marine shipping, the Board rejected Living Oceans' submission that the Board's obligations under section 79 of the *Species at Risk Act* applied to its consideration of the effects of Project-related marine shipping on the Southern resident killer whale (Chapter 14, page 332). Notwithstanding this conclusion that section 79 did not apply, for reasons that are not explained in its report, the Board did comply with the

obligation under subsection 79(1) to notify the responsible ministers that the Project might affect Southern resident killer whales and their habitat. The Board did this by letter dated April 23, 2014 (a letter sent approximately three weeks after the Board made its scoping decision).

[449] I have found that the Board unjustifiably excluded Project-related marine shipping from the Project's description. It follows that the failure to apply section 79 of the *Species at Risk Act* to its consideration of the effects of Project-related marine shipping on the Southern resident killer whale was also unjustified.

[450] Both Canada and Trans Mountain argue that, nonetheless, the Board substantially complied with its obligations under section 79 of the *Species at Risk Act*. Therefore, as with the issue of Project-related marine shipping, the next question is whether the Board substantially complied with its obligations under section 79.

(ii) Did the Board substantially comply with its obligations under section 79 of the *Species at Risk Act*?

[451] The respondents argue that, in addition to complying with the notification requirement found in subsection 79(1), the Board considered:

- the adverse impacts of marine shipping on listed wildlife species and their critical habitat;
- all reasonable alternatives to marine shipping that would reduce impact on listed species' critical habitat; and
- measures, consistent with the applicable recovery strategies or action plans, to avoid or lessen any adverse impacts of the Project.

[452] Canada and Trans Mountain submit that as a result the Board met its requirements "where possible." (Trans Mountain's memorandum of fact and law, paragraph 120). On this last point, Trans Mountain submits that the Board lacked authority to impose conditions or otherwise ensure that measures were taken to avoid or lessen the effects of marine shipping on species at risk. Thus, while the Board could identify potential mitigation measures, and encourage the appropriate regulatory authorities to take further action, it could not ensure compliance with subsection 79(2) of the *Species at Risk Act*.

[453] Canada and Trans Mountain have accurately summarized the Board's findings that are relevant to its consideration of Project-related shipping in the context of the *Species at Risk Act*. However, I do not accept their submission that the Board's consideration of the Project's impact on the Southern resident killer whale substantially complied with its obligation under section 79 of the *Species at Risk Act*. I reach this conclusion for the following reason.

[454] By defining the Project not to include Project-related marine shipping, the Board failed to consider its obligations under the *Species at Risk Act* when it considered the Project's impact on the Southern resident killer whale. Had it done so, in light of its recommendation that the Project be approved, subsection 79(2) of the *Species at Risk Act* required the Board to ensure, if the Project was carried out, that "measures are taken to avoid or lessen" the Project's effects on the Southern resident killer whale and to monitor those measures.

[455] While I recognize the Board could not regulate shipping, it was nonetheless obliged to consider the consequences at law of its inability to "ensure" that measures were taken to

ameliorate the Project's impact on the Southern resident killer whale. However, the Board gave no consideration in its report to the fact that it recommended approval of the Project without any measures being imposed to avoid or lessen the Project's significant adverse effects upon the Southern resident killer whale.

[456] Because marine shipping was beyond the Board's regulatory authority, it assessed the effects of marine shipping in the absence of mitigation measures and did not recommend any specific mitigation measures. Instead it encouraged other regulatory authorities "to explore any such initiatives" (report, page 349). While the Board lacked authority to regulate marine shipping, the final decision-maker was not so limited. In my view, in order to substantially comply with section 79 of the *Species at Risk Act* the Governor in Council required the Board's exposition of all technically and economically feasible measures that are available to avoid or lessen the Project's effects on the Southern resident killer whale. Armed with this information the Governor in Council would be in a position to see that, if approved, the Project was not approved until all technically and economically feasible mitigation measures within the authority of the federal government were in place. Without this information the Governor in Council lacked the necessary information to make the decision required of it.

[457] The reasonableness of the Governor in Council's reliance on the Board's report is considered below.

[458] For completeness I now turn to the second argument advanced by Raincoast and Living Oceans: it was unreasonable for the Governor in Council to fail to comply with its additional, independent obligations under subsection 77(1) of the *Species at Risk Act*.

(iii) Was the Governor in Council obliged to comply with subsection 77(1) of the *Species at Risk Act*?

[459] Subsection 77(1) applies when any person or body, other than a competent minister, issues or approves "a licence, a permit or any other authorization that authorizes an activity that may result in the destruction of any part of the critical habitat of a listed wildlife species". The person or body may authorize such an activity only if they have consulted with the competent minister, considered the impact on the species' critical habitat and formed the opinion that: (a) all reasonable alternatives to the activity that would reduce the impact on the critical habitat have been considered and the best solution has been adopted; and (b) all feasible mitigation measures will be taken to minimize the impact on the critical habitat.

[460] The Board accepted that:

> … vessel noise is considered a threat to the acoustic integrity of Southern resident killer whale critical habitat, and that physical and acoustic disturbance from human activities may be key factors causing depletion or preventing recovery of resident killer whale populations.
>
> (report, page 350)

[461] It also accepted that the impact of a Southern resident killer whale being exposed to an oil spill "is potentially catastrophic" (report, page 398).

[462] Based on these findings, Raincoast and Living Oceans submit that Project-related shipping "may destroy" critical habitat so that subsection 77(1) was engaged.

[463] I respectfully disagree. The Order in Council directed the Board to issue a certificate of public convenience and necessity approving the construction and operation of the expansion project. The Governor in Council did not issue or approve a licence, permit or other authorization that authorized marine shipping.

[464] Further, subsection 77(1.1) of the *Species at Risk Act* provides that subsection 77(1) does not apply to the Board when, as in the present case, it issues a certificate pursuant to an order made by the Governor in Council under subsection 54(1) of the *National Energy Board Act*. I accept Canada's submission that Parliament would not have intended to exempt the Board from the application of subsection 77(1) while at the same time contemplating that the Governor in Council was not exempted and was obliged to comply with subsection 77(1). This is particularly so given the Board's superior expertise in assessing impacts on habitat and mitigation measures. If subsection 77(1) applied, the Board's ability to meet its obligations was superior to that of the Governor in Council.

(f) Conclusion: the Governor in Council erred by relying upon the Board's report as a proper condition precedent to the Governor in Council's decision

[465] Trans Mountain's application was complex, raising challenging issues on matters as diverse as Indigenous rights and concerns, pipeline integrity, the fate and behaviours of spilled hydrocarbons in aquatic environments, emergency prevention, preparedness and response, the

need for the Project and its economic feasibility and the effects of Project-related shipping activities.

[466] The approval process was long and demanding for all participants; after the hearing the Board was left to review tens of thousands of pages of evidence.

[467] Many aspects of the Board's report are not challenged in this proceeding.

[468] This said, I have found that the Board erred by unjustifiably excluding Project-related marine shipping from the Project's definition. While the Board's assessment of Project-related shipping was adequate for the purpose of informing the Governor in Council about the effects of such shipping on the Southern resident killer whale, the Board's report was also sufficient to put the Governor in Council on notice that the Board had unjustifiably excluded Project-related shipping from the Project's definition.

[469] It was this exclusion that permitted the Board to conclude that section 79 of the *Species at Risk Act* did not apply to its consideration of the effects of Project-related marine shipping. This exclusion then permitted the Board to conclude that, notwithstanding its conclusion that the operation of Project-related marine vessels is likely to result in significant adverse effects to the Southern resident killer whale, the Project (as defined by the Board) was not likely to cause significant adverse environmental effects. The Board could only reach this conclusion by defining the Project not to include Project-related shipping.

[470] The unjustified exclusion of Project-related marine shipping from the definition of the Project thus resulted in successive deficiencies such that the Board's report was not the kind of "report" that would arm the Governor in Council with the information and assessments it required to make its public interest determination and its decision about environmental effects and their justification. In the language of *Gitxaala* this resulted in a report so deficient that it could not qualify as a "report" within the meaning of the legislation and it was unreasonable for the Governor in Council to rely upon it. The Board's finding that the Project was not likely to cause significant adverse environmental effects was central to its report. The unjustified failure to assess the effects of marine shipping under the *Canadian Environmental Assessment Act, 2012* and the resulting flawed conclusion about the effects of the Project was so critical that the Governor in Council could not functionally make the kind of assessment of the Project's environmental effects and the public interest that the legislation requires.

[471] I have considered the reference in the Explanatory Note to the Order in Council to the government's commitment to the proposed Action Plan for the Southern resident killer whale and the then recently announced Oceans Protection Plan. These inchoate initiatives, while laudable and to be encouraged, are by themselves insufficient to overcome the material deficiencies in the Board's report because the "report" did not permit the Governor in Council to make an informed decision about the public interest and whether the Project is likely to cause significant adverse environmental effects as the legislation requires.

[472] There remains to consider the issue of the remedy which ought to flow from the unreasonable reliance upon the Board's report. In my view, this is best dealt with following consideration of the adequacy of the Crown's consultation process.

[473] My conclusion that the Board's report was so flawed that it was unreasonable for the Governor in Council to rely upon it arguably makes it unnecessary to deal with the argument advanced on behalf of the Attorney General of British Columbia. It is nonetheless important that it be briefly considered.

3. The challenge of the Attorney General of British Columbia

[474] As explained above at paragraphs 64 and 65, after the Board submits a report to the Governor in Council setting out the Board's recommendation under section 52 of the *National Energy Board Act* about whether a certificate of public convenience and necessity should issue, the Governor in Council may, among other options, by order direct the Board to issue a certificate of public convenience and necessity. Irrespective of the option selected, the Governor in Council's order "must set out the reasons for making the order" (subsection 54(2) of the *National Energy Board Act*). The Attorney General of British Columbia intervened in this proceeding to argue that, in breach of this statutory obligation, the Governor in Council failed to give reasons explaining why the Project is not likely to cause significant adverse environmental effects and why the Project is in the public interest.

[475] The Attorney General also argued in its written memorandum, but not orally, that the Governor in Council failed to consider the "disproportionate impact of Project-related marine

shipping spill risks on the Province of British Columbia". This failure is said to render the Governor in Council's decision unreasonable.

[476] In consequence, the Attorney General of British Columbia supports the request of the applicants that the Governor in Council's Order in Council be set aside.

(a) Did the Governor in Council fail to comply with the obligation to give reasons?

[477] The lynchpin of the Attorney General's argument is his submission that the Governor in Council's reasons must be found "within the four corners of the Order in Council" and nowhere else. Thus, the Attorney General submits that it is impermissible to have regard to the accompanying Explanatory Note or to documents referred to in the Explanatory Note, including the Board's report and the Crown Consultation Report. Read in this fashion, the Order in Council does not explain why the Governor in Council found the Project is not likely to cause any significant adverse environmental effects or was in the public interest.

[478] I respectfully reject the premise of this submission. Subsection 54(2) does not dictate the form the Governor in Council's reasons should take, requiring only that the "order must set out the reasons". Given the legislative nature and the standard format of an Order in Council (generally a series of recitals followed by an order) Orders in Council are not well-suited to the provision of lengthy reasons. In the present case, the two-page Order in Council was accompanied by the 20-page Explanatory Note. They were published together in the Canada Gazette. Given this joint publication, it would, in my view, be unduly formalistic to set aside the

Order in Council on the ground that the reasons found in the attached Explanatory Note were placed in an attachment to the order, and not within the "four square corners" of the order.

[479] Similarly, it would be unduly formalistic not to look to the content of the Board's report that informed the Governor in Council when rendering its decision. The Order in Council specifically referenced the Board's report and the terms and conditions set out in an appendix to the report, and expressly accepted the Board's public interest recommendation. This conclusion that the Order in Council may be read with the Board's report is consistent with this Court's decision in *Gitxaala*, where the Court accepted Canada's submission that the Order in Council should be read together with the findings and recommendations in the report of the joint review panel. This Court read the Order in Council together with the report and other documents in the record and found that the Governor in Council had met its statutory obligation to give reasons.

[480] I therefore find that the Governor in Council also in this case complied with its statutory obligation to give reasons.

(b) Did the Governor in Council fail to consider the impact of Project-related shipping spill risks on the Province of British Columbia?

[481] I disagree that the Governor in Council failed to consider the impact of shipping spill risks. The Explanatory Note shows the Governor in Council considered that:

- The Board found the risk of a major crude oil spill occurring was low (Explanatory Note, page 10).
- The Board imposed conditions relating to accidents and malfunctions (Explanatory Note, page 13).

[482] Under the heading “Government response to what was heard” the Explanatory Note set out the following about the risk of spills:

> Communities are deeply concerned about the risk and impacts that oil spills pose to their land, air, water and communities. In addition to the terms and conditions related to spills identified by the NEB, land-based oil spills are subject to both federal and provincial jurisdiction. Federally regulated pipelines are subject to NEB regulation and oversight, which requires operators to develop comprehensive emergency management programs and collaborate with local responders in the development of these programs. B.C. also recently implemented regulations under the provincial *Environmental Management Act* to strengthen provincial oversight and require industry and government to collaborate in response to spills in B.C.
>
> The Government recently updated its world-leading pipeline safety regime through the *Pipeline Safety Act*, which came into force in June 2016. The Act implements $1 billion in “absolute liability” for companies operating major crude oil pipelines to clarify that operators will be responsible for all costs associated with spills irrespective of fault up to $1 billion; operators remain liable on an unlimited basis beyond this amount when they are negligent or at fault. The Act also requires proponents to carry cash on hand to ensure they are in a position to immediately respond to emergencies.
>
> With respect to ship source spills, the Government recently announced $1.5 billion in new investment in a national Oceans Protection Plan to enhance its world-leading marine safety regime. The Oceans Protection Plan has four main priority areas:
>
> - creating a world-leading marine safety system that improves responsible shipping and protects Canada’s waters, including new preventative and response measures;
> - restoring and protecting the marine ecosystems and habitats, using new tools and research;
> - strengthening partnerships and launching co-management practices with Indigenous communities, including building local emergency response capacity; and
> - investing in oil spill cleanup research and methods to ensure that decisions taken in emergencies are evidence-based.
>
> The Plan responds to concerns related to potential marine spills by strengthening the Coast Guard’s ability to take command in marine emergencies, toughening

> requirements for industry response to incidents, and by enhancing Indigenous partnerships.

[483] While the Attorney General of British Columbia disagrees with the Governor in Council's assessment of the risk of a major spill from Project-related shipping, there is no merit to the submission that the Governor in Council failed to consider the risk of spills posed by Project-related shipping.

[484] I now turn to consider the adequacy of the consultation process.

D. Should the decision of the Governor in Council be set aside on the ground that Canada failed to consult adequately with the Indigenous applicants?

1. The applicable legal principles

[485] Before commencing the analysis, it is helpful to discuss briefly the principles that have emerged from the jurisprudence which has considered the scope and content of the duty to consult. As explained in the opening paragraphs of these reasons, the applicable principles are not in dispute; what is in dispute is whether, on the facts of this case (which are largely agreed), Canada fulfilled its constitutional duty to consult.

[486] The duty to consult is grounded in the honour of the Crown and the protection provided for "existing aboriginal and treaty rights" in subsection 35(1) of the *Constitution Act, 1982*. The duties of consultation and, if required, accommodation form part of the process of reconciliation and fair dealing (*Haida Nation*, paragraph 32).

[487] The duty arises when the Crown has actual or constructive knowledge of the potential existence of Indigenous rights or title and contemplates conduct that might adversely affect those rights or title (*Haida Nation,* paragraph 35). The duty reflects the need to avoid the impairment of asserted or recognized rights caused by the implementation of a specific project.

[488] The extent or content of the duty of consultation is fact specific. The depth or richness of the required consultation increases with the strength of the *prima facie* Indigenous claim and the seriousness of the potentially adverse effect upon the claimed right or title (*Haida Nation*, paragraph 39; *Rio Tinto Alcan Inc. v. Carrier Sekani Tribal Council*, 2010 SCC 43, [2010] 2 S.C.R. 650, paragraph 36).

[489] When the claim to title is weak, the Indigenous interest is limited or the potential infringement is minor, the duty of consultation lies at the low end of the consultation spectrum. In such a case, the Crown may be required only to give notice of the contemplated conduct, disclose relevant information and discuss any issues raised in response to the notice (*Haida Nation*, paragraph 43). When a strong *prima facie* case for the claim is established, the right and potential infringement is of high significance to Indigenous peoples, and the risk of non-compensable damage is high, the duty of consultation lies at the high end of the spectrum. While the precise requirements will vary with the circumstances, a deep consultative process might entail: the opportunity to make submissions; formal participation in the decision-making process; and, the provision of written reasons to show that Indigenous concerns were considered and how those concerns were factored into the decision (*Haida Nation*, paragraph 44).

[490] Parliament may choose to delegate procedural aspects of the duty to consult to a tribunal.

[491] The Supreme Court has found the Board to possess both the procedural powers necessary to implement consultation and the remedial powers to accommodate, where necessary, affected Indigenous claims and Indigenous and treaty rights. The Board's process can, therefore, be relied on by the Crown to fulfil, in whole or in part, the Crown's duty to consult (*Clyde River (Hamlet) v. Petroleum Geo-Services Inc.*, 2017 SCC 40, [2017] 1 S.C.R. 1069, paragraph 34).

[492] As referenced above at paragraph 284, the Supreme Court has described the Board as having considerable institutional expertise both in conducting consultations and in assessing the environmental impacts of proposed projects. Where the effects of a proposed project on Indigenous or treaty rights substantially overlap with the project's potential environmental impact, the Board "is well situated to oversee consultations which seek to address these effects, and to use its technical expertise to assess what forms of accommodation might be available" (*Clyde River*, paragraph 33).

[493] When the Crown relies on a regulatory or environmental assessment process to fulfil the duty to consult, such reliance is not delegation of the Crown's ultimate responsibility to ensure consultation is adequate. Rather, it is a means by which the Crown can be satisfied that Indigenous concerns have been heard and, where appropriate, accommodated (*Haida Nation*, paragraph 53).

[494] The consultation process does not dictate a particular substantive outcome. Thus, the consultation process does not give Indigenous groups a veto over what can be done with land pending final proof of their claim. What is required is a process of balancing interests—a process of give and take. Nor does consultation equate to a duty to agree; rather, what is required is a commitment to a meaningful process of consultation (*Haida Nation*, paragraphs 42, 48 and 62).

[495] Good faith consultation may reveal a duty to accommodate. Where there is a strong *prima facie* case establishing the claim and the consequence of proposed conduct may adversely affect the claim in a significant way, the honour of the Crown may require steps to avoid irreparable harm or to minimize the effects of infringement (*Haida Nation*, paragraph 47).

[496] Good faith is required on both sides in the consultative process: "The common thread on the Crown's part must be 'the intention of substantially addressing [Aboriginal] concerns' as they are raised […] through a meaningful process of consultation" (*Haida Nation*, paragraph 42). The "controlling question in all situations is what is required to maintain the honour of the Crown and to effect reconciliation between the Crown and the Aboriginal peoples with respect to the interests at stake" (*Haida Nation*, paragraph 45).

[497] At the same time, Indigenous claimants must not frustrate the Crown's reasonable good faith attempts, nor should they take unreasonable positions to thwart the government from making decisions or acting in cases where, despite meaningful consultation, agreement is not reached (*Haida Nation*, paragraph 42).

[498] In the present case, much turns on what constitutes a meaningful process of consultation.

[499] Meaningful consultation is not intended simply to allow Indigenous peoples "to blow off steam" before the Crown proceeds to do what it always intended to do. Consultation is meaningless when it excludes from the outset any form of accommodation (*Mikisew Cree First Nation v. Canada (Minister of Canadian Heritage)*, 2005 SCC 69, [2005] 3 S.C.R. 388, paragraph 54).

[500] The duty is not fulfilled by simply providing a process for exchanging and discussing information. There must be a substantive dimension to the duty. Consultation is talking together for mutual understanding (*Clyde River*, paragraph 49).

[501] As the Supreme Court observed in *Haida Nation* at paragraph 46, meaningful consultation is not just a process of exchanging information. Meaningful consultation "entails testing and being prepared to amend policy proposals in the light of information received, and providing feedback." Where deep consultation is required, a dialogue must ensue that leads to a demonstrably serious consideration of accommodation. This serious consideration may be demonstrated in the Crown's consultation-related duty to provide written reasons for the Crown's decision.

[502] Where, as in this case, the Crown must balance multiple interests, a safeguard requiring the Crown to explain in written reasons the impacts of Indigenous concerns on decision-making

becomes more important. In the absence of this safeguard, other issues may overshadow or displace the issue of impacts on Indigenous rights (*Gitxaala*, paragraph 315).

[503] Further, the Crown is obliged to inform itself of the impact the proposed project will have on an affected First Nation, and, if appropriate in the circumstances, communicate its findings to the First Nation and attempt to substantially address the concerns of the First Nation (*Mikisew Cree First Nation*, paragraph 55).

[504] Consultation must focus on rights. In *Clyde River*, the Board had concluded that significant environmental effects to marine mammals were not likely and effects on traditional resource use could be addressed through mitigation measures. The Supreme Court held that the Board's inquiry was misdirected for the purpose of consultation. The Board was required to focus on the Inuit's treaty rights; the "consultative inquiry is not properly into environmental effects *per se*. Rather, it inquires into the impact on the *right*" (emphasis in original) (*Clyde River*, paragraph 45). Mitigation measures must provide a reasonable assurance that constitutionally protected rights were considered as rights in themselves—not just as an afterthought to the assessment of environmental concerns (*Clyde River*, paragraph 51).

[505] When consulting on a project's potential impacts the Crown must consider existing limitations on Indigenous rights. Therefore, the cumulative effects and historical context may inform the scope of the duty to consult (*Chippewas of the Thames*, paragraph 42).

[506] Two final points. First, where the Crown knows, or ought to know, that its conduct may adversely affect the Indigenous right or title of more than one First Nation, each First Nation is entitled to consultation based upon the unique facts and circumstances pertinent to it (*Gitxaala*, paragraph 236).

[507] Second, it is important to understand that the public interest and the duty to consult do not operate in conflict. As a constitutional imperative, the duty to consult gives rise to a special public interest that supersedes other concerns commonly considered by tribunals tasked with assessing the public interest. In the case of the Board, a project authorization that breaches the constitutionally protected rights of Indigenous peoples cannot serve the public interest (*Clyde River*, paragraph 40).

2. The standard to which Canada is to be held in fulfilling the duty

[508] As briefly explained above at paragraph 226, Canada is not to be held to a standard of perfection in fulfilling its duty to consult. The Supreme Court of Canada has expressed this concept as follows:

> Perfect satisfaction is not required; the question is whether the regulatory scheme or government action "viewed as a whole, accommodates the collective aboriginal right in question": *Gladstone*, *supra*, at para. 170. What is required is not perfection, but reasonableness. As stated in *Nikal*, *supra*, at para. 110, "in … information and consultation the concept of reasonableness must come into play. … So long as every reasonable effort is made to inform and to consult, such efforts would suffice." The government is required to make reasonable efforts to inform and consult. This suffices to discharge the duty.
>
> (*Haida Nation*, paragraph 62)
>
> (underlining added)

[509] As in *Gitxaala*, in this case "the subjects on which consultation was required were numerous, complex and dynamic, involving many parties. Sometimes in attempting to fulfil the duty there can be omissions, misunderstandings, accidents and mistakes. In attempting to fulfil the duty, there will be difficult judgment calls on which reasonable minds will differ." (*Gitxaala*, paragraph 182).

[510] Against this legal framework, I turn to the design and execution of Canada's four-phase consultation process. This process began in May 2013 with the filing of the Project description and ended in November 2016 with the decision of the Governor in Council to approve the Project and direct the issuance of a certificate of public convenience and necessity.

3. Application of the legal principles to the evidence

[511] The Indigenous applicants express a myriad of concerns and asserted deficiencies with respect to the consultation process. Broadly speaking, they challenge both the design of the process and the execution of the process.

[512] I will deal first with the asserted deficiencies in the design of the process selected and followed by Canada, and then consider the asserted deficiencies in the execution of the process.

(a) Was the consultation process deficient because of the design of the process selected and followed by Canada?

[513] Generally speaking, the most salient concerns expressed with respect to the design of the consultation process are the assertions that:

i. The consultation framework was unilaterally imposed.

ii. The National Energy Board process is inadequate for fulfilling consultation obligations.

iii. Insufficient funding was provided.

iv. The process allowed the Project to be approved when essential information was lacking.

[514] Each assertion will be considered in turn.

(i) The consultation framework was unilaterally imposed

[515] There was no substantive consultation with the Indigenous applicants about the four-phase consultation process.

[516] However, as Canada argues, the Crown possesses a discretion about how it structures a consultation process and how it meets its consultation obligations (*Gitxaala*, paragraph 203, citing *Cold Lake First Nations v. Alberta (Tourism, Parks and Recreation)*, 2013 ABCA 443, 566 A.R. 259, at paragraph 39). What is required is a process that allows Canada to make reasonable efforts to inform and consult (*Haida Nation*, at paragraph 62).

[517] Canada's four-phase consultation process is described above at paragraphs 72 through 75. While I deal below with the asserted frailties of the Board's hearing process in this particular case, the Supreme Court has recently re-affirmed that the Crown may rely on a regulatory agency to fulfil the Crown's duty to consult so long as the agency possesses the statutory powers to do what the duty to consult requires in the particular circumstances (*Chippewas of the Thames*,

paragraph 32). In the present case, no applicant asserts that the National Energy Board lacked any necessary statutory power so as to be able to fulfil in part the Crown's duty to consult. It follows that Canada could rely upon a consultation process which relied in part on the Board's hearing process, so long as Canada remained mindful of its constitutional obligation to ensure before approving the Project that consultation was adequate.

[518] Canada implemented a five-phase consultation framework for the review of the Northern Gateway Project. In *Gitxaala*, this Court found that the framework was reasonable (*Gitxaala*, paragraph 8). When the two consultation frameworks are compared there is little to distinguish them. An additional first phase was required in the Northern Gateway framework simply because the project was reviewed by a joint review panel, not the Board.

[519] Given Canada's discretion as to how the consultation process is structured and the similarity of this consultation process to that previously found by this Court to be reasonable, I am satisfied that Canada did not act in breach of the duty to consult by selecting the four-phase consultation process it adopted.

(ii) The Board's process is said to be inadequate for fulfilling consultation obligations

[520] A number of deficiencies are asserted with respect to the Board's process and its adequacy for fulfilling, to the extent possible, consultation obligations. The asserted deficiencies include:

- The Board's decision not to allow cross-examination of Trans Mountain's evidence.

- The Board's treatment of oral traditional evidence.
- The Board's timeframe which is said not to have provided sufficient time for affected Indigenous groups to inform themselves of the complexity of the Project and to participate with knowledge of the issues and impacts on them.
- The Board's failure to consult with affected Indigenous groups about any of the decisions the Board made prior to or during the hearing, including the list of issues for the hearing, the panel members who would hear the application, the design of the regulatory review and the environmental assessment, the decision-making process and the report and its recommendations.
- The failure of the Board's process to provide the required dialogue and consultation directly with Canada in circumstances where it is said that consultation in Phase III would be too little, too late.

[521] It is convenient to deal with the first four deficiencies together as the Board's choice of procedures, its decision-making process and its ultimate decision flow from its powers as a regulator under the *National Energy Board Act* and the *Canadian Environmental Assessment Act, 2012*.

[522] As explained above, the Supreme Court has found that meaningful Crown consultation can be carried out wholly or in part through a regulatory process (*Chippewas of the Thames*, paragraph 32). Prior to this decision, concern had been expressed about the tension said to result if a tribunal such as the Board were required both to carry out consultation on behalf of the Crown and then adjudicate on the adequacy of the consultation. The Supreme Court responded that such concern is addressed by observing that while it is the Crown that owes the constitutional duty to consult, agencies such as the Board are required to make legal decisions that comply with the Constitution. The Supreme Court went on to explain, at paragraph 34, that:

> When the [Board] is called on to assess the adequacy of Crown consultation, it may consider what consultative steps were provided, but its obligation to remain a neutral arbitrator does not change. A tribunal is not compromised when it carries out the functions Parliament has assigned to it under its Act and issues decisions that conform to the law and the Constitution.
>
> (underlining added)

[523] Applying these principles to the submissions before this Court, and bearing in mind that at this point I am only addressing submissions with respect to the adequacy of the design of the consultation process, the Board was required to provide a process that was impartial and fair and in accordance with its statutory framework and the Constitution.

[524] As explained above, section 8 of the *National Energy Board Act* authorizes the Board to make rules about the conduct of hearings before it, and the Board's rules allow the Board to determine whether public hearings held before it are oral or written. Section 52 of the *National Energy Board Act* requires the Board to render its report to the Minister within strict timelines. It follows that the Board could decide not to allow oral cross-examination, could determine how oral traditional evidence would be received and could schedule the hearing to comply with section 52 of the *National Energy Board Act* so long as, at the end of the hearing, it was satisfied that it had exercised its responsibilities in a manner that was fair and impartial and consistent with its governing legislation and section 35 of the *Constitution Act, 1982*.

[525] Similarly, the Board was authorized as a neutral arbitrator to make the decisions required of it under the legislation, including decisions about which issues would be decided during the hearing, the composition of the hearing panel and the content of its ultimate report. So long as these decisions were made in a manner that was fair and impartial, and in accordance with the

legislative scheme and subsection 35(1) of the *Constitution Act, 1982* they too were validly made. The Indigenous applicants have not shown that any additional dialogue or process was required between the Board and the Indigenous applicants in order for the Board's decision to be constitutionally sound.

[526] Put another way, when the Board's process is relied on in whole or in part to fulfil the obligation to consult, the regulatory hearing process does not change and the Board's role as neutral arbitrator does not change. What changes is that the Board's process serves the additional purpose of contributing to the extent possible to the constitutional imperative not to approve a project if the duty to consult was not satisfied.

[527] I now consider the last deficiency said to make the Board's process inadequate for fulfilling even in part the duty to consult: the failure of the Board's process to provide the required consultation directly with Canada.

[528] The Indigenous applicants do not point to any jurisprudence to support their submission that Canada was required to dialogue directly with them during the Board's hearing process (that is, during Phase II) and I believe this submission may be dealt with briefly.

[529] As stated above, meaningful Crown consultation can be carried out wholly through a regulatory process so long as where the regulatory process relied upon by the Crown does not achieve adequate consultation or accommodation, the Crown takes further steps to meet its duty

to consult by, for example, filling any gaps in consultation on a case-by-case basis (*Clyde River*, paragraph 22).

[530] In the present case, Phase III was designed in effect to fill the gaps left by the Phase II regulatory process—Phase III was to focus on outstanding concerns about the Project-related impacts upon potential or established Indigenous or treaty rights and on any incremental accommodation measures that Canada should address. Leaving aside the question of whether Phase III adequately addressed gaps in the consultation process, a point dealt with below, the Indigenous applicants have not shown that the consultation process required Canada's direct involvement in the regulatory process.

[531] For all of these reasons, I am satisfied that the Board's process was adequate for fulfilling its consultation obligations.

[532] The next concern with respect to the design of the consultation process is that it is said that insufficient participant funding was provided.

(iii) The funding provided is said to have been inadequate

[533] Two Indigenous applicants raise the issue of inadequate funding: Squamish and SSN.

[534] Squamish sought participant funding of $293,350 to participate in the Board process but was granted only $44,270, plus travel costs for one person to attend the hearing. Canada later provided $26,000 to Squamish to participate in consultation following the close of the Board

hearing record. The Squamish appendix to the Crown Consultation Report notes that the British Columbia Environmental Assessment Office also offered Squamish $5,000 in capacity funding to participate in consultations.

[535] Chief Campbell of the Squamish Nation provided evidence that the funding provided to Squamish was not adequate for Squamish to obtain experts to review and respond to the 8 volume, 15,000 page, highly technical Project application. Nor, in his view, was the funding adequate for Squamish to undertake a comprehensive assessment of the impacts of the Project on Squamish rights and title. He notes that Squamish's limited budget is fully subscribed to meet the needs of its members and that the sole purpose of Squamish's involvement in the hearing and consultation process was "defensive: to protect our rights and title."

[536] SSN requested in excess of $300,000 for legal fees, expert fees, travel costs, meeting attendance costs and information collecting costs. It received $36,920 in participant funding, plus travel for two representatives to attend the hearing. Canada later offered $39,000 to SSN to participate in consultation following the close of the Board hearing record. The British Columbia Environmental Assessment Office also offered some capacity funding.

[537] SSN states that Canada knew that SSN requested funding in largest part to complete a traditional land and resource use study. It states that Canada knew that such studies had been completed for other Indigenous groups in relation to the Project, but that neither Canada nor the proponent had undertaken such a study for SSN.

[538] I accept that the level of participant funding provided constrained participation in the process before the National Energy Board by the Squamish and the SSN. However, as Canada submits, it is difficult to see the level of participant funding as being problematic in a systematic fashion when only two applicants address this issue.

[539] In *Gitxaala*, this Court rejected the submission that inadequate funding had been provided for participation before the joint review panel and in the consultation process. The Court noted, at paragraph 210, that the evidence filed in support of the submissions did:

> … not explain how the amounts sought were calculated, or detail any financial resources available to the First Nations outside of that provided by Canada. As such, the evidence fails to demonstrate that the funding available was so inadequate as to render the consultation process unreasonable.

[540] Much the same can be said of the evidence filed on this application. While SSN did append its request for participant funding as Exhibit D to the affidavit of its affiant Jeanette Jules, at the time this application was submitted SSN had not determined which expert or experts would be hired, it could not advise as to how many hours the expert(s) would likely bill or what the expert(s)' hourly rate(s) would be. The information provided was simply that it was expected that $80,000 was required to prepare a traditional land use study and that an additional $30,000 was required as the approximate cost of a wildlife study. No information was provided by either applicant about financial resources available to it.

[541] The evidence has not demonstrated that the level of participant funding was so inadequate as to render the entire consultation process unreasonable.

(iv) The process allowed the Project to be approved when essential information was lacking

[542] The final deficiency asserted with respect to the structure of the consultation process relates to the nature of the Board's process for approving projects. A number of Indigenous applicants argue that Canada's reliance upon the Board's hearing process was unreasonable in circumstances where potential impacts to title and rights remained unknown because studies of those potential impacts, and of the measures proposed in the Board's report to mitigate potential impacts, were left to a later date after the Governor in Council approved the Project. It is argued that without identification of all of the impacts of the Project Canada cannot rely on the Board's assessment of impacts to fulfil the duty to consult.

[543] Commencing at paragraph 286 above, I describe in some detail the Board's approval process in the context of the submission of the City of Burnaby that the Board's approval process was procedurally unfair because of what Burnaby characterized to be the deferral and delegation of the assessment of important information.

[544] Beginning at paragraph 322 above, I deal with the submissions of the City of Burnaby and Coldwater that the Governor in Council erred in determining that the Board's report qualified as a report because the Board did not decide certain issues before recommending approval of the Project. Consideration of the concerns advanced by Coldwater with respect to the Board's failure to deal with the West Alternative begins at paragraph 375 above. At paragraphs 384 and 385, I conclude that the pipeline route through the Coldwater River Valley remains a live issue.

[545] This places in context concerns raised by Coldwater and other applicants about the reasonableness of Canada's reliance on a process that left important issues unresolved at the time the Governor in Council approved the Project.

[546] In my view, this concern is addressed by the Supreme Court's analysis in the companion cases of *Clyde River* and *Chippewas of the Thames* where the Supreme Court explained that the Board's approval process may itself trigger the duty to consult where that process may result in adverse impacts upon Indigenous and treaty rights (*Clyde River*, paragraphs 25 to 29; *Chippewas of the Thames*, paragraphs 29 to 31).

[547] Examined in the context of Coldwater's concerns about the West Alternative and the protection of Coldwater's aquifer, this means that the Board's decision about the detailed pipeline routing in the vicinity of the Coldwater Reserve will trigger the duty to consult because Canada will have knowledge, real or constructive, of the potential impact of that decision upon Coldwater's aquifer located beneath the Coldwater Reserve. Once the duty is triggered, the Board may only make its decision if it informs itself of the impacts to the aquifer and takes the rights and interests of Coldwater into consideration before making its final decisions about pipeline routing and compliance with Condition 39 (*Chippewas of the Thames*, paragraph 48). Canada will remain responsible to ensure that the Board's decision upholds the honour of the Crown (*Clyde River*, paragraph 22). This is, I believe, a full answer to the concern that the consultation framework was deficient because certain decisions remain to be made after the Governor in Council approved the Project.

(v) Conclusion on the adequacy of the process selected and followed by Canada

[548] In *Clyde River* and *Chippewas of the Thames* the Supreme Court provided helpful guidance about the indicia of a reasonable consultation process. Applying those indicia:

- The Indigenous applicants were given early notice of the Project, the Board's hearing process, the framework of the consultation process and Canada's intention to rely on the National Energy Board process, to the extent possible, to discharge Canada's duty to consult.
- Participant funding was provided to the Indigenous applicants both by the Board and Canada (and the provincial Crown as well).
- The Board's process permitted Indigenous applicants to provide written evidence and oral traditional evidence, to question both Trans Mountain and the federal government interveners through Information Requests and to make written and oral closing submissions.
- The regulatory framework permitted the Board to impose conditions upon Trans Mountain that were capable of mitigating risks posed by the Project to the rights and title of the Indigenous applicants.
- After the Board's hearing record closed and prior to the decision by the Governor in Council, Canada provided a further consultation phase, Phase III, designed to enable Canada to deal with concerns not addressed by the hearing, the Board's proposed conditions and Trans Mountain's commitments.
- Canada understood, and advised the Indigenous applicants, that if Indigenous groups identified outstanding concerns in Phase III there were a number of options available to Canada. These included asking the National Energy Board to reconsider its recommendations and conditions, undertaking further consultations prior to issuing additional permits or authorizations and the use of existing or new policy and program measures to address outstanding concerns.

[549] I am satisfied that the consultation framework selected by Canada was reasonable. It was sufficient, if properly implemented, to enable Canada to make reasonable efforts to inform itself and consult. Put another way, this process, if reasonably implemented, could have resulted in mutual understanding on the core issues and a demonstrably serious consideration of accommodation.

(b) Was the consultation process deficient because of Canada's execution of the process?

[550] Canada argues that the consultation process allowed for deep consultation both in form and in substance. In particular it notes that:

- The Indigenous applicants were given early notice of the proposed Project, the Board hearing process and the consultation process, as well as Canada's intention to rely on the Board's process, to the extent possible, to discharge Canada's duty to consult.
- The Board required that Trans Mountain extensively consult before filing its application so as to attempt to address potential impacts by way of project modifications and design.
- Participant funding was provided to the Indigenous applicants by both Canada and the Board.
- The Indigenous applicants were afforded the opportunity before the Board to provide oral traditional and written evidence, to ask questions of Trans Mountain and the Federal interveners, and to make both written and oral submissions. The Board's report formulated conditions to mitigate, avoid or otherwise address impacts on Indigenous groups, and explained how Indigenous concerns were considered and addressed.
- Canada ordered an extension of the legislative timeframe for the Governor in Council's decision and met and corresponded with the Indigenous applicants to

discuss concerns that may not have been adequately addressed by the Board and to work together to identify potential accommodation measures.

- Canada developed the Crown Consultation Report to inform government decision-makers and sought feedback from the Indigenous applicants on two draft versions of the Crown Consultation Report.
- Canada reviewed upstream greenhouse gas emission estimates for the Project, struck a Ministerial Panel to seek public input and held a workshop in Kamloops.
- Canada developed additional accommodation measures including an Indigenous Advisory and Monitoring Committee, the Oceans Protection Plan and the Action Plan for the Recovery of the Southern Resident Killer Whale.
- Canada gave written reasons for conditionally approving the Project that showed how Indigenous concerns were considered and addressed.

[551] While in *Gitxaala* this Court found that the consultation process followed for the Northern Gateway project fell well short of the mark, Canada submits that the flaws identified by the Court in *Gitxaala* were remedied and not repeated. Specific measures were taken to remedy the flaws found in the earlier consultation. Thus:

i. Canada extended the consultation process by four months to allow deeper consultation with potentially affected Indigenous groups, greater public engagement and an assessment of the greenhouse gas emissions associated with the Project.

ii. The Order in Council expressly stated that the Governor in Council was "satisfied that the consultation process undertaken is consistent with the honour of the Crown and that the concerns and interests have been appropriately accommodated". Reasons for this conclusion were given in the Explanatory Note.

iii. Canada shared its preliminary strength of claim assessments in August 2016 to allow Indigenous groups to comment on the assessments. Canada's ultimate assessments were set out in the Crown Consultation Report.

iv. Canada's officials met and dialogued with Indigenous groups. As well, several Ministers met with Indigenous groups. While the Governor in Council accepted the report of the National Energy Board, in addition to the Board's conditions the Crown Consultation Report contained a commitment to design, fund and implement an Indigenous Advisory and Monitoring Committee for the Project and the Explanatory Note referenced two new initiatives: the Economic Pathways Partnership and the Oceans Protection Plan.

v. In order to ensure that the Governor in Council received accurate information, two drafts of the Crown Consultation Report were distributed for comment and Indigenous groups were invited to provide their own submissions to the Governor in Council.

vi. The consultation was based on the unique facts and circumstances applicable to each Indigenous group. The Crown Consultation Report contained a detailed appendix for each potentially affected Indigenous group that dealt with: background information; a preliminary strength of claim assessment; a summary of the group's involvement in the Board and Crown Consultation process; a summary of the group's interests and concerns; accommodation proposals; the group's response to the Board's report; the potential impacts of the Project on the group's Indigenous interests; and the Crown's conclusions.

[552] I acknowledge significant improvements in the consultation process. To illustrate, in *Gitxaala* this Court noted, among other matters, that:

- requests for extensions of time were ignored (reasons, paragraphs 247 and 250);
- inaccurate information was put before the Governor in Council (reasons, paragraphs 255-262);
- requests for information went unanswered (reasons, paragraphs 272, 275-278);
- Canada did not disclose its assessment of the strength of the Indigenous parties' claim to rights or title or its assessment of the Project's impacts (reasons, paragraphs 288-309); and,

- Canada acknowledged that the consultation on some issues fell well short of the mark (reasons, paragraph 254).

[553] Without doubt, the consultation process for this project was generally well-organized, less rushed (except in the final stage of Phase III) and there is no reasonable complaint that information within Canada's possession was withheld or that requests for information went unanswered.

[554] Ministers of the Crown were available and engaged in respectful conversations and correspondence with representatives of a number of the Indigenous applicants.

[555] Additional participant funding was offered to each of the applicants to support participation in discussions with the Crown consultation team following the release of the Board's report and recommendations. The British Columbia Environmental Assessment Office also offered consultation funding.

[556] The Crown Consultation Report provided detailed information about Canada's approach to consultation, Indigenous applicants' concerns and Canada's conclusions. An individualized appendix was prepared for each Indigenous group (as described above at paragraph 551(vi)).

[557] However, for the reasons developed below, Canada's execution of Phase III of the consultation process was unacceptably flawed and fell short of the standard prescribed by the jurisprudence of the Supreme Court. As such, the consultation process fell short of the required mark for reasonable consultation.

[558] To summarize my reasons for this conclusion, Canada was required to do more than receive and understand the concerns of the Indigenous applicants. Canada was required to engage in a considered, meaningful two-way dialogue. Canada's ability to do so was constrained by the manner in which its representatives on the Crown consultation team implemented their mandate. For the most part, Canada's representatives limited their mandate to listening to and recording the concerns of the Indigenous applicants and then transmitting those concerns to the decision-makers.

[559] On the whole, the record does not disclose responsive, considered and meaningful dialogue coming back from Canada in response to the concerns expressed by the Indigenous applicants. While there are some examples of responsiveness to concerns, these limited examples are not sufficient to overcome the overall lack of response. The Supreme Court's jurisprudence repeatedly emphasizes that dialogue must take place and must be a two-way exchange. The Crown is required to do more than to receive and document concerns and complaints. As this Court wrote in *Gitxaala*, at paragraph 265, speaking of the limited mandate of Canada's representatives:

> When the role of Canada's representatives is seen in this light, it is of no surprise that a number of concerns raised by Aboriginal groups—in our view, concerns very central to their legitimate interests—were left unconsidered and undiscussed. This fell well short of the conduct necessary to meet the duty to consult.

[560] Further, Phase III was to focus on two questions: outstanding concerns about Project-related impacts and any required incremental accommodation measures. Canada's ability to consult and dialogue on these issues was constrained by two further limitations: first, Canada's unwillingness to depart from the Board's findings and recommended conditions so as to

genuinely understand the concerns of the Indigenous applicants and then consider and respond to those concerns in a genuine and adequate way; second, Canada's erroneous view that it was unable to impose additional conditions on Trans Mountain.

[561] Together these three factors led to a consultation process that fell short of the mark and was, as a result, unreasonable. Canada then exacerbated the situation by its late disclosure of its view that the Project did not have a high level of impact on the established and asserted rights of the Indigenous applicants—a disclosure made two weeks before they were required to submit their final response to the consultation process and less than a month before the Governor in Council approved the Project.

[562] I begin the analysis by underscoring the need for meaningful two-way dialogue in the context of this Project and then move to describe in more detail the three significant impediments to meaningful consultation: the Crown consultation team's implementation of their mandate essentially as note-takers, Canada's reluctance to consider any departure from the Board's findings and recommended conditions, and Canada's erroneous view that it lacked the ability to impose additional conditions on Trans Mountain. I then discuss Canada's late disclosure of its assessment of the Project's impact on the Indigenous applicants. Finally, I review instances that show that as a result of these impediments the opportunity for meaningful dialogue was frustrated.

[563] The jurisprudence of the Supreme Court on the duty to consult is clear. The Indigenous applicants were entitled to a dialogue that demonstrated that Canada not only heard but also gave

serious consideration to the specific and real concerns the Indigenous applicants put to Canada, gave serious consideration to proposed accommodation measures, and explained how the concerns of the Indigenous applicants impacted Canada's decision to approve the Project. The instances below show how Canada fell short of its obligations.

(i) The need for meaningful two-way dialogue

[564] As a matter of well-established law, meaningful dialogue is a prerequisite for reasonable consultation. As explained above at paragraphs 499 to 501, meaningful consultation is not simply a process of exchanging information. Where, as in this case, deep consultation is required, a dialogue must ensue and the dialogue should lead to a demonstrably serious consideration of accommodation. The Crown must be prepared to make changes to its proposed actions based on information and insight obtained through consultation.

[565] The need for meaningful dialogue exists and operates in a factual context. Here, Phase III was a critically important part of the consultation framework. This was so for a number of reasons.

[566] First, Phase III was the first opportunity for the Indigenous applicants to dialogue directly with Canada about matters of substance, not process.

[567] Second, the Board's report did not deal with all of the subjects on which consultation was required. For example, the Board did not make any determinations about the nature and scope of asserted or established Indigenous rights, including title rights. Nor did the Board consider the

scope of the Crown's duty to consult or whether the duty was fulfilled. Nor did Trans Mountain in its application, or the Board in its report, assess how the residual effects of the Project, or the Project itself, could adversely impact traditional governance systems and claims to Aboriginal title (Crown Consultation Report, sections 1.4, 4.3.4 and 4.3.5). Canada was obliged to consult on these issues.

[568] Third, neither Trans Mountain nor the Board assessed the Project's impacts on a specific basis for each affected Indigenous group. Rather, Trans Mountain assessed the effects related to Project construction and operations (including potential accidents and malfunctions) that might impact biophysical resources and socio-economic components within the Project area, and the Indigenous uses, practices and activities associated with those resources. This approach was accepted by the Board (Board report, pages 51 to 52).

[569] Finally, Phase III began in earnest with the release of the Board's report and finalized conditions. This report contained findings of great importance to the applicants because the Board's findings led Canada to conclude that the Project had only a minor-to-moderate impact on the Indigenous applicants. As a matter of law, this conclusion directly affected both the depth of consultation required and the need for accommodation measures. The following two examples illustrate the importance of the Board's findings to the Indigenous applicants.

[570] The first example concerns the assessment of the Project's potential impact on freshwater fishing. The Board found that the proposed watercourse crossings designs, mitigation measures, reclamation activities and post-construction monitoring were appropriate and that they would

effectively reduce the extent of effects on fish and fish habitat. Watercourse crossings would be required to comply with federal and provincial laws and regulations and would require permits under the British Columbia *Water Sustainability Act*, S.B.C. 2014, c. 15. The Board agreed with Trans Mountain's self-assessment of the potential for serious harm in that the majority of proposed watercourse crossings would not constitute serious harm to fish for the purposes of the *Fisheries Act*, R.S.C. 1985, c. F-14 (Board report, pages 183 and 185).

[571] The Stó:lō have a constitutionally protected right to fish on the Fraser River, a right affirmed by the Supreme Court of Canada. In the Stó:lō appendix to the Crown Consultation Report, Canada concluded that Project construction and routine maintenance during operation would be expected to result in a minor-to-moderate impact on the Stó:lō's freshwater fishing and marine fishing and harvesting activities (Stó:lō appendix, pages 26 and 27). This assessment flowed directly from the Board's conclusion that Project-related activities could result in low-to-moderate magnitude effects on freshwater and marine fish and fish habitat and the Board's conclusion that its conditions, if the Project was approved, would either directly or indirectly avoid or reduce potential environmental effects on fishing activities (Stó:lō appendix, pages 24 and 25).

[572] The second example relates to the ability of Indigenous groups to use the lands, waters and resources for traditional purposes. The Board found that this ability would be temporarily impacted by construction and routine maintenance activities, and that some opportunities for certain activities, such as harvesting or accessing sites or areas of traditional land resource use, would be temporarily interrupted. The Board was of the view that these impacts would be short-

term, as they would be limited to brief periods during construction and routine maintenance, and that these effects would be largely confined to the Project footprint for the pipeline, associated facilities and the on-shore portion of the Westridge Marine Terminal site. The Board found these effects would be reversible in the short to long term, and low in magnitude (Board report, page 279). The Board also found that:

- Project-related pipeline, facility and Westridge Marine Terminal construction and operation, and marine shipping activities were likely to have low-to-moderate magnitude environmental effects on terrestrial, aquatic and marine species harvested by Indigenous groups as a whole (Board report, pages 204, 221 to 224 and 362);
- Construction of the Westridge Marine Terminal, the pipeline and associated facilities were likely to cause short-term temporary disruptions to Indigenous community members accessing traditional hunting, trapping and plant gathering sites (Board report, page 279); and,
- Project-related marine shipping activities were likely to cause temporary disruptions to activities or access to sites during the period of time Project-related tankers were in transit (Board report, page 362).

[573] Based on these findings, Canada concluded that the impact of Project construction and operation and Project-related marine shipping activities on Tsleil-Waututh's and Squamish's hunting, trapping and plant gathering activity would be negligible-to-minor. The Project's impact on these activities was assessed to be minor for the Stó:lō and SSN, and minor-to-moderate for Coldwater and Upper Nicola.

[574] The critical importance of the Board's findings to the Indigenous applicants mandated meaningful dialogue about those findings. I now turn to consider Canada's execution of Phase III of the consultation process, commencing with the mandate of the Crown consultation team.

(ii) The implementation of the mandate of the Crown consultation team

[575] While Canada submits that the members of the Crown consultation team were not mere note-takers, the preponderance of the evidence is to the effect that the members of the Crown consultation team acted on the basis that, for the most part, their role was that of note-takers who were to accurately report the concerns of the Indigenous applicants to the decision-makers.

[576] My review of the evidence begins with the explanation of the team's mandate found in the Crown Consultation Report. I then move to the evidence of the interactions between the Crown consultation team and the Indigenous applicants during the consultation process.

[577] First, a word of explanation about the source of the evidence cited below. Unless otherwise noted, the evidence comes from meeting notes prepared by Canada. It was Canada's practice to prepare meeting notes following each consultation meeting, to send the draft notes to the affected Indigenous group for comment, and then to revise the notes based on the comments received before distributing a final version. The parties did not take issue with the accuracy of meeting notes. As shown below, where there was any disagreement on what had been said, the minutes set out each party's view of what had been said.

a. The Crown Consultation Report

[578] Section 3.3.4 of the Crown Consultation Report dealt with Phase III of the consultation process. Under the subheading "Post-NEB Hearing Phase Consultation" the report stated:

> … The mandate of the Crown consultation team was to listen, understand, engage and report to senior officials, Aboriginal group perspectives. The Minister of Natural Resources and other Ministers were provided a summary of these meetings.

b. The experience of Tsleil-Waututh

[579] At a meeting held on April 5, 2016, Erin O'Gorman of Natural Resources Canada "highlighted her mandate to listen and understand [Tsleil-Waututh's] perspective on how consultations should be structured, and move this information for decision. No mandate to defend the current approach."

[580] In the course of the introductions and opening remarks at a meeting held September 15, 2016, "Canada stressed that the Crown's ultimate goal is to understand the position and concerns of the [Tsleil-Waututh] on the proposed Trans Mountain Expansion project."

[581] At a meeting held on October 20, 2016, Canada's representatives advised that "[o]ur intention is to provide a report to cabinet and include all first Nations consulted, we are open to having [Tsleil-Waututh] input review and representation in that report, together with mitigation and accommodation measures." In response, a representative of Tsleil-Waututh "indicated he did not want consultations and a report of concerns to [Governor in Council]: that has occurred and

does not work." The response of the federal representatives to this was that "it was sufficient to convey information to the [Governor in Council] depending on how it's done."

c. The experience of Squamish

[582] On October 6, 2016, the Major Projects Management Office and the British Columbia Environmental Assessment Office jointly wrote to Squamish in response to a letter from Squamish setting out its views on the outstanding deficiencies in the Board review process and requesting a review of the consultation approach the Crown was taking to inform forthcoming federal and provincial decisions in respect of the Project. Under the heading "Procedural Concerns" Squamish was advised:

> The Crown Consultation Team's objective has always been to work with Squamish and other Aboriginal groups to put forward the best information possible to decision makers within the available regulatory timeframe, via this Consultation and Accommodation Report. Comments and input provided by Squamish will help the Crown Consultation Team to accurately convey Squamish's interests, concerns, and any specific proposals.
>
> The Crown is now focused on validating the key substantive concerns of Squamish, and has requested feedback on an initial draft report so that the Crown can include draft conclusions in a subsequent revision that will include the Crown's assessment of the seriousness of potential impacts from the Project on Aboriginal Interests, specific to each Aboriginal group.
>
> …
>
> At this stage in the process, following a four month extension of the federal legislated time limit, for a decision on the Project (required by December 19, 2016), we continue to want to ensure that Squamish's substantive concerns with respect to the Project, [Board] report (including recommended terms and conditions), and related proposals for mitigation or accommodation are accurately and comprehensively documented in the Consultation and Accommodation Report.
>
> (underlining added)

[583] At the only consultation meeting held with Squamish, Canada's consultation lead referenced the ethics the team abided by during each meeting with Indigenous groups: "honesty, truth, pursuing the rightful path and ensuring that accurate and objective, representative information is put before decision-makers."

[584] He later reiterated that "[i]t is the Crown's duty to ensure that accurate information on these outstanding issues is provided to decision-makers, including how Squamish perceives the project and any outstanding issues."

d. The experience of Coldwater

[585] At a meeting held with Coldwater on March 31, 2016, prior to the start of Phase III, the head of the Crown consultation team explained that:

> … the work of the Crown consultation team, to develop a draft report that helps document the potential impacts of the project on [Coldwater] rights and interests, will be the vehicle through which the Crown documents potentially outstanding issues and accommodation proposals. It may appear as though the Crown is relying solely on the [Board] process, however it is not. It is leading its own consultation activities and will be overlaying a separate analytical framework (i.e. the impacts-on-rights lens).

[586] At a meeting on May 4, 2016, discussing, among other things, the effect of the Project on Coldwater's aquifer the Crown consultation team advised:

> For specifics such as detailed routing, it is the [Board] which decides those. The responsibility that the Crown consultation team has is to make sure these issues are reflected in the Crown consultation report, so they can be considered by decision makers.
>
> (underlining added)

After Coldwater expressed its strong preference for the West Alternative Canada's representatives responded that:

> [t]his issue is one which is very detailed, and will need to be recorded carefully and accurately in the Crown consultation Report. The Crown consultation report can highlight that project routing is a central issue for Coldwater.
>
> (underlining added)

[587] At a consultation meeting held on October 7, 2016, again in the context of discussions about Coldwater's aquifer, one of Canada's representatives:

> … acknowledged that the aquifer hasn't been fully explored, but explained that the [Board] process has analysed the Project and that the Crown will not be taking an independent analysis beyond that. This is because the [Board] is a quasi-judicial tribunal with significant technical expertise. The Crown (federally and provincially) will not undertake an independent analysis of potential corridor routes. That said, the Crown will take Coldwater's concerns back to decision makers.
>
> …
>
> Coldwater asked what the point of consultation was if all that was coming from the Crown was a summary report to the [Governor in Council].
>
> (underlining added)

[588] In the later stages of the meeting during a discussion headed "Overview of Decision Making", Coldwater stated that based on the discussion with the Crown to date it did not seem likely that there would be a re-analysis of the West Alternative or any of the additional analysis Coldwater had asked for. Canada's representatives responded that:

> [The Crown's] position is that the detailed route hearing process and Condition 39 provide avenues to consider alternative routes, however the Crown is not currently considering alternative routes because the [Board] concluded that the applied for pipeline corridor is satisfactory. The Crown will ensure that Coldwater's concerns about the route are provided to the Cabinet, it will then be

> up to Cabinet to decide if those concerns warrant reconsideration of the current route.
>
> (underlining added)

e. The experience of Stó:lō

[589] An email sent from the Major Projects Management Office following an April 13, 2016, consultation meeting advised that:

> The Crown consultation team for [the Trans Mountain expansion] and the forthcoming Ministerial Representative (or Panel) will hear views on the project and whether there are any outstanding issues not addressed in the [Board's] final report and conditions or [Environment Canada's] assessment of upstream greenhouse gas emissions. This will provide another avenue for participants to provide their views on the upstream [greenhouse gas] assessment for [Trans Mountain expansion]. Any comments will be received and given consideration by the Government of Canada.
>
> (underlining added)

[590] On May 12, 2016, the Stó:lō wrote to the Minister of Natural Resources, the Honourable James Carr. It wrote about the Crown Consultation Report that:

> … we understood [Canada's representative] Mr. Neil to say that the federal decision-maker will be the Governor-in-Council and that [Natural Resources Canada], further to this Crown consultation, will not make recommendations with respect to this project. Instead, its report to the Governor-in-Council will be a summary of what it heard during its consultations with aboriginal peoples with some commentary. We further understood Mr. Whiteside [another federal representative] to say that the Governor-in-Council cannot, based on Crown consultations, add or make changes to the Terms and Conditions of the project as set out by the [Board]. If we have misunderstood these representations, we would appreciate being informed in writing. If we have not misunderstood these representations, we believe that [Natural Resources Canada] is misinterpreting its constitutional obligations and the authority of federal decision-makers.
>
> (underlining added)

[591] The Stó:lō went on to observe that "[a] high level of consultation means more than simply gathering information on aboriginal interests, cross checking those with the Terms and Conditions of the project and reporting those findings to the federal decision-maker." And that "[a] simple 'what we heard' report is inadequate to this task and the Governor-in-Council must be aware of its obligation to either reject or make changes to the project to protect and preserve the aboriginal rights, title and interests of the Stó:lō Collective."

[592] The Minister responded on July 15, 2016. The Minister agreed that addressing concerns required more than gathering and reporting information from consultation sessions and advised that if the Stó:lō Collective identified concerns that had not been fully addressed by the Board's terms and conditions consultation would "include efforts to preserve the Aboriginal rights in question." The Minister encouraged the Stó:lō Collective "to work with the Crown consultation team so that the Stó:lō Collective's interests are fully understood and articulated in the Crown Consultation and Accommodation Report" (underlining added). The Minister added that "[a]ny accommodation measures or proposals raised during Crown consultations will be included in this report and will inform the Government's decision on [the Project]."

f. The experience of Upper Nicola

[593] At a meeting held on March 31, 2016, after Chief McLeod expressed his desire for Upper Nicola's "intentions to be heard by decision makers, and asked that all of the information shared today be relayed to Minister Carr", Canada's representatives responded that "senior decision makers are very involved in this project and the Crown consultation team would be relaying the outcomes and the meeting records from the meeting today up the line." Canada's Crown

consultation lead noted that "wherever possible he would like to integrate some of the Indigenous words Chief McLeod spoke about into the Crown consultation report as a mechanism to relay the important messages which the Chief is talking about."

[594] At a meeting on May 3, 2016, immediately prior to the release of the Board's report and recommendations, Canada's consultation lead "reiterated the current mandate for the Crown consultation team, which is to listen, learn, understand, and to report up to senior decision makers" (underlining added). Upper Nicola's legal counsel responded that "the old consultation paradigm, where the Crown's officials meets with Aboriginal groups to hear from them their perspectives and then to report this information to decision makers, is no longer valid."

[595] Towards the end of the meeting, in response to a question about a recent media story which claimed that the Prime Minister had instructed his staff to develop a strategy for approving Trans Mountain, a senior advisor to Indigenous and Northern Affairs Canada advised that he had "received no instructions from his department that would change his obligation as a public servant to ensure that he does all he can to remain objective and impartial and to ensure that the views of Aboriginal groups are appropriately and accurately relayed to decision makers." The Crown consultation lead added that the "Crown consultation team has no view on the project. Its job is to support decision makers with accurate information" (underlining added).

g. The experience of SSN

[596] In an email of July 7, 2015, sent prior to the release of the Board's draft conditions, SSN was advised by the Major Projects Management Office that the Federal "Crown's consultation

will focus on an exchange of information and dialogue on two key documents", the Board's draft conditions and the draft Crown Consultation Report. With respect to the Crown Consultation Report, the email advised that the focus would be to determine "whether the Crown has adequately described the Aboriginal group's participation in the process, the substantive issues they have raised and the status of those issues (including Aboriginal groups' views on any outstanding concerns and residual issues arising from Phase III)" (underlining added).

[597] In a later email of June 17, 2016, SSN were informed that:

> The objective of the Crown consultation team moving forward is to consult collaboratively in an effort to reach consensus on outstanding issues and related impacts on constitutionally protected Aboriginal and treaty rights, as well as options for accommodating any impacts on rights that may need to be considered as part of the decision-making process. The status of these discussions will be documented in a Consultation and Accommodation Report that will help inform future decisions on the proposed project and any accompanying rationale for the government's decisions.
>
> (underlining added)

h. Conclusion on the mandate of the Crown consultation team

[598] As this review of the evidence shows, members of the Crown consultation team advised the Indigenous applicants on a number of occasions throughout the consultation process that they were there to listen and to understand the applicants' concerns, to record those concerns accurately in the Crown Consultation Report, and to pass the report to the Governor in Council. The meeting notes show the Crown consultation team acted in accordance with this role when discussing the Project, its impact on the Indigenous applicants and their concerns about the Project. The meeting notes show little or no meaningful responses from the Crown consultation team to the concerns of the Indigenous applicants. Instead, too often Canada's response was to

acknowledge the concerns and to provide assurance the concerns would be communicated to the decision-makers.

[599] As this Court explained in *Gitxaala* at paragraph 279, Canada was required to engage, dialogue and grapple with the concerns expressed to it in good faith by the Indigenous groups impacted by the Project. Meaningful dialogue required someone representing Canada empowered to do more than take notes—someone able to respond meaningfully to the applicants' concerns at some point in time.

[600] The exchanges with the applicants demonstrate that this was missing from the consultation process. The exchanges show little to facilitate consultation and show how the Phase III consultation fell short of the mark.

[601] The consultation process fell short of the required mark at least in part because the consultation team's implementation of its mandate precluded the meaningful, two-way dialogue which was both promised by Canada and required by the principles underpinning the duty to consult.

(iii) Canada's reluctance to depart from the Board's findings and recommended conditions and genuinely engage the concerns of the Indigenous applicants

[602] During Phase III each Indigenous applicant expressed concerns about the suitability of the Board's regulatory review and environmental assessment. These concerns were summarized and reported in the appendix to the Crown Consultation Report maintained for each Indigenous

applicant (Tsleil-Waututh appendix, pages 7-8; Squamish appendix, page 4; Coldwater appendix, pages 4-5; Stó:lō appendix, pages 12-14; Upper Nicola appendix, pages 5-6; SSN appendix, page 4). These concerns related to both the Board's hearing process and its findings and recommended conditions. The concerns expressed by the Indigenous applicants included:

- The exclusion of Project-related shipping from the definition of the "designated project" which was to be assessed under the *Canadian Environmental Assessment Act, 2012*.
- The inability to cross-examine Trans Mountain's witnesses, coupled with what were viewed to be inadequate responses by Trans Mountain to Information Requests.
- The Board's recommended terms and conditions were said to be deficient for a number of reasons, including their lack of specificity and their failure to impose additional conditions (for example, a condition that sacred sites be protected).
- The Board's findings were generic, thus negatively impacting Indigenous groups' ability to assess the potential impact of the Project on their title and rights.
- The Board's legislated timelines were extremely restrictive and afforded insufficient time to review the Project application and to participate meaningfully in the review process.
- The Board hearing process was an inappropriate forum for assessing impacts to Indigenous rights, and the Board's methods and conclusions regarding the significance and duration of the Project's impacts on Indigenous rights were flawed.

[603] However, missing from both the Crown Consultation Report and the individual appendices is any substantive and meaningful response to these concerns. Nor does a review of the correspondence exchanged in Phase III disclose sufficient meaningful response to, or dialogue about, the various concerns raised by the Indigenous applicants. Indeed, a review of the record of the consultation process discloses that Canada displayed a closed-mindedness when

concerns were expressed about the Board's report and was reluctant to depart from the findings and recommendations of the Board. With rare exceptions Canada did not dialogue meaningfully with the Indigenous applicants about their concerns about the Board's review. Instead, Canada's representatives were focused on transmitting concerns of the Indigenous applicants to the decision-makers, and nothing more. Canada was obliged to do more than passively hear and receive the real concerns of the Indigenous applicants.

[604] The evidence on this point comes largely from Tsleil-Waututh and Coldwater.

[605] I begin with the evidence of the Director of Tsleil-Waututh's Treaty, Lands and Resources Department, Ernie George. He affirmed that at a meeting held with representatives of Canada on October 21, 2016, to discuss Tsleil-Waututh's view that the Board's process was flawed such that the Governor in Council could not rely on its report and recommendations:

> 81. Canada expressed that it was extremely reluctant to discuss the fundamental flaws that [Tsleil-Waututh] alleged were present in relation to the [Board] process, and even prior to the meeting suggested that we might simply need to "agree to disagree" on all of those issues. In our view Canada had already determined that it was not willing to take any steps to address the issues that [Tsleil-Waututh] identified and submitted constituted deficiencies in the [Board] process, despite having the power to do so under CEAA and NEBA and itself stating that this was a realistic option at its disposal.
>
> (underlining added)

[606] Mr. George was not cross-examined on his affidavit.

[607] Canada's reluctance was firmly expressed a few days later at a meeting held on October 27, 2016. Mr. George affirmed:

> 101. [Tsleil-Waututh] raised its concern that although the [Board] reached similar conclusions as [Tsleil-Waututh] that oil spills in Burrard Inlet would cause significant adverse environmental effects, it disagreed with Drs. Gunton and Broadbent's conclusions as to the likelihood of spills occurring. [Tsleil-Waututh] then asked Canada whether it agreed with those conclusions. Canada was unable to respond because it did not bring its risk experts to the meeting. [Tsleil-Waututh] rearticulated its view that such risks were far too high.
>
> 102. At this point, despite the critical importance of this issue, Canada advised [Tsleil-Waututh] that it was unwilling to revisit the [Board's] conclusions and would instead wholly rely on the [Board's] report on this issue. We stated that we did not accept Canada's position, that further engagement on this subject was required, and that we would be willing to bring our experts to a subsequent meeting to consider any new material or new technology that Canada might identify.
>
> (underlining added)

[608] This evidence is consistent with the meeting notes prepared by Canada which reflect that Canada's representatives "indicated that government would rely on the [Board's] report". The notes then record that Tsleil-Waututh's representatives inquired "if the [Government of Canada] was going to rely on the [Board's] report, there was an openness to discuss matters related to gaps in the [Board's] report and what had been ignored." In response, "Canada acknowledged [Tsleil-Waututh's] views on the [Board] process, and indicated that it could neither agree or disagree: both [Tsleil-Waututh] and [Canada] had been intervenors and neither could know how the [Board] panel weighed information provided to it."

[609] Coldwater provided similar evidence relating to its efforts to consult with Canada about the Project's impacts on its aquifer at meetings held on May 4, 2016 and October 7, 2016.

[610] On May 4, 2016, representatives of Coldwater expressed their view that the West Alternative was a much better pipeline route that addressed issues the Board had not addressed

adequately. As set out above, Canada's representatives responded that for "specifics such as detailed routing, it is the [Board] which decides those" and added that "[t]he responsibility that the Crown consultation team has is to make sure these issues are reflected in the Crown consultation report, so they can be considered by decision makers."

[611] Canada again expressed the view that the Board's findings were not to be revisited in the Crown consultation process at the meeting of October 7, 2016. In response to a question about the West Alternative, Canada's representatives advised that in the Phase III consultation process it was not for Canada to consider the West Alternative as an alternate measure to mitigate or accommodate Coldwater's concerns. The meeting notes state:

> The Crown replied that the [Board] concluded that the current route is acceptable; however the Panel imposed a condition requiring the Proponent to further study the interaction between the proposed pipeline and the aquifer. Tim Gardiner acknowledged that the aquifer hasn't been fully explored, but explained that the [Board] process has analyzed the Project and that the Crown will not be taking an independent analysis beyond that. This is because the [Board] is a quasi-judicial tribunal with significant technical expertise, the Crown (federally and provincially) will not undertake an independent analysis of potential corridor routes. That said, the Crown will take Coldwater's concerns back to decision makers.
>
> (underlining added)

[612] Canada went on to express its confidence in Board Condition 39 and the detailed route hearing process.

[613] Later, in response to Coldwater's concern that the Board never considered the West Alternative, the meeting notes show that Canada's representatives:

> … acknowledged Coldwater's concerns, and explained that when the West Alternative was no longer in the [Board's] consideration, the Crown was not able

> to question that. [Mr. Whiteside] acknowledged that from Coldwater's perspective this leaves a huge gap. Mr. Whiteside went on to explain that the Proponent's removal of the West Alternative "is not the Crown's responsibility. We are confined to the [Board] report."
>
> (underlining added)

[614] Finally, in the course of an overview of decision-making held at the end of the October 7, 2016 meeting, Canada advised it was not considering alternative routes "because the [Board] concluded that the applied for pipeline corridor is satisfactory." Canada added that "[t]he Crown will ensure that Coldwater's concerns about the route are provided to the Cabinet, [and] it will then be up to Cabinet to decide if those concerns warrant reconsideration of the current route."

[615] As this Court had already explained in *Gitxaala,* at paragraph 274, Canada's position that it was confined to the Board's findings is wrong. As in *Gitxaala*, Phase III presented an opportunity, among other things, to discuss and address errors, omissions and the adequacy of the recommendations in the Board's report on issues that vitally concerned the Indigenous applicants. The consequence of Canada's erroneous position was to seriously limit Canada's ability to consult meaningfully on issues such as the Project's impact on each applicant and possible accommodation measures.

[616] Other meeting notes do not record that Canada expressed its reluctance to depart from the Board's findings in the same terms to other Indigenous applicants. However, there is nothing inconsistent with this position in the notes of the consultation with the other applicants.

[617] For example, in a letter sent to Squamish by the Major Projects Management Office on July 14, 2015, it was explained that the intent of Phase III was:

> … not to repeat or duplicate the [Board] review process, but to identify, consider and potentially address any outstanding concerns that have been raised by Aboriginal groups (i.e. concerns that, in the opinion of the Aboriginal group, have not been addressed through the [Board] review process).

[618] Later, Squamish met with the Crown consultation team on September 11, 2015, to discuss the consultation process. At this meeting Squamish raised concerns about, among other things, the adequacy of Canada's consultation process. In a follow-up letter counsel for Squamish provided more detail about the "Squamish Process"—a proposed process to enable consideration of the Project's impact upon Squamish's interests. The process included having community concerns inform the scope of the assessment with the goal of having these concerns substantively addressed by conditions placed on the Project proponent.

[619] Canada responded by letter dated November 26, 2015, in which it reiterated its position that:

> … there are good reasons for the Crown to rely on the [Board's] review of the Project to inform the consultation process. This approach ensures rigour in the assessment of the potential adverse effects of the Project on a broad range of issues including the environment, health and socio-economic conditions, as well as Aboriginal interests.

[620] The letter went on to advise that:

> Information from a formal community level or third-party review process can be integrated into and considered through the [Board] review process if submitted as evidence. For the Trans Mountain Expansion Project, the appropriate time to have done so would have been prior to the evidence filing deadline in May 2015.

[621] Canada went on to express its confidence that the list of issues, scope of assessment and scope of factors examined by the Board would inform a meaningful dialogue between it and Squamish.

[622] In other words, Canada was constrained by the Board's review of the Project. Canada required that evidence of any assessment or review process be first put before the Board, and any dialogue had to be informed by the Board's findings.

[623] A similar example is found in the Crown's consultation with Upper Nicola. At the consultation meeting held on September 22, 2016, Upper Nicola expressed its concern with the Board's economic analysis. The Director General of the Major Projects Management Office responded that "as a rule, the [Governor in Council] is deferential to the [Board's] assessment, but they are at liberty to consider other information sources when making their decision and may reach a different conclusion than the [Board]." The Senior Advisor from Indigenous and Northern Affairs Canada added that "the preponderance of detail in the [Board] report weighs heavy on Ministers' minds."

[624] No dialogue ensued about the legitimacy of Upper Nicola's concern about the Board's economic analysis, although Canada acknowledged "a strong view 'out there' that runs contrary to the [Board's] determination."

[625] Matters were left that if Upper Nicola could provide more information about what it said was an incorrect characterization of the economic rationale and Indigenous interests, this information would be put before the Ministers.

[626] Put another way, Canada was relying on the Board's findings. If Upper Nicola could produce information contradicting the Board that would be put before the Governor in Council; it would not be the subject of dialogue between Upper Nicola and Canada's representatives. Canada did not grapple with Upper Nicola's concerns, did not discuss with Upper Nicola whether the Board should be asked to reconsider its conclusion about the economics of the Project and did not explain why Upper Nicola's concern was found to lack sufficient merit to require Canada to address it meaningfully.

[627] As explained above at paragraph 491, Canada can rely on the Board's process to fulfil, in whole or in part, the Crown's duty to consult. However, reliance on the Board's process does not allow Canada to rely unwaveringly upon the Board's findings and recommended conditions. When real concerns were raised about the hearing process or the Board's findings and recommended conditions, Canada was required to dialogue meaningfully about those concerns.

[628] The Board is not immune from error and many of its recommendations were just that—proffered but not binding options for Canada to consider open-mindedly, assisted by its dialogue with the Indigenous applicants. Phase III of the consultation process afforded Canada the opportunity, and the responsibility, to dialogue about the asserted flaws in the Board's process and recommendations. This it failed to do.

(iv) Canada's erroneous view that the Governor in Council could not impose additional conditions on the proponent

[629] Canada began and ended Phase III of the consultation process operating on the basis that it could not impose additional conditions on the proponent. This was wrong and limited the scope of necessary consultation.

[630] Thus, on May 25, 2015, towards the end of Phase II, the Major Projects Management Office wrote to Indigenous groups to provide additional information on the scope and timing of Phase III consultation. If Indigenous groups identified outstanding concerns after the Board issued its report, the letter described the options available to Canada as follows:

> The Governor in Council has the option of asking the [National Energy Board] to reconsider its recommendation and conditions. Federal and provincial governments could undertake additional consultations prior to issuing additional permits and/or authorizations. Finally, federal and provincial governments can also use existing or new policy and program measures to address outstanding concerns.

[631] Canada expressed the position that these were the available options throughout the consultation process (see, for example, the meeting notes of the consultation meeting held on March 31, 2016, with Coldwater).

[632] Missing was the option of the Governor in Council imposing additional conditions on Trans Mountain.

[633] At a meeting held on April 13, 2016, after Canada's representatives expressed the view that the Crown could not add additional conditions, the Stó:lō's then counsel expressed the

contrary view. She asked that Canada's representatives verify with their Ministers whether Canada could attach additional conditions. By letter dated November 28, 2016 (the day before the Project was approved), Canada, joined by the British Columbia Environmental Assessment Office, advised that "the Governor in Council cannot impose its own conditions directly on the proponent as part of its decision" on the certificate of public convenience and necessity.

[634] This was incorrect. In *Gitxaala*, at paragraphs 163 to 168, this Court explained that when considering whether Canada has fulfilled its duty to consult, the Governor in Council necessarily has the power to impose conditions on any certificate of public convenience and necessity it directs the National Energy Board to issue.

[635] In the oral argument of these applications Canada acknowledged this power to exist, albeit characterizing it to be a power unknown to exist prior to this Court's judgment in *Gitxaala*.

[636] Accepting that the power had not been explained by this Court prior to its judgment in *Gitxaala*, that judgment issued on June 23, 2016, five months before Canada wrote to the Stó:lō advising that the Governor in Council lacked such a power and five months before the Governor in Council approved the Project. The record does not contain any explanation as to why Canada did not correct its position after the *Gitxaala* decision.

[637] The consequence of Canada's erroneous position that the Governor in Council lacked the ability to impose additional conditions on Trans Mountain seriously and inexplicably limited Canada's ability to consult meaningfully on accommodation measures.

(v) Canada's late disclosure of its assessment of the Project's impact on the Indigenous applicants

[638] As explained above at paragraph 488, the depth of the required consultation increases with the seriousness of the potentially adverse effect upon the claimed title or right. Canada's assessment of the Project's effect on each Indigenous applicant was therefore a critical aspect of the consultation process.

[639] Canada ultimately assessed the Project not to have a high level of impact on the exercise of the Indigenous applicants' "Aboriginal Interests" (a term defined in the Crown Consultation Report to include "asserted or established Aboriginal rights, including title and treaty rights."). The Project was assessed to have a minor impact on the exercise of the Aboriginal Interests of Squamish and SSN, a minor-to-moderate impact on the Aboriginal Interests of Coldwater and Stó:lō and a moderate impact on the Aboriginal Interests of Tsleil-Waututh and Upper Nicola.

[640] This important assessment was not communicated to the Indigenous applicants until the first week of November 2016, when the second draft of the Crown Consultation Report was provided (the first draft contained placeholder paragraphs in lieu of an assessment of the Project's impact). Coldwater, Upper Nicola and SSN received the second draft of the Crown Consultation Report on November 1, 2016, Squamish and Stó:lō on November 3, 2016 and Tsleil-Waututh on November 4, 2016. Each was given two weeks to respond to the draft Crown Consultation Report.

[641] By this point in time Squamish, Coldwater, Stó:lō and SSN had concluded their consultation meetings with Canada and no further meetings were held.

[642] Tsleil-Waututh did have further meetings with Canada, but these meetings were for the specific purposes of discussing greenhouse gases, the economic need for the Project and the Oceans Protection Plan.

[643] Upper Nicola did have a consultation meeting with Canada on November 16, 2016, at which time it asked for an extension of time to respond to the second draft of the Crown Consultation Report. In response, Upper Nicola received a two-day extension until November 18, 2016, to provide its comments to Canada. Canada's representatives explained that "Cabinet typically requires material one month ahead of a decision deadline to enable time to receive and review the report, translate etc. and that we've already reduced this down to enable a second round of comments."

[644] Importantly, Canada's Crown consultation lead acknowledged that other groups had asked for more time and the request had been "communicated to senior management and the Minister loud and clear." Canada's consultation lead went on to recognize that the time provided to review the second draft "may be too short for some to contribute detailed comments". There is no evidence that Canada considered granting the requested extension so that the Indigenous groups could provide detailed, thoughtful comments on the second draft of the Crown Consultation Report, particularly on Canada's assessment of the Project's impact. Nor does the record shed any light on why Canada did not consider granting the requested extension. The

statutory deadline for Cabinet's decision was December 19, 2016, and the Indigenous applicants had been informed of this.

[645] Ultimately, the Governor in Council approved the Project on November 29, 2016.

[646] The consequence of Canada's late communication of its assessment of the Project's impact was mitigated to a degree by the fact that from the outset it had acknowledged, and continues to acknowledge, that it was obliged to consult with the Indigenous applicants at the deeper end of the consultation spectrum. Thus, the assessment of the required depth of consultation was not affected by Canada's late advice that the Project, in its view, did not have a high level of impact on the claimed rights and title of the Indigenous applicants.

[647] This said, without doubt Canada's view of the Project's impact influenced its assessment of both the reasonableness of its consultation efforts and the extent that the Board's recommended conditions mitigated the Project's potential adverse effects and accommodated the Indigenous applicants' claimed rights and title. For this reason, the late delivery of Canada's assessment of the Project's impact until after all but one consultation meeting had been held contributed to the unreasonableness of the consultation process.

[648] I now turn to review instances that illustrate Canada's failure to dialogue meaningfully with the Indigenous applicants.

(vi) Canada's failure to dialogue meaningfully

a. The experience of Tsleil-Waututh

[649] Tsleil-Waututh had conducted its own assessment of the Project's impact on Burrard Inlet and on Tsleil-Waututh's title, rights and interests and traditional knowledge. This assessment, based on the findings of six independent experts and the traditional knowledge of Tsleil-Waututh members, concluded, among other things that:

- The likelihood of oil spills in Burrard Inlet would increase if the Project is implemented, and because spilled oil cannot be cleaned up completely, the consequences in such circumstances would be dire for sensitive sites, habitat and species, and in turn for the Tsleil-Waututh's subsistence economy, cultural activities and contemporary economy.
- Any delay in spilled oil cleanup response would decrease significantly the total volume of oil which could be cleaned up, and in turn increase the negative effects and consequences of a spill.
- The direct effects of marine shipping are likely to add to the effects and consequences of spilled oil, which in turn will further amplify the negative effects of the Project on Tsleil-Waututh's title, rights and interests.
- Tsleil-Waututh could not accept the increased risks, effects and consequences of even another small incident like the 2007 spill at the Westridge Marine Terminal or the 2015 MV Marathassa oil spill, let alone a worst-case spill.

[650] In the view of Tsleil-Waututh, the Board erred by excluding Project-related shipping from the Project's definition. Tsleil-Waututh was also of the view that the Board's conditions did not address their concerns about marine shipping. For example, Tsleil-Waututh noted that very few of the Board's conditions set out desired outcomes. Rather, they prescribed a means to secure an unspecified outcome.

[651] At the consultation meeting of October 27, 2016, Canada's representatives repeatedly acknowledged Tsleil-Waututh's view that the Board's conditions were not sufficiently robust, that Project-related shipping ought to have been assessed under the *Canadian Environmental Assessment Act, 2012* and that the Board's failure to do so resulted in the further failure to impose conditions on marine shipping.

[652] However, when the discussion turned to how to address Tsleil-Waututh's concerns, federal representatives noted that "proposals to strengthen marine shipping management, including nation to nation relationships, would take time to develop and strengthen." They went on to express optimism:

> … that progress toward a higher standard of care could occur over the next few years with First Nations, at a nation to nation level, particularly on spill response and emergency preparedness capacities. As baseline capacities increased, risks would be reduced.

[653] This generic and vague response that concerns could be addressed in the future, outside the scope of the Project and its approval, was Canada's only response. Canada did not suggest any concrete measures, such as additional conditions, to accommodate Tsleil-Waututh's concerns about marine shipping.

[654] Nor did Canada propose any accommodation measures at the meeting of October 28, 2016. At this meeting, Tsleil-Waututh sought further discussion about the Project's definition because, in its view, this issue had to be resolved if the Project was to be sent back to the Board for reconsideration. Canada's representatives responded that this was a matter for consideration

by the Governor in Council and "it was understood that the scope of the [Board's] review would be litigated."

[655] Nor did Canada respond meaningfully to Tsleil-Waututh's concerns in the Crown Consultation Report or in the Tsleil-Waututh appendix.

[656] The appendix, after detailing Tsleil-Waututh's concerns responded as follows:

> Sections 4.2.6 and 5.2 of this Report provide an overview of how the Crown has considered accommodation and mitigation measures to address outstanding issues identified by Aboriginal groups. Accommodations proposed by Tsleil-Waututh that the Crown has not responded to directly via letter will be otherwise actively considered by decision-makers weighing Project costs and benefits with the impacts on Aboriginal Interests.
>
> (underlining added)

[657] Section 4.2.6 of the Crown Consultation Report referred to the proposed Indigenous Advisory and Monitoring Committee and to recognition of the historical impacts of the existing Trans Mountain pipeline. The nascent nature of the Indigenous Advisory and Monitoring Committee is shown by the listing of possible roles the committee "could" play.

[658] Section 5.2 of the Crown Consultation Report dealt with Canada's assessment of the adequacy of consultation. It contains no response to Tsleil-Waututh's specific concerns that the Board's conditions were not sufficiently robust, that Project-related shipping ought to have been assessed under the *Canadian Environmental Assessment Act, 2012*, and that the Board's failure to do this resulted in the further failure to impose conditions on marine shipping. Section 5.2 did

provide Canada's limited response to concerns about the appropriateness of the Board's review process:

> With respect to perceived inadequacies in the [Board] review process, the Crown notes the Government's commitment to modernize the [Board] and to restore public trust in federal environmental assessment processes. The Crown further notes that consultations on these processes have been launched and will include the engagement of Indigenous groups. Overall, however, Government, through its Interim Strategy, indicated that no project proponent would be sent back to the beginning, which mean [*sic*] that project [*sic*] currently undergoing regulatory review would continue to do so within the current framework.

[659] Canada has not pointed to any correspondence in which it meaningfully addressed Tsleil-Waututh's concern that the Board's conditions were not sufficiently robust and that Project-related shipping should not have been excluded from the Project's definition.

[660] Tsleil-Waututh raised valid concerns that touched directly on its asserted title and rights. While Canada strove to understand those concerns accurately, it failed to respond to them in a meaningful way and did not appear to give any consideration to reasonable mitigation or accommodation measures, or to returning the issue of Project-related shipping to the Board for reconsideration.

[661] While Canada moved to implement the Indigenous Advisory and Monitoring Committee and the Oceans Protection Plan, these laudable initiatives were ill-defined due to the fact that each was in its early planning stage. As such, these initiatives could not accommodate or mitigate any concerns at the time the Project was approved, and this record does not allow consideration of whether, as those initiatives evolved, they became something that could meaningfully address real concerns.

b. The experience of Squamish

[662] At the one consultation meeting held in Phase III with Squamish on October 18, 2016, Squamish took the position throughout the meeting that it had insufficient information about the Project's impact on Squamish to make a decision on the Project or to discuss mitigation measures. Reference was made to a lack of information about the fate and behaviour of diluted bitumen if spilled in a marine environment. Squamish also expressed the view that the Governor in Council was equally unable to make a decision on the Project because of research and information gaps about diluted bitumen.

[663] Canada responded:

> The Crown recognized that there are uncertainties and information gaps which factor into the project decision. Most decisions are not made with perfect certainty. For instance, fate and behaviour of diluted bitumen in the marine environment has been identified as an information gap. The Crown is happy to discuss the level of uncertainty but is unsure how the [Governor in Council] will weigh these issues, such as whether they will decide that uncertainties are acceptable for the project to move forward. It should be noted that the [Governor in Council] can send the [Board] recommendation and any terms and conditions back to the [Board] for reconsideration.
>
> (underlining added)

[664] The meeting notes do not reflect that any discussion ensued about the fate and behaviour of diluted bitumen in water. This is not surprising because the Crown consultation team had effectively told Squamish that any discussion would not factor into the Governor in Council's deliberation and ultimate decision.

[665] In a letter dated the day before the Project was approved, Canada and the British Columbia Environmental Assessment Office wrote jointly to Squamish responding to issues raised by Squamish. With respect to diluted bitumen the letter stated:

> Squamish Nation has identified concerns relating to potential spills as well as the fate and behaviour of diluted bitumen. The [Board's] Onshore Pipeline Regulations (OPR) requires a company to develop and implement management and protection programs in order to anticipate, prevent, mitigate and respond to conditions that may adversely affect the safety and security of the general public, the environment, property and, company's personnel and pipelines. A company must follow the legal requirements identified in the *National Energy Board Act* and its associated regulations, other relevant standards, and any conditions contained within the applicable Project certificates or orders.

[666] This generic response is not a meaningful response to Squamish's concern that too little was known about how diluted bitumen would behave if spilled and that this uncertainty made it premature to approve the Project.

[667] The letter went on to review Board conditions, planned government initiatives (such as the Area Response Planning Initiative, Transport Canada's commitment to engage with British Columbia First Nations on issues related to marine safety and the Oceans Protection Program). The letter also referenced research that the Government of Canada was conducting on the behaviour and potential impacts of a diluted bitumen spill in a marine environment. While laudable initiatives, they too did not respond meaningfully to Squamish's concern that more needed to be known before the Project was approved.

[668] There is nothing in Canada's response to show that Squamish's concern about diluted bitumen was given real consideration or weight, and nothing to show any consideration was given to any meaningful and tangible accommodation or mitigation measures.

c. The experience of Coldwater

[669] Coldwater's concerns about the Project's impact on its aquifer were described above at paragraphs 609-610 in the context of Canada's unwillingness to depart from the Board's findings and recommended conditions.

[670] As explained at paragraph 610, when, during the consultation process, Coldwater suggested an alternate route for the pipeline that in its view posed less risk to its drinking water, Canada advised that it is the Board that decides pipeline routing, and the role of the Crown consultation team was to make sure the issue of an alternate route was reflected in the Crown Consultation Report so that it could be considered by the decision-makers.

[671] Later during the May 4, 2016 meeting, in response to a question from Coldwater about a detailed route hearing, Brian Nesbitt, a contractor made available to answer questions about the Board, responded:

> Brian explained that the Governor in Council would approve the approved, detailed route, but that if someone doesn't agree with that route they can intervene, say a detailed route hearing is required, and propose an alternative route. He stated that the burden of proof is essentially flipped and the landowner has the onus to show that the best route is somewhere other than the approved route.
>
> Brian provided an overview of the Detailed Route Approval Process (DRAP). Alternative routes, even outside the approved ROW corridor, can be proposed. In those cases it falls to the intervening party to make the case for why that route is the best one. In Brian's experience, these arguments have been made in past hearings and sometimes they are successful. He provided the example of a pipeline going through a wooded area where inner city kids would go. If an alternative route is identified in the detailed route hearing, the proponent has to apply for a variance. This might require Governor in Council decisions, depending on how the CPCN is worded. Brian emphasized that the burden of establishing a better route lies with the landowner.

(underlining added)

[672] A senior advisor for Indigenous and Northern Affairs Canada then agreed that Coldwater would require a very significant variance, a departure of about 10 kilometres from the approved pipeline right-of-way.

[673] Counsel for Coldwater, Melinda Skeels, then replied:

> Melinda stated that it does not sound reasonable to expect Coldwater to mount the kind of evidence needed to make the case for that alternative. In her view, this issue needs to be addressed before a certificate is issued. It cannot wait until after.
>
> Melinda stated that it did not seem like a detailed route hearing is a realistic option that would assist in addressing Coldwater's routing concerns.
>
> > *Coldwater's recollection is that:* Joseph, Tim and Ross were in general agreement, particularly given the significance of the variance and the fact that the onus would be shifted to Coldwater.
> >
> > *The Crown's position is that:* The Crown officials would neither have agreed with or disagreed with the above statement.

[674] The senior advisor for Indigenous and Northern Affairs Canada responded:

> … reflecting this concern in the Crown Consultation Report is one way to have it before decision makers prior to a decision on the certificate. He said that the routing issue goes to the heart of the CPCN and that the Crown may need to send the Project back to the [Board] to address this.

[675] As explained at paragraph 587 above, Coldwater's request for an analysis of the pipeline route was revisited at the October 7, 2016, consultation meeting. Canada acknowledged that the aquifer had not been fully explored, but expressed confidence in the Board's Condition 39.

[676] In response:

> Coldwater expressed its concern that, given the momentum behind the project following a [Governor in Council] approval, it will take a major adverse finding in the Condition 39 report for the West Alternative to become viable. They argued that their aquifer concerns would not be sufficiently mitigated by moving the pipeline within the 150m approved route corridor as part of a detailed route hearing, because the West Alternative was well outside that recommended corridor. Coldwater asked if an approved route corridor had ever been changed because of a report released following a GIC approval.
>
> The [Board] asserted that detailed route hearings in the past had led to routes being changed for various reasons; however he (Brian Nesbitt) was personally unaware of a route being moved outside an approved corridor. However, it is possible if the situation warrants.
>
> …
>
> The Crown replied that Condition 39 was put in place because the Board felt that evidence did not provide enough certainty about the impact of the Project on Coldwater's aquifer. That knowledge gap will have to be addressed, to the [Board's] satisfaction, prior to construction commencing. The Crown appreciates that the Condition does not provide certainty about the possibility of changing the pipeline corridor; however the presence of the Condition indicates that the [Board] is not satisfied with the information currently available.
>
> (underlining added)

[677] In the Crown Consultation Report Canada acknowledged that a pipeline spill associated with the Project could result in minor to serious impacts to Coldwater's Aboriginal Interests:

> The Crown acknowledges the numerous factors that would influence the severity and types of effects associated with a pipeline spill, and that an impacts determination that relates the consequences of a spill to specific impacts on Aboriginal Interests has a high degree of uncertainty. The Crown acknowledges that Coldwater relies primarily on an aquifer crossed by the Project for their drinking water, as well as subsistence foods and natural resources, and are at greater risk for adverse effects from an oil spill. To address the concerns raised by Coldwater during the post-[Board] Crown consultation period, [Environmental Assessment Office] proposes a condition that would require, in addition to [Board] Condition 39, characterization of the aquifer recharge and discharge sources and aquifer confinement, and include an assessment of the vulnerability of the aquifer.

(underlining added, footnote omitted)

[678] Throughout the consultation process, Canada worked to understand Coldwater's concerns, and the British Columbia Environmental Assessment Office imposed a condition requiring a second hydrogeological report for approval by it. However, missing from Canada's consultation was any attempt to explore how Coldwater's concerns could be addressed. Also missing was any demonstrably serious consideration of accommodation—a failure likely flowing from Canada's erroneous position that it was unable to impose additional conditions on the proponent.

[679] Canada acknowledged that the Project would be located within an area of Coldwater's traditional territory where Coldwater was assessed to have a strong *prima facie* claim to Aboriginal title. In circumstances where Coldwater would bear the burden of establishing a better route for the pipeline, and where the advice given to Coldwater by the Board's technical expert was that he was personally unaware of a route being moved out of the approved pipeline corridor, Canada placed its reliance on Condition 39, and so advised Coldwater. However, as Canada acknowledged, this condition carried no certainty about the pipeline route. Nor did the condition provide any certainty as to how the Board would assess the risk to the aquifer.

[680] At the end of the consultation process, and at the time the Project was approved, Canada failed to meaningfully engage with Coldwater, and to discuss and explore options to deal with the real concern about the sole source of drinking water for its Reserve.

d. The experience of Stó:lō

[681] As part of the Stó:lō's effort to engage with the Crown on the Project, Stó:lō prepared a detailed technical submission referred to as the "Integrated Cultural Assessment for the Proposed Trans Mountain Expansion Project", also referred to as "ICA". A copy of the ICA was filed with the Board.

[682] The ICA was based on surveys, interviews, meetings and workshops held with over 200 community members from approximately 11 Stó:lō bands. The ICA concluded that the Project posed a significant risk to the unique Indigenous way of life of the Stó:lō, threatening the cultural integrity and survival of core relationships at the heart of the Stó:lō worldview, identity, health and well-being. The ICA also contained 89 recommendations which, if implemented by Trans Mountain or the Crown, were believed by Stó:lō to mitigate the Project's adverse effects on Stó:lō.

[683] To illustrate the nature of the recommendations, section 17.2 of the ICA deals with recommendations to mitigate the Project's impact on fisheries. Section 17.2.1 deals with Management and Planning in the context of fisheries mitigation. The recommended Management and Planning mitigation measures are:

> 17.2.1 Management and Planning
>
> 5. Stó:lō Fishing representatives will participate in the development and review of Fisheries Management Plans and water course crossing EPPs before construction and mitigation plans are finalized.
>
> 6. Stó:lō representatives will provide input on proposed locations for Hydrostatic test water withdrawal and release.

> 7. [The proponent] will consult with Stó:lō representatives to develop the Emergency Response Plans in the study area.
>
> 8. Stó:lō representatives will consult with community members to determine appropriate restoration plans for water crossings including bank armouring, seed mixes or replanting requirements.
>
> 9. Stó:lō fishing representatives must be notified if isolation methods will not work and [the proponent] is considering another crossing method.
>
> 10. Stó:lō representatives must be notified as soon as a spill or leak, of any size, is detected.
>
> 11. During water quality monitoring program, anything that fails to meet or exceed established guidelines will be reported to a Stó:lō Fisheries Representative within 12 hours.

[684] These measures are specific, brief and generally measured and reasonable. If implemented they would provide more detail to the Board's generic conditions on consultation and require timely notification to the Stó:lō of events that may adversely impact their interests.

[685] During the Board's Information Request process, the Stó:lō pressed Trans Mountain to respond to their 89 recommendations but Trans Mountain did not provide a substantive response. Instead, Trans Mountain provided a general commitment to work with Stó:lō to develop a mutually-acceptable plan for implementation.

[686] The Board did not adopt any of the specific 89 recommendations made by the Stó:lō in its terms and conditions.

[687] At a meeting held with the Crown consultation team on April 13, 2016, before the release of the Board's report, the Stó:lō provided an overview of the development of the ICA and

expressed many concerns, including their dissatisfaction with their engagement with Trans Mountain.

[688] The Stó:lō representative stated that, among other things, Trans Mountain was directed by the Board to include Indigenous knowledge in Project planning, but did not. By way of example, the Stó:lō explained that the Fraser River is a tidal (at least up to Harrison River), meandering river, with a wandering gravel bed that is hydrologically connected to many wetlands and waterways crossed by the Project. A map of historical waterways was provided in the ICA, along with a table listing local and traditional knowledge of waterways crossed by the Project. None of this information was considered in Trans Mountain's technical reports. In Stó:lō's view, Trans Mountain's assumptions and maps about the Fraser River were wrong and did not include their traditional knowledge. A year after the ICA was provided to Trans Mountain the Stó:lō met with Trans Mountain's fisheries manager who had never seen the ICA or any of the technical information contained in it.

[689] Additionally, Stó:lō provided details about deficiencies identified in Trans Mountain's evidence filed with the Board about Stó:lō title, rights, interests and Project impacts. For example, Trans Mountain's evidence was to the effect that the Stó:lō had no traditional plant harvesting areas within the Project area. However, the ICA identified and mapped several plant gathering sites within the proposed pipeline corridor. Another example of a deficiency was Trans Mountain's evidence that there were no habitation sites in the Project area; however, the ICA mapped three habitation sites within the proposed pipeline corridor and two habitation sites located within 50 metres of the pipeline corridor.

[690] At a later consultation meeting held September 23, 2016, the Stó:lō reiterated that a key concern was their view that the Board's process had failed to hold the proponent accountable for integrating Stó:lō's traditional use information into the assessment of the Project. The draft Crown Consultation Report overlooked evidence filed by Stó:lō about their traditional land use. Instead, the report repeated oversights in Trans Mountain's evidence presented to the Board. For example, Stó:lō noted the Crown was wrong to state that "[n]o plant gathering sites were identified within the proposed pipeline corridor". The Stó:lō had explained this at the April 13, 2016 meeting.

[691] The Stó:lō Collective was not confident that Trans Mountain would follow through on commitments to include local Indigenous people or traditional knowledge in the development of the Project unless the Board's terms and conditions required Trans Mountain to regularly engage Stó:lō communities in a meaningful way.

[692] Canada's representatives confirmed that the Stó:lō Collective was looking for stronger conditions, more community-specific commitments and more accountability placed on Trans Mountain so that conditions proposed by Stó:lō became regulatory requirements.

[693] The Crown consultation team met with Stó:lō once after the release of the Board's report, on September 23, 2016.

[694] During this meeting the "Collective noted with great concern that the [Board] report came out May 19th, that the [Governor in Council's] decision is due Dec. 19th, and that the

Crown was just meeting now (Sept. 23) to consult on the [Board] report with so many potential gaps left to discuss and seek to resolve with tight timelines to do so".

[695] At this meeting the Crown consultation team presented slides summarizing the Board's conclusions. The Stó:lō noted their disagreement with the following findings of the Board:

> - "Ability of Aboriginal groups to use the lands, waters and resources for traditional purposes would be ***temporarily impacted***" by construction and routine maintenance activities, and that some opportunities for certain activities such as harvesting or accessing sites or areas of [Traditional Land and Resource Use] will be ***temporary interrupted***.";
>
> - "Project's contribution to potential broader cultural impacts related to access and use of natural resources is ***not significant***."; and,
>
> - "Impacts would be ***short term, limited to brief periods*** during construction and routine maintenance, ***largely confined to the Project footprint*** for the pipeline… Effects would be ***reversible in the short to long term, and low in magnitude***."
>
> (emphasis in original)

[696] The Stó:lō pointed to the potential permanent impact of the Project on sites of critical cultural importance to Stó:lō and the Project's impacts related to access and use of natural resources.

[697] With respect to sites of critical cultural importance, the Stó:lō explained that none of the information contained in their ICA influenced the design of the Project or was included in the Project alignment sheets. The failure to include information about cultural sites on the Project alignment sheets meant that various geographic features known to Stó:lō and the proponent were not being factored into Project effects, or avoidance or mitigation efforts. In response to questions, Stó:lō confirmed that even though Trans Mountain was well aware of Stó:lō sites of

importance, as detailed in the ICA, Trans Mountain had not recognized them on the right-of-way corridor maps. Stó:lō believed this afforded the sites no protection if the Project was approved.

[698] With respect to Lightning Rock, a culturally significant spiritual and burial site, the Stó:lō noted that Trans Mountain planned to put a staging area in proximity to the site which, in the view of the Stó:lō, would obliterate the site. The Board had imposed Condition 77 relating to Lightning Rock. This condition required Trans Mountain to file a report outlining the conclusions of a site assessment for Lightning Rock, including reporting on consultation with the Stó:lō Collective. However, Stó:lō Cultural Heritage experts had not been able to meet with Trans Mountain to participate in Lightning Rock management plans since September 2015. This was a source of great frustration.

[699] The Stó:lō suggested that the Board's conditions should specifically list the Indigenous groups Trans Mountain was required to deal with instead of the generic "potentially affected Aboriginal groups" referenced in the Board's current conditions.

[700] The Stó:lō also requested that they be involved in selecting the Aboriginal monitors working within their territory as contemplated by the Board's conditions. For example, Condition 98 required Trans Mountain to file a plan describing participation by "Aboriginal groups" in monitoring construction of the Project. Stó:lō wanted to ensure these monitors were sufficiently knowledgeable about issues of importance to the Stó:lō.

[701] The September 23, 2016, meeting notes do not indicate any response or meaningful dialogue on the part of the Crown consultation team in response to any of Stó:lō's concerns and suggestions.

[702] Interestingly, at the November 16, 2016, consultation meeting with Upper Nicola, the last of the consultation meetings and the only consultation meeting held after Canada provided the second draft of the Crown Consultation Report setting out Canada's assessment of the Project's impacts, the Crown consultation lead explained:

> … "potentially affected Aboriginal groups" has been noted by many Aboriginal groups as too vague in the recommended conditions, and this phrase is repeated throughout the 157 conditions. Makes reference to how the Crown's consultation and accommodation report does address specific Aboriginal groups. Discussed another point on the [Board] condition for "Aboriginal monitors"—where communities would not [*sic*] want locally knowledgeable Aboriginal people to fulfil this role and not someone from farther afield.

[703] Notwithstanding apparently widespread concern about the Board's generic use of the phrase "potentially affected Aboriginal groups" and the need for locally-selected Indigenous monitors, and despite Canada's ability to add new conditions that would impose the desired specificity, Canada failed to meaningfully consider such accommodation.

[704] Canada and the British Columbia Environmental Assessment Office purported to respond to two of Stó:lō's concerns in their letter of November 28, 2016, to the Stó:lō: the concerns about Traditional Ecological Knowledge and sites of cultural importance.

[705] The Crown "acknowledges the Stó:lō Collective's view that the [Board] and the proponent overlooked traditional knowledge within the development of the [Board] conditions

and Project design." The Crown discusses these issues in Sections III and IV of the Stó:lō Collective appendix (pages 13, 29 and 30 respectively).

[706] I deal with the Stó:lō appendix beginning at paragraph 712 below. As explained below, the Stó:lō appendix does not deal meaningfully with the concerns about Traditional Ecological Knowledge and sites of cultural importance.

[707] The Crown made two more points independent of the Stó:lō Collective appendix. First, it expressed its understanding that the Stó:lō could trigger a detailed route hearing. Second, it encouraged the Stó:lō Collective to continue discussions with the proponent.

[708] In connection with the detailed route hearing, the Crown advised that "[w]ithin the scope of such a hearing exists the potential for the right-of-way to move locations." There are three points to make about this response. First, as explained above at paragraphs 380 to 384, at a detailed route hearing the right of way may only move within the approved pipeline corridor, otherwise an application must be made to vary the pipeline corridor; second, the onus at a detailed route hearing is on the person requesting the alteration; and, third, Canada failed to consider its ability to impose additional conditions, likely because it was operating under the erroneous view it could not. The ability to trigger a detailed route hearing provided no certainty about how potential adverse effects to areas of significant importance to the Stó:lō would be dealt with. This was not a meaningful response on Canada's part.

[709] As to the Crown's suggestion that the Stó:lō Collective continue its discussions with the proponent, no explanation is given as to why this was believed to be an appropriate response to the concerns of the Stó:lō in light of the information they had provided as to the proponent's unwillingness to deal directly with them on a timely basis, or in some cases, at all.

[710] The November 28, 2016, letter also referenced the four accommodation measures the Stó:lō requested in their two-page submission to the Governor in Council. The first asked for a condition to "outline and identify specifics regarding Trans Mountain's collaboration with and resourcing of the Stó:lō Collective to update construction alignment sheets and EPPs to reflect information provided in the Integrated Cultural Assessment" (March 2014). The Stó:lō were told "The recommendations included in the Stó:lō Collective's two-page submission of November 17, 2016 will be provided directly to federal and provincial decision makers."

[711] Leaving aside the point that the letter was sent the day before the Project was approved, none of this is responsive, meaningful, two-way dialogue that the Supreme Court requires as part of the fulfillment of the duty to consult.

[712] Nor is any meaningful response provided in the Stó:lō appendix to the Crown Consultation Report. This is illustrated by the following two examples. First, while the appendix recites that the Stó:lō Collective recommended 89 actions that would assist Trans Mountain to avoid or mitigate adverse effects on their Aboriginal Interests there is no discussion or indication that Canada seriously considered implementing any of the 89 recommended actions, and no explanation as to why Canada did not consider implementing any Stó:lō specific

recommendation as an accommodation or mitigation measure. Second, while the appendix acknowledges that the Stó:lō provided examples of Traditional Ecological Knowledge which they felt the proponent and the Board ignored in the Project design, environmental assessment and mitigation planning, no analysis or response to the concern is given.

[713] In the portion of the appendix that deals with Canada's assessment of the Project's impacts on the Stó:lō, the Crown relies on the conclusions of the Board to find that the impacts of the Project would be up to minor-to-moderate. Thus, for instance, the appendix repeats the Board's conclusion that if the Project is approved, the Board conditions would either directly or indirectly avoid or reduce potential environmental effects associated with hunting, trapping and gathering. In an attempt to deal with the specific concerns raised by the Stó:lō about the adequacy of the Board's report and its conditions, the appendix recites that:

> … the proponent would implement several mitigation measures to reduce potential effects to species important for the Stó:lō Collective's hunting, trapping, and plant gathering activities. The proponent is committed to minimizing the Project footprint to the maximum extent feasible, and all sensitive resources identified on the Environmental Alignment Sheets and environmental tables within the immediate vicinity of the [right-of-way] will be clearly marked before the start of clearing.

[714] While the second draft of the Crown Consultation Report was revised to reference the plant gathering sites identified by Stó:lō in the ICA and in the April and October consultation meetings, Canada continued to rely upon the Board's findings without explaining, for example, how the Board's finding that "Trans Mountain adequately considered all the information provided on the record by Aboriginal groups regarding their traditional uses and activities." (report, page 278) was reliable in the face of the information contained in the ICA.

[715] Nor does Canada explain the source of its confidence in the proponent's commitments in light of the concerns expressed by the Stó:lō that Trans Mountain had failed to follow through on its existing commitments and that without further conditions Stó:lō feared the proponent would not follow through with its commitments to the Board.

[716] With respect to the Stó:lō's concerns about a Project staging area at Lightning Rock, the appendix noted that Lightning Rock was protected by Board Condition 77 which required the proponent to file with the Board an archaeological and cultural heritage field investigation undertaken to assess the potential impacts of Project construction and operations on the Lightning Rock site. The appendix goes on to note that:

> However, given that this is a sacred site with burial mounds, Stó:lō Collective have noted that any Project routing through this area is inappropriate given the need to preserve the cultural integrity of the site and the surrounding area. For the Stó:lō Collective, the site surrounding Lightning Rock should be a "no go" area for the Project.

[717] However, Stó:lō's position that Lightning Rock should be a "no go" area is left unresolved and uncommented upon by Canada.

[718] Another Stó:lō concern detailed by Canada in the appendix, but unaddressed, is the concern of the Stó:lō Collective that the locations of various other culturally important sites do not appear on Trans Mountain's detailed alignment sheets. Examples of such sites include bathing sites within the 150 metre pipeline right-of-way alignment at Bridal Veil Falls, and an ancient pit house located within the pipeline right-of-way. None of these sites are the subject of any Board condition.

[719] The appendix recites Canada's conclusion on these concerns of the Stó:lō as follows:

> With regards to specific risk concerns raised by the Stó:lō Collective, the proponent would implement several mitigation measures to reduce potential effects on physical and cultural heritage resources important for the Stó:lō Collective's traditional and cultural practices. The proponent has also committed to reduce potential disturbance to community assets and events by implementing several measures that include avoiding important community features and assets during [right-of-way] finalization, narrowing the [right-of-way] in select areas, scheduling construction to avoid important community events where possible, communication of construction schedules and plans with community officials, and other ongoing consultation and engagement with local and Aboriginal governments.

[720] This is not meaningful, two-way dialogue in response to Stó:lō's real and valid concerns about matters of vital importance to the Stó:lō.

[721] Canada adopts a similar approach to its assessment of the Project's impact on freshwater fishing and marine fishing and harvesting at pages 24 to 27 of the Stó:lō appendix.

[722] The section begins by acknowledging the Stó:lō's deeply established connection to fishing and marine harvesting "which are core to Stó:lō cultural activities and tradition, subsistence and economic purposes."

[723] After summarizing each concern raised by the Stó:lō, Canada responds by adopting the Board's conclusions that the Project's impact will be low-to-moderate and that Board conditions will either directly or indirectly avoid or reduce potential environmental effects on fishing activities.

[724] In the course of this review Canada acknowledges the Board's finding that "Project-related activities could result in low to moderate magnitude effects on freshwater and marine fish and fish habitat, surface water and marine water quality." Appendix 12 to the Board report defines a moderate impact to be one that, among other things, noticeably affects the resource involved.

[725] Canada also acknowledges that during the operational life of the Project fishing and harvesting activities directly affected by the construction and operation of the Westridge Marine Terminal would not occur within the expanded water lease boundaries.

[726] Further, impacts on navigation, specifically in eastern Burrard Inlet, would exist for the lifetime of the Project, and would occur on a daily basis. Project-related marine vessels also would cause temporary disruption to the Stó:lō Collective's marine fishing and harvesting activities. These disruptions are said "likely to be temporary when accessing fishing sites in the Burrard Inlet that require crossing shipping lanes, as community members would be able to continue their movements shortly after the tanker passes." This too would occur on a daily basis if the Westridge Marine Terminal were to serve 34 Aframax tankers per month.

[727] Missing however from Canada's consultation analysis is any mention of the Stó:lō's constitutionally protected right to fish, and how that constitutionally protected right was taken into account by Canada. Also missing is any explanation as to how the consultation process affected the Crown's ultimate assessment of the impact of the Project on the Stó:lō. Meaningful

consultation required something more than simply repeating the Board's findings and conditions without grappling with the specific concerns raised by the Stó:lō about those same findings.

e. The experience of Upper Nicola

[728] Throughout the consultation process, Upper Nicola raised the issue of the Project's impact on Upper Nicola's asserted title and rights. The issue was raised at the consultation meetings of March 31, 2016, and May 3, 2016, but no meaningful dialogue took place. Canada's representatives advised at the March meeting that until the Board released its report Canada did not know how the Project could impact the environment and Upper Nicola's interests and so could not "yet extrapolate to how those changes could impact [Upper Nicola's] Aboriginal rights and title interests."

[729] The issue was raised again, after the release of the Board's report, at the consultation meeting of September 22, 2016. Upper Nicola expressed its disagreement with Canada's assertion in the first draft of the Crown Consultation Report that potential impacts on its title claim for the pipeline right-of-way included temporary impacts related to construction, and longer-term impacts associated with Project operation. In Upper Nicola's view, construction did not have a temporary impact on its claim to title. Upper Nicola also stated that Canada had examined the Project's impact on title without considering impacts on governance and management, and concerns related to title, such as land and water issues. The meeting notes do not record any response to these concerns.

[730] Nor did Canada respond meaningfully to Upper Nicola's position that the Project would render 16,000 hectares of land unusable or inaccessible for traditional activities. Upper Nicola viewed this to constitute a significant impact that required accommodation of their rights to stewardship, use and governance of the land and water. Canada's response was to acknowledge a letter sent to the Prime Minister in which numerous Indigenous groups had proposed a mitigation measure to ensure they would have a more active role in monitoring and stewardship of the Project. Canada stated that it saw merit in the proposal and that a response to the letter would be forthcoming.

[731] On November 18, 2016, Upper Nicola wrote to the Crown consultation lead to highlight its key, ongoing concerns with the Project and the consultation process. With respect to title, Upper Nicola wrote:

> There were areas which the Crown has determined that we have a strong prima facie claim to Aboriginal title and rights. The Crown must therefore acknowledge the significant impacts and infringements of the Project to Upper Nicola/Syilx Title and Rights, including the incidents of Aboriginal title which include: the right to decide how the land will be used; the right of enjoyment and occupancy of the land; the right to possess the land; the right to the economic benefits of the land; and the right to proactively use and manage the land and adequately accommodate these impacts, concerns and infringements. This has not yet been done.
>
> (underlining added)

[732] Canada and the British Columbia Environmental Assessment Office wrote to Upper Nicola on November 28, 2016, the day before the Project was approved, to respond to the issues raised by Upper Nicola. The only reference to Upper Nicola's asserted title is this brief reference:

> *Impacts and Mitigation:* In response to comments received, the Crown has reviewed its analysis and discussion in the Consultation and Accommodation Report on the direct and indirect impacts of the Project on Syilx (Okanagan) Nation's rights and other interests. In addition, Upper Nicola identified that the study titled "Upper Nicola Band Traditional Use and Occupancy Study for the Kingsvale Transmission Line in Support of the Trans Mountain Expansion Project" (Kingsvale TUOS) had not been specifically referenced in the Syilx (Okanagan) Nation appendix. Upper Nicola resent the Kingsvale TUOS to the Crown on Friday, November 18 and in response to this information, the Crown reviewed the Kingsvale TUOS, summarized the study's findings in Syilx (Okanagan) Nation's appendix, and considered how this information changes the expected impacts of the Project on Syilx (Okanagan) Nation's Aboriginal rights and title. <u>As a result, conclusions were revised upward for Project impacts on Syilx (Okanagan) Nation's freshwater fishing activities, other traditional and cultural activities, as well as potential impacts on Aboriginal title</u>.
>
> (underlining added)

[733] No response was made to the request to acknowledge the Project's impacts and infringement of Upper Nicola's asserted title and rights.

[734] In the Upper Nicola appendix, Canada acknowledged that the Project would be located within an area of Syilx Nation's asserted traditional territory where Syilx Nation was assessed to have a strong *prima facie* claim to Aboriginal title and rights. Canada then asserted the Project to have "minor-to-moderate impact on Syilx Nation's asserted Aboriginal title to the proposed Project area." Canada did not address Upper Nicola's governance or title rights in any detail. Canada did refer to section 4.3.5 of the Crown Consultation Report but this section simply reiterates the Board's findings and conditions and the requirement that the proponent continue consultation "with potentially affected Aboriginal groups".

[735] Missing is any explanation as to why moderate impacts to title required no accommodation beyond the environmental mitigation measures recommended by the Board—mitigation measures that were generic and not specific to Upper Nicola.

[736] Throughout Phase III, Upper Nicola had proposed numerous potential mitigation measures and had requested accommodation related to stewardship, use and governance of the water. No response was given as to why Canada rejected this request. This was not meaningful, two-way dialogue or reasonable consultation.

f. The experience of SSN

[737] Canada met with SSN twice during Phase III. At the first meeting, on August 3, 2016, SSN expressed the desire to have consultation go beyond the environmental assessment process which they felt was insufficient to tackle the issues that affected their territory. SSN sought to move forward on a nation to nation basis and wished to formalize a nation to nation consultation protocol using the Project as a starting point for further consultation.

[738] In response, Canada and representatives of British Columbia asked that the SSN be prepared to review a draft memorandum of understanding for consultation about the Project (affidavit of Jeanette Jules, paragraph 70).

[739] The meeting notes reflect that at the first meeting on August 3, 2016, SSN also raised as accommodation or mitigation measures that: the Project conditions be more specific with respect to safety and emergency preparedness response, warning notifications to communities and

opportunities for training; and, that there be provision for both a spillage fee and a revenue tax imposed on the proponent for the benefit of SSN. The meeting notes do not reflect any dialogue or response from Canada to these proposals.

[740] On September 9, 2016, the Crown consultation lead sent a two-page draft memorandum of understanding to the SSN (two pages not including the signature page).

[741] At the second and last meeting on October 6, 2016, the SSN advised that they desired the proponent to submit to a review of the Project by the SSN, but that the proponent was unwilling to undergo another review. The SSN also repeated their desire for the federal and provincial Crowns to allow SSN to impose a resource development tax on proponents whose projects are located in the SSN's traditional territory. In response, the Crown raised the difficulty in implementing the tax and having the Project undergo assessment by the SSN before the mandated decision deadline of December 19, 2016.

[742] At this meeting Canada sought comments on the draft memorandum of understanding. Jeanette Jules, a counsellor with the Kamloops Indian Band swore in an affidavit filed in support of SSN's application for judicial review that:

> At [the October 6, 2016] meeting, the majority of the time was spent on discussing the content of the [memorandum of understanding], that is, what would engagement with the Crowns on the Project look like. We did not spend any time discussing the routing of the pipeline Project at Pipsell or SSN's concerns about the taking up of new land in the Lac du Bois Grasslands Protected area, although I did voice concerns about those issues again at that meeting. At the end of the meeting, the Crowns committed to revising the [memorandum of understanding] and to setting up another meeting to discuss it with us.
>
> (underlining added)

[743] The meeting notes state that toward the end of the meeting SSN expressed the desire to have a terrestrial spill response centre stationed in their reserve. SSN contemplated that funding for the centre should be raised through a per-barrel spillage fee charged on product flowing through the pipeline.

[744] Thereafter, no memorandum of understanding was finalized and no further meetings took place between Canada and the SSN. Ms. Jules swears that:

> I fully expected that between our last meeting with Canada and the Province of BC and the [Governor in Council] decision to approve the Project, we would come to an agreement on the terms of a [memorandum of understanding] and have had meaningful engagement with the Crowns about pipeline routing and SSN's other concerns raised in its final argument.

[745] Ms. Jules was not cross-examined on her affidavit.

[746] In the November 28, 2016, letter sent to the SSN by Canada and the British Columbia Environmental Assessment Office they wrote:

> We also would like to take this opportunity to provide you with additional information or responses to concerns that Stk'emlúps te Secwèpemc Nation has raised with the Crown.
>
> At the October 6, 2016 meeting with SSN, in addition to reiterating SSN's plan on undertaking its own assessment of the project, SSN outlined a proposal for an SSN resource development tax that they charge directly to proponents whose projects are in their traditional territory, and that SSN wants the federal and provincial Crown's to make the jurisdictional room necessary for the tax to be implemented. These proposals have been added to the SSN specific appendix for consideration by decision makers.

[747] This is not a meaningful response to the proposals made by the SSN. The only response made to the resource development tax during the consultation meetings was the difficulty this

would pose to meeting Canada's decision deadline (notwithstanding that SSN had sought consultation on a broader basis than the Project—the Project was contemplated by SSN to be a starting point).

[748] The SSN appendix to the Crown Consultation Report faithfully records SSN's concerns about the review process, noting, in part, that:

> SSN stated that the [Board] hearing process is an inappropriate forum for assessing impacts to their Aboriginal rights. SSN also expressed concern about the [Board] process' legislated timelines and the way these timelines were unilaterally imposed on them. SSN considers this timeline extremely restrictive and does not believe it affords SSN sufficient time to review the application and participate meaningfully in the review process. SSN has stated that their ability to participate in the process is further hampered by a lack of capacity funding from either the [Board] or the Crown. SSN has expressed a view that related regulatory (i.e. permitting) processes are not well-coordinated, which they believe results in an incomplete sharing of potential effects to SSN Interests. They refer to the perceived disconnected process between the proposed Project and proposed Ajax Mine application review. SSN are not satisfied with the current crown engagement model and the lack of addressing SSN's needs for a nation-to-nation dialogue about their concerns and interests, and have proposed that the Crown develop a [memorandum of understanding] to address these issues and provide a framework for the dialogue moving forward.
>
> …
>
> SSN have requested Nation-to-Nation engagement related to the broader issue of land management and decision making within their territory. SSN requested a consultation protocol agreement be developed, starting with a [memorandum of understanding] for Nation-to-Nation consultation, which would take the form of a trilateral agreement between SSN, BC and Canada. SSN recommended a framework of sustainable Crown funding to participate in the [memorandum of understanding] process, leading to a sustainable funding model to support ongoing land use management within SSN's territory.
>
> At the October 6, 2016 meeting, SSN outlined a proposal for an SSN resource development tax that they charge directly to proponents whose projects are in their traditional territory. SSN wants the federal and provincial Crown's [*sic*] to make the jurisdictional room necessary for the tax to be implemented.
>
> (underlining added)

[749] Missing from the appendix is any advice to the Governor in Council that Canada committed to providing a draft memorandum of understanding to SSN and any advice about the status of the memorandum of understanding. Also missing is any indication of what, if any, impact this had on Canada's view of the consultation process.

[750] In the SSN appendix Canada acknowledged that "the Project would be located within an area of Tk'emlúps te Secwe'pemc and Skeetchestn's traditional territory assessed as having a strong *prima facie* claim to Aboriginal title". Canada had also assessed its duty to consult SSN as being at the deeper end of the consultation spectrum.

[751] Notwithstanding, Canada did not provide any meaningful response to SSN's proposed mitigation measures, and conducted no meaningful, two-way dialogue about SSN's concerns documented on pages 3 to 7 of the SSN appendix.

[752] This was not reasonable consultation as required by the jurisprudence of the Supreme Court of Canada.

(vii) Conclusion on Canada's execution of the consultation process

[753] As explained above at paragraphs 513 to 549, the consultation framework selected by Canada was reasonable and sufficient. If Canada properly executed it, Canada would have discharged its duty to consult.

[754] However, based on the totality of the evidence I conclude that Canada failed in Phase III to engage, dialogue meaningfully and grapple with the concerns expressed to it in good faith by the Indigenous applicants so as to explore possible accommodation of these concerns.

[755] Certainly Canada's consultation team worked in good faith and assiduously to understand and document the concerns of the Indigenous applicants and to report those concerns to the Governor in Council in the Crown Consultation Report. That part of the Phase III consultation was reasonable.

[756] However, as the above review shows, missing was a genuine and sustained effort to pursue meaningful, two-way dialogue. Very few responses were provided by Canada's representatives in the consultation meetings. When a response was provided it was brief, and did not further two-way dialogue. Too often the response was that the consultation team would put the concerns before the decision-makers for consideration.

[757] Where responses were provided in writing, either in letters or in the Crown Consultation Report or its appendices, the responses were generic. There was no indication that serious consideration was given to whether any of the Board's findings were unreasonable or wrong. Nor was there any indication that serious consideration was given to amending or supplementing the Board's recommended conditions.

[758] Canada acknowledged it owed a duty of deep consultation to each Indigenous applicant. More was required of Canada.

[759] The inadequacies of the consultation process flowed from the limited execution of the mandate of the Crown consultation team. Missing was someone representing Canada who could engage interactively. Someone with the confidence of Cabinet who could discuss, at least in principle, required accommodation measures, possible flaws in the Board's process, findings and recommendations and how those flaws could be addressed.

[760] The inadequacies of the consultation process also flowed from Canada's unwillingness to meaningfully discuss and consider possible flaws in the Board's findings and recommendations and its erroneous view that it could not supplement or impose additional conditions on Trans Mountain.

[761] These three systemic limitations were then exacerbated by Canada's late disclosure of its assessment that the Project did not have a high level of impact on the exercise of the applicants' "Aboriginal Interests" and its related failure to provide more time to respond so that all Indigenous groups could contribute detailed comments on the second draft of the Crown Consultation Report.

[762] Canada is not to be held to a standard of perfection in fulfilling its duty to consult. However, the flaws discussed above thwarted meaningful, two-way dialogue. The result was an unreasonable consultation process that fell well short of the required mark.

[763] The Project is large and presented genuine challenges to Canada's effort to fulfil its duty to consult. The evaluation of Canada's fulfillment of its duty must take this into account.

However, in largest part the concerns of the Indigenous applicants were quite specific and focussed and thus quite easy to discuss, grapple with and respond to. Had Canada's representatives met with each of the Indigenous applicants immediately following the release of the Board's report, and had Canada's representatives executed a mandate to engage and dialogue meaningfully, Canada could well have fulfilled the duty to consult by the mandated December 19, 2016 deadline.

E. Remedy

[764] In these reasons I have concluded that the Board failed to comply with its statutory obligation to scope and assess the Project so as to provide the Governor in Council with a "report" that permitted the Governor in Council to make its decision whether to approve the Project. The Board unjustifiably excluded Project-related shipping from the Project's definition.

[765] This exclusion of Project-related shipping from the Project's definition permitted the Board to conclude that section 79 of the *Species at Risk Act* did not apply to its consideration of the effects of Project-related shipping. Having concluded that section 79 did not apply, the Board was then able to conclude that, notwithstanding its conclusion that the operation of Project-related vessels is likely to result in significant adverse effects to the Southern resident killer whale, the Project was not likely to cause significant adverse environmental effects.

[766] This finding—that the Project was not likely to cause significant adverse environmental effects—was central to its report. The unjustified failure to assess the effects of Project-related shipping under the *Canadian Environmental Assessment Act, 2012* and the resulting flawed

conclusion about the environmental effects of the Project was critical to the decision of the Governor in Council. With such a flawed report before it, the Governor in Council could not legally make the kind of assessment of the Project's environmental effects and the public interest that the legislation requires.

[767] I have also concluded that Canada did not fulfil its duty to consult with and, if necessary, accommodate the Indigenous applicants.

[768] It follows that Order in Council P.C. 2016-1069 should be quashed, rendering the certificate of public convenience and necessity approving the construction and operation of the Project a nullity. The issue of Project approval should be remitted to the Governor in Council for prompt redetermination.

[769] In that redetermination the Governor in Council must refer the Board's recommendations and its terms and conditions back to the Board, or its successor, for reconsideration. Pursuant to section 53 of the *National Energy Board Act*, the Governor in Council may direct the Board to conduct that reconsideration taking into account any factor specified by the Governor in Council. As well, the Governor in Council may specify a time limit within which the Board shall complete its reconsideration.

[770] Specifically, the Board ought to reconsider on a principled basis whether Project-related shipping is incidental to the Project, the application of section 79 of the *Species at Risk Act* to Project-related shipping, the Board's environmental assessment of the Project in the light of the

Project's definition, the Board's recommendation under subsection 29(1) of the *Canadian Environmental Assessment Act, 2012* and any other matter the Governor in Council should consider appropriate.

[771] Further, Canada must re-do its Phase III consultation. Only after that consultation is completed and any accommodation made can the Project be put before the Governor in Council for approval.

[772] As mentioned above, the concerns of the Indigenous applicants, communicated to Canada, are specific and focussed. This means that the dialogue Canada must engage in can also be specific and focussed. This may serve to make the corrected consultation process brief and efficient while ensuring it is meaningful. The end result may be a short delay, but, through possible accommodation the corrected consultation may further the objective of reconciliation with Indigenous peoples.

F. Proposed Disposition

[773] For these reasons I would dismiss the applications for judicial review of the Board's report in Court Dockets A-232-16, A-225-16, A-224-16, A-217-16, A-223-16 and A-218-16.

[774] I would allow the applications for judicial review of the Order in Council P.C. 2016-1069 in Court Dockets A-78-17, A-75-17, A-77-17, A-76-17, A-86-17, A-74-17, A-68-17 and A-84-17, quash the Order in Council and remit the matter to the Governor in Council for prompt redetermination.

[775] The issue of costs is reserved. If the parties are unable to agree on costs they may make submissions in writing, such submissions not to exceed five pages.

[776] Counsel are thanked for the assistance they have provided to the Court.

"Eleanor R. Dawson"

APPENDIX

National Energy Board Act, R.S.C. 1985, c. N-7

52 (1) If the Board is of the opinion that an application for a certificate in respect of a pipeline is complete, it shall prepare and submit to the Minister, and make public, a report setting out	52 (1) S'il estime qu'une demande de certificat visant un pipeline est complète, l'Office établit et présente au ministre un rapport, qu'il doit rendre public, où figurent :
(*a*) its recommendation as to whether or not the certificate should be issued for all or any portion of the pipeline, taking into account whether the pipeline is and will be required by the present and future public convenience and necessity, and the reasons for that recommendation; and	*a*) sa recommandation motivée à savoir si le certificat devrait être délivré ou non relativement à tout ou partie du pipeline, compte tenu du caractère d'utilité publique, tant pour le présent que pour le futur, du pipeline;
(*b*) regardless of the recommendation that the Board makes, all the terms and conditions that it considers necessary or desirable in the public interest to which the certificate will be subject if the Governor in Council were to direct the Board to issue the certificate, including terms or conditions relating to when the certificate or portions or provisions of it are to come into force.	*b*) quelle que soit sa recommandation, toutes les conditions qu'il estime utiles, dans l'intérêt public, de rattacher au certificat si le gouverneur en conseil donne instruction à l'Office de le délivrer, notamment des conditions quant à la prise d'effet de tout ou partie du certificat.
(2) In making its recommendation, the Board shall have regard to all considerations that appear to it to be directly related to the pipeline and to be relevant, and may have regard to the following:	(2) En faisant sa recommandation, l'Office tient compte de tous les facteurs qu'il estime directement liés au pipeline et pertinents, et peut tenir compte de ce qui suit :
(*a*) the availability of oil, gas or any other commodity to the pipeline;	*a*) l'approvisionnement du pipeline en pétrole, gaz ou autre produit;
(*b*) the existence of markets, actual or potential;	*b*) l'existence de marchés, réels ou potentiels;
(*c*) the economic feasibility of the	*c*) la faisabilité économique du

pipeline;

(*d*) the financial responsibility and financial structure of the applicant, the methods of financing the pipeline and the extent to which Canadians will have an opportunity to participate in the financing, engineering and construction of the pipeline; and

(*e*) any public interest that in the Board's opinion may be affected by the issuance of the certificate or the dismissal of the application.

(3) If the application relates to a designated project within the meaning of section 2 of the *Canadian Environmental Assessment Act, 2012*, the report must also set out the Board's environmental assessment prepared under that Act in respect of that project.

(4) The report must be submitted to the Minister within the time limit specified by the Chairperson. The specified time limit must be no longer than 15 months after the day on which the applicant has, in the Board's opinion, provided a complete application. The Board shall make the time limit public.

(5) If the Board requires the applicant to provide information or undertake a study with respect to the pipeline and the Board, with the Chairperson's approval, states publicly that this subsection applies, the period that is taken by the applicant to comply with the requirement is not included in the calculation of the time limit.

(6) The Board shall make public the

pipeline;

d) la responsabilité et la structure financières du demandeur et les méthodes de financement du pipeline ainsi que la mesure dans laquelle les Canadiens auront la possibilité de participer au financement, à l'ingénierie ainsi qu'à la construction du pipeline;

e) les conséquences sur l'intérêt public que peut, à son avis, avoir la délivrance du certificat ou le rejet de la demande.

(3) Si la demande vise un projet désigné au sens de l'article 2 de la *Loi canadienne sur l'évaluation environnementale (2012)*, le rapport contient aussi l'évaluation environnementale de ce projet établi par l'Office sous le régime de cette loi.

(4) Le rapport est présenté dans le délai fixé par le président. Ce délai ne peut excéder quinze mois suivant la date où le demandeur a, de l'avis de l'Office, complété la demande. Le délai est rendu public par l'Office.

(5) Si l'Office exige du demandeur, relativement au pipeline, la communication de renseignements ou la réalisation d'études et déclare publiquement, avec l'approbation du président, que le présent paragraphe s'applique, la période prise par le demandeur pour remplir l'exigence n'est pas comprise dans le calcul du délai.

(6) L'Office rend publiques, sans

dates of the beginning and ending of the period referred to in subsection (5) as soon as each of them is known.

délai, la date où commence la période visée au paragraphe (5) et celle où elle se termine.

(7) The Minister may, by order, extend the time limit by a maximum of three months. The Governor in Council may, on the recommendation of the Minister, by order, further extend the time limit by any additional period or periods of time.

(7) Le ministre peut, par arrêté, proroger le délai pour un maximum de trois mois. Le gouverneur en conseil peut, par décret pris sur la recommandation du ministre, accorder une ou plusieurs prorogations supplémentaires.

(8) To ensure that the report is prepared and submitted in a timely manner, the Minister may, by order, issue a directive to the Chairperson that requires the Chairperson to

(8) Afin que le rapport soit établi et présenté en temps opportun, le ministre peut, par arrêté, donner au président instruction :

(*a*) specify under subsection (4) a time limit that is the same as the one specified by the Minister in the order;

a) de fixer, en vertu du paragraphe (4), un délai identique à celui indiqué dans l'arrêté;

(*b*) issue a directive under subsection 6(2.1), or take any measure under subsection 6(2.2), that is set out in the order; or

b) de donner, en vertu du paragraphe 6(2.1), les instructions qui figurent dans l'arrêté, ou de prendre, en vertu du paragraphe 6(2.2), les mesures qui figurent dans l'arrêté;

(*c*) issue a directive under subsection 6(2.1) that addresses a matter set out in the order.

c) de donner, en vertu du paragraphe 6(2.1), des instructions portant sur une question précisée dans l'arrêté.

(9) Orders made under subsection (7) are binding on the Board and those made under subsection (8) are binding on the Chairperson.

(9) Les décrets et arrêtés pris en vertu du paragraphe (7) lient l'Office et les arrêtés pris en vertu du paragraphe (8) lient le président.

(10) A copy of each order made under subsection (8) must be published in the *Canada Gazette* within 15 days after it is made.

(10) Une copie de l'arrêté pris en vertu du paragraphe (8) est publiée dans la *Gazette du Canada* dans les quinze jours de sa prise.

(11) Subject to sections 53 and 54, the Board's report is final and conclusive.

(11) Sous réserve des articles 53 et 54, le rapport de l'Office est définitif et sans appel.

53 (1) After the Board has submitted its report under section 52, the

53 (1) Une fois que l'Office a présenté son rapport en vertu de l'article 52, le

Governor in Council may, by order, refer the recommendation, or any of the terms and conditions, set out in the report back to the Board for reconsideration.

(2) The order may direct the Board to conduct the reconsideration taking into account any factor specified in the order and it may specify a time limit within which the Board shall complete its reconsideration.

…

54 (1) After the Board has submitted its report under section 52 or 53, the Governor in Council may, by order,

(*a*) direct the Board to issue a certificate in respect of the pipeline or any part of it and to make the certificate subject to the terms and conditions set out in the report; or

(*b*) direct the Board to dismiss the application for a certificate.

(2) The order must set out the reasons for making the order.

(3) The order must be made within three months after the Board's report under section 52 is submitted to the Minister. The Governor in Council may, on the recommendation of the Minister, by order, extend that time limit by any additional period or periods of time. If the Governor in Council makes an order under subsection 53(1) or (9), the period that is taken by the Board to complete its reconsideration and to report to the Minister is not to be included in the calculation of the time limit.

(4) Every order made under subsection

gouverneur en conseil peut, par décret, renvoyer la recommandation ou toute condition figurant au rapport à l'Office pour réexamen.

(2) Le décret peut préciser tout facteur dont l'Office doit tenir compte dans le cadre du réexamen ainsi que le délai pour l'effectuer.

…

54 (1) Une fois que l'Office a présenté son rapport en application des articles 52 ou 53, le gouverneur en conseil peut, par décret :

a) donner à l'Office instruction de délivrer un certificat à l'égard du pipeline ou d'une partie de celui-ci et de l'assortir des conditions figurant dans le rapport;

b) donner à l'Office instruction de rejeter la demande de certificat.

(2) Le gouverneur en conseil énonce, dans le décret, les motifs de celui-ci.

(3) Le décret est pris dans les trois mois suivant la remise, au titre de l'article 52, du rapport au ministre. Le gouverneur en conseil peut, par décret pris sur la recommandation du ministre, proroger ce délai une ou plusieurs fois. Dans le cas où le gouverneur en conseil prend un décret en vertu des paragraphes 53(1) ou (9), la période que prend l'Office pour effectuer le réexamen et faire rapport n'est pas comprise dans le calcul du délai imposé pour prendre le décret.

(4) Les décrets pris en vertu des

(1) or (3) is final and conclusive and is binding on the Board.	paragraphes (1) ou (3) sont définitifs et sans appel et lient l'Office.
(5) The Board shall comply with the order made under subsection (1) within seven days after the day on which it is made.	(5) L'Office est tenu de se conformer au décret pris en vertu du paragraphe (1) dans les sept jours suivant sa prise.
(6) A copy of the order made under subsection (1) must be published in the Canada Gazette within 15 days after it is made.	(6) Une copie du décret pris en vertu du paragraphe (1) est publiée dans la Gazette du Canada dans les quinze jours de sa prise.

***Canadian Environmental Assessment Act, 2012*, S.C. 2012, c. 19, s.52**

2(1) designated project means one or more physical activities that	2(1) projet désigné Une ou plusieurs activités concrètes :
(*a*) are carried out in Canada or on federal lands;	*a*) exercées au Canada ou sur un territoire domanial;
(*b*) are designated by regulations made under paragraph 84(a) or designated in an order made by the Minister under subsection 14(2); and	*b*) désignées soit par règlement pris en vertu de l'alinéa 84a), soit par arrêté pris par le ministre en vertu du paragraphe 14(2);
(*c*) are linked to the same federal authority as specified in those regulations or that order.	*c*) liées à la même autorité fédérale selon ce qui est précisé dans ce règlement ou cet arrêté.
It includes any physical activity that is incidental to those physical activities.	Sont comprises les activités concrètes qui leur sont accessoires.

(iv) sur une construction, un emplacement ou une chose d'importance sur le plan historique, archéologique, paléontologique ou architectural.

…

…

19 (1) The environmental assessment of a designated project must take into account the following factors:

19 (1) L'évaluation environnementale d'un projet désigné prend en compte les éléments suivants :

(*a*) the environmental effects of the designated project, including the environmental effects of malfunctions or accidents that may occur in connection with the designated project and any cumulative environmental effects that are likely to result from the designated project in combination with other physical activities that have been or will be carried out;

a) les effets environnementaux du projet, y compris ceux causés par les accidents ou défaillances pouvant en résulter, et les effets cumulatifs que sa réalisation, combinée à celle d'autres activités concrètes, passées ou futures, est susceptible de causer à l'environnement;

(*b*) the significance of the effects referred to in paragraph (a);

b) l'importance des effets visés à l'alinéa a);

(*c*) comments from the public — or, with respect to a designated project that requires that a certificate be issued in accordance with an order made under section 54 of the *National Energy Board Act*, any interested party — that are received in accordance with this Act;

c) les observations du public — ou, s'agissant d'un projet dont la réalisation requiert la délivrance d'un certificat au titre d'un décret pris en vertu de l'article 54 de la *Loi sur l'Office national de l'énergie*, des parties intéressées — reçues conformément à la présente loi;

(*d*) mitigation measures that are technically and economically feasible and that would mitigate any significant adverse environmental effects of the designated project;

d) les mesures d'atténuation réalisables, sur les plans technique et économique, des effets environnementaux négatifs importants du projet;

(*e*) the requirements of the follow-up program in respect of the designated project;

e) les exigences du programme de suivi du projet;

(*f*) the purpose of the designated project;

f) les raisons d'être du projet;

(*g*) alternative means of carrying out the designated project that are technically and economically feasible and the environmental effects of any such alternative means;

g) les solutions de rechange réalisables sur les plans technique et économique, et leurs effets environnementaux;

(*h*) any change to the designated project that may be caused by the environment;

h) les changements susceptibles d'être apportés au projet du fait de l'environnement;

(*i*) the results of any relevant study conducted by a committee established under section 73 or 74; and

i) les résultats de toute étude pertinente effectuée par un comité constitué au titre des articles 73 ou 74;

(*j*) any other matter relevant to the environmental assessment that the responsible authority, or — if the environmental assessment is referred to a review panel — the Minister, requires to be taken into account.

j) tout autre élément utile à l'évaluation environnementale dont l'autorité responsable ou, s'il renvoie l'évaluation environnementale pour examen par une commission, le ministre peut exiger la prise en compte.

…

…

29 (1) If the carrying out of a designated project requires that a certificate be issued in accordance with an order made under section 54 of the *National Energy Board Act*, the responsible authority with respect to the designated project must ensure that the report concerning the environmental assessment of the designated project sets out

29 (1) Si la réalisation d'un projet désigné requiert la délivrance d'un certificat au titre d'un décret pris en vertu de l'article 54 de la *Loi sur l'Office national de l'énergie*, l'autorité responsable à l'égard du projet veille à ce que figure dans le rapport d'évaluation environnementale relatif au projet :

(*a*) its recommendation with respect to the decision that may be made under paragraph 31(1)(a) in relation to the designated project, taking into account the implementation of any mitigation measures that it set out in the report; and

a) sa recommandation quant à la décision pouvant être prise au titre de l'alinéa 31(1)a) relativement au projet, compte tenu de l'application des mesures d'atténuation qu'elle précise dans le rapport;

(*b*) its recommendation with respect to the follow-up program that is to be implemented in respect of the designated project.

b) sa recommandation quant au programme de suivi devant être mis en oeuvre relativement au projet.

…

31 (1) After the responsible authority with respect to a designated project has submitted its report with respect to the environmental assessment or its reconsideration report under section 29 or 30, the Governor in Council may, by order made under subsection 54(1) of the *National Energy Board Act*

(*a*) decide, taking into account the implementation of any mitigation measures specified in the report with respect to the environmental assessment or in the reconsideration report, if there is one, that the designated project

(i) is not likely to cause significant adverse environmental effects,

(ii) is likely to cause significant adverse environmental effects that can be justified in the circumstances, or

(iii) is likely to cause significant adverse environmental effects that cannot be justified in the circumstances; and

(*b*) direct the responsible authority to issue a decision statement to the proponent of the designated project that

(i) informs the proponent of the decision made under paragraph (a) with respect to the designated project and,

(ii) if the decision is referred to in subparagraph (a)(i) or (ii), sets out conditions — which are the implementation of the mitigation

…

31 (1) Une fois que l'autorité responsable à l'égard d'un projet désigné a présenté son rapport d'évaluation environnementale ou son rapport de réexamen en application des articles 29 ou 30, le gouverneur en conseil peut, par décret pris en vertu du paragraphe 54(1) de la *Loi sur l'Office national de l'énergie* :

a) décider, compte tenu de l'application des mesures d'atténuation précisées dans le rapport d'évaluation environnementale ou, s'il y en a un, le rapport de réexamen, que la réalisation du projet, selon le cas :

(i) n'est pas susceptible d'entraîner des effets environnementaux négatifs et importants,

(ii) est susceptible d'entraîner des effets environnementaux négatifs et importants qui sont justifiables dans les circonstances,

(iii) est susceptible d'entraîner des effets environnementaux négatifs et importants qui ne sont pas justifiables dans les circonstances;

b) donner à l'autorité responsable instruction de faire une déclaration qu'elle remet au promoteur du projet dans laquelle :

(i) elle donne avis de la décision prise par le gouverneur en conseil en vertu de l'alinéa a) relativement au projet,

(ii) si cette décision est celle visée aux sous-alinéas a)(i) ou (ii), elle énonce les conditions que le promoteur est tenu de respecter relativement au

measures and the follow-up program set out in the report with respect to the environmental assessment or the reconsideration report, if there is one — that must be complied with by the proponent in relation to the designated project.	projet, à savoir la mise en oeuvre des mesures d'atténuation et du programme de suivi précisés dans le rapport d'évaluation environnementale ou, s'il y en a un, le rapport de réexamen.

***Species at Risk Act*, S.C. 2002, c. 29**

77 (1) Despite any other Act of Parliament, any person or body, other than a competent minister, authorized under any Act of Parliament, other than this Act, to issue or approve a licence, a permit or any other authorization that authorizes an activity that may result in the destruction of any part of the critical habitat of a listed wildlife species may enter into, issue, approve or make the authorization only if the person or body has consulted with the competent minister, has considered the impact on the species' critical habitat and is of the opinion that	77 (1) Malgré toute autre loi fédérale, toute personne ou tout organisme, autre qu'un ministre compétent, habilité par une loi fédérale, à l'exception de la présente loi, à délivrer un permis ou une autre autorisation, ou à y donner son agrément, visant la mise à exécution d'une activité susceptible d'entraîner la destruction d'un élément de l'habitat essentiel d'une espèce sauvage inscrite ne peut le faire que s'il a consulté le ministre compétent, s'il a envisagé les conséquences négatives de l'activité pour l'habitat essentiel de l'espèce et s'il estime, à la fois :
(*a*) all reasonable alternatives to the activity that would reduce the impact on the species' critical habitat have been considered and the best solution has been adopted; and	*a*) que toutes les solutions de rechange susceptibles de minimiser les conséquences négatives de l'activité pour l'habitat essentiel de l'espèce ont été envisagées, et la meilleure solution retenue;
(*b*) all feasible measures will be taken to minimize the impact of the activity on the species' critical habitat.	*b*) que toutes les mesures possibles seront prises afin de minimiser les conséquences négatives de l'activité pour l'habitat essentiel de l'espèce.
(1.1) Subsection (1) does not apply to the National Energy Board when it issues a certificate under an order made under subsection 54(1) of the	(1.1) Le paragraphe (1) ne s'applique pas à l'Office national de l'énergie lorsqu'il délivre un certificat conformément à un décret pris en vertu du paragraphe 54(1) de la *Loi*

National Energy Board Act.

(2) For greater certainty, section 58 applies even though a licence, a permit or any other authorization has been issued in accordance with subsection (1).

…

79 (1) Every person who is required by or under an Act of Parliament to ensure that an assessment of the environmental effects of a project is conducted, and every authority who makes a determination under paragraph 67(a) or (b) of the *Canadian Environmental Assessment Act, 2012* in relation to a project, must, without delay, notify the competent minister or ministers in writing of the project if it is likely to affect a listed wildlife species or its critical habitat.

(2) The person must identify the adverse effects of the project on the listed wildlife species and its critical habitat and, if the project is carried out, must ensure that measures are taken to avoid or lessen those effects and to monitor them. The measures must be taken in a way that is consistent with any applicable recovery strategy and action plans.

(3) The following definitions apply in this section.

person includes an association, an organization, a federal authority as defined in subsection 2(1) of the *Canadian Environmental Assessment Act, 2012*, and any body that is set out in Schedule 3 to that Act.

sur l'Office national de l'énergie.

(2) Il est entendu que l'article 58 s'applique même si l'autorisation a été délivrée ou l'agrément a été donné en conformité avec le paragraphe (1).

…

79 (1) Toute personne qui est tenue, sous le régime d'une loi fédérale, de veiller à ce qu'il soit procédé à l'évaluation des effets environnementaux d'un projet et toute autorité qui prend une décision au titre des alinéas 67a) ou b) de la *Loi canadienne sur l'évaluation environnementale (2012)* relativement à un projet notifient sans tarder le projet à tout ministre compétent s'il est susceptible de toucher une espèce sauvage inscrite ou son habitat essentiel.

(2) La personne détermine les effets nocifs du projet sur l'espèce et son habitat essentiel et, si le projet est réalisé, veille à ce que des mesures compatibles avec tout programme de rétablissement et tout plan d'action applicable soient prises en vue de les éviter ou de les amoindrir et les surveiller.

(3) Les définitions qui suivent s'appliquent au présent article.

personne S'entend notamment d'une association de personnes, d'une organisation, d'une autorité fédérale au sens du paragraphe 2(1) de la *Loi canadienne sur l'évaluation environnementale (2012)* et de tout organisme mentionné à l'annexe 3 de

	cette loi.
project means	projet
(*a*) a designated project as defined in subsection 2(1) of the *Canadian Environmental Assessment Act, 2012* or a project as defined in section 66 of that Act;	*a*) Projet désigné au sens du paragraphe 2(1) de la *Loi canadienne sur l'évaluation environnementale (2012)* ou projet au sens de l'article 66 de cette loi;
(*b*) a project as defined in subsection 2(1) of the *Yukon Environmental and Socio-economic Assessment Act*; or	*b*) projet de développement au sens du paragraphe 2(1) de la *Loi sur l'évaluation environnementale et socioéconomique au Yukon*;
(*c*) a development as defined in subsection 111(1) of the *Mackenzie Valley Resource Management Act*.	*c*) projet de développement au sens du paragraphe 111(1) de la *Loi sur la gestion des ressources de la vallée du Mackenzie*.

Moore J.

Introduction

[1] By all accounts, Isaac Vescio enjoyed a normal gestation and birth. He became the third child and second son of his proud and excited parents, Lina and Pat, and brother to his equally excited siblings, Vanessa and Gian Paolo.

[2] Isaac was welcomed into the world, following an unremarkable labour and a natural childbirth at Mount Sinai Hospital, by his immediate family and a close family friend, "aunt" Elaine, at 4:40 p.m. on Wednesday, 21 October 1999.

[3] As Isaac was born at a gestational age of 35 weeks and 5 days, he was not yet a full-term baby and out of an abundance of caution, the birthing team included a pediatrician, a respiratory therapist and NICU nurse who were also present for Isaac's birth.

[4] Mother and son remained at Mount Sinai for about 42 hours of rest and recuperation and were discharged home at about 11:00 am on Saturday, 23 October 1999. An integral part of the discharge process was an examination of baby Isaac conducted by Dr. Garfield, his pediatrician.

[5] To a one, the Vescios were sure that Isaac was a healthy baby boy; this is what they were told and they knew nothing to the contrary on that Saturday morning; but, by mid afternoon of the following day, Sunday, 24 October 1999, they had brought Isaac back to the Hospital. On

Sunday, Lina first observed an unexpected yellow tint to the colour of her newborn son's skin and eyes, telltale signs of jaundice.

[6] Until Sunday, immediate family members and one close friend, Elaine Belanger-Porter, were the only people, other than Dr. Garfield and hospital staff at Mount Sinai, who had seen Isaac at all. Not one of them saw any sign or symptom of concern.

[7] It appears that jaundice was slow to present but once it arrived, it struck with a real vengeance. Despite the immediate and intensive investigations and treatment afforded at Mount Sinai on and after Isaac's return to the Emergency Department on that Sunday, the outcome was tragic.

[8] Isaac is now burdened with an array of afflictions and limitations that combine to permanently and completely disable him, both mentally and physically. Isaac is catastrophically impaired.

[9] On Isaac's behalf, and in her own right, Lina brings this action against Dr. Garfield and against Mount Sinai Hospital for damages arising from alleged failures in the care and treatment afforded Isaac in the first hours and days of his life.

[10] The quantum of damages has been agreed to in the amount of $8,000,000. Accordingly, only issues of liability remained for determination at trial.

Background – The Vescios

[11] Lina makes an excellent witness on her own behalf. She is pleasant, presentable, well spoken and responsive. Despite all she has been through in caring for Isaac, she maintains dignity, balance and reasonable objectivity. Regrettably, she can offer no explanation for the etiology of the many afflictions with which her youngest son has been burdened.

[12] Lina was born near Rome, Italy on the sixth of February 1955. She came to Canada as an infant. She was married to Pat Vescio on April 26, 1980. He also was born in Italy.

[13] The Vescios have a son, Gian Paolo, born June 4, 1985 and a daughter, Vanessa, born 27 June 1986. Both children were jaundiced as newborn infants; Gian Paolo required some phototherapy treatment but Vanessa's jaundice was very mild and she did not require treatment.

[14] Both of the older children recovered from their early jaundice uneventfully and now are healthy young adults. Gian Paolo is 21 years of age and is finishing his political science degree at York University. Vanessa, now 20, has studied music at Humber College and is working full time in the music field.

[15] Lina is a high school graduate and she completed one year of college. She was a litigation secretary for many years and worked for 10 years with her husband, operating a

restaurant. She returned to school and achieved a paralegal certificate in 1997. Shortly afterwards, she became pregnant with Isaac.

[16] Pat graduated from Humber College as a draftsman but he spent his working career in the restaurant business. He currently manages a banquet hall in Concorde.

Lina's Health

[17] Before Isaac's birth, Lina had no known health problems. She was 44 years of age at the time of the pregnancy.

[18] Dr. Lyons is an obstetrician and he oversaw the progress of this pregnancy. Lina was very cautious and followed her doctor's advice in all respects. She had an amniocentesis and visited her doctor regularly.

[19] Dr. Lyons ordered blood-work and interpreted the results to be normal. He held hospital privileges at Mount Sinai and wrote his conclusions relating to Lina's blood-work and overall health into the Antenatal Record, a document that is prepared by the obstetrician summarizing the course of the mother's progress through her pregnancy. The Antenatal Record must be sent to the Hospital toward the end of the term of a pregnancy and in fact it was in this case. It then becomes part of the Hospital record and is kept in the ordinary course at the Hospital.

[20] The Antenatal Record was generated according to standard protocol and it declared Lina's blood-work, specifically her glucose tolerance tests, to be normal. Dr. Lyons did not give evidence. Lina was not made aware of any adverse results nor of any implications of any blood tests to the future well being of her expected baby.

[21] Dr. Lyons also referred Lina to Dr. Garfield, a pediatrician. Lina met Dr. Garfield in about September of 1999, during the ninth month of the pregnancy with Isaac. During that visit, they spoke of circumcision for her baby and she felt that Dr. Garfield was prepared to perform the procedure. They discussed immunization and he suggested that Lina arrange to bring in the baby to his office a few days after birth for an examination.

Labour, Childbirth and the Hours Immediately Following

[22] Lina attended at Mount Sinai on the morning of 21 October 1999. Lina's labour began at about 6 a.m.; she, Pat, Vanessa and Elaine Belanger-Porter went to the hospital together. Labour progressed normally. Isaac was born at 4:40 that afternoon. Lina did not have an epidural but did require an episiotomy. Otherwise, her natural childbirth experience was uneventful.

[23] To Lina, her newly born baby boy looked pinkish/reddish in colour and she described him as being "little and cute". Shortly thereafter, Lina was taken to a 4-bed nursery ward in the hospital, known as the Combined Care Unit, a Level One Nursery. Isaac was examined by a pediatrician present at the time of his birth and, soon thereafter, cleaned up and taken to Lina in the combined care ward.

[24] Lina was urged by the nurses to settle in and try to feed her baby. She was determined to breastfeed but she thought that the baby had trouble latching on. Lina continued to try to breastfeed the baby at regular intervals well into the night.

[25] The baby was very calm and quiet and Lina does not recall him crying at all on the first evening and night of his young life. Lina tried strategies given her by the nursing staff to encourage the baby to feed but they did not, to her observation at least, seem to work well.

[26] The baby urinated and produced some stool that night.

[27] Lina was sore and tired but persevered in her attempts to feed her baby that Thursday night and on through much of Friday, 22 October. Isaac took a few sucks at a time but Lina recalls that he did not appear to be feeding well at all.

[28] Lina remembers changing diapers on Friday two times or more. She recalls seeing no stool from the baby that day, however.

[29] Isaac's colour on Friday was still pink. That appearance changed very little throughout the day. Lina recalls the baby looking flushed; he was becoming brownish in appearance and moving toward an olive complexion, one that she and all of her immediate family shared. She was not concerned about the baby's appearance at this point at all.

[30] On Friday evening, the baby became irritable and fidgety. He cried a lot. This both surprised and concerned Lina. The nurses reassured her. She continued her attempts to feed the baby but with little success.

[31] Through the night, the baby's disposition changed again; he returned to being calm and sleepy. Lina does not recall the baby awakening between 6:00 a.m. and the time they were discharged home at 10:30 or 11:00 a.m..

[32] Lina changed two diapers that Saturday morning. She does not recall seeing any sign of stool in the diapers.

[33] That morning she saw that the infant was not as red as he had been on the previous two days. His complexion, to her, looked somewhat yellowish but his cheeks were still flushed. He looked normal and she was not concerned about his appearance.

[34] Lina recalled that he baby remained lethargic and sleepy all morning. He was still not feeding well.

[35] On separate occasions, first a nurse and then Dr. Garfield attended and examined the baby. Lina disrobed the baby for each of them. She described both examinations to have been brief. The nurse gave Lina an envelope containing papers that the hospital made available to new mothers and she reviewed some of their content with Lina. Following his examination, Dr. Garfield cleared the baby for discharge.

[36] Pat then took Lina and the baby home.

The Lay Witnesses

[37] The descriptions heard from immediate members of the Vescio family and friend, Elaine, regarding Isaac's skin colour, his activity levels and the prevailing weather and lighting conditions during which visual observations were made in the first days of Isaac's life as a newborn infant were remarkably similar. This may be nothing more than an innocent coincidence or it may represent a consensus view agreed to over time but it sounded somewhat scripted.

[38] Nevertheless, the evidence of these lay witnesses was unchallenged and uncontroverted and I accept that these people endeavored to provide their best recollections on these matters. I accept that they observed neither colour nor activity markers of concern to them at any time between Isaac's birth and the late morning of Sunday, 24 October 1999.

[39] Certainly, there has been no suggestion made that these lay people could or should have appreciated the presence of a growing health problem for Isaac before they did. Equally, there is no suggestion that they caused or contributed to the medical outcome ultimately experienced. Indeed, a case such as this one falls to be determined largely beyond and despite, not because of, the evidence of lay witnesses.

At home, Saturday and Sunday

[40] The Vescios and their friend, Elaine, saw and cared for Isaac at his new home on Saturday and Sunday. The baby stayed in a crib in his parents' bedroom and slept most of the time. Lina continued her efforts to feed Isaac but still without much apparent success. She became increasingly worried about that.

[41] The room was dimly lit. Those who saw Isaac's appearance saw nothing out of the ordinary. He was changing gradually toward the olive complexion of his parents and siblings. He continued to be sleepy and lethargic. He did not wake up on Sunday morning and Lina did not notice his eyes being open that morning.

[42] Lina recalls changing Isaac's diapers at home; she does not now remember seeing stool.

[43] Lina slept in until almost 10:00 a.m. that Sunday morning. Shortly thereafter she noticed that the baby's skin colour looked yellow and she took him down to her brightly lit kitchen for a better look. There, she saw that the skin looked "a bit more yellow" than it had been. Isaac's red flush was fading and he seemed to be turning noticeably yellow. While in the kitchen, the baby opened his eyes and Lina saw that the whites of his eyes had a yellow colour as well. Lina's observations of changes in Isaac's appearance and the fact that he was not feeding well concerned her and she called the hospital.

[44] First she called the Hospital for Sick Children; she was advised to call the birth hospital and so she did. The advice on the call to Mount Sinai was to bring the baby back to Mount Sinai and that she did.

[45] By the time they arrived back at Mount Sinai, about mid afternoon on Sunday the 24th, Isaac looked considerably yellow and was very lethargic. Lina was ushered into a separate room in the Emergency Department in order that she might feed her baby but he would not feed.

Hospital Records

[46] Although virtually all of the delivery, birth and initial stay records for mother and son are missing, Lina kept her copy of the Newborn Record. This record was given to her at the time of the discharge on Saturday the 23rd of October and it contained notes and markings made by Dr. Garfield and by the discharge nurse.

[47] Also available and produced, on consent, into evidence at trial without qualification or caveat concerning their use as evidence were: Dr. Martiniuk's Emergency Record (Exhibit 1, pages 126 and 128), Dr. Tanswell's Consultation Report (Exhibit 1, page 175), and Dr. Jefferies' NICU Final Summary (Exhibit 1, pages 167-169). These are each records made by medical doctors following their review of patient charts and following the provision of medical treatment to Isaac.

[48] I accept the submission made by the hospital that these documents were authored by persons unaffected by the prospect of litigation at a time when they were under a professional duty to Isaac to accurately record the significant clinical events, including his history, findings on their examinations, their diagnosis, and treatment. Even Dr. Wainer agreed, "those records made contemporaneously with the events would be more reliable than the contemporaneous recollections" at trial.

[49] Lina did not author any portion of these documents but they do contain information about Isaac's feeding and waste output, information that Lina acknowledges came to Isaac's caregivers, by way of history, from her. These records evidence that breast-feeding was progressing adequately and that urine and stool production, proxies for nutritional intake, were more considerable than Lina remembered in her evidence in chief. The records are silent about any concerns Lina may have had about Isaac becoming established in his feeding in those early days.

[50] More specifically, I find that the available documentary evidence supports this defence submission:

> Mrs. Vescio's evidence about the degree of feeding and behaviour concerns she had prior to the discharge from Hospital cannot be accepted as reliable in the context of the following evidence:

(a) The final discharge summary dictated November 9, 1999, which was prepared with the benefit of the complete chart, stated that:

> The baby was initially breast-feeding well and was discharged home at 24 hours of age. Apart from having a slightly pinkish stained diaper, there were no abnormalities noticed during the short hospital stay.

Reference: Final Summary, Exhibit 1, p. 169

(b) The history recorded by the emergency physician on Sunday, October 24 was consistent with recent feeding concerns, established latching and regular elimination;

Reference: Emergency Record, Exhibit 1, p. 126 [p. 128 transcribed]

(c) On Sunday, October 24, Baby Vescio had lost 9.6% of his birth weight which falls within an acceptable range of normal weight loss and is consistent with the baby feeding;

Reference: Examination-in-Chief of Dr. Sgro taken May 7, 2007, p. 136, lines 1 - 15

(d) Babies of 35 – 36 weeks' gestation are not expected to fully establish feeding by the second day of life. Consistent with this, Mrs. Vescio was reassured by the nurses that her concerns were not indicative of a significant feeding problem;

> Q. And they reassured you that what you were experiencing and what Isaac was experiencing was normal, didn't they?
>
> A. Yes.

Reference: Cross-Examination of Mrs. Vescio taken April 17, p. 48, lines 4 - 7

(e) Mrs. Vescio testified that Isaac was regularly producing urine in his diapers requiring that these be changed. This is also reflected in the partially completed baby activity report made by Mrs. Vescio marked as Exhibit 3;

Reference: Cross-Examination of Mrs. Vescio taken April 17, 2007, p. 53, lines 14 – 24

Baby Activity Report, Exhibit 3

(f) Isaac Vescio's feeding and behaviour problems became worse on the Saturday evening, into the Sunday morning;

> Q. And it was worse on the Sunday morning than it was on the Saturday?
>
> A. Yeah.

Reference: Cross-Examination of Mrs. Vescio taken April 17, 2007, p. 11, lines 6 - 8

(g) Mrs. Vescio raised no concerns with Dr. Garfield and was satisfied herself that Isaac was a healthy baby on discharge;

Reference: Cross-Examination of Mrs. Vescio taken April 17, p. 48, lines 4 - 7

(h) Neither the nurses nor Mrs. Vescio were concerned about Isaac Vescio such that they requested that the physician present in Mrs. Vescio's room on the Friday evening assessing the other babies assess Isaac Vescio;

Reference: Examination-in-Chief of Mrs. Vescio taken April 16, pp. 72 - 73

(i) There were no significant concerns and so none were noted in the Newborn Record:

> Q. In your practice back in October 1999, when did you put comments following a notation of breastfeeding?
>
> A. If there were any problems that were arising, for example, problems with breastfeeding, nipple problems, poor latch, I might document it there.

Reference: Examination-in-Chief of Tina Hua taken May 14, 2007, pp. 85 – 86, lines 23 – 2, see also pp. 85 – 87

From the evidence of Mrs. Vescio, it may be concluded therefore that:

(j) Isaac Vescio was not jaundiced at discharge;

(k) She had forgotten about the history of jaundice in the case of her two older children and did not give that history to anyone at the Hospital nor could she have to Dr. Garfield;

(l) Isaac Vescio's feeding patterns and behaviours were within a normal range for a healthy, near-term baby;

(m) Isaac Vescio's colour and condition at discharge were not areas of concern to Mrs. Vescio since she raised no concerns with Dr. Garfield;

(n) Isaac Vescio was feeding normally at home for a near-term baby and produced urine and stool in normal quantities;

(o) Sudden onset of hyperbilirubinemia commenced sometime after discharge and resulted in a rapid deterioration of his condition on Sunday, October 24, from his condition Saturday, October 23.

[51] Lina has done her very best to assist the court with her recollections of Isaac's first hours of life but she admits that the observations she made then may not have entirely withstood the passage of time. The available records, however, were made contemporaneously with the events. The observations were made and recorded by doctors trained and experienced in the creation of such records. In these circumstances, where the records and Lina's recollections part ways, I prefer the accuracy of the evidence contained in the records.

Hyperbilirubinemia

[52] Jaundice is a clinical description of an appearance of being yellow due to the presence in the bloodstream of elevated levels of bilirubin.

[53] Hyperbilirubinemia is a specific term involving a threshold of bilirubin level. The generally accepted range for jaundice would be between 80 and 120 units of bilirubin measurement, umol/l/hr. There is no laboratory value of bilirubin level that is diagnostic of hyperbilirubinemia. The diagnosis can depend upon the age of the infant but as the level of bilirubin in the blood rises so too does the severity of the hyperbilirubinemia rise.

[54] In an infant of 48 hours of age, a level of 280 units of bilirubin would generally lead to the initiation of phototherapy treatment in a term infant.

[55] The level of bilirubin that would initiate a blood exchange transfusion in 1999 would be of the order of 360 units and at that time a unit measurement reading of 425 would, according to accepted pediatric guidelines, absolutely require that a transfusion be performed.

[56] Bilirubin is produced following the destruction of red blood cells within the body. It is eliminated by the liver, which conjugates or converts bilirubin into a water-soluble solvent that is then excreted from the body.

[57] In the first week of life, any remaining unconjugated bilirubin may also be passed in the infant's stool. As it passes down the bowel, however, any remaining unconjugated bilirubin may be absorbed back into the bloodstream (entero-hepatic re-absorption) and jaundice is thereby

maintained. And, if the baby is not feeding well, it will not pass stool and that allows for more re-absorption (which can become close to 100%).

[58] In the first 24 to 36 hours of life, stool is a tarry black substance [muconium]. As feeding improves, stool becomes yellow, also a reflection of jaundice coming out.

[59] Liver function takes longer to mature in a premature baby. Conjugation is less likely to happen and therefore bilirubin levels tend to be higher in premature babies because the immature liver may not efficiently eliminate bilirubin.

[60] Hyperbilirubinemia leading to kernicterus is very rare. Indeed, many pediatricians may not encounter kernicterus in a career but mild jaundice is very common. As many as 50-70% of all full term babies will evidence some degree of jaundice within the first few days of life. Premature babies may be expected to be somewhat more susceptible to developing jaundice.

Kernicterus

[61] Kernicterus was originally used as a term indicating a pathological finding of staining, found on autopsy, in the area of the basal ganglia of the brain. It now refers to a combination of clinical and laboratory findings and, possibly, imaging findings on MRI. To make the diagnosis of kernicterus, ideally there would be a history of significant hyperbilirubinemia, long-term neurological outcomes and associated MRI findings with basal ganglia changes.

[62] Dr Fazal explained that "jaundice" is not a scientific term. Hyperbilirubinemia is a scientific term. Kernicterus describes the end stage of brain injury flowing from very high bilirubin levels.

[63] There is no absolute threshold, but the higher the level of hyperbilirubinemia, the more likely it becomes that kernicterus may develop. Dr. Garfield's submissions assert that there is no recognized level of bilirubin that is known to result in kernicterus, and not all children with very high levels of bilirubin will suffer from kernicterus. Upon the evidence I have heard and accept, I agree.

Clinical Assessment of Jaundice

[64] The Newborn Record confirms that Isaac was examined both by Dr. Garfield, someone Dr. Fazal accepted to be a recognized leader in the field of pediatrics, and by a nurse, before he was discharged home from hospital on Saturday morning. Both physician and nurse would be expected to look at skin colour to establish that there was no evidence of blue or yellow colours apparent upon close visual observation.

[65] Colour is important to demonstrate profusion or proper breathing; a blue colour to the skin or nails of an infant may signal breathing problems and yellow is important to establish the presence of jaundice. There was no observation of either colour evident in Isaac's case prior to his discharge home on Saturday morning.

[66] Indeed, Dr. Fazal ultimately conceded that, at the time of discharge, there was no evidence of any discharge concerns whatsoever present in Isaac's case. Dr. Garfield noted on the Newborn Record that Isaac was a normal male, by which he meant, through the symbols he wrote, to convey the opinion that Isaac was healthy and fit for discharge home.

[67] The assessment of jaundice is a matter of clinical judgment made by the doctors and nurses in a hospital setting. It involves a combination of experience and training.

[68] At levels of 350 or 400 micromoles per liter of blood, phototherapy or transfusion treatments can reverse the situation. Phototherapy can effectively break down high levels of bilirubin such that the offending substance can be conjugated and discharged without significant or lasting damage to the newborn. A transfusion removes and replaces bilirubin laden blood with blood containing no or normal and manageable levels of bilirubin. Often, a transfusion will establish balance within the bloodstream and eliminate jaundice in the infant. At a bilirubin unit level as high as 688, however, there is a consensus in medical opinions offered in this case that even with treatment, the patient will end up with some degree of brain damage. Upon re-admission to hospital on Sunday afternoon, the bilirubin level in Isaac's blood serum was tested and found to be 688.

[69] The medical experts called in this case agree that Isaac developed jaundice and that it progressed to become hyperbilirubinemia and progressed further to produce kernicterus or brain damage. The results of that brain damage are seen in the deficits and limitations that describe Isaac's catastrophic impairment.

What did the Defendants do wrong? The Plaintiff's Position

[70] Quite apart from and in addition to hospital records availability issues, about which more will be said later, the plaintiffs assert that the defendants failed to provide adequate and necessary health care services to Isaac and Lina Vescio, particularly during the first 42 hours of Isaac's life.

[71] More specifically, the plaintiffs assert that: Dr. Garfield and/or Nurse Hua:

- failed to perform a complete or adequate visual assessment of jaundice;
- Failed to utilize available means to perform proper investigations or verification of Isaac's physical status (ie: bilimeter or blood serum testing) when he knew that visual assessment of jaundice was unreliable;
- Failed to give due or proper consideration to Isaac's gestational age (prematurity);
- Failed to give due or proper consideration to Isaac's breast-feeding, feeding difficulties and behaviour;

- Failed to provide Mrs. Vescio with appropriate or adequate instruction to recognize and respond appropriately to jaundice after discharge;

- Discharged Isaac at 42 hours of age when he did not meet the criteria for early discharge established by the CPS and the AAP; and

- Failed to take a proper history.

Dr. Garfield's Position

[72] On behalf of Dr. Garfield it is respectfully submitted that the plaintiffs' claim must be dismissed since:

- There is no expert evidence that the conduct of the defendant Dr. Garfield failed to meet the expected standard of practice of a community paediatrician in Ontario in his assessment or treatment of Isaac Vescio in 1999;

- The standard of care is not fraught with such obvious risk as to allow the court to ignore it and determine its own standard;

- Isaac Vescio did not have feeding or behavioural problems in Hospital and was not jaundiced on his discharge from Hospital;

- There was no reason to keep Isaac Vescio in Hospital based on his known history and condition and Mrs. Vescio did not raise any concerns with Dr. Garfield upon his visit and assessment;

- Dr. Garfield's appointment with Mrs. Vescio before the delivery was not an occasion on which a history should have been taken and Mrs. Vescio did not raise the issue;

- In any case, the additional information of the history of jaundice in Isaac Vescio's siblings was not known and could not have been known as Mrs. Vescio did not advise anyone of it and could not recall it at the time;

- Isaac Vescio suffered an extremely rare event of sudden onset hyperbilirubinemia leading to kernicterus which was not foreseeable and the plaintiffs have not proven earlier treatment would have altered his outcome; and

- There is no case for spoliation.

[73] Dr Garfield also submits that:

- The plaintiffs did not lead any expert opinion evidence from a witness who said that Dr. Garfield failed to meet the required standard of care. The only evidence

before this court on the issue of the standard of practice in Ontario in 1999 is the expert opinion evidence of Dr. Michael Sgro, who testified that the expected standard was met by Dr. Garfield;

- Isaac Vescio was properly assessed and discharged in accordance with the expected standards of practice in 1999, as a normal male with no jaundice or significant feeding or behaviour concerns which required he remain in the Hospital;

- None of the suggested risk factors were known, or could have been known to Dr. Garfield, at the time of the discharge;

- Isaac Vescio was not jaundiced at discharge based on the consistent evidence of all observers and the available contemporaneous records;

- Specific to Dr. Garfield's assessment of Isaac Vescio for discharge, the plaintiffs did not challenge Dr. Garfield on:

  His invariable practice to review the chart and the scope of his physical examination;

  His conclusion that Isaac Vescio was normal, with no jaundice and no significant feeding or behaviour concerns;

  The expected standards of practice in 1999 and whether such standards were fraught with obvious risk; and

  His denial that he destroyed any documents in circumstances that could constitute spoliation of evidence.

- Isaac Vescio suffered from a blood disorder caused by an anti-c antibody and probably a G6PD deficiency. The pathological hemolisis caused by the blood disorder, coupled with the physiologic jaundice, resulted in unforeseeable, sudden onset hyperbilirubinemia. Contrary to the plaintiffs' submissions, a statistical analysis cannot explain the extreme hyperbilirubinemia and kernicterus suffered by Isaac Vescio;

- The plaintiffs have not proven that but for the alleged negligence of the defendants, the outcome for Isaac Vescio would be different. No expert testified that earlier treatment or a decision not to discharge would have prevented kernicterus; and

- There is no evidence to suggest that Dr. Garfield played any role in or had any knowledge of the missing Hospital chart. Dr. Garfield was not informed of Isaac

Vescio's subsequent Hospital admission or his unfortunate condition until Dr. Garfield was served with the statement of claim in or around March 2003.

The Position of Mount Sinai

[74] The position of Mount Sinai Hospital is summed up in the following extracts from its written submissions:

- The axis about which this case revolves is the decision to discharge Isaac on October 23, 1999. All of the available documentary evidence supports this decision. Isaac was not clinically jaundiced at the time of his discharge and there were no risk factors which, employing the then current standards of practice, were known or ought to have been known.

- The available documentary evidence is substantial and is certainly sufficient to permit the court to reach a fair and informed decision in this case. In addition to the available birth admission records, the October 24, 1999 readmission records are particularly useful as they address the very questions being asked by this court: whether there were any abnormalities, including feeding difficulties, weighing against discharge.

- Even if the plaintiffs were able to meet the burden of proving the Hospital was negligent in the care provided to Isaac Vescio, they have not proven that but for such negligence, Isaac would not have sustained kernicterus. In other words, there is no expert evidence that but for the defendants' negligence Isaac would have received earlier treatment and his kernicterus would likely have been prevented.

- Isaac's G6PD deficiency in combination with anti-c antibodies in his blood were responsible for causing a sudden haemolytic event, which unfortunately led to Isaac's kernicterus.

- This rare, tragic and unpredictable confluence of conditions is the inescapable calculus of this case.

Analysis

[75] Principal among the concerns raised by the plaintiff is the decision to discharge Isaac from Mount Sinai Hospital on Saturday, 23 October 1999. This decision followed upon physical examinations of the baby by a nurse and thereafter by Dr. Garfield. As such, the doctor authorized Isaac's discharge and the hospital acquiesced in that decision.

[76] At the time of discharge, Isaac was about 42 hours of age. The Canadian Pediatric Society has published guidelines addressing several enumerated concerns for consideration by pediatricians determined to discharge full term newborn babies from hospital before age 48 hours. These concerns largely mirror those published by the equivalent American society, although the American guidelines are somewhat more conservative.

[77] Dr. Wainer adopts the Canadian guidelines as appropriate for purposes of his practice. He points out that they do not specifically address the matter of discharging a baby, such as Isaac, who was born before achieving a gestational age of 37 weeks. Indeed, he cannot personally recall ever discharging a premature baby before at least 48 hours of age.

[78] Dr. Wainer concedes that the diagnosis of jaundice and the application of guidelines for the management of preterm infants involves the exercise of clinical judgment by physicians. This is the same process as applies to full term infants.

[79] In 1999, physicians were left to apply clinical judgment to the decision making process leading to the discharge of an infant born at fewer than 37 weeks gestation because the Canadian Pediatric Society had not, and still today has not, issued guidelines speaking to the discharge from hospital following upon the birth of a premature infant.

[80] Even if a decision to discharge Isaac, or any prematurely born baby at age 42 hours of age, might be worthy of consideration, Dr. Wainer and Dr. Fazal point to the criteria endorsed by the Canadian Pediatric Society for full term infants and assert that Isaac's situation stands out in contrast to those criteria in many respects.

[81] To begin with, the criteria address the case of "well" babies. The pediatricians called by the plaintiffs believe that Isaac was not a "well" baby because they understand and assume that his feeding was inadequate and because of the fact that his was a premature birth. Isaac was a large baby for his gestational age and many of the individual criteria listed in the Canadian and/or American Pediatric Associations' published guidelines would include him out of a decision to discharge from hospital at an age lower than 48 hours after birth.

[82] These doctors necessarily founded their expert opinions, in part at least, upon the facts given in evidence by Lina. In this respect, they assumed as accurate and sufficiently complete the descriptions Lina gave of the course of her attempts to establish an appropriate latch and feeding

for Isaac. As well, these doctors took Lina's evidence of her baby's urine and stool output into consideration along with her description of Isaac's activity levels, his lethargy and his sleeping habits. They also considered and relied upon Lina's description of Isaac's appearance and skin colour at various times during his first 42 hours.

[83] Neither doctor was present during the time Lina gave her evidence to this court. Both had reviewed Lina's discovery transcript but, of course, its contents did not become evidence at trial. Apparently they did not review transcripts of Lina's trial evidence, although that would not have put them offside the order excluding witnesses, as experts were excepted from the application of that order.

[84] So, these doctors were asked to assume that summaries of Lina's evidence as read by plaintiffs' counsel were accurate and their opinions followed. The difficulty arising from that process is that the relatively brief summaries they were read did not encapsulate all of Lina's evidence. This became clear through the course of cross-examinations.

[85] While it is both expected and necessary that an expert found an opinion upon assumptions that he or she may not have first-hand knowledge of, the accuracy of those assumptions is of paramount importance to any consideration of the opinion rendered in court.

[86] In addition to the evidence assumed from fact witnesses such as Lina, Dr. Wainer founded his opinions, in part, upon assumptions regarding chemical and biological functions within the organs and blood stream of baby Isaac.

[87] Upon readmission to Mount Sinai Hospital, blood tests were performed and demonstrated that Isaac's bilirubin level then stood at 688 micromoles per litre of blood per hour (umol/l/hr). The accuracy of this reading is conceded and relied upon by all of the parties and experts in this case.

[88] Dr. Wainer posits that there will be a low but positive bilirubin level within the blood of every newborn baby. This starting point position is uncontroverted. He suggests that an appropriate assumed at-birth bilirubin level for the average newborn would be about 20 umol/l/hr. If this assumption is accurate, it is evident that Isaac's bilirubin level rose by 668 units over the course of his first 70 hours of life. The question then becomes: did Isaac's bilirubin level rise at a steady, linear rate?

[89] For purposes of his analysis and opinion, Dr. Wainer assumed that the rate of rise indeed was linear. He prepared and introduced into evidence, as Exhibit 11, a chart demonstrating the rise in Isaac's bilirubin level over time. Given that his analysis is not an exact science, Dr. Wainer explained that he also charted a linear rise over the time period up to Isaac's first discharge from hospital, at 42 hours of age, assuming 20% positive and negative variances respectively. Why the figure 20% was arbitrarily selected rather than any other was not established to my satisfaction. It is not lost upon me that this marked variance conveniently allows for a low-end bilirubin level, at hour 42, that is in the low to mid 300s. This level of jaundice might be more easily missed during a visual examination, I suppose.

[90] Interestingly, the three graph lines charted by Dr. Wainer from birth through to age 42 hours start from the at-birth assumed bilirubin level of 20 units and rise in a linear fashion demonstrating a deviation range of plus or minus 20%. As such, Isaac's bilirubin level at the time of discharge from hospital on Saturday morning would range from about 330 up to 500 units. From age 42 hours onward, however, the lines on Dr. Wainer's chart converge toward the point that indicates a bilirubin reading of 688 at the time of testing on readmission to the Emergency Department at Mount Sinai Hospital on Sunday afternoon.

[91] Now, it seems to me to be logically and mathematically sound that if you start from an initial bilirubin level of 20 and project a linear rate of rise through hour 42 and on to the time of post readmission testing, a level of 688 will appear on the graph. What I have difficulty with, however, is how the deviation lines (charting variances of plus or minus 20%) can logically separate before hour 42 and converge thereafter at the 688 level at hour 70.

[92] Projecting the upper and lower linear progression lines from 42 hours to readmission produces (688 +/- 20%) a low of 550 and a high of 826 units at 70 hours; but, testing on readmission established the bilirubin level to be 688.

[93] Surely if the bilirubin level at hour 42 could be off by a margin of 20%, the level could be off, by that or some other percentage, at each other hour charted. Dr. Wainer offered no rationale for the assumption that the three lines should separate as they proceed out from hours zero to 42 and then return from the demonstrated separation apparent at hour 42 to confluence at hour 70.

[94] Dr. Wainer does not deny that a rapid rise in bilirubin levels can be experienced in some patients but he does not see an event to explain rapid rise in this case. Parenthetically, I note that the lower of the three graphed lines on Exhibit 11 rises at a linear rate to hour 42 and thereafter, it rises at a higher rate to hour 70. In any event, this doctor asserts that a linear rise in bilirubin levels is a reasonable assumption, notwithstanding that it is not accepted as such by other experts in this case or that he admitted that it is not the only viable assumption an expert in his field could reasonably consider.

[95] At this point, it must be said that it is not the number of opinions on this or any issue in this case supporting one side of a proposition or another that matters to me but rather the quality and persuasive force of any given opinion.

[96] On the basis of the assumptions Dr. Wainer chose to accept, the bilirubin level for Isaac at discharge on Saturday morning was 415 umol/l/hr (plus or minus 20%). As such, the baby's clinical status at the time of discharge would be that he was, to use Dr. Wainer's choice of words, "deeply jaundiced". He concedes that at such levels, jaundice would be quite evident and not only visible in the head but also throughout the entire body of a newborn baby. He accepts that that degree of jaundice would be almost impossible to miss in a well-lit room on clinical examination by a nurse or an experienced pediatrician.

[97] There is unanimity of medical opinion that a bilirubin level of 400, indeed even a level of about 300, would be very obvious to an experienced clinician. Dr Freedman put the matter this

way: “I don't want to make it dramatic, but it would be like seeing a lemon in a bowl of apples. It would be self-evident”.

[98] Dr. Kaplan said that at a level higher than 500, a baby would be the colour of an orange or a pumpkin "literally". He added that a level of 300 to 500 would produce a "deep yellow colour bordering on the colour of an orange".

[99] Dr. Kaplan had read the transcript of the evidence given by Dr. Wainer. He read that Dr. Wainer suggests a bilirubin level of between 300 and 500 units would have been present at the time of Isaac’s discharge home on Saturday morning and that Dr. Wainer chose to apply a linear analysis approach to the progression of the baby’s bilirubin rise.

[100] If the baby had a bilirubin level in that range, he would have been "deeply jaundiced" and deep jaundice would have been recognized in hospital but Dr. Kaplan sees no evidence of jaundice present at the time of discharge at all. He concludes that Dr. Wainer’s theory is simply not compatible with what happened to this baby.

[101] While I have no difficulty in accepting Dr. Wainer’s credentials and expertise, I have real difficulty accepting his objectivity and the essentials of his opinions, especially where those opinions are contested in the evidence of equally, if not more, qualified experts whose objectivity I fully accept. In this latter category, I include doctors Sgro, Freedman and Kaplan.

[102] I am mindful of and in agreement with the view expressed by Lax J. both in *Symaniw v. Zajac*, [1996] O.J. No. 3123 (Gen. Div.) at para. 41 and more recently in *Latin v. Hospital for Sick Children*, [2007] O.J. No. 13 (Ont. Sup. Ct.) that in considering the conflicting evidence of experts, the court should weigh and assess in light of these factors:

- The relevance of the training, experience and specialty of the witness to the medical issues before the court;
- Any reason for the witness to be less than impartial;
- Whether that testimony appears credible and persuasive compared and contrasted with the other expert testimony at the trial.

A word about Expert Evidence

[103] The ability to give opinion evidence at any trial is a privilege, not a right and it is afforded sparingly. In the case of experts in the field of medicine, it is afforded by order of a trial judge, with the hope and expectation that the expert can, in an impartial fashion, assist the court to a full and fair appreciation of matters necessarily in issue and beyond the experience, knowledge, or ready appreciation of the court.

[104] Having carefully followed the evidence of Dr. Wainer, I am very suspicious that his objectivity has been compromised by his eagerness to persuade this court of the validity of

the opinions he gave, both as to the merit of his own view of the likely progression toward and causes for the injuries Isaac ultimately suffered and as to his criticisms of the views of other experts. That he authored thirteen reports to counsel in this case is troubling to me, in and of itself.

[105] As well, I noted numerous instances arising during his cross-examinations in which Dr. Wainer maintained rigid positions in the face of reasonable suggestions not entirely opposite to positions he had earlier espoused. On the whole, he struck me as a man on a mission and that mission had rather less to do with assisting the court toward a reasonable understanding of technical, medical issues arising in this case than it had to do with winning a debate on his particular views.

[106] In the same general way, I am troubled by the evidence heard from Lisa Williston, R.N., who was accepted as an expert in nursing and who opined on the standard of care for nurses at times relevant to Isaac's birth and neo-natal care at Mount Sinai. Overall, the court was helped very little by her opinions; her efforts at objectivity were certainly not apparent to me.

[107] She too was rigid and unyielding in her views. For example, when asked to agree that counting diapers is one of the best ways to determine if a baby is being adequately fed, she declined to agree, arguing that it was not the best way, in her view. Surely one of the best does not equal the only.

[108] This nurse was also heard to say that the comments box on the top portion of the Newborn Record (Exhibit 2, also copied in Exhibit 1, page 120) was intended to contain all information relevant to the care and feeding of the newborn prior to discharge. Her position is that no information is immaterial and if information is not charted, the event didn't happen. She feels that the comments section requires inclusion of all information, whether important or not, having to do with the course of the infant's breast-feeding while in hospital.

[109] This portion of the Newborn Record form simply is not big enough nor, in my view, designed for the inclusion of every scrap of information a nurse observes and may record elsewhere in hospital records. As is evident from the hospital records that are available and those specimen records also contained in Exhibit 1, there are charts specifically designed for the recording of infant feeding and behaviour issues; it is inconceivable that all information from all chart records should be re-recorded in this small section of the Newborn Record.

[110] These are but two of the many instances of partisan positioning that were evident to me during the course of Ms. Williston's evidence.

[111] The thrust of the evidence of the three experts called for the plaintiffs seems to be that the decisions made by Dr. Garfield and by the discharge nurse, Ms. Hua, in favour of discharging Isaac home on Saturday morning were flawed. To the extent that that is indeed the thrust, even assuming that Isaac was not displaying signs or symptoms of jaundice at the time, it seems to me to be largely unhelpful to focus upon post discharge decision record keeping.

[112] Much time was devoted to focusing many witnesses on the completeness and accuracy of the Newborn Record, yet the discharge decisions had already been made before the decision makers put their notes and signatures upon this form. There is no evidence to suggest that Isaac's treatment or outcome following his Saturday discharge were influenced at all, let alone adversely, by the information contained in or omitted from the Newborn Record.

[113] In my view, it is more germaine to focus upon the information that was known or that should have been known by the decision makers, and the extent, if any, to which this information supported the decisions made.

Sibling History

[114] One of the criteria that the plaintiffs' experts cited as a risk factor for the development of Isaac's hyperbilirubinemia is the history of jaundice in his siblings. The plaintiffs' experts did not, however, examine the particulars of the jaundice experienced by Isaac's siblings and describe the role that it actually played, if it did at all, in the development and progression of the problem Isaac actually experienced.

[115] Exhibit 1, pages 332 through 363, contains delivery and newborn records for each of Isaac's siblings. My review of those records persuades me that Isaac's experience was very different from that of either his brother or sister, and that their jaundice cannot reasonably be thought to be a predictor of Isaac's outcome. Beyond that, I see no basis in the siblings' records to support a conclusion that Isaac should have been kept at Mount Sinai longer than the 42 hours he spent there following his birth.

[116] It is interesting to note from the sibling records and from those relating to Lina's pregnancy with Isaac that Dr. E. Lyons followed all three of these pregnancies. Although Gian Paolo developed jaundice prior to discharge from hospital as a newborn, there is no note from Dr. Lyons alerting the reader to that fact contained in records he made relating to Lina's later born children, Vanessa and Isaac. The Antenatal Records (Exhibit 1, pages 362 and 92) prepared by Dr. Lyons contain no comments about sibling jaundice.

[117] Also silent is the portion of the record (at page 360, item 41,) relating to Vanessa's delivery, used for grading potential risks to a newborn baby's health. In Vanessa's case the item invites a letter to be inserted if Lina had given birth to previous babies with hyperbilirubinemia. The term applies to Gian Paolo's jaundice and therefore one might expect to see a letter inserted there on the document made up at the time of Vanessa's neo-natal care, but none appears.

[118] Gian Paolo was born on the afternoon of 4 June 1985; he presented with a normal pink colour which is noted (page 335) to have remained normal through to the day shift on June 7th. The time of the notation is not shown, but on that shift Gian Paolo became 3 days old and he

was noted to be jaundiced. His jaundice continued for more than 3 shifts (1 full day) before treatment was started, at some point during the evening of June 8th. Phototherapy is the only treatment administered and it continued through all or parts of 5 shifts. Gian Paolo was discharged on June 10th at 2:26 p.m. (page 332).

[119] At the time of his discharge, Gian Paolo was still jaundiced, as is so noted on his chart (page 333). A bilirubin level that day was 228 (page 339). His level was 219 on the 7th, the day he was first seen to have been jaundiced, but phototherapy was not begun until the 8th, co-incidentally, the day his level rose to its high, 262.

[120] Vanessa was born on the 22nd of June 1986. Her colour was pink, as shown on the day shift notes and remained so until some point during the night shift on the 23rd (page 351). Her bilirubin was tested on the 24th and on the 25th to be 181 and 216 respectively (page 355). She was discharged from hospital at 11:00 am on the 25th, within only a few hours of her highest recorded bilirubin level.

[121] Vanessa's final diagnosis at discharge shows no reference to jaundice or any other health concern (page 348).

[122] The inevitable conclusion from all of this is that both of Isaac's siblings showed signs of jaundice within days of their birth and both were sent home with jaundice remaining at levels about double that at which the experts in this case agree clinical signs of jaundice are visible.

[123] In the 1980's, the evidence establishes, it was the norm to keep newborns and mothers in hospital for several days. By the 1990's the norm had changed and discharge times were rolled back to times ranging between 24 and 48 hours following the birth of healthy babies. Today, Gian Paolo would likely have been discharged home before his jaundice was noted. Vanessa's jaundice was tested and lower on day 2 of her life than it was on day 3 when she was actually discharged; one wonders if her jaundice would, even today, delay her discharge.

[124] In any event, I see nothing in the sibling records to suggest, let alone establish, that Isaac's discharge should have been delayed because of the siblings' histories.

[125] Finally, on this point, I agree with Dr. Garfield's submission that Mrs. Vescio had forgotten that her other children had experienced jaundice, one requiring phototherapy. Significantly, Mrs. Vescio recalled the sibling jaundice only after the children's' medical records were produced as part of this litigation. She could not therefore have raised it with anyone in the Hospital, or with Dr. Garfield.

Dr. Garfield

[126] That a doctor possessed of Dr. Garfield's particular and extensive training and experience in medicine in general and in the specialty of pediatrics in particular can speak in court with authority, clarity and precision on matters within his sphere of expertise is, of itself,

neither impressive nor novel. In these respects, Dr. Garfield did impress; but he was, perhaps, more impressive for what he did not say.

[127] Dr. Garfield did not pretend to recall his pre-discharge examination of Isaac Vescio, one of some 25,000 examinations of newborns he has done over his more than three decades in practice. He did not deny, in fact he readily accepted, that if Lina said she saw him measure the circumference of her son's head, then that he did.

[128] He did not deny that the Newborn Record form should have been accurately and completely filled out and that in some respects it was not. That form called for the examining physician, at the time of discharge, to insert measurement data for the head circumference. Dr. Garfield omitted that data entry. Parenthetically, I must add here that no evidence was called to suggest that the inclusion of data on that measurement would have affected Isaac's outcome.

[129] Dr. Garfield admitted that he did not take a full family history from Lina when he met with her in his office before Isaac's birth. He relied upon the history available from Lina's obstetrician (Dr. E. Lyon), including the lack of any specific indication of a maternal history of relevance.

[130] Neither of the plaintiffs' experts, namely Dr. Wainer or Dr. Fazal, was critical of Dr. Garfield's approach to this type of prenatal visit.

[131] Dr. Garfield admitted that whatever notes he may have made at the time of that office visit were disposed of in the ordinary course of his office practice, as he did not actually become Isaac's pediatrician and did not see Isaac in consultation or treatment after his discharge from Mount Sinai's Neonatal Unit on the Saturday morning.

[132] He admitted that he has never seen a case of kernicterus in his practice.

[133] Hindsight is 20/20 and an understanding of Isaac's deterioration in this case might be enhanced if more and better medical and hospital records were available. Dr. Garfield admits that. At the time of his involvement with Lina and Isaac, however, he followed his usual practice.

[134] In giving his evidence, Dr. Garfield purported not to be a perfect pediatrician but rather one who followed a thorough and peer accepted procedure for managing the early days of life of newborns in his care at Mount Sinai. In the result, I am comfortable in accepting Dr. Garfield's evidence and find that he very probably applied his usual practice and procedures to his management and examination for discharge in this case.

[135] Specifically, I find that Dr. Garfield observed, touched and measured Isaac in all of the ways he explained his usual practice to involve. His examination addressed numerous potential concerns of medical significance, the presence of signs of jaundice being but one. He found no signs of jaundice and no signs or symptoms of concern. He reviewed Isaac's hospital chart for any record or note indicating that Isaac was unwell, not feeding or voiding appropriately, or otherwise not progressing as a normal child should. He testified that he would

probably also have spoken to nursing staff and would have taken any concern expressed by staff or by a baby's mother into account. Accordingly, he concluded and recorded on the Newborn Record that Isaac was a healthy male child who could accompany his mother home.

[136] I also accept the defence submission and find that the plaintiffs' expert, Dr. Fazal, testified that pressing on the skin to remove the blood and then looking at the skin colour assesses jaundice. This is consistent with Dr. Garfield's invariable practice, and Dr. Fazal was not critical of Dr. Garfield in this regard.

[137] A concern is raised in plaintiff's submissions that Dr. Garfield discharged Isaac home without knowing the results of DAT testing on cord blood taken from the baby at birth. I decline to find that that fact establishes a lack of care or negligence on his part and accept the submission that negative DAT results are not indications of a problem. If anything, such results would have suggested that there was no anti-body issue. This would, had he known that the Mount Sinai lab actually made a negative DAT test result, have offered further reassurance to Dr. Garfield in relation to the decision to discharge Isaac.

[138] I cannot accept that Isaac was jaundiced, let alone deeply jaundiced, at discharge and that all health care professionals, including Dr. Garfield, missed all signs and symptoms of his jaundice. I find that there was no clinical sign or symptom of jaundice apparent to Dr. Garfield at the time of his pre-discharge examination of Isaac on Saturday morning.

Tina Hua R.N.

[139] Nurse Hua was charged with the care of Lina and Isaac on Saturday morning and she examined Isaac as part of her pre-discharge procedures. As well, she spoke with Lina and provided her with the printed materials that the Hospital makes available to new mothers at the time of their discharge (Exhibit 1, pages 279-331). I found Nurse Hua to be a very bright, articulate and impressive witness. I have no doubt that she well understood the discharge protocols she was required to follow at Mount Sinai and that she followed them in this case.

[140] Although she has no memory of Isaac and but a vague recollection of Lina, Ms. Hua recognized her notes and signatures on hospital records (Exhibit 1, pages 91 & 120). She well remembers her usual practice and is confident that she followed it.

[141] In terms of discharge planning, she explained that her priorities included seeing how the baby was feeding and voiding and checking the colour of the baby. As well, she would address the mother's readiness, physiologically, in terms of comfort with handling the baby and whether the mother had family or other appropriate supports around her at home to help with her recuperation and with the care of her infant.

[142] She would have a conversation with the mother about how comfortable she was with the prospect of going home with her baby and whether she had any questions. Nurse Hua would access information about the progress of mother and baby in hospital through discussions with her colleagues and by looking at the patient charts. She would be looking, in particular, for

frequency of feeding and voiding as indicators that the baby was getting nutrition from the mother.

[143] She would, during the course of her discharge discussions with each new mother speak about jaundice and tell mother that, frequently, babies become jaundiced and that it is important monitor for that outcome and that it is also important to feed the baby regularly. She would encourage the mother to examine her baby in sunlight.

[144] She would also make the mother aware that a public health nurse would be available and that Mount Sinai has a unit available to support her should issues of breastfeeding or infant care arise. She would encourage the mother to call her doctor or the hospital as indicated.

[145] Nurse Hua would examine the baby, take the smock and diaper off and look at the baby's colour, breathing, that limbs are moving appropriately and she would assess the general appearance of the baby.

[146] She would look at colour overall and "possibly", she added, by pressing down on the baby's skin. She would discuss with the mother whether she was able to recognize signs of jaundice or dehydration and know the importance of calling a doctor should health concerns arise.

[147] The meeting and review of documentation with the mother requires about 30 or 40 minutes in total. The practice described refers to all discharges done at Mount Sinai in October of 1999.

[148] If Nurse Hua had any concern about feeding behavior or colour, she would chart it and then tell the baby's physician, if she decided that the discharge ought to be placed on hold.

[149] Where the physician attends on the morning of discharge, she would directly communicate any concerns to the physician then. At the time of her nursing assessment for discharge, Ms. Hua had no concern about mother or child and expressed none to any physicians.

[150] Nurse Hua recorded no evidence of jaundice or of any other concern suggesting that Isaac should not be discharged. I find this to be entirely consistent with the observations, physical examination and clinical findings of Dr. Garfield.

Isaac's journey through Jaundice and Hyperbilirubinemia

[151] Neither the available hospital records nor the evidence of the health care professionals who examined Isaac before his discharge home on Saturday morning suggest that he was jaundiced; quite the contrary, he appeared to be very well and flourishing.

[152] I reject the opinion offered by Dr. Wainer that Isaac's course followed a linear progression and that he was deeply jaundiced at the time of his discharge. I prefer the views of

Drs. Freedman and Kaplan and find that Isaac was not jaundiced at discharge but became so later and by reason of a hemolytic event that was not foreseeable and that produced a very rapid rise in bilirubin in Isaac's bloodstream.

[153] As is apparent from any review of the curriculum vitae of the doctors that attended and gave evidence in this case, the court has benefited from and is most grateful for the opinions of extremely skilled, experienced and knowledgeable clinicians, researchers, authors and teachers in a very complex area of medicine and science. The medical witnesses and particularly those called by the defendants literally included world-renowned experts in their respective fields.

[154] Dr. Freedman explained that where an infant presents without jaundice on day two of life, the conjugating capacity of the child's liver is working maximally and remarkably effectively to excrete bilirubin produced by the normal tendency toward jaundice within the first two to three days of life. Dr. Freedman has seen cases of sudden onset hyperbilirubinemia quite frequently and for the same reasons as appear to apply in this case.

[155] On being asked how an apparently normal baby can return to the hospital at age 70 hours with a bilirubin level of 688, Dr. Freedman said this means that the maximum efficiency of liver function has been overcome because of an increase in bilirubin load being produced. The liver capacity thereby becomes overwhelmed.

[156] Dr. Kaplan's view is somewhat different than that offered by Dr. Freedman but he assures the court that the two views are consistent with each other. Dr. Kaplan opined that there are two types of hemolytic events that can lead to an increase in bilirubin production in a newborn: immune and non-immune events. He feels that Isaac's case arose principally from a non-immune hemolisis.

[157] The most common cause of this type of hemolisis arises in the presence of a G6PD deficiency. The G6PD enzyme plays a major role in the production of red cell anti-oxidants in the body and a deficiency allows for destruction of red cells upon exposure to the presence of an oxidant.

[158] Exposure to oxidants can occur within the body but can also occur by way of exposure to external sources such as may be found in mothballs and by way of exposure to some drugs and chemicals that can become triggers of hemolisis. Often a specific trigger is not identified.

[159] There are more than 100 different variants or types of G6PD deficiency and all result in a lower than normal level of G6PD activity.

[160] Most newborns with a G6PD deficiency will prosper even if they develop some degree of jaundice. In about 15% of G6PD deficient babies, significant jaundice typically responds to phototherapy with good outcomes.

[161] In the severe kind of hemolisis situations, very high levels of bilirubin, involving readings of 500 to 700, can occur. This is unpredictable. Sometimes the trigger is not identifiable; for example, if a mother eats fava beans and the offending agent within the beans is transferred into her breast milk, feeding can produce a severe hemolytic event for a breastfed baby.

[162] G6PD deficient babies can become extremely yellow within 12 to 24 hours. Bilirubin levels can skyrocket. There is no way to know which baby would be at risk. Dr. Freedman feels that Isaac's bilirubin rise is consistent with this process.

[163] Dr. Freedman adds that there also seems to be an impact from a G6PD deficiency that decreases the ability of the liver to conjugate bilirubin. Therefore, the level of bilirubin rises as the conjugating ability of the liver decreases. Doctors cannot measure the conjugating ability of the liver in a newborn, for ethical reasons. It would require a biopsy.

[164] Also, he adds, Gilbert's syndrome causes a minor decrease in the conjugation ability of the liver but that syndrome working together with a G6PD deficiency symbiotically produces a greater decrease in conjugation capability. In his opinion, the likelihood is that Isaac also has Gilbert's syndrome.

[165] It is Dr. Kaplan's opinion that Isaac is G6PD deficient [Exhibit 1 page 179A]. He explained that the negative result seen on G6PD testing done following readmission to hospital in October of 1999 represents a false negative. Dr. Kaplan opines that Isaac's case is consistent with Severe Onset G6PD deficiency. It is also consistent with normal presentation or appearance through the first 42 hours of life of a 35 to 36 week gestation newborn.

[166] Dr. Freedman's theory involves an immune type of hemolisis consistent with the presence of an anti-c antibody.

[167] Dr. Kaplan feels that that antibody likely caused a low-grade hemolisis, which was not enough to produce jaundice at first; but it set the stage to produce a severe hemolisis when the baby became exposed to an oxidant at a point following the time of his Mount Sinai to home discharge. It was at this point that Isaac suffered a sudden and severe hemolytic event.

[168] Dr. Kaplan explained that there is no known way to screen for the presence or severity of a G6PD deficiency. Often with G6PD deficiency of the severe type, there is no identifiable trigger. Nevertheless, a sudden and precipitous rise in bilirubin levels often describes the characteristic unpredictability of this deficiency.

[169] In my view, the hemolytic event that produced the sudden rise in bilirubin in Isaac's case occurred after Dr. Garfield examined Isaac and after he was discharged home. The event may have included features of one or both of the processes described by Drs. Freedman and Kaplan, those being immune or non-immune hemolytic processes. Both processes lead to a rise in bilirubin and working independently or together, they can and did bring about an unpredictable, sudden onset of severe hyperbilirubinemia leading to kernicterus.

Can kernicterus be predicted?

[170] Dr. Sgro says that it is not possible to predict prospectively that kernicterus will develop. He does not agree that risk factor identification is important in so far as the development of kernicterus is concerned. It is important to recognize infants at risk of hyperbilirubinemia in order that treatment can be initiated but kernicterus cannot be predicted.

[171] Dr. Sgro was taken to his study and publication of 2006 [Exhibit 18] where 258 of the 367 reported cases of severe neonatal hyperbilirubinemia met the criteria for his study, for an estimated incidence of 1 in 2480 live births over the two year study period.

[172] Severe hyperbilirubinemia was identified in this study in 73 infants before they were even discharged from hospital. The remaining 185 infants were readmitted with hyperbilirubinemia from home. Despite the fact that infants in the former group remained within a hospital setting, they still achieved bilirubin levels averaging 425, or the transfusion threshold.

[173] Dr. Sgro's study identified that a small but significant number of infants developed severe hyperbilirubinemia within, on average, 2.6 days of life. Notably, in my view, in 165 cases (64.0%), no cause was identified for the hyperbilirubinemia ultimately diagnosed.

[174] The study recommended a screening process involving routine serum bilirubin testing of all jaundiced infants and, ideally, blood serum testing of all infants before discharge; nevertheless, no changes have yet been made in the Canadian Pediatric Society's guidelines.

[175] In his study publication, Dr. Sgro states that hyperbilirubinemia is the most common cause of readmission of a newborn to hospital. The risks of hyperbilirubinemia were known in the 1990s but the association between hyperbilirubinemia and kernicterus has only come to light in recent times. Put another way, Dr. Sgro asserts that you need to make a distinction between hyperbilirubinemia and kernicterus. Infants at risk for developing the former are not thereby at significant risk of developing the latter.

[176] Dr. Sgro confirmed that between 300,000 and 350,000 children are born in Canada each year. Of these, about 250,000 to 280,000 will develop jaundice and, therefore, have hyperbilirubinemia. Of those children that do become jaundiced, 8 to 10% may have sufficiently severe jaundice that they will require phototherapy treatment. Of those, a small portion will have such severe hyperbilirubinemia that they will be at risk for long-term neurological sequelae. Of this number, some may develop kernicterus but the risk of developing kernicterus is very small and of the order of 1 to 50 infants per 100,000 live births. Therefore, there may be as few as 10 infants born in Canada in any given year who develop kernicterus.

[177] Dr. Sgro concludes that there are no red flags for the development hyperbilirubinemia contained within the Antenatal Records prepared by Dr. E. Lyons during and concerning Lina's pregnancy with Isaac [Exhibit 1, pages 92 and 93].

[178] Dr. Sgro was taken to [page 128, Exhibit 1] the transcription of the emergency admission record. He reviewed the history and examination sections. He found the history recorded there to be consistent with the onset of clinically significant hyperbilirubinemia occurring on the morning of readmission. His view of the nature and severity, as well as the timing of onset, of Isaac's decline toward kernicterus is consistent with the views of Drs. Freedman and Kaplan and I accept it.

Bilimeters

[179] Dr. Sgro is familiar with the Minolta device and understands how it uses light to convert to a number or, in newer equipment, to a computer estimated serum bilirubin blood level. The device is not helpful. It has significant limitations. It is not calibrated and not accurate. Newer devices are slightly more accurate.

[180] None of the medical doctors in this case advocate the use of bilimeters, either in addition to or in place of a clinical, visual examination of a newborn to assist in the detection of the presence or severity of jaundice.

[181] There is no proof in this case that the use of bilimeters by either physicians or nurses was a generally accepted practice within the discharge of newborns protocols of public hospitals in Ontario in 1999.

[182] Further, whether serviceable bilimeters were available at Mount Sinai in October of 1999 or not, and the evidence is not at all conclusive on this point, it is clear that bilimeters were not customarily used other than, perhaps, where a nurse had first identified jaundice by way of visual examination.

[183] Given my finding that Isaac was not jaundiced to a level apparent, on visual examination by Dr. Garfield, nurse Hua or any member of the Vescio family or their friend, Elaine, on Saturday, I cannot accept that a bilimeter, if used, would have generated a reliable reading to the contrary.

[184] In any event, I do not find that the failure to use a bilimeter prior to Isaac's discharge from the combined care nursery at Mount Sinai on Saturday morning caused or contributed to his eventual, medical outcome.

Early Discharge

[185] In 1999 and still today, newborn babies are routinely discharged home in the interval from 24 to 48 hours after their birth. This applies to full term and to premature infants alike. Attending health care professionals in the hospital setting separately assess each case. The decision to discharge follows from the exercise of clinical judgment.

[186] The question, therefore, is not whether any baby born in October of 1999 at Mount Sinai should be discharged at 42 hours of life. The question is whether Isaac should have

been, based on the information that was known or that should have been known at the time. The physicians called by the plaintiffs assert that Isaac should not have been discharged on Saturday morning. The inference seems to be that if Isaac had stayed at Mount Sinai longer, the signs and symptoms of the hyperbilirubinemia induced kernicterus that he developed would have been noted, treatment would have been undertaken and a very different outcome would have been realized. Upon the whole of the evidence in this case, however, neither the assertion nor the inference has been made out.

[187] First, the inference. No doctor has been heard to predict and medically support a different, let alone a better, outcome for Isaac if he had stayed at Mount Sinai. Several doctors were taken to questions about cases of kernicterus about which data is kept currently in archives at Stanford University in California. Many of the cases recorded in the Kernicterus Registry located there involve sudden onset hyperbilirubinemia and a significant number of those involved children who were in hospital when onset occurred. These are infants who had the benefit of a very high level of care. It appears that not every case of kernicterus can be predicted and treated successfully.

[188] Dr. Wainer was asked, in chief, what, in all probability, would Isaac's injuries be if he had been appropriately diagnosed and treated. He was not asked to define what the appropriate diagnosis and /or treatment would have been, what health care specialists would have been involved or when and why Isaac could not have been managed effectively despite having been discharged home.

[189] What Dr. Wainer opined in response was: "If Isaac's jaundice/hyperbilirubinemia had been detected before he was – before he showed the classic kernicterus symptoms that he displayed on the afternoon of….re-admission, there's every reason to expect that his outcome would have been normal" (Transcript: 23 April 2007; page 118 lines 12-20).

[190] In my view, Dr. Wainer is building an "if" upon a "maybe" to suggest a chance that a better outcome may have arisen if Isaac had stayed in hospital, where intervention treatments may have occurred sooner. Even so, this hoped for better outcome presupposes Dr. Wainer's theory of linear progression in rate of rise of Isaac's bilirubin level applies or, at least that the rise would not be, as I find that it was, sudden and aggressively rapid.

[191] As to the issue of whether Isaac was a good candidate for discharge on Saturday morning, the plaintiffs rely largely upon the evidence of Drs. Fazal and Wainer.

[192] Dr. Fazal is a general or community pediatrician called to comment upon the care given to Isaac at Mount Sinai Hospital. He was also called to speak to the physiological causes of hyperbilirubinemia and factors contributing to Isaac's overall outcome. As well, he was called to comment upon Isaac's clinical status at the time he was discharged from hospital and the criteria that could and should have been addressed in connection with discharge.

[193] Dr. Wainer is a pediatrician with training and non-Canadian recognition in the area of neonatology. He has an interest and considerable experience in the area of jaundice in newborns.

[194] His expertise was conceded but as a practitioner in Calgary, Alberta, he did not speak as an expert on the standard of care for physicians or nurses involved in discharge decisions for newborns in this jurisdiction.

[195] In Dr. Fazal's view, this case presents a multi-factorial problem including feeding problems, lethargy, premature birth, the possibility of enzymes being passed through breast milk and a history of jaundice in both siblings and that all these factors combine to create a perfect setup for hyperbilirubinemia.

[196] Dr. Fazal was taken through laboratory results of blood testing. He agreed that the result of the positive anti-c test was first available at 11:31 a.m. on 25 October. As such, it was not available to Dr. Garfield at the time of his examination for Isaac's discharge.

[197] Further, the glucose tolerance testing done during Lina's pregnancy was properly read and recorded by Dr. E. Lyons to be normal. Therefore, there was nothing on the Antenatal Record that should have put Dr. Garfield on notice of a concern for mother or child arising from diabetes complications.

[198] Dr. Fazal accepted that if Dr. Garfield examined Isaac and found no colour or other concerns, the decision to discharge Isaac represents an "honest and intelligent exercise of his clinical judgment".

[199] Assuming that neither Lina nor staff members in the Neonatal Unit at Mount Sinai complained of significant feeding difficulties, lethargy or irritability of the child, Dr. Fazal agrees that there would be no indication of risk factors for jaundice sufficient to warrant keeping Isaac in hospital.

[200] Dr. Wainer concedes that the diagnosis of jaundice and the application of guidelines for the management of pre-term infants necessarily involves the exercise of clinical judgment by physicians and the same process applies to full term and near-term infants.

[201] Lina concedes that she did not raise any concerns about Isaac's feeding or his behaviour to Dr. Garfield or to Ms. Hua when she saw them at Mount Sinai on Saturday morning. I am satisfied that both Dr. Garfield and Nurse Hua reviewed the hospital chart for Isaac during the course of completing their usual pre-discharge assessment routine. Had the chart then been missing or had it contained any notes indicating that Isaac was not feeding or behaving normally, his discharge would have been stopped.

[202] While I have no doubt that Lina was anxious that Isaac feed well and was concerned that his feeding and behaviour may not have been normal in his first hours of life, she was reassured by the nurses and taught strategies to help in her efforts at breastfeeding. Lina

confirms that the available records and the history contained therein about feeding and voiding in the time before discharge is accurate and establishes that Isaac's progress was normal and in keeping with expected milestones.

[203] The Hospital submits that despite starting to complete the Baby Activity Record while in hospital as instructed by Nurse Hua, Lina did not make any entries following Isaac's discharge. This is consistent with an absence of concern about Isaac's feeding on Saturday; I agree.

[204] In the circumstances presenting on Saturday morning, the exercise of clinical judgment in favour of discharging Isaac home was appropriate. I would add that there was no evidence led by the plaintiffs that credibly establishes what Isaac's bilirubin level was at hour 48 of his life. That is, there is no credible evidence before me as to what Isaac's bilirubin level actually was at the time the plaintiffs assert that he should not have been discharged from Mount Sinai's Combined Care Unit. That he would have been visibly jaundiced at hour 48 or that if he had been kept in hospital longer, that he would have been diagnosed and treated and, if treated, to what outcome, is sheer speculation.

The Accepted Standard is "Fraught with Risk"

[205] The plaintiff asserts that it is open to the court to replace a standard of care by which the parties comport themselves with another standard where, as is submitted to be the situation here, the existing standard is fraught with risk.

[206] In other words, if the court believes there is a better way of doing things, it is open to it to judge the conduct of the parties, including medical doctors, hospitals and employed nurses by a standard that they themselves do not recognize or adhere to for the provision of health care services.

[207] In certain cases the court may step in and apply a new standard but this is not one of those cases. In *Anderson v. Chasney*, [1949] 4 D.L.R. 71; affirmed [1950] 4 D.L.R. 223 (S.C.C.), the court determined that the ordinary man is competent to consider whether or not it is negligent not to use sponges with ties or to have a count of sponges kept during an operation. Such a case would not involve difficult or uncertain questions of medical or surgical treatment nor matters of a scientific or highly technical character.

[208] The matter was revisited in *ter Neuzen v. Korn* (1995), 127 D.L.R. (4th) 577 in which Sopinka J. stated (at para 51) that:

> "[A]s a general rule, where a procedure involves difficult or uncertain questions of medical treatment or complex, scientific or highly technical matters that are beyond the ordinary experience and understanding of a judge or jury, it will not be open to find a standard medical practice negligent. On the other hand, as an exception to the general rule, if a standard practice fails to adopt obvious and reasonable precautions which are

> readily apparent to the ordinary finder of fact, then it is no excuse for a practitioner to claim that he or she was merely conforming to such a negligent common practice".

[209] Upon the evidence before me, it is clear that the diagnosis and treatment of jaundice is a matter of clinical judgment. Whether or under what circumstances one should step in to apply phototherapy or transfusion therapy would likewise require clinical judgment. Whether to use bilimeter devices or upon what protocols is not a matter so obvious that a lay person should second guess health care specialists upon it. Similarly, the requirements upon discharge from hospital and the nature and extent of physical examinations of newborns by doctors and/or nurses involve health and safety concerns far beyond the knowledge of the medically untrained. These are far more complicated matters than those involved in deciding whether to account for sponges used during an operation.

[210] The determination of any professional negligence in this case must be made according to the standards of care accepted in the medical and hospital communities and addressed by the witnesses in this case.

Missing Records

[211] Most of the records of Mount Sinai relating to the delivery and neo-natal stay for Lina and the records relating to Isaac's two stays in Hospital in October of 1999 are missing.

[212] The hospital has expended considerable time and effort to locate and produce missing records and to determine why they have not been located to date. The witnesses called to address the issue offered no explanation as to why or when the records were lost; there is no expectation remaining now that these records will ever be found.

[213] It has not been suggested that these witnesses acted personally to hide or destroy records but the plaintiffs assert that liability and/or adverse inferences for the Hospital should arise from the failure to produce full records. This result can arise in circumstances where a hospital fails to meet its statutory duty to create, preserve, maintain and produce records as required by governing legislation. The plaintiffs also assert that their position benefits from the application of the doctrine of spoliation to the circumstances of this case.

[214] The plaintiffs also submit that Dr. Garfield should have made and kept clinical notes relating to the visit Lina made to his office during September of 1999, shortly before Isaac's birth. Whatever notes Dr. Garfield made were disposed of in the ordinary course within the year following that visit. The plaintiffs also seek to apply the doctrine of spoliation to the disposal of the clinical notes.

[215] As stated above, I must conclude that the records that the Hospital was obliged to generate in order to comply with the requirements of the relevant regulation, *Hospital Management*, R.R.O. 1990, Reg. 965 under the *Public Hospitals Act*, R.S.O. 1990, c. P.40 were made. It is inconceivable that care and treatment could have been afforded to Lina and Isaac

without such records having been generated in the ordinary course of their respective hospitalizations at Mount Sinai.

[216] It is also clear that Dr. Garfield and Nurse Hua referred to the hospital records in the course of their deliberations leading to the discharges of mother and son on Saturday morning. So too, I find, was reference made to those records by the medical and hospital personnel involved at the time of Isaac's re-admission on Sunday afternoon. Undoubtedly, further reference was made to the records throughout Isaac's hospitalization from Sunday, the 24th of October to his subsequent discharge on about 9 November 1999; certainly a fair reading of the NICU Final Summary (pages 167-169) confirms that Dr. Ann Jefferies reviewed hospital charts and records before authenticating that Summary.

[217] Further, it is inconceivable to me that the many laboratory test requisitions and results documents later generated from hospital computers and the heart monitoring records and documents sourced from offices and departments as described in the evidence from hospital witnesses at this trial could have been created in a vacuum.

[218] On the whole of the evidence before this court, I conclude that hospital records for Lina and for Isaac were created in conformity with applicable legislation and with hospital record making protocols in place at the relevant time. What became of the missing hospital records, when and why they were misplaced, is far from clear.

[219] What is clear is that Dr. Garfield's notes relating to Lina and the missing Hospital records were respectively disposed of and misplaced well before Dr. Garfield and/or the Hospital were put on notice of any claim to be made against them. Isaac's charts were noted missing and dummy charts created in the system (to facilitate billing the Ministry of Health for hospital services to Isaac) in December 2000 and February 2001. By the time Lina requested access to her own hospital stay records, they too were missing and she was advised that searches were underway to locate them.

[220] There can be no doubt but that both Dr. Garfield and Mount Sinai hospital are required to make and maintain records in keeping with the legislation and professional standards governing them. The plaintiffs assert that liability and/or adverse inferences should arise from the failure to comply with such record keeping standards.

[221] Quite apart from the fact that Isaac's outcome did not arise because of a failure to maintain records, his kernicterus having developed by Sunday afternoon, at a time when hospital and medical records were intact, there is no evidence suggesting, let alone establishing that a sufficient understanding of Isaac's situation has been materially impeded by the absence of all or any of the missing records.

Spoliation

[222] The plaintiffs assert that spoliation is defined as: "… the destruction of evidence, it constitutes an obstruction of justice. The destruction, or the significant and meaningful

alteration of a document or instrument. It is a maximum flaw, bearing chiefly on evidence but also upon the value generally of the thing destroyed, that everything the most to his disadvantage is to be presumed against the spoliator". (See Black's Law Dictionary as quoted in *Douglas v. Inglis Ltd.,* [2000] O.J. No. 1001 (Ont. Sup. Ct.) per Flinn J.).

[223] The plaintiffs also quote and rely upon authority arising from an appeal to the Saskatchewan Court of Appeal in which Tallis J.A. concluded that the "integrity of the administration of justice in both civil and criminal matters depends in a large part on the honesty of parties and witnesses. Spoliation of relevant documents is a serious matter. Our system of disclosure and the production of documents in civil actions contemplates that relevant documents will be preserved and produced in accordance with the requirements of the law… a party is under a duty to preserve what he knows, or reasonably should know, is relevant in an action. The process of discovery of documents in a civil action is central to the conduct of a fair trial and the destruction of relevant documents undermines the prospect of a fair trial". See *Doust v. Schatz,* 2002 SKCA 129 (*CanLII)* at para. 27.

[224] The plaintiffs also assert that non-preservation of documents in contravention of a duty to preserve the documents, whether the result of intentional or negligent acts or omissions, raises the doctrine of spoliation and an adverse inference against the defendants. See *Cheung v. Toyota Canada Inc.* 2003 *CanLii 9439 (Ont. Sup. Ct)* per Low J..

[225] I agree with the defence submission that there is no evidence to support the allegation that the medical records of Lina and Isaac Vescio were "deliberately and/or intentionally" lost or destroyed by an individual in the employ of the Hospital to "cover up" acts or omissions and the identity of individuals in the care and treatment rendered to Isaac. Such an allegation was not put to any of the Hospital witnesses.

[226] Although I can accept the concept of spoliation as defined by the plaintiffs and that the concept was considered in the unique circumstances of the quoted cases, I have some difficulty in considering that this case should be determined on the basis of the reasoning and outcome of those cases.

[227] In *Rochon,* (supra), the alleged spoliator was an expert retained by the insurer of a home damaged by fire that was thought to have originated in a clothes dryer. The expert examined, removed and apparently damaged the dryer control components. Although subrogation litigation against the dryer manufacturer was not commenced until some years after the fire, it appears clear that the homeowner and his insurer were aware of the potential for a claim arising all along. Regardless, Flinn J. declined to apply the principle of spoliation, as he saw evidence available on both sides of the cause of loss debate. He stated, at para. 20, "In this case a few of the pieces of the dryer are missing. There are many photographs taken by both experts of the machine, the fire site and her clothing. There is the evidence of the two experts and indeed, the very controls that are alleged to have been defective are available for whatever inspection might be required. Consequently, there is evidence that the defendant may rebut.

Surely it is a matter of weight to be given to the experts' opinions, as these plaintiffs seek to prove liability."

[228] In *Doust*, (*supra*), the records in question went missing after the claim between the parties about the number and value of certain horses had materialized. The trial judge, at para.21, described the records as "recently destroyed documents which would have definitely determined the question". The appeal court was likewise cognizant of the time of destruction concern. The court added at para. 28 that, "given the nature of the controversy over the number of mares at the relevant time, Mr. Schatz with his length of experience in the PMU business clearly understood the importance of preserving relevant records for use on discovery and at trial. In this case his failure to preserve and produce the records hampered the trial process".

[229] In *Cheung*, (*supra*), a preservation court order had been made requiring the continuing availability of tires for evidentiary purposes in ongoing litigation. Indeed the order had been made in response to previously detected events of spoliation. The issue before Low J. was not whether the court should impose sanctions. Instead, Justice Low stated at para. 1 that, "The real issue is what sanction is appropriate, given the particular facts and the extent of prejudice to the three moving defendants and given that this motion is made prior to trial".

[230] Although the plaintiffs rely on cases in which records and other evidence were lost or destroyed, including one case involving lost hospital records, *Coriale v. Sisters St Joseph of Sault Ste. Marie* (1998), 41 O.R. (3rd) 347 (Gen Div) per Molloy J., the cases are distinguishable in that they involve known disputes at the time of the loss or destruction of the evidence. Many of the cases address pre-trial motions issues that are also distinguishable from the issues before me.

[231] In any event, the records that are in evidence serve to rebut any presumption that might otherwise apply, even if Dr. Garfield and/or the Hospital might be considered to have lost or destroyed records in a manner and at a time that creates an issue and otherwise supports a finding of spoliation. The Newborn Record and Isaac's re-admission and NICU Final Summary records contain confirmation of evidence, now adopted by Lina as accurate, that demonstrates that Isaac was feeding and behaving in a manner consistent with the clearance for discharge he was given following the visual and physical examinations made by Dr. Garfield and nurse Hua.

[232] Further, Drs. Fazal and Wainer opined clearly and without reservation that the documents they had seen, taken together with the facts they assumed would be made out upon the evidence of Lina and other lay witnesses, were ample foundations to support their opinions.

[233] Finally, and as indicated above, I am satisfied that the missing records would not likely contain evidence to support the view that Isaac's discharge should have been delayed. There is no suggestion that such records contained, for example, evidence of poor feeding. Such notations would be inconsistent with the available evidence.

[234] In the circumstances, I find no evidence that medical or hospital records generated in the ordinary course were disposed of in a manner intended to defeat claims asserted or even

anticipated to arise from Lina's pregnancy, labour and delivery or the care that either Lina or Isaac received thereafter.

[235] In the result and regardless of whether an independent tort of spoliation exists upon the current state of our law, this is not a proper case upon which to consider granting relief to the plaintiff based upon the doctrine of spoliation.

[236] Further, I cannot accept the submission that this is an appropriate case in which to draw an inference against the defendants or make a presumption in favour of the plaintiff that facts contained in missing charts and records would be unfavourable to the positions of the defendants.

[237] Again I note that the absence of records has not hampered the plaintiffs' experts in reaching their conclusions. The available records are sufficient in number, nature and content, when read in concert with the evidence of the very people who saw Isaac that day, to establish that Isaac was healthy, not jaundiced and was feeding well at the time of his discharge on Sunday.

Failure to Call Certain Witnesses

[238] The plaintiffs submit that an unfavourable inference can be drawn in circumstances where a party has failed to call a witness who would have knowledge of the facts and would be assumed to be willing to assist that party. In the same vein, an adverse inference may be drawn against a party who does not call a material witness over whom he or she has exclusive control and does not offer an explanation for the failure to do so. Such failure amounts to an implied admission that the evidence of the absent witness would be contrary to the party's case, or at least would not support it.

Sopinka & Lederman, *The Law of Evidence in Canada*, 2nd. ed. (Toronto: Butterworths, 1999) at 297.

[239] Specifically, the plaintiffs point to nurses, doctors and other health care specialists whose names are identified in the available hospital records and who were not called by the defendants at trial and assert that an adverse inference ought to be drawn from the failure to call these people.

[240] The Hospital asserts that witnesses who were not called were not available. One of the nurses, for example, was said to be a patient in a hospital herself during the trial. Another could not be located. One of the identified doctors now lives and is training in the United States. Further, there is no evidence from which I can discern whether any of these identified people would be material witnesses over whom either defendant has exclusive control.

[241] There is no ownership in a witness. The plaintiffs had alternative procedures open for exploration. They could have approached these individuals had they wished to or sought an

order allowing of examination of such people as non-parties before trial and could, in any event, have summonsed them to trial.

[242] I agree with the defence position that identified doctors were more available to Lina for consultation before or during the trial than to the defendants. Doctors cannot discuss care and treatment of patients, absent a court order or an appropriate consent from, or given on behalf of, the patient.

[243] The plaintiffs' experts did not express any concern that their opinions suffered on account of the absence of these potential witnesses. Many of the potential witnesses in fact did provide evidence; to the extent that their observations and opinions are contained in the available records entered as exhibits, their evidence is before me. I do not draw an adverse inference in these circumstances.

The Law – Standard of Care/Causation

Was there a Breach?

[244] There is remarkably little disagreement between and among the parties upon the state of the applicable law. It is generally accepted that the applicable standard of care is one requiring a medical doctor and any health care professional to both know and exercise that level of care and skill that would be expected of a normal prudent practitioner of the same experience and standing.

[245] As a general proposition, to make out a claim in negligence, it must be established that there was a duty of care, that this duty was breached, that there were damages, and that the damages were caused by the breach.

[246] There is no question that medical practitioners owe a duty of care to their patients. The question of whether there was a breach of this duty depends on the applicable standard of care.

[247] It is generally accepted that the applicable standard of care for any health care professional is the level of care and skill that would be expected of a prudent practitioner of the same experience and standing.

[248] The parties accept the following standard from *Wilson v. Swanson* (1956), 5 D.L.R. (2d) 113 (S.C.C.) at p. 120, quoting *Rann v. Twitchell* (1909), 82 vt. 79 at p. 84:

> He is not to be judged by the result, nor is he to be held liable for an error in judgment. His negligence is to be determined by reference to the pertinent facts existing at the time of his examination and treatment, of which he knew, or in the exercise of due care, should have known.

[249] Broadly speaking, the parties should agree that neither doctor nor nurse should be held accountable so long as the care and treatment that they provide is in keeping with a respected body of professional opinion. See *ter Neuzen, supra.*

[250] For the reasons I have detailed above, I must find that the exercise of clinical judgment by Dr. Garfield and by Nurse Hua at the time of Isaac's discharge from Mount Sinai Hospital fell within the standard of care required of each of them by our law.

Causation

[251] I have already found above that the defendants did not breach the duty of care owed to the plaintiffs. This in itself is determinative of the question raised in this case. See *Willliams (Litigation guardian of) v. Bowler,* [2005] O.J. No. 3323.

[252] However, even if there had been a breach of the duty of care, there is no evidence before me that would establish that this breach caused the damage suffered by Isaac.

[253] The plaintiffs bear the onus of establishing the defendants' negligence and that this negligence brought about the injuries complained of. Unlike many medical misadventure cases, this is not a case in which the actions of a doctor or nurse caused an injury that would not otherwise have occurred and nor is it a case in which the actions of the health care specialists obliterated the cause of patient's injury such that causation could not be established by the plaintiff.

[254] The most that can be said here is that there is a *possibility* that had Isaac remained in hospital, a problem would have been identified soon enough for the damage to have been reduced or avoided. This possibility comes nowhere close to satisfying either the "but for" or "material contribution" standards for causation.

[255] In *Snell v. Farrell* (1990), 72 D.L.R. (4th) 289, Sopinka J. asked and answered the question of whether the plaintiff in a malpractice suit must prove causation in accordance with traditional principles or whether recent developments in the law justify a finding of liability on the basis of some less onerous standard.

[256] Causation was there defined to be "an expression of the relationship that must be found to exist between the tortious act of the wrongdoer and any injury to the victim in order to justify compensation of the latter out of the pocket of the former" (p. 12).

[257] Sopinka J. concluded that "the legal or ultimate burden remains with the plaintiff, but in the absence of evidence to the contrary adduced by the defendant, an inference of causation may be drawn, although positive or scientific proof of causation has not been adduced." (p. 15).

[258] The doctor in question in *Snell v. Farrell* performed an operation. The court observed that he "was present during the operation and was in a better position to observe what

occurred. Furthermore he was able to interpret from a medical standpoint what he saw. In addition, by continuing the operation which has been found to constitute negligence, he made it impossible for the respondent or anyone else to detect bleeding which is alleged to have caused the injury. In these circumstances, it was open to the trial judge to draw the inference that the injury was caused by the retrobulbar bleeding. There was no evidence to rebut this inference" (p. 21).

[259] In the instant case, the defendants did not alter the medical landscape for Isaac by permitting his discharge from Mount Sinai on Saturday. His medical condition changed not at all by reason of that decision nor as a result of the examinations leading to it. Both sides to the debate about the wisdom of the discharge decision had and continue to have the same facts available to them against which to measure the discharge decision.

[260] *Hock (Guardian of) v. Hospital for Sick Children*, (1998-01-30) ONCA c21778 is a case referred to and relied upon by the plaintiff in support of the proposition that causation need not be determined with scientific precision and an inference of causation may be drawn without scientific proof. Causation is a practical question of fact which can best be and usually is answered by ordinary common sense. Where, in a particular case, evidence of causation is in the hands of the defence, relatively little affirmative evidence on the plaintiff's part will be required to justify drawing an inference of causation, in the absence of evidence to the contrary. The trier of fact must weigh all the evidence and having done so, determine whether an inference adverse to the defence should be drawn on the issue of causation.

[261] *Hock* is a case of operative intervention preceding an unfortunate outcome. The Court of Appeal accepted the trial judge’s determination of negligence but declined to find that the negligence caused or materially contributed to the infant plaintiff’s injuries. Notwithstanding my determination that neither defendant has been shown to be negligent, it is important to also note that the link between alleged negligence and causation of Isaac’s outcome is also lacking.

[262] A case of closer application to the facts of the instant case may be that of *Aristorenas v. Comcare Health Services* (2006), 274 D.L.R. (4th) 304. Although the Ontario Court of Appeal was not unanimous in its reasoning, the court agreed upon the appropriateness of applying the robust and pragmatic approach set out in *Snell v. Farrell, supra.*

[263] Speaking for the majority of the court, Rouleau J.A. reviewed the development of the law of causation from *Snell v. Farrell* forward in time. Specifically, he contrasted application of the “but for” test to the “material contribution” test with the former obliging a plaintiff in a delayed medical diagnosis case to prove, on a balance of probabilities, that the delay caused or contributed to the unfavourable outcome. As such, the plaintiff fails if he cannot establish that the outcome could have been avoided with prompt diagnosis and treatment.

[264] A mere chance of avoiding an unfavourable outcome, that is a chance lower than the threshold described *in Cottrelle v. Gerrard* (2003), 233 D.L.R. (4th) 45 (Ont. C.A.) as “more likely than not”, is not enough.

[265] As to the application of the material contribution approach, Rouleau J.A. wrote: “Thus, it would seem that the "material contribution" test is applied to cases that involve multiple inputs that all have harmed the plaintiff. The test is invoked because of logical or structural difficulties in establishing "but for" causation, not because of practical difficulties in establishing that the negligent act was a part of the causal chain.” (para. 53).

[266] Rouleau JA added in the following paragraph that: “The "robust and pragmatic" approach is not a distinct test for causation but rather an approach to the analysis of the evidence said to demonstrate the necessary causal connection between the conduct and the injury. Importantly, a robust and pragmatic approach must be applied to evidence; it is not a substitute for evidence to show that the defendant's negligent conduct caused the injury.”

[267] He added, at para. 56, “ It is important to note that Sopinka J. does not reduce the ultimate burden of proof from a balance of probabilities. Rather, the "robust and pragmatic" approach is adopted in evaluating the facts of the case and deciding whether they meet the civil standard. Put another way, the burden of proof is the same, but a series of facts and circumstances established by the evidence led at trial may enable the trial judge to draw an inference even though medical and scientific expertise cannot arrive at a definitive conclusion.”

[268] Negligence was conceded by the doctor in *Aristorenas* but the question remained as to whether that negligence caused the necrotizing fasciitis that the plaintiff went on to develop.

[269] The evidence on causation troubled the court. Even if a link between the disease ultimately developed and a delay in treatment of an infection is assumed, no witness considered or gave evidence as to the effect of the delay in performing the first treatment. The evidence supported various causes for the necrotizing fasciitis.

[270] As indicated above, I am not persuaded that there was any negligence on the part of either Dr. Garfield or the Hospital; nor am I persuaded, even if negligence were present, that it caused kernicterus. As was the situation in *Aristorenas*, there are many theories of causation and the evidence of the plaintiffs’ experts is flawed. An onus does not rest with the defendants to establish the cause of Isaac’s medical outcome. In meeting the claims of the plaintiffs, however, the defendants have led compelling evidence through credible and world renowned experts that establishes that factors other than those suggested by the plaintiffs led to or caused Isaac’s eventual outcome.

[271] Also apt is a closing comment offered by the court in *Aristorenas:* “One cannot help but have sympathy for the plight of the plaintiff. She suffered grievous injuries and proved serious acts of negligence on the part of professionals in providing what should have been basic routine wound care. But, on the current state of the law she did not make out causation”, para. 78.

[272] In the recent case, *Latin v. Hospital for Sick Children*, [2007] O.J. No. 13, Lax J. found at para. 131 that appropriate test for a case of delayed diagnosis and treatment was the “but for” test:

> “This is not a case where it is alleged that multiple harms have caused the injuries. In general terms, this is a case of delayed diagnosis and treatment. Therefore, the "but for" test applies. The precise cause of Ryleigh's injury is not known. The plaintiffs contend that Ryleigh suffered a hypoxic-ischemic brain injury as a result of decreased perfusion of her brain due to shock, fever and infection. This requires the plaintiff to prove on a balance of probabilities that she sustained this injury and but for the negligence of the nurses and Hospital, this would have been avoided. The plaintiffs are not required to prove the unprovable, i.e. what, as a matter of fact, would have happened if the defendants had followed a course of management which the plaintiffs' experts testified should have been followed. Inferences from the evidence, including expert evidence, can establish the causal link, but loss of a chance of a favourable outcome will not satisfy the plaintiff's evidentiary burden unless it surpasses the threshold of more likely than not.

[273] The Supreme Court of Canada re-visited the law on causation and the tests applicable to its determination in *Resurface Corp. v. Hanke*, [2007] S.C.J. No. 7. Chief Justice McLachlin confirmed that the law of causation has not changed; the “but for” test applies in all but special circumstances. Broadly speaking, the cases in which the "material contribution" test is properly applied involve two requirements (para. 25):

> First, it must be impossible for the plaintiff to prove that the defendant's negligence caused the plaintiff's injury using the "but for" test. The impossibility must be due to factors that are outside of the plaintiff's control; for example, current limits of scientific knowledge. Second, it must be clear that the defendant breached a duty of care owed to the plaintiff, thereby exposing the plaintiff to an unreasonable risk of injury, and the plaintiff must have suffered that form of injury. In other words, the plaintiff's injury must fall within the ambit of the risk created by the defendant's breach.”

[274] Finally, on this issue, The Ontario Court of Appeal has very recently released yet another decision on causation. In *Barker v. Montfort Hospital*, [2007] O.J. No. 1417 (C.A.), the court dealt with an appeal arising from alleged negligence of a general surgeon who managed and eventually operated on a patient who developed a bowel twisting problem. A section of bowel was ultimately removed but, at trial, no expert was asked for or gave an opinion on whether the removed section would have been alive and salvageable at the time the surgery ought to have been performed.

[275] The court concluded therefore that surgery performed sooner would have afforded the patient a chance of avoiding the outcome she actually experienced but that that did not satisfy the requirement of showing that earlier surgery would, more likely than not, have avoided the injury.

[276] Following consideration and specific reference to the decision in *Henke, supra,* Rouleau J.A. stated at pp. 10-11:

> "In the present case, the respondents have not shown that it was impossible to prove that the delay in carrying out the operation caused Ms. Barker's injury on a balance of probabilities…the evidence that was led and that generally addressed the point at which the bowel likely died was unfavorable to the respondents…. in my view, therefore, the material contribution test has no application to the present case. We are left, therefore, with the "but for" test…There is a complete absence of medical or other evidence from which to infer that, but for the delay in operating, a section of the bowel would likely have been saved".

[277] In the circumstances of this case, neither the "but for" nor the "material contribution" standard has been met. There is no credible evidence before me to support the finding that had Isaac remained in hospital, his outcome would have been different.

[278] At its best, the plaintiffs' case is that but for the alleged negligence of the defendants, there may have been a chance that Isaac's hyperbilirubinemia could have been diagnosed and treated to produce a different, perhaps a more favourable, outcome. Given the current state of the law and the evidence before me, I must conclude that the plaintiffs have not met their onus to prove causation.

Conclusions

[279] As I indicated at the outset, I am mindful of the tragic and omnipresent consequences to Isaac and to each member of his family arising from the kernicterus that Isaac suffered at such a tender age. Perhaps proceeding to and through the trial of this action has been cathartic for the family; but at the very least, the Vescios can now take comfort in the knowledge that every evidentiary stone has been upturned.

[280] In closing, I thank counsel for their assistance and patience in helping me ascend the learning curve of issues and evidence in this case, particularly in matters medical. The parties have each and all been particularly well represented by their respective counsel in this long and difficult trial. Counsel have vigorously, professionally and effectively represented the best interests of their clients and they have unfailingly and willingly afforded each other and the court the highest levels of co-operation and civility, in the best traditions of the Bar. Their preparation and presentation has been exceptional and most welcome.

[281] The action is dismissed against both defendants with costs to the defendants, if demanded, in amounts to be agreed upon or fixed. Should the parties be unable to agree on costs issues, I will receive brief written submissions on costs and may request that counsel make oral submissions thereafter.

Respondents

Before: The Honourable Madam Justice Norell

Reasons for Judgment

Counsel for Wet'suwet'en Treaty Office Society:	C. DiPuma D.J. Larkin
Counsel for Coastal Gaslink Pipeline Ltd.:	K. O'Callaghan T. Ahmed M. Grist
Counsel for Executive Director of the British Columbia Environmental Assessment Office:	K. Wolfe A. Caron
Place and Dates of Hearing:	Vancouver, B.C. October 1, 2 and 16, 2020
Place and Date of Judgment:	Vancouver, B.C. April 20, 2021

Introduction and issues

[1] The Wet'suwet'en Treaty Office Society, ("OW") applies for judicial review of the October 15, 2019 decision ("Decision") of the executive director ("Executive Director") of the Environmental Assessment Office ("EAO"), granting a five-year extension to an environmental assessment certificate ("EAC") for the Coastal GasLink Pipeline Project ("Project").

[2] The Project is a 675-km-long natural gas pipeline intended to run from near Groundbirch, B.C. to a liquefied natural gas export terminal at Kitimat, B.C. Coastal Gaslink Pipeline Ltd. ("CGL") is currently in the process of constructing the Project. The OW is a non-profit society established as a central services office for the Wet'suwet'en Nation and is governed by the Wet'suwet'en hereditary chiefs. The Project passes through the asserted traditional territories of the Wet'suwet'en Nation.

[3] The OW seeks an order quashing the Decision and remitting it back to the EAO and Executive Director for further consideration. CGL supports the Decision. The issues to be determined are whether the Decision:

a) was procedurally unfair as reasons were not provided;

b) was unreasonable in its treatment of CGL's compliance record; and

c) was unreasonable in its treatment of Reclaiming Power and Place: the Final Report of the National Inquiry into Missing and Murdered Indigenous Women and Girls ("Inquiry Report").

[4] At the outset, it is important to identify what this judicial review is not about. This review is not about what the OW did or did not do in the consultation process for the extension application, nor about its objection to the Project generally. The OW's actions are not in issue. Nor is this review about the undeniable importance of the Inquiry Report in further understanding the harms and systemic causes of

violence against Indigenous women and girls and other vulnerable populations. All parties accept the importance of the Inquiry Report.

[5] The OW no longer relies upon an argument, originally advanced in its petition, that one of the issues concerning the Inquiry Report raises a "question of law of central importance to the legal system" that must be reviewed by this Court on a standard of correctness.

[6] The Executive Director as represented by the Attorney General of British Columbia appeared in this matter pursuant to ss. 15(1) and 16(2) of the *Judicial Review Procedure Act*, R.S.B.C. 1996, c. 241. The response to petition filed on behalf of the Executive Director included argument on the merits of the issues to be determined. It did so because at the time the response was filed, the Executive Director was the only respondent. CGL was subsequently added as a respondent. At this hearing, the Executive Director withdrew those portions of his response, and in keeping with the limited role of a decision-maker appearing on judicial review, appropriately confined his submissions: *Ontario (Energy Board) v. Ontario Power Generation Inc.*, 2015 SCC 44; *18320 Holdings Inc. v. Thibeau*, 2014 BCCA 494.

Statutory framework and the EAO

[7] At the date of the Decision, the applicable legislation was the former *Environmental Assessment Act*, S.B.C. 2002, c. 43 [*EAA*]. The *EAA* has since been repealed and replaced by the *Environmental Assessment Act*, S.B.C. 2018, c. 51, [*Current EAA*] but the new legislation is not relevant to this proceeding.

Purposes of the *EAA* and EAO

[8] The purpose of the *EAA* is to regulate the significant environmental, economic, social, heritage and health effects of proposed reviewable projects by identifying those effects and determining ways to mitigate them. The *EAA* "balances the need for environmental protection against encouraging economic development": *Fort Nelson First Nation v. British Columbia (Environmental Assessment Office)*, 2016 BCCA 500 at paras. 99-100.

[9] The EAO is the regulatory agency charged with administering the *EAA*. The EAO is responsible for: determining the need for and conducting environmental assessments for reviewable projects; and ensuring compliance with and enforcement of environmental assessment certificates. The organizational structure of the EAO reflects these two functions, with two separate branches responsible for those areas: *Sierra Club of BC Foundation v. British Columbia (Environmental Assessment Office)*, 2020 BCSC 596 [*Sierra Club*] at paras. 51 and 57.

Applications for environmental assessment certificates

[10] A project proponent is responsible for bringing a reviewable project to the EAO's attention. If the Executive Director considers that a project may have significant adverse environmental, economic, social, heritage or health effects, the Executive Director may issue an order requiring the project to undergo an environmental assessment before the project may proceed: s. 10(1)(c) of the *EAA*. If an assessment is required, the Executive Director must make an order which will determine the scope and procedure for the assessment: s. 11. The EAO then conducts a review of the application, which may include engagement with scientific professionals, Indigenous groups, the public, local governments, and federal and provincial agencies. Based upon the information received during the review, the EAO produces an assessment report and if applicable, proposes conditions for the environmental assessment certificate. The EAO's assessment report and any recommendations of the Executive Director are provided to the responsible provincial ministers who decide whether to grant an environmental assessment certificate, and if so, with or without conditions.

[11] If an environmental assessment certificate is issued, the proponent must not carry on activity except that which is in compliance with that certificate: s. 8(2). The EAO's Compliance and Enforcement Policy and Procedure guide ("Compliance Policy"), defines certificate conditions as "legally-binding requirements…to which the certificate holder must adhere throughout the life of the project".

Applications for extension certificates

[12] The duration of an environmental assessment certificate, and the ability to apply for a one-time extension of a certificate, are addressed in s. 18 of the *EAA.* The relevant portions of that section state:

> 18 (1) An environmental assessment certificate must specify a deadline, at least 3 years and not more than 5 years after the issue date of the certificate, by which time the holder of the certificate, in the reasonable opinion of the minister, must have substantially started the project.
>
> (2) However, the holder of an environmental assessment certificate may apply in writing to the executive director for an extension of the deadline specified in the environmental assessment certificate, stating why the proponent wishes an extension of the deadline.
>
> (3) On receipt of an application under subsection (2), the minister or the executive director must complete a review of
>
> (a) the application, and
>
> (b) the reasons given under subsection (2),
>
> in accordance with any procedure determined by the minister or the executive director to assess the proposed extension.
>
> (4) The minister or the executive director may
>
> (a) extend the deadline specified in the environmental assessment certificate, on one occasion only, for not more than 5 years, or
>
> (b) refuse to extend the deadline.

[13] In *Glacier Resorts Ltd. v. British Columbia (Minister of Environment)*, 2019 BCCA 289 at paras. 51-52, Mr. Justice Groberman, speaking for the majority, discussed the rationale for the substantially start deadline:

> [51] The legislation itself balances proponents' desires to build infrastructure and developments with the broader interests of the public in protecting the environment. It provides for intensive study of projects before a certificate is issued allowing them to go ahead. It protects proponents by allowing them to proceed with projects that have been "substantially started" within the deadline set by the certificate.
>
> [52] The legislation, however, is also mindful of the fact that environmental science progresses. The perceived impact of a proposed project may change over time, not only due to changes in public attitudes, but also due to increasing knowledge of the harm caused by certain types of development. Further, the character of a development site may change substantially over time. Finally, advances in technology may result in more effective mitigation measures becoming available. It would be unwise to allow long-delayed

> projects to proceed based on reports and conditions that have become outdated.

[14] There is no statutorily prescribed form for extension applications. In April 2016, the EAO published a guidance document entitled, Requesting a Certificate Extension ("Extension Guide"). The Extension Guide states that the minister has the authority, under s. 37 of the *EAA*:

> …to add new conditions to a certificate if the project is not substantially started by the deadline specified in the certificate. This allows conditions to be updated if required.

The Extension Guide further states:

> When considering a request, the Environmental Assessment Office (EAO) considers such things as the rationale for requiring an extension, the certificate holder's compliance record, and new or changed potential significant adverse effects.

[15] The Extension Guide indicates that on receipt of an extension application, the EAO will: circulate the extension request to appropriate agencies, governments and Indigenous groups to provide advice to the EAO on the potential for new or changed adverse effects not anticipated at the time of the original assessment; consider comments received and resolve issues as required; provide the holder of the certificate an opportunity to respond to comments where appropriate; and refer the application to the Executive Director or minister for a decision on whether to grant the requested extension, and if so, whether additional or revised conditions are required.

[16] Guidance documents such as the Extension Guide are not legislation and do not fetter the discretion of a statutory decision maker: *Maple Lodge Farms v. Government of Canada*, [1982] 2 S.C.R. 2 at pp. 6-7. In this case, the *EAA* grants the Executive Director or minister the discretion to extend or refuse applications, after reviewing the "application" and "why the proponent wishes an extension of the deadline": s. 18(2). The Extension Guide is part of the factual context that, along with the purpose of the *EAA*, animates those requirements.

[17] The Executive Director may delegate his or her powers and duties under the *EAA* to certain persons: s. 4. In September 2016, the Executive Director delegated his duty under s. 18(3) to complete reviews of extension applications to a number of EAO staff, including those involved in CGL's application.

Compliance and enforcement

[18] Part 5 of the *EAA* concerns enforcement of environmental assessment certificates and sanctions that may be imposed to address non-compliance.

[19] Pursuant to the Compliance Policy, EAO officers may inspect a project, and if there is non-compliance, may issue an advisory or warning. The minister may make an order to cease an activity, or remedy non-compliance: s. 34. The *EAA* provides for other escalating sanctions. The minister may also amend or attach new conditions, suspend, or cancel an environmental assessment certificate where the minister has reasonable and probable grounds to believe that the certificate holder is in default of one or more requirements of a certificate: s. 37. The relevant portions of s. 37 state:

> 37 (1) For any of the reasons listed in subsection (2), the minister by order may
>
> (a) suspend all or some of the rights of the holder of an environmental assessment certificate under the certificate or cancel an environmental assessment certificate, or
>
> (b) amend or attach new conditions to an environmental assessment certificate.
>
> (2) The reasons referred to in subsection (1) are as follows:
>
> (a) the holder of the environmental assessment certificate does not substantially start the project by the deadline specified in the certificate;
>
> (b) the minister has reasonable and probable grounds to believe that the holder of the certificate is in default of
>
> (i) an order of the Supreme Court made under section 35, 45 or 47,
>
> (ii) an order of the minister made under section 34 or 36 (2),or
>
> (iii) one or more requirements of the certificate; …

Background of application and extension application for the Project

Application for the EAC for the Project

[20] In October 2012, CGL submitted its application for an environmental assessment certificate. Subsequently, the Executive Director issued an order requiring an environmental assessment certificate for the Project, and the Executive Director's delegate issued an order setting out the scope and procedures for the assessment. This order established a working group ("Working Group"), which included representatives of federal and provincial agencies, local governments, and Indigenous groups to provide advice to the EAO and CGL on issues within the scope and mandate of their respective organizations. The OW participated in the Working Group. On October 23, 2014, the Minister of Environment and the Minister of Natural Gas Development issued EAC (#E14-03) along with reasons. The EAC authorized CGL to construct the Project subject to 32 conditions.

Extension application for the Project

[21] Pursuant to the terms of the EAC, CGL was required to substantially start the Project by October 23, 2019. In April 2019, CGL applied to the Executive Director for an extension of the substantial start deadline ("Extension Application"). CGL does not admit that it did not substantially start by the deadline. No specific procedure was directed by the Executive Director or minister pursuant to s. 18(3) to assess the Extension Application, however as noted previously, the EAO has published the Extension Guide.

[22] In early June 2019, the EAO contacted members of the original Working Group regarding the Extension Application and proposed a schedule for the assessment process. Thereafter, between June and September 2019, the OW, CGL and the EAO exchanged numerous letters, submissions, and responses regarding issues raised by the OW. The OW objected to an extension.

[23] Each of CGL and the EAO prepared a tracking table to list and track the issues raised by Working Group members and the responses provided by CGL and

the EAO ("CGL Tracking Table" and "EAO Tracking Table", collectively referred to as the "Tracking Tables").

[24] Another document that requires identification arises out of a sub-set of the exchange of submissions beginning with a letter from the OW which asks 67 questions, and which was discussed in a subsequent telephone meeting between representatives from the EAO, the OW, and the Oil and Gas Commission ("OGC"). The EAO provided its written response to these questions, also in the form of a table, and which included responses from the OGC ("Response Document").

[25] On September 13, 2019, the EAO provided the OW with a draft of the EAO's evaluation report to the Executive Director, along with the Tracking Tables, and indicated its intention to refer the report to the Executive Director at the beginning of October 2019. The EAO invited comment from the OW. Subsequently the OW reiterated its position that the Extension Application should not be granted. The EAO finalized its report to the Executive Director ("Evaluation Report").

[26] In the Evaluation Report, the EAO provides a brief history of the issuance of the EAC and notes that documents relating to the assessment are on EPIC. EPIC is a government website, accessible to the public, for projects reviewed by the EAO, and which provides links to associated documents. The EAO cites the relevant statutory provisions and describes the Project and activities to date, and the reasons why CGL wants to extend the EAC. The EAO describes the review process that took place and the responses from agencies and Indigenous groups and references the Tracking Tables and the Response Document. The EAO states that it considered the rationale for requiring the extension, CGL's compliance record, and new or changed potential significant adverse effects that would require revisions to the EAC, Certified Project Description, or Table of Conditions. Most of the Evaluation Report addresses specific concerns raised by the OW and Dark House, a Wet'suwet'en house. This includes sections on CGL's compliance record and the Inquiry Report. The Evaluation Report concludes with a summary and a recommendation that the Extension Application be granted.

The Decision

[27] On October 15, 2019, the Executive Director issued the Decision. No new conditions were added to the EAC. The Executive Director did not provide formal reasons for the Decision. After recitals noting the relevant sections of the *EAA*, the Decision states:

> The Executive Director has fully considered the reasons for the Certificate Holder's application and any comments received from agencies and Indigenous Nations.
>
> NOW THEREFORE
>
> Pursuant to Section 18(4) of the Act, the Executive Director extends the date specified in the Certificate by which the Certificate Holder must have substantially started the Project to October 23, 2024.

The record

[28] The parties agree that the Evaluation Report, the Tracking Tables, and the Response Document were provided to the Executive Director for the purpose of deciding whether to grant the Extension Application, and form part of the record. The OW and the EAO also filed affidavits on this review. The parties agree those affidavits are admissible. CGL filed an affidavit of Mr. Kevin Wyman, and argues that the information contained within it should also form part of the record. The OW objects to most of this affidavit.

[29] In *Air Canada v. British Columbia (Workers' Compensation Appeal Tribunal),* 2018 BCCA 387 [*Air Canada*], the Court discussed that while usually only the record before the decision-maker is considered, there are circumstances where a court may need evidence of the decision-maker's own expertise or experience which informed the decision, or evidence of procedures followed to assess procedural fairness: paras. 34-37. The "key question is whether the admission of the evidence is consistent with the limited supervisory jurisdiction of the court": para. 39. An affidavit containing "general background information" will be admissible if it is what the decision-maker "actually knew or acted upon" or if it serves to "educate the court on matters that are within the specialized expertise of a tribunal", but it must not "simply seek to shore up weaknesses in the record": para. 40. The evidence must be neutral

"non-argumentative orienting statements that assist the reviewing court in understanding the history and nature of the case" before the decision-maker, but must "not engage in spin or advocacy": para. 41, citing *Delios v. Canada (Attorney General)*, 2015 FCA 117 at para. 45.

[30] I agree with the parties that the two affidavits filed by the OW and the one affidavit filed by the EAO (which are largely duplicative of each other) are admissible within the principles in *Air Canada*.

[31] With respect to the affidavit of Mr. Wyman, the OW argues that it is an attempt to introduce evidence that: is inconsistent with the evidence CGL provided to the Executive Director; is not general background information, and goes beyond that which was before the Executive Director to bolster CGL's position in relation to the merits of the Extension Application and this judicial review; and post-dates the Executive Director's Decision and therefore was not considered by him.

[32] CGL argues that the affidavit: contains factual context for the Decision, much of which is already in the record; facilitates the Court's understanding of the EAO's expertise and its supervision of the Project, and how its processes have worked following the Decision; is relevant to the statutory framework; is relevant to determining the remedy should the Court decide the Decision was unreasonable; and does not prejudice the OW as the material is largely publicly-available.

[33] I find that the paragraphs of Mr. Wyman's affidavit to which the OW objects, along with the documents referred to in those paragraphs (except to the extent they are already included in the three other affidavits), are not admissible for the following reasons. Paragraphs 17, 22-26, 84-86 and 88 are evidence concerning: attempts by CGL to engage the OW in the development of the Socio-Economic Effects Management Plan ("SEEMP") both before and after the Decision; the blockades of the Project; and attempts by CGL to engage the OW regarding the Extension Application. As stated at the beginning of these reasons, the OW's conduct is not in issue in these proceedings. Paragraphs 27-33 are evidence regarding steps CGL

has taken regarding the management of socio-economic effects before and after the Decision, although some of the information, such as the existence of certain policies, is already in admissible documents. Paragraphs 35-37, 40-66, 68-69, 71, 74, and 82-83 are evidence regarding CGL's explanation for the non-compliance findings, and evidence of compliance, before and after the Decision, although some of this information is already in admissible documents. This further evidence, if admitted, would be used for advocacy and to bolster the Executive Director's Decision. Finally, events after the Decision are not relevant as they cannot provide justification for the Decision.

[34] I turn first to the procedural fairness issue.

Procedural fairness legal principles

[35] The parties agree that no deference is owed to the Executive Director on the issue of whether there was procedural fairness. I agree that the standard of review is correctness, which is sometimes referred to as "fairness": *R.N.L. Investments Ltd. v. British Columbia (Agricultural Land Commission),* 2021 BCCA 67 at para. 57.

[36] There is a general common law duty of procedural fairness imposed on every public authority making an administrative decision which is not of a legislative nature, and which affects the "rights, privileges or interests of an individual": *Cardinal v. Director of Kent Institution*, [1985] 2 S.C.R. 643 at p. 653; *Canada (Attorney General) v. Mavi*, 2011 SCC 30 at paras. 38-39. Purely ministerial decisions on broad grounds of public policy, or legislative functions, will not typically result in a duty of procedural fairness: *Martineau v. Matsqui Institution*, [1980] 1 S.C.R. 602 at pp. 628-629; *Canadian Union of Public Employees v. Canada (Attorney General)*, 2018 FC 518 at paras. 126-130.

[37] When a person is entitled to procedural fairness, the extent and content of that duty is flexible and depends on the legislation and rights affected in all of the circumstances of the case: *Baker v. Canada (Minister of Citizenship and Immigration)*, [1999] 2 S.C.R. 817 [*Baker*], at paras. 21-22. A non-exhaustive list of

factors that inform the content of the duty of fairness is: the nature of the decision and the process followed in making it; the legislation; the importance of the decision to the person affected; the legitimate expectations of the person challenging the decision; and the choices of procedures made by the decision-making agency: *Baker* at paras. 23-28.

[38] In certain circumstances, the duty of procedural fairness will require the provision of a written explanation for the decision: *Baker* at para. 43. Factors that militate in favour of requiring written reasons are: the person has participatory rights in the decision-making process; an adverse decision would have a significant impact on that person; or there is a right of appeal: *Canada (Minister of Citizenship and Immigration) v. Vavilov*, 2019 SCC 65 [*Vavilov*], at para. 77. Where reasons are not given, the record as a whole may be examined to determine the reasons: *Vavilov* at paras. 94 and 137. In *Baker*, the Court accepted the notes of a reviewing officer as being the reasons and stated at para. 44:

> …Accepting documents such as these notes as sufficient reasons is part of the flexibility that is necessary…when courts evaluate the requirements of the duty of fairness with recognition of the day-to-day realities of administrative agencies and the many ways in which the values underlying the principles of procedural fairness can be assured. It upholds the principle that individuals are entitled to fair procedures and open decision-making, but recognizes that in the administrative context, this transparency may take place in various ways. …

Issue 1: procedural fairness and the provision of reasons

[39] It is not in dispute that the Executive Director owed the OW a duty of procedural fairness. The issues are: whether the content of that duty extended to the provision of an explanation or reasons for the Decision; and if there was such a duty, whether that duty was fulfilled.

[40] On this last issue, both parties refer to *Sierra Club*, so I will briefly outline the facts of that case. *Sierra Club* also concerned the *EAA* and a judicial review of the Executive Director's orders exempting an owner of two dams from the requirement to obtain environmental assessment certificates. At paras. 66-69, the Court

addressed the argument that the Executive Director did not provide reasons for the orders. The orders issued referenced Summary Evaluation Reports prepared by the EAO for the two dams, and confirmed the conclusion that the dams will not result in adverse environmental, economic, social, heritage or health effects. The Court found that the Summary Evaluation Reports explained why the Executive Director reached his decision.

Position of OW

[41] In its petition, the OW argues that the Evaluation Report represents the reasons, and in the alternative, if the Evaluation Report is not the reasons, the Decision lacks reasons and is in breach of the Executive Director's duty of procedural fairness. The OW argues it was owed reasons because: its rights, privileges and interests were affected; the Decision was final and specific with respect to whether to extend the EAC and apply any conditions; since 2012, the EAO has engaged extensively with the OW in relation to the Project, including compliance and the Extension Application; and the Decision was important to the OW given the special relationship the Wet'suwet'en Nation has to the lands on which the Project is being constructed, and the harms identified by the Inquiry Report.

[42] Despite its position in its petition that the Evaluation Report represents the reasons, the OW argues that it is not clear that the Evaluation Report is the reasons. The OW argues that the only rationale given in the Decision is the one recital, quoted above, that the Executive Director "has fully considered the reasons for the Certificate Holder's application and any comments received from agencies and Indigenous Nations". While the OW acknowledges that the Tracking Tables and the Response Document provide those comments, and there is a link between the Decision and those documents, the Executive Director did not make any findings or draw any conclusions regarding those comments. The OW distinguishes this case from the circumstances in *Sierra Club*, and argues that because the Decision does not reference the Evaluation Report, there is no nexus, "nor any means of confirming that the executive director's reasons for granting the extension are the same" as

those set out in the Evaluation Report. Further, unlike *Sierra Club*, the Decision did not "confirm the conclusion(s)" set out in the Evaluation Report. Finally, unlike *Sierra Club*, there is no indication that the Executive Director was "alive to the issues".

Position of CGL

[43] CGL argues that the Executive Director's duty of procedural fairness owed to the OW was minimal and did not require written reasons because: the Decision was a "ministerial-type" of decision which should be given deference; the "administrative renewal" of the already-approved Project is discretionary; and the statutory requirements and scope of an extension application are narrower than an original application for a certificate. Further, while the Executive Director did not provide formal reasons, the OW received procedural fairness as it was extensively engaged by the EAO in the Extension Application process, and the record which was given to the Executive Director includes the Evaluation Report, which by itself and with the remainder of the record, provides a thorough explanation as to why the Executive Director reached his Decision. CGL relies upon *Sierra Club* and argues that the EAO's Summary Evaluation Reports in that case are analogous to the Evaluation Report in this case. CGL argues it is illogical to suggest that the Executive Director did not consider the very report created for the sole purpose of supporting his decision-making.

Analysis

[44] The OW is a group whose important interests are affected by the Extension Application. The Project passes through the asserted traditional territories of the OW. The Inquiry Report addresses potential harms to Indigenous women and girls that are correlated with work camps. The EAO engaged extensively with the OW in recognition of its interests in the Project. While the scope of issues for consideration on an extension application may be more limited, this does not limit the interests of OW in those issues. The Decision was not ministerial, but nor was it the result of an adversarial, adjudicative process between two competing parties. The Decision was made pursuant to legislated requirements where the sole applicant was CGL and

where the EAO sought comments from interested persons. There is no statutory requirement in the *EAA* requiring reasons for a decision on an extension application, nor does the OW assert that the EAO made a representation that reasons would be provided.

[45] For the above reasons, I conclude that the Executive Director's duty of procedural fairness owed to the OW for the Extension Application includes a duty to provide an explanation for the Decision with respect to the concerns raised by the OW, but this duty does not extend to the provision of written reasons.

[46] I am unable to accede to the OW's argument that there is no nexus between the Evaluation Report and the Decision. The Evaluation Report states:

> To inform the Executive Director's decision on whether to extend the EAC, the EAO considered the Certificate Holder's rationale for requiring an extension, their compliance record, and new or changed potential significant adverse effects that would require revisions to the EAC, CPD [Certified Project Description], or TOC [Table of Conditions] to address these new potential adverse effects.
>
> [Emphasis added.]

[47] The Executive Director delegated his authority to review the Extension Application to certain EAO staff. It would make little sense that the report made with that delegated authority, and created to inform the Executive Director's Decision, would not be used by him in making his decision.

[48] In its cover letter delivering the reasons, the EAO stated that the Evaluation Report (referred to below as the Extension Report) was reviewed by the Executive Director, and after doing so, he decided to extend the deadline in the EAC:

> On October 15, 2019, after reviewing the extension request and the EAO's Extension Report, Kevin Jardine, the Executive Director of the Environmental Assessment Office, has decided to extend the deadline specified in the EAC to October 23, 2024….
>
> [Emphasis added.]

[49] There is another nexus. The Decision states in its recital that:

> The Executive Director has fully considered the reasons for the Certificate Holder's application and any comments received from agencies and Indigenous Nations.
>
> [Emphasis added.]

[50] The comments from Indigenous nations and agencies (including those of the EAO) were summarized in the Evaluation Report, and further details were provided in the Tracking Tables and Response Document, which were referenced in the Evaluation Report. There is no indication anywhere in the record that the Executive Director disagrees with the Evaluation Report, and he followed the EAO recommendation.

[51] In my view, the only reasonable conclusion to draw from the above facts is that the Executive Director adopted the Evaluation Report, and as supplemented by the Tracking Tables and the Response Document, as the explanation or reasons for his Decision. I find that to the extent there was a duty to provide an explanation for the Decision, this duty was fulfilled by those documents, which address each of the OW concerns raised on this petition. I find there was no breach of the duty of procedural fairness owed to the OW.

[52] I turn next to the review of the Decision on the basis of reasonableness.

Reasonableness review legal principles

[53] The parties agree that on the issues raised, the applicable standard of review for the Decision is reasonableness. In the leading case of *Vavilov*, the majority discussed the guiding principles for conducting such a review.

[54] The review is concerned with the hallmarks of "justification, transparency and intelligibility" within the decision-making process, and whether the decision is defensible in the context, including the facts and law. The court must consider whether the decision, including the rationale and the outcome, was unreasonable: paras. 83-87.

[55] The burden is on the party challenging the decision to show that it is unreasonable. There must be "sufficiently serious shortcomings" before a decision is considered unreasonable: para. 100. Where reasons are given, they are the starting point of the analysis: para. 84. Reasons are not assessed against a standard of perfection: paras. 91 and 128. In cases where no reasons are given, the court "must look to the record as a whole to understand the decision: para. 137.

[56] There are two types of fundamental flaws. The first is where the decision shows a failure of an internally coherent reasoning process. This is not a "line-by-line treasure hunt for error", but the court must be able to find a "rational chain of analysis". The reasons should be read with "due sensitivity to the administrative regime" in which they were given: paras. 100-103.

[57] The second type of flaw is where the Decision is in some respect untenable in the context of the relevant facts and law: paras. 105-107. Factors to consider may include: the governing statutory scheme (the decision must "ultimately comply" with the statutory scheme); other relevant statutory or common law (for example, precedent); principles of statutory interpretation; the evidence before the decision maker (the reviewing court must refrain from "reweighing and reassessing" the evidence, but the decision must be reasonable in light of the evidence); the submissions of the parties before the decision maker (the decision maker need not "respond to every argument", but must "meaningfully grapple with key issues or central arguments"); past practices and past decisions; and the impact of the decision on the affected individual (the greater the consequences, the more the reasons must reflect that the decision maker has considered the consequences and they are justified): paras. 108, 125-128, and 133-135.

[58] Even if the outcome of a decision could be reasonable under different circumstances, if the reviewing court finds an unreasonable chain of analysis or a fundamental flaw, it is not open to the court to disregard those errors and substitute its own justification for the outcome: para. 96.

[59] It is important to distinguish between a reasonableness review and a correctness review. The court "does not ask what decision it would have made in place of that of the administrative decision maker, attempt to ascertain the 'range' of possible conclusions that would have been open to the decision maker, conduct a *de novo* analysis or seek to determine the 'correct' solution to the problem". Instead, the court considers "only whether the decision made by the administrative decision maker — including both the rationale for the decision and the outcome to which it led — was unreasonable": para. 83.

[60] Before addressing whether the Decision was unreasonable in its treatment of CGL's compliance record and the Inquiry Report, I note that the OW makes an argument that is closely related to its argument on procedural fairness, but recast in a reasonableness framework. In summary, the OW argues that there is no nexus between the Decision and the Evaluation Report, and it is therefore impossible to determine whether the Decision was based on a rational chain of reasoning. As a result, the Decision is unreasonable. As I have already found that the Executive Director's Decision adopted the Evaluation Report, I do not agree with this argument.

[61] I will turn now to whether the Decision was unreasonable in its treatment of CGL's compliance record.

Issue 2: reasonableness of the Decision concerning CGL's compliance record

[62] The OW argues that the Executive Director's Decision to grant the extension is unreasonable as it fails to meaningfully account for CGL's demonstrated history of non-compliance with the conditions of its EAC.

[63] There are four documents that address the compliance issues. I will first review the relevant portions of those documents, and then the arguments of the OW and CGL.

Inspection reports

[64] The OW and CGL referred in detail to the inspection reports. As the OW argues that some of the findings in the Evaluation Report are not supported by the facts, I will summarize those portions of the inspection reports where there was found to be non-compliance.

[65] The findings of non-compliance concern:

a) January 2019: pre-construction investigative works, which came within the definition of "construction" in the EAC, carried out prior to the submission of plans, and which had been remedied by the time of the inspection report;

b) February 2019: a self-identified delay of seven days in a yearly self-report; a self-identified mapping error that resulted in plant habitat assessments not being completed at 15 sites, which was being corrected, and which resulted in an order to refrain from construction in those areas in advance of those assessments being completed; and a failure to notify trap-line holders at least six months prior to carrying out activities, which resulted in an order to cease activities within that area until proper notification had been provided;

c) March 2019: Indigenous persons had been denied access to their trap-lines on one day, and the EAO noted that heightened tensions may have impeded effective communication between CGL staff and the Indigenous persons;

d) April 2019: a failure to securely install geotextile fabric and sideboards to the top of a bridge deck; an improperly installed sediment fence which did not fully contain potentially contaminated soil; and at a camp which had been in operation for two days, failure to install proper bear-proof garbage receptacles, with garbage not properly secured;

e) June and July 2019: food waste was not stored in bear-proof containers, which resulted in the EAO issuing an order requiring CGL to securely dispose of or manage wildlife attractants; a camp was not enclosed by an electric fence to deter bears, and this took three months to rectify; and

f) October 2019: at a helicopter refueling area, a fuel spill kit was not in the immediate area; a contaminated soil disposal bin was covered but did not have a sealed lid; a containment tray beneath a used oil-tank was filled with rain water, when there had been a heavy rain fall just prior to the inspection; various waste bins contained some waste that should not be there, for example, a bin labeled for cardboard contained a plastic garbage bag. All of these were rectified.

[66] Except where the three orders are noted, all of the instances of non-compliance resulted in an advisory or warning from EAO compliance officers.

Tracking Tables

[67] Both Tracking Tables note comments from the OW and Dark House that CGL has not been compliant with EAC conditions. I will summarize those notations in the Tracking Tables that form the basis of the OW's arguments.

[68] The CGL responded that: it was committed to compliance and is focused on continuous improvement of its monitoring and inspection programs; it was implementing the Construction Monitoring and Community Liaison Program, in accordance with one of the EAC conditions and continues to invite the OW to participate in the program, and was available to discuss any concerns; and that it "considers this focus on compliance of the Project to be a separate matter from the request to extend the EAC Certificate".

[69] The EAO responded that: its compliance and enforcement branch had completed multiple inspections in 2018 and 2019 and orders were issued for any areas where CGL was found to be out of compliance; the inspection reports are publicly available on EPIC; the EAO routinely works with Indigenous groups in the conduct of compliance and enforcement activities within their territories and is open to further engagement; and it will continue to undertake inspections and be responsive to complaints.

Response Document

[70] The OW and CGL identified 12 of the 67 questions that focused on compliance. In summary, the responses of the EAO are similar to those set out in its Tracking Table. In addition, the EAO confirmed that: it would consider CGL's compliance record in assessing the Extension Application; it conducts regular inspections, and in the event of noncompliance, issues enforcement to bring the Project into compliance; inspections to date "have identified a range of noncompliance, as recorded in the inspection records"; if non-compliance is ongoing, it "engages in progressive enforcement"; and compliance with regulatory requirements "is the expectation" and it holds CGL accountable for compliance. The EAO agreed no compliance and enforcement program can ensure 100% compliance, and that one of the objectives of the Indigenous Relations Program is to facilitate the flow of information and their involvement to increase the effectiveness of compliance and enforcement.

Evaluation Report

[71] The Evaluation Report states the following regarding compliance:

> 5.1.4 Compliance with the EAC
>
> Concern regarding the Certificate Holder's compliance with conditions of the EAC were raised by Indigenous Nations, in particular by Office of the Wet'suwet'en. In 2018 and 2019, Office of the Wet'suwet'en brought to the attention of the EAO multiple allegations of non-compliance with the EAC including those related to investigative works, wildlife incidents, access management, firearms policy cultural sites and archeological values.
>
> The EAO's C&E has treated these allegations as complaints and conducted compliance inspections in accordance with the Compliance and Enforcement Policy and Procedure, and made associated compliance determinations. The EAO notes that the EAC non-compliances identified on CGL, have been rectified, or are in the process of being rectified by the Certificate Holder. Given the currently available compliance records (not considering the ongoing compliance determinations where a decision has not been made), the EAO has found that the Certificate Holder was prompt in responding to remediation orders issued by the EAO. In addition, on several occasions the Certificate Holder has self-identified potential non-compliant activities and reported on their actions to rectify the non-compliance.
>
> In subsequent dialogue with Office of the Wet'suwet'en the EAO reaffirmed a desire to continue to work with Office of the Wet'suwet'en regarding CGL

> compliance. The EAO identified opportunities for Office of the Wet'suwet'en to be further involved in compliance activities (such as monitoring compliance, participation in field inspections, receiving information on completion of remediation orders) through the C&E's Indigenous Relations Liaison Program. Condition 30 of the EAC also requires the Certificate Holder to provide opportunities for representatives from Indigenous Nationals to participate in construction monitoring within their traditional territory. The certificate Holder states that they have developed a Construction Monitoring and Community Liaison Program and are engaging with Indigenous groups to identify participants.
>
> In consideration of the compliance concerns raised during the review of the Extension Application, the EAO is satisfied that despite instances of non-compliance, the Certificate Holder has demonstrated a commitment to remediation and returning to compliance.

Position of OW

[72] The OW argues that an extension application "is the one opportunity in the life of a project" for the EAO to consider a certificate holder's compliance history as a whole, and to determine whether in light of that history, the Project should proceed at all or if conditions should be added to ensure better compliance.

[73] The OW argues that although the inspection reports form part of the record for this judicial review, it is unclear whether they were actually reviewed by the EAO. This is because, before filing this petition, the OW wrote to the EAO to request the record relied upon for the Evaluation Report. In response, the EAO advised that the Evaluation Report provides links to the various records, which are all public documents on EPIC. The links in the Evaluation Report did not go to the inspection reports. The OW argues that if the EAO did not review its own inspection reports, its conclusions cannot be reasonable. The OW acknowledges that the Evaluation Report refers to "the available compliance records" which is inconsistent with the EAO not having the inspection records. OW argues this discrepancy does not reflect a transparent or coherent chain of analysis.

[74] The OW argues that the conclusion to be drawn from the collective content of the Tracking Tables and the Response Document is that: the OW raised the instances of non-compliance and asked for confirmation these would be considered;

the EAO acknowledged OW had raised compliance issues, had conducted "point-in-time" inspections, and had identified a range of noncompliance, and that this would be considered; and CGL asserted an ongoing commitment to compliance and took the view that non-compliance is "a separate matter from the request to extend" the EAC. The OW argues that the Executive Director did not clarify his position on CGL's view, and therefore failed to grapple with a critical issue.

[75] The OW's main argument is that the inspection reports show that CGL has an established pattern of non-compliance, and that the Executive Director failed to grapple with what the OW characterizes as significant and frequent non-compliance and a lack of self-reporting. The OW argues that the Evaluation Report fails to analyze the compliance record and provides no rationale for the approval of the extension in light of that history. The OW submits there is no reference to the nature, timing, or frequency of the non-compliance, nor a weighing of this evidence, which could provide a chain of reasoning that justifies the outcome. The OW acknowledges that not every compliance finding had to be addressed, but argues that on the whole, there had to be an explanation. Instead, the OW argues that the EAO's focus was on its desire to continue to work with the OW on compliance issues and opportunities for the OW to "be further involved in compliance activities". While this may be desirable, it is not logically connected to the EAO's consideration of CGL's compliance record.

[76] Further, referring to specific inspection reports, the OW argues that where the Evaluation Report does attempt to address CGL's compliance record, the EAO's conclusions that CGL had been "prompt in responding to remediation orders" and "demonstrated a commitment to remediation and returning to compliance" are not justifiable on the facts.

Position of CGL

[77] CGL disagrees that the Extension Application was the "one opportunity in the life of the Project" for the EAO to impose additional conditions as a result of non-compliance. Pursuant to s. 37 of the *EAA*, the EAO can impose new conditions at

any time that one of the circumstances listed in subsection (2) are in existence, which includes non-compliance with a certificate. Further, under s. 34, the minister can impose orders to cease or remedy if a reviewable project is not being carried out in accordance with an environmental assessment certificate.

[78] CGL argues that the non-compliances that the OW have emphasized were appropriately addressed under Part 5 of the *EAA*. The EAO has continued to monitor compliance and retains jurisdiction to impose sanctions, or add certificate conditions, throughout the Project's construction if there is non-compliance. The thrust of the OW's argument appears to be that the Executive Director should have exercised his discretion to refuse to grant the Extension Application or add conditions as a form of sanction. This submission ignores Part 5 of the *EAA*. A decision to grant more time to complete an already-approved project under Part 3 of the *EAA* is "separate and distinct" from Part 5. However, these two distinct parts of the *EAA* "are not mutually exclusive and may run at the same time": *Sierra Club* at para. 51.

[79] CGL argues that it is clear that the EAO was aware of the inspection records. In preparing the Evaluation Report, the EAO considered "the EAC non-compliances identified", which are published on EPIC.

[80] CGL argues that EAO's treatment of CGL's compliance record was reasonable given the applicable factual and legal context. The Evaluation Report, Tracking Tables and the Response Document show that the EAO meaningfully considered the nature of the non-compliances, and CGL's commitment to compliance. These are reasonable factors to consider and provided a rational justification for the Decision. The conclusion that CGL had rectified or was committed to compliance was reasonable based on the facts. The Project has been under close scrutiny by the EAO, and the subject of numerous inspections since 2018. Instances of non-compliance have ranged from minor to more serious issues. CGL has implemented corrective measures in response, and the instances of non-compliance that the OW refers to must be considered in the context of the overall scale of the Project and granularity of the inspections. Of all the inspections, at the

time of the Decision, CGL had received three orders to remedy, and the EAO had never resorted to more significant enforcement measures. The vast majority of enforcement measures were at the low end of sanctions, being advisories or warnings, and were proportionate to the infractions being minor. The Evaluation Report indicates the EAO was satisfied by CGL's compliance efforts.

Analysis

[81] I do not accept the OW's argument that the EAO may not have had the inspection reports. I see no reason to conclude that publicly available documents on the EAO's own website were not available and reviewed, especially when the Evaluation Report, EAO Tracking Table and Response Document refer to the inspection reports and/or findings in those reports.

[82] I also do not agree with the OW's argument that because CGL stated in its Tracking Table that non-compliance is "a separate matter" from the Extension Application, the Executive Director failed to grapple with what the OW characterizes as a critical issue. It is clear from the Evaluation Report that the EAO considered compliance history to be a relevant factor, and did consider it, despite what may have been meant by CGL's comment.

[83] I do not agree with the OW that the Evaluation Report fails to analyze the compliance record and provides no rationale for the approval of the Extension Application. Both the frequency and nature of the non-compliances are addressed in the statement that there were "multiple allegations of non-compliance with the EAC including those related to investigative works, wildlife incidents, access management, firearms policy, cultural sites and archeological values". Further, the Evaluation Report concludes that: the non-compliance which had occurred had been addressed by the enforcement process; and CGL was committed to compliance, and had either rectified or was in the process of rectifying any non-compliance. In light of the legislative context which provides for inspections and escalating sanctions, and given the scope of the Project, these are relevant factors and explain the EAO's conclusions regarding the OW's compliance concerns. I do not agree with the OW

that instead of analyzing the non-compliances, the EAO focused on how the OW could become more involved with compliance. In my view, the EAO was simply extending the opportunity to the OW to become more involved in a compliance program if the OW wished.

[84] I have reviewed the inspection reports in the record for the limited purpose of considering OW's argument that there is no evidence to support the conclusions in the Evaluation Report. It is not the function of the court, on a judicial review for reasonableness, to reweigh the evidence. I do not agree with the OW that the conclusions in the Evaluation Report are not supported by the inspection reports. There is ample evidence in the inspection reports to support the EAO's conclusion that non-compliances "have been rectified, or are in the process of being rectified", and that CGL "was prompt in responding to remediation orders".

[85] In summary, with respect to CGL's compliance record, the OW has not established that the outcome of the Decision is unreasonable or that there were fundamental flaws in the reasoning process. I find that the explanations as set out in the Evaluation Report and as supplemented by the Tracking Tables and Response Document, are justified, transparent and intelligible.

[86] I turn next to whether the Decision was unreasonable in its treatment of the Inquiry Report.

Issue 3: reasonableness of the Decision concerning the Inquiry Report

[87] The OW's final argument is that the Executive Director's Decision to grant the extension is unreasonable because it does not meaningfully account for the potential harms and recommendations identified in the Inquiry Report.

[88] There are several documents that are relevant to the Inquiry Report. I will first review those documents and then the arguments of the OW and CGL.

EAC assessment and Ministers' reasons

[89] The 2014 EAO assessment report recommending the EAC shows that the EAO assessed the Project's social effects, which included effects on community utilities and services and community quality of life, as well as economic effects and health effects. In the Ministers' reasons for granting the EAC, the Ministers noted that the "main construction camps for the Project will be located near several northern communities" and that "several concerns were raised…that the Project could result in increased demands on community utilities and services, heath care, waste management facilities, housing and accommodation, and social services". The Ministers stated they were:

> … satisfied that the condition for the development of a Socio-Economic Effects Management Plan (SEEMP), which will include monitoring activities to inform management of potential cumulative socio-economic effects relating to pipeline construction and other projects will suffice to manage those concerns. …

Condition 24 and the Framework

[90] Condition 24 of the EAC requires CGL to develop and implement a SEEMP in accordance with a framework ("Framework") which is attached to the Table of Conditions. Condition 24 states that:

> The SEEMP must include specific actions to address the following:
>
> - implementation of mitigation set out in [certain sections of the original EAC application, being section 12 (economic impacts) and section 15 (infrastructure and services)];
> - effective consultation planning and implementation with affected Aboriginal Groups, local governments and service delivery agencies regarding effects related to community level infrastructure and services including water, waste (solid and liquid), health and social services;
> - approach to designing and communicating programs related to employment and contracting opportunities, skills training and education;
> - monitoring and reporting on the effectiveness of the mitigation set out in the Application and in the SEEMP; and
> - if necessary, description of an adaptive management approach, including the implementation of alternative mitigation, <u>to address unpredicted effects directly related to the Project</u>.
>
> …

> Any amendments to the SEEMP as a result of the adaptive management approach must be developed in consultation with CSCD [Ministry of Community, Sport and Cultural Development] and approved by EAO prior to implementation, unless otherwise authorized by EAO.
>
> [Emphasis added.]

[91] The Framework describes what the SEEMP should contain and how it should be developed, approved, monitored, and if necessary, amended. It is evident from this document that the SEEMP: is intended to address socio-economic effects, with a focus on infrastructure and services; is "intended to be adaptable to the emergence of new information"; must include an adaptive management process which includes mitigation measures to address "effects not previously identified"; may be amended; and that stakeholder engagement is an important aspect of the plan. The certificate holder will initiate the amendment process with the approval of the EAO and in consultation with affected parties (p. 5).

SEEMP

[92] In March 2016, the EAO approved CGL's SEEMP. Its purpose is described as follows (p. 2):

> The purpose of the SEEMP is to engage identified parties in Coastal GasLink's approach to implementing mitigation during construction to avoid or reduce potential adverse socio-economic effects on regional and community infrastructure and services as presented in the Application for an Environmental Assessment Certificate (Application), and monitor and report on the effectiveness of the mitigation. Coastal GasLink will use an adaptive management approach, where required, if monitoring indicates that the mitigation is not achieving the predicted outcome, and include any new or revised mitigation in its reporting. The SEEMP also describes Coastal Gaslink's plans to engage with identified groups during implementation of the SEEMP, including the issues management and adaptive management approaches during construction.

[93] The identified groups consulted include provincial ministries and agencies (including advanced education, skills training, police, and victim services), local governments, and Indigenous groups (pp. 11-13).

[94] The SEEMP identifies potential adverse socio-economic effects, which in addition to other effects focused on community infrastructure and services, include: limited local participation in contract opportunities; a local skilled labour shortage and lack of time to train local workers; increased demand on police, health and social services; increased demand for education services; and reduction in available housing (pp. 9-10 and Appendix D).

[95] Specific examples of mitigations for the above identified effects are listed in an appendix, and include: a procurement strategy for Indigenous and local contractors; a CGL skills training program; communication with police in advance of construction; communication with local housing providers regarding housing options; communication with training service providers to develop local skilled workers; housing the temporary workforce in construction camps with appropriate recreational facilities; and appropriate worker and contractor policies, such as for exhibiting respectful conduct in the community (Appendix D).

[96] In the SEEMP, CGL states that all its employees and contractors are subject to "TransCanada" policies and programs. (CGL is a wholly-owned subsidiary of TransCanada PipeLines Limited.) These policies and programs are stated to align with the mitigations in the above appendix and include an: Aboriginal Relations Policy; Alcohol and Drug Policy; Duty to Accommodate Policy; Employee/Visitor/Contractor Health, Safety and Environment Orientation Program; Employment Equity and Non-Discrimination Policy; Harassment-Free Workplace Policy; Incident Management System Program; Community Partnership Plan; Education and Training Plan; and Local and Aboriginal Participation Plan (pp. 7-8).

[97] With respect to baseline information for monitoring mitigation effectiveness for adaptive management, the SEEMP states that CGL "carried out studies to establish baseline information from which reasonable predictions of the potential adverse effects" were made for the original EAC application, and which were supplied in the EAC application's Social Technical Report and Economic Technical Report. Sources of monitoring data include qualitative and quantitative data collected by CGL (p. 26):

> Internal data collection, such as Diversity and Local Spending Data, provides statistics on items such as local and Aboriginal spending, workforce diversity and community investment spending. Data collected from Internal Incident Reports and Statistics include incident severity, type of incident, location, time of day and cumulative statistics on incident frequency rates. The internal Incident Reports also include qualitative data, such as incident details, causes and recommendations for corrective action.

[98] Other sources of monitoring data identified are stated to include Engagement Records, Education and Training Spending Data, Education and Training Partnership Reports, Health and Safety Audits, Inspection Monitoring Data, Camp Residency Data and Camp Policies Review, along with input from various educational, employment, and Indigenous groups (Appendix D).

[99] The SEEMP states CGL will use adaptive management where monitoring results indicate that outcomes are not as predicted and new or modified mitigations may be needed (p. 27). If a previously unidentified issue arises, the issues management process will be used. With respect to the issues management process, the SEEMP states (p. 16):

> Issues identified will be addressed in alignment with Coastal GasLink's approved Aboriginal Consultation Plan or Public Consultation Plan located on the EAO's website. If an unpredicted adverse effect is shown to be directly related to construction, the adaptive management process… may be implemented.

Inquiry Report

[100] On June 3, 2019 the Inquiry Report was released. The Inquiry was tasked with investigating violence against Indigenous women, girls, and 2SLGBTQQIA people, and identifying practices that have been effective in reducing violence and increasing safety (p. 58, vol. 1a). Chief Commissioner Marion Buller described the violence as a "national tragedy" (p. 5, vol. 1a). Commissioner Michèle Audette stated the Inquiry Report sheds light on a crisis that, though "identified long ago, we have been slow to examine in depth" (p. 7, vol. 1a).

[101] The Inquiry Report contains "deeper dives" into particular topics, one of those being resource extraction projects. In summary, the Inquiry Report found evidence of

a "correlation between resource extraction projects and violence against Indigenous women, girls, and 2SLGBTQQIA people (p. 593, vol. 1a). The increased rate of violence is "largely the result of the migration into camps of mostly non-Indigenous young men with high salaries and little to no stake in the host Indigenous community". Industries that create "boom towns" and "man camps" have "increased rates of drug- and alcohol-related offences, sexual offences, domestic violence, and gang violence, as well as sex industry activities" in the host communities, which disproportionately impact Indigenous women, girls, and 2SLGBTQQIA people. These groups also "do not have equitable access to the economic benefits" of these industries. Indigenous women face barriers to participating in the extraction industry due to work environments where there are "elevated rates of workplace racism, sexual harassment, and violence", and that are often far from law enforcement and largely unpoliced. The nature of the work, in particular shift-work in isolated locations, "deters women from participating" as it is not compatible with family and meaningful community life. When women are employed, it is often in low-paying jobs. The creation of a boom town "often results in high rates of inflation and an increased cost of living in the host communities", which disproportionately impacts Indigenous women.

[102] The Inquiry Report made a number of "Calls for Justice" related to the resource extraction and development industries. In summary, these include: for industry to consider the safety and security of these groups and their equitable benefit from such projects; for governments and bodies mandated to approve and/or monitor development projects to complete "gender-based socio-economic impact assessments", which must include mitigations of the risks and impacts identified; for impact-benefit agreements related to projects to include provisions that address the safety and security of these groups and to ensure that these groups equitably benefit from the projects; and for industry, governments and service providers to anticipate and address increased demand on social infrastructure and services and to have mitigation measures in place (p. 196 vol. 1b).

[103] As noted in the Inquiry Report, governments are not required to implement the recommendations of the Inquiry Report, nor does the Inquiry Report resolve individual cases or declare people legally at fault (p. 60, vol. 1a).

Tracking Tables

[104] The Tracking Tables contain comments from both the OW and Dark House regarding the Inquiry Report. The OW: noted the recommendations around temporary housing for resource extraction projects and the missing and murdered women along the "Highway of Tears" (Highway 16); stated the SEEMP was being disregarded "as the complaints are getting violent in nature"; and requested inclusion of the Inquiry Report recommendations. Dark House was concerned about a work camp near a healing lodge where there would be vulnerable people, and noted the Inquiry Report's conclusions regarding work camps.

[105] CGL's responses to the OW and Dark House were similar. CGL responded that potential socio-economic effects associated with the Project were assessed in the original application for the EAC and in a 2017 amendment to the EAC. (I note that amendment is not the subject of this petition.) Mitigations were developed to address the potential effects, and form part of the SEEMP. CGL acknowledged the concerns regarding work camps, and set out the steps it had taken for security and safety, such as a "zero-tolerance" approach to harassment, and rules and guidelines for CGL and its contractors regarding harassment-free workforce accommodations and work environments. With respect to the work camp identified, this included policies setting: zero-tolerance for the possession of firearms, possession and use of illegal drugs, recreational cannabis, and alcohol on the premises; and workers being tested for drugs and alcohol prior to hiring. CGL had put in place: security guards to enforce workforce safety and accommodation rules 24 hours a day, seven days a week; fencing around the camp to prevent human/wildlife interactions; and security personnel stationed at the entrance to control access in and out of the work camp and prevent all unauthorized persons from accessing the site. Under the heading "issue resolution status", CGL stated that the "comments raised relate to potential

effects from the workforce accommodation which were already assessed as part of the EAC Application and are therefore outside the scope of the EAC Extension", however, it was available to work with the OW and Dark House to review any concerns. CGL noted that Dark House and the OW had not been responsive to their invitations to do so.

[106] The EAO stated in the EAO Tracking Table that it had responded to the OW concerns in previous correspondence and continued to be open "to facilitate the required dialogue for ensuring that any important information related to the safety of communities and individuals is shared in a timely manner and to identify potential updates to the [SEEMP]". In response to the Dark House concerns, the EAO stated that it had directed CGL to respond to the concerns related to the proximity of the healing lodge to the work camp, including mitigation measures proposed to minimize risks. CGL had responded with the key mitigation measures and would engage further with Dark House to discuss concerns.

Response Document

[107] The OW and CGL identified two of the 67 questions that focused on the Inquiry Report. In response to what the EAO was going to do about the Inquiry Report recommendations, the EAO responded that it "held a series of workshops in the province regarding the impact of construction camps to Indigenous groups" and the report from these workshops will be provided to the OW. Further, that "Condition #24 allows for the incorporation of new information via updating SEEMP" and this was previously addressed in their correspondence to the OW.

Evaluation Report

[108] The Evaluation Report states the following regarding the Inquiry Report:

> 5.2.2 Construction Camps
>
> Office of the Wet'suwet'en and Dark House expressed concern regarding potential impacts to their members, including women and girls, from industrial construction camps in their territory and referred to the federal report *Reclaiming Power and Place: The Final Report of the National Inquiry into Missing and Murdered Indigenous Women and Girls*. The EAO is aware that

> B.C. has committed to developing a 'path forward' to ending violence against Indigenous women and girls. This path is being developed in collaboration with survivors, family members and communities and not only addresses the inquiry's Call for Justice, but also historic, B.C.-specific recommendations previously provided to government. This work is closely aligned with government's commitments to reconciliation and the implementation of the UNDRIP. It is also complementary to government's commitment to ensure gender equity is reflected in the provincial government's budget, policies, and programs.
>
> This summer, representatives from across government ministries reviewed the Calls for Justice and past recommendations to determine current progress in addressing systemic causes of violence and recommended solutions, as well as preliminary priorities and opportunities for additional action. Several Indigenous-led, community-based engagements will take place across the province to determine community priorities and opportunities for collaboration. This work will result in the identification of recommendations for government to build a path forward to end violence and inform the creation of an interim response to the final report.
>
> The Certificate Holder also provided a summary of their key mitigation measures in relation to a construction camp in Office of the Wet'suwet'en and Dark House territory (Camp 9A). The EAO response referred to the condition #24 SEEMP requirements to implement, monitor and report on the effectiveness of mitigation set out in the Application and in the SEEMP. There is also a requirement for adaptive management and implementation of alternative mitigation if unpredicted effects directly related to CGL were identified. To meet the requirements of condition 24, the EAO requested that the Certificate Holder consider in the SEEMP how effects related to industrial development, including construction camps, on Indigenous communities including women, children and other vulnerable populations, will be identified and addressed and how Indigenous Nations will be engaged in the identification and monitoring of potential social impacts. The EAO receives semi-annual SEEMP reports in alignment with summer and winter construction seasons during the construction phase. The EAO reviews these reports and posts them on EPIC. Additionally, the Certificate Holder pointed to their Issues Management Process described in section 3.4.2 of SEEMP. This process requires the Certificate Holder to engage SEEMP contacts identified in section 3.1 of the SEEMP including all Indigenous groups and report to the EAO on the results of engagement.
>
> In consideration of the issues raised and commitments made by the Certificate Holder and the requirements of the EAC, the EAO is satisfied that a potential approval of the extension request would not have consequences that could not be appropriately addressed by the existing provisions of the EAC.
>
> [Emphasis added.]

[109] The relevant conclusion in the Evaluation Report states:

> That material changes in circumstances relevant to the Extension Application have not occurred since the original EA that could affect the EA conclusions or require revisions to the EAC, CPD [Certified Project Description] and TOC [Table of Conditions].

Position of OW

[110] The OW reiterates its argument that the Extension Application is the "one opportunity in the life of the Project" to assess new or changed potential significant adverse effects and add conditions to the EAC. The harms identified in the Inquiry Report were unknown or undetected at the time of the original EAC assessment. The Extension Guide identifies new potential adverse effects as a factor that the EAO will consider, and which is at the heart of the EAO's legislative mandate.

[111] The OW argues that there is a conflict between the OW's position that the Extension Application should address the Inquiry Report, and CGL's view (as expressed in the CGL Tracking Table) that these concerns were already assessed and therefore "are outside the scope of the EAC Extension." The OW argues that the Executive Director did not grapple with this conflict and there is no way to know whether he considered the Inquiry Report to be within the scope of the Extension Application or not, and the Decision is therefore unreasonable.

[112] In the OW's correspondence with the EAO during the application process, it asserted that the EAO has a legal obligation to conduct a gender-based socio-economic impact assessment arising from the Inquiry Report. At this hearing, the OW acknowledged that the Inquiry Report does not create new legal obligations or change the legislative framework, nor was the EAO bound to implement the recommendations of the Inquiry Report. However, the OW argues that this did not absolve the EAO from considering the Inquiry Report given that decision makers must make decisions in light of the relevant legal and factual context. The OW characterizes the Inquiry Report as a "sea change" in society's understanding of violence against Indigenous women and girls and 2SLGBTQQIA people.

[113] The OW argues that the Inquiry Report made findings of fact and recommendations that "bear directly" on the reasonableness of the Decision. The OW argues that public inquiries: find facts; may shift public opinion; may form the impetus for administrative assessment and action; and are routinely considered in assessing the reasonableness of an administrative decision. A decision may be unreasonable where a decision maker does not adequately consider the context provided by such findings. As commissions of inquiry do not make findings in relation to a particular person or entity, this is why the EAO should have undertaken an assessment specific to the Project.

[114] The OW's main argument focuses on the conclusion in the Evaluation Report that approval of the Extension Application would not have consequences that "could not be appropriately addressed by the existing provisions of the EAC". The OW argues this is an unreasonable conclusion as the SEEMP generally, and the adaptive management process in particular, do not and cannot address the harms identified in the Inquiry Report. There are three prongs to this argument.

[115] The first prong is that there is no evidence that the Inquiry Report harms were identified or assessed by a study at the time of the original EAC application. Further, the SEEMP was not intended to, nor does it address, the types of harms identified in the Inquiry Report. The SEEMP is focused on community infrastructure and services as a result of population increases from projects and camps, and the monitoring and mitigation of potential harms related to these issues. The OW refers to passages in the documents discussed above, in support of this argument. The OW refers to CGL's zero-tolerance policies and physical security measures, which focus on work camps, and argues that the harms articulated in the Inquiry Report are not so limited, leading to mitigation measures which are not responsive to all of the harms. The OW argues that the EAO "fundamentally misapprehended" the nature of the harms articulated in the Inquiry Report.

[116] The second prong of the OW's main argument is that neither the issues management process, nor the adaptive management process within the SEEMP,

nor an amendment to the SEEMP, are appropriate to address the harms and cannot be used as a substitute for the assessment that was required. These processes only require CGL to record and review issues brought to their attention and follow up with the initiator, but have no binding requirement to mitigate. Further, those issues need only be within the scope of the SEEMP, which the OW argues is limited to infrastructure and services.

[117] The OW argues that adaptive management is a mechanism to manage remaining uncertainty after an assessment has been done, thus allowing a project to proceed. It has no application where there is a vacuum of knowledge regarding a potential harm and measures that could mitigate it. Adaptive management requires predicting potential adverse impacts, monitoring the actual impacts, assessing actual outcomes, and then checking whether those results support the predicted outcomes and adjusting the project if outcomes are worse than predicted. There is no baseline information from which to make predictions of potential adverse effects. The OW argues adaptive management cannot be a "general commitment to do something when and if it becomes necessary": *Re Coalspur Mines (Operations) Ltd.*, 2014 ABAER 4 at para. 78. In describing adaptive management, the OW also refers to: *Pembina Institute for Appropriate Development v. Canada (Attorney General),* 2008 FC 302 [*Pembina*] at para. 32, *Re Stannus and British Columbia (Director, Environmental Management Act)*, [2018] B.C.E.A. No. 11 at para. 178; *Bay of Fundy Inshore Fisherman's Assn v. Nova Scotia (Minister of Environment)*, 2016 NSSC 286 at para. 58, and 2017 NSSC 96 at para. 47; and *Toews v. British Columbia (Director, Environmental Management Act)*, [2015] B.C.E.A. No. 25 at para. 137.

[118] Finally, the third prong of the OW's main argument is that the EAO's reliance on B.C.'s "path forward" and the work of various government ministries to review the Calls for Justice is irrelevant. Reliance on such external and aspirational endeavours to the exclusion of conducting its own impact assessment is outside the EAO's legislative mandate and authority. The EAO must assess the harms with respect to this Project. While the EAO's comments on the path forward may have been

intended to assuage the OW concerns, such comments do not excuse the EAO from properly considering each of the factors it was required to assess.

Position of CGL

[119] CGL refers to the wide discretion of the Executive Director under s. 18(3) of the *EAA*. Unlike the *Current EAA* (which does require gender-based impact assessments), neither the *EAA* in force at the time, nor the Inquiry Report, impose a legal obligation on the EAO to conduct a gender-based impact assessment as alleged by the OW during the Extension Application. Regardless, the Evaluation Report shows that the EAO did consider the Inquiry Report, and considered it seriously and reasonably. CGL argues that given the assessment of socio-economic effects which had already been assessed at the time of the original application for the EAC, and the existing structure and flexibility of the SEEMP, the EAO's conclusion that the Inquiry Report could be addressed through the SEEMP and that further conditions were not required, was rational and reasonable.

[120] CGL addresses the three prongs of the OW's main argument. First, CGL argues that the purpose of the SEEMP, as understood by the EAO, is much broader than community infrastructure and services. Like the OW, CGL refers to passages in the documents above, in support of its position that the SEEMP is not so limited. CGL argues that the SEEMP is intended to address a wide range of potential adverse socio-economic effects, and it is flexible enough to address the potential harms identified in the Inquiry Report. CGL points to the EAO's response to the concerns from Dark House, and the EAO directing CGL to respond, and argues this is an example of how the EAC and SEEMP work to adapt to new risks identified. The EAO and CGL were already taking steps within the existing structure of the SEEMP to address those concerns.

[121] Second, CGL argues that the EAO's conclusion that the adaptive management process within the SEEMP can be used to identify, assess, and manage potential harms identified in the Inquiry Report, is consistent with the principles of adaptive management. The record, including the recommendation of

the Executive Director for the original EAC application, shows that the socio-economic effects relating to the Project and construction camps had been assessed, although the harms identified in the Inquiry Report were not singled out. CGL refers to specific policies, data sources, monitoring, and mitigations described in the SEEMP in support of that conclusion. Mitigation measures are already in place for broader harms. CGL acknowledges that those do not address everything in the deeper dive in the Inquiry Report, and there will need to be further analysis through the adaptive management process and in consideration of the Inquiry Report, but the structure and many mitigation measures are already present. The SEEMP recognizes that potential adverse socio-economic effects "might change over time" and the SEEMP was expressly created "to adapt mitigation to those situations in collaboration with…communities", which would include the OW.

[122] Adaptive management responds to the difficulty or impossibility of predicting all of the consequences of a project. Courts have recognized that some level of uncertainty should not paralyze entire projects: *Canadian Parks and Wilderness Society v. Canada (Minister of Canadian Heritage),* 2003 FCA 197 [*Canadian Parks*] at para. 24; and *Pembina* at paras. 32 and 56. Adaptive management permits projects with uncertain, yet potentially adverse effects to proceed based on flexible management strategies capable of adjusting to new information regarding adverse impacts.

[123] Further, a key component of the SEEMP is engagement with local governments, communities, and Indigenous groups to identify new issues and monitor mitigation implementation. The SEEMP requires that if a previously unidentified issue arises, affected parties will be engaged in the issues management process. Adaptive management is generally focused on what is measured already but the issues management process allows new issues to be considered.

[124] Third, with respect to the EAO referring to the government's path forward, CGL argues that this in itself does not give rise to a legal error: *Greenpeace Canada v. (Attorney General)*, 2016 FCA 114 [*Greenpeace*] at para. 76. By referring to the

government steps, the EAO was indicating that the Inquiry Report was being taken seriously and was assuaging the OW concerns, but the EAO was not relying upon this. Instead, the next paragraphs of the Evaluation Report show that the EAO was addressing the Inquiry Report through the SEEMP and had directed CGL to consider the Inquiry Report in order to meet the requirements of condition 24.

Analysis

[125] I do not accept the OW's argument that because CGL stated in its Tracking Table that "potential effects from the workforce accommodation … were already assessed as part of the EAC Application and are therefore outside the scope of the EAC Extension", that the Executive Director failed to grapple with a critical issue. It is clear from the Evaluation Report that the EAO considered the Inquiry Report to be a potential new or changed effect, and did consider it.

[126] As for the factual and legal context, commissions of inquiries find facts: *Phillips v. Nova Scotia (Commissioner, Public Inquiries Act)*, [1995] 2 S.C.R. 97 at para. 62. Findings of commissions of inquiry have been considered in assessing the reasonableness of administrative decisions: *Thomas v. Canada (Minister of Citizenship & Immigration)*, 2007 FC 838 at paras. 59-69; *Lewis v. Canada (Public Safety and Emergency Preparedness)*, 2017 FCA 130 at para. 86. However, commissions of inquiry do not impose binding legal obligations on government, regulators or industry: *Alexis Nakota Sioux Nation v. Canada (Aboriginal Affairs and Northern Development*), 2006 FC 721 at para. 8; *Canada (Attorney General) v. Canada (Commission of Inquiry on the Blood System)*, [1997] 3 S.C.R. 440 at p. 460; and *R v. Doyle*, 2007 BCCA 587 at paras. 11-13. Further, there is no specific legal obligation under the *EAA*, to carry out a gender-based impact assessment.

[127] There is no dispute that the Inquiry Report and its Calls for Justice are matters of significant importance to our governments and the people of Canada. The Inquiry Report has contributed to the understanding of the systemic causes of this serious problem. The Inquiry made recommendations to help end the violence. The

findings in the Inquiry Report are relevant, but there are no findings with respect to the Project.

[128] The Evaluation Report does not state that the Inquiry Report is not a new adverse effect and that it would not be considered any further. Nor does the Evaluation Report state that no further mitigations are required. In my view, the Evaluation Report concludes that: the Inquiry Report was a new or changed potential adverse effect; the socio-economic effects associated with construction camps and the Project had been addressed in the original application for the EAC and by the SEEMP; and that the SEEMP was the appropriate tool to address the Inquiry Report, and through which further mitigations would be put in place, if required. I conclude this because the Evaluation Report: references specific existing mitigations that address many of the systemic causes of violence identified in the Inquiry Report (e.g. drug and alcohol, and harassment policies) and the adaptive management process in the SEEMP used to address unpredicted social effects; and states that to meet condition 24, the EAO had requested CGL to consider in the SEEMP how effects related to industrial development and construction camps, on Indigenous communities including women, children and other vulnerable populations, will be identified and addressed, and how Indigenous Nations will be engaged in the identification and monitoring of potential social impacts.

[129] The OW's first argument suggests that the Extension Application was the one and only time the Inquiry Report could be addressed, and that the approval of the Extension Application without further conditions, has effectively closed the door on further consideration of it. In light of the above, I do not agree with this argument. The EAO had already required CGL to address the Inquiry Report through the SEEMP and this was taking place whether or not the extension was granted.

[130] The OW also argues that the EAO "fundamentally misapprehended" the harms. In support of this argument, the OW referenced the EAO's response to the Dark House concerns regarding proximity of its healing lodge to a work camp. In my

view, the EAO was addressing that specific concern, and this does not show that the EAO had a limited understanding of the harms.

[131] The main issue is whether it was unreasonable, in the factual and legal context, for the EAO and by extension the Executive Director, to conclude that the potential adverse effects as discussed in the Inquiry Report, and as they may relate to the Project, could be appropriately addressed by the existing provisions of the EAC, and in particular the SEEMP including its new issues and adaptive management processes.

[132] I disagree with the OW that the SEEMP is focused only on community infrastructure and services and therefore cannot address broader socio-economic harms. The SEEMP is intended to address socio-economic effects, and while it is stated to be focused on community infrastructure and services, and there is much in the SEEMP that does address those two subjects, a detailed reading of the SEEMP shows that it also addresses other socio-economic effects. The EAC and SEEMP identified many of the same systemic causes of adverse effects as those identified in the Inquiry Report. For example, there are mitigations which address personal behaviour, safety, and security. The SEEMP: specifically itemizes existing policies on harassment, drug and alcohol use, firearms, discrimination, and employee behaviour; discusses the need to have adequate recreational facilities within camps; identifies that community services such as policing may need to be increased; and sets out specific mitigations related to all of these. Condition 29 requires cultural awareness training at the request of an Indigenous group. The SEEMP addresses economic concerns that: local contractors and Indigenous groups be able to access the economic benefit of the Project through employment and contracting opportunities; there may be a need for skills training in the local workforce to access those opportunities, and to enable CGL to hire locally (thus benefiting local people and also limiting newcomers); and housing availability and affordability may be affected. These systemic economic issues were also identified in the Inquiry Report

as being systemic economic issues that are correlated with violence against Indigenous women and girls, and 2SLGBTQQIA people.

[133] However, the concerns and mitigations identified in the SEEMP are not stated to be specific to Indigenous women and girls, as opposed to broader populations. For example, policies and mitigations that address behaviour, safety, and security are meant to benefit all persons. The SEEMP addresses the concern that the economic benefits of the Project be available to local and Indigenous persons, and condition 29 requires cultural awareness training, but the SEEMP does not specifically mention women within that population. Similarly, while the SEEMP identifies that there may be a need for local skills training, it does not specifically mention Indigenous women within that group. Adequate police services and housing availability and affordability are concerns for everyone, but lack of adequate police services and housing can disproportionately affect certain groups.

[134] By finding that many of the systemic causes of the adverse effects in the SEEMP are the same or similar as those identified in the Inquiry Report, I am not suggesting the adverse effects on Indigenous women and children and other vulnerable populations are the same as for broader populations. I accept they are disproportionately affected, and may be affected in unique ways, and there may be intersectionality with other factors which affect the degree or type of potential harm for these groups. The issue is whether these potential adverse effects are so different that the EAO's conclusion that these could be addressed within the issues and adaptive management processes of the SEEMP is unreasonable.

[135] The OW characterizes the availability of an adaptive management process as being in a narrow set of circumstances where extensive study has already been undertaken, and CGL conversely characterizes it as being available in a wider set of circumstances. The case authorities cited by the OW where there are comments regarding extensive study are distinguishable from the situation here. They involve highly technical or scientific data, for example, for nuclear energy plants, ocean energy turbines, end-pit lakes in coal mining, and air emissions from aluminum

smelting. In my view, the extent of study required must be that which is sufficient in the circumstances, and I adopt the comments in *Pembina*, at para. 32:

> …Thus, in my opinion, adaptive management permits projects with uncertain, yet potentially adverse environmental impacts to proceed based on flexible management strategies capable of adjusting to new information regarding adverse environmental impacts where sufficient information regarding those impacts and potential mitigation measures already exists.
>
> [Emphasis added.]

[136] I disagree with the OW that adaptive management is not appropriate because there is no baseline data. The SEEMP states that CGL carried out two studies for the original application (Social Technical Report and Economic Technical Report), and identified several other existing qualitative and quantitative data sources for monitoring. The record does not indicate what details are in those reports. It may be that those reports already contain the data that is useful, or it may be that further information is required through the issues management or adaptive management process. However, the onus is on the OW to establish that the existing data does not provide sufficient information, such that it is unreasonable to conclude that these processes can address the Inquiry Report. The OW has not done so. It is not sufficient to simply say there is no data, or what is in existence, is not adequate. There has to be some evidence of that.

[137] The OW also suggests that adaptive management is not appropriate because it is complaints-driven and CGL is not required to implement mitigations. In my view, that is too narrow a view of the SEEMP process, and ignores that: the EAO has required CGL to address the Inquiry Report; the EAO monitors compliance; and an important aspect of the SEEMP to which CGL must adhere, is stakeholder engagement.

[138] In summary, the OW's main argument leads to the conclusion that nothing short of a gender-based impact assessment conducted by the EAO, as recommended by the Inquiry Report, would be reasonable; and that a more specific or robust assessment was required. However, to establish that a decision was

unreasonable, the applicant "must do more than merely allege that a better analysis could have been undertaken": *Greenpeace* at para. 63.

[139] I do not agree with the OW's argument that the EAO erred by relying upon the government initiatives instead of doing the assessment the OW argues should have been done. In my view, the EAO did not rely upon the government initiatives in substitution of, or to defer, assessing the Inquiry Report. The reference by the EAO to the government review of the Inquiry Report was a recognition by the EAO that: the Inquiry Report was important; further time was required by the government to address it; the EAO was also assessing it; and the EAO would be addressing it further. This was the EAO assuaging the OW concerns, and indicates that the EAO does not consider this to be a closed topic, but a work in progress. The Evaluation Report states that the EAO requested CGL to consider how the harms identified in the Inquiry Report "will be identified and addressed and how Indigenous Nations will be engaged in the identification and monitoring of potential social impacts", and notes that CGL is required to make semi-annual SEEMP reports. These comments do not indicate a failure or refusal of the EAO to consider the Inquiry Report, but the opposite.

[140] In summary, with respect to the Inquiry Report, the OW has not established that the outcome of the Decision is unreasonable or that there were fundamental flaws in the reasoning process. I find that the explanations as set out in the Evaluation Report and as supplemented by the Tracking Tables and Response Document, are justified, transparent and intelligible.

[141] Finally, I want to emphasize that this decision should not be taken as in any way diminishing the importance of the Inquiry Report. As stated at the beginning of these reasons, the Inquiry Report is of undeniable value in our society's work toward finding solutions to end the unacceptable violence against Indigenous women and girls, and 2SLGBTQQIA people. The importance of the Inquiry Report was not disputed on this petition.

Order

[142] The OW's petition is dismissed. Neither CGL nor the EAO seek costs of the petition.

"Norell J."

2014 CarswellOnt 2321
Ontario Environmental Review Tribunal

Wrightman v. Director, Ministry of the Environment

2014 CarswellOnt 2321, [2014] O.E.R.T.D. No. 11, 86 C.E.L.R. (3d) 18

In the Matter of appeals by Esther Wrightman, Harvey Wrightman, and Middlesex-Lambton Wind Action Group Inc. filed August 16, 2013 for a hearing before the Environmental Review Tribunal pursuant to section 142.1 of the Environmental Protection Act, R.S.O. 1990, c. E.19, as amended, with respect to Renewable Energy Approval No. 8980-95RSLP issued by the Director, Ministry of the Environment, on August 1, 2013 to Kerwood Wind Inc. under section 47.5 of the Environmental Protection Act, regarding the construction, installation, operation, use and retiring of a 37 wind turbine generator with a total name plate capacity of 60 megawatts at a site located at multiple addresses south of Townsend Line, west of Centre Road, north of Napperton Drive and east of Sexton Road, in the Township of Adelaide Metcalfe, County of Middlesex, Ontario

In the Matter of a hearing held on October 15-18, 21-23, 25, 30-31 and November 8, 2013 at the Middlesex County Administrative Offices, 399 Ridout Street North, London, Ontario, and at the West Middlesex Memorial Centre, 334 Metcalfe Street, Strathroy, Ontario

Dirk VanderBent Chair, Maureen Carter-Whitney Member

Heard: October 15-18, 21-23, 25, 30-31; November 8, 2013
Judgment: February 14, 2014
Docket: 13-102 to 13-104

Counsel: Harvey Wrightman, Appellant, for himself and Appellant, Middlesex-Lambton Wind Action Group Inc.
Esther Wrightman, Appellant, for herself
Andrew Weretelnyk, Katie Clements, for Director, Ministry of the Environment
Dennis Mahony, John Terry, Arlen Sternberg, Justin Necpal, for Approval Holder, Kerwood Wind Inc.
Kathryn Minten, for herself

Headnote

Environmental law --- Statutory protection of environment — Approvals, licences and orders — Appeals — To administrative tribunal — Grounds for appeal — Miscellaneous

Ministry of Environment issued renewable energy approval to KW Inc. for construction, installation, operation, use and retiring of wind facility — Appellants appealed — Appeal dismissed — Appellants did not meet onus under s. 145.2.1 of Environmental Protection Act to prove that engaging in project in accordance with renewable energy approval would cause serious and irreversible harm to plant life, animal life or natural environment — Appellants did not meet onus to prove that engaging in project in accordance with renewable energy approval would cause serious harm to human health — Appellants failed to established that health test had been met based on public safety risks cited by appellants, namely: shadow flicker, ice throw, blade throw, tower collapse and damage resulting from tower fire — Appellants did not establish that sound levels were higher than those predicted by noise modelling conducted on behalf of approval holder.

Environmental law --- Statutory protection of environment — Approvals, licences and orders — Species protection

Ministry of Environment issued renewable energy approval to KW Inc. for construction, installation, operation, use and retiring of wind facility — Appellants appealed — Appeal dismissed — Appellants did not meet onus under s. 145.2.1 of Environmental Protection Act to prove that engaging in project in accordance with renewable energy approval would cause serious and irreversible harm to plant life, animal life or natural environment — Evidence established that risk to bald eagle population, considered either in local or regional context, was low — There was insufficient evidence to make determination regarding appropriate population scale to consider in assessing harm with respect to wildlife species — Evidence in respect of stray voltage was technical and scientific evidence for which opinion or interpretative evidence was required.

Environmental law --- Statutory protection of environment — Approvals, licences and orders — Noise

Ministry of Environment issued renewable energy approval to KW Inc. for construction, installation, operation, use and retiring of wind facility — Appellants appealed — Appeal dismissed — Evidence adduced by appellants fell short of establishing that sound levels were higher than those predicted by noise modelling conducted on behalf of approval holder and even if it did, test was that health test must be met at sound levels of 40 dBA or less — In light of difference of professional opinion as to whether effects of amplitude modulation were adequately considered and addressed by noise guidelines and absent any more detailed evidence regarding these effects, particularly as they applied to project wind turbines, this evidence was at best exploratory in nature.

APPEAL from decision of Ministry of Environment to issue renewable energy approval for construction, installation, operation, use and retiring of wind facility.

***Decision of the Board*:**

Background

1 On August 1, 2013, Vic Schroter, Director, Ministry of the Environment ("MOE"), issued Renewable Energy Approval No. 8980-95RSLP (the "REA") to Kerwood Wind Inc. (the "Approval Holder") for the construction, installation, operation, use

and retiring of a Class 4 wind facility, known as the Adelaide Wind Energy Centre, with 37 wind turbine generators with a total name plate capacity of 60 megawatts ("MW"). The location is described in the REA as multiple addresses south of Townsend Line, west of Centre Road, north of Napperton Drive and east of Sexton Road, in the Township of Adelaide Metcalfe, County of Middlesex, Ontario (the "Project" or "Adelaide Project").

2 The REA was issued pursuant to Part V.0.1, s. 47.5 of the *Environmental Protection Act* ("*EPA*").

3 On August 16, 2013, Esther Wrightman, Harvey Wrightman, and Middlesex-Lambton Wind Action Group Inc. ("MLWAG") filed notices of appeal with the Environmental Review Tribunal (the "Tribunal") with respect to the REA. The Appellants raised issues related to both the health and natural environment grounds under s. 142.2 of the *EPA*.

4 Also on August 16, 2013, the Appellant Harvey Wrightman served and filed a Notice of Constitutional Question, arguing that the renewable energy approval process violated his right to security of the person under s. 7 of the *Canadian Charter of Rights and Freedoms* (the "*Charter*"). Ms. Wrightman also raised the s. 7 *Charter* violation issue in her notice of appeal.

5 Under s. 52 of the *Constitution Act, 1982*, the Appellants challenged the constitutional validity of s. 142.1 and s. 47.5 of the *EPA*. The parties reached an agreement during the hearing that the Appellants would not proceed with their challenge to the constitutional validity of s. 47.5 of the *EPA*, which included a challenge to s. 54 of Ontario Regulation ("O. Reg.") 359/09 made under the *EPA*. The parties also agreed that the Appellants would not proceed with a challenge to any conduct or actions of the Director under s. 47.5 of the *EPA*, including any consideration by the Director of s. 54 of O. Reg. 359/09, so as to give rise to a remedy under s. 24(1) of the *Charter*.

6 On September 16, 2013, the Tribunal held the preliminary hearing in Strathroy, Ontario. At the preliminary hearing, presenter status was granted to Robert Lewis, Kelly Dortmans and Stephana Johnston. The Tribunal subsequently denied a request by Kathryn Minten for party status, but granted her participant status. Further details can be found in the Tribunal's orders dated October 10, 2013 and January 9, 2014 [2014 CarswellOnt 413 (Ont. Environmental Review Trib.)], which also granted a request to change the venue for the main hearing and denied a request to video record the proceeding.

7 On October 8 and 10, 2013, the Tribunal heard a motion to focus evidence, brought by the Approval Holder, and motions for disclosure and to exclude certain evidence, brought by the Director. On October 11, 2013, the Tribunal issued an order granting the motions in part, with written reasons issued on December 18, 2013 [2013 CarswellOnt 18504 (Ont. Environmental Review Trib.)].

8 The Tribunal's order of January 9, 2014 refers, at para. 27, to the Approval Holder's submission during the preliminary hearing (on the issue of whether party status should be granted to Ms. Minten) that "the Appellants are not pursuing the second ground in s. 142.1(3) of the *EPA*, namely, whether the project will cause serious and irreversible harm to plant life, animal life or the natural environment." However, during the main hearing, this panel was not advised that this ground of the appeal had been formally withdrawn, and evidence in relation to this ground was adduced at the hearing. The Tribunal observes that this ground was not struck from the notices of appeal during the preliminary hearing.

9 The hearing began on October 15, 2013. Ms. Wrightman appeared at the hearing on her own behalf. Mr. Wrightman and MLWAG were both represented by Eric K. Gillespie Professional Corporation. However, at the outset of the hearing, Mr. Wrightman advised the Tribunal that he appeared on his own behalf and on behalf of MLWAG, indicating that Mr. Gillespie would attend if required. It transpired that Mr. Gillespie did not attend at the hearing.

10 The Tribunal heard evidence over ten days in October and November 2013, and conducted a site visit on October 18, 2013. The parties and the participant provided written closing submissions, as directed by the Tribunal, over November and December 2013.

11 Numerous procedural rulings were made over the course of the hearing. They are found at Appendix A.

12 For the reasons that follow, the Tribunal dismisses the appeals.

Relevant Legislation

13 *Environmental Protection Act*

1. (1) "natural environment" means the air, land and water, or any combination or part thereof, of the Province of Ontario; ("environnement naturel")

145.2.1 (2) The Tribunal shall review the decision of the Director and shall consider only whether engaging in the renewable energy project in accordance with the renewable energy approval will cause,

(a) serious harm to human health; or

(b) serious and irreversible harm to plant life, animal life or the natural environment.

(3) The person who required the hearing has the onus of proving that engaging in the renewable energy project in accordance with the renewable energy approval will cause harm referred to in clause (2) (a) or (b).

(4) If the Tribunal determines that engaging in the renewable energy project in accordance with the renewable energy approval will cause harm referred to in clause (2) (a) or (b), the Tribunal may,

(a) revoke the decision of the Director;

(b) by order direct the Director to take such action as the Tribunal considers the Director should take in accordance with this Act and the regulations; or

(c) alter the decision of the Director, and, for that purpose, the Tribunal may substitute its opinion for that of the Director.

Issues

14 The issues are:

Issue No. 1: Whether engaging in the Project as approved will cause serious and irreversible harm to plant life, animal life or the natural environment.

Issue No. 2: Whether engaging in the Project as approved will cause serious harm to human health.

Issue No. 3: Whether the renewable energy approval process violated Mr. Wrightman's and Ms. Wrightman's rights to security of the person under s. 7 of the *Charter*.

Issue No. 1: Whether engaging in the Project as approved will cause serious and irreversible harm to plant life, animal life or the natural environment.

Bald Eagles

Evidence of the Appellants respecting Bald Eagles

15 Ms. Wrightman provided evidence in relation to her allegation that the Project will cause harm to bald eagles. She also called Muriel Allingham as a witness. The Appellants did not tender expert opinion evidence in relation to bald eagles.

16 Ms. Wrightman expressed concerns that a bald eagle nest located near the Project substation (also referred to as the Project switchyard) would be impacted by the construction of the Project or that the nesting tree might be cut down. She testified to her understanding that the Project substation would be 187 metres ("m") from the nest. While she noted the presence of wind turbines 634 m and 741 m from the bald eagle nest, she acknowledged under cross-examination that those turbines are part of

the Bornish wind farm project (the "Bornish Project"), which is a different wind farm project in the area, and that the closest turbine in the Adelaide Project is approximately 12 kilometres ("km") away from the nest.

17 Ms. Wrightman raised concerns that the Approval Holder would be permitted to destroy or remove the nest without an approval from the Ministry of Natural Resources ("MNR") based on a recent regulatory change under the *Endangered Species Act* ("*ESA*").

18 Ms. Allingham, who lives in North Middlesex County, also testified to her belief that the Project substation would be located 187 m from the bald eagle nest, and to her concern that the nest would be destroyed.

19 Both Ms. Wrightman and Ms. Allingham referred to the removal, in January 2013, of a bald eagle nest and tree in proximity to the Summerhaven Wind Energy Centre ("Summerhaven Project") located in Haldimand County. Ms. Wrightman described the circumstances concerning the removal of that nest and stated that the incident had raised concerns for her that the bald eagle population in the vicinity of the Adelaide Project would not be protected. Ms. Allingham also expressed concern about the removal of the Haldimand County nest.

Evidence of the Respondents respecting Bald Eagles

20 The Approval Holder called the following witnesses to testify concerning bald eagles: Benjamin Greenhouse; Andrew Ryckman; and Dr. Paul Kerlinger. The Director called Joseph Halloran to testify in relation to bald eagles. Mr. Ryckman was qualified by the Tribunal to give opinion evidence as an expert terrestrial and wetland biologist, with expertise conducting environmental assessments of wind projects and assessing their impacts on wildlife and the natural environment. Dr. Kerlinger was qualified by the Tribunal as an expert on birds and the effects of wind energy on birds, including bald eagles and other species.

21 Mr. Greenhouse, Director of Wind Development at NextEra Energy Canada, ULC ("NextEra") and the Adelaide Project Director, provided evidence concerning the Haldimand County bald eagle nest. He was also the Project Director responsible for the development of the Summerhaven Project. He stated that the bald eagle nest in the area of the Summerhaven Project appeared to be newly built, and was discovered after completion of the natural heritage assessment for that project. He testified that, after consultation with the MNR, NextEra removed the nest and implemented a plan for mitigation and compensation, which included the construction of three alternate nesting platforms in the area of the original nest. He indicated that, after the platforms were installed, a pair of eagles nested on one of them and two eaglets subsequently hatched.

22 Mr. Greenhouse noted that the Project switchyard is co-owned by three different wind projects in the area, including the Adelaide Project. He testified that there is no intention to remove the bald eagle nest near the Project switchyard. He gave evidence that the Approval Holder has consulted with the MNR on the appropriate mitigation to ensure that the nest is not disturbed, and will not build any permanent infrastructure within 400 m of the nest. He said that temporary construction activity may take place within 200 to 400 m of the nest, but not during the "most critical period" as set out in the MNR's 1987 Bald Eagle Habitat Management Guidelines (the "Eagle Guidelines"), which were developed by the MNR, prior to the establishment of the renewable energy approval regime, to protect bald eagle habitat.

23 To better understand this submission, the Tribunal notes, in overview, that the Eagle Guidelines set out four periods of sensitivity to disturbance identified for nesting areas: most critical period; moderately critical period; low critical period; and not critical period. The critical periods relevant in this case are described at pages 4 - 5 of the Eagle Guidelines. The most critical periods are prior to egg laying when bald eagles engage in courtship activities and nest building, and during the incubation period, when they are most intolerant of external disturbances and may readily abandon the area. The moderately critical period includes approximately one month before the most critical period, and four weeks after hatching. Although disturbance can keep adults from the nest during this period, they are protective of the nest as long as one or more healthy chicks are present, so this period is less critical than during the pre-laying and incubation period.

24 Mr. Greenhouse testified that, during the most critical period, there is a prohibition on any construction activity within 200 to 400 m of the nest.

25 Mr. Halloran, who is employed as the acting Renewable Energy Program Coordinator with the MNR, provided evidence concerning the assessment of the bald eagle nest in an addendum report to the Project Natural Heritage Assessment ("NHA"). In addition to those mitigation measures outlined by Mr. Greenhouse above, he noted that deterrents to prevent perching and roosting would be installed on the transmission line, and there would be monitoring requirements during and after construction. Mr. Halloran also gave evidence regarding the MNR's involvement in the removal of the nest near the Summerhaven Project.

26 Mr. Ryckman is a terrestrial and wetland biologist with Natural Resources Solutions Inc. ("NRSI"), an environmental consulting firm retained by the Approval Holder to conduct the NHA. He gave evidence concerning the identification of the bald eagle nest, noting that there was only one bald eagle nest habitat found in the Project area. He testified that, while the closest edge of the property on which the substation is located will be 187 m away from the nest, the Project substation itself will be further than 400 m away, at approximately 405 m from the nest. He testified that an assessment and behavioural study of bald eagle activity at the nest have been completed and a report is being prepared. He stated that an addendum report to the NHA (the "NHA Addendum II Report") was prepared following identification of the bald eagle nest.

27 Mr. Ryckman testified that the current status of the bald eagle under the *ESA* in Ontario has changed from "endangered" to "special concern", which suggests that the population is increasing in Ontario. He noted that the Eagle Guidelines set out three buffer zones to protect a nest habitat: the primary zone is the first 100 m from the nest; the secondary zone is 100 to 200 m from the nest; and the tertiary zone is 200 to 400 m from the nest, and may extend up to 800 m from the nest depending on topography, vegetation and potential activities within this area. He stated that human activities and habitat alterations are restricted to varying degrees in these buffer zones, ranging from the greatest restrictions in the primary zone to the least restrictions in the tertiary zone. He gave further evidence concerning the mitigation measures described by Mr. Halloran.

28 Mr. Ryckman also stated that the "most critical period" is from about March to mid-May, and the "moderately critical period" includes approximately one month prior to the above period and four weeks after hatching, and occurs in February and from mid-May to mid-June.

29 Mr. Ryckman provided his opinion that the Project would not cause any significant impact to bald eagles or their habitat. Mr. Ryckman testified that the bald eagle nest is on the west side of the woodland, providing a buffer from construction activities and eliminating any sight line from the nest to the substation. Mr. Ryckman acknowledged, under cross-examination, that the tertiary zone would be extended to 800 m if there was a sight line from the nest, but maintained that there is no sight line in this case. He also stated, in cross-examination, that the risk to bald eagles from the cumulative effects of the three proposed wind farms in the Adelaide Metcalfe area is very low because they fly above the turbines.

30 Dr. Kerlinger holds a PhD in biology, with specialization in bird behaviour, ecology and research design/statistics. It is his opinion that, because eagles fly between different areas, the geographic scope of the relevant bald eagle population in relation to the Project is the Great Lakes population in Ontario and parts of Michigan, New York and possibly Ohio.

31 Dr. Kerlinger stated that this bald eagle population has been increasing dramatically over the past two decades into a robust and healthy population, and its size over the Great Lakes region is estimated to be several thousand individuals. He estimates that there are as many as 300 bald eagles in Southern Ontario. He said that, while formerly an endangered species, the bald eagle is now listed as a species of "special concern" under the *ESA*, and noted that the increase in population results from the discontinuation of the use of DDT and other toxins, and protection from shooting.

32 Dr. Kerlinger noted that bald eagles are generally at very low mortality risk from wind projects because they can see turbines and are good at avoiding them while flying. He also stated that bald eagles are habituating to human activities and infrastructure, including wind turbines. When asked, in cross-examination, about the cumulative impacts of the wind farm projects in the Adelaide Metcalfe area on bald eagles, he responded that he did not expect any bald eagle mortality. In Dr. Kerlinger's opinion, there is no possibility that the Project could have any population level impact to bald eagles.

33 Dr. Kerlinger also testified that he did not expect the Project to adversely affect the bald eagle nest located near the Project substation, or the eagles using it because: the nest is located 12 km from the closest turbines for this Project; no infrastructure

will be constructed within 400 m of the nest; substations and transmission lines pose little risk to eagles; and it is unlikely that there will be nest abandonment or reduced nest productivity because there is evidence that eagles are adapting quickly to human activities. Dr. Kerlinger testified that there is low likelihood that the bald eagles would abandon their nest because of noise disturbance due to construction, given that there can be no construction in the tertiary zone during the primary season for nesting, which is when the eagles would be most sensitive.

34 Dr. Kerlinger testified that the mitigation measures required for the Project are appropriate, noting as follows at para. 32 of his Witness Statement:

> With respect to the bald eagle nest, the [Environmental Effects Monitoring Plan ("EEMP")] (April 2013) stipulates that all construction activity be done outside a 200 metres buffer surrounding next locations, as well as "primary and secondary habitat zones". In addition, I understand that all infrastructure will be set back from the nest a minimum of 400 meters and no construction will occur within the "tertiary zone" between March 1 and May 15. Other measures outlined in the EEMP for the existing bald eagle nest are also appropriate, including an activity assessment and a behavioural study during construction. Finally, mitigation measures for the transmission line, including perch-guarding the transmission poles and marking the lines within 800 metres of a nest, are appropriate for reducing potential impacts to these birds. The mitigation measures in place will therefore minimize the risk of any impact.

35 Dr. Kerlinger commented on the mitigation measures in the REA conditions, noting that, in his opinion, it was highly unlikely that the operational mitigation measures for birds would be needed at the Project because the mortality thresholds established in the REA will not be exceeded, based on his opinion that any level of bird fatalities is likely to be minimal. He stated that mitigation measures in the REA would be appropriate if, by some remote possibility, mortality thresholds were reached or exceeded. He concluded in his Witness Statement that the Project "will cause no impact of any significance to bald eagles or their habitat, and certainly no population level impact".

Submissions of the Appellants respecting Bald Eagles

36 Ms. Wrightman refers to the Tribunal's decision in *Lewis v. Director, Ministry of the Environment*, [2013] O.E.R.T.D. No. 70 (Ont. Environmental Review Trib.) ("*Lewis*") which addressed the same bald eagle nest in the context of the Bornish Project. She notes that the Tribunal in *Lewis* stated, at para. 23, that "the fact that the bald eagle is a species at risk is an important factor in assessing serious and irreversible harm."

37 Ms. Wrightman submits that the bald eagle population in the Project area could be eliminated by one or more of the following threats: the potential removal of the nest; disruption from construction activities; and the potential for bald eagles to collide with Project components. She asserts that the bald eagle nest should not be removed, and notes that the Tribunal in *Lewis* agreed, at para. 21, with the approach of leaving the nest intact.

38 Ms. Wrightman submits that there could be cumulative impacts on the bald eagles in the future due to the various proposed and developed wind farm projects in Southern Ontario, including destruction of the bald eagle's habitat, breeding and foraging areas as a result of hundreds of turbines in the area, and hundreds of kilometres of transmission lines threatening flight paths and roosting areas. She urges the Tribunal to consider the impacts on the eagles at the local scale, citing *Lewis* as follows, at para. 42:

> Serious and irreversible harm, especially at a local ecosystem level ... can occur well before the overall viability of a larger population is put at risk. Numerous individual local decisions may appear to be relatively insignificant at a provincial scale but over time may accumulate to create very severe consequences.

39 Ms. Wrightman argues that the death of one bald eagle in the area of the Project would constitute serious and irreversible harm.

40 Ms. Wrightman submits that the Approval Holder is not following the Eagle Guidelines properly. She states that protecting the bald eagles from disturbance only during the "most critical period" under the Eagle Guidelines is inadequate, and that

protection during the "moderately critical period" is also required. She also asserts that construction should not be permitted in the tertiary zone because there is a direct line of sight from the nest to the field.

41 Ms. Wrightman further submits that there has not been adequate study of the bald eagle pair in the Project area, and cites the recommendation of the Tribunal in *Lewis*, at para. 79, in relation to the two turbines in the Bornish Project proposed to be located near the nest:

> Relocating or postponing construction of these two turbines would also allow more behavioural studies to be undertaken within the context of the rest of the Project being in place as well as other nearby projects. Further study could provide better information in determining the tertiary habitat zone and deciding whether to build the two turbines in question.

Submissions of the Respondents respecting Bald Eagles

42 The Approval Holder submits that the evidence shows that the bald eagle nest in the vicinity of the Adelaide Project substation will not be removed. The Approval Holder further submits that the nest is outside the Project location and far from any turbines in the Project, the closest being 12 km away. The Approval Holder notes that the nest is closer to the turbines in the Bornish Project, and that the Tribunal dismissed the Bornish Project appeal in the *Lewis* decision, finding that it had not been established that serious and irreversible harm would be caused. The Tribunal concluded in *Lewis* that the nest is not directly in harm's way from the Bornish Project (para. 19 to 20).

43 The Approval Holder submits that a number of mitigation measures, approved by the MNR, have been put in place to ensure the protection of the bald eagles and their nest. The Approval Holder further submits that these mitigation measures comply with the Eagle Guidelines.

44 The Approval Holder asserts that the risk of either direct or indirect harm to the bald eagles is very low. The Approval Holder also asserts that the relevant population scale is the Great Lakes region, and that there is no risk to this population from the Project.

45 The Approval Holder argues that the removal of the bald eagle nest in the vicinity of the Summerhaven Project is irrelevant to this appeal. The Approval Holder further argues that there is no evidence that there is a risk of potential cumulative impacts to bald eagles from the wind farm projects in the region. The Approval Holder submits that the Appellants have not demonstrated that the Project will cause serious and irreversible harm to bald eagles.

46 The Director's submissions support those of the Approval Holder. The Director asserts that the Appellants' concerns are based on uninformed speculation, and submits that Dr. Kerlinger and Mr. Ryckman provided un-contradicted opinion evidence that the Project would not cause any significant impact to bald eagles or their habitat.

Findings respecting Bald Eagles

47 As noted above, the Appellants bear the onus, under s. 145.2.1 of the *EPA*, of proving that engaging in the Project in accordance with the REA will cause serious and irreversible harm to plant life, animal life or the natural environment. The recent Tribunal decision in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment* (2013), 76 C.E.L.R. (3d) 171 (Ont. Environmental Review Trib.) ("*APPEC*") summarized the applicable guidance from previous Tribunal decisions on this test at paras. 185-186 (citations omitted):

> **Previous decisions of the Tribunal**
>
> Previous decisions of the Tribunal have considered some aspects of the second branch of the renewable energy approval test.
>
> - An appellant is required to show such harm on the civil standard of a balance of probabilities.

- Regarding the phrase "in accordance with" the terms of the REA, the Tribunal has held: "Any harm that may be caused by exceedances will not be relevant to the Tribunal's decision."
- Evidence that only raises the potential for harm does not meet the onus of proof.
- "Will cause" must be proved on a balance of probabilities.
- The Tribunal can consider whether both "direct" and "indirect" effects will be caused.
- The word "serious" should be interpreted in a way that suits both branches of the test.

Serious and irreversible harm

The phrase of the test that the parties focus on in their submissions is "serious and irreversible harm". Previous decisions of the Tribunal have not considered this phrase in depth, but have found that:

- the word "serious", and the phrase "serious and irreversible", must be interpreted on a case-by-case assessment according to all relevant factors.
- one bird or bat mortality will not always constitute "serious and irreversible harm to plant life, animal life or the natural environment", but may be sufficient in certain circumstances.
- the test would be meaningless if it were to be interpreted to always be met or to never be met.

48 The Tribunal in *APPEC* noted the principle of an ecosystem approach, and found that, "in determining serious and irreversible harm to plant life, animal life or the natural environment, the relevant factors, and their respective importance and weight, must be assessed on a case by case basis" (para. 206). The Tribunal in *Lewis* further noted, at paras. 10-11, that an ecosystem approach does not carry with it an automatic scale but can be used at many different scales, and the Tribunal will sometimes be called on to determine the most appropriate scale in respect of an individual species, group of species, ecosystem or habitat. The Tribunal in *Lewis* stated, at para. 12, that, "[u]nder s. 145.2.1(2)(b) of the *EPA*, the Tribunal utilizes a relevant factor-based analysis conducted within the context of the circumstances and evidence of each case."

49 The Tribunal's decision in *Lewis* made findings with respect to the bald eagle nest that is at issue in this proceeding. The bald eagle nest is located in proximity to two wind turbines in the Bornish Project, which was under appeal in the *Lewis* matter. In *Lewis*, as in the appeal of the Adelaide Project before this Tribunal panel, Mr. Greenhouse and Mr. Ryckman testified that the approval holder was not seeking to remove the nest (paras. 19-20). The Tribunal in *Lewis* also heard testimony from Dr. Kerlinger that was very similar to the evidence before this Tribunal panel.

50 The Tribunal in *Lewis* observed, at para. 23, that the risk status of a species is "highly relevant in assessing serious and irreversible harm under the *EPA*". As noted at para. 23 in *Lewis*, the bald eagle is listed as a species of "special concern" under the *ESA* and does not receive the same high level of protection that threatened or endangered species receive, but is a regulated species subject to management guidelines developed by the MNR. The Tribunal in *Lewis* determined, at para. 29, that the Tribunal's central role in a renewable energy approval appeal is to look at the potential harm to the listed species at risk in question, including harm to its habitat, according to the s. 145.2.1(2)(b) test.

51 Given that the Approval Holder does not seek to remove the nest, the issue before this Tribunal panel, as in *Lewis*, is whether construction or disturbance from the proposed development of the Adelaide Project would cause serious and irreversible harm. Ms. Wrightman submitted that there will be harm to the bald eagle population in the Project area through either disturbance from the construction of the Project, or mortality due to contact with Project components. She further submitted that the death of one bald eagle would constitute serious and irreversible harm.

52 The Approval Holder submitted, based on Dr. Kerlinger's expert opinion evidence, that the relevant population scale for the bald eagle is the Great Lakes region, which he estimates to have a population of several thousand individuals. He estimates that there are approximately 300 bald eagles in Southern Ontario.

53 This Tribunal panel adopts the reasoning of the Tribunal in *Lewis*, set out in detail at paras. 35-49, regarding the question of the appropriate scale in respect of the bald eagles at this nest. The Tribunal in *Lewis* noted, at para. 38, that a provincial or regional scale is not necessarily the appropriate scale to automatically use in assessing serious and irreversible harm. The Tribunal in *Lewis* went on to point out several implications of such a narrow interpretation: the argument in favour of an automatic provincial scale for harm appears to be predicated on the "serious", rather than the "irreversible" element of the test (para. 39); an automatic provincial scale for harm to animal life would likely lead to an absurd result in that the test would be impossible to meet in virtually any case, even where there was an extensive loss of animal life in the vicinity of a project (para. 40); and the Legislature could have indicated that the provincial scale must be applied, had that been its intent (para. 41).

54 The Tribunal in *Lewis* was not persuaded that the renewable energy approval appeal test can only apply at a very large scale and did not limit its application of that section of the *EPA*, instead adopting a fact-specific, case by case approach to serious and irreversible harm, consistent with prior Tribunal decisions (para. 43). This Tribunal panel, which has heard very similar evidence and argument in relation to the same bald eagles and their habitat as in the *Lewis* matter, agrees and takes the same approach as the Tribunal in *Lewis*.

55 As in *Lewis*, at para. 47, this Tribunal panel adopts the finding in *APPEC* that assessing serious and irreversible harm involves a multi-factor case by case analysis in which the extent of harm, in the sense of a factor such as the scale of population being affected where appropriate, is just one factor among many.

56 This Tribunal panel also finds, as the Tribunal did in *Lewis* (para. 48), that it is most appropriate to use the local scale to assess serious and irreversible harm to bald eagles in this case, particularly given the evidence that: this is the only known bald eagle's nest in the vicinity of the Project; at 300, the number of bald eagles in Southern Ontario is low relative to the several thousand over the Great Lakes region; and the bald eagle is listed as a species of special concern under the *ESA*. As indicated in *Lewis*, at para. 48, "the death or displacement of this pair would constitute a loss of bald eagles from the immediate area, as there was no evidence of any other documented nest near this site".

57 The Tribunal turns now to the evidence concerning the potential for harm to the bald eagles in the vicinity of the Project. As stated in *Lewis*, at para. 63, "it is important for the Tribunal to examine the mitigation measures being proposed with specific reference to their impact on the serious and irreversible harm test at the appropriate scale, which in this case is the local level".

58 Ms. Wrightman submitted that there will be harm to the bald eagles present in the Project area as a result of disturbance from the construction of the Project. However, she did not provide any expert evidence to demonstrate that the construction of the Project will cause serious and irreversible harm to the bald eagles or their habitat. The Tribunal heard expert opinion evidence from Mr. Ryckman that the substation would be approximately 405 m away from the nest, and that a tertiary zone extending to 400 m around the nest was adequate, given that there is a buffer and no sight line from the nest to the substation. Mr. Greenhouse stated that the Approval Holder will not build permanent infrastructure within 400 m of the nest. The Tribunal finds that this proposed mitigation is appropriate to ensure that the bald eagles and their nest will not be disturbed.

59 Ms. Wrightman also asserted that there will be harm to the bald eagles if they are not protected from disturbance during the "moderately critical period" in addition to the "most critical period". Again, Ms. Wrightman did not provide any expert evidence to show that construction during the moderately critical period will cause serious and irreversible harm to the bald eagles or their habitat.

60 Mr. Ryckman noted the degree to which activity is restricted in the different buffer zones and provided his opinion that, given the mitigation measures in place, the Project would not cause any significant adverse impact on bald eagles or their habitat. Dr. Kerlinger also testified that these mitigation measures would minimize the risk of any impact.

61 Ms. Wrightman submitted that the bald eagles may have contact with Project components, resulting in death. She is also concerned that adequate study has not been done concerning the bald eagles and their habitat. Beyond raising these concerns, she did not provide opinion evidence (and, in fact, no evidence other than her views and the views of Ms. Allingham) to demonstrate that the Project will cause serious and irreversible harm.

62 The Adelaide Project components closest to the bald eagle's nest are the switchyard and transmission lines. Mr. Halloran and Mr. Ryckman reviewed mitigation measures to address these concerns, such as deterrents that would be installed on the transmission line to prevent perching and roosting, which are included in the NHA Addendum II Report. Dr. Kerlinger noted mitigation measures in the EEMP, including those addressing perching on the transmission line, and provided his opinion that they would be appropriate for reducing potential impacts to the bald eagles and would minimize the risk of any impact. The Tribunal notes that the mitigation measures in the NHA Addendum II Report and the EEMP are incorporated into conditions in the REA.

63 In addition to the mitigation measures in the EEMP, the REA contains detailed conditions and requirements addressing the bald eagles, with respect to pre-construction and post-construction monitoring of habitat, mortality thresholds and mitigation, and reporting and review of results. These conditions include the preconstruction requirement of baseline survey of a bald eagle nesting, foraging and perching habitat. Dr. Kerlinger provided his opinion that it was highly unlikely that the operational mitigation measures for birds would be needed at the Project because, in his opinion, mortality thresholds established in the REA will not be exceeded.

64 In *Monture v. Ontario (Director, Ministry of the Environment)*, 2012 CarswellOnt 12208 (Ont. Environmental Review Trib.) ("*Monture*"), the Tribunal addressed whether one bird kill would constitute serious and irreversible harm. The Tribunal in that case found, at paras. 73-75:

> The purpose of the threshold is to establish a standard to delineate when the Tribunal may act, and when it may not. No one disputes that the construction and operation of a wind energy project, of necessity, will cause the death of some individual plants or animals. ...
>
> The fact that section 23.1 of the Regulation [O.Reg. 359/09] adopts the Bird Guideline and the Bat Guideline, both of which prescribe mortality thresholds, is an indication that it is anticipated that wind energy projects can be approved notwithstanding that some mortalities will occur. ...
>
> With respect to section 145.2.1(2) in particular, the Tribunal finds that it is intended to act as a filter that determines whether the Tribunal will then exercise its discretion under section 145.2.1(4). It follows, therefore, that interpretations that automatically result either in screening out no appeals, or screening out all appeals, do not accord with the Legislature's intention.

65 The Tribunal in that case then went on to find, at paras. 80-81:

> Accordingly, the Tribunal finds that the threshold respecting "serious and irreversible harm to plant life, animal life or the natural environment", as set out in section 145.2.1(2)(b) of the *EPA*, is not automatically satisfied by demonstrating that one bird or bat mortality will occur. This finding does not preclude the possibility that a single mortality in some circumstances could constitute "serious and irreversible harm". Whether the threshold has been met must be determined on the individual circumstances of each case.
>
> The Tribunal also observes that the test under section 145.2.1 of *EPA* is not whether a proponent's application has satisfied the requirements of the Regulation, or is within the bounds of the Guidelines. Accordingly, it remains open to an Appellant to adduce evidence to establish that serious and irreversible harm will occur, even where a proponent has demonstrated compliance with the requirements of the Regulation.

66 Although the Tribunal, in this case, is not bound by the above findings, the Tribunal finds this analysis is persuasive, and adopts these conclusions. It follows, therefore, that the question the Tribunal must address is whether the test has been met in the circumstances of this case. In this regard, the Tribunal has considered Dr. Kerlinger's evidence that:

- the bald eagle population is growing in Ontario;
- there is only a remote possibility that the bald eagle mortality threshold, as set out in Part K7 of the REA would be reached or exceeded;
- bald eagles are generally at very low mortality risk from wind projects because they can see turbines and are good at avoiding them while flying;
- substations and transmission lines pose little risk to eagles, and that it is unlikely that there will be nest abandonment or reduced nest productivity, because there is evidence that eagles are adapting quickly to human activities;
- there is low likelihood that the bald eagles would abandon their nest because of noise disturbance due to construction, given that there can be no construction in the tertiary zone during the primary season for nesting, which is when the eagles would be most sensitive; and
- the mitigation measures required for the Project are appropriate.

67 The Tribunal notes that, although the Appellants disagree with Dr. Kerlinger's opinions, they adduced no opinion evidence to contradict his evidence. The Tribunal also finds that they adduced no other probative evidence to counter his opinions. Consequently, the Tribunal accepts the opinion evidence of Dr. Kerlinger. This evidence establishes that the risk to the bald eagle population, considered either in the local or regional context, is low. Furthermore, there is no evidence to suggest that a single mortality could constitute serious and irreversible harm in the circumstances of this case. Based on this evidence, the Tribunal concludes that the Appellants have adduced insufficient evidence to establish that engaging in the Project in accordance with the REA will cause serious and irreversible harm to bald eagles.

68 In reaching this conclusion, the Tribunal has considered Ms. Wrightman's submission that there will be cumulative impacts on the bald eagles in the future due to the various proposed and developed wind farm projects in Southern Ontario that could lead to the destruction of the bald eagle's habitat, breeding and foraging areas. However, Ms. Wrightman did not provide any evidence, expert or otherwise, to support this concern. When questioned by Ms. Wrightman about cumulative impacts, neither Mr. Ryckman nor Dr. Kerlinger had concerns about the cumulative effects of the various wind farm projects in the Adelaide Metcalfe area.

69 The Tribunal has also considered that the MNR has detailed Eagle Guidelines in place. As noted in *Lewis*, at para. 57, the Eagle Guidelines were developed when the bald eagle was listed as an endangered species, a higher category of risk. However, the Tribunal adopts the finding in *Lewis* that the Eagle Guidelines "remain a useful source of guidance for protecting bald eagles as a special concern species" (para. 57). The purpose of the Eagle Guidelines is to provide criteria for the protection and maintenance of bald eagle breeding habitat and for the protection of bald eagles from human disturbance during the breeding season. Ms. Wrightman called no evidence to establish that the Eagle Guidelines are deficient or not being met.

Other Wildlife Species and Dairy Cattle

Evidence of the Participant and Presenters respecting other Wildlife Species and Dairy Cattle

70 Ms. Minten owns and operates an organic dairy farm, with her husband, in the Township of Adelaide Metcalfe. She raised concerns about harm to wildlife, in particular, bobolinks and eastern meadowlarks, snapping turtles and bats. She also expressed concern about the impact of stray voltage on her cattle.

71 Ms. Minten testified that she has worked with the MNR to set strips of grassland for bobolink and eastern meadowlark, both threatened species, on her farm to help restore their breeding habitat. She expressed concern that the Project transmission lines, proposed to be located near the grassland habitat on her farm, will result in habitat loss for these species.

72 Ms. Minten stated that she is concerned about the impact of the Project on snapping turtles, a species of special concern under the *ESA*, which she has observed crossing the road and nesting on her property. She said that she has also found baby snapping turtles in window wells and sandboxes on the property. She raised concerns that: the turtles will face an increased risk of mortality due to increased heavy traffic on the roads; proposed transmission lines will be located in snapping turtle habitat; and a proposed amphibian culvert will not be sufficient mitigation.

73 Ms. Minten also gave evidence on her concerns about bats, including endangered bat species, stressing the importance of bats to pest reduction in agriculture because they eat insects. She testified that, although the NHA did not identify significant bat habitat in the area, she has seen bats in the vicinity of homes and barns in the area. She stated that damage to bats' nesting sites and fatalities caused by wind turbines would have a significant impact on the bats.

74 Ms. Minten raised concerns that stray voltage and ground current from the Project transmission lines would cause adverse health effects on her dairy cattle, including reproductive, digestive and behavioural problems.

75 Ms. Dortmans expressed a number of concerns about how the Project may affect her two properties: the property where her house is located; and a vacant lot that she owns. She provided photographs of snapping turtles on her vacant lot, upon which there is a creek and wetlands. She expressed concern that the Project is located in an environmentally sensitive area.

76 Mr. Lewis showed a video that addressed the complexity of ecology and the importance of preserving wildlife and wildlife habitat.

Evidence of the Respondents respecting other Wildlife Species and Dairy Cattle

77 Dr. Kerlinger provided his opinion that the Project would have no impact of any significance on the bobolink or eastern meadowlark for the following reasons: these species are not present in the Project area in significant numbers; there is no significant habitat, such as large, high-quality grasslands fields, present in the Project area; there will be no bobolink habitat removal and only negligible eastern meadowlark habitat removal; and bobolink and eastern meadowlark are at very low risk of mortality from wind energy projects in general based on his research.

78 Mr. Ryckman testified that there is not a significant amount of suitable habitat present for either the bobolink or eastern meadowlark in the Project area, and that no bobolink habitat disturbance is expected to occur due to the Project. He said that minimal temporary eastern meadowlark habitat removal would occur after the breeding season, but considerable habitat restoration would occur prior to the next breeding season and there would be negligible long-term removal. He also gave evidence concerning the mitigation measures relating to the bobolink and eastern meadowlark, and gave evidence that these species are rarely impacted by turbines and that the risk of mortality or displacement at this Project is minimal.

79 Mr. Ryckman also provided his opinion that the Project is unlikely to have any impact on snapping turtles or their habitat, and will not have any population level impact. He based this opinion on the following: the NHA determined there was no significant snapping turtle habitat in the Project area; no snapping turtles were observed in the Project area during fieldwork; and the wetlands in the Project area are not expected to be affected by the construction or operation of the Project. He said that Ms. Minten's and Ms. Dortmans' observations of snapping turtles on their properties may indicate significant habitat in the vicinity, but testified that there is no significant habitat within the Project area. He stated that there would be no Project construction in wetland areas. He further stated that, in his opinion, additional road traffic during the construction period would be marginal compared to existing road use and would not increase the risk to turtles.

80 Mr. Ryckman gave opinion evidence that the Project would not have any significant impact on bats or their habitats. He stated that the level of bat activity and habitat at the Project location is relatively low because the landscape is not suitable bat

habitat, and there are no bat hibernacula and there is relatively little maternity colony habitat. He said there was no evidence that the Project area is a migratory pathway for bats. Mr. Ryckman testified that there would not be any removal of significant bat habitat during the construction and operation of the Project, and that the bat mortality risk from the Project is very low. He noted that the endangered bat species are listed as endangered due to the impact of White Nose Syndrome and not wind projects. He also noted the mitigation measures to reduce risk and minimize any impact on bats. With respect to bats in houses, he testified that houses are not considered significant habitat by the MNR, but that the risk of harms to those bats is also minimal.

81 Mr. Ryckman concluded with his opinion that the Project would not cause any significant harm to any of these species or their habitat.

82 James Arkerson, who was called as an expert witness by the Approval Holder, was qualified by the Tribunal as an expert in the design and operation, and management of electrical issues related to transmission lines. He provided his opinion that the design of the Project transmission system would comply with applicable Ontario regulations, including the Electrical Safety Code.

83 The focus of Mr. Arkerson's testimony was on the potential for stray voltage to have an impact on human health, and this is described in greater detail in that section below. He acknowledged that the Electrical Safety Code is based on human interaction with electricity, although he said that the testing that produced the values used in modern safety codes included animal testing. He testified that stray voltage may occur on surfaces that animals contact, and explained why it would not be created given the design of the Project transmission lines. In his opinion, the design of the Project transmission system would ensure safe levels of stray voltage, ground current, induced current and harmonics.

Submissions of the Participant respecting other Wildlife Species and Dairy Cattle

84 Ms. Minten submits that the assessment of bat maternity colonies and hibernacula in the NHA is flawed, and that many of the individuals who conducted the bat monitoring were inexperienced. She further submits that the mortality threshold of bats permitted for the Project is too high. She also asserts that the NHA studies should have identified snapping turtles and their habitat in the area.

85 Ms. Minten argues that Approval Holder too easily deemed species and habitats to be insignificant during its site investigations. She submits that wildlife, the environment and farmland will be seriously harmed by the Project and requests that the REA be revoked.

Submissions of the Respondents respecting other Wildlife Species and Dairy Cattle

86 The Approval Holder submits the evidence of Ms. Minten and Ms. Dortmans amounted, at most, to general expressions of concern regarding potential risk to wildlife, and notes that neither are expert witnesses. The Approval Holder further submits that they did not lead any evidence to establish that the Project will cause serious and irreversible harm.

87 The Approval Holder asserts that the evidence of Dr. Kerlinger and Mr. Ryckman demonstrated that the Project would not have any significant impact on the species of wildlife identified by Ms. Minten and Ms. Dortmans, or the habitats of these species.

88 The Approval Holder submits that, based on Mr. Arkerson's evidence, the transmission line meets or exceeds all relevant Ontario safety requirements, and stray voltage, ground current, induced current and harmonics will be kept to safe levels.

89 The Director's submissions support those of the Approval Holder. The Director submits that the evidence provided by the Appellants, Ms. Minten and Ms. Dortmans was not sufficient to meet the statutory test that the Project will cause serious and irreversible harm. The Director further submits that Dr. Kerlinger provided un-contradicted opinion evidence that the Project would not cause any significant impact to bobolinks or eastern meadowlarks, and Mr. Ryckman provided un-contradicted opinion evidence that the Project would not cause any significant impact to bobolinks or eastern meadowlarks, snapping turtles or bats.

Findings respecting other Wildlife Species and Dairy Cattle

90 As stated above, the Appellants bear the onus, under s. 145.2.1 of the *EPA*, of proving that engaging in the Project in accordance with the REA will cause serious and irreversible harm to plant life, animal life or the natural environment.

91 Ms. Minten and Ms. Dortmans raised concerns regarding potential impacts of the Project on a number of wildlife species, including bobolink, eastern meadowlark, snapping turtles and bats, which they said they had observed in the Adelaide Metcalfe area. Ms. Minten and Ms. Dortmans, however, were not qualified to give opinion evidence. As noted in the evidence section above, Mr. Ryckman and Dr. Kerlinger specifically addressed the concerns raised about the different wildlife species, and provided opinion evidence that the risk to these species from the Project would be minimal.

92 Given the nature of the evidence before it, the Tribunal was not provided with sufficient information to make a determination regarding the appropriate population scale to consider in assessing harm with respect to the wildlife species noted by Ms. Mintens and Ms. Dortmans. Based on the evidence before it, the Tribunal finds that the Appellants have not met the onus of showing that engaging in the Project in accordance with the REA will cause serious and irreversible harm to any wildlife species regardless of which scale is used.

93 Ms. Minten also testified to her understanding of the potential for stray voltage to affect cattle on her dairy farm. Mr. Arkerson provided his opinion that the Project transmission system design would ensure that stray voltage, ground current, induced current and harmonics would be kept to safe levels.

94 As noted in greater detail below respecting stray voltage and human health, the Tribunal found that Ms. Minten, who testified as a fact witness in this proceeding, should be allowed to express her views concerning the impacts of stray voltage, and accepted that, where appropriate, she could refer to scientific, technical or other forms of expert information, solely on the basis that it informs or clarifies her views, but not as proof of such supporting information.

95 The Tribunal finds that Ms. Minten's evidence in respect of stray voltage is technical and scientific evidence for which opinion or interpretative evidence is required. Ms. Minten's evidence can only be accepted as a statement of her concerns respecting the issues she has raised. Mr. Arkerson was qualified to give opinion evidence in this area. Accordingly, his is the only opinion evidence before the Tribunal in this proceeding. As Mr. Arkerson's expert opinion evidence has not been contradicted by any expert evidence adduced by the Appellants, the Tribunal finds that the Appellants have failed to establish that engaging in the Project in accordance with the REA will cause serious and irreversible harm to dairy cattle.

Findings on Issue No. 1

96 Based on the evidence before the Tribunal, the Appellants have not met their onus to prove that engaging in the Project in accordance with the REA will cause serious and irreversible harm to plant life, animal life or the natural environment.

Issue No. 2: Whether engaging in the Project as approved will cause serious harm to human health.

Noise

Evidence of the Appellants respecting Noise Impacts

97 William Palmer, who appeared as a witness on behalf of Ms. Wrightman, was qualified by the Tribunal to give opinion evidence regarding the application of engineering principles to risk and public safety assessment and in the area of acoustics. Mr. Palmer, a retired professional engineer, began conducting acoustics research in relation to wind farms after a wind farm was proposed near his home. Prior to his retirement, he worked in various roles at Ontario Power Generation's Bruce Nuclear Power facility, including as a section manager for operations performance assessment, a reactor safety superintendent and a training and safety superintendent.

98 Mr. Palmer gave evidence, based on information from the 2013 Wind Turbine Noise Conference in Denver, Colorado. He stated that the most up-to-date science shows that: International Standard ISO 9613-2, *Acoustics — Attenuation of sound during propagation outdoors — Part 2: General method of calculation* ("ISO 9613-2") underestimates the highest sound levels received at receptors; weather and ground attenuation can give a 14 decibel ("dB") variability in expected wind turbine sound level; and amplitude modulation has been shown to occur 18% of the time at 1 km and 44% of the time at 500 m.

99 Mr. Palmer testified that cyclical amplitude modulation in the sound emitted by wind turbines is the predominant cause for complaints, and that measuring the one hour average sound level will not be sufficient to determine the annoyance level for a cyclically varying sound. He stated that the sound of wind turbine equipment at 40 A-weighted decibels ("dBA") is not the same as an office ventilation system at 40 dBA because of the cyclical amplitude modulation of wind turbine sound. He noted that international experience, based on the scientific papers at the 2013 Denver conference, showed that annoyance may occur even where regulatory limits are met.

100 Mr. Palmer stated that a higher wind shear coefficient should have been used in the Noise Impact Assessment ("NIA") for the Project. He said that the values permitted by the MOE for ground attenuation factor, temperature and humidity underestimate sound levels, compared to a worst-case predictable value in winter conditions. He also noted the acoustic emissions of the turbine used in the NIA did not match the Wind Turbines Specifications Report provided with the application for the Project.

Evidence of the Respondents respecting Noise Impacts

101 Shant Dokouzian, who was qualified by the Tribunal to give opinion evidence as an engineer with expertise in noise and shadow flicker, and the design, impact assessment and post-construction monitoring of wind farms, testified on behalf of the Approval Holder. He is the Team Leader for project development services at GL Garrad Hassan, a consultant for the Approval Holder, and was the lead engineer for the NIA conducted for the Project.

102 Mr. Dokouzian described the NIA conducted for the Project, as required by O. Reg. 359/09, and testified that the NIA concluded that the Project is predicted to operate in compliance with the sound level limits in the MOE's October 2008 Noise Guidelines for Wind Farms ("Noise Guidelines"), at all receptor points within 1,500 m of the Project turbines. He stated that the noise predictions for the Project used conservative assumptions to address the predictable worst-case scenario. He said that the NIA took into consideration the potential noise contributions from other wind farms within 5 km of the Project.

103 In response to Mr. Palmer's evidence about amplitude modulation, Mr. Dokouzian testified that the MOE's sound level limits account for noise variability as they are expressed in terms of the hourly, A-weighted, equivalent sound level, which is a widely adopted environmental noise measurement. He stated, in his Reply Witness Statement, that the Noise Guidelines provide that no special adjustments are necessary to address the variation in wind turbine sound level.

104 Mr. Dokouzian also addressed Mr. Palmer's concerns about wind shear, noting that wind shear is an adjustment to a turbine manufacturer's specified acoustic emissions for a specific turbine at a specific site, and is only significant to the extent that the model does not use the maximum sound power level. He stated that the wind shear value of 0.35 in the Project NIA resulted in the use of the maximum sound power level at each of the wind speeds modelled, meaning that a higher wind shear value would not have made a difference to the results.

105 Mahdi Zangeneh, who was qualified by the Tribunal to give opinion evidence as a noise engineer with experience and expertise in the application of MOE's Noise Guidelines, appeared on behalf of the Director. He is a senior noise engineer at the MOE and was the review engineer responsible for the Project NIA.

106 Mr. Zangeneh testified that the Project NIA complied with the requirements of the MOE's Noise Guidelines, incorporating the predictable worst-case scenario. He provided his opinion that application of the Noise Guidelines results in a conservative prediction due to both the assumption that all turbines are always propagating sound downwind towards each noise receptor, and the need to account for the noise contributions of all turbines within a 5 km radius of a receptor.

107 In response to Mr. Palmer's concerns in relation to the MOE's values for ground attenuation factor, temperature and humidity, Mr. Zangeneh noted the MOE's position that noise surveys and acoustical modelling should be done in seasons when members of the public are likely to keep windows open and spend more time outdoors, so that the predictable worst-case scenario incorporates spring, summer and early fall conditions.

108 In response to the issues raised by Mr. Palmer concerning amplitude modulation and wind shear, Mr. Zangeneh gave evidence consistent with that of Mr. Dokouzian. He also stated that, at the minimum setback distance of 550 m, amplitude modulation is significantly reduced, and the sound level of 40 dBA from wind turbines is comparable to the same sound level from other types of equipment. He pointed out that the REA includes conditions requiring that an independent acoustical consultant prepare an acoustical audit, which is to be submitted to the Director.

109 In response to Mr. Palmer's evidence that the acoustic emissions of the turbine used in the NIA do not match the Wind Turbines Specifications Report, Mr. Zangeneh testified that the April 25, 2013 NIA is based on a new turbine with a Low Noise Trailing Edge ("LNTE") blade, while the Wind Turbine Specifications Report was based on an earlier model without LNTE, and that the REA was granted for the LNTE turbines.

110 In response to concerns expressed by Ms. Wrightman, Mr. Zangeneh noted the NIA predicted that the sound level for Adelaide-W.G. MacDonald Public School would be 34.9 dBA outside the school, measured at 4.5 m above grade. His own calculation of the sound level was 34.8 dBA. He added that the sound level would be about 32.9 dBA at the ear level of children in the playground, and that the sound level inside the school would be approximately 10 dBA lower.

Submissions of the Appellants respecting Noise Impacts

111 MLWAG and Mr. Wrightman submit that there were numerous errors in the assessments of the Project's noise impact by Mr. Dokouzian and Mr. Zangeneh.

Submissions of the Respondents respecting Noise Impacts

112 The Director submits that Mr. Palmer's evidence on noise is, at most, a critique of the Noise Guidelines and a wish list for parameters to be included in a noise assessment.

113 The Approval Holder submits that Mr. Palmer's evidence about the variability of wind turbine noise does not assist the Tribunal in determining the issue under s. 145.2.1(2)(a) of the *EPA*, and maintains that his concern about the variability of wind turbine noise is plainly directed at establishing that the Project will operate out of compliance with the REA. The Approval Holder submits that the *EPA* requires the Tribunal to assume there will be compliance with the REA, so Mr. Palmer's assertions are irrelevant to this proceeding. The Approval Holder further submits that, to the extent Mr. Palmer's evidence is directed at establishing that wind turbine noise might result in a health related annoyance, such opinion is clearly beyond Mr. Palmer's expertise.

Findings respecting Noise Impacts

114 The Appellants' position is that the REA should be revoked. Under s.145.2.1 of the *EPA*, respecting the ground of harm of human health, the Tribunal has the jurisdiction to do so, only if an appellant establishes that engaging in the Project in accordance with the REA will cause serious harm to human health (the "Health Test"). O. Reg. 359/09, made under the *EPA*, requires that an approval holder conduct noise modelling in accordance with the Noise Guidelines. Under this regulatory regime, the maximum sound level limit applicable to the Project is 40dBA for wind speed from 4 to 6 m per second, and slightly higher levels for higher wind speeds. These sound levels are measured at "receptors" as this term is defined in the Noise Guidelines. For ease of reference, the Tribunal more simply describes the noise level requirement as being 40 dBA. This requirement is expressly incorporated in Part C of the REA. Consequently, the Appellants must demonstrate that the Health Test will be met at sound levels at 40 dBA or less before the Tribunal would have jurisdiction to revoke the REA. If the Appellants establish that engaging in the Project will result in a sound level which exceeds 40 dBA, then the Director would be required to take action to

ensure the Approval Holder's compliance with the REA. However, this still would not satisfy the requirements that must first be met under the Health Test, before the Tribunal would have jurisdiction to revoke the REA.

115 It is important to understand this regulatory context, when considering the evidence regarding noise modelling required under the Noise Guidelines. In this appeal, the noise modelling conducted by the Approval Holder's consultant has been adduced by the Approval Holder in response to the evidence which has been adduced by the Appellants to meet their onus to establish that the Health Test has been met. To meet their onus, it is not sufficient that the Appellants establish only that the results of the noise modelling may not be accurate. The Appellants have a positive onus to establish that noise levels at or below 40 dBA will cause serious harm to human health.

116 Regarding the opinion evidence adduced by the Appellants respecting the noise modelling conducted by the Approval Holder's consultant, the Tribunal finds that this opinion evidence, assessed from a perspective that is the most favourable to the Appellants, only establishes that there are conflicting opinions regarding: (i) the accuracy of the data inputs used to conduct the noise modelling; (ii) the impact of weather and ground attenuation on sound levels; (iii) the extent to which the noise modelling accounts for amplitude modulation, and the extent to which such modulation is reduced at the minimum setback distance of 550 m; and (iv) the extent to which the noise modelling represents a conservative estimate. Therefore, the Tribunal finds that the evidence adduced by the Appellants falls short of establishing that the sound levels are higher than those predicted by noise modelling conducted on behalf of the Approval Holder. Even if it did, the test, as noted above, is that the Health Test must be met at sound levels of 40 dBA or less. At most, this evidence would establish that the Director would be required to take action to ensure the Approval Holder's compliance with the REA. In this regard, the Tribunal notes that the Director has proactively addressed this matter, as section F of the REA requires an acoustical audit, by an independent acoustical consultant, once turbines have been constructed.

117 The Tribunal notes that Mr. Palmer, in his written Witness Statement, acknowledges that his testimony is primarily focussed on public safety and the impact of public safety on human health, and that he only briefly comments on the matters relating to noise. The Tribunal notes that his opinions addressed the above-mentioned concerns respecting the noise modelling, but he did not personally conduct or provide any noise modelling assessment or study, or other specific data respecting predicted noise levels for any of the Project components.

118 As noted above, Mr. Dokouzian testified that the Noise Guidelines account for noise variability as they are expressed in terms of the hourly, A-weighted, equivalent sound level, which is a widely adopted environmental noise measurement. He also stated that the Noise Guidelines provide that no special adjustments are necessary to address the variation in wind turbine sound level. Section 6.4.8 of the Noise Guidelines states:

> **6.4.8 Adjustment for Special Quality of Sound**
>
> Should the manufacturer's data indicate that the wind turbine acoustic emissions are tonal, the acoustic emissions must be adjusted by 5 dB for tonality, in accordance with Publication NPC-104, Reference [1]. Otherwise, the prediction should assume that the wind turbine noise requires no adjustments for special quality of sound described in Publication NPC-104, Reference [1].
>
> No special adjustments are necessary to address the variation in wind turbine sound level (swishing sound) due to the blade rotation, see Section 4. This temporal characteristic is not dissimilar to other sounds to which no adjustments are applied. It should be noted that the adjustments for special quality of sound described in Publication NPC-104 were not designed to apply to sounds exhibiting such temporal characteristic.

119 Section 4 of the Noise Guidelines states:

> In general, the significant noise sources associated with the operation of a Wind Farm are the wind turbines and the Transformer Substation.

> Noise from wind turbines consists of the aerodynamic noise caused by blades passing through the air, and mechanical noise created by the operation of mechanical elements of the drive-train. Close to the turbine, the noise typically exhibits a swishing sound as the blades rotate; and the whirr of the drive-train and generator. However, as distance from the turbine increases, these effects are reduced. The wind turbine noise perceived at receptors is typically broadband in nature. Any tonal character associated with the wind turbine noise is generally associated with maintenance issues.

120 The import of Mr. Palmer's evidence is that this averaging does not account for the impact of amplitude modulation, a component of wind turbine noise where noise levels periodically fluctuate. Such amplitude modulation is commonly referred to as "blade swish". Consequently, there clearly is a difference of opinion whether the effects of amplitude modulation are adequately assessed by noise modelling conducted in accordance with the Noise Guidelines.

121 While Mr. Palmer did speak to annoyance, he only made general reference to papers presented at a 2013 Wind Turbine Noise Conference which he attended. He states that papers presented at this conference indicate that it is the special characteristics of the sound which caused annoyance, not just amplitude modulation. He did not provide any analysis respecting the effects of noise attenuation, particularly as it specifically relates to wind turbines in the Project, nor any analysis of the effects of amplitude modulation where the hourly, A-weighted, equivalent sound level is 40 dBA or less, other than to assert that annoyance is expected to occur. However, Mr. Palmer does not assert that he is qualified to give opinion evidence of the impact of annoyance on human health.

122 In light of this difference of professional opinion as to whether the effects of amplitude modulation are adequately considered and addressed by the Noise Guidelines, and absent any more detailed evidence regarding these effects, particularly as they apply to the Project wind turbines, the Tribunal finds this evidence, at best, is exploratory in nature. In *Erickson v. Ontario (Director, Ministry of Environment)*, [2011] O.E.R.T.D. No. 29 (Ont. Environmental Review Trib.) *("Erickso*n"), at para. 838, the Tribunal states "It is, therefore, no surprise that the legal test, which requires proof of harm, has not been satisfied when the applicable scientific evidence is in such an early stage of development." The Tribunal, in this case, finds this conclusion applies equally to the sound level evidence adduced in this proceeding.

123 In summary, the Tribunal finds that the Appellants' evidence respecting noise does not establish that the Health Test has been satisfied.

Health Impacts generally

Evidence of the Appellants, Participant and Presenters respecting Health Impacts generally

124 Mr. Wrightman called, as witnesses, four individuals who live in the vicinity of existing wind turbine projects in Ontario, who each report that they have experienced adverse health effects, which they assert have been caused by these wind turbine projects (the "post-turbine witnesses").

125 The post-turbine witnesses testified concerning a range of adverse health effects that one or more of them had experienced, including: nausea; headaches; sinus pressure and pain; dry eyes; sleep disturbance; mood swings; emotional instability; depression; vibrations in the body; heart palpitations; loss of concentration and memory; ringing in the ears; swollen glands; vertigo; and dizziness. In addition to their oral testimony, the post-turbine witnesses provided the Tribunal with witness information forms and the medical records that they were able to obtain.

126 The post-turbine witnesses gave evidence that these adverse health effects began at the time that the wind farm near them began to operate, or shortly after that. They stated that when they are away from the wind farm, they experience relief from their symptoms, and that their symptoms return when they go home. They testified to their belief that their adverse health effects are caused by their exposure to the wind farm project.

127 While some of the medical records provided by the post-turbine witnesses included documents setting out medical opinions respecting specific conditions, none of these witnesses provided a medical opinion that attributed exposure to the wind farm project as the cause of their symptoms.

128 Ms. Wrightman raised concerns that the Project would have adverse effects on the health of her own children and other children who attend Adelaide-W.G. MacDonald Public School. She testified to her understanding that there will be 11 wind turbines from the project within 2 km of the school, 15 turbines within 3 km of the school and 35 turbines within 5 km of the school. She stated that the Approval Holder had advised that the school's noise level would be increased to 35.7 dBA. Ms. Wrightman expressed concern about the impacts of shadow flicker and noise, including both low frequency noise and infrasound, on the children's health and their ability to concentrate and learn at school. She also said that she was concerned that the Project's transmission lines may be located near the school.

129 Ms. Wrightman referenced the World Health Organization ("WHO") definition of "health", which states that health is a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity. She stated that the "human habitat", within which she lives, includes her home, community, surroundings, school and local organizations. She noted that many rural families work and farm together and testified that the Project has created stress in families within the community because some individuals have signed leases for wind turbines and others oppose them. She said that there may be adverse impacts on her health and well-being, and the health and well-being of those in her community, because these family and social units are threatened by the Project.

130 Ms. Minten also expressed concerns about the impacts of the Project on human health. She gave evidence that she had lived near a small (100 foot, 30 kilowatt) wind turbine, which became operational on the farm in 2006. She said that she did not become ill enough to go to a doctor and has no medical records, but stated that she did experience shadow flicker that was, at times, disorienting. She testified that she was aware of a pulsating noise that frequently woke her at night and contributed to tiredness. Ms. Minten also raised concerns about: electromagnetic hypersensitivity; impacts of sleep disorders on the farming community; health risks of noise for children; health effects of financial stress; and health inequality in rural Ontario.

131 Mr. Lewis showed a video relating to his concerns about wilful blindness in organizations and institutions concerning adverse health impacts. He emphasized the importance of speaking out about his concerns regarding impacts on health.

132 Ms. Dortmans testified that she lives on a road that will be a main access road to the Project, with collector lines for five of the turbines. Her house is close to the road, and she is concerned about adverse effects on her family's health due to the air quality and water well impacts of gravel dust and diesel exhaust from trucks during Project construction, and due to power surges from the collector lines. She also raised concerns about traffic safety as her children play outside, cycle on the road and travel on a school bus that uses the road. Ms. Dortmans also gave evidence concerning her concerns about the health impacts of noise and shadow flicker from the ten turbines that will be within 10 km of her home, and the potential impacts if she builds a home on her vacant property, as planned.

133 Ms. Johnston raised concerns about the legislative and policy framework governing the assessment of the impact of the Project on human health. She testified that the Haldimand-Norfolk Health Board and Health Unit, and the acting Haldimand-Norfolk Medical Officer of Health, have refused to engage with Ontario's Chief Medical Officer of Health to determine whether a health hazard exists, under the *Health Promotion and Protection Act*, in response to concerns raised in a petition and deputation. She also raised concerns about wind energy.

Evidence of the Respondents respecting Health Impacts generally

134 The Director and the Approval Holder did not call any witnesses specifically to respond to the Appellants' evidence. Instead, the Director and the Approval Holder rely on their cross-examination of the Appellants' witnesses.

Submissions of the Appellants and Participant respecting Health Impacts generally

135 Ms. Wrightman submits that the children at Adelaide-W.G. MacDonald Public School will be affected by the wind turbines in the Project, and are at risk of severe harm. She further submits that the Project will impact the learning environment at the school. She argues that many Adelaide Metcalfe area residents will experience adverse health effects, such as sleep disturbance, vertigo, migraines and depression, from the turbines.

136 Ms. Wrightman asserts that the Project will have adverse effects on human health, as defined by the WHO, including impacts on income and social status, social support networks, employment, working conditions, social and physical environments and healthy child development.

137 Ms. Minten states that, in the course of the past months, she heard more and more stories of people who are being affected in negative ways from wind turbines in Southwestern Ontario. Although she acknowledges that she is not a qualified medical expert, she asserts that even qualified medical experts, and the current medical research surrounding industrial wind turbines, are unable to answer the questions that should be answered first, before construction and operation of the Project.

Submissions of the Respondents respecting Health Impacts generally

138 The Approval Holder submits that the Appellants have fallen short of meeting their onus of proving on a balance of probabilities that engaging in the Project in accordance with the REA will cause serious harm to human health. The Approval Holder notes that the Appellants did not call any expert evidence on the human health effects of noise. The Approval Holder says that, at most, the Appellants, participant and presenters have raised concerns about the potential for harm from the Project.

139 The Approval Holder asserts that the Tribunal should not give any weight to lay evidence about what has been said about the health effects of noise in the publications of various experts, which is hearsay, and notes that any statements of opinion offered by lay witnesses is inadmissible. The Approval Holder also asserts that some of the Appellants' evidence was directed at establishing that the Project will operate out of compliance with the REA, and that the Tribunal must assume that the Project will operate in accordance with the REA, which includes a condition requiring compliance with the MOE's noise level limits. The Approval Holder submits that Mr. Palmer's evidence on amplitude modulation was also directed at establishing that the Project will operate out of compliance with the REA.

140 With respect to the evidence of the post-turbine witnesses, the Approval Holder notes that no health professionals were called to testify to any diagnoses reflected in their medical records, and that the medical records entered as exhibits at the hearing have not been admitted for the truth of the contents. The Approval Holder observes that none of the medical records contained any diagnosis by a medical professional that an illness had resulted from exposure to wind turbines.

141 The Approval Holder submits that the Tribunal should find, consistent with its findings in *APPEC*, at para. 176, that the individual experiences of the post-turbine witnesses cannot be extrapolated to conclude that engaging in the Project, in accordance with the REA, will cause serious harm to human health because it has not been proven that their health complaints were caused by wind turbines. The Approval Holder argues that, to the extent that Mr. Palmer's evidence was directed at establishing that wind turbine noise might result in a health-related annoyance, such an opinion is beyond his expertise.

142 The Approval Holder submitted that the following issues raised by the participant and presenters are beyond the scope of the health appeals either because they do not relate to human health or were not raised in the notices of appeal: Ms. Dortmans' construction-related concerns, Ms. Johnston's complaints about wind energy; and Ms. Minten's concerns about financial stress and health inequality.

143 The Approval Holder summarizes its position, submitting there is no evidentiary basis on which the Tribunal could conclude that noise from the Project will be an issue, let alone cause serious harm to human health. In support of this position, the Approval Holder maintains that: there was a complete dearth of expert evidence on the impact of noise on human health; the Appellants relied on evidence that has already been rejected in previous cases before the Tribunal (i.e., the post-turbine witnesses' evidence); the evidence that the Tribunal heard from those opposed to the project was limited to expressions of

concern that were, at best, speculative; and the limited expert evidence that the Tribunal heard from the Appellants was not health-related, and focused on a matter (alleged non-compliance with the REA) that is irrelevant to the statutory test.

144 The Director's submissions support those of the Approval Holder. The Director submits that the Appellants have not brought any new evidence that would warrant a conclusion that is different from previous Tribunal cases in relation to harm to human health, and did not provide any expert medical evidence.

145 The Director notes that none of the post-turbine witnesses provided noise level measurements to assist the Tribunal in determining whether they were experiencing symptoms at sound pressure levels below 40 dB, and that the turbines located near the homes of the post-turbine witnesses are not the same as those approved in the Project REA.

Findings respecting Health Impacts generally

146 The Tribunal first turns to the evidence of the post-turbine witnesses. It is not disputed that each of these witnesses have previously testified, among others, in one or more proceedings before the Tribunal, including *APPEC* and *Bovaird v. Director, Ministry of the Environment*, 2013 CarswellOnt 18046 (Ont. Environmental Review Trib.) ("*Bovaird*"). Their testimony in this proceeding is consistent with their testimony in those other proceedings. In *Bovaird*, paras. 300 and 301 summarize the evidence given by the post-turbine witnesses in that proceeding:

> All of the post-turbine witnesses provided a witness information form which essentially sets out their responses to a list of questions regarding their medical history, self-reported health symptoms, and other personal information. They each provided medical records that they were able to obtain in time to present at the hearing. Some of these medical records included documents setting out medical opinions respecting specific conditions. None of these witnesses provided a medical opinion which attributed exposure to wind project components as the cause of their complaints. ... Despite any pre-existing medical condition these witnesses may have, they each testified that, after the wind turbines became operational in their environs, they have experienced adverse health effects which they had not experienced before. They state their views that exposure to the wind farm project in the vicinity of their residences has caused these adverse health effects. They maintain that they had no negative perceptions or expectations respecting the impacts of wind turbine projects prior to experiencing adverse health effects.
>
> They cite one or both of the following reasons to support their assertion regarding causality:
>
> • The adverse health effects they have experienced manifested when the wind farm project commenced operation, or shortly thereafter, and they have been unable to find any other explanation for their condition; and
>
> • They have gained respite from their various symptoms when they leave their homes, more specifically, when they are no longer in the vicinity of the wind farm for a period of time (where symptom relief is either immediate or gradual). Their symptoms resume upon returning to their homes either immediately or shortly thereafter.

147 The Tribunal finds that this is an accurate summation of the evidence adduced by the post-turbine witnesses in this appeal.

148 In *Bovaird*, at para. 313, the Tribunal made the following finding with respect to this evidence:

> The Tribunal does not question the sincerity of the post-turbine witnesses in giving their evidence. They acknowledge that the identification of their adverse health effects is through their own self-diagnosis. They also acknowledge that they have reached personal conclusions regarding the issue of causation. Several of them assert that they have had to do so, because they maintain that medical professionals either have no knowledge regarding the effects of wind turbines, or are skeptical or dismissive of the possibility that wind turbines can negatively affect human health. Nevertheless, none of the post-turbine witnesses adduced any medical opinion from their health practitioners which confirms that they have experienced symptoms caused by wind turbines. The Tribunal does not question that the post-turbine witnesses have experienced the symptoms they have described. After all, only they can say how they feel. However, in order to arrive at a reliable conclusion respecting causation, personal assessments which do not consider the full range of potential causes of these

symptoms, are incomplete. Furthermore, the exercise of arriving at a diagnosis requires a level of education, training and experience, which none of the post-turbine witnesses possess. In this regard, the Tribunal notes that in *Kawartha Dairy* [*Kawartha Dairy v. Ontario (Director, Ministry of the Environment)* (2008), 41 C.E.L.R. (3d) 184], the Tribunal found that confirmation of medical conditions requires the diagnostic skills of a qualified health professional. This conclusion was accepted in *APPEC*, and the Tribunal accepts that it applies in the circumstances of this case.

149 While the Tribunal is not bound by the decision in *Bovaird*, the Tribunal finds this analysis is persuasive, and concludes that the above findings apply equally in this case.

150 In addition to the fact that the medical records provided by the post-turbine witnesses do not include any medical opinion that their symptoms are caused by wind turbines, the Tribunal also notes that no other independent medical opinion was adduced as evidence in this regard. As is noted below, the Tribunal excluded the proposed medical opinion evidence of Dr. Nina Pierpont. However, the Tribunal notes that Dr. Pierpont's written Witness Statement did not include any medical diagnosis in respect of any of the post-turbine witnesses.

151 In conclusion, the Tribunal finds, (as the Tribunal found in *APPEC*, at para. 176), that the individual experiences of the post-turbine witnesses who testified in this proceeding cannot be extrapolated to conclude that engaging in the Project, in accordance with the REA, will cause serious harm to human health, because it has not been proven that their health complaints have been caused by wind turbines.

152 The Tribunal now turns to the other more general submissions made by the Appellants, the presenter, and the participants. The Tribunal does not find it necessary to address each submission individually. None of the submissions expressing concerns respecting harm to human health were supported by the expert opinion of a qualified health practitioner. Other submissions, as was the case with Ms. Johnston in particular, only addressed policy considerations. At best, this evidence amounts to the expression of concerns that engaging in the Project will cause harm to human health. The Tribunal finds that these expressions of concern fall short of establishing that engaging in the Project in accordance with the REA will cause serious harm to human health.

Public Safety Risks

Evidence of the Appellants respecting Public Safety Risks

153 Mr. Palmer testified that there would be a risk of ice throw, blade throw, tower collapse and fire from the turbines in the Project, stating that each of these types of failures had already occurred in Ontario. He presented a chart, compiled using data from the Caithness Wind Farm Information Forum website (the "Caithness data") as well as media and industry reports, which listed industrial wind turbine failures internationally from January 2009 to August 2013. Based on his evidence that there were two blade failures and one fire at Ontario turbines in approximately "3400 turbine years in service" during that time period, he estimated the Ontario failure rate to be approximately 0.001 failures per year. Mr. Palmer acknowledged, under cross-examination, that the Caithness organization is concerned about wind farms but said that its data provided a comprehensive list of wind turbine failures.

154 Mr. Palmer also testified, based on his review of reports of wind power developments in the Adelaide Metcalfe area conducted in December 2012, that the Project would pose a threat to human health due to shadow flicker along Highway 402. He stated that 8 km of Highway 402 would be subject to 30 to 59 hours of shadow flicker per year, causing five minutes of sustained shadow flicker for drivers during morning and afternoon, which would be distracting and create an adverse impact on a safe driving environment. He based his analysis on his experience assessing changing radiation fields at the Bruce Nuclear Power facility.

Evidence of the Respondents respecting Public Safety Risks

155 Mr. Greenhouse testified as to the specific measures taken by the Approval Holder to prevent the build-up of ice on turbines and to ensure that safety precautions are taken if ice build-up occurs. He stated that the Approval Holder proactively

shuts down turbines when conditions that would allow for ice build-up are imminent. He noted in his Supplementary Witness Statement that if ice accumulation on the blades is avoided, "the safety risk of falling ice is practically zero." He added that, even if ice were to build up on a rotating blade, the increased load and vibration on the turbine would be detected electronically and the turbine would be shut down automatically and restarted only after a visible inspection, eliminating the risk of falling ice.

156 Mr. Dokouzian provided evidence in response to Mr. Palmer's concerns about ice throw, blade throw, tower collapse, fire and shadow flicker. In his opinion, the risk of harm from ice throw from the Project turbines is very low due to NextEra's ice throw and ice build-up prevention protocol, described by Mr. Greenhouse.

157 Mr. Dokouzian is also of the opinion that the Project would not pose any significant safety risk to the public due to blade failure, tower collapse or fire. He noted that Mr. Palmer's statistics were generated from a very small set of data and therefore prone to statistical error. He also stated that there are no independent sources confirming that blades or tower parts were ejected from the turbines in the two Ontario blade failure events referred to by Mr. Palmer.

158 Mr. Dokouzian testified that blade failure events are rare (1 in 2,400 turbines per year based on 2005 Dutch research by Braam *et al*.) and, when they occur, it is more likely that the damaged structure remains attached to the turbine. He was not aware of any injuries caused by blade failure. He stated that the probability of tower collapse is even lower than that of blade failure (1 in 7,700 turbines per year based on the Dutch research). He also noted that turbine fires are extremely rare and described the safeguards with which modern turbines are equipped.

159 Mr. Dokouzian also addressed the issue raised by Mr. Palmer concerning shadow flicker on Highway 402. He stated that the effect of shadow flicker is much less perceived in a moving vehicle outdoors than inside a dwelling while stationary, due to the diffusion of light outdoors and the lesser exposure time for a driver moving through the area. He further explained the conservative nature of the shadow flicker assessment prepared in relation to the Project.

Submissions of the Appellants respecting Public Safety Risks

160 Ms. Wrightman submits that incidents involving turbines toppling, blade throw and ice throw happen regularly. She says that the minimum regulatory setbacks are not sufficient. She asserts that shadow flicker on Highway 402 will create a hazard that has not been assessed as part of the approval process.

Submissions of the Respondents respecting Public Safety Risks

161 The Approval Holder submits that Mr. Palmer's testimony concerning ice throw, blade failure, tower collapse, fire and shadow flicker does not demonstrate that the Project will cause serious harm to human health. The Approval Holder asserts that Mr. Palmer's evidence merely raised concerns about theoretical risks of harm from wind farms in general, and that Mr. Dokouzian's expert evidence established that the Project, operated in accordance with the REA, will not cause serious harm to human health.

162 The Director submits that Mr. Palmer's statements about the risk posed by ice throw, blade throw, fire or tower collapse are not supported by any evidence, and his opinion should not be given any weight. The Director further submits that assessing risks posed by shadow flicker is different than assessing risks posed by nuclear radiation.

Findings respecting Public Safety Risks

163 In *Erickson*, at para. 629, the Tribunal discussed causation in the context of the "will cause" requirement in the Heath Test, stating:

> With regard to the "will cause" arguments of the Parties, the Tribunal finds that there are some aspects of the case law cited by the Parties which are applicable here. For example, there is a distinction between medical (or scientific) causation and legal causation. The Tribunal is to determine whether specified harms will be caused according to the applicable legal standard, which is a balance of probabilities. That standard is not the exact same standard used by scientists, statisticians or medical experts. The Tribunal will take its direction on determining whether the Appellants have proven that harm will

> be caused according to the legal concepts of proof and causation. In doing so, it will assess the scientific evidence and consider which approaches to causation and proof were used in that evidence.

The Tribunal adopts these findings.

164 Mr. Palmer asserts that serious harm to human health will occur as a result of any of the following events: blade throw, tower collapse, damage resulting from a tower fire, ice throw, and shadow flicker distraction for drivers using Highway 402 (the "public safety events"). It is perhaps trite to observe that the Health Test does not require proof at a level of absolute certainty. Such certainty could only be established once the wind turbines are built and operating, and a public safety event occurs. Instead, an appellant must demonstrate that harm will occur on a balance of probabilities. Accordingly, the Appellants are not required to establish that there is absolute certainty that any of these events will occur. However, it is also important to note that the Director and the Approval Holder, in responding to the Appellants' case, are similarly not required to establish with absolute certainty that any of these events will not occur. Therefore, the probability (risk) that these events will occur, is a relevant consideration when determining whether harm will be caused according to legal concepts of proof and causation.

165 Mr. Palmer was qualified to give opinion evidence regarding the application of engineering principles to risk and public safety assessment. Based on the evidence heard in this proceeding, the Tribunal understands that the key components of such a risk assessment are: (i) to identify plausible events that could cause serious harm to human health; (ii) determine the probability that such types of event will occur; and (iii) determine the probability that such an event, if it did occur, will cause serious harm. In terms of legal concepts of causation, the Tribunal will also consider whether mitigation measures are available to reduce this risk, and, if so, to what extent.

166 No one disputes that each of the public safety events identified by Mr. Palmer could potentially occur. However, the Respondents dispute that shadow flicker distraction for drivers using Highway 402 could result in serious harm. Respecting the other public safety events, they dispute both Mr. Palmer's assessment of the probability that these events will occur, and his assessment of the probability that serious harm would be caused if an event occurred.

Shadow Flicker

167 The Tribunal first addresses the issue of shadow flicker affecting drivers using Highway 402. The Tribunal notes that, in his evidence, Mr. Palmer baldly states that shadow flicker will occur and states his opinion that it will distract drivers. However, Mr. Palmer was not qualified to give opinion evidence on the impact of shadow flicker. The Tribunal notes that this would not preclude him from addressing shadow flicker in his risk assessment, but it does require him to include in his assessment, technical information from a reliable source respecting the nature of the shadow flicker to be produced by the 14 Project wind turbines which he states will be situated along Highway 402. In this regard, Mr. Palmer relies on the Shadow Flicker Assessment conducted on behalf of Approval Holder. He acknowledges that this assessment confirms that Highway 402 will be subject to 30 to 59 hours of shadow flicker per year. However, he critiques this assessment, stating:

> This value assumes average hours of sunshine per day, yet what it does not say is that, for many days of the year, drivers along a major traffic artery will be subjected to not only the distraction of moving wind turbines along side of the highway at a setback of barely 120 metres, but also will be subject at this distance to an immersion in pronounced shadow flicker for 5 minutes during morning and afternoon. It is clear that this will have an adverse impact on the safe driving environment for many drivers. This highway traffic safety issue is not addressed in the shadow flicker report.

168 The Tribunal notes, however, that Mr. Palmer does not provide any explanation or definition for what he describes as "pronounced shadow flicker", or how he determined that it will occur for five minutes during the morning and afternoon. In addition, Mr. Palmer does not provide any explanation, nor was he qualified to give opinion evidence, on how a driver might respond to such flicker, and, to the extent it caused distraction, whether the nature of the distraction could interfere with a driver's ability to safely drive the vehicle. The Tribunal also notes that, in cross-examination, Mr. Palmer acknowledged that he had no statistical evidence demonstrating that people driving by wind farms are in fact distracted by shadow flicker, and admitted that he is not aware of any accidents having been caused by shadow flicker. In his evidence, Mr. Palmer simply assumes both

that distraction will occur and that it will interfere with driver safety. The Tribunal finds this to be a significant deficiency in his assessment.

169 Mr. Dokouzian was qualified to give opinion evidence on shadow flicker. He conducted a shadow flicker assessment for the Project, and it was his un-contradicted opinion that the effect of shadow flicker is much less perceived in a moving vehicle outdoors than inside a dwelling while stationary, due to the diffusion of light outdoors and the lesser exposure time for a driver moving through the area.

170 In light of the deficiency in Mr. Palmer's assessment and the un-contradicted opinion evidence of Mr. Dokouzian, the Tribunal finds that the Appellants have not established that shadow flicker will cause serious harm to drivers on Highway 402.

Ice throw

171 No one disputes that a person could be seriously harmed, if struck by ice thrown from a wind turbine blade. However, the Tribunal finds that Mr. Palmer's assessment in respect of ice throw from wind turbine blades only establishes that this is a plausible event. In this regard, the Tribunal notes that he does not provide any information or analysis respecting the formation of ice on wind turbine blades, or the incidence and conditions where such an event may have occurred in the past. He only provides an assertion that Project wind turbines are located sufficiently close to Highway 402 and other receptors to impact them by ice throw. Furthermore, his assessment does not contain any technical information respecting the Project wind turbines related to the management of ice conditions to prevent ice build-up on turbine blades. The Tribunal finds this to be another significant deficiency in his assessment.

172 The Approval Holder has provided detailed evidence related to the management of ice conditions to prevent ice build-up on turbine blades, which has been summarized earlier in this decision. Mr. Dokouzian, who was qualified to give opinion evidence respecting this matter, has expressed his opinion that the safety risk of falling ice is practically zero. This evidence was not contradicted.

173 In light of the deficiency in Mr. Palmer's assessment and the un-contradicted opinion evidence of Mr. Dokouzian, the Tribunal finds that the Appellants have not established that ice throw from wind turbine blades will cause serious harm to human health.

Blade throw, tower collapse, damage resulting from a tower fire

174 Blade throw, tower collapse, and damage resulting from a tower fire are collectively referred to as "turbine failure". Blade throw refers to an event whereby a turbine blade becomes detached from the hub and, if the turbine blades are spinning, will then be thrown some distance from the turbine tower. This could be caused by mechanical failure, or due to damage if the wind turbine catches fire. Collapse of the wind turbine tower could similarly occur due to mechanical failure or if the tower catches fire. The Tribunal first turns to an evaluation of how these events could plausibly result in serious harm to human health. In his assessment, Mr. Palmer referred to a report, described only as the "Copes report" which he states identifies that blade parts have been known to have travelled to a distance of 500 m from a wind turbine base. He also refers to a report that, due to a turbine fire at the Kingsbridge I Wind Project North of Goderich, Ontario, burning parts have travelled up to 200 m from the wind turbine tower. Mr. Palmer noted that, in this case, the collapse of a Project wind turbine "can put blade parts...at distances of over 130 metres from the tower". Mr. Palmer also provided a listing of source data describing wind turbine failures at wind farm projects worldwide from January 2009 to August 2013, which he obtained from the Caithness data. In cross-examination, Mr. Palmer acknowledged, as noted above, that the Caithness organization is a group of people concerned about wind farms, and stated that it is a member of a European association of groups which oppose wind farms.

175 The Respondents did not dispute that these are plausible events which could cause serious harm to human health. However, they dispute Mr. Palmer's assessment of the probability that these events will occur. They also maintain that Mr. Palmer did not assess the probability that any of these events would cause serious harm to human health, if these events were to occur. The Tribunal will assess each factor in turn.

176 Regarding the probability that wind turbine failure will occur, Mr. Palmer's assessment does not present a probability for each of these three types of events individually. Instead, he calculates the probability of turbine failure which could include any of the events. His Witness Statement states his conclusion solely in respect of the probability of turbine failure in Ontario, indicating that it is approximately 0.001 failures per year. An alternative way of stating this probability is 1 failure for every 1000 wind turbines each year. Mr. Palmer provides the basis for his calculation. He stated that there were three known incidents of wind turbine failure in Ontario from January 2009 to August 2013, for approximately 3400 turbine years in service during this same time period.

177 In response, Mr. Dokouzian testified that these wind turbine failure events are very rare, and referred to a 2005 Dutch study which states that the risk of blade failure was calculated to be 1 in 2,400 turbines per year and the risk of tower collapse was stated to be 1 in 7,700 turbines per year. He explained that even these low probabilities are very conservative by today's standards, given the evolution and improvement of wind turbine design since 2005.

178 Mr. Dokouzian also expressed his opinion that Mr. Palmer's conclusion respecting the probability of wind turbine failure is unreliable. In support of this opinion, he notes that Mr. Palmer's calculation was based on limited data, restricted to turbine failure events in Ontario, over a limited time period. On this basis he asserts that Mr. Palmer's calculation is statistically unreliable. The Tribunal notes, however, that Mr. Dokouzian was not qualified to give opinion evidence on statistics, so no weight is given to this aspect of Mr. Dokouzian's evidence.

179 The Tribunal finds, however, that Mr. Palmer's assessment did not include consideration of the 2005 Dutch study, nor did Mr. Palmer explain why a calculation of probability should be based on data respecting only wind turbines in Ontario. The Tribunal finds these to be significant deficiencies in his assessment. In this regard, the Tribunal notes that Mr. Palmer did include a calculation of probability for known international events, based on the Caithness data (116 incidents of turbine failures for 570,000 turbine years) which showed that the failure rate is approximately 0.0002 failures per year, but he did not explain why he did not adopt this probability, or factor it into his conclusion regarding what the risk of Project failure would be.

180 In summary, for the purpose of expressing an opinion respecting the probability of wind turbine failure, the Tribunal does not accept that use of only the Ontario data, as Mr. Palmer has done, is adequate. The Tribunal accepts that the Dutch study demonstrates that the probability could be much lower than Mr. Palmer has calculated. However, the Tribunal was not provided with a full report of this study. As such, the Tribunal finds that the evidence adduced in this proceeding is insufficient for the Tribunal draw any firm conclusion regarding the probability that wind turbine failure will occur.

181 The Tribunal now turns to the probability that wind turbine failure, if it occurred, would cause serious harm to human health. It is clear that the mechanism of the harm to be addressed here, is that a person could be seriously injured if struck by any part of the wind turbine. Therefore, key to Mr. Palmer's risk assessment, is the determination of the maximum distance that wind turbine parts may be thrown in the event of turbine failure ("striking range"), and the probability that anyone would be within this striking range. The evidence Mr. Palmer adduced respecting striking range is very limited. As noted above, Mr. Palmer quotes one source as describing an event where blade parts were thrown 500 m. However, he did not provide a copy of this report, nor any description of the wind turbine. Therefore, the Tribunal finds it is not possible to draw any firm conclusion respecting striking range for parts throw for Project wind turbines in this case. The striking range for tower collapse for Project wind turbines is relatively straightforward. It is not disputed that the tower height is 80 m, and the blade length is 50 m, so the maximum striking distance would be 130 m. However, the Tribunal notes that this assumes that a tower falls over without first being itself thrown forward from its base. The Tribunal notes that it did not receive any evidence respecting whether a tower could first be thrown forward from its base if a collapse occurred.

182 The Tribunal observes that, as the striking distances for parts throw and tower collapse appear to be different, the probability of event occurrence should, ideally, be calculated separately for parts throw and tower collapse. As noted above, Mr. Palmer's assessment does not do so. The Tribunal finds this to be a significant deficiency in his assessment.

183 The Tribunal now turns to the probability that anyone would be within these striking ranges. Mr. Palmer correctly points out that the non-participating owner and occupants of a property, which is adjacent to the property on which a wind turbine is situated, are entitled to be present anywhere within the boundary of their property. He notes that s. 53 of O. Reg. 359/09, which specifies the minimum setback distance for wind turbines, states:

> **Class 3, 4 and 5 wind facilities**
>
> 53.(1) No person shall construct, install or expand a wind turbine that is to form part of a Class 3, 4 or 5 wind facility unless,
>
> (a) the distance between the centre of the base of the wind turbine and any public road rights of way or railway rights of way is equivalent to, at a minimum, the length of any blades of the wind turbine, plus 10 metres; and
>
> (b) the distance between the centre of the base of the wind turbine and all boundaries of the parcel of land on which the wind turbine is constructed, installed or expanded is equivalent to, at a minimum, the height of the wind turbine, excluding the length of any blades.

184 Therefore, Project wind turbines may be located a minimum of 60 m from public road or railway rights of way, and a minimum of 80 m to the boundary lines of the property where a Project wind turbine is located. Assuming striking distance due to parts throw could be up to 500 m, or even a more conservative estimate of 200 m (as demonstrated by the other data provided by Mr. Palmer discussed above), there clearly is the potential for persons on adjacent properties or on public roadways to be within striking distance, based on these minimum setbacks. However, a proper risk assessment respecting the Project requires consideration of the actual proposed setback for each individual turbine from adjacent property boundaries and public roads and railways. For example, assuming that the maximum striking distance is 500 m, an adjacent property owner would not be exposed to any risk if a wind turbine is actually located more than 500 m from the property line. The Tribunal notes that Mr. Palmer's assessment does not include or consider this data. The Tribunal finds that this is a significant deficiency in his assessment.

185 As noted above, the assessment of risk of injury due to parts throw or tower collapse must also include the probability that anyone would be within striking range. Although Mr. Dokouzian was not qualified to give opinion evidence respecting risk assessment, he testified that a proper risk assessment of turbine failure should not only consider the failure rate and striking distance, but also the probability of a person being at that specific location at a given time. This evidence was not contradicted by the Appellants.

186 The Tribunal notes that Mr. Palmer's assessment did not include consideration of the probability that a person would be within striking ranges of wind turbine parts throw or tower collapse. The Tribunal finds that this is a significant deficiency in his assessment.

187 In his testimony, Mr. Dokouzian expressed his opinion that the probability that a person would be within striking distance when an event occurred would be very low. However, the Tribunal notes that he provided no data or analysis to support this conclusion. Mr. Dokouzian stated that, if this probability is included in the risk assessment, the probability of harm to a person, as a result of an event, would be much lower than the probability that the event would occur. He further asserted that this risk would be lower than the risk of being hit by lightning, which he stated is often used as a benchmark in risk assessments. However, the Tribunal again notes that Mr. Dokouzian was not qualified as an expert in conducting risk assessments, and, like Mr. Palmer, he did not provide any data regarding actual turbine setback distances, in support of his conclusion. Consequently, the Tribunal finds that it cannot make any definitive findings based on this evidence.

188 In summary, due to the numerous deficiencies in Mr. Palmer's assessment, and limitations respecting the evidence adduced in response to Mr. Palmer's evidence, the Tribunal finds that it has received insufficient evidence to make any definitive findings regarding the probability that blade throw, tower collapse, and damage resulting from a tower fire, would cause harm to human health. As such, the Tribunal finds that the Appellants have provided insufficient evidence to meet their onus to establish that such turbine failure will cause serious harm to human health.

189 In light of this finding, the Tribunal finds that it is unnecessary to address the Respondents' submissions respecting bias. These submissions are summarized in the procedural ruling respecting Mr. Palmer's qualification to give expert evidence, which is set out in Appendix A to this decision, as described below.

Summary conclusion

190 The Tribunal has found that the Appellants have failed to establish that the Health Test has been met based on the public safety risks cited by the Appellants, namely: shadow flicker; ice throw; and blade throw, tower collapse, and damage resulting from a tower fire.

Stray Voltage

Evidence of the Participant respecting Stray Voltage

191 Ms. Minten gave evidence on her concerns about stray voltage, which she described as power acting in unintended ways, including ground current, earth potential rise, step and touch potential, induced current and harmonic frequency. She testified concerning her understanding of each of these topics.

192 Ms. Minten raised concerns that having the Project's high voltage transmission lines near her property would create stray voltage problems, causing electrical shock, which could have adverse health effects on her and her family. She expressed concern that increased levels of electrical exposure could result in injury, pain, respiratory arrest, severe muscular contractions, adverse impacts on pregnant women, and potentially death.

Evidence of the Respondents respecting Stray Voltage

193 Mr. Arkerson described the layout and components of the Project transmission facilities in relation to Ms. Minten's property. He testified that all transmission line designs used in the Project are signed by Ontario Licensed Professional Engineers, ensuring the safety of the transmission lines and their compliance with applicable Ontario regulations, including the Electrical Safety Code.

194 Mr. Arkerson noted that NextEra does not narrow the definition of stray voltage to the concerns set out by Ms. Minten, and stated that stray voltage is a general term used to describe low-level voltages that may occur on surfaces that animals contact. He said that distribution systems use the neutral wire as a return path for current flow and, based on local service loading, may have unbalanced flows on the phase wires, creating stray voltage issues. He testified that the Project transmission line is not a distribution line and is not impacted by local service loading because it is not directly connected to the local distribution system. He stated that, due to its design, the Project transmission line would have balanced current conditions.

195 Mr. Arkerson specifically explained how the design of the transmission line and mitigation measures would address Ms. Minten's concerns with respect to ground potential rise, step and touch potential limits, induced voltage and harmonic distortion, and ensure that they are kept to safe levels. He testified that, given the nature and design of the transmission line and the mitigation measures implemented by NextEra, the transmission line would not cause harm to human health.

Submissions of the Participant respecting Stray Voltage

196 Ms. Minten submits that the health of people in her community will be seriously harmed by the Project, and requests that the REA be revoked.

Submissions of the Respondents respecting Stray Voltage

197 The Approval Holder submits that all of the potential problems that Ms. Minten raised have been given consideration by the Approval Holder's professional engineers and addressed where appropriate. The Approval Holder further submits that Mr. Arkerson's expert evidence should be preferred to Ms. Minten's non-expert, lay opinion.

198 The Director submits that Ms. Minten's evidence and the documents she referred to should be deemed inadmissible and irrelevant, and should not be considered by the Tribunal. The Director asserts that it is clear from Mr. Arkerson's testimony that Ms. Minten's evidence is inaccurate and that there is no basis for her concerns.

Findings respecting Stray Voltage

199 Ms. Minten testified as a fact witness in this proceeding. As noted elsewhere in this decision, the Respondents challenged the admissibility of her evidence on the basis that she does not have the requisite expert qualification to give the opinions she has expressed in her Witness Statement. Ms. Minten acknowledges that she is not an expert for the purpose of providing opinion evidence, nor does she have expertise in interpreting scientific and technical evidence. The Tribunal found that she should be allowed to express her views, as this may assist the Tribunal's understanding of the issues. The Tribunal also accepted that, where appropriate, she could refer to scientific, technical or other forms of expert information, solely on the basis that it informs or clarifies her views, but not as proof of such supporting information.

200 In her evidence, Ms. Minten provided detailed commentary on a variety of technical topics related to stray voltage, including ground current and earth potential rise, induced current along high voltage transmission lines, harmonic frequency and its effect, and health effects of electrical currents on humans. None of the parties disputed that this subject matter involves scientific and technical information. Ms. Minten does not dispute that, in her evidence, she presents and analyzes this technical information and provides her views on the implications of this analysis as it relates to harm to human health.

201 The Tribunal finds that Ms. Minten's evidence in respect of stray voltage is technical and scientific evidence for which opinion or interpretative evidence is required. Although she gave a thoughtful, detailed, and well-organized presentation, Ms. Minten's evidence can only be accepted as a statement of her concerns respecting the issues she has raised. Mr. Arkerson was qualified to give opinion evidence in this area. Accordingly, his is the only opinion evidence before the Tribunal in this proceeding on this issue. For this reason, the Tribunal does not find it necessary to discuss Ms. Minten's evidence in detail.

202 Mr. Arkerson's overall opinion and conclusion, as stated in his Witness Statement, is:

> Due to the nature and design of the transmission system for the Adelaide project, stray voltage, ground current, induced current and harmonics will be kept to safe levels. NextEra's transmission line also meets or exceeds all relevant Ontario safety requirements.

203 As Mr. Arkerson's expert opinion evidence has not been contradicted by any expert evidence adduced by the Appellants, the Tribunal finds that the Appellants have failed to establish that the Health Test has been satisfied.

Findings on Issue No. 2

204 Based on the evidence before the Tribunal, the Appellants have not met their onus to prove that engaging in the Project in accordance with the REA will cause serious harm to human health.

Issue No. 3: Whether the renewable energy approval process violated Mr. Wrightman's and Ms. Wrightman's rights to security of the person under s. 7 of the Charter.

205 Although Mr. Wrightman and Ms. Wrightman raised the s. 7 *Charter* violation issue in their notices of appeal, and Mr. Wrightman filed a Notice of Constitutional Question, neither Appellant made submissions on the *Charter* question. As noted above, the parties agreed that the Appellants would not proceed with a constitutional challenge under s. 47.5 of the *EPA*. However, the Appellants did not withdraw their constitutional challenge to s. 142.1 of the *EPA*.

206 Ms. Wrightman's submissions did not address this issue at all, and Mr. Wrightman merely included a copy of the Notice of Constitutional Question in his written submissions. While the Appellants called evidence concerning human health, as described above, they did not identify any specific evidence in relation to the constitutional issue.

207 As a result, these Appellants did not proceed with their constitutional challenge to s. 142.1 of the *EPA*.

208 In the absence of sufficient evidence and legal submissions from Mr. Wrightman and Ms. Wrightman to establish their case on the constitutional issue, the Tribunal finds that it is not appropriate to make any formal rulings on this issue. For that reason, the constitutional issue in these appeals is dismissed.

209 The Tribunal did receive submissions on the constitutional issue from the Director, but in light of its finding above, it is unnecessary to summarize them.

Decision

210 The Tribunal finds that the Appellants have not established that engaging in the Project as approved will cause serious and irreversible harm to plant life, animal life or the natural environment.

211 The Tribunal finds that the Appellants have not established that engaging in the Project as approved will cause serious harm to human health.

212 The Tribunal dismisses the constitutional challenge to s. 142.1 of the *EPA* on the basis that the Appellants did not proceed with this issue in their appeal.

Appeal dismissed.

AppendixA

Procedural Rulings

The Tribunal made a number of procedural rulings over the course of the hearing. These rulings are set out in this section of the decision.

Motion to Strike paragraphs in notices of appeal

The Approval Holder brought a motion to strike out paras. 30 and 35 of Ms. Wrightman's, and para. 17 of MLWAG's and Mr. Wrightman's, notices of appeal. Ms. Wrightman's notice of appeal refers to "any other issues which the community feels would cause harm to human health and safety, and to plants, animals and the natural environment", and both notices of appeal refer to "such further and other grounds as counsel may advise and this Tribunal may permit." The Approval Holder submitted that these allegations are vague and unparticularized, and asserted that the Tribunal does not have jurisdiction under the *EPA* to consider them.

At the commencement of the hearing, the Tribunal heard submissions and issued an oral ruling, as follows:

> Regarding the motion to strike certain grounds in the notices of appeal, the Tribunal finds it unnecessary to do so. The witness statements have been filed, so the issues have been identified for this proceeding. The Tribunal confirms, therefore, that no additional grounds can be raised.

Motion to exclude evidence of Larry Cook and Harvey Wrightman

Prior to the commencement of the hearing, the Approval Holder brought a motion to exclude the testimony of Ms. Wrightman's witnesses, Larry Cook and Harvey Wrightman, regarding lease negotiations. In its order dated October 11, 2013, the Tribunal ordered that this issue be determined by the panel hearing the appeals.

At the commencement of the hearing, the Tribunal heard submissions and issued an oral ruling, as follows:

> The Tribunal finds that the Appellants have not established that the evidence proposed to be given is relevant to the test under 142.1 of the *EPA*. While the Appellants have concerns regarding the leasehold negotiations, how these negotiations

> came about does not indicate one way or the other, whether engaging in the Project in accordance with the REA will cause serious harm to human health or serious and irreversible harm to plant life, animal life or the natural environment.
>
> Respecting the last sentence in Mr. Wrightman's Witness Statement, which asserts that the documents of the wind companies reveal that the effects of these projects will cause serious harm to human health, the Tribunal notes that this statement is in the nature of a submission, and Mr. Wrightman is entitled to make closing submissions, based on the evidence, at the end of the hearing.

Motion to exclude evidence of Linda Rogers

In response to Ms. Wrightman's request that Linda Rogers be permitted to give evidence in this proceeding, the Tribunal heard submissions and issued an oral ruling at the hearing, as follows:

> Pursuant to the schedule of events, all reply witness statements were to be filed by Sept. 24, 2013. In this regard, the Tribunal notes that the purpose of establishing a final date for the filing of witness statements, is to establish a date by which the Tribunal can identify the witnesses who will be called to give evidence by each party, so that the Tribunal can set the hearing schedule for the main hearing. In the case of renewable energy appeals, the timely scheduling of hearing dates is of particular importance, given the strict legislative timeline for completion of these appeals.
>
> At a continuation of the preliminary hearing held on Sept 27, 2013, the Tribunal granted Ms. Wrightman, at her request, an extension of the filing due date to Oct. 1, 2013. The Tribunal made it clear that this was the final date by which the Appellants' witness statements were to be filed. It is not disputed that Ms. Rogers' witness statement was served and filed on October 9. The commencement date of the hearing is October 15, 2013, which is insufficient time to allow the Respondents a fair opportunity to identify whether they would need to call a witness or witnesses to respond to Ms. Rogers' evidence if she were allowed to testify, nor for the Tribunal to schedule such response witnesses within the days which have already been scheduled to hear the respondents' case.
>
> The Tribunal will not comment on Ms. Rogers' qualification to give opinion evidence, or the evidence she proposes to adduce. The Tribunal is prepared to accept that Ms. Rogers' testimony is not solely to replace the testimony of Ben Lansink and Michael McCann, whom the Tribunal has ruled cannot testify in this proceeding. However, the Tribunal notes that the Appellant has not established any basis on which to conclude that Ms. Rogers' proposed evidence could not have been identified, and her Witness Statement served and filed by the October 1 st deadline.
>
> For these reasons, the Tribunal does not grant Ms. Wrightman's request that Ms. Rogers be allowed to given evidence in this proceeding.

Motion to exclude evidence of Dr. Nina Pierpont

Prior to the commencement of the proceeding, the Director brought a written motion dated October 4, 2013, requesting an order prohibiting Dr. Pierpont from testifying in this proceeding. This motion was adjourned to be heard by the Hearing Panel in this proceeding. The Hearing Panel then heard this motion and gave an oral ruling as follows:

> It is regrettable that this particular issue has not been avoided, and therefore the Tribunal has had to make a very difficult decision. The Tribunal grants the Director's request that Dr. Pierpont be prohibited from testifying at this hearing. The Tribunal will provide written Reasons to follow.

The Tribunal now provides its reasons for this disposition.

Background

On September 24, 2013, Ms. Wrightman disclosed a witness statement for Dr. Pierpont (the "Witness Statement"). This brief Witness Statement states:

BACKGROUND AND AREA OF EXPERTISE

I am a physician (MD, Johns Hopkins University School of Medicine, 1991) and ecologist (PhD, Princeton University, 1985), and the author of Wind Turbine Syndrome: A Report on a Natural Experiment (K-Selected Books, 2009), a peer-reviewed book of original, primary research data and analysis, addressing specifically the issue of why some people are affected by symptoms in the presence of wind turbines and others not, and placing the symptoms in the context of the known physiology and pathophysiology of the ear, balance system, and brain. A CV is attached.

INTRODUCTION

I will attempt to teach the representatives of NextEra and the Ontario Ministry of the Environment, as well as the members of the Tribunal, enough about brain and ear physiology and pathophysiology, population-level studies in free-living organisms, and medical interviewing that they can understand the wind turbine-associated health issues. I will review and discuss studies since 2009 that have supported my conclusions and reports that oppose them.

I will also review the history since 1987 of the stratagems used by the wind industry and its consultants to deny health effects. These include:

- The assertion that wind turbines with upwind blades do not cause the same problems to nearby residents as wind turbines with downwind blades.
- The assertion that if a sound cannot be heard, it cannot have any other effects on the ear or body.
- The assertion that internally generated infrasound is more apparent to the ear than wind turbine-generated infrasound.
- The assertion that differences in susceptibility mean that the people with symptoms are either consciously or unconsciously making up their symptoms.
- The assertion that my book and other descriptions of turbine-associated symptoms are creating these symptoms in other people by suggestion.

DOCUMENTS REVIEWED

Pierpont, N. 2009. Wind Turbine Syndrome: A Report on a Natural Experiment. K-Selected Books, Santa Fe, NM, 294 pp.

Remainder of list in file submitted is pending.

SUMMARY OF OPINION

Current evidence makes the denial of health effects from wind turbines an increasingly untenable position by the wind industry and Ontario government.

By email dated September 25, 2013, Katie Clements, counsel for the Director, wrote to Ms. Wrightman:

I am in receipt of the witness statement and 52 supporting documents that you provided for Nina Pierpoint. In Dr. Pierpont's witness statement, she does not specifically reference these supporting documents or what portions of those documents she will be referencing.

Rule 170 of the Tribunal's Rules requires that a witness statement include not only a summary of the opinions, conclusions and recommendations of the witness, but also reference to those portions of other documents which form an important part of the opinions, conclusions and recommendations of the witness.

> In its Practice Direction for Technical and Opinion Evidence, the Tribunal states that "where the opinion and evidence are based on information contained in other documents, detailed references should be provided in any report prepared by the expert" [10(f)]. The Practice Direction also states that the report "provide enough information on the assumptions made, procedures used, and conclusions drawn to allow comprehension of the report as it stands, and to permit a fair and efficient cross-examination [10(c)].
>
> Dr. Pierpont's witness statement is incomplete and we are not able to properly prepare a reply witness statement. I would ask that you forward to us a complete witness statement in accordance with the Rules forthwith.

Ms. Wrightman then responded the same day:

> Dear Ms. Clements,
>
> I re-read Dr. Pierpont's witness statement and believe it is sufficient.
>
> You will note in her Documents Reviewed, Dr. Pierpont states one reference: "Pierpont, N. 2009. Wind Turbine Syndrome: A Report on a Natural Experiment. K-Selected Books, Santa Fe, NM, 294 pp."
>
> I am sending you this book today and encourage you to read it entirely as an extension of her witness statement. It clearly details how Dr. Pierpont formed her, "opinions, conclusions and recommendations". As well, this book has sixteen pages of footnoted references throughout.

Ms. Clements then responded on September 26, 2013:

> Ms. Wrightman,
>
> The 52 documents that you provided are not reference[d] in either Dr. Pierpont's book or her witness statement. As such, I will assume, unless you indicate otherwise, that Dr. Pierpont will not be relying upon any of those 52 documents you provide[d] on Tuesday night. If Dr. Pierpont does want to rely upon the 52 documents, a detailed witness statement with references is required in accordance with the Rules.
>
> In accordance with Rule 170, could you provide us with the passages of the book that Dr. Pierpont will be relying on in her evidence? As you mentioned there are 16 pages of references, which you have not disclosed to us. If Dr. Pierpont is relying on some of those book references in her evidence, the disclosure rules would dictate that we should receive a copy of at least the references relating to the most significant portions of the book that Dr. Pierpont would be relying on.

Ms. Wrightman then replied September 26, 2013:

> I do not have Dr. Pierpont's witness statement and evidence in comic book form.
>
> Luckily when she wrote her book, she divided it into two sections: for physicians, and for non-physicians. At the very least read through the non-physician portion if you want a clear understanding of what she will speak to.
>
> Although, as you are a professional, it would be best if you made it through the physician portion as well, which is written in a very comprehensible format.

In a continuation of the preliminary hearing by telephone conference call ("TCC") with the parties on September 27, 2013, Tribunal Vice-Chair, Paul Muldoon, who chaired the preliminary hearing, directed that Ms. Wrightman be permitted the opportunity to file additional witness statements no later than October 1, 2013. In this TCC, the Tribunal confirmed the Tribunal's requirement that each witness statement must fully summarize all of the evidence the witness intended to adduce at the hearing.

On September 30, 2013, Ms. Wrightman delivered an updated version of Dr. Pierpont's Witness Statement (the "updated Witness Statement"), although it remained signed and dated September 24, 2013. Para. 1 was amended as follows:

INTRODUCTION

I will attempt to teach the representatives of NextEra and the Ontario Ministry of the Environment, as well as the members of the Tribunal, enough about brain and ear physiology and pathophysiology, population-level studies in free-living organisms, and medical interviewing that they can understand the wind turbine-associated health issues **(ref. 1-3).** I will review and discuss studies, reports, and submitted evidence since 2009 that have supported my conclusions **(ref. 4-30)** and reports that oppose them **(ref. 34-46).**

This updated Witness Statement also includes a new section entitled "Documents Reviewed" and lists 46 documents which include Dr. Pierpont's book, published papers, and other articles.

Submissions of the Director and Approval Holder

The Director provided written submissions in his motion record, which are supported by the Approval Holder. The Director relies on Rule 170, particularly Rules 170(b), (e), (f), and (g), and paras. 2 and 10(c), (e), and (f) of the Practice Direction for Technical and Opinion Evidence. The Director made the following submissions:

• Dr. Pierpont's Witness Statement is deficient and does not allow the Director to know the case to meet and to prepare a responding case. The Director submits that the Pierpont Statement should be excluded from evidence as it prejudices the Director's ability to prepare a responding case.

• In light of the expedited timelines enshrined in the REA appeal process, it is critical that the responding parties receive as much information as possible to be able to understand the case that each of the Appellants intends to advance. One of the key ways that this is achieved is by providing detailed witness statements in advance of the hearing. Complete witness statements in accordance with the Rules are necessary so that the responding parties can understand the case to be met and can adequately prepare their responding cases within the strict timelines set out by the Tribunal

• The Tribunal has continually emphasized the need for detailed witness statements and adequate particularization of the Appellants' case in this proceeding as well as other REA appeal proceedings. Given the limited time available for hearings, it is imperative that parties provide detailed witness statements in order that opposing parties know the case to meet and have the opportunity to meet it.

• The need to promote efficiency and fairness in the Tribunal's process and to decrease delay has a heightened significance in REA appeal proceedings relative to other appeals under the *EPA*. In *Preserve Mapleton Inc. v. Ontario (Director, Ministry of the Environment)* (2012), 67 C.E.L.R. (3d) 246 (Ont. Environmental Review Trib.), at para. 64, the Tribunal held that the "expedited nature of the REA appeal process demands that the parties make their best efforts to provide as much information to each other as early as possible...".

• Dr. Pierpont's Witness Statement does not reference those specific portions of other documents which form an important part of the opinions, conclusions and recommendations of the witness. Nor does it provide basic information about the content of her opinions and conclusions. Given that there is no explanation of the reasons and facts supporting the opinion, it is not obvious what portions of the references are being relied upon. Furthermore, the Pierpont Statement does not indicate whether Dr. Pierpont has an interest in the proceeding or not.

• Dr. Pierpont's Witness Statement states "I will review and discuss studies, reports, and submitted evidence since 2009 that have supported my conclusions (ref. 4-30) and reports that oppose them (ref. 34-46)." It is insufficient to simply say that a proposed witness will review 42 documents that support or oppose her conclusions, without providing any content to the review that is proposed to be conducted. The failure to provide a basic outline of the proposed witness' opinions and conclusions about these articles does not permit fair and efficient cross-examination, as required by the Tribunal.

• Similarly, Dr. Pierpont's Witness Statement provides that she will "review the history since 1987 of the stratagems used by the wind industry and its consultants to deny health effects" and she lists five (5) of these "stratagems." In effect, Dr.

Pierpont lists five (5) statements that she opines are false. However, there is no summary or commentary as to why these five (5) statements are false and how Dr. Pierpont came to the conclusion that these statements are false.

• Dr. Pierpont's Witness Statement meets neither the heightened requirements for statements in renewable energy appeal proceedings nor even basic compliance with the letter of the Rules.

• As such, the Director submits that the Tribunal should decline to accept the evidence of Dr. Pierpont.

• The Tribunal states very clearly in para.15 of its Practice Directions the consequences of failing to comply with Practice Directions:

> If this Practice Direction is not complied with, the Tribunal may:
>
> (a) decline to accept the opinions or evidence of an otherwise qualified witness;
>
> (b) admit the evidence, but accord it little weight;
>
> (c) adjourn the date of the Hearing until such time as this Practice Direction is complied with;....

In order for the responding parties to provide meaningful additional disclosure and witness statements in accordance with the subsequent disclosure deadlines, they must be substantially aware of the case each of the Appellants intends to call. In particular, it is essential that the parties know what witnesses will be called by each Appellant, the content of each witness's evidence and how each witness's evidence will assist the Tribunal in determining whether the statutory test has been met.

• Given that the Tribunal has already extended the deadline for Ms. Wrightman to provide a revised witness statement that complies with the Rules, Ms. Wrightman's failure to do so, and the impending commencement of the hearing, the Director requests that the Tribunal strike the evidence of Dr. Pierpont. Ms. Wrightman has been provided with the opportunity twice to provide a detailed witness statement that permits for fair and efficient cross-examination. Ms. Wrightman has refused to provide a detailed witness statement. It would be unjust and unfair to permit Ms. Wrightman to benefit from her non-compliance with the *Rules*, despite an additional opportunity to comply.

Submissions of Ms. Wrightman and Mr. Wrightman/MLWAG

The Appellants did not respond to the Director's motion in writing. Their response submissions were given orally by Ms. Wrightman. Mr. Wrightman and MLWAG support her position. In summary, her submissions are:

• Ms. Wrightman states her belief that there is no restriction as to the length of a witness statement. She submits that the second version of Dr. Pierpont's Witness Statement listed the documents to be reviewed by Dr. Pierpont and specified which of these documents she would be relying on in support of her conclusions.

• Ms. Wrightman points out that she provided the Respondents with a document entitled *Wind Turbine Syndrome — A Twenty Minute Crash Course* (the "Crash Course Document"), which is a written transcript of a video-conference presentation given by Dr. Pierpont in Shelburne Falls, Massachusetts on January 28, 2012. She asserts that this document provides an outline of what Dr. Pierpont's evidence will be in this proceeding. She stated that she assumed she would have heard from the Respondents if this was not satisfactory.

• Ms. Wrightman submits that if Dr. Pierpont's Witness Statement is an expert report, it should have been called that. She indicated that it is surprising that Dr. Pierpont's Witness Statement could take the place of direct evidence. She notes that Dr. Pierpont included her book, *Wind Turbine Syndrome: A Report on a Natural Experiment* described in her Witness Statement ("Dr. Pierpont's Book") which Ms. Wrightman submits is an extension of her Witness Statement. She emphasizes that this book was written by Dr. Pierpont, and extensively addresses what Dr. Pierpont referenced in her Witness Statement. Ms. Wrightman asserts that it is there if you read Dr. Pierpont's Book.

• Ms. Wrightman asserts that there has been no delay, and maintains that Dr. Pierpont's Witness Statement was delivered on time and Dr. Pierpont is prepared to attend and testify as scheduled.

• Ms. Wrightman emphasizes that para. 15 of the Tribunal's Practice Directions, which addresses the consequences of failing to comply with the Practice Directions, states that the Tribunal *may*, not shall, decline to accept the evidence of a witness. She submits that the prejudice to her case far outweighs any prejudice to the Respondents, whose resources are limitless, as compared to hers, which hardly exist.

• Ms. Wrightman asserts that the Respondents have indicated their right to have evidence admitted "may" be prejudiced, or there "may" be a delay in the hearing. She submits that her Witness Statement was filed in time, and she doesn't see what the problem is.

• In summary, she asks that the Tribunal "not throw the baby out with the bathwater". She submits that fairness requires that Dr. Pierpont should be heard, and that the Tribunal should listen to her testimony and then apply weight. She submits that there is no reason to decline her evidence, and that the Director's request is frivolous.

Findings respecting the request for an order prohibiting Dr. Pierpont from testifying in this proceeding

The Tribunal finds that Rule 170, particularly Rules 170(b), (f), and (g), and paras. 2 and 10(a), (c), (e), and (f) of the Practice Direction for Technical and Opinion Evidence apply in the circumstances of this case.

Rule 170 states:

Witness Statements

170. If the Tribunal requires the production of witness statements, the Parties and Participants shall serve those statements on each other and file them with the Tribunal within the time directed by the Tribunal, which is usually no later than 15 days before the commencement of the Hearing. Each witness statement shall include, where applicable:

(a) the name, address and telephone number of the witness;

(b) **whether the evidence will be factual evidence or, if the witness is qualified, opinion evidence;**

(c) a resume of the witness' qualifications, where the witness is to give opinion evidence;

(d) a signed form in accordance with Form 5 in Appendix F, where the witness is to give opinion evidence;

(e) whether or not the witness has an interest in the application or appeal and, if so, the nature of the interest;

(f) **a summary of the opinions, conclusions and recommendations of the witness;**

(g) **reference to those portions of other documents which form an important part of the opinions, conclusions and recommendations of the witness;**

(h) a summary of answers to any interrogatories to or from other Parties that will be relied upon at the Hearing;

(i) where applicable, a discussion of proposed conditions of approval that are in controversy among the Parties or agreed upon conditions that may be related to issues in dispute;

(j) the date of the statement; and

(k) the signature of the witness.

[emphasis added]

Paragraphs 10 (a), (c), (e), and (f) and para. 15 of the Practice Direction for Technical and Opinion Evidence (the "Practice Direction") state:

> **Preparing Reports**
>
> 10. In preparing reports to be used by the witness' employer or client in determining the issues to be raised and the employer or client's position on those issues and for use as evidence, and *in testifying before the Tribunal, the witness has the following disclosure duties*:
>
> (a) It is the responsibility of the witness to make fair and full disclosure.
>
> . . .
>
> (c) To provide enough information on the assumptions made, procedures used, and conclusions drawn to allow comprehension of the report as it stands, and to permit fair and efficient cross-examination.
>
> . . .
>
> (e) The witness should state all the material facts and assumptions upon which his or her opinion is based. He or she should consider and acknowledge material facts which could detract from the opinion. Where the facts are in dispute, the Tribunal expects that the witness will give his or her view of the facts and the proof relied upon before giving the opinion.
>
> (f) Where the opinion and evidence are based on information contained in other documents, detailed references should be provided in any report prepared by the expert, and copies of those documents made available on request before and during the Hearing.
>
> **Compliance**
>
> 15. If this Practice Direction is not complied with, the Tribunal may:
>
> (a) decline to accept the opinions or evidence of an otherwise qualified witness;
>
> (b) admit the evidence, but accord it little weight;
>
> (c) adjourn the date of the Hearing until such time as this Practice Direction is complied with;
>
> . . .
>
> [emphasis added]

The Tribunal turns first to the requirement of Rule 170.

The Tribunal first notes that Dr. Pierpont's proposed evidence is to address the issue of whether engaging in the Project, in accordance with the REA, will cause serious harm to human health. The adequacy of her Witness Statement must be assessed in this context.

In reviewing Dr. Pierpont's updated Witness Statement, the Tribunal finds she clearly provides only one conclusory opinion, in the section entitled Summary of Opinion. She states "Current evidence makes the denial of health effects from wind turbines an increasingly untenable position by the wind industry and Ontario government."

However, the Tribunal finds that statement is better described as a summation. In this regard, she refers to "current evidence", but provides no indication of the specific evidence on which she relies. Even if the Tribunal accepts Ms. Wrightman's assertion that the list of documents reviewed should be read as an extension of Dr. Pierpont's Witness Statement, the Witness Statement

itself states that this list include documents that both support and oppose her conclusions. Consequently, there is no indication of the specific evidence on which she will rely to support this conclusion.

Clearly, Dr. Pierpont's Witness Statement, at best, can be described as setting out a list of topics that she intends to address in her evidence. Her Witness Statement does not provide any of her substantive opinions on any of these topics. There appears to be a misunderstanding on her part, when she states in the introduction that she "will attempt to teach" the parties and the Tribunal about the topics she specified. In the context of being a teacher it may be sufficient to simply provide an outline of the topics to be addressed. However, if she were an expert witness in this proceeding, her role would be to provide her expert opinion regarding the issues to be addressed in this proceeding. As with all witnesses, her evidence may be challenged by the other parties through cross-examination, and by calling response witnesses. The other parties can only do so if they have been provided with a clear statement of what her specific opinions will be.

It is not sufficient, as Ms. Wrightman suggests, that the parties be left to read through the documents Dr. Pierpont has listed for review. This only leaves them to guess which opinions, analysis, data, or other information Dr. Pierpont will adopt as her evidence. Ms. Wrightman's answer to this, particularly as it relates to Dr. Pierpont's book, is that Dr. Pierpont relies on all of it. The Tribunal does not accept this position. The documents listed by Ms. Wrightman, including her book, were not written to respond to the issues in this proceeding. Furthermore, other parties are not required to respond to the portions of these documents which will not be referenced by Dr. Pierpont. Therefore, it is incumbent on Dr. Pierpont to identify, in her Witness Statement, her specific opinions as they relate to the issue in this proceeding, and to quote the specific parts of the documents listed on which she relies in support her opinions. Without this information, the other parties will be unable to determine precisely what her evidence will be, and, as a consequence, have no fair opportunity to respond to her evidence.

The Tribunal's finding in this regard is clearly supported by the Rules and the Practice Direction. Rule 170(f) requires that a witness statement include a summary of the opinions, conclusions and recommendations of the witness. Rule 170(f) does not say that a witness is merely required to provide an agenda respecting the subjects of the opinions to be provided.

Rule 170(g) requires that a witness statement include "reference to those portions of other documents which form an important part of the opinions, conclusions and recommendations of the witness". This section clearly underscores that there is a difference between the opinions, conclusions, and recommendations that are to be included in the witness statement under Rule 170(f), and the portions of other documents referenced in support of those positions. Apart from this, Rule 170(g) clearly requires reference to the specific portions of the documents on which she relies. It is clear that Dr. Pierpont's Witness Statement does not comply with this provision. Her Witness Statement only lists the titles of the documents reviewed. The Tribunal also notes that the requirement of Rule 170(g) is substantially repeated in para. 10(f) of the Practice Direction.

Regarding para. 10 of the Practice Direction, although Ms. Wrightman questions whether there is a difference between an expert report and a witness statement, the Tribunal finds that any distinction between the two is not a probative consideration. Paragraph 10 expressly states that it applies in preparing reports *and* when giving testimony before the Tribunal. Clearly the report is evidence. Therefore, the Tribunal finds that, for expert witnesses, requirements for reports also apply to witness statements. The Tribunal notes that the wording of sub-paras, 10 (a), (c), and (e) are clear. It is the responsibility of the witness to make full disclosure, to provide enough information on assumptions, procedures, and conclusions to allow comprehension of the report or witness statement as it stands. This means that the witness statement itself must allow comprehension of the opinion evidence, without further reference to the information contained in other documents that have been cited in support of the opinion evidence. Clearly, Dr. Pierpont's Witness Statement does not satisfy this requirement. It also does not satisfy the requirement of para. 10(e). Dr. Pierpont's Witness Statement does not include all the material facts and assumptions upon which her opinions are based.

Ms. Wrightman also submits that the Crash Course Document provides an outline of what Dr. Pierpont's evidence will be in this proceeding. The Tribunal does not accept this submission. The Tribunal has reviewed this document. As noted above, it is a transcript of a public lecture given by Dr. Pierpont. As such it does not indicate the evidence which Dr. Pierpont intends to adduce in respect of the issues in this proceeding.

In summary, based on the above analysis and findings, the Tribunal finds that Dr. Pierpont's Witness Statement does not satisfy the applicable requirements of Rule 170 and the Practice Direction.

Having found that Dr. Pierpont's Witness Statement does not comply with Rule 170 and the Practice Direction, the Tribunal turns to its analysis of the appropriate response. As noted in para. 15 of the Practice Direction, the Tribunal may: decline to accept the opinions or evidence of an otherwise qualified witness; admit the evidence, but accord it little weight; or adjourn the date of the Hearing until such time as the Practice Direction is complied with. The Tribunal accepts Ms. Wrightman's submission that, because para. 15 says it may take any of the listed responses, the Tribunal has discretion to allow Dr. Pierpont to testify. The question, therefore, is whether the Tribunal should do so.

The least intrusive response is to adjourn the hearing until the Practice Direction has been complied with. The Tribunal finds that this is not a feasible option. Based on the witness schedule, approximately half of the hearing is devoted to the Health Test. Ms. Wrightman made no alternative submissions regarding whether Dr. Pierpont would comply with the Practice Direction, and, if so, when. In any event, rescheduling this part of the proceeding would significantly delay completion of the hearing, bearing in mind that the hearing must be completed and the appeals disposed of within six months from the filing of the appeals. The Tribunal finds that such an adjournment would seriously prejudice the Tribunal's ability to complete the hearing of these appeals and dispose of them within six months.

The Tribunal next considers whether it should admit the evidence but afford it little weight. The Tribunal finds there is no purpose to be served by this approach in the circumstances of this case. Dr. Pierpont's Witness Statement, in and of itself, contains virtually no substantive evidence, so allowing Dr. Pierpont to testify, but restricting her evidence to the contents of her Witness Statement, would be of no assistance to the Tribunal.

The remaining option is to decline to accept Dr. Pierpont's evidence. Ms. Wrightman asserts that it would be unfair to do so, and submits that Dr. Pierpont should be allowed to testify. Each case must be determined on its own merits. The Tribunal accepts that an overall consideration of fairness is relevant, and has given this matter serious consideration, particularly as the Appellants assert that Dr. Pierpont's evidence is important for their case. However, the Tribunal must also consider whether the current situation could have been avoided. In this regard, the Tribunal has considered the following:

- Ms. Clements, in her emails dated September 25 and 26, 2013, clearly alerted Ms. Wrightman to the requirements of Rule 170. Ms. Wrightman's reply email dated September 26, 2013, can be characterized as a flippant response.

- The Tribunal extended the filing due date for her witness statements to October 1, 2013, in order to allow Ms. Wrightman a further opportunity to provide a witness statement for Dr. Pierpont which would satisfy the requirements of Rule 170 and the Practice Direction, but Ms. Wrightman did not do so.

- The Director's motion is dated October 4, 2013, and was originally brought before the Tribunal on October 8, 2013, so the Appellants were well aware of the issues being raised by the Director, and the relief being sought, prior to the commencement of the hearing on October 15, 2013.

- All parties were aware of the Tribunal's direction that examination-in-chief would be restricted to less than hour, and, therefore, it would be necessary for witness statements to contain all the witness's evidence, so the witness could adopt the witness statement when testifying. Clearly, given the scope of the topics described in Dr. Pierpont's Witness Statement, oral examination-in-chief could not possibly be completed within this time frame.

Based on these considerations, the Tribunal finds that reasonable efforts were made to: (i) alert Ms. Wrightman to the requirements for Dr. Pierpont's Witness Statement; (ii) allow her the opportunity, and sufficient time, to prepare and file an adequate witness statement; and (iii) provide her with notice of the potential consequences if she did not do so. Consequently, the Tribunal finds that Ms. Wrightman could have avoided this situation had she chosen to do so.

Based on the above analysis and findings, the Tribunal has, as stated in its oral ruling, exercised its discretion to prohibit Dr. Pierpont from testifying in this proceeding.

Request for qualification of William Palmer as an expert witness

The Appellants and Mr. Palmer requested that he be qualified by the Tribunal to give opinion evidence as a professional engineer in the province of Ontario with experience and qualification in the operation, public safety, risk assessment and environmental assessment related to the electrical power generating system. This includes evaluating operation of electrical generating systems, including wind turbines, and advising and reporting specific to the professional engineering aspects of safeguarding of life, health, property and the public welfare requiring the application of engineering principles of risk assessment, and evaluation of operating experience.

The Respondents opposed this request as discussed in greater detail below.

The Tribunal provided an oral ruling as follows:

> The Tribunal qualifies Mr. Palmer to give opinion evidence regarding the application of engineering principles to risk and public safety assessment, and in the area of acoustics.
>
> Our reasons will follow. However, to assist the parties in proceeding with Mr. Palmer's evidence, the Tribunal makes two observations:
>
> • Submissions regarding bias and advocacy will be assessed by the Tribunal when giving weight to the evidence; and
>
> • This witness may speak to the areas for which he has been qualified, and the Tribunal will assess the extent to which his opinions apply to the subject areas addressed in his Witness Statement.

The Tribunal now provides its reasons for this ruling.

Mr. Palmer prepared a written Witness Statement dated September 24, 2013, and a Supplemental Witness Statement dated October 1, 2013, jointly referenced as the "Witness Statements".

Regarding Mr. Palmer's qualifications, he is a professional engineer, having a Bachelor of Applied Science degree, which included auditing a course on acoustics. He has taken courses at the Massachusetts Institute of Technology in nuclear power reactor safety and risk-informed operation management. His Witness Statement indicates that these courses include areas of risk assessment (deterministic and probabilistic) and evaluation of operating experience of generation systems. He is a member of the Acoustical Society of America. His Witness Statement also indicates that he has attended several international conferences respecting wind turbine noise. In terms of his work experience, he has worked for approximately 30 years at the Bruce Power facility in various positions, the most recent as the section manager for performance assessment. Since his retirement in 2007, he has continued to maintain his registration as a professional engineer.

Mr. Palmer testified that he has expertise in conducting shadow analysis respecting nuclear radiation, which he asserted is expertise which can also be applied to shadow flicker analysis.

Regarding the field of acoustics, Mr. Palmer testified that professional engineers in Ontario are not specifically registered as acoustical engineers. He noted that there is a consulting engineer association which designates consulting acoustic engineers, but the only standard to be met is primarily to pay a registration fee. He explained that the MOE has specifically identified within their compliance protocols for industrial wind turbines a set of criteria for persons who would do acoustical audits. He also stated that persons other than engineers may be qualified as acousticians, pointing out that the Acoustical Society of America has associate and full members, where full membership is granted based on recognition of work done in the field of acoustics. Mr. Palmer testified that, since he retired, he has worked the equivalent of six or seven years of full time self-training and work, the majority of this time being devoted to the area of acoustics, with the remaining time including work on risk assessment.

Respecting his experience relate to industrial wind turbines, his Witness Statements list papers he has presented, conferences he attended, his involvement in proceedings before the Ontario Municipal Board and the Ohio Power Siting Board, and as technical advisor to a Multi Municipality Wind Turbine Working Group. He states that he has also personally viewed all the major wind turbine arrays in Ontario.

The Respondents objected to several areas addressed in Mr. Palmer's Witness Statement and Supplemental Witness Statement, including Mr. Palmer's comments on medical evidence, natural environmental resource assessment, and greenhouse gas emissions. In reviewing his Witness Statements, the subject matter of some of his opinions clearly fall outside his qualification as requested by the Appellants. In addition, the Tribunal notes the Witness Statements include opinions in response to witnesses who did not testify in this proceeding, which includes the subject area of greenhouse gas emissions. Mr. Palmer acknowledges that he does not have special expertise respecting health matters. He testified that he has no qualifications in the fields of ecology and biology, and his experience respecting environmental assessment was in working on a team where he received input from other persons with expertise in those areas. For the above reasons, the Tribunal concludes that he should be not be qualified in the areas of health, or natural resource environmental assessment.

The Respondents assert that Mr. Palmer is not qualified to give expert opinion on shadow flicker. The Tribunal accepts that Mr. Palmer does not have direct experience respecting shadow flicker, *per se*, but he does have related expertise, which the Tribunal finds qualifies him to comment on shadow flicker, in the context of applying engineering principles to risk and public safety assessment.

The Respondents assert that Mr. Palmer is not qualified to give expert opinion evidence on acoustics, noting that he is not an acoustical engineer. However, the evidence adduced indicates that acousticians are not legislatively regulated as a professional occupation. Mr. Palmer is a professional engineer who has audited one academic course in acoustics, and has engaged in significant amount of self-study in acoustics as it relates to industrial wind turbines, and has presented papers on this subject at several conferences. Therefore, the Tribunal finds that he has sufficient education, training and expertise to be qualified to give opinion evidence on acoustics.

The Respondents do not challenge that Mr. Palmer has significant experience in public safety and risk assessment in the nuclear energy field, but they argue that it cannot be assumed that this experience is transferable to industrial wind turbine energy. The Tribunal accepts this submission in part. Mr. Palmer did not clearly state that he had direct experience in conducting public safety and risk assessment. But he is a professional engineer who has considerable related work experience in the nuclear energy field. Therefore, the Tribunal is satisfied that he is qualified to give opinion evidence on the application of engineering principles to risk and public safety assessment.

The Tribunal finds that the wording of the qualification sought by the Appellants for Mr. Palmer is imprecise, and his training, education and experience only support a more circumscribed qualification, as stated in the Tribunal's oral ruling. Finally, the Tribunal notes, that this ruling is only in respect of his qualification to give opinion evidence. It is not an acceptance that all opinions, as presented in his Witness Statements, fall within the areas for which he has been qualified, nor is it an indication of the weight to be given to Mr. Palmer's opinion evidence.

The Respondents have also raised concerns respecting Mr. Palmer's qualification as an expert on the grounds that he has, in the past, been affiliated with an organization which opposes industrial wind farms, and has been an advocate against wind farm development. As noted in the Tribunal's oral ruling, these submissions regarding bias and advocacy will be assessed by the Tribunal when weighing his evidence.

Request to strike witness statement of Kathryn Minten

During the proceeding, the Approval Holder brought an oral motion to request that Ms. Minten's Witness Statement be struck and that her evidence in this proceeding be restricted to oral evidence of a lay (fact) witness. One of the Approval Holder's grounds in support of this motion, was that portions of Ms. Minten's Witness Statement speak to issues which were not raised in the Appellants' notices of appeal. In this regard, the Approval Holder had, earlier in the proceeding, raised a request to strike

certain parts of these appeals on the grounds that they were so broadly drafted that they did not disclose a discrete ground in support of the appeals. The Approval Holder asserted that these clauses included phrases such as "any other issues which the community feels will cause harm" or "such further or other grounds as counsel may advise and this Tribunal may permit".

The Tribunal's ruling on the motion to strike Ms. Minten's Witness Statement was prepared in writing, and delivered by the Tribunal's case coordinator to the parties by electronic mail:

> Regarding the Tribunal's earlier ruling respecting the Approval Holder's motion to strike what has been described as the "basket clause" grounds of appeal (Paragraph 17 of the MLWAG/Harvey Wrightman Notice of Appeal, and paragraphs 30 and 35 of the Esther Wrightman appeal), the Tribunal clarifies that it did not find it necessary to rule on this request, as the Tribunal expected that the issues should have been adequately identified through the witness statements filed in this proceeding. As a further clarification of this ruling, the Tribunal notes that it does not accept that these "basket clauses" can be relied on when determining whether proposed evidence is relevant. However, this does not mean, as the Approval Holder has submitted, that relevance is to be determined in the context of the scope of the witness statements of the parties' witnesses. The Tribunal finds that relevance is to be determined having regard to the grounds set out in the notices of appeal (other than the basket clauses).
>
> As Ms. Minten has been granted participant status in a later stage of this proceeding, she was directed to file her Witness Statement by October 16. The Approval Holder requests that the Tribunal strike Ms. Minten's Witness Statement in its entirety, and that she only be allowed to testify orally to evidence that is generally accepted from a lay fact witness. In this regard, the Approval Holder refers to the Tribunal's Practice Direction for Technical and Opinion evidence. The Approval Holder's submissions in support of this request fall into two categories: (i) matters addressed in Ms. Minten's Witness Statement are not relevant to the grounds of appeal of any of the Appellants; and (ii) her Witness
>
> Statement includes technical or opinion evidence which a lay fact witness is not allowed to give. In addition, the Approval Holder notes that Ms. Minten's Witness Statement reports evidence of other persons, and states that these parts of her Witness Statement should be struck as they are hearsay. The Approval Holder also asserts that Ms. Minten refers to health effects regarding a wind turbine owned by her father-in-law, to which her family was exposed. The Approval Holder asserts that her testimony in this regard should not be accepted, as she has filed no documents regarding her medical history.
>
> The Approval Holder asserts that the following areas of Ms. Minten's Witness Statement are not relevant:
>
> • The impact of stray voltage on animals
>
> • Soil compaction (as set out in the following sections in Ms. Minten's Witness Statement: Serious and irreversible harm to the natural environment — effects of soil compaction, Wet Weather, Tracks and Subsoiling, Soil Rehabilitation, and Mitigation is not sufficient)
>
> • Impact to wildlife, including specific evidence regarding individual species.
>
> • Health effects experienced by Ms. Minten regarding a wind turbine purchased and installed by her father-in-law.
>
> For reasons to be provided later, the Tribunal finds that Paragraph 27 of Ms. Wrightman's Notice of Appeal sets out grounds to which subject areas #1 and #3 are relevant. The Tribunal finds that neither notice of appeal sets out grounds of appeal to which area #2 is relevant. Therefore, in respect of area #2, the Tribunal will strike the previously mentioned sections of her Witness Statement.
>
> Turning to the second category of the Approval Holder's submissions, Ms. Minten acknowledges that she is not an expert for the purpose of providing opinion evidence, nor that she has expertise in interpreting scientific and technical evidence. On this basis, the Tribunal cannot accept any opinion evidence or any evidence interpreting scientific or technical evidence. However, for reasons to be provided later, the Tribunal accepts that participants and presenters may be allowed to express their views even though they may be giving evidence as fact witnesses, as this may assist the Tribunal's understanding of

> the issues. The Tribunal also accepts that, and, where appropriate, they may refer to scientific, technical or other forms of expert information, solely on the basis that it informs or clarifies any views they may have stated, but not as proof of such supporting information. In this case, the Tribunal finds that the portions of Ms. Minten's Witness Statement which are otherwise relevant and admissible, may be accepted subject to this caveat.
>
> To the extent that Ms. Minten's evidence regarding her personal exposure to a wind turbine includes conclusions regarding the health impact of the turbine, the Tribunal will not accept this evidence. However, consistent with previous Tribunal rulings, she can describe any symptoms she personally experienced.
>
> The Tribunal finds that the evidence of other persons quoted by Ms. Minten are hearsay, and, for reasons to follow, will not be admitted.

The Tribunal now provides its reasons respecting its ruling, as identified in the above disposition.

Regarding the issue of relevance, para. 27 of Ms. Wrightman's notice of appeal states:

> **Animals health, safety and habitat at risk**
>
> **The Adelaide Wind Energy Centre poses serious and irreversible harm to wildlife, livestock**, and household pets **in the project area** — and even outside the project area, when cumulative impacts are taken into consideration. Bats, eagles, and **other** flora and **fauna are at risk from the installation of** the turbines**, transmission lines, substations**, access roads and other general destruction and disruption made by the wind company.
>
> [emphasis added]

The Tribunal notes that this paragraph does not contain one of the basket clauses to which the Approval Holder objects. The Tribunal finds that this paragraph of Ms. Wrightman's appeal clearly alleges harm to wildlife and livestock, and identifies the installation of transmission lines and substations as one of the alleged causes of the harm.

The Tribunal now turns to its reasons respecting the issue whether a participant or presenter may express their views even though they may be giving evidence as fact witnesses. The Tribunal notes that, under Rules 63, 66, and 69, two of the relevant matters that the Tribunal may consider in deciding whether to grant participant or presenter status are whether:

- a person has a genuine interest, whether public or private, in the subject matter of the proceeding; and
- a person is likely to make a relevant contribution to the Tribunal's understanding of the issues in the proceeding.

For this reason, even if a participant or presenter is a fact witness, Tribunal practice is typically to allow them to state their views on issues, and to either state their understanding of technical information or opinions which inform their views, or to file what is commonly referred to as supporting documents, such as published reports. This evidence is typically not accepted as proof of this supporting evidence. Rather it is accepted on the basis that it describes the information on which the participant or presenter has relied to inform the views which they have expressed.

The Approval Holder argues that the complexity of the information provided by Ms. Minten in her Witness Statement transcends the latitude normally allowed to participants and presenters, in essence crossing the boundary into giving expert technical or opinion evidence. However, Ms. Minten acknowledges that she is not an expert for the purpose of providing opinion evidence, nor that she has expertise in interpreting scientific and technical evidence, and the Tribunal has clearly indicated her evidence is not being accepted as such.

Regarding the hearsay evidence, the Tribunal notes that it is factual evidence, and the Tribunal received no explanation why the persons who provided the evidence to Ms. Minten could not have been called to testify. The nature of the hearsay evidence is such that the Respondents should be able to cross-examine on this evidence, and it is clear that Ms. Minten would not be able to

adequately respond to such cross-examination, as she had no independent personal knowledge relating to this evidence. For these reasons the Tribunal excluded this evidence, notwithstanding that the Tribunal has the jurisdiction to accept hearsay evidence.

During the hearing, the Tribunal ruled that, to the extent that Ms. Minten's evidence regarding her personal exposure to a wind turbine included conclusions regarding the health impacts of the turbine, the Tribunal would not accept this evidence. However, consistent with previous Tribunal rulings, Ms. Minten was permitted to describe any symptoms she personally experienced.

Request by Stephana Johnston to give evidence about the impacts of wind turbines on her own health

After the hearing commenced, Ms. Johnston indicated that she wished to give evidence about the impacts of wind turbines on her own health. When Ms. Johnston sought presenter status at the preliminary hearing, she raised concerns about the legislative and policy framework governing the assessment of the impact of the Project on human health. She did not indicate at that time that she wished to testify concerning the impacts of turbines on her health, and she did not subsequently provide medical records. As a result, the Tribunal ruled that Ms. Johnston was not permitted to provide evidence concerning her health.

Closing Submissions of the Appellants and Participant

The Appellants raised a number of concerns regarding the fairness of the hearing in their written closing submissions, in relation to disclosure of medical records, accessibility and video recording, and access to transcripts. These concerns were addressed and determined as preliminary issues or during the hearing. At this stage, the Tribunal's role is to make a decision on the issues raised in these appeals, according to the legislative tests set out below, and not to revisit or make further findings concerning its procedural rulings made over the course of the hearing. The Tribunal has, therefore, considered only the portions of the Appellants' submissions that address the issues to be determined in this decision.

The Tribunal notes that numerous final submissions made by the Appellants and the participant included, and referred to, evidence that was not adduced at the hearing, and therefore cannot be considered. Some of the submissions also refer to evidence from a different appeal before another panel of the Tribunal. Also, MLWAG and Mr. Wrightman made submissions concerning the Witness Statement of Richard James, an expert witness who was not called at the hearing, and in particular his evidence directed at showing that the Project will not meet the terms and conditions of the REA, which the Tribunal excluded in its orders of October 11 and December 18, 2013. This evidence was disregarded by the Tribunal.

New Evidence

Ms. Wrightman and Ms. Minten both included new evidence in their written closing submissions. The Tribunal has not considered this new evidence. The Tribunal clearly stated in its opening remarks at the hearing that no new evidence would be accepted in closing statements.
