Présents : Les juges L'Heureux-Dubé, Gonthier, Iacobucci, Major, Bastarache, Arbour et LeBel.

EN APPEL DE LA COUR D'APPEL DU QUÉBEC

Droit municipal — Règlements — Réglementation et restriction de l'utilisation des pesticides — Adoption par la Ville d'un règlement limitant l'utilisation des pesticides sur son territoire à des endroits précis et à des activités énumérées — La Ville avait-elle le pouvoir légal d'adopter le règlement? — Le règlement a-t-il été rendu inopérant du fait de son incompatibilité avec la législation fédérale ou provinciale? — Règlement 270

provincial legislation — Town of Hudson By-law 270 — Cities and Towns Act, R.S.Q., c. C-19, s. 410(1).

The appellants are landscaping and lawn care companies operating mostly in the greater Montreal area, with both commercial and residential clients. They make regular use of pesticides approved by the federal *Pest Control Products Act* in the course of their business activities and hold the requisite licences under Quebec's *Pesticides Act*. In 1991 the respondent Town, located west of Montreal, adopted By-law 270, which restricted the use of pesticides within its perimeter to specified locations and for enumerated activities. The definition of pesticides in By-law 270 replicates that in the *Pesticides Act*. Under s. 410(1) of the Quebec *Cities and Towns Act* ("*C.T.A.*"), the council may make by-laws to "secure peace, order, good government, health and general welfare in the territory of the municipality", while under s. 412(32) *C.T.A.* it may make by-laws to "regulate or prohibit the . . . use of . . . combustible, explosive, corrosive, toxic, radioactive or other materials that are harmful to public health or safety, in the territory of the municipality or within l km therefrom". In 1992 the appellants were charged with having used pesticides in violation of By-law 270. They brought a motion for declaratory judgment asking the Superior Court to declare By-law 270 to be inoperative and *ultra vires* the Town's authority. The Superior Court denied the motion, and the Court of Appeal affirmed that decision.

Held: The appeal should be dismissed.

Per L'Heureux-Dubé, Gonthier, Bastarache and Arbour JJ.: As statutory bodies, municipalities may exercise only those powers expressly conferred by statute, those powers necessarily or fairly implied by the expressed power in the statute, and those indispensable powers essential and not merely convenient to the effectuation of the purposes of the corporation. Included in this authority are "general welfare" powers, conferred by provisions in provincial enabling legislation, on which municipalities can draw. Section 410 *C.T.A.* is an example of such a general welfare provision and supplements the specific grants of power in s. 412. While enabling provisions that allow municipalities to regulate for the "general welfare" within their territory authorize the enactment of by-laws genuinely aimed at furthering goals such as public health and safety, courts faced with

de la ville de Hudson — Loi sur les cités et villes, L.R.Q., ch. C-19, art. 410(1).

Les appelantes sont des entreprises d'aménagement paysager et d'entretien des pelouses qui exercent leurs activités surtout dans la région métropolitaine de Montréal et qui ont aussi bien des clients commerciaux que des clients résidentiels. Elles utilisent régulièrement, dans le cadre de leurs activités commerciales, des pesticides conformes à la *Loi sur les produits antiparasitaires* du gouvernement fédéral et détiennent les permis requis par la *Loi sur les pesticides* du Québec. En 1991, la Ville intimée, située à l'ouest de Montréal, a adopté le règlement 270, qui limite l'utilisation des pesticides sur son territoire à des endroits précis et aux activités énumérées. La définition de pesticides contenue dans le règlement 270 est la réplique exacte de celle adoptée dans la *Loi sur les pesticides*. En vertu du par. 410(1) de la *Loi sur les cités et villes* du Québec (« *L.C.V.* »), le conseil peut faire des règlements « [p]our assurer la paix, l'ordre, le bon gouvernement, la salubrité et le bien-être général sur le territoire de la municipalité », tandis qu'en vertu du par. 412(32) *L.C.V.*, il peut faire des règlements « [p]our réglementer ou défendre [. . .] l'usage de [. . .] matières combustibles, explosives, corrosives, toxiques, radioactives ou autrement dangereuses pour la santé ou la sécurité publiques, sur le territoire de la municipalité ou dans un rayon de 1 km à l'extérieur de ce territoire ». En 1992, les appelantes ont été accusées d'avoir utilisé des pesticides contrairement au règlement 270. Elles ont introduit une requête en jugement déclaratoire demandant à la Cour supérieure de déclarer inopérant le règlement 270 et *ultra vires* le pouvoir de la Ville. La Cour supérieure a rejeté la requête, et la Cour d'appel a confirmé cette décision.

Arrêt : Le pourvoi est rejeté.

Les juges L'Heureux-Dubé, Gonthier, Bastarache et Arbour : En tant qu'organismes créés par la loi, les municipalités peuvent exercer seulement les pouvoirs qui leur sont conférés expressément par la loi, les pouvoirs qui découlent nécessairement ou vraiment du pouvoir explicite conféré dans la loi, et les pouvoirs indispensables qui sont essentiels et non pas seulement commodes pour réaliser les fins de l'organisme. Y sont inclus les pouvoirs en matière de « bien-être général » conférés par la loi provinciale habilitante, sur laquelle les municipalités peuvent se fonder. L'article 410 *L.C.V.* constitue un exemple d'une telle disposition générale de bien-être et il ajoute aux pouvoirs spécifiques conférés par l'art. 412. Bien que les dispositions habilitantes permettant aux municipalités de réglementer pour le « bien-être général » sur leur territoire autorisent l'adoption de

an impugned by-law enacted under an "omnibus" provision such as s. 410 *C.T.A.* must be vigilant in scrutinizing the true purpose of the by-law.

By-law 270 does not fall within the ambit of s. 412(32) *C.T.A.* There is no equation of pesticides and "toxic . . . materials" either in the terms of the by-law or in any evidence presented during this litigation. Since there is no specific provision in the provincial enabling legislation referring to pesticides, the by-law must fall within the purview of s. 410(1) *C.T.A.* By-law 270 read as a whole does not impose a total prohibition, but rather permits the use of pesticides in certain situations where that use is not purely an aesthetic pursuit. Based on the distinction between essential and non-essential uses of pesticides, it is reasonable to conclude that the Town by-law's purpose is to minimize the use of allegedly harmful pesticides in order to promote the health of its inhabitants. This purpose falls squarely within the "health" component of s. 410(1) *C.T.A.* The distinctions impugned by the appellants as restricting their businesses are necessary incidents to the power delegated by the province under s. 410(1) *C.T.A.* Moreover, reading s. 410(1) to permit the Town to regulate pesticide use is consistent with principles of international law and policy. The interpretation of By-law 270 set out here respects international law's "precautionary principle". In the context of the precautionary principle's tenets, the Town's concerns about pesticides fit well under their rubric of preventive action.

By-law 270 was not rendered inoperative because of a conflict with federal or provincial legislation. As a product of provincial enabling legislation, By-law 270 is subject to the "impossibility of dual compliance" test for conflict between federal and provincial legislation set out in *Multiple Access*. The federal *Pest Control Products Act* regulates which pesticides can be registered for manufacture and/or use in Canada. This legislation is permissive, rather than exhaustive, and there is no operational conflict with By-law 270. The *Multiple Access* test also applies to the inquiry into whether there is a conflict between the by-law and provincial legislation. In this case, there is no barrier to dual compliance with By-law 270 and the Quebec *Pesticides Act*, nor any plausible evidence that the legislature intended to preclude municipal regulation of pesticide use. The *Pesticides Act* establishes a permit and licensing system for

règlements visant véritablement à faciliter la réalisation d'objectifs telles la santé et la sécurité publiques, les tribunaux saisis d'un règlement contesté adopté en vertu d'une disposition « omnibus » comme l'art. 410 *L.C.V.* doivent être vigilants lorsqu'ils cherchent à déterminer le but véritable du règlement.

Le règlement 270 ne tombe pas sous l'égide du par. 412(32) *L.C.V.* Le texte du règlement et la preuve présentée au cours du présent litige n'assimilent pas les pesticides aux « matières [. . .] toxiques ». Étant donné qu'aucune disposition particulière de la loi provinciale habilitante ne mentionne les pesticides, le règlement doit tomber dans le champ d'application du par. 410(1) *L.C.V.* Interprété dans son ensemble, le règlement 270 n'impose pas une interdiction totale, mais permet plutôt l'usage de pesticides dans certains cas où cet usage n'a pas un but purement esthétique. Selon la distinction entre l'usage essentiel et l'usage non essentiel des pesticides, il est raisonnable de conclure que le règlement de la Ville a pour objet de minimiser l'utilisation de pesticides qui seraient nocifs afin de protéger la santé de ses habitants. Cet objet relève directement de l'aspect « santé » du par. 410(1) *L.C.V.* Les distinctions contestées par les appelantes au motif qu'elles restreignent leurs activités commerciales sont des conséquences nécessaires à l'application du pouvoir délégué par la province en vertu du par. 410(1) *L.C.V.* De plus, interpréter le par. 410(1) comme permettant à la Ville de réglementer l'utilisation des pesticides correspond aux principes de droit et de politique internationaux. L'interprétation du règlement 270 exposée ici respecte le « principe de précaution » du droit international. Dans le contexte des postulats du principe de précaution, les craintes de la Ville au sujet des pesticides s'inscrivent confortablement sous la rubrique de l'action préventive.

Le règlement 270 n'a pas été rendu inopérant du fait de son incompatibilité avec la législation fédérale ou provinciale. Découlant d'une loi provinciale habilitante, le règlement 270 est sujet au critère de « l'impossibilité de se conformer aux deux textes » en cas de conflit entre la législation fédérale et la législation provinciale, critère qui a été énoncé dans l'arrêt *Multiple Access*. La *Loi sur les produits antiparasitaires* du gouvernement fédéral dicte quels pesticides peuvent être agréés à des fins de fabrication et/ou d'utilisation au Canada. Cette loi est permissive, et non pas exhaustive, de sorte qu'il n'y a aucun conflit d'application avec le règlement 270. Le critère de l'arrêt *Multiple Access* s'applique également à l'examen de la question de savoir s'il y a conflit entre le règlement municipal et la législation provinciale. Dans la présente affaire, rien n'empêche que l'on se conforme à la fois au règlement 270 et à la *Loi sur les*

vendors and commercial applicators of pesticides and thus complements the federal legislation's focus on the products themselves. Along with By-law 270, these laws establish a tri-level regulatory regime.

Per Iacobucci, Major and LeBel JJ.: The basic test to determine whether there is an operational conflict remains the impossibility of dual compliance. From this perspective, the alleged conflict with federal legislation simply does not exist. Nor does a conflict exist with the Quebec *Pesticides Act*, for the reasons given by the majority.

The issues in this case remain strictly first whether the *C.T.A.* authorizes municipalities to regulate the use of pesticides within their territorial limits, and second whether the particular regulation conforms with the general principles applicable to delegated legislation. The Town concedes that the only provision under which its by-law can be upheld is the general clause of s. 410(1) *C.T.A.* While it appears to be sound legislative and administrative policy, under general welfare provisions, to grant local governments a residual authority to address emerging or changing issues concerning the welfare of the local community living within their territory, it is not enough that a particular issue has become a pressing concern in the opinion of a local community. This concern must be closely related to the immediate interests of the community within the territorial limits defined by the legislature in a matter where local governments may usefully intervene. In this case, the by-law targets problems of use of land and property, and addresses neighborhood concerns that have always been within the realm of local government activity. The by-law was thus properly authorized by s. 410(1).

Two basic and longstanding principles of delegated legislation state that a by-law may not be prohibitory and may not discriminate unless the enabling legislation so authorizes. While on its face, By-law 270 involves a general prohibition and then authorizes some specific uses, when it is read as a whole its overall effect is to prohibit purely aesthetic use of pesticides while allowing other uses, mainly for business or agricultural

pesticides du Québec, et il n'y a aucun élément de preuve plausible indiquant que la législature avait l'intention d'empêcher la réglementation par les municipalités de l'utilisation des pesticides. La *Loi sur les pesticides* établit un régime de permis pour les vendeurs et les applicateurs commerciaux de pesticides et elle est donc complémentaire à la législation fédérale, qui porte sur les produits eux-mêmes. Conjointement avec le règlement 270, ces lois établissent un régime de réglementation à trois niveaux.

Les juges Iacobucci, Major et LeBel : Le critère fondamental permettant de déterminer s'il existe conflit d'application demeure l'impossibilité de se conformer aux deux textes. Dans cette optique, le présumé conflit avec la législation fédérale n'existe tout simplement pas. Il n'y a pas non plus conflit avec la *Loi sur les pesticides* du Québec pour les raisons données par la majorité.

En l'espèce, les questions se résument à savoir si, premièrement, la *L.C.V.* autorise les municipalités à réglementer l'utilisation des pesticides sur leur territoire et, deuxièmement, si le règlement en cause respecte les principes généraux applicables à la législation déléguée. La Ville admet que la seule disposition qui permette de confirmer la légalité de son règlement est la clause générale du par. 410(1) *L.C.V.* Bien qu'il paraisse logique, sur les plans législatif et administratif, de recourir à des dispositions générales de bien-être pour conférer aux administrations publiques locales le pouvoir résiduaire de traiter des questions nouvelles ou évolutives relativement au bien-être de la collectivité locale vivant sur leur territoire, il ne suffit pas qu'une question particulière soit devenue une préoccupation urgente selon la collectivité locale. Cette préoccupation doit être étroitement liée aux intérêts immédiats de la collectivité se trouvant dans les limites territoriales définies par la législature pour ce qui concerne toute question pour laquelle l'intervention des administrations publiques locales peut se révéler utile. En l'espèce, le règlement vise les problèmes liés à l'utilisation des terres et des biens et il porte sur des préoccupations de quartier qui ont toujours relevé du domaine d'activité des administrations publiques locales. Le règlement était donc autorisé en bonne et due forme par le par. 410(1).

Selon deux principes fondamentaux établis depuis longtemps en matière de législation déléguée, un règlement ne peut pas être prohibitif et discriminatoire à moins que la loi habilitante ne l'autorise. Bien que le règlement 270 établisse de prime abord une prohibition générale pour ensuite permettre certaines utilisations particulières, lu dans son ensemble, il a comme effet d'interdire l'utilisation des pesticides pour des raisons

purposes. Moreover, although the by-law discriminates, there can be no regulation on such a topic without some form of discrimination in the sense that the by-law must determine where, when and how a particular product may be used. An implied authority to discriminate was thus unavoidably part of the delegated regulatory power.

purement esthétiques tout en permettant d'autres utilisations, surtout pour des activités commerciales et agricoles. De plus, bien que le règlement soit discriminatoire, il ne peut y avoir aucune réglementation sur un tel sujet sans une certaine forme de discrimination, en ce sens que le règlement doit établir où, quand et comment un produit particulier peut être utilisé. Le pouvoir de réglementation délégué comportait donc inévitablement le pouvoir implicite de faire de la discrimination.

The judgment of L'Heureux-Dubé, Gonthier, Bastarache and Arbour JJ. was delivered by

1 L'HEUREUX-DUBÉ J. — The context of this appeal includes the realization that our common future, that of every Canadian community, depends on a healthy environment. In the words of the Superior Court judge: "Twenty years ago, there was very little concern over the effect of chemicals such as pesticides on the population. Today, we are more conscious of what type of an environment we wish to live in, and what quality of life we wish to expose our children [to]" ((1993), 19 M.P.L.R. (2d) 224, at p. 230). This Court has recognized that

POURVOI contre un arrêt de la Cour d'appel du Québec, [1998] A.Q. nº 2546 (QL), J.E. 98-1855, qui a confirmé un jugement de la Cour supérieure (1993), 19 M.P.L.R. (2d) 224, qui avait rejeté la requête en jugement déclaratoire des appelantes. Pourvoi rejeté.

Gérard Dugré et *Denis Manzo*, pour les appelantes.

Stéphane Brière et *Pierre Lepage*, pour l'intimée.

Stewart A. G. Elgie et *Jerry V. DeMarco*, pour les intervenants la Fédération canadienne des municipalités, Nature-Action Québec Inc. et le Fonds mondial pour la nature (Canada).

Argumentation écrite seulement par *Theresa A. McClenaghan* et *Paul Muldoon*, pour les intervenants Toronto Environmental Alliance, Sierra Club du Canada, l'Association canadienne du droit de l'environnement, Parents' Environmental Network, Healthy Lawns — Healthy People, Pesticide Action Group Kitchener, Working Group on the Health Dangers of the Urban Use of Pesticides, Environmental Action Barrie, Breast Cancer Prevention Coalition, Vaughan Environmental Action Committee et Dr Merryl Hammond.

Jean Piette, pour l'intervenante la Fédération interdisciplinaire de l'horticulture ornementale du Québec.

Version française du jugement des juges L'Heureux-Dubé, Gonthier, Bastarache et Arbour rendu par

LE JUGE L'HEUREUX-DUBÉ — Le contexte de ce pourvoi nous invite à constater que notre avenir à tous, celui de chaque collectivité canadienne, dépend d'un environnement sain. Comme l'a affirmé le juge de la Cour supérieure : [TRADUCTION] « Il y a vingt ans, on se préoccupait peu de l'effet des produits chimiques, tels les pesticides, sur la population. Aujourd'hui, nous sommes plus sensibles au genre d'environnement dans lequel nous désirons vivre et à la qualité de vie que nous voulons procurer à nos enfants » ((1993), 19

"[e]veryone is aware that individually and collectively, we are responsible for preserving the natural environment . . . environmental protection [has] emerged as a fundamental value in Canadian society": *Ontario v. Canadian Pacific Ltd.*, [1995] 2 S.C.R. 1031, at para. 55. See also *Friends of the Oldman River Society v. Canada (Minister of Transport)*, [1992] 1 S.C.R. 3, at pp. 16-17.

Regardless of whether pesticides are in fact an environmental threat, the Court is asked to decide the legal question of whether the Town of Hudson, Quebec, acted within its authority in enacting a by-law regulating and restricting pesticide use.

The case arises in an era in which matters of governance are often examined through the lens of the principle of subsidiarity. This is the proposition that law-making and implementation are often best achieved at a level of government that is not only effective, but also closest to the citizens affected and thus most responsive to their needs, to local distinctiveness, and to population diversity. La Forest J. wrote for the majority in *R. v. Hydro-Québec*, [1997] 3 S.C.R. 213, at para. 127, that "the protection of the environment is a major challenge of our time. It is an international problem, one that requires action by governments at all levels" (emphasis added). His reasons in that case also quoted with approval a passage from *Our Common Future*, the report produced in 1987 by the United Nations' World Commission on the Environment and Development. The so-called "Brundtland Commission" recommended that "local governments [should be] empowered to exceed, but not to lower, national norms" (p. 220).

There are now at least 37 Quebec municipalities with by-laws restricting pesticides: J. Swaigen, "The *Hudson* Case: Municipal Powers to Regulate

M.P.L.R. (2d) 224, p. 230). Notre Cour a reconnu que « [n]ous savons tous que, individuellement et collectivement, nous sommes responsables de la préservation de l'environnement naturel [. . .] la protection de l'environnement est [. . .] devenue une valeur fondamentale au sein de la société canadienne » : *Ontario c. Canadien Pacifique Ltée*, [1995] 2 R.C.S. 1031, par. 55. Voir également *Friends of the Oldman River Society c. Canada (Ministre des Transports)*, [1992] 1 R.C.S. 3, p. 16-17.

2 Peu importe que les pesticides constituent ou non en fait une menace pour l'environnement, la Cour est appelée à trancher la question de droit consistant à savoir si la ville de Hudson (Québec) a agi dans le cadre de ses pouvoirs en adoptant un règlement régissant et restreignant l'utilisation de pesticides.

3 Cette instance surgit à une époque où les questions de gestion des affaires publiques sont souvent examinées selon le principe de la subsidiarité. Ce principe veut que le niveau de gouvernement le mieux placé pour adopter et mettre en œuvre des législations soit celui qui est le plus apte à le faire, non seulement sur le plan de l'efficacité mais également parce qu'il est le plus proche des citoyens touchés et, par conséquent, le plus sensible à leurs besoins, aux particularités locales et à la diversité de la population. S'exprimant au nom de la majorité dans *R. c. Hydro-Québec*, [1997] 3 R.C.S. 213, par. 127, le juge La Forest écrit que « la protection de l'environnement est un défi majeur de notre époque. C'est un problème international qui exige une action des gouvernements de tous les niveaux » (je souligne). Dans ses motifs, il cite avec approbation un extrait de *Notre avenir à tous*, rapport publié en 1988 par la Commission mondiale sur l'environnement et le développement (« Commission Brundtland »), créée par les Nations Unies. Cette commission a recommandé que « les autorités locales [soient] habilitées à renforcer, mais non pas à libéraliser, les normes nationales » (p. 262).

4 Il existe aujourd'hui au Québec au moins 37 municipalités où l'utilisation des pesticides est restreinte par règlement : J. Swaigen, « The *Hudson*

Pesticides Confirmed by Quebec Courts" (2000), 34 C.E.L.R. (N.S.) 162, at p. 174. Nevertheless, each level of government must be respectful of the division of powers that is the hallmark of our federal system; there is a fine line between laws that legitimately complement each other and those that invade another government's protected legislative sphere. Ours is a legal inquiry informed by the environmental policy context, not the reverse.

Case: Municipal Powers to Regulate Pesticides Confirmed by Quebec Courts » (2000), 34 C.E.L.R. (N.S.) 162, p. 174. Chaque niveau de gouvernement doit, toutefois, respecter le partage des compétences, qui est la caractéristique de notre système fédéral; il existe une distinction subtile entre les lois qui se complètent légitimement les unes les autres et celles qui empiètent sur le domaine de compétence législative protégé de l'autre ordre de gouvernement. Notre examen en est donc un d'ordre juridique dans le contexte des politiques environnementales et non l'inverse.

I. Facts

I. Les faits

5 The appellants are landscaping and lawn care companies operating mostly in the region of greater Montreal, with both commercial and residential clients. They make regular use of pesticides approved by the federal *Pest Control Products Act*, R.S.C. 1985, c. P-9, in the course of their business activities and hold the requisite licences under Quebec's *Pesticides Act*, R.S.Q., c. P-9.3.

Les appelantes sont des entreprises d'aménagement paysager et d'entretien des pelouses qui exercent leurs activités surtout dans la région métropolitaine de Montréal et qui ont aussi bien des clients commerciaux que des clients résidentiels. Elles utilisent régulièrement, dans le cadre de leurs activités commerciales, des pesticides conformes à la *Loi sur les produits antiparasitaires* du gouvernement fédéral, L.R.C. 1985, ch. P-9, et détiennent les permis requis par la *Loi sur les pesticides* du Québec, L.R.Q., ch. P-9.3.

6 The respondent, the Town of Hudson ("the Town"), is a municipal corporation governed by the *Cities and Towns Act*, R.S.Q., c. C-19 ("*C.T.A.*"). It is located about 40 kilometres west of Montreal and has a population of approximately 5,400 people, some of whom are clients of the appellants. In 1991, the Town adopted By-law 270, restricting the use of pesticides within its perimeter to specified locations and for enumerated activities. The by-law responded to residents' concerns, repeatedly expressed since 1985. The residents submitted numerous letters and comments to the Town's Council. The definition of pesticides in By-law 270 replicates that of the *Pesticides Act*.

L'intimée, la ville de Hudson (la « Ville »), est une municipalité régie par la *Loi sur les cités et villes*, L.R.Q., ch. C-19 (« *L.C.V.* »). Elle est située à environ 40 kilomètres à l'ouest de Montréal et compte approximativement 5 400 habitants, dont certains sont des clients des appelantes. En 1991, la Ville adopte le règlement 270, qui limite l'utilisation des pesticides sur son territoire à des endroits précis et aux activités énumérées. Ce règlement fait suite aux craintes exprimées à maintes reprises depuis 1985 par les résidants, qui ont présenté de nombreuses lettres et observations au conseil municipal. La définition de pesticides contenue dans le règlement 270 est la réplique exacte de celle adoptée dans la *Loi sur les pesticides*.

7 In November 1992, the appellants were served with a summons by the Town to appear before the Municipal Court and respond to charges of having used pesticides in violation of By-law 270. The appellants pled not guilty and obtained a suspen-

En novembre 1992, les appelantes ont reçu signification, de la part de la Ville, de sommations leur enjoignant de comparaître devant la Cour municipale pour répondre à des accusations d'avoir utilisé des pesticides contrairement au

sion of proceedings in order to bring a motion for declaratory judgment before the Superior Court (under art. 453 of Quebec's *Code of Civil Procedure*, R.S.Q., c. C-25). They asked that the court declare By-law 270 (as well as By-law 248, which is not part of this appeal) to be inoperative and *ultra vires* the Town's authority.

The Superior Court denied the motion for declaratory judgment, finding that the by-laws fell within the scope of the Town's powers under the *C.T.A.* This ruling was affirmed by a unanimous Quebec Court of Appeal.

II. Relevant Statutory Provisions

Town of Hudson By-law 270

1. The following words and expressions, whenever the same occur in this By-Law, shall have the following meaning:

   a) "PESTICIDES": means any substance, matter or micro-organism intended to control, destroy, reduce, attract or repel, directly or indirectly, an organism which is noxious, harmful or annoying for a human being, fauna, vegetation, crops or other goods or intended to regulate the growth of vegetation, excluding medicine or vaccine;

   b) "FARMER": means a farm producer within the meaning of the Farm Producers Act (R.S.Q., chap., P-28);

. . .

2. The spreading and use of a pesticide is prohibited throughout the territory of the Town.

3. Notwithstanding article 2, it is permitted to use a pesticide in the following cases:

   a) in a public or private swimming-pool;

   b) to purify water intended for the use of human beings or animals;

   c) inside of a building;

   d) to control or destroy animals which constitute a danger for human beings;

   e) to control or destroy plants which constitute a danger for human beings who are allergic thereto.

règlement 270. Les appelantes ont plaidé non coupable et ont obtenu la suspension des procédures afin d'introduire une requête en jugement déclaratoire devant la Cour supérieure (en vertu de l'art. 453 du *Code de procédure civile* du Québec, L.R.Q., ch. C-25). Elles ont demandé à la cour de déclarer inopérant le règlement 270 (et le règlement 248, qui ne fait pas l'objet du pourvoi) et *ultra vires* le pouvoir de la Ville.

8 La Cour supérieure a rejeté la requête en jugement déclaratoire, concluant que les règlements relevaient des pouvoirs conférés à la Ville par la *L.C.V.* Cette décision a été confirmée à l'unanimité par la Cour d'appel du Québec.

II. Les dispositions législatives pertinentes

Règlement 270 de la ville de Hudson

9

1. Dans ce règlement, les mots et expressions suivants ont le sens et l'application que leur attribue le présent article :

   a) « PESTICIDE » : toute substance, matière ou micro-organisme destiné à contrôler, détruire, amoindrir, attirer ou repousser, directement ou indirectement, un organisme nuisible, nocif ou gênant pour l'être humain, la faune, la végétation, les récoltes ou les autres biens, ou destiné à servir de régulateur de croissance de la végétation, à l'exclusion d'un médicament ou d'un vaccin.

   b) « FERMIER » : un producteur agricole au sens de la Loi sur les producteurs agricoles (L.R.Q., chap. P-28);

. . .

2. L'épandage et l'utilisation de tout pesticide est interdit partout sur le territoire de la Ville.

3. Nonobstant l'article 2, l'utilisation d'un pesticide est permis dans les cas suivants :

   a) dans une piscine publique ou privée;

   b) pour purifier l'eau destinée à la consommation des humains ou des animaux;

   c) à l'intérieur d'un bâtiment;

   d) pour contrôler ou enrayer la présence d'animaux qui constituent un danger pour les humains;

   e) pour contrôler ou enrayer les plantes qui constituent un danger pour les humains qui y sont allergiques.

4. Notwithstanding article 2, a farmer using a pesticide on an immoveable which is exploited for purposes of agriculture or horticulture, in a hot house or in the open, is requested to

   a) register, by written declaration, with the Town, in the month of march of each year, the products which he stores and which he will be using during that year.

   b) also provide, in the written declaration at article 4 a), the schedule of application of said products and the area(s) of his property where the products will be applied.

5. Notwithstanding article 2, it is permitted to use a pesticide on a golf course, for a period not exceeding five (5) years from the date this by-law comes into force:

. . .

6. Notwithstanding article 2, it is permitted to use a biological pesticide to control or destroy insects which constitute a danger or an inconvenience for human beings.

. . .

10. For the purpose of article 8 of the Agricultural Abuses Act (R.S.Q. chap. A-2) an inspector designated by the Town may use a pesticide, notwithstanding article 2 of the By-Law, if there is no other efficient way of destroying noxious plants determined as such by the Provincial Government and the presence of which is harmful to a real and continuous agricultural exploitation.

Cities and Towns Act, R.S.Q., c. C-19

410. The council may make by-laws:

(1) To secure peace, order, good government, health and general welfare in the territory of the municipality, provided such by-laws are not contrary to the laws of Canada, or of Québec, nor inconsistent with any special provision of this Act or of the charter;

. . .

In no case may the council make by-laws on the matters contemplated in the Agricultural Products, Marine Products and Food Act (chapter P-29) or in the Dairy Products and Dairy Products Substitutes Act (chapter P-30). This paragraph applies notwithstanding any provision of a special Act granting powers on those matters

4. Nonobstant l'article 2, un fermier utilisant un pesticide sur une propriété qui est exploitée à des fins agricoles ou horticoles, dans une serre ou à l'extérieur, doit :

   a) enregistrer, par déclaration écrite à la Ville, au cours du mois de mars de chaque année, les produits qu'il entrepose et dont il entrevoit faire usage durant l'année;

   b) de plus fournir, dans la déclaration écrite à l'article 4a), la cédule d'épandage desdits produits et les secteurs de sa propriété où les produits seront appliqués.

5. Nonobstant l'article 2, il est permis d'utiliser un pesticide sur un terrain de golf, pour une période n'excédant pas cinq (5) ans, à partir de la date d'entrée en vigueur de ce règlement :

. . .

6. Nonobstant l'article 2, il est permis d'utiliser un pesticide biologique pour contrôler ou enrayer les insectes qui constituent un danger ou qui incommodent les humains;

. . .

10. Selon l'article 8 [de] la Loi sur les abus agricoles (L.R.Q. chap. A-2), un inspecteur désigné par la Ville peut utiliser un pesticide en dépit de l'article 2 du règlement, s'il n'existe aucune autre façon efficace d'enrayer les plantes nocives déterminées comme telles par le gouvernement provincial et la présence desquelles est nuisible à une exploitation agricole véritable et continue.

Loi sur les cités et villes, L.R.Q., ch. C-19

410. Le conseil peut faire des règlements :

1º Pour assurer la paix, l'ordre, le bon gouvernement, la salubrité et le bien-être général sur le territoire de la municipalité, pourvu que ces règlements ne soient pas contraires aux lois du Canada ou du Québec, ni incompatibles avec quelque disposition spéciale de la présente loi ou de la charte;

. . .

Le conseil ne peut faire des règlements sur des matières visées par la Loi sur les produits agricoles, les produits marins et les aliments (chapitre P-29) et par la Loi sur les produits laitiers et leurs succédanés (chapitre P-30). Le présent alinéa s'applique malgré une disposition d'une loi spéciale accordant des pouvoirs sur ces

to any municipality other than Ville de Trois-Rivières and Ville de Sherbrooke.

. . .

412. The council may make by-laws:

. . .

(32) To regulate or prohibit the storage and use of gun-powder, dry pitch, resin, coal oil, benzine, naphtha, gasoline, turpentine, gun-cotton, nitro-glycerine, and other combustible, explosive, corrosive, toxic or radioactive or other materials that are harmful to public health or safety, in the territory of the municipality or within 1 km therefrom;

By-laws passed under the first paragraph in respect of corrosive, toxic or radioactive materials require the approval of the Minister of the Environment;

. . .

463.1 Subject to the Pesticides Act (chapter P-9.3) and the Environment Quality Act (chapter Q-2), the municipality may, with the consent of the owner of an immovable, carry out pesticide application works on the immovable.

Pesticides Act, R.S.Q., c. P-9.3

102. The provisions of the Pesticide Management Code and of the other regulations of this Act prevail over any inconsistent provision of any by-law passed by a municipality or an urban community.

102. [As revised in 1993; not yet in force] The Pesticide Management Code and any other regulation enacted pursuant to this Act shall render inoperative any regulatory provision concerning the same matter enacted by a municipality or an urban community, except where the provision

– concerns landscaping or extermination activities, such as fumigation, as defined by government regulation, and

– prevents or further mitigates harmful effects on the health of humans or of other living species or damage to the environment or to property.

. . .

matières à une municipalité autre que la Ville de Trois-Rivières et la Ville de Sherbrooke.

. . .

412. Le conseil peut faire des règlements :

. . .

32º Pour réglementer ou défendre l'emmagasinage et l'usage de poudre, poix sèche, résine, pétrole, benzine, naphte, gazoline, térébenthine, fulmicoton, nitroglycérine, ainsi que d'autres matières combustibles, explosives, corrosives, toxiques, radioactives ou autrement dangereuses pour la santé ou la sécurité publiques, sur le territoire de la municipalité ou dans un rayon de 1 km à l'extérieur de ce territoire;

Un règlement adopté en vertu du premier alinéa à l'égard de matières corrosives, toxiques ou radioactives requiert l'approbation du ministre de l'Environnement;

. . .

463.1 Sous réserve de la Loi sur les pesticides (chapitre P-9.3) et de la Loi sur la qualité de l'environnement (chapitre Q-2), la municipalité peut, avec le consentement du propriétaire d'un immeuble, procéder à des travaux d'épandage de pesticides sur l'immeuble.

Loi sur les pesticides, L.R.Q., ch. P-9.3

102. Toute disposition du Code de gestion des pesticides et des autres règlements édictés en vertu de la présente loi prévaut sur toute disposition inconciliable d'un règlement édicté par une municipalité ou une communauté urbaine.

102. [Selon la modification de 1993; non en vigueur] Le Code de gestion des pesticides et tout autre règlement édictés en application de la présente loi rendent inopérante toute disposition réglementaire portant sur une même matière qui est édictée par une municipalité ou une communauté urbaine, sauf dans le cas où cette disposition réglementaire satisfait aux conditions suivantes :

– elle porte sur les activités d'entretien paysager ou d'extermination, notamment la fumigation, déterminées par règlement du gouvernement;

– elle prévient ou atténue davantage les atteintes à la santé des êtres humains ou des autres espèces vivantes, ainsi que les dommages à l'environnement ou aux biens.

. . .

105. [Not yet in force] The Government shall enact by regulation a Pesticide Management Code which may prescribe rules, restrictions or prohibitions respecting activities related to the distribution, storage, transportation, sale or use of any pesticide, pesticide container or any equipment used for any of those activities.

105. [Non en vigueur] Le gouvernement édicte, par règlement, un Code de gestion des pesticides. Ce code peut édicter des règles, restrictions ou prohibitions portant sur les activités relatives à la distribution, à la vente, à l'entreposage, au transport ou à l'utilisation de tout pesticide, de tout contenant d'un pesticide ou de tout équipement servant à l'une de ces activités.

105.1. [Not yet in force] The Pesticide Management Code may require a person who stores pesticides of a determined category or in a determined quantity to subscribe civil liability insurance, the kind, extent, duration, amount and other applicable conditions of which are determined in the said Code, and to furnish proof thereof to the Minister.

105.1. [Non en vigueur] Le Code de gestion des pesticides peut exiger d'une personne qui entrepose des pesticides d'une catégorie ou en quantité déterminée qu'elle contracte une assurance de responsabilité civile, dont il détermine la nature, l'étendue, la durée, le montant ainsi que les autres conditions applicables, et en fournisse l'attestation au ministre.

106. [Not yet in force] The Pesticide Management Code may cause any rule elaborated by another government or by a body to be mandatory.

In addition, the code may cause any instructions of the manufacturer of a pesticide or of equipment used for any activity referred to in the code to be mandatory.

106. [Non en vigueur] Le Code de gestion des pesticides peut rendre obligatoire une règle élaborée par un autre gouvernement ou par un organisme.

Il peut, en outre, rendre obligatoires les instructions du fabricant d'un pesticide ou d'un équipement servant à l'une des activités visées par le code.

107. [Not yet in force] The Government may prescribe that the contravention of the provisions of this code which it determines constitutes an offence.

107. [Non en vigueur] Le gouvernement peut, dans ce code, déterminer les dispositions dont la contravention constitue une infraction.

Pest Control Products Act, R.S.C. 1985, c. P-9

Loi sur les produits antiparasitaires, L.R.C. 1985, ch. P-9

4. (1) No person shall manufacture, store, display, distribute or use any control product under unsafe conditions.

4. (1) Il est interdit de fabriquer, stocker, présenter, distribuer ou utiliser un produit antiparasitaire dans des conditions dangereuses.

. . .

. . .

(3) A control product that is not manufactured, stored, displayed, distributed or used as prescribed or that is manufactured, stored, displayed, distributed or used contrary to the regulations shall be deemed to be manufactured, stored, displayed, distributed or used contrary to subsection (1).

(3) La fabrication, le stockage, la présentation, la distribution ou l'utilisation d'un produit antiparasitaire, réalisés de façon contraire ou non conforme aux règlements, sont réputés contrevenir au paragraphe (1).

. . .

. . .

6. (1) The Governor in Council may make regulations

6. (1) Le gouverneur en conseil peut, par règlement :

. . .

. . .

(*j*) respecting the manufacture, storage, distribution, display and use of any control product;

j) régir la fabrication, le stockage, la présentation, la distribution et l'utilisation de produits antiparasitaires;

Pest Control Products Regulations, C.R.C. 1978, c. 1253

45. (1) No person shall use a control product in a manner that is inconsistent with the directions or limitations respecting its use shown on the label.

(2) No person shall use a control product imported for the importer's own use in a manner that is inconsistent with the conditions set forth on the importer's declaration respecting the control product.

(3) No person shall use a control product that is exempt from registration under paragraph 5(*a*) for any purpose other than the manufacture of a registered control product.

III. Judgments

A. *Superior Court* (1993), 19 M.P.L.R. (2d) 224

Kennedy J. held that by-laws are presumed valid and legal. He found that By-laws 248 and 270 were adopted under s. 410 *C.T.A.* and, thus, did not require ministerial approval to enter into effect. Both by-laws deal with pesticides and not toxic substances and since "pesticides" are not included in s. 412(32), ministerial approval is not required. According to Kennedy J., the Town, faced with a situation involving health and the environment, acted in the public interest by enacting the by-laws in question. Consequently, the Town could rely on s. 410(1) *C.T.A.* as the legislative provision that enabled it to adopt these by-laws.

Kennedy J. then considered the provisions of the *Pesticides Act* to determine whether the by-laws conflicted with provincial legislation. He found it clear that the *Pesticides Act* was enacted with the intention to allow municipalities to adopt by-laws of this nature. In this regard, Kennedy J. cited ss. 102 and 105 to 107 of the *Pesticides Act*, which envision the creation of a Pesticide Management Code allowing the provincial government to restrict or prohibit pesticides. Section 102 of that Act states that the provisions of the Code are to take precedence over inconsistent by-laws. Yet, given that the Code had yet to come into force, nothing prohibited municipalities from regulating

Règlement sur les produits antiparasitaires, C.R.C. 1978, ch. 1253

45. (1) Il est interdit d'utiliser un produit antiparasitaire d'une manière qui ne correspond pas au mode d'emploi, ni aux limitations figurant sur le label.

(2) Il est interdit d'utiliser un produit antiparasitaire importé par un utilisateur pour son propre usage d'une manière qui ne correspond pas aux conditions énoncées sur la déclaration de l'importateur visant ledit produit.

(3) Il est interdit d'utiliser un produit antiparasitaire exempté de l'enregistrement en vertu de l'alinéa 5*a*) pour une autre fin que la fabrication d'un produit antiparasitaire enregistré.

III. Les jugements

A. *Cour supérieure* (1993), 19 M.P.L.R. (2d) 224

10 Le juge Kennedy conclut que les règlements sont présumés valides et légaux. À son avis, les règlements 248 et 270 ont été adoptés en vertu de l'art. 410 *L.C.V.*, de sorte que leur entrée en vigueur ne nécessite pas l'approbation du ministre. Ils portent tous deux sur les pesticides et non pas sur les substances toxiques; vu que les « pesticides » ne sont pas visés par le par. 412(32), l'approbation du ministre n'est pas requise. Selon le juge Kennedy, la Ville, face à une situation où la santé et l'environnement sont en jeu, a agi dans l'intérêt public en adoptant les règlements en question. Elle pouvait donc se fonder sur le par. 410(1) *L.C.V.* en tant que disposition législative l'habilitant à adopter ces règlements.

11 Le juge Kennedy examine ensuite les dispositions de la *Loi sur les pesticides* pour déterminer si les règlements vont à l'encontre de cette loi provinciale. À son avis, l'adoption de la *Loi sur les pesticides* vise clairement à permettre aux municipalités d'adopter des règlements de cette nature. À cet égard, le juge Kennedy cite les art. 102 et 105 à 107 de la *Loi sur les pesticides*, qui prévoient la création d'un Code de gestion des pesticides permettant au gouvernement provincial de restreindre ou d'interdire l'utilisation des pesticides. Selon l'article 102 de cette loi, les dispositions du Code prévalent sur tout règlement inconciliable. Toutefois, étant donné que le Code n'était pas encore en

pesticide use in the interim. Kennedy J. thus concluded that there was no conflict between the by-laws and provincial or federal legislation.

vigueur, rien n'empêchait les municipalités de réglementer entre-temps l'utilisation des pesticides. Le juge Kennedy conclut donc qu'il n'y a aucun conflit entre les règlements et la législation provinciale ou fédérale.

B. *Court of Appeal*, [1998] Q.J. No. 2546 (QL)

B. *Cour d'appel*, [1998] A.Q. nº 2546 (QL)

12 Before the Court of Appeal, the Town conceded that By-law 248 was inoperative. Thus, only By-law 270 was at issue. The appellants challenged Kennedy J.'s ruling on two grounds. First, they argued that By-law 270 was inoperative given that it was incompatible with the *Pesticides Act*. Second, the appellants contended that since the regulation of toxic substances was covered by s. 412(32) *C.T.A.*, Kennedy J. erred in finding that the by-law was enacted under s. 410(1) *C.T.A.* While the latter provision allows a municipality to enact by-laws considered necessary for public health and welfare, s. 412(32) *C.T.A.* is concerned with "toxic" materials, and states that by-laws addressing this subject matter require approval from the Minister of the Environment. Given that the Town did not obtain such approval when it enacted By-law 270, the appellants argued that the by-law was invalid.

Devant la Cour d'appel, la Ville admet que le règlement 248 est inopérant. En conséquence, seul le règlement 270 est ici en cause. Les appelantes contestent la décision du juge Kennedy pour deux motifs. Premièrement, elles font valoir que le règlement 270 est inopérant du fait de son incompatibilité avec la *Loi sur les pesticides*. Deuxièmement, elles soutiennent que, la réglementation des substances toxiques étant visée par le par. 412(32) *L.C.V.*, le juge Kennedy a commis une erreur en concluant que le règlement avait été adopté en vertu du par. 410(1) *L.C.V.* Même si cette dernière disposition autorise une municipalité à adopter les règlements jugés nécessaires pour la santé et le bien-être publics, le par. 412(32) *L.C.V.*, qui porte sur les matières « toxiques », prévoit que les règlements en cette matière doivent être approuvés par le ministre de l'Environnement. Les appelantes soutiennent que, la Ville n'ayant pas obtenu l'approbation requise lorsque le règlement 270 fut adopté, celui-ci est en conséquence invalide.

13 The Court of Appeal, *per* Delisle J.A., accepted the Town's position that By-law 270 was enacted under s. 410(1) *C.T.A.* In reaching this conclusion, the court noted that By-law 270 repeated the definition of "pesticide" that is found in the *Pesticides Act*. This definition makes no reference to terms used in s. 412(32) or to toxicity. Moreover, the *C.T.A.* itself does not discuss whether pesticides are "toxic . . . materials", nor does it require ministerial approval for regulations relating to pesticides. No evidence was submitted concerning the toxic character of pesticides. The Court of Appeal also held that By-law 270 furthered the objectives set out in s. 410(1) *C.T.A.* It reiterated the statements of Kennedy J. that by-laws are presumed to be valid and legal and that there is a presumption that legislators act in good faith and in the public interest. It found that s. 410(1) is a very general

Le juge Delisle, au nom de la Cour d'appel, accepte la position de la Ville selon laquelle le règlement 270 a été adopté en vertu du par. 410(1) *L.C.V.* En tirant cette conclusion, la cour souligne que le règlement 270 reprend la définition de « pesticide » dans la *Loi sur les pesticides*. Cette définition ne réfère aucunement aux termes utilisés au par. 412(32) ni à la toxicité. De plus, la *L.C.V.* elle-même ne précise pas si les pesticides sont des « matières [. . .] toxiques » et elle n'exige pas non plus l'approbation du ministre pour les règlements visant les pesticides. Aucun élément de preuve n'a été présenté au sujet de la toxicité des pesticides. La Cour d'appel conclut aussi que le règlement 270 facilite la réalisation des objectifs énoncés au par. 410(1) *L.C.V.* La cour réitère les déclarations du juge Kennedy voulant que les règlements sont présumés valides et légaux et qu'il existe une pré-

enabling clause and must receive a liberal interpretation.

The court agreed with Kennedy J.'s finding that the by-law was enacted by the Town in the public interest and in response to health concerns expressed by residents. The court noted that these concerns were recorded in the Town Council's meeting minutes and manifested themselves in letters to Council, as well as a petition with more than 300 signatures. Moreover, the Court of Appeal recognized that s. 410 *C.T.A.* describes when a municipality may not act under its general governance powers. By-laws on subjects contemplated in the *Pesticides Act* were not included in this list of unauthorized areas of regulation. The appellants argued that s. 410(1) does not permit the Town to ban pesticides. The Court of Appeal held that an absolute ban would be forbidden, but that the by-law does not impose an absolute ban.

The Court of Appeal then examined whether By-law 270 was in conflict with the *Pesticides Act* and thus inoperative. It found that s. 102 of the *Pesticides Act* — which states that the Pesticide Management Code and all regulations of the *Pesticides Act* take precedence over any incompatible municipal by-law — contemplated municipal regulation of pesticide use. The court also commented that the revised version of s. 102, as well as ss. 105 to 107 regarding the Pesticide Management Code, had yet to be enacted. As a result, it held that, as opposed to a real conflict, a potential future incompatibility between the by-law and the Code did not suffice to render the by-law inoperative.

Finally, the Court of Appeal noted that, although not yet in force, the revised version of s. 102 of the *Pesticides Act* allows municipalities to adopt by-laws concerning pesticides, so long as these are not incompatible with the Pesticide Management Code. At the same time, even if such incompatibil-

somption que le législateur agit de bonne foi et dans l'intérêt public. Elle juge que le par. 410(1) est une clause habilitante très générale qui doit recevoir une interprétation libérale.

14 La Cour d'appel partage l'avis du juge Kennedy, selon lequel la Ville a adopté le règlement dans l'intérêt public en réponse aux craintes liées à la santé exprimées par les résidants. Elle souligne que ces craintes ont été consignées dans les procès-verbaux du conseil municipal et qu'elles se sont manifestées par des lettres au conseil de même que par une pétition portant plus de 300 signatures. De plus, la cour reconnaît que l'art. 410 *L.C.V.* précise les cas où une municipalité ne peut pas agir en vertu de son pouvoir général de gestion des affaires publiques. Les règlements portant sur des matières visées par la *Loi sur les pesticides* ne figurent pas parmi les domaines de réglementation interdits. Les appelantes soutiennent que le par. 410(1) n'autorise pas la Ville à interdire les pesticides. La Cour d'appel conclut qu'une interdiction absolue serait interdite, mais que le règlement en question n'impose pas une telle interdiction.

15 La Cour d'appel examine ensuite la question de savoir si le règlement 270 entre en conflit avec la *Loi sur les pesticides* et s'il est en conséquence inopérant. Selon la cour, l'art. 102 de la *Loi sur les pesticides* — qui prévoit que le Code de gestion des pesticides et les règlements d'application de la *Loi sur les pesticides* prévalent sur tout règlement municipal incompatible — vise la réglementation par les municipalités de l'utilisation des pesticides. La cour fait aussi remarquer que la version modifiée de l'art. 102, de même que les art. 105 à 107 relatifs au Code de gestion des pesticides, n'étaient pas encore en vigueur. Elle conclut donc que, contrairement à un conflit réel, une éventuelle incompatibilité entre le règlement et le Code ne suffit pas pour rendre le règlement inopérant.

16 Enfin, la Cour d'appel souligne que, même si la nouvelle version de l'art. 102 de la *Loi sur les pesticides* n'était pas encore en vigueur, elle permettait aux municipalités d'adopter des règlements sur les pesticides dans la mesure où ils ne sont pas incompatibles avec le Code de gestion des pesti-

ity arises, the by-laws can continue to be operative if they relate to landscaping activities, or if they aim to prevent or reduce injury or damage to people, animals, the environment or property. As such, this new regime would enable municipalities to enact by-laws that are more restrictive than the provisions set out in the provincial Pesticide Management Code. Based on these reasons, the Court of Appeal dismissed the appeal, holding that By-law 270 was validly enacted and operative.

cides. Par ailleurs, même en cas d'incompatibilité, les règlements continuent de s'appliquer s'ils ont trait à l'aménagement paysager ou s'ils visent à prévenir ou à réduire les blessures causées aux personnes ou aux animaux ou les dommages causés à l'environnement ou à la propriété. Ainsi, ce nouveau régime permettrait aux municipalités d'adopter des règlements plus restrictifs que le Code de gestion des pesticides de la province. Pour ces motifs, la Cour d'appel rejette le pourvoi, concluant que le règlement 270 a été valablement adopté et qu'il s'applique.

IV. Issues

17 There are two issues raised by this appeal:

(1) Did the Town have the statutory authority to enact By-law 270?

(2) Even if the Town had authority to enact it, was By-law 270 rendered inoperative because of a conflict with federal or provincial legislation?

IV. Les questions en litige

Le pourvoi soulève deux questions :

1) La Ville avait-elle le pouvoir légal d'adopter le règlement 270?

2) Dans l'hypothèse où la Ville avait le pouvoir de l'adopter, le règlement 270 a-t-il été rendu inopérant du fait de son incompatibilité avec la législation fédérale ou provinciale?

V. Analysis

A. *Did the Town Have the Statutory Authority to Enact By-law 270?*

18 In *R. v. Sharma*, [1993] 1 S.C.R. 650, at p. 668, this Court recognized "the principle that, as statutory bodies, municipalities 'may exercise only those powers expressly conferred by statute, those powers necessarily or fairly implied by the expressed power in the statute, and those indispensable powers essential and not merely convenient to the effectuation of the purposes of the corporation' (Makuch, *Canadian Municipal and Planning Law* (1983), at p. 115)". Included in this authority are "general welfare" powers, conferred by provisions in provincial enabling legislation, on which municipalities can draw. As I. M. Rogers points out, "the legislature cannot possibly foresee all the powers that are necessary to the statutory equipment of its creatures. . . . Undoubtedly the inclusion of 'general welfare' provisions was intended to circumvent, to some extent, the effect of the doctrine of *ultra vires* which puts the municipalities in the position of having to point to an express

V. Analyse

A. *La Ville avait-elle le pouvoir légal d'adopter le règlement 270?*

Dans l'arrêt *R. c. Sharma*, [1993] 1 R.C.S. 650, p. 668, notre Cour reconnaît que le « principe selon lequel, en tant qu'organismes créés par la loi, les municipalités [TRADUCTION] "peuvent exercer seulement les pouvoirs qui leur sont conférés expressément par la loi, les pouvoirs qui découlent nécessairement ou vraiment du pouvoir explicite conféré dans la loi, et les pouvoirs indispensables qui sont essentiels et non pas seulement commodes pour réaliser les fins de l'organisme" (Makuch, *Canadian Municipal and Planning Law* (1983), à la p. 115) ». Y sont inclus les pouvoirs en matière de « bien-être général » conférés par la loi provinciale habilitante, sur laquelle les municipalités peuvent se fonder. Comme le souligne I. M. Rogers, [TRADUCTION] « la législature ne peut pas prévoir tous les pouvoirs de réglementation nécessaires à ses créatures [. . .] Sans doute, l'inclusion de dispositions en matière de "bien-être général" visait à contourner dans une certaine mesure l'effet de la

grant of authority to justify each corporate act" (*The Law of Canadian Municipal Corporations* (2nd ed. (loose-leaf)), Cum. Supp. to vol. 1, at p. 367).

Section 410 *C.T.A.* is an example of such a general welfare provision and supplements the specific grants of power in s. 412. More open-ended or "omnibus" provisions such as s. 410 allow municipalities to respond expeditiously to new challenges facing local communities, without requiring amendment of the provincial enabling legislation. There are analogous provisions in other provinces' and territories' municipal enabling legislation: see *Municipal Government Act*, S.A. 1994, c. M-26.1, ss. 3(*c*) and 7; *Local Government Act*, R.S.B.C. 1996, c. 323, s. 249; *Municipal Act*, S.M. 1996, c. 58, C.C.S.M. c. M225, ss. 232 and 233; *Municipalities Act*, R.S.N.B. 1973, c. M-22, s. 190(2), First Schedule; *Municipal Government* Act, S.N.S. 1998, c. 18, s. 172; *Cities, Towns and Villages Act*, R.S.N.W.T. 1988, c. C-8, ss. 54 and 102; *Municipal Act*, R.S.O. 1990, c. M.45, s. 102; *Municipal Act*, R.S.Y. 1986, c. 119, s. 271.

While enabling provisions that allow municipalities to regulate for the "general welfare" within their territory authorize the enactment of by-laws genuinely aimed at furthering goals such as public health and safety, it is important to keep in mind that such open-ended provisions do not confer an unlimited power. Rather, courts faced with an impugned by-law enacted under an "omnibus" provision such as s. 410 *C.T.A.* must be vigilant in scrutinizing the true purpose of the by-law. In this way, a municipality will not be permitted to invoke the implicit power granted under a "general welfare" provision as a basis for enacting by-laws that are in fact related to ulterior objectives, whether mischievous or not. As a Justice of the Ontario Divisional Court, Cory J. commented instructively on this subject in *Re Weir and The*

théorie de l'excès de pouvoir qui oblige les municipalités à invoquer une attribution expresse de pouvoir pour justifier chaque acte qu'elles accomplissent » (*The Law of Canadian Municipal Corporations* (2e éd. (feuilles mobiles)), suppl. cum. du vol. 1, p. 367).

19 L'article 410 *L.C.V.* constitue un exemple d'une telle disposition générale de bien-être et il ajoute aux pouvoirs spécifiques conférés par l'art. 412. Les dispositions moins limitatives ou « omnibus », tel l'art. 410, permettent aux municipalités de relever rapidement les nouveaux défis auxquels font face les collectivités locales sans qu'il soit nécessaire de modifier la loi provinciale habilitante. Les lois habilitantes des autres provinces et des territoires qui autorisent l'adoption de règlements municipaux contiennent des dispositions analogues: voir *Municipal Government Act*, S.A. 1994, ch. M-26.1, al. 3*c*) et art. 7; *Local Government Act*, R.S.B.C. 1996, ch. 323, art. 249; *Loi sur les municipalités*, L.M. 1996, ch. 58, C.P.L.M., ch. M225, art. 232-233; *Loi sur les municipalités*, L.R.N.-B. 1973, ch. M-22, par. 190(2), annexe I; *Municipal Government Act*, S.N.S. 1998, ch. 18, art. 172; *Loi sur les cités, villes et villages*, L.R.T.N.-O. 1988, ch. C-8, art. 54 et 102; *Loi sur les municipalités*, L.R.O. 1990, ch. M.45, art. 102; *Loi municipale*, L.R.Y. 1986, ch. 119, art. 271.

20 Bien que les dispositions habilitantes permettant aux municipalités de réglementer pour le « bien-être général » sur leur territoire autorisent l'adoption de règlements visant véritablement à faciliter la réalisation d'objectifs telles la santé et la sécurité publiques, il importe de garder à l'esprit le fait que ces dispositions non limitatives ne confèrent pas un pouvoir illimité. Les tribunaux saisis d'un règlement contesté adopté en vertu d'une disposition « omnibus » comme l'art. 410 *L.C.V.* doivent plutôt être vigilants lorsqu'ils cherchent à déterminer le but véritable du règlement. Ainsi, une municipalité ne pourra pas invoquer le pouvoir implicite conféré par une disposition de « bien-être général » pour adopter des règlements qui sont en fait liés à des objectifs inavoués, que ceux-ci soient ou non malicieux. Lorsqu'il était juge à la Cour division-

Queen (1979), 26 O.R. (2d) 326 (Div. Ct.), at p. 334. Although he found that the City of Toronto's power to regulate matters pertaining to health, safety and general welfare (conferred by the *Municipal Act*, R.S.O. 1970, c. 284, s. 242) empowered it to pass a by-law regulating smoking in public retail shops, Cory J. also made the following remark about the enabling provision: "There is no doubt that a by-law passed pursuant to the provisions of s. 242 must be approached with caution. If such were not the case, the municipality could be deemed to be empowered to legislate in a most sweeping manner."

naire de l'Ontario, le juge Cory a fait des commentaires instructifs sur ce sujet dans l'affaire *Re Weir and The Queen* (1979), 26 O.R. (2d) 326 (C. div.), p. 334. Même s'il a conclu que le pouvoir de réglementation de la ville de Toronto en matière de santé, de sécurité et de bien-être général (conféré par la *Municipal Act*, R.S.O. 1970, ch. 284, art. 242) lui permettait d'adopter un règlement sur l'usage du tabac dans les commerces de détail, le juge Cory a aussi fait la remarque suivante au sujet de la disposition habilitante : [TRADUCTION] « Il ne fait aucun doute qu'un règlement adopté en vertu de l'art. 242 doit être examiné avec prudence. Sinon, la municipalité pourrait être réputée avoir un pouvoir de réglementation extrêmement étendu. »

21 Within this framework, I turn now to the specifics of the appeal. As a preliminary matter, I agree with the courts below that By-law 270 was not enacted under s. 412(32) *C.T.A.* This provision authorizes councils to "make by-laws: To regulate or prohibit the storage and use of gun-powder, dry pitch, resin, coal oil, benzine, naphtha, gasoline, turpentine, gun-cotton, nitro-glycerine, and other combustible, explosive, corrosive, toxic or radioactive or other materials that are harmful to public health or safety, in the territory of the municipality or within 1 km therefrom" (emphasis added). In replicating the definition of "pesticides" found in the provincial *Pesticides Act*, By-law 270 avoids falling under the ambit of s. 412(32). There is no equation of pesticides and "toxic . . . materials" either in the terms of the by-law or in any evidence presented during this litigation. The provincial government did not consider By-law 270 to fall under s. 412(32): see letter of July 5, 1991 from the Deputy Minister of the Environment. As Y. Duplessis and J. Hétu state in *Les pouvoirs des municipalités en matière de protection de l'environnement* (2nd ed. 1994), at p. 110,

C'est sur cette toile de fond que j'aborde maintenant les questions spécifiques soulevées par ce pourvoi. Tout d'abord, je suis d'accord avec les cours d'instance inférieure que le règlement 270 n'a pas été adopté en vertu du par. 412(32) *L.C.V.* Cette disposition autorise les conseils à « faire des règlements: Pour réglementer ou défendre l'emmagasinage et l'usage de poudre, poix sèche, résine, pétrole, benzine, naphte, gazoline, térébenthine, fulmicoton, nitroglycérine, ainsi que d'autres matières combustibles, explosives, corrosives, toxiques, radioactives ou autrement dangereuses pour la santé ou la sécurité publiques, sur le territoire de la municipalité ou dans un rayon de 1 km à l'extérieur de ce territoire » (je souligne). Reprenant la définition de « pesticide » dans la *Loi sur les pesticides* de la province, le règlement 270 évite de tomber sous l'égide du par. 412(32). Le texte du règlement et la preuve présentée au cours du présent litige n'assimilent pas les pesticides aux « matières [. . .] toxiques ». Selon le gouvernement provincial, le règlement 270 ne relève pas du par. 412(32) : voir la lettre du 5 juillet 1991 du sous-ministre de l'Environnement. Comme le disent Y. Duplessis et J. Hétu dans *Les pouvoirs des municipalités en matière de protection de l'environnement* (2e éd. 1994), p. 110 :

[TRANSLATION] . . . these subsections concerning "corrosive, toxic or radioactive materials" in no way limit the other more general powers granted to municipalities that

. . . ces paragraphes relatifs aux « matières corrosives, toxiques, radioactives » ne viennent aucunement limiter les autres pouvoirs plus généraux confiés aux munici-

could justify municipal intervention in relation to pesticides.

As a result, since there is no specific provision in the provincial enabling legislation referring to pesticides, the by-law must fall within the purview of s. 410(1) *C.T.A.* The party challenging a by-law's validity bears the burden of proving that it is *ultra vires*: see *Kuchma v. Rural Municipality of Tache*, [1945] S.C.R. 234, at p. 239, and *Montréal (City of) v. Arcade Amusements Inc.*, [1985] 1 S.C.R. 368, at p. 395.

The conclusion that By-law 270 does not fall within the purview of s. 412(32) *C.T.A.* distinguishes this appeal from *R. v. Greenbaum*, [1993] 1 S.C.R. 674. In that case, various express provisions of the provincial enabling legislation at issue covered the regulation of Toronto sidewalks. The appellant was therefore trying to expand the ambit of these specific authorizations by recourse to the "omnibus" provision in Ontario's *Municipal Act*. Moreover, that provision, s. 102, stated that "[e]very council may pass such by-laws and make such regulations for the health, safety, morality and welfare of the inhabitants of the municipality in matters not specifically provided for by this Act as may be deemed expedient and are not contrary to law . . . ." (emphasis added). The Court thus held in *Greenbaum*, at p. 693, that "[t]hese express powers are . . . taken out of any power included in the general grant of power". Since the *C.T.A.* contains no such specific provisions concerning pesticides (nor a clause limiting its purview to matters not specifically provided for in the Act) the "general welfare" provision of the *C.T.A.*, s. 410(1), is not limited in this fashion.

Section 410(1) *C.T.A.* provides that councils may make by-laws:

(1) To secure peace, order, good government, health and general welfare in the territory of the municipality, provided such by-laws are not contrary to the laws of

paux [*sic*] et pouvant justifier une intervention municipale dans le domaine des pesticides.

Par conséquent, étant donné qu'aucune disposition particulière de la loi provinciale habilitante ne mentionne les pesticides, le règlement doit tomber dans le champ d'application du par. 410(1) *L.C.V.* Il incombe à la partie qui conteste la validité d'un règlement de prouver qu'il est *ultra vires* : voir *Kuchma c. Rural Municipality of Tache*, [1945] R.C.S. 234, p. 239, et *Montréal (Ville de) c. Arcade Amusements Inc.*, [1985] 1 R.C.S. 368, p. 395.

22 La conclusion selon laquelle le règlement 270 n'est pas visé par le par. 412(32) *L.C.V.* établit une distinction entre le présent pourvoi et l'affaire *R. c. Greenbaum*, [1993] 1 R.C.S. 674. Dans cette affaire, différentes dispositions expresses de la loi provinciale habilitante en cause portaient sur la réglementation des trottoirs de Toronto. L'appelante tentait donc d'élargir la portée de ces autorisations spécifiques au moyen de la disposition « omnibus » de la *Loi sur les municipalités* de l'Ontario. De plus, cette disposition, soit l'art. 102, prévoit que « [l]e conseil peut adopter les règlements municipaux, ainsi que les règlements qui ne sont pas contraires à la loi, qui sont réputés pertinents, et qui portent sur la santé, la sécurité, la moralité et le bien-être des habitants de la municipalité, au sujet de questions qui ne sont pas expressément prévues par la présente loi . . . » (je souligne). Notre Cour a en conséquence conclu dans *Greenbaum*, p. 693, que [TRADUCTION] « [c]es pouvoirs explicites sont [. . .] soustraits de ceux qui sont compris dans le pouvoir général ». Étant donné que la *L.C.V.* ne contient aucune disposition particulière de ce genre au sujet des pesticides (et aucune disposition qui en limite la portée aux matières non expressément prévues par la loi), la disposition en matière de « bien-être général » de la *L.C.V.*, soit le par. 410(1), n'est pas ainsi limitée.

23 Le paragraphe 410(1) *L.C.V.* prévoit que les conseils peuvent faire des règlements :

1º Pour assurer la paix, l'ordre, le bon gouvernement, la salubrité et le bien-être général sur le territoire de la municipalité, pourvu que ces règlements ne soient pas

Canada, or of Québec, nor inconsistent with any special provision of this Act or of the charter.

contraires aux lois du Canada ou du Québec, ni incompatibles avec quelque disposition spéciale de la présente loi ou de la charte.

In *Nanaimo (City) v. Rascal Trucking Ltd.*, [2000] 1 S.C.R. 342, 2000 SCC 13, at para. 36, this Court quoted with approval the following statement by McLachlin J. (as she then was) in *Shell Canada Products Ltd. v. Vancouver (City)*, [1994] 1 S.C.R. 231, at p. 244:

Dans *Nanaimo (Ville) c. Rascal Trucking Ltd.*, [2000] 1 R.C.S. 342, 2000 CSC 13, par. 36, notre Cour cite avec approbation l'énoncé suivant du juge McLachlin (maintenant Juge en chef) dans *Produits Shell Canada Ltée c. Vancouver (Ville)*, [1994] 1 R.C.S. 231, p. 244 :

> Recent commentary suggests an emerging consensus that courts must respect the responsibility of elected municipal bodies to serve the people who elected them and exercise caution to avoid substituting their views of what is best for the citizens for those of municipal councils. Barring clear demonstration that a municipal decision was beyond its powers, courts should not so hold. In cases where powers are not expressly conferred but may be implied, courts must be prepared to adopt the "benevolent construction" which this Court referred to in *Greenbaum*, and confer the powers by reasonable implication. Whatever rules of construction are applied, they must not be used to usurp the legitimate role of municipal bodies as community representatives. [Emphasis added.]

> Il ressort d'un commentaire récent que l'on commence à s'accorder pour dire que les tribunaux doivent respecter la responsabilité qu'ont les conseils municipaux élus de servir leurs électeurs et de prendre garde de substituer à l'opinion de ces conseils leur propre avis quant à ce qui est dans le meilleur intérêt des citoyens. A moins qu'il ne soit clairement démontré qu'une municipalité a excédé ses pouvoirs en prenant une décision donnée, les tribunaux ne devraient pas conclure qu'il en est ainsi. Dans les cas où il n'y a pas d'attribution expresse de pouvoirs, mais où ceux-ci peuvent être implicites, les tribunaux doivent se montrer prêts à adopter l'interprétation «bienveillante» évoquée par notre Cour dans l'arrêt *Greenbaum* et à conférer les pouvoirs par déduction raisonnable. Quelles que soient les règles d'interprétation appliquées, elles ne doivent pas servir à usurper le rôle légitime de représentants de la collectivité que jouent les conseils municipaux. [Je souligne.]

24 The appellants argue that By-law 270 imposes an impermissible absolute ban on pesticide use. They focus on s. 2 of the by-law, which states that: "The spreading and use of a pesticide is prohibited throughout the territory of the Town." In my view, the by-law read as a whole does not impose such a prohibition. By-law 270's ss. 3 to 6 state locations and situations for pesticide use. As one commentary notes, "by-laws like Hudson's typically target non-essential uses of pesticides. That is, it is not a total prohibition, but rather permits the use of pesticides in certain situations where the use of pesticides is not purely an aesthetic pursuit (e.g. for the production of crops)": Swaigen, *supra*, at p. 178.

Les appelantes prétendent que le règlement 270 impose une interdiction absolue non permise relativement à l'utilisation de pesticides. Elles mettent l'accent sur l'art. 2 du règlement : « L'épandage et l'utilisation de tout pesticide est interdit partout sur le territoire de la Ville. » Selon moi, le règlement, interprété dans son ensemble, n'impose pas une telle interdiction. Les articles 3 à 6 du règlement 270 indiquent les lieux et les cas où l'utilisation de pesticides est permise. Comme le souligne Swaigen, *loc. cit.*, p. 178 : [TRADUCTION] « les règlements comme celui de Hudson visent généralement les usages non essentiels de pesticides. C'est-à-dire qu'ils ne prévoient pas une interdiction totale, mais permettent plutôt l'usage de pesticides dans certains cas où cet usage n'a pas un but purement esthétique (p. ex. pour la production de récoltes) ».

The appellants further submit that the province's adoption in 1997 of s. 463.1 *C.T.A.*, which states that a municipality may get permission to introduce pesticides onto private property, indicates, by virtue of the principle of *expressio unius est exclusio alterius* (express mention of one is the exclusion of the other), that the province did not intend to allow municipal regulation of pesticides. I find this argument to be without merit, since, even if this subsequent enactment were considered to instantiate prior legislative intent, there is absolutely no implication in s. 463.1 *C.T.A.*, a permissive provision, that it is meant to exhaust municipalities' freedom of action concerning pesticides.

Les appelantes soutiennent, en outre, que l'adoption par la province en 1997 de l'art. 463.1 *L.C.V.*, selon lequel une municipalité peut obtenir la permission d'épandre des pesticides sur une propriété privée, indique, d'après le principe *expressio unius est exclusio alterius* (la mention explicite de l'un signifie l'exclusion de l'autre), que la province n'avait pas l'intention de permettre la réglementation des pesticides par les municipalités. J'estime cet argument mal fondé, car, même si l'on considère que l'adoption ultérieure de cette disposition confirme l'intention antérieure du législateur, absolument rien dans l'art. 463.1 *L.C.V.*, une disposition permissive, ne vise à retirer aux municipalités leur liberté d'action en ce qui a trait aux pesticides. 25

In *Shell*, *supra*, at pp. 276-77, Sopinka J. for the majority quoted the following with approval from Rogers, *supra*, § 64.1:

> In approaching a problem of construing a municipal enactment a court should endeavour firstly to interpret it so that the powers sought to be exercised are in consonance with the purposes of the corporation. The provision at hand should be construed with reference to the object of the municipality: to render services to a group of persons in a locality with a view to advancing their health, welfare, safety and good government.

Dans l'arrêt *Shell*, précité, p. 276-277, le juge Sopinka, au nom de la majorité, cite avec approbation l'extrait suivant tiré de l'ouvrage de Rogers, *op. cit.*, § 64.1 : 26

> [TRADUCTION] Devant un problème d'interprétation d'une résolution ou d'un règlement adopté par une municipalité, les tribunaux doivent s'efforcer en premier lieu de donner une interprétation qui harmonise les pouvoirs que l'on cherche à exercer avec les objectifs de la municipalité. La disposition en cause devrait s'interpréter en fonction de l'objectif de la municipalité : fournir des services à un groupe de personnes, dans une localité, en vue d'en améliorer la santé, le bien-être, la sécurité et le bon gouvernement;

In that case, Sopinka J. enunciated the test of whether the municipal enactment was "passed for a municipal purpose". Provisions such as s. 410(1) *C.T.A.*, while benefiting from the generosity of interpretation discussed in *Nanaimo*, *supra*, must have a reasonable connection to the municipality's permissible objectives. As stated in *Greenbaum*, *supra*, at p. 689: "municipal by-laws are to be read to fit within the parameters of the empowering provincial statute where the by-laws are susceptible to more than one interpretation. However, courts must be vigilant in ensuring that municipalities do not impinge upon the civil or common law rights of citizens in passing *ultra vires* by-laws".

Dans cet arrêt, le juge Sopinka énonce le critère applicable afin de déterminer si le règlement municipal a été « adopt[é] à des fins municipales ». Même si elles bénéficient de l'interprétation large mentionnée dans *Nanaimo*, précité, les dispositions tel le par. 410(1) *L.C.V.* doivent être raisonnablement liées aux objectifs municipaux permis. Comme le mentionne l'arrêt *Greenbaum*, précité, p. 689 : « lorsqu'ils sont susceptibles de recevoir plus d'une interprétation, les règlements municipaux doivent être interprétés de manière à respecter les paramètres de la loi provinciale habilitante. Toutefois, les tribunaux doivent veiller à ce que les municipalités n'empiètent pas sur les droits civils ou de common law des citoyens en adoptant des règlements *ultra vires* ».

27 Whereas in *Shell*, the enactments' purpose was found to be "to affect matters beyond the boundaries of the City without any identifiable benefit to its inhabitants" (p. 280), that is not the case here. The Town's By-law 270 responded to concerns of its residents about alleged health risks caused by non-essential uses of pesticides within Town limits. Unlike *Shell*, in which the Court felt bound by the municipal enactments' "detailed recital of . . . purposes" (p. 277), the by-law at issue requires what Sopinka J. called the reading in of an implicit purpose. Based on the distinction between essential and non-essential uses of pesticides, it is reasonable to conclude that the Town by-law's purpose is to minimize the use of allegedly harmful pesticides in order to promote the health of its inhabitants. This purpose falls squarely within the "health" component of s. 410(1). As R. Sullivan appositely explains in a hypothetical example illustrating the purposive approach to statutory interpretation:

Alors que, dans l'arrêt *Shell*, les règlements adoptés ont été jugés avoir « pour objet d'exercer une influence à l'extérieur des limites de la ville et ne comport[a]nt aucun bénéfice précis pour ses citoyens » (p. 280), tel n'est pas le cas ici. Le règlement 270 de la Ville répondait aux craintes de ses résidants au sujet des risques que pourrait présenter pour la santé l'usage non essentiel de pesticides dans les limites de la Ville. Contrairement à la situation dans *Shell*, où notre Cour s'est sentie liée par « l'énumération détaillée des objets » (p. 277) des règlements municipaux, le règlement en cause exige ce que le juge Sopinka a recommandé de faire, soit de lui prêter un objectif implicite. Selon la distinction entre l'usage essentiel et l'usage non essentiel des pesticides, il est raisonnable de conclure que le règlement de la Ville a pour objet de minimiser l'utilisation de pesticides qui seraient nocifs afin de protéger la santé de ses habitants. Cet objet relève directement de l'aspect « santé » du par. 410(1). Comme R. Sullivan l'explique pertinemment dans un exemple hypothétique illustrant l'interprétation téléologique des lois :

> Suppose, for example, that a municipality passed a by-law prohibiting the use of chemical pesticides on residential lawns. With no additional information, one might well conclude that the purpose of this by-law was to protect persons from health hazards contained in the chemical spray. This inference would be based on empirical beliefs about the harms chemical pesticides can cause and the risks of exposure created by their use on residential lawns. It would also be based on assumptions about the relative value of grass, insects and persons in society and the desirability of possible consequences of the by-law, such as putting people out of work, restricting the free use of property, interfering with the conduct of businesses and the like. These assumptions make it implausible to suppose that the municipal council was trying to promote the spread of plant-destroying insects or to put chemical workers out of work, but plausible to suppose that it was trying to suppress a health hazard.
>
> [TRADUCTION] Supposons, par exemple, qu'une municipalité adopte un règlement interdisant l'utilisation de pesticides chimiques sur les pelouses résidentielles. Sans autre renseignement, on pourrait bien conclure que le règlement avait pour objet la protection contre les risques pour la santé que présente la vaporisation de produits chimiques. Cette conclusion serait fondée sur des croyances empiriques au sujet des problèmes que les pesticides chimiques peuvent causer et des risques d'exposition créés par leur utilisation sur des pelouses résidentielles. Elle serait également fondée sur des présomptions au sujet de la valeur relative de l'herbe, des insectes et des personnes dans la société ainsi qu'au sujet du caractère souhaitable des conséquences possibles du règlement, comme le fait de causer des pertes d'emploi, de restreindre la liberté d'utilisation de la propriété, de s'ingérer dans l'exploitation des entreprises et les autres conséquences semblables. Ces présomptions font en sorte qu'il n'est pas plausible de supposer que le conseil municipal tentait de favoriser la propagation des insectes qui détruisent les plantes ou de causer la mise à pied de travailleurs du domaine des produits chimiques, mais qu'il est plausible de supposer qu'il tentait d'éliminer un risque pour la santé.

(*Driedger on the Construction of Statutes* (3rd ed. 1994), at p. 53)

Kennedy J. correctly found (at pp. 230-31) that the Town Council, "faced with a situation involving health and the environment", "was addressing a need of their community." In this manner, the municipality is attempting to fulfill its role as what the Ontario Court of Appeal has called a "trustee of the environment" (*Scarborough v. R.E.F. Homes Ltd.* (1979), 9 M.P.L.R. 255, at p. 257).

The appellants claim that By-law 270 is discriminatory and therefore *ultra vires* because of what they identify as impermissible distinctions that affect their commercial activities. There is no specific authority in the *C.T.A.* for these distinctions. Writing for the Court in *Sharma*, *supra*, at p. 668, Iacobucci J. stated the principle that:

> . . . in *Montréal (City of) v. Arcade Amusements Inc.*, *supra*, this Court recognized that discrimination in the municipal law sense was no more permissible between than within classes (at pp. 405-6). Further, the general reasonableness or rationality of the distinction is not at issue: discrimination can only occur where the enabling legislation specifically so provides or where the discrimination is a necessary incident to exercising the power delegated by the province (*Montréal (City of) v. Arcade Amusements Inc.*, *supra*, at pp. 404-6). [Emphasis added.]

See also *Shell*, *supra*, at p. 282; *Allard Contractors Ltd. v. Coquitlam (District)*, [1993] 4 S.C.R. 371, at p. 413.

Without drawing distinctions, By-law 270 could not achieve its permissible goal of aiming to improve the health of the Town's inhabitants by banning non-essential pesticide use. If all pesticide uses and users were treated alike, the protection of health and welfare would be sub-optimal. For example, withdrawing the special status given to farmers under the by-law's s. 4 would work at cross-purposes with its salubrious intent. Section 4 thus justifiably furthers the objective of By-law 270. Having held that the Town can regulate the use of pesticides, I conclude that the distinctions

(*Driedger on the Construction of Statutes* (3e éd. 1994), p. 53)

Le juge Kennedy a conclu à bon droit (aux p. 230-231) que, [TRADUCTION] « devant une situation où la santé et l'environnement sont en jeu », le conseil municipal « voyait à un besoin de sa collectivité ». Ainsi, la municipalité tente d'exercer son rôle, qualifié par la Cour d'appel de l'Ontario de [TRADUCTION] « fiduciaire de l'environnement » (*Scarborough c. R.E.F. Homes Ltd.* (1979), 9 M.P.L.R. 255, p. 257).

28 Les appelantes font valoir que le règlement 270 est discriminatoire et en conséquence est *ultra vires* en raison de ce qu'elles identifient comme des distinctions non permises affectant leurs activités commerciales. La *L.C.V.* n'autorise pas explicitement de telles distinctions. S'exprimant au nom de la Cour dans *Sharma*, précité, p. 668, le juge Iacobucci énonce le principe suivant :

> . . . dans l'arrêt *Montréal (Ville de) c. Arcade Amusements Inc.*, précité, notre Cour a reconnu que la discrimination au sens du droit municipal n'était pas plus permise entre des catégories qu'au sein de catégories (aux pp. 405 et 406). En outre, le caractère raisonnable ou rationnel général de la distinction n'est pas en cause: il ne saurait y avoir de discrimination que si la loi habilitante le prévoit précisément ou si la discrimination est nécessairement accessoire à l'exercice du pouvoir délégué par la province (*Montréal (Ville de) c. Arcade Amusements Inc.*, précité, aux pp. 404 à 406). [Je souligne.]

Voir également *Shell*, précité, p. 282; *Allard Contractors Ltd. c. Coquitlam (District)*, [1993] 4 R.C.S. 371, p. 413.

29 Sans faire ces distinctions, le règlement 270 ne pourrait pas atteindre l'objectif y autorisé, soit d'améliorer la santé des habitants de la Ville en interdisant l'usage non essentiel de pesticides. Si l'on traitait de façon similaire tous les usages et utilisateurs de pesticides, la protection de la santé et du bien-être ne serait pas optimale. Par exemple, le retrait du statut spécial que l'art. 4 du règlement confère aux fermiers irait à l'encontre de l'objectif de salubrité de ce règlement. L'article 4 facilite ainsi, et il est justifié de le faire, la réalisation de l'objectif visé par le règlement 270. Ayant conclu

impugned by the appellants for restricting their businesses are necessary incidents to the power delegated by the province under s. 410(1) *C.T.A.* They are "so absolutely necessary to the exercise of those powers that [authorization has] to be found in the enabling provisions, by necessary inference or implicit delegation"; *Arcade Amusements*, *supra*, at p. 414, quoted in *Greenbaum*, *supra*, at p. 695.

30 To conclude this section on statutory authority, I note that reading s. 410(1) to permit the Town to regulate pesticide use is consistent with principles of international law and policy. My reasons for the Court in *Baker v. Canada (Minister of Citizenship and Immigration)*, [1999] 2 S.C.R. 817, at para. 70, observed that "the values reflected in international human rights law may help inform the contextual approach to statutory interpretation and judicial review". As stated in *Driedger on the Construction of Statutes*, *supra*, at p. 330:

> [T]he legislature is presumed to respect the values and principles enshrined in international law, both customary and conventional. These constitute a part of the legal context in which legislation is enacted and read. In so far as possible, therefore, interpretations that reflect these values and principles are preferred. [Emphasis added.]

31 The interpretation of By-law 270 contained in these reasons respects international law's "precautionary principle", which is defined as follows at para. 7 of the *Bergen Ministerial Declaration on Sustainable Development* (1990):

> In order to achieve sustainable development, policies must be based on the precautionary principle. Environmental measures must anticipate, prevent and attack the causes of environmental degradation. Where there are threats of serious or irreversible damage, lack of full scientific certainty should not be used as a reason for

que la Ville peut réglementer l'utilisation des pesticides, je juge que les distinctions contestées par les appelantes au motif qu'elles restreignent leurs activités commerciales sont des conséquences nécessaires à l'application du pouvoir délégué par la province en vertu du par. 410(1) *L.C.V.* Elles sont « indispensable[s] à l'exercice de ces pouvoirs de telle sorte que [l'autorisation] doive [être] trouv[ée] dans ces dispositions habilitantes, par inférence nécessaire ou délégation implicite »; *Arcade Amusements*, précité, p. 414, cité dans *Greenbaum*, précité, p. 695.

En conclusion quant à cette partie relative au pouvoir conféré par la loi, je souligne qu'interpréter le par. 410(1) comme permettant à la Ville de réglementer l'utilisation des pesticides correspond aux principes de droit et de politique internationaux. Au nom de la Cour dans *Baker c. Canada (Ministre de la Citoyenneté et de l'Immigration)*, [1999] 2 R.C.S. 817, par. 70, je note dans mon opinion que « [l]es valeurs exprimées dans le droit international des droits de la personne peuvent [. . .] être prises en compte dans l'approche contextuelle de l'interprétation des lois et en matière de contrôle judiciaire ». Comme il est mentionné dans *Driedger on the Construction of Statutes*, *op. cit.*, p. 330 :

> [TRADUCTION] [L]a législature est présumée respecter les valeurs et les principes contenus dans le droit international, coutumier et conventionnel. Ces principes font partie du cadre juridique au sein duquel une loi est adoptée et interprétée. Par conséquent, dans la mesure du possible, il est préférable d'adopter des interprétations qui correspondent à ces valeurs et à ces principes. [Je souligne.]

L'interprétation que je fais ici du règlement 270 respecte le « principe de précaution » du droit international, qui est défini ainsi au par. 7 de la *Déclaration ministérielle de Bergen sur le développement durable* (1990) :

> Un développement durable implique des politiques fondées sur le principe de précaution. Les mesures adoptées doivent anticiper, prévenir et combattre les causes de la détérioration de l'environnement. Lorsque des dommages graves ou irréversibles risquent d'être infligés, l'absence d'une totale certitude scientifique ne

postponing measures to prevent environmental degradation.

Canada "advocated inclusion of the precautionary principle" during the Bergen Conference negotiations (D. VanderZwaag, CEPA Issue Elaboration Paper No. 18, *CEPA and the Precautionary Principle/Approach* (1995), at p. 8). The principle is codified in several items of domestic legislation: see for example the *Oceans Act*, S.C. 1996, c. 31, Preamble (para. 6); *Canadian Environmental Protection Act, 1999*, S.C. 1999, c. 33, s. 2(1)(*a*); *Endangered Species Act*, S.N.S. 1998, c. 11, ss. 2(1)(*h*) and 11(1).

Scholars have documented the precautionary principle's inclusion "in virtually every recently adopted treaty and policy document related to the protection and preservation of the environment" (D. Freestone and E. Hey, "Origins and Development of the Precautionary Principle", in D. Freestone and E. Hey, eds., *The Precautionary Principle and International Law* (1996), at p. 41. As a result, there may be "currently sufficient state practice to allow a good argument that the precautionary principle is a principle of customary international law" (J. Cameron and J. Abouchar, "The Status of the Precautionary Principle in International Law", in *ibid.*, at p. 52). See also O. McIntyre and T. Mosedale, "The Precautionary Principle as a Norm of Customary International Law" (1997), 9 *J. Env. L.* 221, at p. 241 ("the precautionary principle has indeed crystallised into a norm of customary international law"). The Supreme Court of India considers the precautionary principle to be "part of the Customary International Law" (*A.P. Pollution Control Board v. Nayudu*, 1999 S.O.L. Case No. 53, at para. 27). See also *Vellore Citizens Welfare Forum v. Union of India*, [1996] Supp. 5 S.C.R. 241. In the context of the precautionary principle's tenets, the Town's concerns about pesticides fit well under their rubric of preventive action.

devrait pas servir de prétexte pour ajourner l'adoption de mesures destinées à prévenir la détérioration de l'environnement.

Le Canada « a préconisé l'inclusion du principe de précaution » au cours des négociations de la Conférence de Bergen (D. VanderZwaag, Examen de la LCPE : Document d'élaboration des enjeux 18, *La LCPE et le principe ou l'approche précaution* (1995), p. 11). Ce principe est intégré dans plusieurs dispositions de législation interne : voir par exemple la *Loi sur les océans*, L.C. 1996, ch. 31, Préambule (par. 6); la *Loi canadienne sur la protection de l'environnement (1999)*, L.C. 1999, ch. 33, al. 2(1)*a*); la *Endangered Species Act*, S.N.S. 1998, ch. 11, al. 2(1)(*h*) et par. 11(1).

32 Des auteurs ont démontré que le principe de précaution est repris [TRADUCTION] « dans pratiquement tous les traités et documents de politique récents en matière de protection et de préservation de l'environnement » (D. Freestone et E. Hey, « Origins and Development of the Precautionary Principle », dans D. Freestone et E. Hey, dir., *The Precautionary Principle and International Law* (1996), p. 41. Par conséquent, il y a peut-être [TRADUCTION] « actuellement suffisamment de pratiques de la part des États pour qu'il soit permis de prétendre de façon convaincante que le principe de précaution est un principe de droit international coutumier » (J. Cameron et J. Abouchar, « The Status of the Precautionary Principle in International Law », *ibid.*, p. 52). Voir également O. McIntyre et T. Mosedale, « The Precautionary Principle as a Norm of Customary International Law » (1997), 9 *J. Env. L.* 221, p. 241 [TRADUCTION] (« le principe de précaution s'est vraiment cristallisé en une norme de droit international coutumier »). La Cour suprême de l'Inde considère le principe de précaution comme faisant [TRADUCTION] « partie du droit international coutumier » (*A.P. Pollution Control Board c. Nayudu*, 1999 S.O.L. Case No. 53, par. 27). Voir également *Vellore Citizens Welfare Forum c. Union of India*, [1996] Suppl. 5 S.C.R. 241. Dans le contexte des postulats du principe de précaution, les craintes de la Ville au sujet des pesticides s'inscrivent confortablement sous la rubrique de l'action préventive.

B. *Even if the Town Had Authority to Enact it, Was By-law 270 Rendered Inoperative Because of a Conflict with Federal or Provincial Legislation?*

33 This Court stated in *Hydro-Québec*, *supra*, at para. 112, that *Oldman River*, *supra*, "made it clear that the environment is not, as such, a subject matter of legislation under the *Constitution Act, 1867*. As it was put there, 'the *Constitution Act, 1867* has not assigned the matter of "environment" *sui generis* to either the provinces or Parliament' (p. 63). Rather, it is a diffuse subject that cuts across many different areas of constitutional responsibility, some federal, some provincial (pp. 63-64)." As there is bijurisdictional responsibility for pesticide regulation, the appellants allege conflicts between By-law 270 and both federal and provincial legislation. These contentions will be examined in turn.

1. Federal Legislation

34 The appellants argue that ss. 4(1), 4(3) and 6(1)(*j*) of the *Pest Control Products Act* ("*PCPA*"), and s. 45 of the *Pest Control Products Regulations* allowed them to make use of the particular pesticide products they employed in their business practices. They allege a conflict between these legislative provisions and By-law 270. In *Multiple Access Ltd. v. McCutcheon*, [1982] 2 S.C.R. 161, at p. 187, Dickson J. (as he then was) for the majority of the Court reviewed the "express contradiction test" of conflict between federal and provincial legislation. At p. 191, he explained that "there would seem to be no good reasons to speak of paramountcy and preclusion except where there is actual conflict in operation as where one enactment says 'yes' and the other says 'no'; 'the same citizens are being told to do inconsistent things'; compliance with one is defiance of the other". See also *M & D Farm Ltd. v. Manitoba Agricultural Credit Corp.*, [1999] 2 S.C.R. 961, at paras. 17 and 40; *Bank of Montreal v. Hall*, [1990] 1 S.C.R. 121,

B. *Dans l'hypothèse où la Ville avait le pouvoir de l'adopter, le règlement 270 a-t-il été rendu inopérant du fait de son incompatibilité avec la législation fédérale ou provinciale?*

Notre Cour a dit dans *Hydro-Québec*, précité, par. 112, que l'arrêt *Oldman River*, précité, « a précisé [. . .] que l'environnement n'est pas, comme tel, un domaine de compétence législative en vertu de la *Loi constitutionnelle de 1867*. Comme il y est affirmé, "la *Loi constitutionnelle de 1867* n'a pas conféré le domaine de 'l'environnement' comme tel aux provinces ou au Parlement" (p. 63). Il s'agit plutôt d'un sujet diffus qui touche plusieurs domaines différents de responsabilité constitutionnelle, dont certains sont fédéraux et d'autres provinciaux (pp. 63 et 64). » Étant donné qu'il existe une responsabilité bijuridictionnelle en matière de réglementation de pesticides, les appelantes allèguent que le règlement 270 entre en conflit tant avec la législation fédérale qu'avec la législation provinciale. Je discuterai de ces prétentions à tour de rôle.

1. La législation fédérale

Les appelantes prétendent que les par. 4(1) et 4(3) ainsi que l'al. 6(1)*j*) de la *Loi sur les produits antiparasitaires* (la « *LPAP* ») et l'art. 45 du *Règlement sur les produits antiparasitaires* leur permettaient d'utiliser les pesticides particuliers qu'elles employaient dans le cadre de leurs activités commerciales. Elles allèguent qu'il existe un conflit entre ces dispositions et le règlement 270. Dans *Multiple Access Ltd. c. McCutcheon*, [1982] 2 R.C.S. 161, p. 187, le juge Dickson (plus tard Juge en chef), au nom de la majorité de la Cour, examine le « critère du conflit explicite » entre la législation fédérale et la législation provinciale. À la page 191, il explique qu'« il ne semble y avoir aucune raison valable de parler de prépondérance et d'exclusion sauf lorsqu'il y a un conflit véritable, comme lorsqu'une loi dit "oui" et que l'autre dit "non"; "on demande aux mêmes citoyens d'accomplir des actes incompatibles"; l'observance de l'une entraîne l'inobservance de l'autre ». Voir également *M & D Farm Ltd. c. Société du crédit agricole du Manitoba*, [1999] 2 R.C.S. 961, par. 17 et 40; *Banque de Montréal c. Hall*, [1990] 1 R.C.S.

at p. 151. By-law 270, as a product of provincial enabling legislation, is subject to this test.

Federal legislation relating to pesticides extends to the regulation and authorization of their import, export, sale, manufacture, registration, packaging and labelling. The *PCPA* regulates which pesticides can be registered for manufacture and/or use in Canada. This legislation is permissive, rather than exhaustive, and there is no operational conflict with By-law 270. No one is placed in an impossible situation by the legal imperative of complying with both regulatory regimes. Analogies to motor vehicles or cigarettes that have been approved federally, but the use of which can nevertheless be restricted municipally, well illustrate this conclusion. There is, moreover, no concern in this case that application of By-law 270 displaces or frustrates "the legislative purpose of Parliament". See *Multiple Access*, *supra*, at p. 190; *Bank of Montreal*, *supra*, at pp. 151 and 154.

2. Provincial Legislation

Multiple Access also applies to the inquiry into whether there is a conflict between the by-law and provincial legislation, except for cases (unlike this one) in which the relevant provincial legislation specifies a different test. The *Multiple Access* test, namely "impossibility of dual compliance", see P. W. Hogg, *Constitutional Law of Canada* (looseleaf ed.), vol. 1, at p. 16-13, was foreshadowed for provincial-municipal conflicts in *dicta* contained in this Court's decision in *Arcade Amusements*, *supra*, at p. 404. There, Beetz J. wrote that "otherwise valid provincial statutes which are directly contrary to federal statutes are rendered inoperative by that conflict. Only the same type of conflict with provincial statutes can make by-laws inoperative: I. M. Rogers, *The Law of Canadian Municipal Corporations*, vol. 1, 2nd ed., 1971, No. 63.16" (emphasis added).

121, p. 151. Découlant d'une loi provinciale habilitante, le règlement 270 est sujet à ce critère.

35 La législation fédérale relative aux pesticides s'étend à la réglementation et à l'autorisation de leur importation, de leur exportation, de leur vente, de leur fabrication, de leur agrément, de leur emballage et de leur étiquetage. La *LPAP* dicte quels pesticides peuvent être agréés à des fins de fabrication et/ou d'utilisation au Canada. Cette loi est permissive, et non pas exhaustive, de sorte qu'il n'y a aucun conflit opérationnel avec le règlement 270. Nul n'est placé dans la situation impossible d'avoir l'obligation légale de se conformer aux deux régimes de réglementation. L'analogie avec les véhicules automobiles et les cigarettes qui ont été approuvés au niveau fédéral mais dont l'usage peut toutefois être restreint au niveau municipal illustre bien cette conclusion. Il n'y a, en outre, aucune crainte en l'espèce que l'application du règlement 270 écarte ou déjoue « l'intention du Parlement ». Voir *Multiple Access*, précité, p. 190; *Banque de Montréal*, précité, p. 151 et 154.

2. La législation provinciale

36 L'arrêt *Multiple Access* s'applique également à l'examen de la question de savoir s'il y a conflit entre le règlement municipal et la législation provinciale, sauf dans les cas (différents de la présente affaire) où la loi provinciale pertinente spécifie un critère autre. La remarque incidente faite dans la décision rendue par notre Cour dans *Arcade Amusements*, précité, p. 404, présageait le critère de l'arrêt *Multiple Access*, à savoir [TRADUCTION] « l'impossibilité de se conformer aux deux textes », voir P. W. Hogg, *Constitutional Law of Canada* (éd. feuilles mobiles), vol. 1, p. 16-13. Dans cette décision, le juge Beetz écrit que « des lois provinciales, valides par ailleurs, mais qui se heurtent directement à des lois fédérales, sont rendues inopérantes par suite de ce conflit. Seule la même sorte de conflit avec des lois provinciales peut rendre des règlements inopérants: I. M. Rogers, *The Law of Canadian Municipal Corporations*, vol. 1, 2e éd., 1971, no 63.16 » (je souligne).

37 One of the competing tests to *Multiple Access* suggested in this litigation is based on *Attorney General for Ontario v. City of Mississauga* (1981), 15 M.P.L.R. 212 (Ont. C.A.). In that case, decided before *Multiple Access*, Morden J.A. saw "no objection to borrowing, in this field, relevant principles of accommodation which have been developed in cases involving alleged federal-provincial areas of conflict. In both fields great care is, and should be, taken before it is held that an otherwise properly enacted law is inoperative" (p. 232). He added, at p. 233, the important point that "a by-law is not void or ineffective merely because it 'enhances' the statutory scheme of regulation by imposing higher standards of control than those in the related statute. This is not conflict or incompatibility per se" (quoting *Township of Uxbridge v. Timber Bros. Sand & Gravel Ltd.* (1975), 7 O.R. (2d) 484 (C.A.)). See also P.-A. Côté, *The Interpretation of Legislation in Canada* (3rd ed. 2000), at p. 353 ("In some cases, the courts have held that the provincial statute does not imply full repeal of the municipal power. The municipality retains its authority as long as there is no conflict with provincial legislation. It may be more demanding than the province, but not less so").

L'un des critères opposés à celui de l'arrêt *Multiple Acesss* qui ont été proposés dans le présent litige est fondé sur l'arrêt *Attorney General for Ontario c. City of Mississauga* (1981), 15 M.P.L.R. 212 (C.A. Ont.). Dans cette décision rendue avant l'arrêt *Multiple Access*, le juge Morden de la Cour d'appel de l'Ontario ne voit [TRADUCTION] « aucun problème à introduire dans ce domaine les principes d'accommodement pertinents qui ont été élaborés dans les affaires portant sur des présumés domaines de conflit entre les textes fédéraux et les textes provinciaux. Dans les deux domaines, on fait, et il faut faire, bien attention avant de déclarer inopérante une disposition qui a été autrement valablement adoptée » (p. 232). Il ajoute, à la p. 233, un point important, qui est qu' [TRADUCTION] « un règlement n'est pas nul ou sans effet simplement parce qu'il "rehausse" le régime législatif de réglementation en imposant des normes de contrôle plus sévères que celles prévues dans la loi connexe. Cela n'est pas un conflit ou une incompatibilité en soi » (citation de *Township of Uxbridge c. Timber Bros. Sand & Gravel Ltd.* (1975), 7 O.R. (2d) 484 (C.A.)). Voir également P.-A. Côté, *Interprétation des lois* (3e éd. 1999), p. 446-447 (« Dans certaines affaires, on a jugé que l'adoption de la loi provinciale ne devait pas s'interpréter comme une abrogation complète du pouvoir municipal : celui-ci pouvait continuer à s'exercer à la condition toutefois de ne pas contredire la réglementation provinciale, c'est-à-dire que la municipalité pouvait être plus exigeante, mais non moins exigeante que la province »).

38 Some courts have already made use of the *Multiple Access* test to examine alleged provincial-municipal conflicts. For example, in *British Columbia Lottery Corp. v. Vancouver (City)* (1999), 169 D.L.R. (4th) 141, at pp. 147-48, the British Columbia Court of Appeal stated that cases pre-dating *Multiple Access*, including the Ontario Court of Appeal decision in *Mississauga*, *supra*, "must be read in the light of [that] decision".

Certains tribunaux ont déjà recouru au critère de l'arrêt *Multiple Access* pour examiner les présumés conflits entre des textes provinciaux et des textes municipaux. Par exemple, dans *British Columbia Lottery Corp. c. Vancouver (City)* (1999), 169 D.L.R. (4th) 141, p. 147-148, la Cour d'appel de la Colombie-Britannique déclare que les décisions rendues avant l'arrêt *Multiple Access*, notamment la décision de la Cour d'appel de l'Ontario dans *Mississauga*, précité, [TRADUCTION] « doivent être interprétées selon [cette] décision ».

It is no longer the key to this kind of problem to look at one comprehensive scheme, and then to look at the other comprehensive scheme, and to decide which

[TRADUCTION] On ne résout plus ce genre de problème en examinant un régime complet, en examinant l'autre régime complet et en décidant quel régime

scheme entirely occupies the field to the exclusion of the other. Instead, the correct course is to look at the precise provisions and the way they operate in the precise case, and ask: Can they coexist in this particular case in their operation? If so, they should be allowed to co-exist, and each should do its own parallel regulation of one aspect of the same activity, or two different aspects of the same activity. [Emphasis added.]

occupe tout le domaine à l'exclusion de l'autre. Il faut plutôt examiner les dispositions précises et la manière dont elles s'appliquent dans le cas particulier et se demander si elles peuvent s'appliquer de façon harmonieuse dans ce cas précis? Dans l'affirmative, il faut permettre leur coexistence et elles doivent chacune réglementer en parallèle une facette, ou deux facettes différentes, de la même activité. [Je souligne.]

The court summarized the applicable standard as follows: "A true and outright conflict can only be said to arise when one enactment compels what the other forbids." See also *Law Society of Upper Canada v. Barrie (City)* (2000), 46 O.R. (3d) 620 (S.C.J.), at pp. 629-30: "Compliance with the provincial Act does not necessitate defiance of the municipal By-law; dual compliance is certainly possible"; *Huot v. St-Jérôme (Ville de)*, J.E. 93-1052 (Sup. Ct.), at p. 19: [TRANSLATION] "A finding that a municipal by-law is inconsistent with a provincial statute (or a provincial statute with a federal statute) requires, first, that they both deal with similar subject matters and, second, that obeying one necessarily means disobeying the other."

La cour a résumé ainsi la norme applicable : [TRADUCTION] « On peut dire qu'il y a un conflit réel et direct seulement lorsqu'un texte impose ce que l'autre interdit. » Voir également *Law Society of Upper Canada c. Barrie (City)* (2000), 46 O.R. (3d) 620 (C.S.J.), p. 629-630 : [TRADUCTION] « La conformité à la loi provinciale ne requiert pas l'inobservation du règlement municipal; il est certainement possible de se conformer aux deux textes); *Huot c. St-Jérôme (Ville de)*, J.E. 93-1052 (C.S.), p. 19 : « En effet, pour qu'un règlement municipal soit incompatible avec une loi provinciale (ou une loi provinciale avec une loi fédérale), il faut d'abord que les deux touchent des sujets similaires et, ensuite, qu'un citoyen, pour obéir à l'une doive enfreindre l'autre. »

As a general principle, the mere existence of provincial (or federal) legislation in a given field does not oust municipal prerogatives to regulate the subject matter. As stated by the Quebec Court of Appeal in an informative environmental decision, *St-Michel-Archange (Municipalité de) v. 2419-6388 Québec Inc.*, [1992] R.J.Q. 875 (C.A.), at pp. 888-91:

39

De façon générale, la simple existence d'une loi provinciale (ou fédérale) dans un domaine donné n'écarte pas le pouvoir des municipalités de réglementer cette matière. Comme le dit la Cour d'appel du Québec dans un arrêt instructif en matière d'environnement, *St-Michel-Archange (Municipalité de) c. 2419-6388 Québec Inc.*, [1992] R.J.Q. 875 (C.A.), p. 888-891 :

[TRANSLATION] According to proponents of the unitary theory, although the provincial legislature has not said so clearly, it has nonetheless established a provincial scheme for managing waste disposal sites. It has therefore reserved exclusive jurisdiction in this matter for itself, and taken the right to pass by-laws concerning local waste management away from municipalities. The *Environment Quality Act* therefore operated to remove those powers from municipal authorities.

Pour les tenants de la thèse unitaire, le législateur provincial, sans le dire d'une façon claire, a néanmoins instauré un système provincial de gestion des sites de réception des déchets. Il s'est donc réservé l'exclusivité des compétences en la matière et a enlevé aux municipalités le droit de faire des règlements sur la gestion locale des déchets. La *Loi sur la qualité de l'environnement* aurait donc eu pour effet de retirer ces pouvoirs aux autorités municipales.

According to proponents of the pluralist theory, the provincial legislature very definitely did not intend to abolish the municipality's power to regulate; rather, it

Pour les tenants de la thèse pluraliste, le législateur provincial n'a pas, bien au contraire, entendu abolir le pouvoir municipal de réglementation, mais simplement

intended merely to better circumscribe that power, to ensure complementarity with the municipal management scheme. . . .

. . .

The pluralist theory accordingly concedes that the intention is to give priority to provincial statutory and regulatory provisions. However, it does not believe that it can be deduced from this that any complementary municipal provision in relation to planning and development that affects the quality of the environment is automatically invalid.

. . .

A thorough analysis of the provisions cited *supra* and a review of the environmental policy as a whole as it was apparently intended by the legislature leads to the conclusion that it is indeed the pluralist theory, or at least a pluralist theory, that the legislature seems to have taken as the basis for the statutory scheme.

In this case, there is no barrier to dual compliance with By-law 270 and the *Pesticides Act*, nor any plausible evidence that the legislature intended to preclude municipal regulation of pesticide use. The *Pesticides Act* establishes a permit and licensing system for vendors and commercial applicators of pesticides and thus complements the federal legislation's focus on the products themselves. Along with By-law 270, these laws establish a tri-level regulatory regime.

40 According to s. 102 of the *Pesticides Act*, as it was at the time By-law 270 was passed: "The provisions of the Pesticide Management Code and of the other regulations of this Act prevail over any inconsistent provision of any by-law passed by a municipality or an urban community." Evidently, the *Pesticides Act* envisions the existence of complementary municipal by-laws. As Duplessis and Hétu, *supra*, at p. 109, put it, [TRANSLATION] "the Quebec legislature gave the municipalities the right to regulate pesticides, provided that the by-law was not incompatible with the regulations and the Management Code enacted under the *Pesticides Act*". Since no Pesticide Management Code has been enacted by the province under s. 105, the

l'encadrer davantage dans une perspective de complémentarité de gestion avec les autorités municipales. . .

. . .

La thèse pluraliste admet donc qu'il y a intention de donner priorité aux dispositions législatives et réglementaires provinciales. Elle ne croit cependant pas que l'on puisse en déduire qu'automatiquement toute disposition municipale complémentaire en matière d'urbanisme et d'aménagement et qui touche la qualité de l'environnement soit nulle.

. . .

Une analyse approfondie des textes précités et l'examen de l'ensemble de la politique environnementale que semble avoir voulue le législateur mènent à la conclusion que c'est bien la thèse pluraliste, ou du moins une certaine thèse pluraliste, que celui-ci semble avoir pris comme base de l'ensemble législatif.

Dans la présente affaire, rien n'empêche que l'on se conforme à la fois au règlement 270 et à la *Loi sur les pesticides*, et il n'y a aucun élément de preuve plausible indiquant que la législature avait l'intention d'empêcher la réglementation par les municipalités de l'utilisation des pesticides. La *Loi sur les pesticides* établit un régime de permis pour les vendeurs et les applicateurs commerciaux de pesticides et elle est donc complémentaire à la législation fédérale, qui porte sur les produits eux-mêmes. Conjointement avec le règlement 270, ces lois établissent un régime de réglementation à trois niveaux.

En vertu de l'art. 102 de la *Loi sur les pesticides*, tel qu'il existait au moment de l'adoption du règlement 270 : « Toute disposition du Code de gestion des pesticides et des autres règlements édictés en vertu de la présente loi prévaut sur toute disposition inconciliable d'un règlement édicté par une municipalité ou une communauté urbaine. » Il est clair que la *Loi sur les pesticides* envisage l'existence de règlements municipaux complémentaires. Comme le disent Duplessis et Hétu, *op. cit.*, p. 109, « le législateur provincial reconnaissait aux municipalités le droit de réglementer les pesticides en autant que cette réglementation n'était pas inconciliable avec les règlements et le Code de gestion adoptés en vertu de la *Loi sur les pesti-*

lower courts in this case correctly found that the by-law and the *Pesticides Act* could co-exist. In the words of the Court of Appeal, at p. 16: [TRANSLATION] "The *Pesticides Act* thus itself contemplated the existence of municipal regulation of pesticides, since it took the trouble to impose restrictions."

cides ». Étant donné qu'aucun Code de gestion des pesticides n'a été adopté par la province aux termes de l'art. 105, les tribunaux antérieurs en l'espèce ont eu raison de conclure que le règlement et la *Loi sur les pesticides* pouvaient coexister. Pour reprendre les termes de la Cour d'appel, à la p. 16 : « La *Loi sur les pesticides* envisageait donc elle-même l'existence d'une réglementation municipale sur les pesticides, puisqu'elle prenait la peine d'imposer des contraintes. »

I also agree with the Court of Appeal at p. 16, that: [TRANSLATION] "A potential inconsistency is not sufficient to invalidate a by-law; there must be a real conflict". In this regard, the Court of Appeal quoted, at p. 17, *St-Michel-Archange*, *supra*, at p. 891, to the effect that: [TRANSLATION] "However, to the extent that and for as long as the provincial regulation is not in force, the municipal by-law continues to regulate the activity, provided, of course, that it complies with all the rules established by the law and the courts concerning its validity." 41

Je suis également d'accord avec la Cour d'appel à la p. 16 pour dire qu'« [u]ne éventuelle incompatibilité ne suffit pas pour invalider un règlement; il faut une réelle opposition ». À cet égard, la Cour d'appel a cité, à la p. 17, l'arrêt *St-Michel-Archange*, précité, p. 891, selon lequel « [t]ant et aussi longtemps toutefois que le règlement provincial n'est pas en vigueur, le règlement municipal continue à régir l'activité à condition, naturellement, qu'il respecte toutes les normes fixées par la loi et par la jurisprudence relativement à sa validité ».

I note in conclusion that the 1993 revision to the *Pesticide Act* added a new s. 102 stating: 42

Je souligne, en terminant, que la version modifiée de 1993 de la *Loi sur les pesticides* comporte un nouvel art. 102, ainsi libellé :

The Pesticide Management Code and any other regulation enacted pursuant to this Act shall render inoperative any regulatory provision concerning the same matter enacted by a municipality or an urban community, except where the provision

Le Code de gestion des pesticides et tout autre règlement édictés en application de la présente loi rendent inopérante toute disposition réglementaire portant sur une même matière qui est édictée par une municipalité ou une communauté urbaine, sauf dans le cas où cette disposition réglementaire satisfait aux conditions suivantes :

– concerns landscaping or extermination activities, such as fumigation, as defined by government regulation, and

– elle porte sur les activités d'entretien paysager ou d'extermination, notamment la fumigation, déterminées par règlement du gouvernement;

– prevents or further mitigates harmful effects on the health of humans or of other living species or damage to the environment or to property.

– elle prévient ou atténue davantage les atteintes à la santé des êtres humains ou des autres espèces vivantes, ainsi que les dommages à l'environnement ou aux biens.

This revised language indicates more explicitly that the *Pesticides Act* is meant to co-exist with stricter municipal by-laws of the type at issue in this case. Indeed, the new s. 102, by including the word "health", echoes the enabling legislation that underpins By-law-270, namely s. 410(1) *C.T.A.* Once a Pesticide Management Code is enacted,

Ce nouveau libellé indique de façon encore plus explicite que la *Loi sur les pesticides* vise à coexister avec des règlements municipaux plus sévères du genre de celui qui est en cause en l'espèce. En fait, l'inclusion du mot « santé » dans le nouvel art. 102 reflète la disposition habilitant le règlement 270, soit le par. 410(1) *L.C.V.* Dès l'adoption

municipalities will be able to draw on s. 102 in order to continue their independent regulation of pesticides. As Duplessis and Hétu, *supra*, explain at p. 111: [TRANSLATION] "the Quebec legislature has again recognized that municipalities have a role to play in pesticide control while at the same time indicating that it intends to make the municipal power subordinate to its own regulatory activity".

VI. Disposition

43 I have found that By-law 270 was validly enacted under s. 410(1) *C.T.A.* Moreover, the by-law does not render dual compliance with its dictates and either federal or provincial legislation impossible. For these reasons, I would dismiss the appeal with costs.

The reasons of Iacobucci, Major and LeBel JJ. were delivered by

LEBEL J. —

Introduction

44 I agree with Justice L'Heureux-Dubé that the impugned by-law on pesticide use adopted by the respondent, the Town of Hudson, is valid. It does not conflict with relevant federal and provincial legislation on the use and control of pesticides and is a valid exercise of municipal regulatory power under s. 410(1) of the *Cities and Towns Act*, R.S.Q., c. C-19 ("*C.T.A.*").

45 I view this case as an administrative and local government law issue. Although I agree with L'Heureux-Dubé J. on the disposition of the appeal, I wish to add some comments on some of the problems raised by the appellants. First, I will discuss the alleged operational conflict with the regulatory and legislative systems put in place by other levels of government. I will then turn to the difficulties created by the use of broad provisions like s. 410 and the application of the general prin-

du Code de gestion des pesticides, les municipalités pourront se fonder sur l'art. 102 pour continuer de réglementer les pesticides de façon indépendante. Comme Duplessis et Hétu, *op. cit.*, l'expliquent à la p. 111 : « le législateur québécois reconnaît une fois de plus que les municipalités ont un rôle à jouer en matière de contrôle des pesticides tout en voulant subordonner le pouvoir municipal à son activité réglementaire ».

VI. Dispositif

J'ai conclu que le règlement 270 a été valablement adopté en vertu du par. 410(1) *L.C.V.* De plus, le règlement ne rend pas impossible la conformité à ses prescriptions ainsi qu'à la législation fédérale et à la législation provinciale. Pour ces motifs, je rejetterais le pourvoi avec dépens.

Version française des motifs des juges Iacobucci, Major et LeBel rendus par

LE JUGE LEBEL —

Introduction

Je conviens avec le juge L'Heureux-Dubé que le règlement sur l'utilisation des pesticides contesté qui a été adopté par l'intimée la ville de Hudson est valide. Il n'entre pas en conflit avec la législation fédérale et la législation provinciale pertinentes sur l'utilisation et le contrôle des pesticides, et il constitue un exercice valide du pouvoir de réglementation que confère aux municipalités le par. 410(1) de la *Loi sur les cités et villes*, L.R.Q., ch. C-19 (« *L.C.V.* »).

Je considère la présente affaire comme une question de droit administratif et de droit municipal. Je suis d'accord avec le juge L'Heureux-Dubé quant à l'issue du pourvoi, mais je désire ajouter quelques observations au sujet de certains problèmes soulevés par les appelantes. J'aborde en premier lieu le présumé conflit d'application avec les régimes réglementaire et législatif mis en place par les autres ordres de gouvernement. Je traite ensuite des difficultés que créent l'application de

ciples of administrative law governing delegated legislation.

The Operational Conflict

As its first line of attack against By-law 270 of the Town of Hudson, the appellants raise the issue of an operational conflict with the federal *Pest Control Products Act*, R.S.C. 1985, c. P-9, and the *Pest Control Products Regulations*, C.R.C. 1978, c. 1253. The appellants also assert that the by-law conflicts with the Quebec *Pesticides Act*, R.S.Q., c. P-9.3. As L'Heureux-Dubé J. points out, the applicable test to determine whether an operational conflict arises is set out in *Multiple Access Ltd. v. McCutcheon*, [1982] 2 S.C.R. 161, at pp. 187 and 189. There must be an actual conflict, in the sense that compliance with one set of rules would require a breach of the other. This principle was recently reexamined and restated by Binnie J. in *M & D Farm Ltd. v. Manitoba Agricultural Credit Corp.*, [1999] 2 S.C.R. 961, at paras. 39-42. The basic test remains the impossibility of dual compliance. From this perspective, the alleged conflict with federal legislation simply does not exist. The federal Act and its regulations merely authorize the importation, manufacturing, sale and distribution of the products in Canada. They do not purport to state where, when and how pesticides could or should be used. They do not grant a blanket authority to pesticides' manufacturers or distributors to spread them on every spot of greenery within Canada. This matter is left to other legislative and regulatory schemes. Nor does a conflict exist with the provincial *Pesticides Act*, and I agree with L'Heureux-Dubé J.'s analysis on this particular point. The operational conflict argument thus fails.

The Administrative Law Issues

The most serious problems raised by the appeal involve pure administrative law issues. The appellants' arguments raise some basic issues of admin-

dispositions larges comme l'art. 410 et celle des principes généraux de droit administratif régissant la législation déléguée.

Le conflit d'application

46 Comme premier moyen de contestation du règlement 270 de la ville de Hudson, les appelantes soulèvent la question du conflit d'application avec la *Loi sur les produits antiparasitaires*, L.R.C. 1985, ch. P-9, et le *Règlement sur les produits antiparasitaires*, C.R.C. 1978, ch. 1253, adoptés au niveau fédéral. Les appelantes affirment également que le règlement va à l'encontre de la *Loi sur les pesticides* du Québec, L.R.Q., ch. P-9.3. Comme le souligne le juge L'Heureux-Dubé, le critère servant à déterminer s'il existe un conflit d'application est établi dans *Multiple Access Ltd. c. McCutcheon*, [1982] 2 R.C.S. 161, p. 187 et 189. Il faut qu'il y ait un conflit véritable, en ce sens que l'observation d'un ensemble de règles entraîne l'inobservation de l'autre. Le juge Binnie a récemment réexaminé et réaffirmé ce principe dans *M. & D. Farm Ltd. c. Société du crédit agricole du Manitoba*, [1999] 2 R.C.S. 961, par. 39-42. Le critère fondamental demeure l'impossibilité de se conformer aux deux textes. Dans cette optique, le présumé conflit avec la législation fédérale n'existe tout simplement pas. La loi fédérale et son règlement d'application ne font qu'autoriser l'importation, la fabrication, la vente et la distribution des produits au Canada. Ils ne visent pas à prescrire où, quand et comment les pesticides peuvent ou doivent être utilisés. Ils ne confèrent pas aux fabricants et aux distributeurs de pesticides l'autorisation générale de les appliquer partout où il y a un bout de verdure au Canada. Cette question relève d'autres régimes législatifs et réglementaires. Il n'y a pas non plus conflit avec la *Loi sur les pesticides* de la province, et je souscris à l'analyse du juge L'Heureux-Dubé sur ce point particulier. L'argument reposant sur le conflit d'application n'est donc pas fondé.

Les questions de droit administratif

47 Les problèmes les plus graves mentionnés dans le pourvoi portent sur des questions de droit administratif pur. Dans leurs arguments, les appelantes

istrative law as applied in the field of municipal governance.

48 The appellants assert that no provision of the *C.T.A.* authorizes By-law 270. If such legislative authority exists, the by-law is nevertheless void because of its discriminatory and prohibitory nature. A solution is to be found in the principles governing the interpretation and application of the laws governing cities and towns like the respondent in the Province of Quebec. Interesting as they may be, references to international sources have little relevance. They confirm the general importance placed in modern society and shared by most citizens of this country on the environment and the need to protect it. Nevertheless, no matter how laudable the purpose of the by-law may be, and although it may express the will of the members of the community to protect their local environment, the means to do it must be found somewhere in the law. The issues in this case remain strictly, first, whether the *C.T.A.* authorizes municipalities to regulate the use of pesticides within their territorial limits and, second, whether the particular regulation conforms with the general principles applicable to delegated legislation.

49 A tradition of strong local government has become an important part of the Canadian democratic experience. This level of government usually appears more attuned to the immediate needs and concerns of the citizens. Nevertheless, in the Canadian legal order, as stated on a number of occasions, municipalities remain creatures of provincial legislatures (see *Public School Boards' Assn. of Alberta v. Alberta (Attorney General)*, [2000] 2 S.C.R. 409, 2000 SCC 45, at paras. 33-34; *Ontario English Catholic Teachers' Assn. v. Ontario (Attorney General)*, [2001] 1 S.C.R. 470, 2001 SCC 15, at paras. 29 and 58-59). Municipalities exercise such powers as are granted to them by legislatures. This principle is illustrated by numerous decisions of our Court (see, for example, *Montréal (City of) v. Arcade Amusements Inc.*, [1985] 1 S.C.R. 368; *R. v. Sharma*, [1993] 1 S.C.R. 650). They are not endowed with residuary general powers, which would allow them to exercise dor-

soulèvent des questions de droit administratif fondamentales appliquées au domaine de la gestion des affaires municipales.

Les appelantes affirment qu'aucune disposition de la *L.C.V.* n'autorise le règlement 270. Même si une telle autorisation législative existe, le règlement est nul en raison de son caractère discriminatoire et prohibitif. Une solution se trouve dans les principes régissant l'interprétation et l'application des lois visant les cités et les villes comme l'intimée au Québec. Si intéressants soient-ils, les renvois aux sources internationales ne sont guère pertinents. Ils confirment l'importance que la société moderne accorde généralement à l'environnement et à la nécessité de le protéger, position que partagent la plupart des citoyens de ce pays. Cependant, aussi louable que soit l'objet du règlement et même si celui-ci exprime la volonté des membres de la collectivité de protéger son environnement local, les moyens pour ce faire doivent être tirés de la loi. En l'espèce, les questions se résument à savoir, premièrement, si la *L.C.V.* autorise les municipalités à réglementer l'utilisation des pesticides sur leur territoire et, deuxièmement, si le règlement en cause respecte les principes généraux applicables à la législation déléguée.

La tradition d'établir des administrations publiques locales fortes est devenue une partie importante de l'expérience démocratique canadienne. Cet ordre d'administration publique paraît généralement mieux adapté aux besoins et préoccupations immédiats des citoyens. Toutefois, dans l'ordre juridique canadien, comme on l'a dit à plusieurs reprises, les municipalités demeurent des créatures du législateur provincial (voir *Public School Boards' Assn. of Alberta c. Alberta (Procureur général)*, [2000] 2 R.C.S. 409, 2000 CSC 45, par. 33-34; *Ontario English Catholic Teachers' Assn. c. Ontario (Procureur général)*, [2001] 1 R.C.S. 470, 2001 CSC 15, par. 29 et 58-59). Les municipalités exercent les pouvoirs que leur confèrent les législatures. Nombre de décisions de notre Cour illustrent ce principe (voir, par exemple, *Montréal (Ville de) c. Arcade Amusements Inc.*, [1985] 1 R.C.S. 368; *R. c. Sharma*, [1993] 1 R.C.S. 650). Elles ne possèdent aucun pouvoir résiduaire

mant provincial powers (see I. M. Rogers, *The Law of Canadian Municipal Corporations* (2nd ed. (loose-leaf)), Cum. Supp. to vol. 1, at pp. 358 and 364; J. Hétu, Y. Duplessis and D. Pakenham, *Droit Municipal: Principes généraux et contentieux* (1998), at p. 651). If a local government body exercises a power, a grant of authority must be found somewhere in the provincial laws. Although such a grant of power must be construed reasonably and generously (*Nanaimo (City) v. Rascal Trucking Ltd.*, [2000] 1 S.C.R. 342, 2000 SCC 13), it cannot receive such an interpretation unless it already exists. Interpretation may not supplement the absence of power.

général qui leur permettrait d'exercer des pouvoirs provinciaux non attribués (voir I. M. Rogers, *The Law of Canadian Municipal Corporations* (2e éd. (feuilles mobiles)), suppl. cum. du vol. 1, p. 358 et 364; J. Hétu, Y. Duplessis et D. Pakenham, *Droit Municipal: Principes généraux et contentieux* (1998), p. 651). Une administration publique locale ne peut exercer un pouvoir que s'il est conféré par une loi provinciale. Certes, ce pouvoir doit être interprété de façon raisonnable et libérale (*Nanaimo (Ville) c. Rascal Trucking Ltd.*, [2000] 1 R.C.S. 342, 2000 CSC 13), mais il ne peut recevoir cette interprétation que s'il existe. L'interprétation ne peut pas suppléer à l'absence de pouvoir.

The appellants argue that no power to regulate the use of pesticides was delegated to municipalities in Quebec, either under a specific grant of power or under the more general provisions of s. 410(1) *C.T.A.* The respondent concedes that the only provision under which its by-law can be upheld is the general clause of s. 410(1). It no longer asserts that it could be supported under s. 412(32) concerning toxic materials.

50 Les appelantes prétendent qu'aucun pouvoir de réglementation de l'utilisation des pesticides n'a été délégué aux municipalités du Québec, que ce soit par un pouvoir particulier ou en vertu des dispositions plus générales du par. 410(1) *L.C.V.* L'intimée admet que la seule disposition qui permette de confirmer la légalité de son règlement est la clause générale du par. 410(1). Elle n'affirme plus que son règlement pourrait s'appuyer sur le par. 412(32), qui porte sur les matières toxiques.

As the appellants interpret a general clause like s. 410 *C.T.A.*, it would amount to an empty shell. Any exercise of municipal regulatory authority would require a specific and express grant of power. The history of the *C.T.A.* confirms that the Quebec legislature has generally favoured a drafting technique of delegating regulatory or administrative powers to municipalities through a myriad of specific provisions, which are amended frequently. The reader is then faced with layers of complex and sometimes inconsistent legislation.

51 Si l'on acceptait l'interprétation par les appelantes d'une clause générale comme l'art. 410 *L.C.V.*, cette disposition équivaudrait à une coquille vide. L'exercice de tout pouvoir de réglementation municipal nécessiterait un pouvoir particulier et explicite. L'historique de la *L.C.V.* confirme que la législature du Québec privilégie généralement la technique de rédaction consistant à déléguer des pouvoirs de réglementation ou administratifs aux municipalités par d'innombrables dispositions particulières qui sont modifiées fréquemment. Le lecteur se retrouve donc avec une série de dispositions législatives complexes et parfois incohérentes.

In the case of a specific grant of power, its limits must be found in the provision itself. Non-included powers may not be supplemented through the use of the general residuary clauses often found in municipal laws (*R. v. Greenbaum*, [1993] 1 S.C.R. 674).

52 Dans le cas d'un pouvoir particulier, la disposition elle-même doit en préciser les limites. L'application des clauses générales relatives aux pouvoirs non attribués que comportent souvent les lois municipales ne peut pas suppléer aux pouvoirs non visés (*R. c. Greenbaum*, [1993] 1 R.C.S. 674).

53 The case at bar raises a different issue: absent a specific grant of power, does a general welfare provision like s. 410(1) authorize By-law 270? A provision like s. 410(1) must be given some meaning. It reflects the reality that the legislature and its drafters cannot foresee every particular situation. It appears to be sound legislative and administrative policy, under such provisions, to grant local governments a residual authority to deal with the unforeseen or changing circumstances, and to address emerging or changing issues concerning the welfare of the local community living within their territory. Nevertheless, such a provision cannot be construed as an open and unlimited grant of provincial powers. It is not enough that a particular issue has become a pressing concern in the opinion of a local community. This concern must relate to problems that engage the community as a local entity, not a member of the broader polity. It must be closely related to the immediate interests of the community within the territorial limits defined by the legislature in a matter where local governments may usefully intervene. In *Shell Canada Products Ltd. v. Vancouver (City)*, [1994] 1 S.C.R. 231, the Court emphasized the local ambit of such power. It does not allow local governments and communities to exercise powers in questions that lie outside the traditional area of municipal interests, even if municipal powers should be interpreted broadly and generously (see F. Hoehn, *Municipalities and Canadian Law: Defining the Authority of Local Governments* (1996), at pp. 17-24).

La question qui se pose en l'espèce est différente : en l'absence d'un pouvoir particulier, une disposition de bien-être général comme le par. 410(1) autorise-t-elle le règlement 270? Il faut donner un sens à une disposition comme le par. 410(1). Celui-ci correspond à la réalité que la législature et ses rédacteurs ne peuvent pas prévoir tous les cas particuliers. Il paraît donc logique, sur les plans législatif et administratif, de recourir à de telles dispositions pour conférer aux administrations publiques locales le pouvoir résiduaire d'intervenir en cas d'imprévu et de changements ainsi que de traiter des questions nouvelles ou évolutives relativement au bien-être de la collectivité locale vivant sur leur territoire. On ne peut toutefois pas interpréter une telle disposition comme conférant de façon absolue des pouvoirs provinciaux. Il ne suffit pas qu'une question particulière soit devenue une préoccupation urgente selon la collectivité locale. Cette préoccupation doit avoir trait à des problèmes touchant la collectivité comme entité locale et non pas comme membre de la société au sens large. Elle doit être étroitement liée aux intérêts immédiats de la collectivité se trouvant dans les limites territoriales définies par la législature pour ce qui concerne toute question pour laquelle l'intervention des administrations publiques locales peut se révéler utile. Dans *Produits Shell Canada Ltée c. Vancouver (Ville)*, [1994] 1 R.C.S. 231, notre Cour a souligné la portée locale d'un tel pouvoir. Elle ne permet pas aux administrations publiques locales et aux collectivités locales d'exercer des pouvoirs pour des questions ne relevant pas du domaine traditionnel des intérêts municipaux, même si les pouvoirs municipaux doivent être interprétés de façon large et libérale (voir F. Hoehn, *Municipalities and Canadian Law: Defining the Authority of Local Governments* (1996), p. 17-24).

54 In the present case, the subject matter of the by-law lies within the ambit of normal local government activities. It concerns the use and protection of the local environment within the community. The regulation targets problems of use of land and property, and addresses neighbourhood concerns that have always been within the realm of local government activity. Thus, the by-law was prop-

En l'espèce, l'objet du règlement relève des activités normales des administrations publiques locales. Il s'agit de l'utilisation et de la protection de l'environnement local de la collectivité. La réglementation vise les problèmes liés à l'utilisation des terres et des biens, et elle porte sur des préoccupations de quartier qui ont toujours relevé du domaine d'activité des administrations

erly authorized by s. 410(1). I must then turn briefly to the second part of the administrative law argument raised by the appellants, that the particular exercise of the existing municipal power breached principles of delegated legislation against prohibitory and discriminatory regulations.

publiques locales. Par conséquent, le règlement était autorisé en bonne et due forme par le par. 410(1). Je dois donc aborder brièvement la deuxième partie de l'argument de droit administratif soulevé par les appelantes, selon lequel l'exercice particulier du pouvoir municipal existant a contrevenu aux principes de législation déléguée interdisant la prise de règlements prohibitifs et discriminatoires.

Two basic and longstanding principles of delegated legislation state that a by-law may not be prohibitory and may not discriminate unless the enabling legislation so authorizes. (See P. Garant, *Droit administratif* (4th ed. 1996), vol. 1, at pp. 407 *et seq.*; R. Dussault and L. Borgeat, *Administrative Law: A Treatise* (2nd ed. 1985), vol. 1, at pp. 435 *et seq.*; Hétu, Duplessis and Pakenham, *supra*, at pp. 677-82 and 691-96.) The drafting technique used in the present case creates an apparent problem. On its face, the by-law involves a general prohibition and then authorizes some specific uses. This obstacle may be overcome through global interpretation of the by-law. When it is read as a whole, its overall effect is to prohibit purely aesthetic use of pesticides while allowing other uses, mainly for business or agricultural purposes. It does not appear as a purely prohibitory legal instrument. As such, it conforms with this first basic principle of municipal law. There remains the problem of the discriminatory aspect of the by-law. Although the by-law discriminates, I agree with L'Heureux-Dubé J. that this kind of regulation implies a necessary component of discrimination. There can be no regulation on such a topic without some form of discrimination in the sense that the by-law must determine where, when and how a particular product may be used. The regulation needed to identify the various distinctions between different situations. Otherwise, no regulation would have been possible. An implied authority to discriminate was then unavoidably part of the delegated regulatory power.

55

Selon deux principes fondamentaux établis depuis longtemps en matière de législation déléguée, un règlement ne peut pas être prohibitif et discriminatoire à moins que la loi habilitante ne l'autorise. (Voir P. Garant, *Droit administratif* (4e éd. 1996), vol. 1, p. 407 et suiv.; R. Dussault et L. Borgeat, *Traité de droit administratif* (2e éd. 1984), t. I, p. 557 et suiv.; Hétu, Duplessis et Pakenham, *op. cit.*, p. 677-682 et 691-696.) La technique de rédaction employée en l'espèce crée un problème apparent. Le règlement établit de prime abord une prohibition générale pour ensuite permettre certaines utilisations particulières. L'interprétation globale du règlement permet de contourner cet obstacle. Lu dans son ensemble, le règlement a comme effet d'interdire l'utilisation des pesticides pour des raisons purement esthétiques tout en permettant d'autres utilisations, surtout pour des activités commerciales et agricoles. Il ne paraît pas constituer un texte juridique purement prohibitif. À ce titre, il respecte ce premier principe fondamental du droit municipal. Il reste le problème de l'aspect discriminatoire du règlement. Bien que le règlement soit discriminatoire, je conviens avec le juge L'Heureux-Dubé que ce genre de réglementation comporte nécessairement une composante de discrimination. Il ne peut y avoir aucune réglementation sur un tel sujet sans une certaine forme de discrimination, en ce sens que le règlement doit établir où, quand et comment un produit particulier peut être utilisé. La réglementation devait établir les diverses distinctions entre les différentes situations. Autrement, aucune réglementation n'aurait été possible. Le pouvoir de réglementation délégué comportait donc inévitablement le pouvoir implicite de faire de la discrimination.

56 For these reasons, the appeal is dismissed, with costs to the respondent the Town of Hudson.

Appeal dismissed with costs.

ON APPEAL FROM THE COURT OF APPEAL FOR THE YUKON TERRITORY

Constitutional law — Aboriginal peoples — Aboriginal rights — Land claims — Duty of Crown to consult

EN APPEL DE LA COUR D'APPEL DU YUKON

Droit constitutionnel — Autochtones — Droits ancestraux — Revendications territoriales — Obligation de la

and accommodate in the context of a modern comprehensive land claims treaty — Treaty provides Aboriginal right of access for hunting and fishing for subsistence in their traditional territory — Application by non-Aboriginal for an agricultural land grant within territory approved by Crown — Whether Crown had duty to consult and accommodate Aboriginal peoples — If so, whether Crown discharged its duty — Constitution Act, 1982, s. 35.

Crown law — Honour of the Crown — Duty to consult and accommodate Aboriginal peoples — Whether Crown has duty to consult and accommodate prior to making decisions that might adversely affect Aboriginal rights and title claims.

Administrative law — Judicial review — Standard of review — Whether decision maker had duty to consult and accommodate — If so, whether decision maker discharged this duty — Lands Act, R.S.Y. 2002, c. 132; Territorial Lands (Yukon) Act, S.Y. 2003, c. 17.

Little Salmon/Carmacks entered into a land claims agreement with the governments of Canada and the Yukon Territory in 1997, after 20 years of negotiations. Under the treaty, Little Salmon/Carmacks members have a right of access for hunting and fishing for subsistence in their traditional territory, which includes a parcel of 65 hectares for which P submitted an application for an agricultural land grant in November 2001. The land applied for by P is within the trapline of S, who is a member of Little Salmon/Carmacks.

Little Salmon/Carmacks disclaim any allegation that a grant to P would violate the treaty, which itself contemplates that surrendered land may be taken up from time to time for other purposes, including agriculture. Nevertheless, until such taking up occurs, the members of Little Salmon/Carmacks attach importance to their ongoing treaty interest in surrendered Crown lands (of which the 65 acres forms a small part). Little Salmon/Carmacks contend that in considering the grant to P the territorial government proceeded without proper consultation and without proper regard to relevant First Nation's concerns.

The Yukon government's Land Application Review Committee ("LARC") considered P's application at a

Couronne de consulter et d'accommoder les Autochtones dans le contexte d'un traité récent relatif à des revendications territoriales globales — Traité accordant aux Autochtones l'accès à leur territoire traditionnel pour y pratiquer la chasse et la pêche de subsistance — Approbation, par la Couronne, d'une demande de concession de terres agricoles dans ce territoire présentée par un non-Autochtone — La Couronne avait-elle l'obligation de consulter et d'accommoder les Autochtones? — Si oui, la Couronne s'est-elle acquittée de cette obligation? — Loi constitutionnelle de 1982, art. 35.

Droit de la Couronne — Honneur de la Couronne — Obligation de consulter et d'accommoder les Autochtones — La Couronne a-t-elle l'obligation de consulter et d'accommoder les Autochtones avant de prendre des décisions susceptibles d'avoir des conséquences négatives sur leurs revendications de titre et de droits?

Droit administratif — Contrôle judiciaire — Norme de contrôle — Le décideur avait-il l'obligation de consulter et d'accommoder les Autochtones? — Si oui, s'est-il acquitté de cette obligation? — Loi sur les terres, L.R.Y. 2002, ch. 132; Loi du Yukon sur les terres territoriales, L.Y. 2003, ch. 17.

En 1997, après 20 ans de négociations, la Première nation Little Salmon/Carmacks a conclu avec les gouvernements du Canada et du Territoire du Yukon un accord sur les revendications territoriales. Aux termes du traité, les membres de la première nation possèdent, à des fins de chasse et de pêche de subsistance, un droit d'accès à leur territoire traditionnel qui englobe une parcelle de 65 hectares à l'égard de laquelle P a fait une demande de concession de terres agricoles en novembre 2001. La parcelle visée par la demande de P se trouve dans le territoire de piégeage de S, un membre de la première nation.

La première nation rejette toute allégation que la concession d'une parcelle à P violerait le traité, qui prévoit lui-même que des terres cédées peuvent à l'occasion être prises à d'autres fins, notamment à des fins agricoles. Mais jusqu'à ce que des terres aient été ainsi prises, les membres de la première nation accordent de l'importance à l'intérêt qu'ils conservent sur les terres cédées à la Couronne (dont les 65 hectares forment une petite partie). La première nation soutient qu'en examinant la demande de concession de P, le gouvernement territorial a agi sans tenir la consultation requise et sans prendre en compte les préoccupations pertinentes de la première nation.

Le Comité d'examen des demandes d'aliénation de terres (« CEDAT ») du gouvernement du Yukon a

meeting to which it invited Little Salmon/Carmacks. The latter submitted a letter of opposition to P's application prior to the meeting, but did not attend. At the meeting, LARC recommended approval of the application and, in October 2004, the Director, Agriculture Branch, Yukon Department of Energy, Mines and Resources, approved it. Little Salmon/Carmacks appealed the decision to the Assistant Deputy Minister, who rejected its review request. On judicial review, however, the Director's decision was quashed and set aside. The chambers judge held that the Yukon failed to comply with the duty to consult and accommodate. The Court of Appeal allowed the Yukon's appeal.

Held: The appeal and cross-appeal should be dismissed.

Per McLachlin C.J. and Binnie, Fish, Abella, Charron, Rothstein and Cromwell JJ.: When a modern land claim treaty has been concluded, the first step is to look at its provisions and try to determine the parties' respective obligations, and whether there is some form of consultation provided for in the treaty itself. While consultation may be shaped by agreement of the parties, the Crown cannot contract out of its duty of honourable dealing with Aboriginal people — it is a doctrine that applies independently of the intention of the parties as expressed or implied in the treaty itself.

In this case, a continuing duty to consult existed. Members of Little Salmon/Carmacks possessed an express treaty right to hunt and fish for subsistence on their traditional lands, now surrendered and classified as Crown lands. While the Treaty did not prevent the government from making land grants out of the Crown's holdings, and indeed it contemplated such an eventuality, it was obvious that such grants might adversely affect the traditional economic and cultural activities of Little Salmon/Carmacks, and the Yukon was required to consult with Little Salmon/Carmacks to determine the nature and extent of such adverse effects.

The treaty itself set out the elements the parties regarded as an appropriate level of consultation (where the treaty requires consultation) including proper notice of a matter to be decided in sufficient form and detail to allow that party to prepare its view on the matter; a reasonable period of time in which the party to be consulted may prepare its views on the matter, and an opportunity to present such views to the party obliged

examiné la demande de P lors d'une réunion à laquelle étaient invités les représentants de la première nation. Cette dernière ne s'est pas fait représenter à la réunion mais avait présenté une lettre d'opposition à la demande de P. À la réunion, le CEDAT a recommandé l'approbation de la demande, et le directeur de la Direction de l'agriculture du ministère de l'Énergie, des Mines et des Ressources du Yukon l'a approuvée au mois d'octobre 2004. La première nation a fait appel de la décision auprès du sous-ministre adjoint, qui a rejeté la demande de révision. À l'issue du contrôle judiciaire toutefois, la décision du directeur a été annulée. Le juge siégeant en cabinet a conclu que le Yukon n'avait pas respecté son obligation de consulter et d'accommoder. La Cour d'appel a accueilli l'appel du Yukon.

Arrêt : Le pourvoi et le pourvoi incident sont rejetés.

La juge en chef McLachlin et les juges Binnie, Fish, Abella, Charron, Rothstein et Cromwell : Lorsqu'un traité récent relatif aux revendications territoriales a été conclu, la première étape consiste à en examiner les dispositions et à tenter de déterminer les obligations respectives des parties et l'existence, dans le traité lui-même, d'une forme quelconque de consultation. Les parties peuvent s'entendre sur les modalités de la consultation, mais la Couronne ne peut se soustraire à son obligation de traiter honorablement avec les Autochtones — il s'agit d'une doctrine qui s'applique indépendamment de l'intention des parties, que cette intention soit expresse ou implicite dans le traité lui-même.

En l'espèce, l'obligation de consulter était permanente. Les membres de la première nation possédaient un droit, prévu expressément au traité, de pratiquer la chasse et la pêche de subsistance sur leur territoire traditionnel qui a maintenant été cédé et est considéré comme des terres de la Couronne. Même si le traité n'empêchait pas le gouvernement de concéder des terres de la Couronne, cette possibilité y était même prévue, il était évident que cela risquait d'avoir des conséquences négatives sur les activités économiques et culturelles traditionnelles de la première nation, et le Yukon était tenu de consulter cette dernière afin de déterminer la nature et l'étendue de ces conséquences négatives.

Le traité lui-même précise les éléments considérés par les parties comme constituant une consultation appropriée (lorsqu'une consultation est nécessaire). Ces éléments comprennent un avis suffisamment détaillé concernant la question à trancher afin de permettre à la partie consultée de préparer sa position sur la question, un délai suffisant pour permettre à la partie devant être consultée de préparer sa position sur la question ainsi

to consult; and full and fair consideration by the party obliged to consult of any views presented.

The actual treaty provisions themselves did not govern the process for agricultural grants at the time. However, given the existence of the treaty surrender and the legislation in place to implement it, and the decision of the parties not to incorporate a more elaborate consultation process in the Treaty itself, the scope of the duty of consultation in this situation was at the lower end of the spectrum.

Accordingly, the Director was required, as a matter of compliance with the legal duty to consult based on the honour of the Crown, to be informed about and consider the nature and severity of any adverse impact of the proposed grant before he made a decision to determine (amongst other things) whether accommodation was necessary or appropriate. The purpose of consultation was not to re-open the Treaty or to re-negotiate the availability of the lands for an agricultural grant. Such availability was already established in the Treaty. Consultation was required to help manage the important ongoing relationship between the government and the Aboriginal community in a way that upheld the honour of the Crown and promoted the objective of reconciliation.

In this case, the duty of consultation was discharged. Little Salmon/Carmacks acknowledges that it received appropriate notice and information. The Little Salmon/Carmacks objections were made in writing and they were dealt with at a meeting at which Little Salmon/Carmacks was entitled to be present (but failed to attend). Both Little Salmon/Carmacks' objections and the response of those who attended the meeting were before the Director when, in the exercise of his delegated authority, he approved P's application. Neither the honour of the Crown nor the duty to consult required more.

Nor was there any breach of procedural fairness. While procedural fairness is a flexible concept, and takes into account the Aboriginal dimensions of the decision facing the Director, it is nevertheless a doctrine that applies as a matter of administrative law to regulate relations between the government decision makers and all residents of the Yukon, Aboriginal as well as non-Aboriginal.

While the Yukon had a duty to consult, there was no further duty of accommodation on the facts of this case. Nothing in the treaty itself or in

que l'occasion de présenter cette position à la partie obligée de tenir la consultation, et un examen complet et équitable de toutes les positions présentées, par la partie obligée de tenir la consultation.

Le processus de concession de terres à des fins agricoles n'était pas régi à l'époque par les dispositions elles-mêmes du traité. Cependant, étant donné l'existence de la cession opérée par le traité et les textes législatifs adoptés en vue de la mise en œuvre de celui-ci, ainsi que la décision des parties de ne pas incorporer dans le traité lui-même un processus de consultation plus élaboré, la portée de l'obligation de consultation dans une telle situation se situait au bas du continuum.

Par conséquent, le directeur était tenu, pour se conformer à l'obligation juridique de consulter fondée sur l'honneur de la Couronne, d'être informé de la nature et de la gravité de toute incidence négative de la concession projetée et d'en tenir compte avant de prendre une décision, pour déterminer (entre autres choses) si des accommodements étaient nécessaires ou appropriés. La consultation n'avait pas pour objet de rouvrir le traité ou de renégocier la possibilité de concéder les terres à des fins agricoles. Cette possibilité était déjà prévue au traité. La consultation était requise afin de faciliter la gestion de la relation importante entre le gouvernement et la communauté autochtone en conformité avec la préservation de l'honneur de la Couronne et la réalisation de l'objectif de réconciliation.

En l'espèce, l'obligation de consultation a été respectée. La première nation reconnaît avoir reçu un avis suffisant et l'information utile. Elle a communiqué ses objections par écrit, et celles-ci ont été étudiées lors d'une réunion à laquelle la première nation avait le droit d'assister (mais à laquelle elle ne s'est pas fait représenter). Le directeur avait pris connaissance des objections de la première nation et de la réponse fournie par les personnes présentes à la réunion lorsque, dans l'exercice de son pouvoir délégué, il a approuvé la demande de P. L'honneur de la Couronne et l'obligation de consultation n'exigeaient rien de plus.

Il n'y a eu non plus aucun manquement à l'équité procédurale. Si l'équité procédurale est une notion souple et prend en compte les aspects qui, dans la décision que doit prendre le directeur, touchent directement les Autochtones, il n'en demeure pas moins que cette doctrine s'applique en droit administratif pour encadrer les relations entre les décideurs gouvernementaux et tous les habitants du Yukon, Autochtones comme non-Autochtones.

Si le Yukon avait une obligation de consultation, les faits de l'espèce ne donnent lieu à aucune autre obligation d'accommodement. Le traité lui-même ou

the surrounding circumstances gave rise to such a requirement.

In exercising his discretion in this case, as in all others, the Director was required to respect legal and constitutional limits. The constitutional limits included the honour of the Crown and its supporting doctrine of the duty to consult. The standard of review in that respect, including the adequacy of the consultation, is correctness. Within the limits established by the law and the Constitution, however, the Director's decision should be reviewed on a standard of reasonableness.

In this case, the Director did not err in law in concluding that the level of consultation that had taken place was adequate. The advice the Director received from his officials after consultation is that the impact of the grant of 65 hectares would not be significant. There is no evidence that he failed to give full and fair consideration to the concerns of Little Salmon/Carmacks. The material filed by the parties on the judicial review application does not demonstrate any palpable error of fact in his conclusion. Whether or not a court would have reached a different conclusion is not relevant. The decision to approve or not to approve the grant was given by the legislature to the Minister who, in the usual way, delegated the authority to the Director. His disposition was reasonable in the circumstances.

Per LeBel and Deschamps JJ.: Whereas past cases have concerned unilateral actions by the Crown that triggered a duty to consult for which the terms had not been negotiated, in the case at bar, the parties have moved on to another stage. Formal consultation processes are now a permanent feature of treaty law, and the Little Salmon/Carmacks Final Agreement affords just one example of this. To give full effect to the provisions of a treaty such as the Final Agreement is to renounce a paternalistic approach to relations with Aboriginal peoples. It is a way to recognize that Aboriginal peoples have full legal capacity. To disregard the provisions of such a treaty can only encourage litigation, hinder future negotiations and threaten the ultimate objective of reconciliation.

To allow one party to renege unilaterally on its constitutional undertaking by superimposing further rights and obligations relating to matters already provided for in the treaty could result in a paternalistic legal contempt, compromise the national treaty negotiation

l'ensemble des circonstances ne donnent en aucun cas ouverture à une telle obligation.

Dans l'exercice de son pouvoir discrétionnaire dans ce cas, comme dans tous les autres cas, le directeur devait respecter des limites légales et constitutionnelles. Les limites constitutionnelles incluaient l'honneur de la Couronne et le principe de l'obligation de consulter qui l'appuie. La norme de contrôle à cet égard, y compris à l'égard du caractère adéquat de la consultation, est celle de la décision correcte. Dans les limites établies par le droit et la Constitution, toutefois, la décision du directeur doit être examinée selon la norme de la raisonnabilité.

En l'espèce, le directeur n'a pas commis d'erreur de droit en concluant que la consultation menée était adéquate. Selon l'avis reçu de ses fonctionnaires par le directeur après la consultation, les incidences de la concession de 65 hectares de terres ne seraient pas importantes. Rien n'indique que les préoccupations de la première nation n'ont pas fait l'objet d'un examen complet et équitable de sa part. Les documents déposés par les parties lors de la demande de contrôle judiciaire ne révèlent l'existence d'aucune erreur de fait manifeste dans sa conclusion. Le fait qu'un tribunal judiciaire aurait éventuellement pu arriver à une conclusion différente n'est pas pertinent. La décision d'approuver ou de ne pas approuver la concession de la parcelle de terre a été confiée par l'assemblée législative au ministre qui, de la façon habituelle, a délégué ce pouvoir au directeur. La décision prise par ce dernier était raisonnable dans les circonstances.

Les juges LeBel et Deschamps : Si, jusqu'ici, les litiges ont mis en cause une action unilatérale de la Couronne qui déclenchait une obligation de consulter dont les modalités n'avaient pas été négociées, le présent dossier indique que les parties sont maintenant passées à une autre étape. Les processus formels de consultation font maintenant résolument partie de l'univers juridique des traités. L'Entente définitive de Little Salmon/Carmacks n'en est qu'un exemple. Donner leur plein effet aux stipulations d'un traité comme l'Entente définitive c'est renoncer à toute approche paternaliste à l'égard des peuples autochtones. Il s'agit d'une façon de reconnaître leur pleine capacité juridique. Méconnaître les stipulations d'un tel traité ne peut qu'encourager le recours aux tribunaux, nuire aux négociations futures et compromettre la réalisation de l'objectif ultime de réconciliation.

Permettre à une partie de revenir unilatéralement sur son engagement constitutionnel en y superposant des droits et obligations additionnels portant sur des matières déjà prévues au traité risque de se traduire par un mépris juridique paternaliste, de compromettre le

process and frustrate the ultimate objective of reconciliation. This is the danger of what seems to be an unfortunate attempt to take the constitutional principle of the honour of the Crown hostage together with the principle of the duty to consult Aboriginal peoples that flows from it.

In concluding a treaty, the Crown does not act dishonourably in agreeing with an Aboriginal community on an elaborate framework involving various forms of consultation with respect to the exercise of that community's rights. Nor does the Crown act dishonourably if it requires the Aboriginal party to agree that no parallel mechanism relating to a matter covered by the treaty will enable that party to renege on its undertakings. Legal certainty is the primary objective of all parties to a comprehensive land claim agreement.

Legal certainty cannot be attained if one of the parties to a treaty can unilaterally renege on its undertakings with respect to a matter provided for in the treaty where there is no provision for its doing so in the treaty. This does not rule out the possibility of there being matters not covered by a treaty with respect to which the Aboriginal party has not surrendered possible Aboriginal rights. Nor does legal certainty imply that an equitable review mechanism cannot be provided for in a treaty.

Thus, it should be obvious that the best way for a court to contribute to ensuring that a treaty fosters a positive long relationship between Aboriginal and non-Aboriginal communities consists in ensuring that the parties cannot unilaterally renege on their undertakings. And once legal certainty has been pursued as a common objective at the negotiation stage, it cannot become a one-way proposition at the stage of implementation of the treaty. On the contrary, certainty with respect to one party's rights implies that the party in question must discharge its obligations and respect the other party's rights. Having laboured so hard, in their common interest, to substitute a well-defined legal system for an uncertain normative system, both the Aboriginal party and the Crown party have an interest in seeing their efforts bear fruit.

It is in fact because the agreement in issue does provide that the Aboriginal party has a right to various forms of consultation with respect to the rights the Crown wishes to exercise in this case that rights and obligations foreign to the mechanism provided for in the treaty must not be superimposed on it, and not simply because this is a "modern" treaty constituting a land claims agreement.

processus national de négociation de traités et de nuire à la poursuite de l'objectif ultime de réconciliation. Voilà le péril auquel nous expose ce qui semble être une malheureuse prise en otage du principe constitutionnel d'honneur de la Couronne et du principe en découlant, l'obligation de consulter les Autochtones.

Dans le cadre de la conclusion d'un traité, il n'y a rien de déshonorant pour la Couronne à s'entendre avec une communauté autochtone sur un régime détaillé et multiforme de consultation relative à l'exercice des droits de cette communauté. Il n'y a rien non plus de déshonorant de la part de la Couronne à exiger de la partie autochtone qu'aucun régime parallèle relatif à une matière prévue au traité ne permette à celle-ci de revenir sur ses engagements. En effet, la sécurité juridique est l'objectif premier de toutes les parties à un accord portant règlement de revendication territoriale globale.

Il ne saurait y avoir de sécurité juridique si une des parties à un traité pouvait — unilatéralement et sans que cela ne soit prévu au traité — revenir sur ses engagements à l'égard d'une matière prévue à ce traité. Cela ne veut pas dire qu'il ne peut pas exister de matières dont les parties n'auront pas traité et à l'égard desquelles la partie autochtone pourra ne pas avoir renoncé à d'éventuels droits ancestraux. La sécurité juridique n'exclut pas non plus la possibilité de prévoir, dans un traité, un mécanisme équitable de réexamen.

En ce sens, il devrait être évident que la meilleure façon pour les tribunaux de contribuer à ce qu'un traité favorise une longue relation positive entre parties autochtone et étatique consiste à s'assurer que les parties ne puissent revenir unilatéralement sur leurs engagements. Et il se trouve que, en aval de sa poursuite en tant qu'objectif partagé à l'étape de la négociation, la sécurité juridique ne saurait, à l'étape de la mise en œuvre d'un traité, opérer à sens unique. Au contraire, la sécurité des droits d'une partie implique nécessairement que celle-ci s'acquitte de ses obligations et respecte les droits de l'autre partie. S'étant toutes deux échinées, dans leur intérêt commun, à substituer un système juridique précis à un régime normatif incertain, la partie autochtone et la partie étatique ont toutes deux intérêt à ce que leur œuvre produise ses effets.

En l'espèce, c'est justement parce que l'accord en cause traite bel et bien des différentes formes de consultation auxquelles a droit la partie autochtone concernant les droits que la Couronne veut exercer qu'il faut se garder de superposer à ce régime des droits et obligations qui lui sont étrangers, et non pas simplement parce qu'il s'agit d'un traité « moderne » constituant un accord portant règlement de revendications territoriales.

Even when the treaty in issue is a land claims agreement, the Court must first identify the common intention of the parties and then decide whether the common law constitutional duty to consult applies to the Aboriginal party. Therefore, where there is a treaty, the common law duty to consult will apply only if the parties to the treaty have failed to address the issue of consultation.

The consultation that must take place if a right of the Aboriginal party is impaired will consist in either: (1) the measures provided for in the treaty in this regard; or (2) if no such measures are provided for in the treaty, the consultation required under the common law framework.

Where a treaty provides for a mechanism for consultation, what it does is to override the common law duty to consult Aboriginal peoples; it does not affect the general administrative law principle of procedural fairness, which may give rise to a duty to consult rights holders individually.

The courts are not blind to omissions, or gaps left in the treaty, by the parties with respect to consultation, and the common law duty to consult could always be applied to fill such a gap. But no such gap can be found in this case.

These general considerations alone would form a sufficient basis for dismissing the appeal.

But the provisions of the Final Agreement also confirm this conclusion. The Final Agreement includes general and interpretive provisions that are reproduced from the Umbrella Agreement. More precisely, this framework was first developed by the parties to the Umbrella Agreement, and was then incorporated by the parties into the various final agreements concluded under the Umbrella Agreement. Where there is any inconsistency or conflict, the rules of this framework prevail over the common law principles on the interpretation of treaties between governments and Aboriginal peoples.

These general and interpretive provisions also establish certain rules with respect to the relationships of the Umbrella Agreement and any final agreement concluded under it, not only the relationship between them, but also that with the law in general. These rules can be summarized in the principle that the Final Agreement prevails over any other non-constitutional legal rule, subject to the requirement that its provisions not be so construed as to affect the rights of "Yukon Indian people" as Canadian citizens and their entitlement to

Même lorsque le traité en cause est un accord portant règlement de revendications territoriales, la Cour doit d'abord dégager l'intention commune des parties, elle se prononcera ensuite sur l'application, à la partie autochtone, du régime jurisprudentiel relatif à l'obligation constitutionnelle de consultation. Par conséquent, en présence d'un traité, l'obligation jurisprudentielle de consultation ne s'appliquera qu'en cas d'omission des parties au traité d'avoir prévu cette matière.

La consultation requise lorsqu'il y a atteinte à un droit des Autochtones comportera : (1) soit les mesures prévues par le traité à cet égard; (2) soit, à défaut de telles mesures dans le traité, un degré de consultation que le régime jurisprudentiel établit.

Lorsqu'un traité établit des mesures de consultation, ce que le traité a pour effet d'écarter dans un tel cas est bien l'obligation jurisprudentielle de consultation des peuples autochtones, non pas toute obligation de consulter individuellement le titulaire d'un droit pouvant découler du principe général du droit administratif qu'est l'équité procédurale.

Les tribunaux ne sont pas aveugles aux omissions ou lacunes des parties au traité en matière de consultation et l'obligation jurisprudentielle de consultation pourrait toujours s'appliquer pour combler cette lacune. Mais aucune lacune de ce genre ne peut être constatée dans la présente affaire.

Il serait possible, sur la seule base de ces considérations d'ordre général, de rejeter l'appel principal.

Cependant, les dispositions de l'Entente définitive confirment elles aussi cette conclusion. L'Entente définitive comporte des dispositions générales et interprétatives qui ont été reprises de l'Accord-cadre. Plus exactement, ce régime a d'abord été élaboré par les parties à l'Accord-cadre, puis repris par les parties aux différentes ententes définitives conclues conformément aux stipulations de cet accord. Advenant toute incompatibilité, ce régime l'emporte sur les principes dégagés par la jurisprudence en matière d'interprétation de traités conclus par les gouvernements et les peuples autochtones.

Ces dispositions interprétatives et générales posent aussi certaines normes relatives aux rapports qu'entretiennent l'Accord-cadre et toute entente définitive conclue conformément à ses stipulations, non seulement entre eux, mais avec le reste du droit également. Ces normes peuvent être résumées par le principe selon lequel l'Entente définitive l'emporte sur toute autre règle de droit infraconstitutionnel, sous réserve du fait que ses dispositions ne doivent pas être interprétées d'une manière portant atteinte aux droits des Indiens du Yukon en tant

all the rights, benefits and protections of other citizens. In short, therefore, with certain exceptions, the treaty overrides Aboriginal rights related to the matters to which it applies, and in cases of conflict or inconsistency, it prevails over all other non-constitutional law.

Regarding the relationship between the treaty in issue and the rest of our constitutional law other than the case law on Aboriginal rights, such a treaty clearly cannot on its own amend the Constitution of Canada. In other words, the Final Agreement contains no provisions that affect the general principle that the common law duty to consult will apply only where the parties have failed to address the issue of consultation. This will depend on whether the parties have come to an agreement on this issue, and if they have, the treaty will — unless, of course, the treaty itself provides otherwise — override the application to the parties of any parallel framework, including the common law framework.

In this case, the parties included provisions in the treaty that deal with consultation on the very question of the Crown's right to transfer Crown land upon an application like the one made by P.

P's application constituted a project to which the assessment process provided for in Chapter 12 of the Final Agreement applied. Although that process had not yet been implemented, Chapter 12, including the transitional legal rules it contains, had been. Under those rules, any existing development assessment process would remain applicable. The requirements of the processes in question included not only consultation with the First Nation concerned, but also its participation in the assessment of the project. Any such participation would involve a more extensive consultation than would be required by the common law duty in that regard. Therefore, nothing in this case can justify resorting to a duty other than the one provided for in the Final Agreement.

Moreover, the provisions of Chapter 16 on fish and wildlife management establish a framework under which the First Nations are generally invited to participate in the management of those resources at the predecision stage. In particular, the invitation they receive to propose fish and wildlife management plans can be regarded as consultation.

The territorial government's conduct raises questions in some respects. In particular, there is the fact that the Director did not notify the First Nation of his decision of October 18, 2004 until July 27, 2005.

que citoyens canadiens ni à leur droit de jouir de tous les droits, avantages et protections reconnus aux autres citoyens. En somme, donc, sauf exception le traité se substitue aux droits ancestraux relativement aux matières dont il dispose et il a préséance, en cas d'incompatibilité, sur le reste du droit infraconstitutionnel.

En ce qui a trait à la relation entre le traité en cause et le reste de notre droit constitutionnel au-delà du seul régime jurisprudentiel des droits ancestraux, un tel traité ne saurait évidemment à lui seul modifier la Constitution du Canada. Autrement dit, l'Entente définitive ne contient pas de dispositions qui auraient une incidence sur le principe général selon lequel l'obligation de consultation de régime jurisprudentiel ne s'appliquera qu'en cas d'omission des parties au traité d'avoir prévu cette matière. En effet, tout dépendra de ce que les parties auront ou non convenu sur la question, auquel cas le traité, sauf bien sûr renvoi à l'effet contraire dans celui-ci, aura écarté l'application entre les parties de tout régime parallèle, y compris le régime jurisprudentiel.

En l'espèce, les parties ont prévu, dans le traité des dispositions concernant la consultation sur la question précise du droit de la Couronne de céder de ses terres à la suite d'une demande comme celle de P.

La demande de P constituait un projet soumis au processus d'évaluation prévu au chapitre 12 de l'Entente définitive. Ce processus n'avait pas été mis en œuvre, mais le chapitre 12 l'avait été, y compris les règles de droit provisoire y figurant. En vertu de ces règles, tout processus existant d'évaluation des activités de développement demeurait en vigueur. Ces processus prévoyaient non seulement la consultation de la nation autochtone concernée, mais aussi sa participation à l'évaluation du projet. Une telle participation impliquait un niveau de consultation supérieur à celui qui aurait été fondé sur l'obligation faite par la jurisprudence à cet égard. En conséquence, rien, en l'espèce, ne saurait justifier le recours à une obligation externe à celle prévue par l'Entente définitive.

De plus, les dispositions du chapitre 16 qui concernent la gestion des ressources halieutiques et fauniques instaurent un régime par lequel les premières nations sont généralement invitées à participer à la gestion de ces ressources sur une base prédécisionnelle. Notamment, l'invitation qui leur est faite de proposer des plans de gestion des ressources halieutiques et fauniques peut être considérée comme une consultation.

À certains égards, la conduite des autorités territoriales soulève des interrogations. C'est notamment le cas en ce qui a trait au fait que le directeur n'a signifié que le 27 juillet 2005 à la première nation sa décision

Under s. 81(1) of the *Yukon Environmental and Socio-economic Assessment Act*, S.C. 2003, c. 7 ("*YESAA*"), the "designated office" and, if applicable, the executive committee of the Yukon Development Assessment Board would have been entitled to receive copies of that decision and, one can only assume, to receive them within a reasonable time. Here, the functional equivalent of the designated office is the Land Application Review Committee ("LARC"). Even if representatives of the First Nation did not attend the August 13, 2004 meeting, it would be expected that the Director would inform that First Nation of his decision within a reasonable time. Nonetheless, the time elapsed after the decision did not affect the quality of the prior consultation.

The territorial government's decision to proceed with P's application at the "prescreening" stage despite the requirement of consultation in the context of the First Nation's fish and wildlife management plan was not an exemplary practice either. However, the First Nation did not express concern about this in its letter of July 27, 2004 to Yukon's Lands Branch. And as can be seen from the minutes of the August 13, 2004 meeting, the concerns of the First Nation with respect to resource conservation were taken into consideration. Also, the required consultation in the context of the fish and wildlife management plan was far more limited than the consultation to which the First Nation was entitled in participating in LARC, which was responsible for assessing the specific project in issue in this appeal. Finally, the First Nation, the renewable resources council and the Minister had not agreed on a provisional suspension of the processing of applications for land in the area in question.

Despite these aspects of the handling of P's application that are open to criticism, it can be seen from the facts as a whole that the respondents received what they were entitled to receive from the appellants where consultation as a First Nation is concerned. In fact, in some respects they were consulted to an even greater extent than they would have been under the *YESAA*.

The only right the First Nation would have had under the *YESAA* was to be heard by the assessment district office as a stakeholder. That consultation would have been minimal, whereas the First Nation was invited to participate directly in the assessment of P's application as a member of LARC.

du 18 octobre 2004. En vertu du par. 81(1) de la *Loi sur l'évaluation environnementale et socioéconomique au Yukon*, L.C. 2003, ch. 7, (« *LÉESY* »), le « bureau désigné » et, le cas échéant, le comité de direction de la Commission d'évaluation des activités de développement du Yukon auraient eu droit de recevoir une copie de cette décision, et ce, on peut le supposer, à l'intérieur d'un délai raisonnable. L'équivalent fonctionnel du bureau désigné est ici le Comité d'examen des demandes d'aliénation de terres (« CEDAT »). Même si les représentants de la première nation ne se sont pas présentés à la réunion du 13 août 2004, on se serait attendu à ce que le directeur informe cette première nation de sa décision dans un délai raisonnable. Ce délai, survenu après la décision, n'a cependant pas affecté la qualité de la consultation préalable.

La décision qu'a prise l'administration territoriale, au terme de l'examen préalable, de poursuivre le traitement de la demande de P malgré la consultation qui avait cours dans le cadre du plan de gestion des ressources halieutiques et fauniques de la première nation n'est pas davantage un exemple de bonne pratique. Cependant, la première nation n'a pas exprimé cette préoccupation dans sa lettre du 27 juillet 2004 à la Direction des Terres du Yukon. De plus, comme le démontre le procès-verbal de la réunion du 13 août 2004, les préoccupations de la première nation concernant la conservation des ressources ont été prises en considération. Au surplus, la consultation qui avait cours dans le cadre du plan de gestion des ressources halieutiques et fauniques était beaucoup plus limitée que celle à laquelle donnait droit la participation de la première nation au CEDAT qui était chargé d'évaluer le projet spécifique faisant l'objet du présent pourvoi. De surcroît, la première nation, le conseil des ressources renouvelables et le ministre ne s'étaient pas entendus sur la suspension provisoire du traitement de toute demande d'aliénation de terres dans la région visée.

Au-delà de ces aspects critiquables du cheminement de la demande de P, l'ensemble des faits révèle que les intimés ont reçu des appelants ce à quoi ils avaient droit de la part de ceux-ci en matière de consultation à titre de première nation. En réalité, ils ont même obtenu à certains égards davantage que ce que leur aurait procuré la *LÉESY*.

Le seul droit qu'aurait obtenu la première nation en vertu de la *LÉESY* est celui d'être entendue à titre de personne intéressée par le bureau de circonscription. Il s'agissait là d'une consultation minimale, alors que la première nation a été invitée à participer directement, à titre d'évaluateur membre du CEDAT, à l'évaluation de la demande de P.

It is true that the First Nation's representatives did not attend the August 13, 2004 meeting. They did not notify the other members of LARC that they would be absent and did not request that the meeting be adjourned, but they had already submitted comments in a letter.

Thus, the process that led to the October 18, 2004 decision on P's application was consistent with the transitional law provisions of Chapter 12 of the Final Agreement. There is no legal basis for finding that the Crown breached its duty to consult.

Il est vrai que les représentants de la première nation ne se sont pas présentés à la réunion du 13 août 2004. Cela est survenu sans qu'ils ne préviennent au préalable les autres membres du CEDAT et sans demander l'ajournement de la réunion mais alors qu'ils avaient fait des commentaires par lettre.

Par conséquent, le processus qui a mené à la décision du 18 octobre 2004 relativement à la demande de P respectait les dispositions de droit provisoire prévues au chapitre 12 de l'Entente définitive. Il n'existe aucun motif juridique permettant de conclure que l'obligation de consultation de la Couronne a été violée.

Version française du jugement de la juge en chef McLachlin et des juges Binnie, Fish, Abella, Charron, Rothstein et Cromwell rendu par

[1] Le juge Binnie — Ce pourvoi soulève d'importantes questions touchant l'interprétation et la mise en œuvre des traités récents relatifs à des revendications territoriales globales conclus entre la Couronne, les Premières Nations et d'autres paliers de gouvernement.

[2] Le traité en cause en l'espèce est l'Entente définitive de la Première nation de Little Salmon/Carmacks (le « traité PNLSC »), finalisée en 1996 et ratifiée par les membres de la première nation

1997. The LSCFN Treaty is one of 11 that arose out of and implement an umbrella agreement signed in 1993 after 20 years of negotiations between representatives of all of the Yukon First Nations and the federal and territorial governments. It was a monumental achievement. These treaties fall within the protection of s. 35 of the *Constitution Act, 1982*, which gives constitutional protection to existing Aboriginal and treaty rights.

[3] The present dispute relates to an application for judicial review of a decision by the Yukon territorial government dated October 18, 2004, to approve the grant of 65 hectares of surrendered land to a Yukon resident named Larry Paulsen. The plot borders on the settlement lands of the Little Salmon/Carmacks First Nation, and forms part of its traditional territory, to which its members have a treaty right of access for hunting and fishing for subsistence. In the result, Mr. Paulsen still awaits the outcome of the grant application he submitted on November 5, 2001.

[4] The First Nation disclaims any allegation that the Paulsen grant would violate the LSCFN Treaty, which itself contemplates that surrendered land may be taken up from time to time for other purposes, including agriculture. Nevertheless, until such taking up occurs, the members of the LSCFN have an ongoing treaty interest in surrendered Crown lands (of which the 65 hectares form a small part), to which they have a treaty right of access for hunting and fishing for subsistence. The LSCFN contends that the territorial government proceeded without proper consultation and without proper regard to relevant First Nation's concerns. They say the decision of October 18, 2004, to approve the Paulsen grant should be quashed.

[5] The territorial government responds that no consultation was required. The LSCFN Treaty,

en 1997. Le traité PNLSC s'inscrit dans une série de 11 traités découlant et assurant la mise en œuvre d'un accord-cadre signé en 1993 après 20 ans de négociations entre des représentants de l'ensemble des premières nations du Yukon et les gouvernements fédéral et territorial. Il s'agissait d'une réalisation des plus imposantes. Ces traités sont visés par l'art. 35 de la *Loi constitutionnelle de 1982*, qui accorde une protection constitutionnelle aux droits existants — ancestraux ou issus de traités — des peuples autochtones du Canada.

[3] Le litige concerne une demande de contrôle judiciaire d'une décision par laquelle le gouvernement territorial du Yukon a approuvé, le 18 octobre 2004, la concession à un habitant du Yukon nommé Larry Paulsen de 65 hectares de terres cédées. La parcelle en question est contiguë aux terres visées par le règlement de la Première nation de Little Salmon/Carmacks (« PNLSC »), et fait partie de son territoire traditionnel, auquel ses membres ont un droit d'accès issu d'un traité à des fins de chasse et de pêche de subsistance. En raison de ce litige, M. Paulsen attend toujours le résultat de sa demande de concession de terre présentée le 5 novembre 2001.

[4] La première nation rejette toute allégation suivant laquelle la concession de la parcelle à M. Paulsen violerait le traité PNLSC, qui lui-même prévoit que des terres cédées peuvent à l'occasion être prises à d'autres fins, notamment à des fins agricoles. Mais jusqu'à ce que des terres aient été ainsi prises, les membres de la PNLSC conservent un intérêt issu d'un traité relativement aux terres de la Couronne cédées (dont les 65 hectares forment une petite partie), à l'égard desquelles ils ont un droit d'accès issu d'un traité à des fins de chasse et de pêche de subsistance. La PNLSC soutient que le gouvernement territorial a agi sans effectuer la consultation requise et sans tenir compte des préoccupations pertinentes de la première nation. Selon elle, la décision du 18 octobre 2004 approuvant la concession de terres à M. Paulsen devrait être annulée.

[5] Le gouvernement territorial réplique qu'aucune consultation n'était exigée. Le traité

it says, is a complete code. The treaty refers to consultation in over 60 different places but a land grant application is not one of them. Where not specifically included, the duty to consult, the government says, is excluded.

[6] The important context of this appeal, therefore, is an application for judicial review of a decision that was required to be made by the territorial government having regard to relevant constitutional as well as administrative law constraints. The Yukon Court of Appeal held, as had the trial judge, that the LSCFN Treaty did not exclude the duty of consultation, although in this case the content of that duty was at the lower end of the spectrum (2007 YKSC 28; 2008 YKCA 13). The Court of Appeal went on to hold, disagreeing in this respect with the trial judge, that on the facts the government's duty of consultation had been fulfilled.

[7] I agree that the duty of consultation was not excluded by the LSCFN Treaty, although its terms were relevant to the exercise of the territorial government discretion, as were other principles of administrative and Aboriginal law, as will be discussed. On the facts of the Paulsen application, however, I agree with the conclusion of the Court of Appeal that the First Nation did not make out its case. The First Nation received ample notice of the Paulsen application, an adequate information package, and the means to make known its concerns to the decision maker. The LSCFN's objections were made in writing and they were dealt with at a meeting at which the First Nation was entitled to be present (but failed to show up). Both the First Nation's objections and the response of those who attended the meeting were before the appellant when, in the exercise of his delegated authority, he approved the Paulsen application. In light of the consultation provisions contained in the treaty, neither the honour of the Crown nor the duty to consult were breached. Nor was there any breach of procedural fairness. Nor can it be said that the appellant acted unreasonably in making

PNLSC constitue, dit-il, un code complet. Il est question de consultation à plus de 60 endroits différents dans le traité, mais jamais à propos d'une demande de concession de terres. Lorsque l'obligation de consulter n'est pas spécifiquement mentionnée, dit le gouvernement, elle est exclue.

[6] Le pourvoi s'inscrit donc dans le contexte important d'une demande de contrôle judiciaire d'une décision que le gouvernement territorial devait prendre en tenant compte des contraintes applicables qu'imposent tant le droit constitutionnel que le droit administratif. La Cour d'appel du Yukon a conclu, comme le juge de première instance, que le traité PNLSC n'excluait pas l'obligation de consulter, bien que le contenu de cette obligation se situait en l'espèce au bas du continuum (2007 YKSC 28; 2008 YKCA 13). La Cour d'appel a ensuite conclu, en désaccord sur ce point avec le juge de première instance, que selon les faits, le gouvernement s'était acquitté de son obligation de consulter.

[7] J'estime moi aussi que l'obligation de consulter n'était pas exclue par le traité PNLSC, même si les clauses de ce dernier étaient pertinentes à l'égard de l'exercice, par le gouvernement territorial, de son pouvoir discrétionnaire, à l'instar d'autres principes du droit administratif et du droit des Autochtones, comme nous le verrons. Mais devant les faits relatifs à la demande de M. Paulsen, je suis d'accord avec la conclusion de la Cour d'appel selon laquelle la première nation n'a pas réussi à démontrer le bien-fondé de ses arguments. La première nation a été avisée longtemps d'avance de la demande de M. Paulsen; on lui a fourni une documentation adéquate et on lui a donné le moyen de faire connaître ses préoccupations au décideur. La PNLSC a communiqué ses objections par écrit, et celles-ci ont été étudiées lors d'une réunion à laquelle la première nation avait le droit d'assister (mais à laquelle elle ne s'est pas fait représenter). L'appelant avait pris connaissance des objections soulevées par la première nation et de la réponse fournie par les personnes présentes à la réunion lorsque, dans l'exercice de son pouvoir délégué, il a approuvé la demande de M. Paulsen. Vu les dispositions relatives à la consultation contenues

the decision that he did. I would dismiss the appeal and cross-appeal.

I. Overview

[8] Historically, treaties were the means by which the Crown sought to reconcile the Aboriginal inhabitants of what is now Canada to the assertion of European sovereignty over the territories traditionally occupied by First Nations. The objective was not only to build alliances with First Nations but to keep the peace and to open up the major part of those territories to colonization and settlement. No treaties were signed with the Yukon First Nations until modern times.

[9] Unlike their historical counterparts, the modern comprehensive treaty is the product of lengthy negotiations between well-resourced and sophisticated parties. The negotiation costs to Yukon First Nations of their various treaties, financed by the federal government through reimbursable loans, were enormous. The LSCFN share alone exceeded seven million dollars. Under the Yukon treaties, the Yukon First Nations surrendered their Aboriginal rights in almost 484,000 square kilometres, roughly the size of Spain, in exchange for defined treaty rights in respect of land tenure and a quantum of settlement land (41,595 square kilometres), access to Crown lands, fish and wildlife harvesting, heritage resources, financial compensation, and participation in the management of public resources. To this end, the LSCFN Treaty creates important institutions of self-government and authorities such as the Yukon Environmental and Socio-economic Assessment Board and the Carmacks Renewable Resources Council, whose members are jointly nominated by the First Nation and the territorial government.

au traité, l'honneur de la Couronne a été préservé et il n'y a eu aucun manquement à l'obligation de consultation. Il n'y a eu non plus aucun manquement à l'équité procédurale. On ne peut en outre affirmer que l'appelant a agi de manière déraisonnable en prenant la décision qu'il a prise. Je suis d'avis de rejeter le pourvoi et le pourvoi incident.

I. Vue d'ensemble

[8] Dans le passé, les traités ont constitué le moyen par lequel la Couronne s'est efforcée de faire accepter aux habitants autochtones de ce qui est maintenant le Canada l'affirmation de la souveraineté européenne sur les territoires traditionnellement occupés par les Premières Nations. L'objectif ne consistait pas seulement à construire des alliances avec celles-ci, mais à maintenir la paix et à ouvrir la majeure partie de ces territoires à la colonisation. Aucun traité n'a été signé avec les premières nations du Yukon avant l'ère moderne.

[9] Contrairement aux traités historiques, les traités récents portant sur des revendications globales sont le fruit de longues négociations entre des parties qui sont averties et disposent de ressources importantes. Le coût énorme de la négociation des divers traités, pour les premières nations du Yukon, a été financé par le gouvernement fédéral au moyen de prêts remboursables. Pour la seule PNLSC, le coût a dépassé les sept millions de dollars. En vertu des traités du Yukon, les premières nations du Yukon ont cédé leurs droits ancestraux sur presque 484 000 kilomètres carrés, soit environ la superficie de l'Espagne, contre des droits définis par traités au chapitre de la tenure et une certaine quantité de terres visées par le règlement (41 595 kilomètres carrés), l'accès aux terres de la Couronne, à la récolte de poissons et d'animaux sauvages et aux ressources patrimoniales, une indemnisation pécuniaire et la participation à la gestion des ressources publiques. À cette fin, le traité PNLSC établit d'importantes institutions d'autonomie gouvernementale et des autorités comme l'Office d'évaluation environnementale et socioéconomique du Yukon et le Conseil des ressources renouvelables de Carmacks, dont les membres sont désignés conjointement par la première nation et le gouvernement territorial.

[10] The reconciliation of Aboriginal and non-Aboriginal Canadians in a mutually respectful long-term relationship is the grand purpose of s. 35 of the *Constitution Act, 1982*. The modern treaties, including those at issue here, attempt to further the objective of reconciliation not only by addressing grievances over the land claims but by creating the legal basis to foster a positive long-term relationship between Aboriginal and non-Aboriginal communities. Thoughtful administration of the treaty will help manage, even if it fails to eliminate, some of the misunderstandings and grievances that have characterized the past. Still, as the facts of this case show, the treaty will not accomplish its purpose if it is interpreted by territorial officials in an ungenerous manner or as if it were an everyday commercial contract. The treaty is as much about building relationships as it is about the settlement of ancient grievances. The future is more important than the past. A canoeist who hopes to make progress faces forwards, not backwards.

[11] Equally, however, the LSCFN is bound to recognize that the $34 million and other treaty benefits it received in exchange for the surrender has earned the territorial government a measure of flexibility in taking up surrendered lands for other purposes.

[12] The increased detail and sophistication of modern treaties represents a quantum leap beyond the pre-Confederation historical treaties such as the 1760-61 Treaty at issue in *R. v. Marshall*, [1999] 3 S.C.R. 456, and post-Confederation treaties such as Treaty No. 8 (1899) at issue in *R. v. Badger*, [1996] 1 S.C.R. 771, and *Mikisew Cree First Nation v. Canada (Minister of Canadian Heritage)*, 2005 SCC 69, [2005] 3 S.C.R. 388. The historical treaties were typically expressed in lofty terms of high generality and were often ambiguous. The courts were obliged to resort to general principles (such as the honour of the Crown) to fill the gaps and achieve a fair outcome. Modern comprehensive land claim agreements, on the other hand, starting perhaps with the *James Bay and Northern Québec Agreement* (1975), while still to be interpreted and

[10] La réconciliation des Canadiens autochtones et non autochtones dans le cadre d'une relation à long terme empreinte de respect mutuel : voilà le noble objectif de l'art. 35 de la *Loi constitutionnelle de 1982*. Les traités récents, y compris ceux en cause en l'espèce, tentent de contribuer à la réalisation de cet objectif de réconciliation, non seulement en répondant aux griefs relatifs aux revendications territoriales, mais en créant le fondement juridique propre à favoriser une relation à long terme harmonieuse entre les collectivités autochtones et non autochtones. Une application judicieuse du traité aidera à aplanir, sans nécessairement les éliminer, certains des malentendus et des doléances qui ont caractérisé le passé. Mais comme le montrent les faits de la présente affaire, l'objectif du traité ne pourra être atteint si les responsables territoriaux l'interprètent de façon mesquine ou comme s'il s'agissait d'un banal contrat commercial. Le traité vise tout autant l'établissement de relations que la résolution des griefs du passé. L'avenir est plus important que le passé. Un canoteur qui souhaite avancer regarde devant lui, non derrière.

[11] La PNLSC doit cependant reconnaître du même coup que les 34 millions de dollars et les autres avantages qu'elle a reçus en échange de la cession autorisent le gouvernement territorial à faire preuve d'une certaine souplesse dans l'utilisation à d'autres fins des terres cédées.

[12] Par leur complexité et leur caractère détaillé, les traités récents marquent un énorme progrès, à la fois par rapport aux traités historiques antérieurs à la Confédération tels les traités de 1760 et 1761 en cause dans *R. c. Marshall*, [1999] 3 R.C.S. 456, et par rapport aux traités postérieurs à la Confédération tel le Traité n^{o} 8 (1899) dont il est question dans *R. c. Badger*, [1996] 1 R.C.S. 771, et dans *Première nation crie Mikisew c. Canada (Ministre du Patrimoine canadien)*, 2005 CSC 69, [2005] 3 R.C.S. 388. Les traités historiques, habituellement formulés en termes nobles d'une grande généralité, étaient souvent ambigus. Les tribunaux se sont ainsi vus forcés de recourir à des principes généraux (comme l'honneur de la Couronne) pour pallier les lacunes et parvenir à un résultat équitable. En revanche, si les ententes récentes sur des revendications

applied in a manner that upholds the honour of the Crown, were nevertheless intended to create some precision around property and governance rights and obligations. Instead of *ad hoc* remedies to smooth the way to reconciliation, the modern treaties are designed to place Aboriginal and non-Aboriginal relations in the mainstream legal system with its advantages of continuity, transparency, and predictability. It is up to the parties, when treaty issues arise, to act diligently to advance their respective interests. Good government requires that decisions be taken in a timely way. To the extent the Yukon territorial government argues that the Yukon treaties represent a new departure and not just an elaboration of the *status quo*, I think it is correct. However, as the trial judge Veale J. aptly remarked, the new departure represents but a step — albeit a very important step — in the long journey of reconciliation (para. 69).

territoriales globales — que l'on pourrait sans doute faire remonter à la *Convention de la Baie-James et du Nord québécois* (1975) — doivent elles aussi être interprétées et appliquées en conformité avec l'honneur de la Couronne, elles étaient néanmoins censées procurer une certaine précision quant aux droits et obligations relatifs à la propriété et à la gouvernance. Au lieu d'instituer des mécanismes ponctuels facilitant la réconciliation, les traités récents visent à inscrire les relations entre Autochtones et non-Autochtones dans le système juridique général, avec les avantages que cela présente au plan de la continuité, de la transparence et de la prévisibilité. Il appartient aux parties, lorsque l'application des traités suscite des difficultés, d'agir de façon diligente pour faire valoir leurs intérêts respectifs. Une bonne gouvernance suppose que les décisions soient prises en temps opportun. Dans la mesure où le gouvernement territorial du Yukon plaide que les traités du Yukon constituent un nouveau départ et non pas simplement un prolongement du *statu quo*, je crois qu'il a raison. Toutefois, comme le juge Veale l'a si justement fait remarquer en première instance, le nouveau départ ne représente qu'une étape — mais une étape très importante — dans le long voyage de la réconciliation (par. 69).

[13] There was in this case, as mentioned, an express treaty right of members of the First Nation to hunt and fish for subsistence on their traditional lands, now surrendered and classified as Crown lands. While the LSCFN Treaty did not prevent the government from making land grants out of the Crown's land holdings, and indeed it contemplated such an eventuality, it was obvious that such grants might adversely affect the traditional economic activities of the LSCFN, and the territorial government was required to consult with the LSCFN to determine the nature and extent of such adverse effects.

[13] Comme je l'ai indiqué, le traité PNLSC conférait expressément aux membres de la première nation, dans le cas présent, un droit de chasse et de pêche de subsistance sur leurs terres ancestrales, qui ont fait l'objet d'une cession et sont maintenant considérées comme des terres de la Couronne. Même si le traité n'interdisait pas aux autorités d'octroyer des terres faisant partie des terres de la Couronne, — en fait, cette possibilité y était envisagée — il était évident que cela risquait d'avoir des conséquences négatives sur les activités économiques traditionnelles de la PNLSC, et le gouvernement territorial était tenu de consulter cette dernière afin de déterminer la nature et l'étendue de ces conséquences négatives.

[14] The delegated statutory decision maker was the appellant David Beckman, the Director of the Agriculture Branch of the territorial Department of Energy, Mines and Resources. He was authorized, subject to the treaty provisions, to issue land grants

[14] Le décideur délégué en vertu de la loi était l'appelant David Beckman, le directeur de la Direction de l'agriculture du ministère de l'Énergie, des Mines et des Ressources du Yukon. Il était autorisé, sous réserve des clauses du traité, à concéder

to non-settlement lands under the *Lands Act*, R.S.Y. 2002, c. 132, and the *Territorial Lands (Yukon) Act*, S.Y. 2003, c. 17. The First Nation argues that in exercising his discretion to approve the grant the Director was required to have regard to First Nation's concerns and to engage in consultation. This is true. The First Nation goes too far, however, in seeking to impose on the territorial government not only the procedural protection of consultation but also a substantive right of accommodation. The First Nation protests that its concerns were not taken seriously — if they had been, it contends, the Paulsen application would have been denied. This overstates the scope of the duty to consult in this case. The First Nation does not have a veto over the approval process. No such substantive right is found in the treaty or in the general law, constitutional or otherwise. The Paulsen application had been pending almost three years before it was eventually approved. It was a relatively minor parcel of 65 hectares whose agricultural use, according to the advice received by the Director (and which he was entitled to accept), would not have any significant adverse effect on First Nation's interests.

des terres non visées par un règlement en vertu de la *Loi sur les terres*, L.R.Y. 2002, ch. 132, et de la *Loi du Yukon sur les terres territoriales*, L.Y. 2003, ch. 17. Selon la première nation, le directeur était obligé, dans l'exercice de son pouvoir discrétionnaire d'approuver la concession de terres, de tenir compte des préoccupations de la première nation et de tenir des consultations. C'est exact. Mais la première nation va trop loin lorsqu'elle prétend imposer au gouvernement territorial non seulement la protection procédurale qu'offre la consultation, mais également le respect d'un droit substantif à l'accommodement. La première nation se plaint de ce que ses préoccupations n'ont pas été prises au sérieux — sinon, dit-elle, la demande de M. Paulsen aurait été rejetée. Elle se trouve ainsi à élargir indûment l'obligation de consulter en l'espèce. La première nation ne jouit pas d'un droit de veto à l'égard du processus d'approbation. Aucun droit semblable n'est prévu par le traité ni par le droit commun, constitutionnel ou autre. La demande de M. Paulsen est demeurée en suspens pendant près de trois ans avant d'être finalement approuvée. Elle concernait une parcelle relativement petite de 65 hectares dont l'utilisation à des fins agricoles, suivant l'avis reçu par le directeur — un avis qu'il était en droit d'accepter — n'aurait aucune incidence négative notable sur les intérêts de la première nation.

[15] Unlike *Mikisew Cree* where some accommodation was possible through a rerouting of the proposed winter road, in this case, the stark decision before the appellant Director was to grant or refuse the modified Paulsen application. He had before him the relevant information. Face-to-face consultation between the First Nation and the Director (as decision maker) was not required. In my view, the decision was reasonable having regard to the terms of the treaty, and in reaching it the Director did not breach the requirements of the duty to consult, natural justice, or procedural fairness. There was no *constitutional* impediment to approval of the Paulsen application and from an *administrative* law perspective the outcome fell within a range of reasonable outcomes.

[15] Contrairement à la situation dans *Première nation crie Mikisew*, où un accommodement était possible par la modification du tracé de la route hivernale projetée, dans la présente affaire, la décision consistait purement et simplement, pour le directeur appelant, à accorder ou à rejeter la demande modifiée de M. Paulsen. Il disposait de l'information pertinente. Les représentants de la première nation et le directeur (en tant que décideur) n'étaient pas tenus de se rencontrer pour tenir des consultations. Je suis d'avis que la décision était raisonnable, compte tenu des termes du traité, et que le directeur, lorsqu'il l'a prise, n'a en aucun cas écarté l'obligation de tenir des consultations, la justice naturelle ou l'équité procédurale. Il n'existait aucun obstacle *constitutionnel* à l'approbation de la demande de M. Paulsen, et du point de vue du droit *administratif*, le résultat entrait dans la gamme des résultats raisonnables.

II. Facts

[16] On November 5, 2001, Larry Paulsen submitted his application for an agricultural land grant of 65 hectares. He planned to grow hay, put up some buildings and raise livestock. The procedure governing such grant applications was set out in a pre-treaty territorial government policy, *Agriculture for the 90s: A Yukon Policy* (1991) (the "1991 Agriculture Policy").

[17] The Paulsen application (eventually in the form of a "Farm Development Plan") was pre-screened by the Agriculture Branch and the Lands Branch as well as the Land Claims and Implementation Secretariat (all staffed by territorial civil servants) for completeness and compliance with current government policies.

[18] The Paulsen application was then sent to the Agriculture Land Application Review Committee ("ALARC") for a more in-depth technical review by various Yukon government officials. ALARC was established under the 1991 Agriculture Policy. It predates and is completely independent from the treaty. The civil servants on ALARC recommended that Mr. Paulsen reconfigure his parcel to include only the "bench" of land set back from the Yukon River for reasons related to the suitability of the soil and unspecified environmental, wildlife, and trapping concerns. Mr. Paulsen complied.

[19] On February 24, 2004, ALARC recommended that the Paulsen application for the parcel, as reconfigured, proceed to the next level of review, namely, the Land Application Review Committee ("LARC"), which includes First Nation's representatives. LARC also functioned under the 1991 Agriculture Policy and, as well, existed entirely independently of the treaties.

II. Les faits

[16] Le 5 novembre 2001, Larry Paulsen a présenté une demande de concession de 65 hectares de terres agricoles. Il projetait de cultiver du fourrage, de construire quelques bâtiments et d'élever du bétail. La façon de traiter de telles demandes était énoncée dans une politique du gouvernement territorial antérieure au traité, intitulée *Agriculture for the 90s : A Yukon Policy* (1991) (la « Politique agricole pour 1991 »).

[17] La Direction de l'agriculture et la Direction des terres ainsi que le Secrétariat des revendications territoriales (le personnel de tous ces services étant formé de fonctionnaires territoriaux) ont procédé à un examen préliminaire de la demande de M. Paulsen (devenue depuis un « plan de développement agricole »), afin de vérifier si la demande était complète et respectait les politiques gouvernementales en vigueur.

[18] La demande de M. Paulsen a ensuite été transmise au Comité d'examen des demandes concernant les terres agricoles (« CEDTA »), où elle devait faire l'objet d'un examen technique plus approfondi par divers fonctionnaires du Yukon. Institué en vertu de la Politique agricole pour 1991, le CEDTA est antérieur au traité et n'a rien à voir avec celui-ci. Les fonctionnaires du CEDTA ont recommandé à M. Paulsen de redélimiter sa parcelle de terre de façon à n'y inclure que la partie du terrain formant terrasse en retrait du fleuve Yukon, pour des raisons liées aux caractéristiques du sol et à des préoccupations non précisées concernant l'environnement, la faune et la flore ainsi que le piégeage. M. Paulsen s'est conformé à cette recommandation.

[19] Le 24 février 2004, le CEDTA a recommandé que la demande de M. Paulsen, ainsi redélimitée, soit soumise au palier d'examen supérieur, soit celui du Comité d'examen des demandes d'aliénation de terres (« CEDAT »), où siègent des représentants des premières nations. Le CEDAT exerçait des fonctions prévues à la Politique agricole pour 1991 et il n'avait lui non plus rien à voir avec les traités.

[20] Reference should also be made at this point to the Fish and Wildlife Management Board — a treaty body composed of persons nominated by the First Nation and Yukon government — which in August 2004 (i.e. while the Paulsen application was pending) adopted a Fish and Wildlife Management Plan ("FWMP") that identified a need to protect wildlife and habitat in the area of the Yukon River, which includes the Paulsen lands. It proposed that an area in the order of some 10,000 hectares be designated as a Habitat Protection Area under the *Wildlife Act*, R.S.Y. 2002, c. 229. The FWMP also recognized the need to preserve the First Nation's ability to transfer its culture and traditions to its youth through opportunities to participate in traditional activities. The FWMP did not, however, call for a freeze on approval of agricultural land grants in the area pending action on the FWMP proposals.

[21] Trapline #143 was registered to Johnny Sam, a member of the LSCFN. His trapline is in a category administered by the Yukon government, not the First Nation. It helps him to earn a livelihood as well as to provide a training ground for his grandchildren and other First Nation youth in the ways of trapping and living off the land. The trapline covers an area of approximately 21,435 hectares. As noted by the Court of Appeal, the 65 hectares applied for by Mr. Paulsen is approximately one-third of one percent of the trapline. A portion of the trapline had already been damaged by forest fire, which, in the LSCFN view, added to the significance of the loss of a further 65 hectares. The severity of the impact of land grants, whether taken individually or cumulatively, properly constituted an important element of the consultation with LARC and, ultimately, a relevant consideration to be taken into account by the Director in reaching his decision.

[20] Il faut aussi mentionner la Commission de gestion des ressources halieutiques et fauniques — un organe constitué par le traité dont les membres sont désignés par la première nation et le gouvernement du Yukon — qui, en août 2004 (soit pendant que la demande de M. Paulsen était toujours à l'étude) a adopté un plan de gestion des ressources halieutiques et fauniques (« PGRHF ») faisant état de la nécessité de protéger la faune et son habitat dans la région du fleuve Yukon où se trouvent les terres demandées par M. Paulsen. Il y était proposé qu'une superficie de quelque 10 000 hectares soit désignée comme région de protection de l'habitat sous le régime de la *Loi sur la faune*, L.R.Y. 2002, ch. 229. Était en outre reconnue dans le PGRHF la nécessité de préserver la capacité de la première nation de transmettre sa culture et ses traditions aux nouvelles générations en leur donnant l'occasion de participer à des activités traditionnelles. Le PGRHF ne prévoyait cependant pas le gel des approbations de concession de terres agricoles dans la région jusqu'à ce qu'il ait été donné suite aux propositions contenues dans le plan.

[21] Le territoire de piégeage n^{o} 143 a été enregistré au nom de Johnny Sam, un membre de la PNLSC. Ce territoire de piégeage appartient à une catégorie administrée par le gouvernement du Yukon, et non par la première nation. Johnny Sam l'utilise comme gagne-pain partiel et comme une base où ses petits-enfants ainsi que d'autres jeunes de la première nation s'y entraînent aux méthodes de piégeage et y apprennent à vivre des ressources de la nature. Le territoire de piégeage s'étend sur une superficie d'environ 21 435 hectares. Comme l'a relevé la Cour d'appel, la parcelle de 65 hectares visée par la demande de M. Paulsen correspond approximativement à un tiers de un pour cent du territoire de piégeage en question. Une partie du territoire de piégeage avait déjà été détériorée par un incendie de forêt, ce qui, pour la PNLSC, avait pour effet de rendre plus onéreuse la perte de 65 autres hectares. La grande incidence des concessions de terres, prises individuellement ou cumulativement, constituait à juste titre pour le CEDAT un élément important de la consultation et, en définitive, une considération pertinente que le directeur devait prendre en compte pour rendre sa décision.

[22] The LARC meeting to discuss the Paulsen application was scheduled for August 13, 2004. The First Nation received notice and was invited to provide comments prior to the meeting and to participate in the discussion as a member of LARC.

[23] On July 27, 2004, the First Nation submitted a letter of opposition to the Paulsen application. The letter identified concerns about impacts on Trapline #143, nearby timber harvesting, the loss of animals to hunt in the area, and adjacent cultural and heritage sites. No reference was made in the First Nation's letter to Johnny Sam's concerns about cultural transfer or to the FWMP. The letter simply states that "[t]he combination of agricultural and timber harvesting impacts on this already-damaged trapline would certainly be a significant deterrent to the ability of the trapper to continue his traditional pursuits" (A.R., vol. II, at p. 22).

[24] Nobody from the LSCFN attended the August 13, 2004 meeting. Susan Davis, its usual representative, was unable to attend for undisclosed reasons. The meeting went on as planned.

[25] The members of LARC who were present (mainly territorial government officials) considered the Paulsen application and recommended approval in principle. The minutes of the August 13 meeting show that LARC *did* consider the concerns voiced by the LSCFN in its July 27, 2004 letter. Those present at the meeting concluded that the impact of the loss of 65 hectares on Trapline #143 would be minimal as the Paulsen application covered a very small portion of the trapline's overall area and noted that Johnny Sam could apply under Chapter 16 of the LSCFN Treaty for compensation for any diminution in its value. LARC recommended an archaeological survey to address potential heritage and cultural sites. (An archaeological assessment was later conducted and reported on

[22] Le CEDAT devait se réunir le 13 août 2004 pour discuter de la demande de M. Paulsen. La première nation en a été avisée; elle a été invitée à présenter des observations avant la réunion et à participer à la discussion en sa qualité de membre du CEDAT.

[23] Le 27 juillet 2004, la première nation a exprimé par lettre son opposition à la demande de M. Paulsen. La lettre faisait état de préoccupations touchant les incidences sur le territoire de piégeage n^{o} 143, la récolte de bois dans les environs, la perte d'animaux pour la chasse dans la région et certains sites d'intérêt culturel et patrimonial. La lettre de la première nation ne faisait pas mention des préoccupations de Johnny Sam concernant la transmission de la culture, ni du PGRHF. Il y était simplement écrit que [TRADUCTION] « [l]a conjugaison d'incidences relatives à l'agriculture et à la récolte de bois sur ce territoire de piégeage déjà détérioré aurait certainement un effet dissuasif notable quant à la possibilité pour le trappeur de continuer à se livrer à ses activités traditionnelles » (d.a., vol. II, p. 22).

[24] Aucun représentant de la PNLSC n'était présent à la réunion du 13 août 2004. Susan Davis, la personne qui représentait habituellement la première nation, n'a pu y assister pour des raisons non précisées. La réunion a eu lieu comme prévu.

[25] Les membres du CEDAT qui étaient présents (principalement des fonctionnaires du gouvernement territorial) ont étudié la demande de M. Paulsen et en ont recommandé l'approbation de principe. Le procès-verbal de la réunion du 13 août indique que le CEDAT a *bel et bien* pris en considération les préoccupations exprimées par la PNLSC dans sa lettre du 27 juillet 2004. Les personnes présentes à la réunion sont arrivées à la conclusion que la perte de 65 hectares aurait une incidence minime sur le territoire de piégeage n^{o} 143, du fait que la demande de M. Paulsen visait une très petite partie du territoire en question. Elles ont signalé que Johnny Sam pouvait, en vertu du chapitre 16 du traité PNLSC, demander une indemnisation pour toute diminution de la valeur du

September 2, 2004, that it was unable to identify any sites that would be impacted adversely by the grant.)

[26] On September 8, 2004, the First Nation representatives met with Agriculture Branch staff who were conducting an agricultural policy review. The meeting did not focus specifically on the Paulsen application. Nevertheless, the First Nation made the general point that its concerns were not being taken seriously. Agriculture Branch officials replied that they consult on such matters through LARC but they were not required by the Final Agreement to consult on such issues. Meetings and discussions with the First Nation had been conducted, they said, only as a courtesy.

[27] On October 18, 2004, the Director approved the Paulsen application and sent a letter to Larry Paulsen, informing him of that fact. He did not notify the LSCFN of his decision, as he ought to have done.

[28] Apparently unaware that the Paulsen application had been approved, the First Nation continued to express its opposition by way of a series of letters from Chief Eddie Skookum to the Yukon government. Johnny Sam also wrote letters expressing his opposition. It seems the government officials failed to disclose that the Director's decision to approve the grant had already been made. This had the unfortunate effect of undermining appropriate communication between the parties.

[29] In the summer of 2005, Susan Davis, representing the First Nation, made enquiries of the Agriculture Branch and obtained confirmation that the Paulsen application had already been approved. She was sent a copy of the October 18, 2004 approval letter.

territoire de piégeage. Le CEDAT a recommandé qu'on procède à une reconnaissance archéologique au sujet des sites d'intérêt patrimonial et culturel. (Une évaluation archéologique a été effectuée par la suite, et selon le rapport en date du 2 septembre 2004, elle n'a permis l'identification d'aucun site sur lequel l'octroi de la parcelle aurait des incidences négatives.)

[26] Le 8 septembre 2004, des représentants de la première nation ont rencontré les fonctionnaires de la Direction de l'agriculture qui procédaient à un examen de la politique agricole. Cette rencontre n'a pas porté spécifiquement sur la demande de M. Paulsen. La première nation a tout de même signalé que ses préoccupations n'avaient pas été prises au sérieux. Les fonctionnaires ont répondu qu'ils tiennent des consultations sur ces questions dans le cadre du CEDAT, mais que l'Entente définitive ne les obligeait pas à tenir des consultations sur de telles questions. C'est uniquement par courtoisie, ont-ils dit, qu'on avait tenu des réunions et des discussions avec la première nation.

[27] Le 18 octobre 2004, le Directeur a approuvé la demande de M. Paulsen et lui a envoyé une lettre pour l'en informer. Il n'a pas avisé la PNLSC de sa décision, ce qu'il aurait dû faire.

[28] N'étant apparemment pas au courant de l'approbation de la demande de M. Paulsen, la première nation a continué à manifester son opposition par une série de lettres adressées par le chef Eddie Skookum au gouvernement du Yukon. Johnny Sam a lui aussi écrit des lettres dans lesquelles il faisait part de son opposition. Les fonctionnaires semblent avoir tu le fait que le directeur avait déjà décidé d'approuver la concession de la parcelle de terre. Cette omission a eu pour effet malheureux de miner la communication opportune entre les parties.

[29] Au cours de l'été 2005, Susan Davis, la représentante de la première nation, a demandé à la Direction de l'agriculture où en était le dossier. On lui a confirmé que la demande de M. Paulsen avait déjà été approuvée et on lui a fait parvenir une copie de la lettre d'approbation du 18 octobre 2004.

[30] In response, by letter dated August 24, 2005, the First Nation launched an administrative appeal of the Paulsen grant to the Assistant Deputy Minister.

[31] On December 12, 2005, the request to review the decision was rejected on the basis that the First Nation had no right of appeal because it was a member of LARC, and not just an intervener under the LARC Terms of Reference. The Terms of Reference specify that only applicants or interveners may initiate an appeal. The Terms of Reference had no legislative or treaty basis whatsoever, but the Yukon government nevertheless treated them as binding both on the government and on the First Nation.

[32] Frustrated by the territorial government's approach, which it believed broadly misconceived and undermined relations between the territorial government and the LSCFN, the First Nation initiated the present application for judicial review.

III. Analysis

[33] The decision to entrench in s. 35 of the *Constitution Act, 1982* the recognition and affirmation of existing Aboriginal and treaty rights, signalled a commitment by Canada's political leaders to protect and preserve constitutional space for Aboriginal peoples to be Aboriginal. At the same time, Aboriginal people do not, by reason of their Aboriginal heritage, cease to be citizens who fully participate with other Canadians in their collective governance. This duality is particularly striking in the Yukon, where about 25 percent of the population identify themselves as Aboriginal. The territorial government, elected in part by Aboriginal people, represents Aboriginal people as much as it does non-Aboriginal people, even though Aboriginal culture and tradition are and will remain distinctive.

[34] Underlying the present appeal is not only the need to respect the rights and reasonable expectations of Johnny Sam and other members of his community, but the rights and expectations of

[30] En réponse, la première nation, par une lettre du 24 août 2005, a fait appel de la concession de la parcelle à M. Paulsen auprès du sous-ministre adjoint.

[31] Le 12 décembre 2005, la demande d'examen de la décision a été rejetée au motif que la première nation n'avait aucun droit d'appel, puisqu'en vertu du mandat du CEDAT, elle était un membre de ce comité et non simplement un intervenant. Il est précisé dans ce mandat que seuls les demandeurs ou les intervenants peuvent former un appel. Le mandat ne trouvait aucun fondement dans un texte législatif ou un traité, mais le gouvernement du Yukon considérait tout de même qu'il liait tant le gouvernement que la première nation.

[32] Irritée par la démarche du gouvernement territorial qui, selon elle, dénaturait et bafouait gravement les relations entre le gouvernement et la PNLSC, la première nation a présenté la demande de contrôle judiciaire à l'origine du pourvoi.

III. Analyse

[33] Par la décision d'inscrire à l'art. 35 de la *Loi constitutionnelle de 1982* la reconnaissance et la confirmation des droits existants — ancestraux ou issus de traités — des peuples autochtones, les dirigeants politiques du Canada s'engageaient à protéger et à préserver un espace constitutionnel permettant aux Autochtones d'être des Autochtones. Mais l'existence de leur héritage autochtone ne fait pas en sorte que les Autochtones cessent d'être des citoyens qui participent pleinement avec les autres Canadiens à leur gouvernance collective. Cette dualité est particulièrement frappante au Yukon, où environ 25 pour 100 de la population se réclame d'une identité autochtone. Le gouvernement territorial, élu en partie par les Autochtones, représente tout autant ces derniers que les non-Autochtones, même si la culture et la tradition autochtones conservent maintenant et pour l'avenir leur caractère distinctif.

[34] À la base du présent pourvoi, il y a la nécessité de respecter non seulement les droits et les attentes raisonnables de Johnny Sam et d'autres membres de sa communauté, mais aussi ceux d'autres habitants

other Yukon residents, including both Aboriginal people *and* Larry Paulsen, to good government. The Yukon treaties are intended, in part, to replace expensive and time-consuming *ad hoc* procedures with mutually agreed upon legal mechanisms that are efficient but fair.

[35] I believe the existence of Larry Paulsen's stake in this situation is of considerable importance. Unlike *Mikisew Cree*, which involved a dispute between the Federal government and the Mikisew Cree First Nation over the route of a winter road, Mr. Paulsen made his application as an ordinary citizen who was entitled to a government decision reached with procedural fairness within a reasonable time. On the other hand, the entitlement of the trapper Johnny Sam was a derivative benefit based on the collective interest of the First Nation of which he was a member. I agree with the Court of Appeal that he was not, as an individual, a necessary party to the consultation.

A. *The LSCFN Treaty Reflects a Balance of Interests*

[36] Under the treaty, the LSCFN surrendered all undefined Aboriginal rights, title, and interests in its traditional territory in return for which it received:

- title to 2,589 square kilometres of "settlement land" [Chapters 9 and 15];
- financial compensation of $34,179,210 [Chapter 19];
- potential for royalty sharing [Chapter 23];
- economic development measures [Chapter 22];
- rights of access to Crown land (except that disposed of by agreement for sale, surface licence, or lease) [Chapter 6];
- special management areas [Chapter 10];

du Yukon, y compris les Autochtones *et* Larry Paulsen, relativement à un bon gouvernement. Les traités du Yukon visent notamment à substituer à des procédures ponctuelles coûteuses en temps et en argent des mécanismes juridiques mutuellement acceptés qui sont efficaces tout en étant équitables.

[35] Je crois que l'existence de l'intérêt de Larry Paulsen dans la présente situation revêt une importance considérable. Contrairement à ce qui était le cas dans l'affaire *Première nation crie Mikisew*, où le litige opposait le gouvernement fédéral et la Première nation crie Mikisew au sujet du tracé d'une route hivernale, M. Paulsen a présenté sa demande en qualité de simple citoyen ayant droit à une décision gouvernementale prise conformément à l'équité procédurale dans un délai raisonnable. Par ailleurs, le droit du trappeur Johnny Sam constituait un avantage dérivé qu'il tenait de l'intérêt collectif de la première nation dont il était membre. Je suis d'accord avec la cour d'appel pour dire qu'il n'était pas, à titre individuel, une partie nécessaire à la consultation.

A. *Le traité PNLSC présente un juste équilibre des intérêts*

[36] Aux termes du traité, la PNLSC a renoncé à la totalité de ses droits, titres et intérêts ancestraux non précisés concernant son territoire traditionnel, en échange de quoi elle a reçu :

[TRADUCTION]

- un titre à l'égard d'une superficie de 2 589 kilomètres carrés de « terres visées par le règlement » [chapitres 9 et 15];
- une indemnisation pécuniaire de 34 179 210 $ [chapitre 19];
- une possibilité de partage des redevances [chapitre 23];
- des mesures de développement économique [chapitre 22];
- des droits d'accès aux terres de la Couronne (à l'exception de celles faisant l'objet d'un contrat de vente, d'un permis ou d'un bail de surface) [chapitre 6];
- des zones spéciales de gestion [chapitre 10];

- protection of access to settlement land [s. 6.2.7];
- rights to harvest fish and wildlife [Chapter 16];
- rights to harvest forest resources [Chapter 17];
- rights to representation and involvement in land use planning [Chapter 11] and resource management [Chapters 14, 16-18].

(C.A. reasons, para. 41)

These are substantial benefits, especially when compared to the sparse offerings of earlier treaties such as those provided to the Mikisew Cree in Treaty No. 8. With the substantive benefits, however, came not only rights but duties and obligations. It is obvious that the long-term interdependent relationship thus created will require work and good will on both sides for its success.

[37] The reason for the government's tight-lipped reaction to the unfolding Paulsen situation, as explained to us at the hearing by its counsel, was the fear that if the duty of consultation applies, "these parties will be in court like parties are in areas where there are no treaties, and there will be litigation over whether the consultation applies; what is the appropriate level of the consultation? Is accommodation required? It is all under court supervision" (transcript, at p. 18). The history of this appeal shows, however, that taking a hard line does not necessarily speed matters up or make litigation go away.

[38] The denial by the Yukon territorial government of any duty to consult except as specifically listed in the LSCFN Treaty complicated the Paulsen situation because at the time the Director dealt with the application the treaty implementation provision contemplated in Chapter 12 had itself not yet been implemented. I do not believe the Yukon Treaty was intended to be a "complete code". Be that as it

- la protection de l'accès aux terres visées par le règlement [art. 6.2.7];
- des droits relatifs à la récolte des ressources halieutiques et fauniques [chapitre 16];
- des droits relatifs à la récolte des ressources forestières [chapitre 17];
- des droits relatifs à la représentation et à la participation dans le cadre de l'aménagement du territoire [chapitre 11] et de la gestion des ressources [chapitres 14, 16-18].

(motifs de la C.A., par. 41)

Il s'agit là d'avantages substantiels, surtout si on les compare aux rares avantages offerts par les anciens traités comme ceux accordés à la Première nation crie Mikisew dans le Traité n^{o} 8. Ces avantages considérables, toutefois, s'accompagnaient non seulement de droits, mais aussi d'obligations. La réussite de la relation d'interdépendance à long terme qui a été établie nécessitera de toute évidence du travail et de la bonne volonté de part et d'autre.

[37] Le silence du gouvernement face à la situation que présentait la demande de M. Paulsen, comme l'a expliqué l'avocat du gouvernement à l'audience, était attribuable à la crainte que, dans le cas où l'obligation de consulter s'appliquerait, [TRADUCTION] « les parties se trouveront devant le tribunal dans la même situation que dans les domaines où il n'existe pas de traité, et on débattra la question de savoir si la consultation s'applique, ainsi que celles de savoir quel est le niveau de consultation requis et si un accommodement est nécessaire. Tout est soumis à la supervision du tribunal » (transcription, p. 18). L'historique du présent pourvoi montre cependant que l'adoption de la ligne dure n'accélère pas nécessairement les choses, pas plus qu'elle n'élimine les litiges.

[38] La négation, par le gouvernement territorial du Yukon, de toute obligation de consulter sauf dans les cas prévus spécifiquement dans le traité PNLSC a compliqué la situation que présentait la demande de M. Paulsen car, à l'époque où le directeur a pris une décision sur la demande, la disposition relative à la mise en œuvre du traité envisagée au chapitre 12 n'avait elle-même pas encore été mise en

may, the duty to consult is derived from the honour of the Crown which applies independently of the expressed or implied intention of the parties (see below, at para. 61). In any event, the procedural gap created by the failure to implement Chapter 12 had to be addressed, and the First Nation, in my view, was quite correct in calling in aid the duty of consultation in putting together an appropriate procedural framework.

[39] Nevertheless, consultation *was* made available and *did* take place through the LARC process under the 1991 Agriculture Policy, and the ultimate question is whether what happened in this case (even though it was mischaracterized by the territorial government as a courtesy rather than as the fulfilment of a legal obligation) was sufficient. In *Taku River Tlingit First Nation v. British Columbia (Project Assessment Director)*, 2004 SCC 74, [2004] 3 S.C.R. 550, the Court held that participation in a forum created for other purposes may nevertheless satisfy the duty to consult if *in substance* an appropriate level of consultation is provided.

B. *The Relationship Between Section 35 and the Duty to Consult*

[40] The First Nation relies in particular on the following statements in *Haida Nation v. British Columbia (Minister of Forests)*, 2004 SCC 73, [2004] 3 S.C.R. 511, at para. 20:

> It is a corollary of s. 35 that the Crown act honourably in defining the rights it guarantees and in reconciling them with other rights and interests. This, in turn, implies a duty to consult and, if appropriate, accommodate.

Further, at para. 32:

> The jurisprudence of this Court supports the view that the duty to consult and accommodate is part of a process of fair dealing and reconciliation that begins with the assertion of sovereignty and continues beyond formal claims resolution. Reconciliation is not a final

œuvre. Je ne crois pas que le traité du Yukon était censé constituer un « code complet ». Quoi qu'il en soit, l'obligation de consulter découle du principe de l'honneur de la Couronne, qui s'applique indépendamment de l'intention expresse ou implicite des parties (voir le par. 61 ci-après). De toute façon, il fallait remédier à la lacune procédurale suscitée par l'absence de mise en œuvre du chapitre 12, et la première nation a eu tout à fait raison à mon avis d'invoquer l'obligation de consulter et d'établir un cadre de procédure approprié.

[39] Quoi qu'il en soit, la consultation *a effectivement* été rendue possible et *a bel et bien* eu lieu dans le cadre du processus du CEDAT en vertu de la Politique agricole pour 1991. En dernière analyse, la question à trancher est de savoir si, dans la présente affaire, ce que l'on a fait était suffisant (bien que le gouvernement territorial y ait vu à tort une mesure de courtoisie plutôt que l'exécution d'une obligation juridique). Dans *Première nation Tlingit de Taku River c. Colombie-Britannique (Directeur d'évaluation de projet)*, 2004 CSC 74, [2004] 3 R.C.S. 550, la Cour a conclu que la participation à un forum créé pour d'autres besoins peut tout de même satisfaire à l'obligation de consulter si, *pour l'essentiel*, un niveau approprié de consultation a été rendu possible.

B. *La relation entre l'art. 35 et l'obligation de consulter*

[40] La première nation se fonde en particulier sur le passage suivant de l'arrêt *Nation haïda c. Colombie-Britannique (Ministre des Forêts)*, 2004 CSC 73, [2004] 3 R.C.S. 511, par. 20 :

> L'article 35 a pour corollaire que la Couronne doit agir honorablement lorsqu'il s'agit de définir les droits garantis par celui-ci et de les concilier avec d'autres droits et intérêts. Cette obligation emporte à son tour celle de consulter et, s'il y a lieu, d'accommoder.

Également, au par. 32 :

> La jurisprudence de la Cour étaye le point de vue selon lequel l'obligation de consulter et d'accommoder fait partie intégrante du processus de négociation honorable et de conciliation qui débute au moment de l'affirmation de la souveraineté et se poursuit au-delà du

legal remedy in the usual sense. Rather, it is a process flowing from rights guaranteed by s. 35(1) of the *Constitution Act, 1982*. [Emphasis added.]

règlement formel des revendications. La conciliation ne constitue pas une réparation juridique définitive au sens usuel du terme. Il s'agit plutôt d'un processus découlant des droits garantis par le par. 35(1) de la *Loi constitutionnelle de 1982*. [Je souligne.]

[41] Reference should also be made to *R. v. Kapp*, 2008 SCC 41, [2008] 2 S.C.R. 483, at para. 6, where the Court said:

The decision to enhance aboriginal participation in the commercial fishery may also be seen as a response to the directive of this Court in *Sparrow*, at p. 1119, that the government consult with aboriginal groups in the implementation of fishery regulation in order to honour its fiduciary duty to aboriginal communities. Subsequent decisions have affirmed the duty to consult and accommodate aboriginal communities with respect to resource development and conservation; it is a constitutional duty, the fulfilment of which is consistent with the honour of the Crown: see e.g. *Delgamuukw v. British Columbia*, [1997] 3 S.C.R. 1010. [Emphasis added.]

[41] On peut également citer l'arrêt *R. c. Kapp*, 2008 CSC 41, [2008] 2 R.C.S. 483, par. 6, où la Cour a dit ce qui suit :

La décision de favoriser la participation des Autochtones à la pêche commerciale peut aussi être perçue comme une réponse à la directive donnée par notre Cour dans l'arrêt *Sparrow*, p. 1119, selon laquelle, en appliquant la réglementation sur les pêches, le gouvernement doit consulter les groupes autochtones afin de respecter l'obligation de fiduciaire qu'il a envers ces collectivités. Des arrêts subséquents ont confirmé l'obligation de consulter et d'accommoder les collectivités autochtones dans les domaines de l'exploitation et de la conservation des ressources; il s'agit là d'une obligation constitutionnelle qui concorde avec le principe de l'honneur de la Couronne : voir, par exemple, l'arrêt *Delgamuukw c. Colombie-Britannique*, [1997] 3 R.C.S. 1010. [Je souligne.]

[42] The obligation of honourable dealing was recognized from the outset by the Crown itself in the *Royal Proclamation* of 1763 (reproduced in R.S.C. 1985, App. II, No. 1), in which the British Crown pledged its honour to the protection of Aboriginal peoples from exploitation by non-Aboriginal peoples. The honour of the Crown has since become an important anchor in this area of the law: see *R. v. Taylor* (1981), 62 C.C.C. (2d) 227 (Ont. C.A.), leave to appeal refused, [1981] 2 S.C.R. xi; *R. v. Sparrow*, [1990] 1 S.C.R. 1075; *R. v. Nikal*, [1996] 1 S.C.R. 1013; *Delgamuukw v. British Columbia*, [1997] 3 S.C.R. 1010; as well as *Badger*, *Marshall* and *Mikisew Cree*, previously referred to. The honour of the Crown has thus been confirmed in its status as a constitutional principle.

[42] L'obligation de se conduire honorablement a été reconnue dès le départ par la Couronne elle-même dans la *Proclamation royale* de 1763 (L.R.C. 1985, App. II, n^{o} 1). La Couronne britannique s'y engageait sur l'honneur à protéger les peuples autochtones contre l'exploitation de la part des peuples non autochtones. L'honneur de la Couronne est devenu depuis lors un important point d'ancrage dans ce domaine du droit : voir *R. c. Taylor* (1981), 62 C.C.C. (2d) 227 (C.A. Ont.), autorisation d'appel refusée, [1981] 2 R.C.S. xi; *R. c. Sparrow*, [1990] 1 R.C.S. 1075; *R. c. Nikal*, [1996] 1 R.C.S. 1013; *Delgamuukw c. Colombie-Britannique*, [1997] 3 R.C.S. 1010, de même que *Badger*, *Marshall* et *Première nation crie Mikisew*, dont il a déjà été fait état. L'honneur de la Couronne a par conséquent été confirmé dans son statut de principe constitutionnel.

[43] However, this is not to say that every policy and procedure of the law adopted to uphold the honour of the Crown is itself to be treated as if inscribed in s. 35. As the Chief Justice noted in *Haida Nation*, "[t]he honour of the Crown gives rise to different duties in different circumstances" (para. 18). This appeal considers its application in

[43] Il ne faut pas en conclure pour autant que toute politique et procédure juridique adoptée en vue de préserver l'honneur de la Couronne doive elle-même être considérée comme inscrite dans l'art. 35. Ainsi que l'a souligné la Juge en chef dans *Nation haïda*, « [l]'honneur de la Couronne fait naître différentes obligations selon les circonstances » (par. 18).

the modern treaty context; its application where no treaty has yet been signed was recently the subject of this Court's decision in *Rio Tinto Alcan Inc. v. Carrier Sekani Tribal Council*, 2010 SCC 43, [2010] 2 S.C.R. 650.

[44] The respondents' submission, if I may put it broadly, is that because the *duty* to consult is "constitutional", therefore there must be a reciprocal constitutional *right* of the First Nation to be consulted, and constitutional rights of Aboriginal peoples are not subject to abrogation or derogation except as can be justified under the high test set out in *Sparrow*. On this view, more or less every case dealing with consultation in the interpretation and implementation of treaties becomes a constitutional case. The trouble with this argument is that the content of the duty to consult varies with the circumstances. In relation to what *Haida Nation* called a "spectrum" of consultation (para. 43), it cannot be said that consultation at the lower end of the spectrum instead of at the higher end must be justified under the *Sparrow* doctrine. The minimal content of the consultation imposed in *Mikisew Cree* (para. 64), for example, did not have to be "justified" as a limitation on what would otherwise be a right to "deep" consultation. The circumstances in *Mikisew Cree* never gave rise to anything more than minimal consultation. The concept of the duty to consult is a valuable adjunct to the honour of the Crown, but it plays a supporting role, and should not be viewed independently from its purpose.

[45] The LSCFN invited us to draw a bright line between the duty to consult (which it labelled constitutional) and administrative law principles such as procedural fairness (which it labelled unsuitable). At the hearing, counsel for the LSCFN was dismissive of resort in this context to administrative law principles:

Dans le présent pourvoi, nous examinons l'application du principe de l'honneur de la Couronne dans le contexte d'un traité récent; son application lorsqu'aucun traité n'a été signé a récemment fait l'objet de la décision de notre Cour dans *Rio Tinto Alcan Inc. c. Conseil tribal Carrier Sekani*, 2010 CSC 43, [2010] 2 R.C.S. 650.

[44] La thèse de l'intimée, si je peux la résumer à grands traits, est celle-ci : étant donné la nature « constitutionnelle » de *l'obligation* de consulter, il doit exister un *droit* constitutionnel réciproque de la première nation d'être consultée, et les droits constitutionnels des peuples autochtones sont à l'abri de toute abrogation ou dérogation, exception faite de celles qui peuvent se justifier au regard du critère rigoureux établi dans *Sparrow*. Selon cette logique, pratiquement chaque affaire ayant trait à la consultation dans le cadre de l'interprétation et de la mise en œuvre des traités devient une affaire constitutionnelle. Cet argument est problématique en ce que le contenu de l'obligation de consulter varie suivant les circonstances. Relativement à ce que l'on a appelé dans *Nation haïda* un « continuum » de consultation (par. 43), on ne peut affirmer que la consultation au bas plutôt qu'au haut du continuum doit être justifiée suivant la doctrine de l'arrêt *Sparrow*. Le contenu minimal de la consultation imposé dans *Première nation crie Mikisew* (par. 64), par exemple, n'avait pas à être justifié comme une limite à ce qui serait autrement un droit à une consultation « approfondie ». Dans *Première nation crie Mikisew*, les circonstances n'ont jamais requis plus qu'un minimum de consultation. Si la notion d'obligation de consulter se veut un complément valable à l'honneur de la Couronne, elle joue un rôle de soutien et ne devrait pas être considérée indépendamment de l'objectif qu'elle vise à atteindre.

[45] La PNLSC nous a demandé d'établir une nette distinction entre l'obligation de consulter (qu'elle a qualifiée de constitutionnelle) et les principes du droit administratif tels l'équité procédurale (qu'elle a qualifiés d'inadéquats). Lors de l'audition, l'avocat de la PNLSC a rejeté le recours aux principes du droit administratif dans ce contexte :

[A]dministrative law principles are not designed to address the very unique circumstance of the Crown-Aboriginal history, the Crown-Aboriginal relationship. Administrative law principles, for all their tremendous value, are not tools toward reconciliation of Aboriginal people and other Canadians. They are not instruments to reflect the honour of the Crown principles. [transcript, at p. 62]

However, as Lamer C.J. observed in *R. v. Van der Peet*, [1996] 2 S.C.R. 507, "aboriginal rights exist within the general legal system of Canada" (para. 49). Administrative decision makers regularly have to confine their decisions within constitutional limits: *Slaight Communications Inc. v. Davidson*, [1989] 1 S.C.R. 1038; *Little Sisters Book and Art Emporium v. Canada (Minister of Justice)*, 2000 SCC 69, [2000] 2 S.C.R. 1120; *Suresh v. Canada (Minister of Citizenship and Immigration)*, 2002 SCC 1, [2002] 1 S.C.R. 3; and *Multani v. Commission scolaire Marguerite-Bourgeoys*, 2006 SCC 6, [2006] 1 S.C.R. 256. In this case, the constitutional limits include the honour of the Crown and its supporting doctrine of the duty to consult.

[46] The link between constitutional doctrine and administrative law remedies was already noted in *Haida Nation*, at the outset of our Court's duty to consult jurisprudence:

In all cases, the honour of the Crown requires that the Crown act with good faith to provide meaningful consultation appropriate to the circumstances. In discharging this duty, regard may be had to the procedural safeguards of natural justice mandated by administrative law. [Emphasis added; para. 41.]

The relevant "procedural safeguards" mandated by administrative law include not only natural justice but the broader notion of procedural fairness. And the content of meaningful consultation "appropriate to the circumstances" will be shaped, and in some cases determined, by the terms of the modern land claims agreement. Indeed, the parties themselves may decide therein to exclude consultation altogether in defined situations and the decision to do so would be upheld by the courts where this

[TRADUCTION] [L]es principes du droit administratif ne sont pas conçus pour s'appliquer au cas tout à fait particulier de l'histoire des relations entre la Couronne et les Autochtones. Ces principes, malgré leur valeur considérable, ne constituent pas des outils favorisant la réconciliation entre les Autochtones et les autres Canadiens. Ce ne sont pas des instruments par lesquels peuvent s'exprimer les principes relatifs à l'honneur de la Couronne. [transcription, p. 62]

Toutefois, comme l'a précisé le Juge en chef Lamer dans *R. c. Van der Peet*, [1996] 2 R.C.S. 507, « les droits ancestraux existent dans les limites du système juridique canadien » (par. 49). Les décideurs administratifs doivent couramment confiner leurs décisions dans les limites constitutionnelles : *Slaight Communications Inc. c. Davidson*, [1989] 1 R.C.S. 1038; *Little Sisters Book and Art Emporium c. Canada (Ministre de la Justice)*, 2000 CSC 69, [2000] 2 R.C.S. 1120; *Suresh c. Canada (Ministre de la Citoyenneté et de l'Immigration)*, 2002 CSC 1, [2002] 1 R.C.S. 3, et *Multani c. Commission scolaire Marguerite-Bourgeoys*, 2006 CSC 6, [2006] 1 R.C.S. 256. En l'espèce, les limites constitutionnelles incluent l'honneur de la Couronne et le principe de l'obligation de consulter qui l'appuie.

[46] Le lien entre la doctrine constitutionnelle et les recours de droit administratif a déjà été signalé dans *Nation haïda*, un des premiers arrêts traitant de l'obligation de consulter :

Dans tous les cas, le principe de l'honneur de la Couronne commande que celle-ci agisse de bonne foi et tienne une véritable consultation, qui soit appropriée eu égard aux circonstances. Lorsque vient le temps de s'acquitter de cette obligation, les garanties procédurales de justice naturelle exigées par le droit administratif peuvent servir de guide. [Je souligne; par. 41.]

Les « garanties procédurales » en question qu'exige le droit administratif englobent non seulement la justice naturelle mais aussi la notion plus générale de l'équité procédurale. Et les termes des ententes récentes sur les revendications territoriales suggéreront, et dans certains cas dicteront, le contenu de la véritable consultation « appropriée eu égard aux circonstances ». Les parties elles-mêmes peuvent décider dans ces ententes d'exclure purement et simplement la consultation dans des situations

outcome would be consistent with the maintenance of the honour of the Crown.

[47] The parties in this case proceeded by way of an ordinary application for judicial review. Such a procedure was perfectly capable of taking into account the constitutional dimension of the rights asserted by the First Nation. There is no need to invent a new "constitutional remedy". Administrative law is flexible enough to give full weight to the constitutional interests of the First Nation. Moreover, the impact of an administrative decision on the interest of an Aboriginal community, whether or not that interest is entrenched in a s. 35 right, would be relevant as a matter of procedural fairness, just as the impact of a decision on any other community or individual (including Larry Paulsen) may be relevant.

C. *Standard of Review*

[48] In exercising his discretion under the Yukon *Lands Act* and the *Territorial Lands (Yukon) Act*, the Director was required to respect legal and constitutional limits. In establishing those limits no deference is owed to the Director. The standard of review in that respect, including the adequacy of the consultation, is correctness. A decision maker who proceeds on the basis of inadequate consultation errs in law. Within the limits established by the law and the Constitution, however, the Director's decision should be reviewed on a standard of reasonableness: *Dunsmuir v. New Brunswick*, 2008 SCC 9, [2008] 1 S.C.R. 190, and *Canada (Citizenship and Immigration) v. Khosa*, 2009 SCC 12, [2009] 1 S.C.R. 339. In other words, if there was adequate consultation, did the Director's decision to approve the Paulsen grant, having regard to all the relevant considerations, fall within the range of reasonable outcomes?

précises, et les tribunaux accepteront cette décision lorsqu'une telle décision serait compatible avec le maintien de l'honneur de la Couronne.

[47] Les parties en l'espèce ont choisi la voie d'une demande ordinaire de contrôle judiciaire. Dans le cadre de cette instance, il était parfaitement possible de prendre en compte la dimension constitutionnelle des droits invoqués par la première nation. Point n'est besoin d'inventer une nouvelle « réparation constitutionnelle ». Le droit administratif est suffisamment souple pour que le tribunal accorde l'importance voulue aux intérêts constitutionnels de la première nation. De plus, l'incidence d'une décision administrative sur un intérêt d'une communauté autochtone — que cet intérêt fasse ou non partie d'un droit reconnu par l'art. 35 — s'avérerait pertinente au titre de l'équité procédurale, tout comme peut s'avérer pertinente l'incidence d'une décision sur toute autre communauté ou tout autre individu (y compris Larry Paulsen).

C. *Norme de contrôle*

[48] Dans l'exercice des pouvoirs discrétionnaires que lui confèrent la *Loi sur les terres* et la *Loi du Yukon sur les terres territoriales*, le directeur devait respecter les limites légales et constitutionnelles. En ce qui a trait à la détermination de ces limites, on n'a pas à faire preuve de déférence à l'endroit du directeur. La norme de contrôle à cet égard, y compris à l'égard du caractère adéquat de la consultation, est celle de la décision correcte. Un décideur qui rend une décision fondée sur une consultation inadéquate commet une erreur de droit. Dans les limites établies par le droit et la Constitution, toutefois, la décision du directeur doit être examinée selon la norme de la raisonnabilité : *Dunsmuir c. Nouveau-Brunswick*, 2008 CSC 9, [2008] 1 R.C.S. 190, et *Canada (Citoyenneté et Immigration) c. Khosa*, 2009 CSC 12, [2009] 1 R.C.S. 339. En d'autres mots, s'il y a eu consultation adéquate, la décision du directeur d'approuver la concession de terres à M. Paulsen se situait-elle, compte tenu de toutes les considérations pertinentes, dans la gamme des résultats raisonnables?

D. *The Role and Function of the LSCFN Treaty*

[49] The territorial government and the LSCFN have very different views on this point. This difference lies at the heart of their opposing arguments on the appeal.

[50] The territorial government regards the role of the LSCFN Treaty as having nailed down and forever settled the rights and obligations of the First Nation community as Aboriginal people. The treaty recognized and affirmed the Aboriginal rights surrendered in the land claim. From 1997 onwards, the rights of the Aboriginal communities of the LSCFN, in the government's view, were limited to the treaty. To put the government's position simplistically, what the First Nations negotiated as terms of the treaty is what they get. Period.

[51] The LSCFN, on the other hand, considers as applicable to the Yukon what was said by the Court in *Mikisew Cree*, at para. 54:

> Treaty making is an important stage in the long process of reconciliation, but it is only a stage. What occurred at Fort Chipewyan in 1899 was not the complete discharge of the duty arising from the honour of the Crown, but a rededication of it.

And so it is, according to the First Nation, with the treaty-making process in the Yukon that led in 1997 to the ratification of the LSCFN Treaty.

[52] I agree with the territorial government that the LSCFN Treaty is a major advance over what happened in Fort Chipewyan in 1899, both in the modern treaty's scope and comprehensiveness, and in the fairness of the procedure that led up to it. The eight pages of generalities in Treaty No. 8 in 1899 is not the equivalent of the 435 pages of the LSCFN Treaty almost a century later. The LSCFN Treaty provides a solid foundation for reconciliation, and the territorial government is quite correct that the LSCFN Treaty should not simply set the stage for further negotiations from ground zero. Nor is that

D. *Le rôle et la fonction du traité PNLSC*

[49] Le gouvernement territorial et la PNLSC ont des points de vue très différents sur cette question. Cette divergence d'opinion se retrouve au centre même des arguments opposés qu'ils ont invoqués dans le cadre du pourvoi.

[50] Pour le gouvernement territorial, le traité PNLSC a fixé de façon définitive les droits et les obligations de la première nation en tant que peuple autochtone. Le traité a reconnu et confirmé les droits ancestraux cédés dans le cadre de la revendication territoriale. À partir de 1997, les droits des communautés autochtones de la PNLSC, selon le gouvernement, ont été limités à ce qui est prévu par le traité. Pour exprimer en termes simplistes la position du gouvernement, les premières nations obtiennent ce qu'elles ont négocié comme termes des traités, un point c'est tout.

[51] La PNLSC, pour sa part, juge applicable au Yukon ce que la Cour a écrit dans *Première nation crie Mikisew*, par. 54 :

> La conclusion de traités est une étape importante du long processus de réconciliation, mais ce n'est qu'une étape. Ce qui s'est passé à Fort Chipewyan en 1899 ne constituait pas un accomplissement parfait de l'obligation découlant de l'honneur de la Couronne, mais une réitération de celui-ci.

Il en va de même, selon la première nation, du processus de conclusion de traités relatifs au Yukon qui a conduit en 1997 à la ratification du traité PNLSC.

[52] Je suis d'accord avec le gouvernement territorial lorsqu'il dit que le traité PNLSC marque un progrès majeur par rapport à ce qui s'est produit à Fort Chipewyan en 1899, tant pour la portée et le caractère global du traité récent que pour la justesse de la procédure qui y a mené. Les huit pages de considérations générales du Traité n^{o} 8 de 1899 ne peuvent équivaloir aux 435 pages du traité PNLSC conclu près d'un siècle plus tard. Le traité PNLSC procure une assise solide à la réconciliation, et le gouvernement territorial a tout à fait raison de soutenir que ce traité ne devrait pas simplement préparer le

the First Nation's position. It simply relies on the principle noted in *Haida Nation* that "[t]he honour of the Crown is always at stake in its dealings with Aboriginal peoples" (para. 16 (emphasis added)). Reconciliation in the Yukon, as elsewhere, is not an accomplished fact. It is a work in progress. The "complete code" position advocated by the territorial government is, with respect, misconceived. As the Court noted in *Mikisew Cree*: "The duty to consult is grounded in the honour of the Crown . . . . The honour of the Crown exists as a source of obligation independently of treaties as well, of course" (para. 51).

[53] On this point, *Haida Nation* represented a shift in focus from *Sparrow*. Whereas the Court in *Sparrow* had been concerned about sorting out the consequences of infringement, *Haida Nation* attempted to head off such confrontations by imposing on the parties a duty to consult and (if appropriate) accommodate in circumstances where development might have a significant impact on Aboriginal rights when and if established. In *Mikisew Cree*, the duty to consult was applied to the management of an 1899 treaty process to "take up" (as in the present case) ceded Crown lands for "other purposes". The treaty itself was silent on the process. The Court held that on the facts of that case the content of the duty to consult was at "the lower end of the spectrum" (para. 64), but that nevertheless the Crown was wrong to act unilaterally.

[54] The difference between the LSCFN Treaty and Treaty No. 8 is not simply that the former is a "modern comprehensive treaty" and the latter is more than a century old. Today's modern treaty will become tomorrow's historic treaty. The distinction lies in the relative precision and sophistication of the modern document. Where adequately resourced and professionally represented parties have sought to order their own affairs, and have

terrain pour d'autres négociations qu'on reprendrait à partir de zéro. Telle n'est pas du reste la position défendue par la première nation. Elle s'appuie simplement sur le principe signalé dans *Nation haïda*, soit que « [l]'honneur de la Couronne est toujours en jeu lorsque cette dernière transige avec les peuples autochtones » (par. 16 (je souligne)). La réconciliation, au Yukon comme ailleurs, n'est pas un fait accompli, mais un chantier permanent. La thèse du « code complet » avancée par le gouvernement territorial est, à mon avis, mal fondée. Comme l'a observé la Cour dans *Première nation crie Mikisew* : « L'obligation de consultation repose sur l'honneur de la Couronne [. . .] L'honneur de la Couronne existe également en tant que source d'obligation indépendante des traités, bien entendu » (par. 51).

[53] Sur cette question, *Nation haïda* marquait un changement de perspective par rapport à *Sparrow*. Alors que dans *Sparrow*, la Cour s'était employée à dégager les conséquences de la violation, elle a tenté dans *Nation haïda* de prévenir de tels affrontements en imposant aux parties une obligation de consulter et (au besoin) d'accommoder, dans des circonstances où le développement est susceptible d'avoir des conséquences importantes sur les droits ancestraux lorsque ceux-ci ont été établis. Dans *Première nation crie Mikisew*, l'obligation de consulter a été appliquée à la gestion d'un processus prévu par un traité de 1899, concernant la « prise » (comme dans la présente espèce) pour d'« autres objets », de terres cédées à la Couronne. Le traité lui-même ne mentionnait aucunement le processus en question. La Cour a conclu que si, d'après les faits de l'espèce, le contenu de l'obligation de consulter se situait « au bas du continuum » (par. 64), la Couronne n'en avait pas moins eu tort d'agir de façon unilatérale.

[54] La différence entre le traité PNLSC et le Traité nº 8 ne tient pas uniquement au fait que le premier est un « traité récent global » tandis que le second a été conclu il y a plus d'un siècle. Le traité récent d'aujourd'hui deviendra le traité historique de demain. La distinction réside plutôt dans la précision et la complexité relatives du document récent. Lorsque des parties bénéficiant de ressources suffisantes et de l'aide de professionnels ont tenté de

given shape to the duty to consult by incorporating consultation procedures into a treaty, their efforts should be encouraged and, subject to such constitutional limitations as the honour of the Crown, the Court should strive to respect their handiwork: *Quebec (Attorney General) v. Moses*, 2010 SCC 17, [2010] 1 S.C.R. 557.

[55] However, the territorial government presses this position too far when it asserts that unless consultation is specifically required by the Treaty it is excluded by negative inference. Consultation in some meaningful form is the necessary foundation of a successful relationship with Aboriginal people. As the trial judge observed, consultation works "to avoid the indifference and lack of respect that can be destructive of the process of reconciliation that the Final Agreement is meant to address" (para. 82).

[56] The territorial government would have been wrong to act unilaterally. The LSCFN had existing treaty rights in relation to the land Paulsen applied for, as set out in s. 16.4.2 of the LSCFN Treaty:

> Yukon Indian People shall have the right to harvest for Subsistence within their Traditional Territory . . . all species of Fish and Wildlife for themselves and their families at all seasons of the year and in any numbers on Settlement Land and on Crown Land to which they have a right of access pursuant to 6.2.0, subject only to limitations prescribed pursuant to Settlement Agreements.

The Crown land was subject to being taken up for other purposes (as in *Mikisew Cree*), including agriculture, but in the meantime the First Nation had a continuing treaty interest in Crown lands to which their members continued to have a treaty right of access (including but not limited to the Paulsen plot). It was no less a treaty interest because it was defeasible.

mettre de l'ordre dans leurs propres affaires et ont donné forme à l'obligation de consulter en incorporant dans un traité la procédure de consultation, il convient d'encourager leurs efforts et, sous réserve des limitations constitutionnelles comme le principe de l'honneur de la Couronne, la Cour devrait essayer de respecter le fruit de leur travail : *Québec (Procureur général) c. Moses*, 2010 CSC 17, [2010] 1 R.C.S. 557.

[55] Cependant, le gouvernement territorial pousse trop loin cette thèse lorsqu'il prétend que la consultation qui n'est pas spécifiquement requise par le traité est exclue par inférence négative. Une consultation digne de ce nom demeure le fondement nécessaire d'une relation réussie avec les peuples autochtones. Comme le juge de première instance l'a pertinemment fait remarquer, la consultation permet [TRADUCTION] « d'éviter l'indifférence et le manque de respect susceptibles d'anéantir le processus de réconciliation que l'entente définitive est censée établir » (par. 82).

[56] Le gouvernement territorial aurait eu tort d'agir de façon unilatérale. La PNLSC avait des droits existants issus d'un traité à l'égard de la parcelle visée par la demande de M. Paulsen, comme l'indique l'art. 16.4.2 du traité PNLSC :

> Les Indiens du Yukon ont le droit de récolter, à des fins de subsistance, dans les limites de leur territoire traditionnel [. . .] toute espèce de poisson et d'animal sauvage, pour eux-mêmes et pour leur famille, en toute saison et sans limite de prises, sur des terres visées par un règlement et sur des terres de la Couronne où ils bénéficient d'un droit d'accès conformément à la section 6.2.0, sous réserve seulement des limites prévues par les ententes portant règlement.

Les terres de la Couronne pouvaient être prises à d'autres fins (comme dans *Première nation crie Mikisew*) et notamment à des fins d'agriculture, mais entre-temps, la première nation conservait un intérêt issu d'un traité sur les terres de la Couronne à l'égard desquelles ses membres avaient toujours un droit d'accès issu d'un traité (y compris la parcelle de M. Paulsen). La possibilité que cet intérêt soit supprimé n'en faisait pas moins un intérêt issu d'un traité.

[57] The decision maker was required to take into account the impact of allowing the Paulsen application on the concerns and interests of members of the First Nation. He could not take these into account unless the First Nation was consulted as to the nature and extent of its concerns. Added to the ordinary administrative law duties, of course, was the added legal burden on the territorial government to uphold the honour of the Crown in its dealings with the First Nation. Nevertheless, given the existence of the treaty surrender and the legislation in place to implement it, and the decision of the parties not to incorporate a more general consultation process in the LSCFN Treaty itself, the content of the duty of consultation (as found by the Court of Appeal) was at the lower end of the spectrum. It was not burdensome. But nor was it a mere courtesy.

[57] Le décideur était tenu de prendre en compte les conséquences qu'aurait le fait d'accorder la demande de M. Paulsen sur les préoccupations et les intérêts des membres de la première nation. Or, il ne pouvait pas le faire sans que la première nation ne soit consultée au sujet de la nature et de la portée de ses préoccupations. S'ajoutait bien sûr aux obligations habituelles ressortissant au droit administratif, l'obligation légale du gouvernement territorial de préserver l'honneur de la Couronne dans ses relations avec la première nation. Néanmoins, étant donné l'existence de la cession opérée par le traité et les textes législatifs adoptés en vue de la mise en œuvre de celui-ci, ainsi que la décision des parties de ne pas incorporer dans le traité PNLSC lui-même un processus de consultation d'un caractère plus général, le contenu de l'obligation de consultation se situait (comme l'a conclu la Cour d'appel) au bas du continuum. Il ne s'agissait pas d'une obligation exigeante. Mais ce n'était pas non plus une simple affaire de courtoisie.

E. *The Source of the Duty to Consult Is External to the LSCFN Treaty*

E. *La source de l'obligation de consulter est extrinsèque au traité PNLSC*

[58] The LSCFN Treaty dated July 21, 1997, is a comprehensive lawyerly document. The territorial government argues that the document refers to the duty to consult in over 60 different places but points out that none of them is applicable here (although the implementation of Chapter 12, which was left to subsequent legislative action, did not foreclose the possibility of such a requirement).

[58] Le traité PNLSC, daté du 21 juillet 1997, est un document à caractère juridique des plus détaillé. Le gouvernement territorial fait valoir qu'il est fait mention de l'obligation de consulter à plus de 60 endroits différents dans ce document, mais qu'aucun de ces cas n'est applicable en l'espèce (même si la mise en œuvre du chapitre 12, laissée en suspens dans l'attente d'une mesure législative, n'écartait pas la possibilité d'une telle obligation).

[59] There was considerable discussion at the bar about whether the duty to consult, if it applies at all, should be considered an implied term of the LSCFN Treaty or a duty externally imposed as a matter of law.

[59] On a longuement débattu, à l'audience, la question de savoir si l'obligation de consulter, à supposer qu'elle soit applicable d'une quelconque façon, devrait être considérée comme une clause implicite du traité PNLSC ou comme une obligation juridique extérieure au traité.

[60] The territorial government takes the view that terms cannot be implied where the intention of the parties is plainly inconsistent with such an outcome. In this case, it says, the implied term is negated by the parties' treatment of consultation throughout the treaty and its significant absence

[60] Pour le gouvernement territorial, il ne saurait y avoir de clause implicite qui serait à l'évidence incompatible avec l'intention des parties. En l'espèce, plaide-t-il, la clause implicite est contredite par la manière dont les parties ont abordé la consultation dans l'ensemble du traité et par l'absence

in the case of land grants. The necessary "negative inference", argues the territorial government, is that failure to include it was intentional.

[61] I think this argument is unpersuasive. The duty to consult is treated in the jurisprudence as a means (in appropriate circumstances) of upholding the honour of the Crown. Consultation can be shaped by agreement of the parties, but the Crown cannot contract out of its duty of honourable dealing with Aboriginal people. As held in *Haida Nation* and affirmed in *Mikisew Cree*, it is a doctrine that applies independently of the expressed or implied intention of the parties.

[62] The argument that the LSCFN Treaty is a "complete code" is untenable. For one thing, as the territorial government acknowledges, nothing in the text of the LSCFN Treaty authorizes the making of land grants on Crown lands to which the First Nation continues to have treaty access for subsistence hunting and fishing. The territorial government points out that authority to alienate Crown land exists in the general law. This is true, but the general law exists outside the treaty. The territorial government cannot select from the general law only those elements that suit its purpose. The treaty sets out rights and obligations of the parties, but the treaty is part of a special relationship: "In all its dealings with Aboriginal peoples, from the assertion of sovereignty to the resolution of claims and the implementation of treaties, the Crown must act honourably" (*Haida Nation*, at para. 17 (emphasis added)). As the text of s. 35(3) makes clear, a modern comprehensive land claims agreement is as much a treaty in the eyes of the Constitution as are the earlier pre- and post-Confederation treaties.

[63] At the time the Paulsen application was pending, the implementation of the LSCFN Treaty was in transition. It contemplates in Chapter 12

significative de celle-ci dans le cas de la concession de terres. La nécessaire « inférence négative », soutient le gouvernement territorial, est que le fait de ne pas prévoir la consultation était intentionnel.

[61] Cet argument ne me paraît pas convaincant. L'obligation de consulter est considérée, dans la jurisprudence, comme un moyen de préserver l'honneur de la Couronne (lorsque cela s'avère indiqué). Les parties ont la possibilité de s'entendre sur les modalités de la consultation, mais la Couronne ne peut pas se soustraire à son obligation de traiter honorablement avec les Autochtones. Cette doctrine, comme nous l'avons affirmé dans *Nation haïda* et confirmé dans *Première nation crie Mikisew*, s'applique indépendamment de l'intention expresse ou implicite des parties.

[62] L'argument suivant lequel le traité PNLSC est un « code complet » ne tient pas. D'une part, comme le reconnaît le gouvernement territorial, le texte du traité PNLSC n'autorise d'aucune manière l'octroi de terres de la Couronne à l'égard desquelles la première nation continue de jouir, en vertu du traité, d'un droit d'accès à des fins de chasse et de pêche de subsistance. Le gouvernement territorial souligne que le pouvoir d'aliéner des terres de la Couronne existe selon le droit commun. C'est vrai, mais le droit commun existe à l'extérieur du traité. Le gouvernement territorial ne peut pas retenir uniquement, dans le droit commun, les éléments qui lui conviennent. Le traité énonce les droits et les obligations des parties, tout en s'inscrivant dans une relation spéciale : « Dans tous ses rapports avec les peuples autochtones, qu'il s'agisse de l'affirmation de sa souveraineté, du règlement de revendications ou de la mise en œuvre de traités, la Couronne doit agir honorablement » (*Nation haïda*, par. 17 (je souligne)). Comme il ressort clairement du texte du par. 35(3), une entente récente relative à des revendications globales constitue, du point de vue de la Constitution, un traité au même titre que les anciens traités conclus avant et après la Confédération.

[63] Au moment où la demande de M. Paulsen était à l'étude, la mise en œuvre du traité PNLSC était dans une phase de transition. Le chapitre 12

the enactment of a "development assessment process" to implement the treaty provisions. This was ultimately carried into effect in the *Yukon Environmental and Socio-economic Assessment Act*, S.C. 2003, c. 7 ("*YESAA*"). The territorial government acknowledges that the *YESAA* would have applied to the Paulsen application. Part 2 of the Act (regarding the assessment process) did not come into force until after the Paulsen application was approved (s. 134). The treaty required the government to introduce the law within two years of the date of the settlement legislation (s. 12.3.4). This was not done. The subsequent legislative delay did not empower the territorial government to proceed without consultation.

envisage l'adoption d'un « processus d'évaluation des activités de développement » en vue de la mise en œuvre des dispositions du traité. Cette mise en œuvre a finalement été accomplie par la *Loi sur l'évaluation environnementale et socioéconomique au Yukon*, L.C. 2003, ch. 7 (« *LÉESY* »). Le gouvernement territorial reconnaît que la *LÉESY* se serait appliquée à la demande de M. Paulsen. La partie 2 de cette loi (concernant le processus d'évaluation) n'est entrée en vigueur qu'après l'approbation de la demande en question (art. 134). Le gouvernement était tenu, aux termes du traité, d'édicter une mesure législative dans les deux ans suivant l'entrée en vigueur de la loi de mise en œuvre (art. 12.3.4). Il ne l'a pas fait. Le retard législatif subséquent ne donnait pas au gouvernement territorial le pouvoir d'agir sans consultation.

[64] The purpose of the *YESAA* is broadly stated to "[give] effect to provisions of the Umbrella Final Agreement respecting assessment of environmental and socio-economic effects" by way of a "comprehensive, neutrally conducted assessment process" (s. 5) where "an authorization or the grant of an interest in land" would be required (s. 47(2)(*c*)). The neutral assessor is the Yukon Environmental and Socio-economic Assessment Board, to which (excluding the chair) the Council for Yukon Indians would nominate half the members and the territorial government the other half. The Minister, after consultation, would appoint the chair.

[64] La *LÉESY* vise d'une manière générale à « met[tre] en œuvre diverses dispositions de l'accord-cadre relatives à l'évaluation des effets sur l'environnement ou la vie socioéconomique » par l'instauration d'un « processus complet et impartial d'évaluation » (art. 5) lorsque « l'autorisation [. . .] ou l'attribution [. . .] de droits fonciers » serait nécessaire (al. 47(2)*c*)). L'évaluateur neutre est l'Office d'évaluation environnementale et socioéconomique du Yukon, dont les membres (sauf le président) seraient nommés pour moitié par le Conseil des Indiens du Yukon et pour l'autre moitié par le gouvernement territorial. Le ministre nommerait le président après consultation.

[65] The territorial government contends that this new arrangement is intended to satisfy the requirement of consultation on land grants in a way that is fair both to First Nations and to the other people of the Yukon. Assuming (without deciding) this to be so, the fact remains that no such arrangement was in place at the relevant time.

[65] Selon le gouvernement territorial, ce nouveau régime vise à répondre à l'exigence de consultation au sujet de la concession de terres d'une façon équitable à la fois pour les premières nations et pour les autres habitants du Yukon. En supposant que tel soit le cas (je ne me prononce pas sur la question), il n'en demeure pas moins que le régime en question n'était pas en vigueur à l'époque en cause.

[66] In the absence of the agreed arrangement, consultation was necessary in this case to uphold the honour of the Crown. It was therefore imposed as a matter of law.

[66] En l'absence du régime sur lequel on s'était entendu, la consultation était nécessaire en l'espèce pour préserver l'honneur de la Couronne. Elle était donc imposée par le droit.

F. *The LSCFN Treaty Does Not Exclude the Duty to Consult and, if Appropriate, Accommodate*

[67] When a modern treaty has been concluded, the first step is to look at its provisions and try to determine the parties' respective obligations, and whether there is some form of consultation provided for in the treaty itself. If a process of consultation has been established in the treaty, the scope of the duty to consult will be shaped by its provisions.

[68] The territorial government argues that a mutual objective of the parties to the LSCFN Treaty was to achieve certainty, as is set out in the preamble:

> . . . the parties to this Agreement wish to achieve certainty with respect to the ownership and use of lands and other resources of the Little Salmon/Carmacks First Nation Traditional Territory;
>
> the parties wish to achieve certainty with respect to their relationships to each other . . . .

Moreover the treaty contains an "entire agreement" clause. Section 2.2.15 provides that

> Settlement Agreements shall be the entire agreement between the parties thereto and there shall be no representation, warranty, collateral agreement or condition affecting those Agreements except as expressed in them.

[69] However, as stated, the duty to consult is not a "collateral agreement or condition". The LSCFN Treaty *is* the "entire agreement", but it does not exist in isolation. The duty to consult is imposed as a matter of law, irrespective of the parties' "agreement". It does not "affect" the agreement itself. It is simply part of the essential legal framework within which the treaty is to be interpreted and performed.

[70] The First Nation points out that there is an express exception to the "entire agreement" clause in the case of "existing or future constitutional rights", at s. 2.2.4:

> Subject to 2.5.0, 5.9.0, 5.10.1 and 25.2.0, Settlement Agreements shall not affect the ability of aboriginal

F. *Le traité PNLSC n'exclut pas l'obligation de consulter et, au besoin, d'accommoder*

[67] Lorsqu'un traité récent a été conclu, la première étape consiste à en examiner les dispositions et à tenter de déterminer les obligations respectives des parties et l'existence, dans le traité lui-même, d'une forme quelconque de consultation. Si un processus de consultation a été établi dans le traité, les dispositions du traité indiqueront la portée de l'obligation de consulter.

[68] Le gouvernement territorial plaide que la certitude constituait un objectif mutuel des parties au traité PNLSC, comme l'indique le préambule :

> . . . les parties à la présente entente désirent définir avec certitude les droits de propriété et d'utilisation des terres et autres ressources du territoire traditionnel de la première nation de Little Salmon/Carmacks;
>
> les parties à la présente entente désirent définir avec certitude leurs rapports les unes avec les autres . . .

Qui plus est, le traité renferme une clause du type « intégralité de l'entente », soit l'art. 2.2.15 :

> Chaque entente portant règlement constitue l'entente complète intervenue entre les parties à cette entente et il n'existe aucune autre assertion, garantie, convention accessoire ou condition touchant cette entente que celles qui sont exprimées dans cette dernière.

[69] Toutefois, l'obligation de consulter ne constitue pas, comme je l'ai indiqué, une « convention accessoire ou condition ». Le traité PNLSC *constate* effectivement l'« entente complète », mais il n'existe pas isolément. L'obligation de consulter est imposée par le droit sans égard à l'« entente » conclue entre les parties. Elle ne « touche » pas l'entente elle-même. Elle fait simplement partie du cadre juridique essentiel dans lequel le traité doit être interprété et exécuté.

[70] La première nation souligne qu'une exception à la clause de l'« entente complète » est expressément prévue à l'art. 2.2.4, pour les « droits constitutionnels — existants ou futurs » :

> Sous réserve des sections 2.5.0, 5.9.0 et 25.2.0 et de l'article 5.10.1, les ententes portant règlement n'ont pas pour

people of the Yukon to exercise, or benefit from, any existing or future constitutional rights for aboriginal people that may be applicable to them.

Section 2.2.4 applies, the LSCFN argues, because the duty of consultation is a new constitutional duty and should therefore be considered a "future" constitutional right within the scope of the section.

[71] As discussed, the applicable "existing or future *constitutional* right" is the right of the Aboriginal parties to have the treaty performed in a way that upholds the honour of the Crown. That principle is readily conceded by the territorial government. However, the honour of the Crown may not *always require consultation*. The parties may, in their treaty, negotiate a different mechanism which, nevertheless, in the result, upholds the honour of the Crown. In this case, the duty applies, the content of which will now be discussed.

G. *The Content of the Duty to Consult*

[72] The adequacy of the consultation was the subject of the First Nation's cross-appeal. The adequacy of what passed (or failed to pass) between the parties must be assessed in light of the role and function to be served by consultation on the facts of the case and whether that purpose was, on the facts, satisfied.

[73] The Yukon *Lands Act* and the *Territorial Lands (Yukon) Act* created a discretionary authority to make grants but do not specify the basis on which the discretion is to be exercised. It was clear that the Paulsen application might *potentially* have an adverse impact on the LSCFN Treaty right to have access to the 65 hectares for subsistence "harvesting" of fish and wildlife, and that such impact would include the First Nation's beneficial use of the surrounding Crown lands to which its members have a continuing treaty right of access. There was at least the possibility that the impact would be significant in economic and cultural terms. The Director was then required, as a matter of both

effet de porter atteinte à la capacité des peuples autochtones du Yukon d'exercer des droits constitutionnels — existants ou futurs — qui sont reconnus aux peuples autochtones et qui s'appliquent à eux ou de tirer parti de tels droits.

L'article 2.2.4 s'applique, soutient la PNLSC, parce que l'obligation de consultation est une nouvelle obligation constitutionnelle et devrait donc être considérée comme un droit constitutionnel « futur » tombant dans le champ d'application de cet article.

[71] Comme nous l'avons vu, le « droit *constitutionnel* existant ou futur » applicable est le droit des parties autochtones à ce que le traité soit exécuté d'une manière propre à préserver l'honneur de la Couronne. Ce principe est admis volontiers par le gouvernement territorial. Toutefois, l'honneur de la Couronne peut ne pas *toujours exiger la consultation*. Les parties peuvent, dans leur traité, négocier un mécanisme différent qui permet malgré tout, dans son résultat, de préserver l'honneur de la Couronne. En l'espèce, l'obligation s'applique, et j'en viens maintenant à l'examen de son contenu.

G. *Le contenu de l'obligation de consulter*

[72] Le pourvoi incident de la première nation porte sur le caractère adéquat de la consultation. Ce qui s'est passé (ou ne s'est pas passé) entre les parties doit être évalué à la lumière du rôle et de la fonction de la consultation au regard des faits de l'espèce, et de la question de savoir si cet objectif a été rempli au regard des faits.

[73] La *Loi sur les terres* du Yukon et la *Loi du Yukon sur les terres territoriales* ont institué un pouvoir discrétionnaire de concession de terres, mais sans préciser la base sur laquelle ce pouvoir discrétionnaire doit être exercé. Il ne faisait de doute que la demande de M. Paulsen était *susceptible* d'avoir des incidences négatives sur le droit d'accès aux 65 hectares conféré par le traité PNLSC pour la « récolte » de poissons et d'animaux sauvages à des fins de subsistance, incidences comprenant l'usage bénéficiaire par la première nation des terres de la Couronne avoisinantes auxquelles ses membres continuent d'avoir un droit d'accès en vertu du traité. Il existait au moins une possibilité que ces

compliance with the legal duty to consult based on the honour of the Crown *and* procedural fairness to be informed about the nature and severity of such impacts before he made a decision to determine (amongst other things) whether accommodation was necessary or appropriate. The purpose of consultation was not to reopen the LSCFN Treaty or to renegotiate the availability of the lands for an agricultural grant. Such availability was already established in the Treaty. Consultation was required to help manage the important ongoing relationship between the government and the Aboriginal community in a way that upheld the honour of the Crown.

[74] This "lower end of the spectrum" approach is consistent with the LSCFN Treaty itself which sets out the elements the parties themselves regarded as appropriate regarding consultation (where consultation is required) as follows:

"Consult" or "Consultation" means to provide:

(a) to the party to be consulted, notice of a matter to be decided in sufficient form and detail to allow that party to prepare its views on the matter;

(b) a reasonable period of time in which the party to be consulted may prepare its views on the matter, and an opportunity to present such views to the party obliged to consult; and

(c) full and fair consideration by the party obliged to consult of any views presented.

(LSCFN Treaty, Chapter 1)

At the hearing of this appeal, counsel for the First Nation contended that the territorial government has "to work with the Aboriginal people to understand what the effect will be, and then they have to try and minimize it" (transcript, at p. 48 (emphasis added)). It is true that these treaties were negotiated prior to *Haida Nation* and *Mikisew Cree*, but it must have been obvious to the negotiators that

incidences soient importantes sur les plans économique et culturel. Le directeur était par conséquent tenu, pour se conformer à l'obligation juridique de consulter fondée sur l'honneur de la Couronne *et* au nom de l'équité procédurale, d'être informé de la nature et de la gravité de telles incidences avant de prendre une décision, pour déterminer (entre autres choses) si des accommodements étaient nécessaires ou appropriés. La consultation n'avait pas pour objet de rouvrir le traité PNLSC ou de renégocier la possibilité de concéder les terres à des fins agricoles. Cette possibilité était déjà prévue au traité. La consultation était requise afin de faciliter la gestion de la relation importante entre le gouvernement et la communauté autochtone en conformité avec la préservation de l'honneur de la Couronne.

[74] Cette approche au « bas du continuum » est conforme au traité PNLSC lui-même, qui précise les éléments considérés par les parties elles-mêmes comme constituant une consultation appropriée (lorsqu'une consultation est nécessaire) :

« consulter » ou « consultation » La procédure selon laquelle :

a) un avis suffisamment détaillé concernant la question à trancher doit être communiqué à la partie devant être consultée afin de lui permettre de préparer sa position sur la question;

b) la partie devant être consultée doit se voir accorder un délai suffisant pour lui permettre de préparer sa position sur la question, ainsi que l'occasion de présenter cette position à la partie obligée de tenir la consultation;

c) la partie obligée de tenir la consultation doit procéder à un examen complet et équitable de toutes les positions présentées.

(Traité PNLSC, chapitre 1)

Lors de l'audition du pourvoi, l'avocat de la première nation a soutenu que le gouvernement territorial doit [TRADUCTION] « s'efforcer, de concert avec les peuples autochtones, de comprendre quels seront les effets, et ensuite il doit essayer de les réduire au minimum » (transcription, p. 48 (je souligne)). Il est vrai que ces traités ont été négociés avant les arrêts *Nation haïda* et *Première nation crie Mikisew*, mais

there is a substantial difference between imposing on a decision maker a duty to provide "full and fair consideration" of the First Nation's "views" and (on the other hand) an obligation to try "to understand what the effect will be, and then . . . to try and minimize it". It is the former formulation which the parties considered sufficient and appropriate. Even in the absence of treaty language, the application of *Haida Nation* and *Mikisew Cree* would have produced a similar result.

il devait être évident pour les négociateurs qu'il existe une différence substantielle entre, d'une part, le fait d'imposer à un décideur une obligation de procéder à « un examen complet et équitable » des « positions » de la première nation, et, d'autre part, une obligation de s'efforcer [TRADUCTION] « de comprendre quels seront les effets, et ensuite [. . .] essayer de les réduire au minimum ». C'est la première de ces obligations que les parties ont considérée comme suffisante et appropriée. Même en l'absence de clauses au traité, l'application des arrêts *Nation haïda* et *Première nation crie Mikisew* aurait produit un résultat semblable.

[75] In my view, the negotiated definition is a reasonable statement of the content of consultation "at the lower end of the spectrum". The treaty does not apply directly to the land grant approval process, which is not a treaty process, but it is a useful indication of what the parties themselves considered fair, and is consistent with the jurisprudence from *Haida Nation* to *Mikisew Cree*.

[75] À mon avis, la définition négociée constitue un énoncé raisonnable du contenu de la consultation « au bas du continuum ». Le traité ne régit pas directement le processus d'approbation des concessions de terres, qui ne relève pas d'un traité, mais il indique de façon utile ce que les parties elles-mêmes jugeaient équitable, et il est conforme à la jurisprudence des arrêts *Nation haïda* et *Première nation crie Mikisew*.

H. *There Was Adequate Consultation in This Case*

H. *Il y a eu une consultation adéquate en l'espèce*

[76] The First Nation acknowledges that it received appropriate notice and information. Its letter of objection dated July 27, 2004, set out its concerns about the impact on Trapline #143, a cabin belonging to Roger Rondeau (who was said in the letter to have "no concerns with the application") as well as Johnny Sam's cabin, and "potential areas of heritage and cultural interest" that had not however "been researched or identified". The letter recommended an archaeological survey for this purpose (this was subsequently performed *before* the Paulsen application was considered and approved by the Director). Nothing was said in the First Nation's letter of objection about possible inconsistency with the FWMP, or the need to preserve the 65 hectares for educational purposes.

[76] La première nation reconnaît avoir reçu un avis suffisant et l'information utile. Sa lettre d'opposition datée du 27 juillet 2004 faisait état de ses préoccupations au sujet des incidences de la concession de la parcelle sur le territoire de piégeage n^{o} 143, sur une cabane appartenant à Roger Rondeau (chez qui, d'après la lettre, [TRADUCTION] « la demande [ne suscitait] aucune inquiétude ») ainsi que sur la cabane de Johnny Sam, et sur [TRADUCTION] « des zones pouvant présenter un intérêt patrimonial et culturel » mais qui n'avaient pas « été identifiées » ou n'avaient pas « fait l'objet de recherches ». La lettre recommandait qu'on procède à cette fin à une reconnaissance archéologique (reconnaissance qui a eu lieu par la suite, *avant* l'examen et l'approbation, par le directeur, de la demande de M. Paulsen). Nulle part dans la lettre d'opposition de la première nation n'était-il fait mention d'une possible non-conformité avec le PGRHF, ou de la nécessité de préserver les 65 hectares à des fins éducatives.

[77] The concerns raised in the First Nation's letter of objection dated July 27, 2004, were put before the August 13, 2004 meeting of LARC (which the First Nation did not attend) and, for the benefit of those not attending, were essentially reproduced in the minutes of that meeting. The minutes noted that "[t]here will be some loss of wildlife habitat in the area, but it is not significant." The minutes pointed out that Johnny Sam was entitled to compensation under the LSCFN Treaty to the extent the value of Trapline #143 was diminished. The minutes were available to the LSCFN as a member of LARC.

[77] Les préoccupations soulevées dans la lettre d'opposition de la première nation datée du 27 juillet 2004 ont été évoquées lors de la réunion du CEDAT tenue le 13 août 2004 (à laquelle la première nation n'était pas représentée) et ont été décrites, pour l'essentiel, dans le procès-verbal de cette réunion, à l'intention des personnes qui étaient absentes. Il est mentionné dans le procès-verbal qu'[TRADUCTION] « [i]l y aura une certaine perte au plan de l'habitat faunique dans la région, mais elle n'est pas importante. » Il y est également souligné que Johnny Sam avait droit à une indemnisation en vertu du traité PNLSC dans la mesure où la valeur du territoire de piégeage nº 143 se trouvait diminuée. La PNLSC, en tant que membre du CEDAT, pouvait consulter le procès-verbal.

[78] The First Nation complains that its concerns were not taken seriously. It says, for example, the fact that Johnny Sam is eligible for compensation ignores the cultural and educational importance of Trapline #143. He wants the undiminished trapline, not compensation. However, Larry Paulsen also had an important stake in the outcome. The Director had a discretion to approve or not to approve and he was not obliged to decide this issue in favour of the position of the First Nation. Nor was he obliged as a matter of law to await the outcome of the FWMP. The Director had before him the First Nation's concerns and the response of other members of LARC. He was entitled to conclude that the impact of the Paulsen grant on First Nation's interests was not significant.

[78] La première nation se plaint de ce que ses préoccupations n'aient pas été prises au sérieux. Elle dit par exemple que le fait que Johnny Sam ait droit à une indemnisation témoigne d'une incompréhension de l'importance du territoire de piégeage nº 143 aux plans culturel et éducatif. Il veut conserver le territoire de piégeage dans son intégralité, et non toucher une indemnisation. L'enjeu était cependant important pour Larry Paulsen également. Le directeur avait le pouvoir discrétionnaire d'approuver ou de ne pas approuver sa demande et il n'était pas obligé de trancher la question en faveur de la position défendue par la première nation. Il n'était pas non plus légalement tenu d'attendre le résultat du PGRHF. Le directeur connaissait les préoccupations de la première nation et la réponse des autres membres du CEDAT. Il était en droit de conclure que la concession à M. Paulsen de la parcelle en question n'avait pas d'incidences importantes sur les intérêts de la première nation.

[79] It is important to stress that the First Nation does not deny that it had full notice of the Paulsen application, and an opportunity to state its concerns through the LARC process to the ultimate decision maker in whatever scope and detail it considered appropriate. Moreover, unlike the situation in *Mikisew Cree*, the First Nation here was consulted *as a First Nation* through LARC and not as members of the general public. While procedural fairness is a flexible concept and takes into account the

[79] Il importe de signaler que la première nation ne nie pas avoir reçu un avis suffisant de la demande de M. Paulsen, et avoir eu l'occasion d'exposer, dans toute l'ampleur et la précision jugées appropriées, ses préoccupations au décideur ultime dans le cadre des procédures du CEDAT. De plus, contrairement à la situation en cause dans l'affaire *Première nation crie Mikisew*, la première nation en l'espèce a été consultée dans le cadre du CEDAT *en tant que première nation* et non en tant que membre du grand

Aboriginal dimensions of the decision facing the Director, it is nevertheless a doctrine that applies as a matter of administrative law to regulate relations between the government decision makers and all residents of the Yukon, Aboriginal as well as non-Aboriginal, Mr. Paulsen as well as the First Nation. On the record, and for the reasons already stated, the requirements of procedural fairness were met, as were the requirements of the duty to consult.

[80] It is impossible to read the record in this case without concluding that the Paulsen application was simply a flashpoint for the pent-up frustration of the First Nation with the territorial government bureaucracy. However, the result of disallowing the application would simply be to let the weight of this cumulative problem fall on the head of the hapless Larry Paulsen (who still awaits the outcome of an application filed more than eight years ago). This would be unfair.

I. *The Duty to Accommodate*

[81] The First Nation's argument is that in this case the legal requirement was not only procedural consultation but substantive accommodation. *Haida Nation* and *Mikisew Cree* affirm that the duty to consult *may* require, in an appropriate case, accommodation. The test is not, as sometimes seemed to be suggested in argument, a duty to accommodate to the point of undue hardship for the non-Aboriginal population. Adequate consultation having occurred, the task of the Court is to review the exercise of the Director's discretion taking into account all of the relevant interests and circumstances, including the First Nation entitlement and the nature and seriousness of the impact on that entitlement of the proposed measure which the First Nation opposes.

[82] The 65-hectare plot had already been reconfigured at government insistence to accommodate

public. Si l'équité procédurale est une notion souple et prend en compte les aspects qui, dans la décision que doit prendre le directeur, touchent directement les Autochtones, il n'en demeure pas moins que cette doctrine s'applique en droit administratif pour encadrer les relations entre les décideurs gouvernementaux et tous les habitants du Yukon, Autochtones comme non-Autochtones, et M. Paulsen comme la première nation. Au vu du dossier et pour les raisons exposées précédemment, les exigences de l'équité procédurale ont été respectées, tout comme celles de l'obligation de consulter.

[80] Il est impossible de parcourir le dossier de cette affaire sans voir dans la demande de M. Paulsen la petite étincelle qui allait faire éclater le mécontentement accumulé par la première nation face à la bureaucratie du gouvernement territorial. Le rejet de cette demande, cependant, ferait simplement porter le poids de ce problème cumulatif à l'infortuné Larry Paulsen (qui attend toujours l'issue d'une demande présentée il y a plus de huit ans). Ce résultat serait injuste.

I. *L'obligation d'accommoder*

[81] La première nation avance que dans la présente affaire, il y avait une obligation juridique non seulement de tenir une consultation au plan procédural, mais d'offrir des mesures concrètes d'accommodement. Il est précisé dans *Nation haïda* et dans *Première nation crie Mikisew* que l'obligation de consulter *peut*, dans certains cas, exiger des accommodements. Le critère ne consiste pas, comme on a parfois semblé le soutenir dans l'argumentation, dans une obligation d'accommoder jusqu'au point où la population non autochtone subit une contrainte excessive. Une consultation adéquate ayant eu lieu, il incombe à la Cour d'examiner la façon dont le directeur a exercé son pouvoir discrétionnaire, compte tenu de l'ensemble des circonstances et des intérêts pertinents, y compris les droits de la première nation ainsi que la nature et la gravité de l'incidence, sur ces droits, de la mesure proposée à laquelle la première nation s'oppose.

[82] La parcelle de 65 hectares avait déjà été redélimitée à la demande pressante du gouvernement

various concerns. The First Nation did not suggest any alternative configuration that would be more acceptable (although it suggested at one point that any farming should be organic in nature). In this case, in its view, accommodation must inevitably lead to rejection of the Paulsen application. However, with respect, nothing in the treaty itself or in the surrounding circumstances gave rise to a requirement of accommodation. The government was "taking up" surrendered Crown land for agricultural purposes as contemplated in the treaty.

[83] The concerns raised by the First Nation were important, but the question before the Director was in some measure a policy decision related to the 1991 Agricultural Policy as well as to whether, on the facts, the impact on the First Nation interests were as serious as claimed. He then had to weigh those concerns against the interest of Larry Paulsen in light of the government's treaty and other legal obligations to Aboriginal people. It is likely that many, if not most, applications for grants of remote land suitable for raising livestock will raise issues of wildlife habitat, and many grants that interfere with traplines and traditional economic activities will also have a cultural and educational dimension. The First Nation points out that the Paulsen proposed building would trigger a "no-shooting zone" that would affect Johnny Sam's use of his cabin (as well as his trapline). However, where development occurs, shooting is necessarily restricted, and the LSCFN Treaty is not an anti-development document.

[84] *Somebody* has to bring consultation to an end and to weigh up the respective interests, having in mind the Yukon public policy favouring agricultural development where the rigorous climate of the Yukon permits. The Director is the person with the delegated authority to make the decision whether to approve a grant of land already surrendered by the

pour tenir compte de certaines préoccupations. La première nation n'a suggéré aucune autre délimitation qui lui aurait été plus acceptable (bien qu'elle ait mentionné à un certain moment que toute activité agricole devait être de nature biologique). Dans le cas présent, l'accommodement doit inévitablement, à ses yeux, entraîner le rejet de la demande de M. Paulsen. Toutefois, le traité lui-même ou l'ensemble des circonstances ne donnent en aucun cas ouverture à une obligation d'accommodement. Le gouvernement « prenait » des terres de la Couronne cédées pour qu'elles servent à l'agriculture, ce que le traité envisageait.

[83] Les préoccupations soulevées par la première nation étaient certes importantes, mais la question soumise au directeur constituait dans une certaine mesure une décision touchant à la Politique agricole pour 1991 ainsi qu'à la question de savoir si, d'après les faits, les incidences sur les intérêts de la première nation étaient aussi graves que celle-ci le prétendait. Il devait alors mettre dans la balance ces préoccupations et l'intérêt de Larry Paulsen à la lumière des obligations juridiques (issues de traités ou non) du gouvernement envers les Autochtones. Bon nombre, sinon la plupart, des demandes de concession de terres éloignées propres à l'élevage du bétail susciteront des préoccupations au chapitre de l'habitat faunique, et de nombreuses concessions de terres nuisant aux territoires de piégeage et aux activités économiques traditionnelles auront aussi une dimension culturelle et éducative. La première nation souligne que le bâtiment proposé par M. Paulsen entraînerait la création d'une [TRADUCTION] « zone d'interdiction de chasse » qui entraverait l'utilisation par Johnny Sam de sa cabane (et de son territoire de piégeage). Cependant, le développement a nécessairement pour conséquence des restrictions en matière de chasse, et le traité PNLSC n'est pas un document anti-développement.

[84] Il doit y avoir *quelqu'un* qui met un terme à la consultation et soupèse les intérêts respectifs en jeu en tenant compte de la politique du Yukon favorable au développement de l'agriculture là où le climat rigoureux le permet. Or, le directeur est la personne à qui a été délégué le pouvoir de décider s'il y a lieu d'approuver la concession de terres déjà

First Nation. The purpose of the consultation was to ensure that the Director's decision was properly informed.

[85] The Director did not err in law in concluding that the consultation in this case with the First Nation was adequate.

[86] The advice the Director received from his officials after consultation is that the impact would not be significant. There is no evidence that he failed to give the concerns of the First Nation "full and fair consideration". The material filed by the parties on the judicial review application does not demonstrate any palpable error of fact in his conclusion.

[87] It seems the Director was simply not content to put Mr. Paulsen's interest on the back burner while the government and the First Nation attempted to work out some transitional rough spots in their relationship. He was entitled to proceed as he did.

[88] Whether or not a court would have reached a different conclusion on the facts is not relevant. The decision to approve or not to approve the grant was given by the Legislature to the Minister who, in the usual way, delegated the authority to the Director. His disposition was not unreasonable.

IV. Conclusion

[89] I would dismiss the appeal and cross-appeal, with costs.

English version of the reasons of LeBel and Deschamps JJ. delivered by

[90] DESCHAMPS J. — The Court has on numerous occasions invited governments and Aboriginal peoples to negotiate the precise definitions of Aboriginal rights and the means of exercising them. To protect the integrity of the negotiation process, the Court developed, on the basis of what was

cédées par la première nation. La consultation avait pour but de garantir que la décision du directeur était prise en connaissance de cause.

[85] Le directeur n'a pas commis d'erreur de droit en concluant qu'en l'espèce, la consultation avec la première nation était adéquate.

[86] Selon l'avis reçu de ses fonctionnaires par le directeur après la consultation, les incidences ne seraient pas importantes. Rien n'indique que les préoccupations de la première nation n'ont pas fait l'objet d'un « examen complet et équitable » de sa part. Les documents déposés par les parties lors de la demande de contrôle judiciaire ne révèlent l'existence d'aucune erreur de fait manifeste dans sa conclusion.

[87] Il semble que le directeur était simplement mécontent de mettre en veilleuse le cas de M. Paulsen alors que le gouvernement et la première nation tentaient d'aplanir certaines difficultés liées à la transition dans le cadre de leur relation. Il avait le droit d'agir comme il l'a fait.

[88] Le fait qu'un tribunal judiciaire aurait éventuellement pu arriver à une conclusion différente à partir des mêmes faits n'est pas pertinent. La décision d'approuver ou de ne pas approuver la concession de la parcelle de terre a été confiée par l'assemblée législative au ministre qui, de la façon habituelle, a délégué ce pouvoir au directeur. La décision prise par ce dernier n'était pas déraisonnable.

IV. Conclusion

[89] Je suis d'avis de rejeter le pourvoi et le pourvoi incident, avec dépens.

Les motifs des juges LeBel et Deschamps ont été rendus par

[90] LA JUGE DESCHAMPS — La Cour a maintes fois invité les gouvernements et les peuples autochtones à négocier la définition précise et les modalités d'exercice des droits ancestraux de ces peuples. Afin de protéger l'intégrité du processus de négociation, la Cour a formulé, à partir de ce qui n'était à

originally just one step in the test for determining whether infringements of Aboriginal rights are justifiable, a duty to consult that must be discharged before taking any action that might infringe as-yet-undefined rights. It later expanded the minimum obligational content of a treaty that is silent regarding how the Crown might exercise those of its rights under the treaty that affect rights granted to the Aboriginal party in the same treaty.

[91] In Yukon, the parties sat down to negotiate. An umbrella agreement and 11 specific agreements were reached between certain First Nations, the Yukon government and the Government of Canada. Through these agreements, the First Nations concerned have taken control of their destiny. The agreements, which deal in particular with land and resources, are of course not exhaustive, but they are binding on the parties with respect to the matters they cover. The Crown's exercise of its rights under the treaty is subject to provisions on consultation. To add a further duty to consult to these provisions would be to defeat the very purpose of negotiating a treaty. Such an approach would be a step backward that would undermine both the parties' mutual undertakings and the objective of reconciliation through negotiation. This would jeopardize the negotiation processes currently under way across the country. Although I agree with Binnie J. that the appeal and cross-appeal should be dismissed, my reasons for doing so are very different.

[92] Mr. Paulsen's application constituted a project to which the assessment process provided for in Chapter 12 of the Little Salmon/Carmacks First Nation Final Agreement ("Final Agreement") applied. Although that process had not yet been implemented, Chapter 12, including the transitional legal rules it contains, had been. Under those rules, any existing development assessment process would remain applicable. The requirements of the processes in question included not only consultation with the First Nation concerned, but also its participation in the assessment of the project. Any such participation would involve a more extensive

l'origine qu'une étape de la justification des atteintes aux droits ancestraux, une obligation de consultation préalable à la prise de mesures pouvant porter atteinte à ces droits non encore définis. Plus tard, elle a élargi le contenu obligationnel minimal d'un traité lorsque celui-ci omettait de prévoir la façon dont la Couronne peut exercer les droits que lui reconnaît un traité et qui ont une incidence sur ceux conférés à la partie autochtone par ce même traité.

[91] Au Yukon, les parties se sont assises ensemble. Un accord-cadre et 11 ententes particulières ont été conclus par des premières nations, le gouvernement du Yukon et le gouvernement du Canada. Ces ententes constituent la concrétisation de la prise en charge par les premières nations concernées de leur destinée. Il va de soi que tout n'est pas prévu dans ces ententes, qui portent tout particulièrement sur les terres et les ressources. En revanche, ce qui l'est lie les parties. L'exercice par la Couronne des droits qui lui sont conférés par le traité fait l'objet dans celui-ci de dispositions concernant la consultation. C'est faire affront à l'objectif même de la négociation d'un traité que d'ajouter à ces dispositions une obligation additionnelle de consultation. Une telle approche constitue un recul, qui a pour effet de saper les engagements pris par les parties l'une à l'égard de l'autre et de miner l'objectif de réconciliation par la négociation. Cet affront met en péril les processus de négociation actuellement en cours d'un bout à l'autre du pays. Si, à l'instar du juge Binnie, je suis d'avis de rejeter l'appel principal et l'appel incident, je le fais cependant pour des motifs fort différents.

[92] La demande de M. Paulsen constituait un projet soumis au processus d'évaluation prévu au chapitre 12 de l'Entente définitive de la Première nation de Little Salmon/Carmacks (« Entente définitive »). Ce processus n'avait pas été mis en œuvre, mais le chapitre 12 l'avait été, y compris les règles de droit provisoire y figurant. En vertu de ces règles, tout processus existant d'évaluation des activités de développement demeurait en vigueur. Ces processus prévoyaient non seulement la consultation de la nation autochtone concernée, mais aussi sa participation à l'évaluation du projet. Une telle participation impliquait un niveau de consultation supérieur

consultation than would be required by the common law duty in that regard. Therefore, nothing in this case can justify resorting to a duty other than the one provided for in the Final Agreement.

[93] The Crown's constitutional duty to specifically consult Aboriginal peoples was initially recognized as a factor going to the determination of whether an Aboriginal right was infringed (*Guerin v. The Queen*, [1984] 2 S.C.R. 335), and was later established as one component of the test for determining whether infringements of Aboriginal rights by the Crown were justified: *R. v. Sparrow*, [1990] 1 S.C.R. 1075. The Court was subsequently asked in *Haida Nation v. British Columbia (Minister of Forests)*, 2004 SCC 73, [2004] 3 S.C.R. 511, and *Taku River Tlingit First Nation v. British Columbia (Project Assessment Director)*, 2004 SCC 74, [2004] 3 S.C.R. 550, whether such a duty to consult could apply even before an Aboriginal or treaty right is proven to exist. The Court's affirmative answer was based on a desire to encourage the Crown and Aboriginal peoples to negotiate treaties rather than resorting to litigation.

[94] I disagree with Binnie J.'s view that the common law constitutional duty to consult applies in every case, regardless of the terms of the treaty in question. And I also disagree with the appellants' assertion that an external duty to consult can never apply to parties to modern comprehensive land claims agreements and that the Final Agreement constitutes a complete code. In my view, *Mikisew Cree First Nation v. Canada (Minister of Canadian Heritage)*, 2005 SCC 69, [2005] 3 S.C.R. 388, stands for the proposition that the common law constitutional duty to consult Aboriginal peoples applies to the parties to a treaty only if they have said nothing about consultation in respect of the right the Crown seeks to exercise under the treaty. Moreover, it is essential to understand that in this context, the signature of the treaty entails a change in the nature of the consultation. When consultation is provided for in a treaty, it ceases to

à celui qui aurait été fondé sur l'obligation faite par la jurisprudence à cet égard. En conséquence, rien, en l'espèce, ne saurait justifier le recours à une obligation externe à celle prévue par l'Entente définitive.

[93] L'obligation constitutionnelle qui incombe à la Couronne de consulter de façon spéciale les Autochtones est apparue à l'origine comme facteur d'évaluation d'une atteinte à un droit autochtone (*Guerin c. La Reine*, [1984] 2 R.C.S. 335), puis a été établie en tant que composante du critère de vérification du caractère justifié des atteintes portées par la première aux droits constitutionnels des seconds : *R. c. Sparrow*, [1990] 1 R.C.S. 1075. Les affaires *Nation haïda c. Colombie-Britannique (Ministre des Forêts)*, 2004 CSC 73, [2004] 3 R.C.S. 511, et *Première nation Tlingit de Taku River c. Colombie-Britannique (Directeur d'évaluation de projet)*, 2004 CSC 74, [2004] 3 R.C.S. 550, ont ensuite posé la question de savoir si une telle obligation de consultation pouvait être mise en œuvre avant que soit établie l'existence d'un droit ancestral ou issu de traité. La réponse positive qu'a donnée notre Cour était fondée sur une volonté de favoriser la négociation de traités entre la Couronne et les peuples autochtones plutôt que le recours aux tribunaux.

[94] Si, contrairement au juge Binnie, je ne dis pas que l'obligation constitutionnelle de consultation dégagée par la jurisprudence s'applique dans tous les cas, peu importe les stipulations du traité en cause, je ne dis pas non plus, comme le font les appelants, qu'on peut affirmer qu'une obligation externe de consultation ne saurait jamais s'appliquer aux parties à un accord moderne de règlement de revendication territoriale globale et que l'Entente définitive constitue un code complet. À mon avis, il ressort de l'arrêt *Première nation crie Mikisew c. Canada (Ministre du Patrimoine canadien)*, 2005 CSC 69, [2005] 3 R.C.S. 388, que l'obligation constitutionnelle de consultation des Autochtones établie par la jurisprudence ne s'applique aux parties à un traité que si celles-ci ont été silencieuses à cet égard relativement au droit que la Couronne cherche à exercer en vertu du traité. En outre, il est capital de signaler que, dans un tel contexte, un pas est franchi et que

be a measure to prevent the infringement of one or more rights, as in *Haida Nation*, and becomes a duty that applies to the Crown's exercise of rights granted to it in the treaty by the Aboriginal party. This means that where, as in *Mikisew*, the common law duty to consult applies to treaty rights despite the existence of the treaty — because the parties to the treaty included no provisions in this regard — it represents the minimum obligational content.

la consultation change alors de sens. Lorsqu'elle est prévue par les dispositions d'un traité, la consultation ne constitue plus une mesure visant à prévenir des atteintes à un ou plusieurs droits, comme dans l'affaire *Nation haïda*, mais plutôt une obligation touchant les modalités d'exercice, par la Couronne, des droits que la partie autochtone lui reconnaît par traité. Cela veut donc dire que dans les cas où, comme dans *Mikisew*, l'obligation jurisprudentielle de consultation intervient relativement à des droits issus d'un traité nonobstant l'existence de celui-ci — en raison du défaut des parties à ce traité d'avoir stipulé à cet égard —, c'est à titre de contenu obligationnel minimal.

[95] Binnie J. has set out the facts. I will return to them only to make some clarifications I consider necessary. For now, I will simply mention that the appellants' position is based on the fact that this case concerns a modern treaty. The appellants argue that in a case involving a modern treaty, the duty to consult is strictly limited to the terms expressly agreed on by the parties and there is no such duty if none has been provided for. In their view, a duty to consult can be found to exist only if the parties have expressly provided for one. The appellants seek not a reversal of the Court of Appeal's ultimate conclusion, but a declaration on the scope of the duty to consult. The respondents, who are also cross-appellants, are asking us to overturn the Court of Appeal's decision and affirm the judgment of the Supreme Court of the Yukon Territory quashing the decision to approve the grant of land to Mr. Paulsen. The respondents submit that the source of the Crown's duty to consult them lies outside the treaty, that is, that the duty derives exclusively from constitutional values and common law principles. According to the respondents, the treaty does not purport to define their constitutional relationship with the Crown, nor does the constitutional duty apply in order to fill a gap in the treaty (R.F., at para. 11). They submit that the common law duty to consult applies because Mr. Paulsen's application would affect their interests. They invoke three interests: a right of access for subsistence harvesting purposes to the land in question in the application, their interest under the treaty in fish and wildlife

[95] Le juge Binnie a exposé les faits. Je n'y reviendrai que pour y ajouter les précisions qui me paraîtront s'imposer. Pour l'instant, il suffit de rappeler que la thèse des appelants repose sur le fait qu'il s'agit d'un traité moderne. Ils soutiennent que, en présence d'un tel traité, l'obligation de consultation se limite strictement aux modalités dont les parties ont expressément convenu, et que si rien n'a été prévu, il n'y a pas d'obligation. Selon eux, pour pouvoir conclure à l'existence d'une obligation de consulter, il faut que celle-ci ait été explicitement formulée par les parties. Les appelants ne demandent pas l'infirmation de la conclusion ultime de la Cour d'appel, mais plutôt une déclaration sur la portée de l'obligation de consulter. Les intimés, qui sont aussi appelants incidents, sollicitent pour leur part la cassation du jugement de la Cour d'appel. Ils voudraient que soit confirmé le jugement de la Cour suprême du Yukon qui a cassé la décision autorisant la cession de la terre à M. Paulsen. Les intimés soutiennent que l'obligation qu'a la Couronne de les consulter puise sa source à l'extérieur du traité, soit exclusivement dans les valeurs constitutionnelles et les principes de la common law. Pour eux, le traité n'a pas pour objet de définir leurs relations constitutionnelles avec la Couronne et l'obligation constitutionnelle ne sert pas à combler un hiatus dans le traité (m.i., par. 11). Ils soutiennent que l'obligation jurisprudentielle de consultation s'applique parce que la demande de M. Paulsen affecte leurs intérêts. Ils invoquent trois intérêts : un droit d'accès aux fins de récolte non commerciale à la terre faisant l'objet de la demande, leur intérêt dans la gestion

management, and the reduced value of the trapline of the respondent Johnny Sam.

[96] In my view, the answers to the questions before the Court can be found first in the general principles of Aboriginal law and then in the terms of the treaty. To explain my conclusion, I must review the origin, the nature, the function and the specific purpose of the duty being relied on, after which I will discuss what can be learned from a careful review of the treaty.

I. General Principles

[97] In *Reference re Secession of Quebec*, [1998] 2 S.C.R. 217, at paras. 48-82, this Court identified four principles that underlie the whole of our constitution and of its evolution: (1) constitutionalism and the rule of law; (2) democracy; (3) respect for minority rights; and (4) federalism. These four organizing principles are interwoven in three basic compacts: (1) one between the Crown and individuals with respect to the individual's fundamental rights and freedoms; (2) one between the non-Aboriginal population and Aboriginal peoples with respect to Aboriginal rights and treaties with Aboriginal peoples; and (3) a "federal compact" between the provinces. The compact that is of particular interest in the instant case is the second one, which, as we will see, actually incorporates a fifth principle underlying our Constitution: the honour of the Crown.

[98] The Aboriginal and treaty rights of the Aboriginal peoples of Canada are recognized and affirmed in s. 35(1) of the *Constitution Act, 1982*. The framers of the Constitution also considered it advisable to specify in s. 25 of that same Act that the guarantee of fundamental rights and freedoms to persons and citizens must not be considered to be inherently incompatible with the recognition of special rights for Aboriginal peoples. In other words, the first and second compacts should be interpreted not in a way that brings them into conflict with one another, but rather as being complementary. Finally, s. 35(4) provides that, notwithstanding any other provision of the *Constitution*

des ressources halieutiques et fauniques prévue au traité et la diminution de valeur de la ligne de piégeage que détient l'intimé Johnny Sam.

[96] À mon avis, la réponse aux questions qui sont posées à la Cour se trouve d'abord dans les principes généraux du droit relatif aux Autochtones puis dans les stipulations du traité. Pour expliquer ma conclusion, je dois revenir sur l'origine, la nature, la fonction ainsi que l'objet précis de l'obligation invoquée et sur ce qu'une lecture attentive du traité révèle.

I. Principes généraux

[97] À l'occasion du *Renvoi relatif à la sécession du Québec*, [1998] 2 R.C.S. 217, par. 48-82, notre Cour a dégagé quatre principes qui sous-tendent l'ensemble de notre Constitution et de son évolution : (1) le constitutionnalisme et la primauté du droit; (2) la démocratie; (3) le respect des droits des minorités; (4) le fédéralisme. Ces quatre principes structurants s'articulent dans trois pactes fondamentaux : (1) pacte entre l'État et les personnes au sujet des droits et libertés fondamentaux de ces dernières; (2) pacte entre la population allochtone et les peuples autochtones sur le respect des droits ancestraux des seconds et des traités conclus avec eux; (3) « pacte fédératif » entre les provinces. Le pacte qui nous intéresse tout spécialement en l'espèce est le deuxième, dont nous verrons qu'il est, dans les faits, porteur d'un cinquième principe sous-jacent à notre Constitution : l'honneur de la Couronne.

[98] Notre *Loi constitutionnelle de 1982*, par. 35(1), reconnaît et confirme les droits ancestraux et issus de traités des peuples autochtones du Canada. Le constituant a également jugé bon de préciser, à l'art. 25 de cette même loi, que le fait qu'il reconnaisse des droits et libertés fondamentaux aux personnes et citoyens ne devait pas être jugé en soi incompatible avec la reconnaissance de droits spéciaux aux peuples autochtones. Autrement dit, lorsqu'on interprète les premier et deuxième pactes, il ne faut pas le faire de sorte qu'ils entrent en conflit, mais plutôt qu'ils se complètent. Enfin, le par. 35(4) confirme que, nonobstant toute autre disposition de la *Loi constitutionnelle de 1982*,

Act, 1982, the Aboriginal and treaty rights recognized and affirmed in s. 35(1) "are guaranteed equally to male and female persons". The compact relating to the special rights of Aboriginal peoples is therefore in harmony with the other two basic compacts and with the four organizing principles of our constitutional system.

[99] In the case at bar, all the parties are, in one way or another, bound by the Final Agreement, which settles the comprehensive land claim of the Little Salmon/Carmacks First Nation. Section 35(3) of the *Constitution Act, 1982* provides that "in subsection (1)" the expression "treaty rights" includes "rights that now exist by way of land claims agreements or may be so acquired". The appellants' position is based on one such agreement.

[100] The respondents, intending to rely on *Mikisew*, invoke only the Crown's common law duty to consult Aboriginal peoples, and not the agreement, which, as can be seen from the transcript of the hearing (at p. 46), they do not allege has been breached; they submit that the purpose of the agreement in the instant case was not to define the parties' constitutional duties.

[101] Prior consultation was used originally as a criterion to be applied in determining whether an Aboriginal right had been infringed (*Guerin*, at p. 389), and then as one factor in favour of finding that a limit on a constitutional right — whether an Aboriginal or a treaty right — of the Aboriginal peoples in question was justified (*Sparrow*, at p. 1119). The Crown failed to consult Aboriginal peoples at its own risk, so to speak, if it took measures that, should Aboriginal title or an Aboriginal or treaty right be proven to exist, infringed that right.

[102] Then, in *Haida Nation* and *Taku River*, it was asked whether such a duty to consult exists even though the existence of an Aboriginal right has not been fully and definitively established in a court proceeding or the framework for exercising such a right has not been established in a

les droits ancestraux ou issus de traités reconnus et confirmés par le par. 35(1) « sont garantis également aux personnes des deux sexes ». Le pacte relatif aux droits spéciaux des peuples autochtones s'harmonise donc avec les deux autres pactes fondamentaux et avec les quatre principes structurants de notre ordre constitutionnel.

[99] En l'espèce, les parties sont toutes, d'une manière ou d'une autre, liées par l'Entente définitive qui porte règlement de la revendication territoriale globale de la Première nation de Little Salmon/Carmacks. Justement, le par. 35(3) de la *Loi constitutionnelle de 1982* précise que les « droits issus de traités », « dont il est fait mention au paragraphe (1) », comprennent « les droits existants issus d'accords sur des revendications territoriales ou ceux susceptibles d'être ainsi acquis. » Les appelants assoient leur position sur un tel accord.

[100] Entendant bien s'appuyer sur l'arrêt *Mikisew*, les intimés n'invoquent quant à eux que l'obligation jurisprudentielle qu'a la Couronne de consulter les Autochtones et non l'accord, à l'égard duquel ils n'allèguent aucune violation, selon ce que révèle la transcription de l'audience (p. 46), et prétendent, en l'espèce, qu'il n'avait pas pour objet de définir les obligations constitutionnelles des parties.

[101] À l'origine, la consultation préalable a été utilisée comme critère d'évaluation de la violation d'un droit autochtone (*Guerin*, p. 389), puis comme un facteur militant en faveur du caractère justifié de la restriction apportée au droit constitutionnel — ancestral ou issu de traité — des Autochtones concernés (*Sparrow*, p. 1119). Si la Couronne ne consultait pas les Autochtones, c'était pour ainsi dire à ses risques et périls si les mesures qu'elle prenait devait, en cas de preuve de l'existence d'un titre aborigène ou d'un droit ancestral ou issu de traité, se révéler attentatoires à ce droit.

[102] Les affaires *Nation haïda* et *Taku River* ont ensuite posé la question de l'existence d'une telle obligation de consultation, indépendamment de l'établissement complet et définitif d'un droit ancestral au terme d'une instance judiciaire ou d'un processus d'aménagement de ses modalités d'exercice

treaty. Had the answer to this question been no, this would have amounted, in particular, to denying that under s. 35 of the *Constitution Act, 1982*, the rights of Aboriginal peoples are protected by the Constitution even if no court has yet declared that those rights exist and no undertaking has yet been given to exercise them only in accordance with a treaty. A negative answer would also have had the effect of increasing the recourse to litigation rather than to negotiation, and the interlocutory injunction would have been left as the only remedy against threats to Aboriginal rights where the framework for exercising those rights has yet to be formally defined. It was just such a scenario that the Court strove to avoid in *Haida Nation* and *Taku River*, as the Chief Justice made clear in her reasons in *Haida Nation* (paras. 14 and 26).

[103] Thus, the constitutional duty to consult Aboriginal peoples involves three objectives: in the short term, to provide "interim" or "interlocutory" protection for the constitutional rights of those peoples; in the medium term, to favour negotiation of the framework for exercising such rights over having that framework defined by the courts; and, in the longer term, to assist in reconciling the interests of Aboriginal peoples with those of other stakeholders. As one author recently noted, the *raison d'être* of the constitutional duty to consult Aboriginal peoples is to some extent, if not primarily, to contribute to attaining the ultimate objective of reconciliation through the negotiation of treaties, and in particular of comprehensive land claims agreements (D. G. Newman, *The Duty to Consult: New Relationships with Aboriginal Peoples* (2009), at pp. 18 and 41). This objective of reconciliation of course presupposes active participation by Aboriginal peoples in the negotiation of treaties, as opposed to a necessarily more passive role and an antagonistic attitude in the context of constitutional litigation (*Haida Nation*, at para. 14; S. Grammond, *Aménager la coexistence: Les peuples autochtones et le droit canadien* (2003), at p. 247). The duty to consult can be enforced in different ways. However, the courts must ensure that this duty is not distorted and invoked in a way that compromises rather than fostering negotiation.

dans un traité. Une réponse négative à cette question aurait notamment eu pour effet de nier que, en vertu de l'art. 35 de la *Loi constitutionnelle de 1982*, les droits ancestraux des peuples autochtones bénéficient de la protection de la Constitution, même s'ils n'ont pas encore fait l'objet d'une déclaration judiciaire ou d'un engagement à n'être exercés que conformément aux stipulations d'un traité. Une réponse négative aurait aussi eu pour conséquence d'accroître le recours aux tribunaux plutôt qu'à la négociation et de ne laisser que l'injonction interlocutoire comme seul remède en cas de menace à des droits ancestraux dont les modalités d'exercice n'ont pas encore été formellement définies. C'est un tel scénario qu'a résolument voulu écarter la Cour dans *Nation haïda* et *Taku River*. Ce qui précède se dégage clairement des motifs rédigés par la Juge en chef dans l'affaire *Nation haïda* (par. 14 et 26).

[103] L'obligation constitutionnelle de consulter les Autochtones vise donc trois objectifs : à court terme, assurer la protection « provisoire » ou « interlocutoire » des droits constitutionnels des peuples autochtones; à moyen terme, favoriser la négociation des modalités d'exercice de tels droits plutôt que leur définition par les tribunaux; enfin, à plus long terme, permettre la réconciliation des intérêts respectifs des Autochtones et des autres parties concernées. Comme l'a d'ailleurs récemment souligné un auteur, l'obligation constitutionnelle de consultation des Autochtones a notamment, sinon principalement, pour raison d'être de contribuer à l'objectif ultime de réconciliation par la négociation de traités, en particulier d'accords de règlement de revendications territoriales globales (D. G. Newman, *The Duty to Consult : New Relationships with Aboriginal Peoples* (2009), p. 18 et 41). Cet objectif de réconciliation suppose bien entendu l'exercice, par les Autochtones, d'un rôle actif de nature constituante lors de la négociation de traités plutôt qu'un rôle forcément plus passif et une attitude antagoniste en cas de contentieux constitutionnel (*Nation haïda*, par. 14; S. Grammond, *Aménager la coexistence : Les peuples autochtones et le droit canadien* (2003), p. 247). L'obligation de consultation peut faire l'objet d'une forme ou une autre d'exécution forcée. Les tribunaux doivent toutefois veiller à ce que cette obligation de

That, in my view, would be the outcome if we were to accept the respondents' argument that the treaties, and the Final Agreement in particular, do not purport to define the parties' constitutional duties, including what the Crown party must do to consult the Aboriginal party before exercising its rights under the treaty.

[104] The short-, medium- and long-term objectives of the constitutional duty to consult Aboriginal peoples are all rooted in the same fundamental principle with respect to the rights of Aboriginal peoples, namely the honour of the Crown, which is always at stake in relations between the Crown and Aboriginal peoples (*R. v. Van der Peet*, [1996] 2 S.C.R. 507, at para. 24). Obviously, when these relations involve the special constitutional rights of Aboriginal peoples, the honour of the Crown becomes a source of constitutional duties and rights, such as the Crown's duty to consult Aboriginal peoples with respect to their Aboriginal or treaty rights (*R. v. Kapp*, 2008 SCC 41, [2008] 2 S.C.R. 483, at para. 6).

[105] This Court has, over time, substituted the principle of the honour of the Crown for a concept — the fiduciary duty — that, in addition to being limited to certain types of relations that did not always concern the constitutional rights of Aboriginal peoples, had paternalistic overtones (*St. Ann's Island Shooting and Fishing Club Ltd. v. The King*, [1950] S.C.R. 211, at p. 219; *Guerin*; *Sparrow*; *Quebec (Attorney General) v. Canada (National Energy Board)*, [1994] 1 S.C.R. 159, at p. 183; *Delgamuukw v. British Columbia*, [1997] 3 S.C.R. 1010; *Haida Nation*; *Taku River Tlingit First Nation*; *Mitchell v. M.N.R.*, 2001 SCC 33, [2001] 1 S.C.R. 911, at para. 9, *per* McLachlin C.J.; *Mikisew*, at para. 51). Before being raised to the status of a constitutional principle, the honour of the Crown was originally referred to as the "sanctity" of the "word of the white man" (*R. v. White* (1964), 50 D.L.R. (2d) 613 (B.C.C.A.), at p. 649, aff'd (1965), 52 D.L.R. (2d) 481 (S.C.C.); see also *R. v. Sioui*,

consultation ne soit pas dénaturée et invoquée d'une manière qui compromette la négociation au lieu de la favoriser. C'est ce qui se produirait, à mon avis, si on retenait l'argument des intimés selon lequel les traités, et plus particulièrement l'Entente définitive, n'ont pas pour objet de définir les obligations constitutionnelles des parties, y compris les modalités de la consultation de la partie autochtone par la partie étatique avant l'exercice par cette dernière des droits que lui reconnaît le traité.

[104] Les différents objectifs — à court, moyen et long terme — de l'obligation constitutionnelle de consultation des Autochtones procèdent tous d'un même principe fondamental en ce qui concerne les droits des peuples autochtones : l'honneur de la Couronne, qui est toujours en jeu dans les rapports entre l'État et les peuples autochtones (*R. c. Van der Peet*, [1996] 2 R.C.S. 507, par. 24). De toute évidence, lorsque ces rapports portent sur les droits constitutionnels spéciaux de ces peuples, l'honneur de la Couronne devient alors source d'obligations et de droits constitutionnels, comme c'est le cas pour l'obligation de la Couronne de consulter les Autochtones relativement aux droits ancestraux ou issus de traités de ces derniers (*R. c. Kapp*, 2008 CSC 41, [2008] 2 R.C.S. 483, par. 6).

[105] Dans notre jurisprudence, le principe de l'honneur de la Couronne tend à se substituer à une notion qui possède à la fois une portée se limitant à certains types de rapports n'intéressant pas toujours les droits constitutionnels des Autochtones et des relents de paternalisme, à savoir l'obligation de fiduciaire (*St. Ann's Island Shooting and Fishing Club Ltd. c. The King*, [1950] R.C.S. 211, p. 219; *Guerin*; *Sparrow*; *Québec (Procureur général) c. Canada (Office national de l'énergie)*, [1994] 1 R.C.S. 159, p. 183; *Delgamuukw c. Colombie-Britannique*, [1997] 3 R.C.S. 1010; *Nation haïda*; *Première nation Tlingit de Taku River*; *Mitchell c. M.R.N.*, 2001 CSC 33, [2001] 1 R.C.S. 911, par. 9, la juge en chef McLachlin; *Mikisew*, par. 51). Avant d'être élevé au rang de principe constitutionnel, l'honneur de la Couronne s'est d'abord entendu du caractère « sacré » de la [TRADUCTION] « parole de l'homme blanc » (*R. c. White* (1964), 50 D.L.R. (2d) 613 (C.A.C.-B.), p. 649, conf. par (1965), 52 D.L.R.

[1990] 1 S.C.R. 1025, at p. 1041, and *Province of Ontario v. Dominion of Canada* (1895), 25 S.C.R. 434, at pp. 511-12, *per* Gwynne J. (dissenting)). The honour of the Crown thus became a key principle for the interpretation of treaties with Aboriginal peoples (*R. v. Badger*, [1996] 1 S.C.R. 771, at para. 41; *R. v. Sundown*, [1999] 1 S.C.R. 393, at paras. 24 and 46; *R. v. Marshall*, [1999] 3 S.C.R. 456, at para. 78, *per* McLachlin J. (as she then was), dissenting, but not on this issue; *Mikisew*, at para. 51).

[106] Associating the honour of the Crown with the observance of duly negotiated treaties implies that some value is placed on the treaty negotiation process. But for the treaty to have legal value, its force must be such that neither of the parties can disregard it. The principle of the honour of the Crown does not exempt the Aboriginal party from honouring its own undertakings. What is in question here is respect for the ability of Aboriginal peoples to participate actively in defining their special constitutional rights, and for their autonomy of judgment.

[107] To allow one party to renege unilaterally on its constitutional undertaking by superimposing further rights and obligations relating to matters already provided for in the treaty could result in a paternalistic legal contempt, compromise the national treaty negotiation process and frustrate the ultimate objective of reconciliation. This is the danger of what seems to me to be an unfortunate attempt to take the constitutional principle of the honour of the Crown hostage together with the principle of the duty to consult Aboriginal peoples that flows from it.

[108] The Crown does indeed act honourably when it negotiates in good faith with an Aboriginal nation to conclude a treaty establishing how that nation is to exercise its special rights in its traditional territory. Adhering to the principle of the honour of the Crown also requires that in the course of negotiations the Crown consult the Aboriginal party, to an extent that can vary, and in some cases find ways to "accommodate" it, before taking steps or making

(2d) 481 (C.S.C.); voir également *R. c. Sioui*, [1990] 1 R.C.S. 1025, p. 1041, et *Province of Ontario c. Dominion of Canada* (1895), 25 R.C.S. 434, p. 511-512, le juge Gwynne (dissident)). L'honneur de la Couronne est ainsi devenu un principe cardinal d'interprétation des traités conclus avec les Autochtones (*R. c. Badger*, [1996] 1 R.C.S. 771, par. 41; *R. c. Sundown*, [1999] 1 R.C.S. 393, par. 24 et 46; *R. c. Marshall*, [1999] 3 R.C.S. 456, par. 78, la juge McLachlin (maintenant Juge en chef), dissidente, mais non sur cette question; *Mikisew*, par. 51).

[106] Associer l'honneur de la Couronne au respect des traités dûment négociés suppose une certaine valorisation du processus de négociation de ces traités. Or, la valeur juridique même du traité dépend de la capacité de celui-ci d'être respecté par les deux parties. Le principe de l'honneur de la Couronne ne dispense pas la partie autochtone de l'obligation d'honorer ses propres engagements. Il en va du respect de la capacité des peuples autochtones de prendre une part active à la définition de leurs droits constitutionnels spéciaux, du respect de leur autonomie de jugement.

[107] Permettre à une partie de revenir unilatéralement sur son engagement constitutionnel en y superposant des droits et obligations additionnels portant sur des matières déjà prévues au traité risque de se traduire par un mépris juridique paternaliste, de compromettre le processus national de négociation de traités et de nuire à la poursuite de l'objectif ultime de réconciliation. Voilà le péril auquel nous expose ce qui me semble être une malheureuse prise en otage du principe constitutionnel de l'honneur de la Couronne et du principe en découlant, l'obligation de consulter les Autochtones.

[108] La Couronne se montre assurément honorable lorsqu'elle négocie de bonne foi avec une nation autochtone un traité précisant les modalités d'exercice des droits spéciaux de celle-ci sur son territoire traditionnel. Le respect du principe de l'honneur de la Couronne exige aussi que, en cas de négociation, cette dernière consulte avec une intensité variable la partie autochtone et, dans certains cas, trouve le moyen de l'« accommoder » avant de prendre des

decisions that could infringe special constitutional rights in respect of which the Crown has already agreed to negotiate a framework for exercising them (*Haida Nation*; *Taku River*). Since the honour of the Crown is more a normative legal concept than a description of the Crown's actual conduct, it implies a duty on the part of the Crown to consult Aboriginal peoples not only with respect to the Aboriginal rights to which the negotiations actually relate, but also with respect to any Aboriginal right the potential existence of which the Crown can be found to have constructive knowledge, provided, of course, that what it plans to do might adversely affect such rights (*Haida Nation*, at para. 35). As we have seen, this principle also requires that the Crown keep its word and honour its undertakings after a treaty has been signed.

[109] In concluding a treaty, the Crown does not act dishonourably in agreeing with an Aboriginal community on an elaborate framework involving various forms of consultation with respect to the exercise of that community's rights: consultation in the strict sense, participation in environmental and socio-economic assessments, co-management, etc. Nor, in such cases — which are the norm since the signing of the *James Bay and Northern Québec Agreement* in 1975 — does the Crown act dishonourably in concluding a land claim agreement based on Aboriginal rights if it requires the Aboriginal party to agree that no parallel mechanism relating to a matter covered by the treaty will enable that party to renege on its undertakings. Legal certainty is the primary objective of all parties to a comprehensive land claim agreement.

[110] It has sometimes been asserted, incorrectly in my opinion, that in treaty negotiations, the Crown and Aboriginal parties have deeply divergent points of view respecting this objective of legal certainty, which only the Crown is really interested in pursuing. Excessive weight should not be given to the arguments of the parties to this case, as their

mesures ou décisions susceptibles d'attenter à des droits constitutionnels spéciaux dont elle a justement accepté de négocier les modalités d'exercice (*Nation haïda*; *Taku River*). En réalité, étant davantage un concept juridique normatif qu'un concept descriptif de l'action réelle de la Couronne, l'honneur de la Couronne implique l'obligation pour celle-ci de consulter les Autochtones non seulement au sujet des droits ancestraux effectivement visés par les négociations, mais également au sujet de tout droit ancestral dont la connaissance ou l'existence potentielle peut lui être imputée, pour autant, bien entendu, que les dispositions qu'elle envisage de prendre seraient susceptibles d'avoir un effet préjudiciable sur de tels droits (*Nation haïda*, par. 35). Ce même principe commande aussi, comme nous l'avons vu, que la Couronne tienne parole et respecte ses engagements une fois un traité conclu.

[109] Dans le cadre de la conclusion d'un traité, il n'y a rien de déshonorant pour la Couronne à s'entendre avec une communauté autochtone sur un régime détaillé et multiforme de consultation relative à l'exercice des droits de cette communauté : consultation au sens strict, participation à l'évaluation environnementale et socioéconomique, cogestion, etc. En outre, dans un tel cas — et c'est normalement ce qui se produit depuis la signature de la *Convention de la Baie-James et du Nord québécois* en 1975 — lors de la conclusion de tout accord de règlement d'une revendication territoriale fondée sur des droits ancestraux, il n'y a rien non plus de déshonorant de la part de la Couronne à exiger de la partie autochtone qu'aucun régime parallèle relatif à une matière prévue au traité ne permette à celle-ci de revenir sur ses engagements. En effet, la sécurité juridique est l'objectif premier de toutes les parties à un accord portant règlement de revendication territoriale globale.

[110] On a parfois affirmé, à tort selon moi, que, dans la négociation d'un traité, la partie étatique et la partie autochtone divergeaient profondément d'opinions relativement à cet objectif de sécurité juridique, ou « certitude », dont seul l'État aurait à cœur la poursuite. Il ne faut pas accorder un poids démesuré aux thèses avancées par les parties en

positions have clearly become polarized as a result of the adversarial context of this proceeding.

[111] In fact, according to studies commissioned by the United Nations, (1) lack of precision with respect to their special rights continues to be the most serious problem faced by Aboriginal peoples, and (2) Aboriginal peoples attach capital importance to the conclusion of treaties with the Crown (M. Saint-Hilaire, "La proposition d'entente de principe avec les Innus: vers une nouvelle génération de traités?" (2003), 44 *C. de D.* 395, at pp. 397-98). It is also wrong, in my opinion, to say that Aboriginal peoples' relational understanding of the treaty is incompatible with the pursuit of the objective of legal certainty. On this understanding, that of "treaty making", the primary purpose of these instruments is to establish a relationship that will have to evolve (M. L. Stevenson, "Visions of Certainty: Challenging Assumptions", in Law Commission of Canada, ed., *Speaking Truth to Power: A Treaty Forum* (2001), 113, at p. 121; R. A. Williams, *Linking Arms Together* (1997)). The concept of an agreement that provides certainty is not synonymous with that of a "final agreement", or even with that of an "entire agreement". Legal certainty cannot be attained if one of the parties to a treaty can unilaterally renege on its undertakings with respect to a matter provided for in the treaty where there is no provision for its doing so in the treaty. This does not rule out the possibility of there being matters not covered by a treaty with respect to which the Aboriginal party has not surrendered possible Aboriginal rights. Nor does legal certainty imply that an equitable review mechanism cannot be provided for in a treaty.

[112] Thus, it should be obvious that the best way for a court to contribute to ensuring that a treaty fosters, in the words of Binnie J., "a positive long-term relationship between Aboriginal and non-Aboriginal communities" (at para. 10) consists first and foremost in ensuring that the parties cannot unilaterally renege on their undertakings. And once legal certainty has been pursued as a common objective at the negotiation stage, it

l'espèce, qui ont arrêté des positions sans nul doute polarisées par le contexte contradictoire de la présente instance.

[111] En effet, des travaux commandés par l'Organisation des Nations Unies ont révélé que (1) le déficit de précision de leurs droits spéciaux demeurait le problème le plus important pour les peuples autochtones, en même temps que (2) l'importance capitale que revêt aux yeux de ces peuples la conclusion de traités avec les États (M. Saint-Hilaire, « La proposition d'entente de principe avec les Innus : vers une nouvelle génération de traités? » (2003), 44 *C. de D.* 395, p. 397-398). On fait également fausse route, à mon avis, lorsqu'on affirme que la conception relationnelle que se font les Autochtones des traités est incompatible avec la poursuite d'un objectif de sécurité juridique. Suivant cette conception de la [TRADUCTION] « négociation de traités » (« *treaty making* »), ces instruments viseraient principalement à établir une relation qui serait appelée à évoluer (M. L. Stevenson, « Visions de certitude : question d'hypothèses », dans Commission du droit du Canada, dir., *Parlons franchement à propos des traités* (2001), 123, p. 132; R. A. Williams, *Linking Arms Together* (1997)). Or, la notion d'« accord sûr » ne coïncide pas avec celle d'« accord définitif », ni même avec celle d'« accord complet ». Il ne saurait y avoir de sécurité juridique si une des parties à un traité pouvait — unilatéralement et sans que cela ne soit prévu au traité — revenir sur ses engagements à l'égard d'une matière prévue à ce traité. Cela ne veut pas dire qu'il ne peut pas exister de matières dont les parties n'auront pas traité et à l'égard desquelles la partie autochtone pourra ne pas avoir renoncé à d'éventuels droits ancestraux. La sécurité juridique n'exclut pas non plus la possibilité de prévoir, dans un traité, un mécanisme équitable de réexamen.

[112] En ce sens, il devrait être évident que la meilleure façon pour les tribunaux de contribuer à ce qu'un traité favorise, comme le souhaite le juge Binnie, « une relation à long terme harmonieuse entre les collectivités autochtones et non autochtones » (par. 10), consiste d'abord et avant tout à s'assurer que les parties ne puissent revenir unilatéralement sur leurs engagements. Et il se trouve que, en aval de sa poursuite en tant qu'objectif partagé à

cannot become a one-way proposition at the stage of implementation of the treaty. On the contrary, certainty with respect to one party's rights implies that the party in question must discharge its obligations and respect the other party's rights. Having laboured so hard, in their common interest, to substitute a well-defined legal system for an uncertain normative system, both the Aboriginal party and the Crown party have an interest in seeing their efforts bear fruit.

[113] Except where actions are taken that are likely to unilaterally infringe treaty rights of an Aboriginal people, it is counterproductive to assert, as the respondents do, that the common law duty to consult continues to apply in all cases, even where a treaty exists. However, the appellants' argument goes much too far. As I explain more fully below, the fact that a treaty has been signed and that it is the entire agreement on some aspects of the relationship between an Aboriginal people and the non-Aboriginal population does not imply that it is a complete code that covers every aspect of that relationship. It is in fact because the agreement in issue does provide that the Aboriginal party has a right to various forms of consultation with respect to the rights the Crown wishes to exercise in this case that rights and obligations foreign to the mechanism provided for in the treaty must not be superimposed on it, and not simply, as the appellants submit, because this is a "modern" treaty constituting a land claims agreement.

[114] It is true that s. 35(3) of the *Constitution Act, 1982* recognizes the existence of a category of treaties, called "land claims agreements", which, in constitutional law, create "treaty" rights within the meaning of s. 35(1). Thus, although the courts will certainly take the context of the negotiation of each treaty into consideration, they will avoid, for example, developing rules specific to each category of treaty identified in the legal literature or by the government (e.g., "peace and friendship" treaties, "pre-Confederation" treaties, "numbered" treaties and "modern" treaties).

l'étape de la négociation, la sécurité juridique ne saurait, à l'étape de la mise en œuvre d'un traité, opérer à sens unique. Au contraire, la sécurité des droits d'une partie implique nécessairement que celle-ci s'acquitte de ses obligations et respecte les droits de l'autre partie. S'étant toutes deux échinées, dans leur intérêt commun, à substituer un système juridique précis à un régime normatif incertain, la partie autochtone et la partie étatique ont toutes deux intérêt à ce que leur œuvre produise ses effets.

[113] Sauf en ce qui concerne la prise de mesures susceptibles d'enfreindre unilatéralement des droits reconnus par traité à un peuple autochtone, il est contre-productif d'affirmer, comme le font les intimés, que l'obligation de consultation de régime jurisprudentiel demeure toujours applicable, même en présence d'un traité. Cela dit, la thèse des appelants va beaucoup trop loin. Comme je l'explique plus amplement ci-dessous, le fait qu'un traité ait été signé et qu'il s'agisse de l'entente complète sur certains aspects de la relation des Autochtones avec les non-Autochtones ne signifie pas qu'il s'agit d'un code complet couvrant tous les aspects de cette relation. En l'espèce, c'est justement parce que l'accord en cause traite bel et bien des différentes formes de consultation auxquelles a droit la partie autochtone concernant les droits que la Couronne veut exercer qu'il faut se garder de superposer à ce régime des droits et obligations qui lui sont étrangers, et non pas simplement, comme le prétendent les appelants, parce qu'il s'agit d'un traité « moderne » constituant un accord portant règlement de revendications territoriales.

[114] Il est vrai que le par. 35(3) de la *Loi constitutionnelle de 1982* reconnaît l'existence d'une catégorie de traités, appelés « accords sur des revendications territoriales », dont la loi constitutionnelle confirme qu'ils créent des droits « issus de traités » visés au par. 35(1). Cela dit, les tribunaux prendront certes acte du contexte des négociations de chaque traité, mais ils éviteront, par exemple, de dégager des règles particulières pour chaque catégorie de traités reconnue par la doctrine ou l'administration publique (p. ex. traités « de paix et d'amitié », traités « préconfédératifs », traités « numérotés », traités « modernes »).

[115] In *Quebec (Attorney General) v. Moses*, 2010 SCC 17, [2010] 1 S.C.R. 557, LeBel J. and I rejected the date of signature as the criterion for determining the rules of interpretation applicable to treaties entered into with Aboriginal peoples: ". . . the issue relates to the context in which an agreement was negotiated and signed, not to the date of its signature" (para. 114). We arrived at that conclusion because we did not believe that distinct legal meanings flowed from the identification in the legal literature and by the government of various categories of treaties on the basis of the historical periods in which the treaties were signed. This approach was also taken by McLachlin J., dissenting on a different issue, in *Marshall*, as she said that "each treaty must be considered in its unique historical and cultural context", which "suggests" that the practice of "slot[ting] treaties into different categories, each with its own rules of interpretation . . . should be avoided" (para. 80).

[116] If, in a given case, a court feels freer to maintain a certain critical distance from the words of a treaty and can as a result interpret them in a manner favourable to the Aboriginal party, this will be because it has been established on the evidence, including historical and oral evidence, that the written version of the exchange of promises probably does not constitute an accurate record of all the rights of the Aboriginal party and all the duties of the Crown that were created in that exchange. It is true that, where certain time periods are concerned, the context in which the agreements were reached will more readily suggest that the words are not faithful. But this is a question that relates more to the facts than to the applicable law, which is, in the final analysis, concerned with the common intention of the parties. From a legal standpoint, a comprehensive land claim agreement is still a treaty, and nothing, not even the fact that the treaty belongs to a given "category", exempts the court from reading and interpreting the treaty in light of the context in which it was concluded in order to identify the parties' common intention. This Court has had occasion to mention that, even where the oldest of treaties are involved, the interpretation "must be realistic and reflect the intention

[115] Dans *Québec (Procureur général) c. Moses*, 2010 CSC 17, [2010] 1 R.C.S. 557, le juge LeBel et moi avons rejeté la date de conclusion comme critère déterminant les règles d'interprétation des traités conclus avec les Autochtones : « . . . le choix de la méthode d'interprétation se rattache au contexte de la négociation et de la signature d'un accord, et non à la date à laquelle il a été signé » (par. 114). Cette conclusion procédait d'un refus de reconnaître une signification juridique autonome ou immédiate aux diverses catégories de traités que la doctrine et l'administration publique ont établies sur la base d'un découpage historique. Cette approche a aussi été défendue par la juge McLachlin, dissidente sur une autre question, qui a affirmé, dans l'arrêt *Marshall*, que « chaque traité doit être examiné à la lumière de son contexte historique et culturel particulier », principe qui « tend à indiquer » que la pratique consistant à « classer les traités en diverses catégories, dont chacune aurait ses propres règles d'interprétation [. . .] devrait être évitée » (par. 80).

[116] Dans les cas où les tribunaux se sentiront davantage libres de prendre une certaine distance critique par rapport au texte d'un traité et pourront, de ce fait, l'interpréter d'une manière favorable à la partie autochtone, ce sera parce que la preuve, y compris la preuve historique et orale, aura établi qu'il est probable que la version écrite de l'échange de promesses ne consigne pas fidèlement tous les droits de la partie autochtone et toutes les obligations de la Couronne qu'a créés cet échange. Il est vrai que, pour certaines époques, le contexte de conclusion des accords suggérera plus facilement l'existence d'une telle infidélité du texte. Mais cela ressortit davantage aux faits qu'au droit applicable, lequel s'attache en dernière analyse à l'intention commune des parties. Du point de vue juridique, les accords de règlement de revendications territoriales globales demeurent des traités. Et rien, pas même l'appartenance du traité à une « catégorie » donnée, ne dispense de lire et d'interpréter ce traité à la lumière du contexte de sa conclusion afin de dégager l'intention commune des parties. La Cour a d'ailleurs eu l'occasion de rappeler que, même lorsqu'il s'agit de traités plus anciens, l'interprétation « doit être réaliste et refléter l'intention des deux parties et non seulement celle [de la première

of both parties, not just that of the [First Nation]" (*Sioui*, at p. 1069). I would even say that it would be wrong to think that the negotiating power of Aboriginal peoples is directly related to the time period in which the treaty was concluded, as certain Aboriginal nations were very powerful in the early years of colonization, and the European newcomers had no choice but to enter into alliances with them.

[117] My finding with regard to the interpretation of treaties is equally applicable to the relationship between treaties and the law external to them or, in other words, to the application to treaties of the rules relating to conflicting legislation: the mere fact that a treaty belongs to one "category" or another cannot mean that a different set of rules applies to it in this regard. The appellants' invitation must therefore be declined: even when the treaty in issue is a land claims agreement, the Court must first identify the common intention of the parties and then decide whether the common law constitutional duty to consult applies to the Aboriginal party.

[118] Thus, the basis for distinguishing this case from *Mikisew* is not the mere fact that the treaty in issue belongs to the category of modern land claims agreements. As Binnie J. mentions in the case at bar (at para. 53), the treaty in issue in *Mikisew* was silent on how the Crown was to exercise its right under the treaty to require or take up tracts "from time to time for settlement, mining, lumbering, trading or other purposes". This constituted an omission, as, without guidance, the exercise of such a right by the Crown might have the effect of nullifying the right of the Mikisew under the same treaty "to pursue their usual vocations of hunting, trapping and fishing". Therefore, where there is a treaty, the common law duty to consult will apply only if the parties to the treaty have failed to address the issue of consultation.

nation] » (*Sioui*, p. 1069). Je dirais même qu'il serait erroné de penser que le pouvoir de négociation des Autochtones est directement fonction de l'époque du traité, car certaines nations autochtones étaient très puissantes au début de la colonisation et les arrivants européens ne pouvaient se passer d'alliances avec elles.

[117] Ma conclusion au sujet de l'interprétation des traités vaut tout autant en ce qui concerne la relation entre ceux-ci et le droit qui leur est extérieur, autrement dit, au sujet de l'application aux traités des règles relatives aux conflits de lois : le simple fait qu'un traité appartienne à l'une ou l'autre des « catégories » ne saurait assujettir celui-ci à un régime distinct à cet égard. L'invitation des appelants doit donc être déclinée : même lorsque le traité en cause est un accord portant règlement de revendications territoriales, la Cour doit d'abord dégager l'intention commune des parties; elle se prononcera ensuite sur l'application, à la partie autochtone, du régime jurisprudentiel relatif à l'obligation constitutionnelle de consultation.

[118] C'est donc sur une autre base que la simple appartenance du traité en cause à la catégorie des accords modernes de règlement de revendications territoriales que la présente affaire se distingue de l'affaire *Mikisew*. Comme le rappelle en l'espèce le juge Binnie (par. 53), le traité en cause dans *Mikisew* était silencieux sur les modalités d'exercice du droit reconnu à la Couronne de requérir ou prendre des terrains « de temps à autre [. . .] pour des fins d'établissements, de mine, d'opérations forestières, de commerce ou autres objets ». Il s'agissait là d'une omission, car, en l'absence de balises, l'exercice d'un tel droit par la Couronne risquait de rendre inopérant le droit des Mikisew « de se livrer à leurs occupations ordinaires de la chasse au fusil, de la chasse au piège et de la pêche » que le même traité leur reconnaissait par ailleurs. Par conséquent, en présence d'un traité, l'obligation jurisprudentielle de consultation ne s'appliquera qu'en cas d'omission des parties au traité d'avoir prévu cette matière.

[119] Moreover, where, as in *Mikisew*, the common law duty to consult must be discharged to remedy a gap in the treaty, the duty undergoes a transformation. Where there is a treaty, the function of the common law duty to consult is so different from that of the duty to consult in issue in *Haida Nation* and *Taku River* that it would be misleading to consider these two duties to be one and the same. It is true that both of them are constitutional duties based on the principle of the honour of the Crown that applies to relations between the Crown and Aboriginal peoples whose constitutional — Aboriginal or treaty — rights are at stake. However, it is important to make a clear distinction between, on the one hand, the Crown's duty to consult before taking actions or making decisions that might infringe Aboriginal rights and, on the other hand, the minimum duty to consult the Aboriginal party that necessarily applies to the Crown with regard to its exercise of rights granted to it by the Aboriginal party in a treaty. This, in my opinion, is the exact and real meaning of the comment in *Mikisew* that the "honour of the Crown exists as a source of obligation independently of treaties as well" (para. 51). This is also the exact meaning of the comment in *Haida Nation* that the "jurisprudence of this Court supports the view that the duty to consult and accommodate is part of a process of fair dealing and reconciliation that begins with the assertion of sovereignty and continues beyond formal claims resolution" (para. 32).

[120] Where the Crown unilaterally limits a right granted to an Aboriginal people in a treaty in taking an action that does not amount to an exercise of one of its own rights under that treaty, the infringement is necessarily a serious one, and the Crown's duty is one of reasonable accommodation. This principle is very similar to that of minimal impairment, with respect to which a duty to consult was held to exist in *Sparrow*.

[119] Par ailleurs, lorsque, comme dans l'affaire *Mikisew*, l'obligation de consultation de régime jurisprudentiel doit être mobilisée afin de combler une lacune du traité, cette obligation connaît alors un phénomène de différenciation. En effet, en présence d'un traité, l'obligation jurisprudentielle de consultation remplit une fonction bien distincte de celle de l'obligation de consultation en cause dans les affaires *Nation haïda* et *Taku River*, si bien qu'il serait trompeur d'assimiler ces deux obligations. Certes, il s'agit dans les deux cas d'une obligation constitutionnelle, fondée sur le principe de l'honneur de la Couronne qui doit présider aux relations entre celle-ci et les peuples autochtones lorsque les droits constitutionnels — ancestraux ou issus de traités — des seconds sont en jeu. Cependant, il est important de bien distinguer, d'une part, l'obligation de consultation qui s'impose à la Couronne préalablement à la prise de mesures ou dispositions qui risquent d'enfreindre les droits ancestraux d'un peuple autochtone et, d'autre part, l'obligation minimale en matière de consultation de la partie autochtone qui s'applique impérativement à la Couronne relativement à l'exercice par celle-ci des droits que la première lui a reconnus par traité. Voilà, à mon avis, la signification précise et véritable du passage suivant de l'arrêt *Mikisew*, selon lequel l'« honneur de la Couronne existe également en tant que source d'obligation indépendante des traités » (par. 51). C'est dans ce sens précis que doit être également compris le passage suivant de l'arrêt *Nation haïda* selon lequel la « jurisprudence de la Cour étaye le point de vue selon lequel l'obligation de consulter et d'accommoder fait partie intégrante du processus de négociation honorable et de conciliation qui débute au moment de l'affirmation de la souveraineté et se poursuit au-delà du règlement formel des revendications » (par. 32).

[120] Lorsque, autrement que dans l'exercice d'un droit découlant d'un traité, la Couronne restreint unilatéralement un droit conféré par ce traité à un peuple autochtone, une telle atteinte est forcément grave et l'obligation qu'a alors la Couronne consiste à prendre des mesures d'accommodement raisonnable. Et cette norme rejoint d'ailleurs celle de l'atteinte minimale, contexte dans lequel l'arrêt *Sparrow* a reconnu l'obligation de consulter.

[121] The consultation that must take place if the Crown's exercise of its own rights under a treaty impairs a right of the Aboriginal party will consist in either: (1) the measures provided for in the treaty in this regard; or (2) if no such measures are provided for in the treaty, the consultation required under the common law framework, which varies with the circumstances, and in particular with the seriousness of any potential effects on the Aboriginal party's rights under the treaty (*Haida Nation*, at para. 39; *Mikisew*).

[122] One thing must be made clear at this point, however. Where a treaty provides for a mechanism for consulting the Aboriginal party when the Crown exercises its rights under the treaty — one example would be the participation of the Aboriginal party in environmental and socio-economic assessments with respect to development projects — what the treaty does is to override the common law duty to consult the Aboriginal people; it does not affect the general administrative law principle of procedural fairness, which may give rise to a duty to consult rights holders individually. The constitutional duty to consult Aboriginal peoples is rooted in the principle of the honour of the Crown, which concerns the special relationship between the Crown and Aboriginal peoples as peoples (*Rio Tinto Alcan Inc. v. Carrier Sekani Tribal Council*, 2010 SCC 43, [2010] 2 S.C.R. 650, at paras. 59-60). It is as a result of this special relationship, originally based on the recognition of Aboriginal institutions that existed before the Crown asserted its sovereignty, that Aboriginal peoples, as peoples, can enter into treaties with the Crown. The general rules of administrative law do not normally form part of the matters provided for in comprehensive land claims agreements.

[123] When all is said and done, the fatal flaw in the appellants' argument that the duty to consult can never apply in the case of a modern treaty is that they confuse the concept of an agreement that provides certainty with that of an "entire agreement". The imperative of legal certainty that is central to the negotiation of a modern treaty and

[121] La consultation requise en vue de l'exercice de droits reconnus à la Couronne par un traité, lorsqu'il y a atteinte à un droit des Autochtones, comportera : (1) soit les mesures prévues par le traité à cet égard; (2) soit, à défaut de telles mesures dans le traité, au degré de consultation que le régime jurisprudentiel établit et qui est fonction des circonstances, notamment la gravité des effets potentiels sur les droits que le traité reconnaît à la partie autochtone (*Nation haïda*, par. 39; *Mikisew*).

[122] Une précision importante doit toutefois être apportée ici. Lorsqu'un traité établit des mesures de consultation de la partie autochtone en vue de l'exercice par la partie étatique des droits que lui reconnaît ce traité, par exemple la participation de la partie autochtone concernée à l'évaluation environnementale et socioéconomique des projets de développement, ce que le traité a pour effet d'écarter dans un tel cas est bien l'obligation jurisprudentielle de consultation du peuple autochtone, non pas toute obligation de consulter individuellement le titulaire d'un droit pouvant découler du principe général du droit administratif qu'est l'équité procédurale. L'obligation constitutionnelle de consultation des Autochtones procède du principe de l'honneur de la Couronne, lequel concerne la relation toute particulière qu'entretiennent avec l'État les Autochtones en tant que peuples (*Rio Tinto Alcan Inc. c. Conseil tribal Carrier Sekani*, 2010 CSC 43, [2010] 2 R.C.S. 650, par. 59-60). C'est d'ailleurs cette relation particulière, fondée à l'origine sur la reconnaissance d'ordres autochtones préexistants à l'affirmation par la Couronne de sa souveraineté, qui explique que, en tant que peuples, les Autochtones peuvent conclure des traités avec l'État. Les règles générales du droit administratif ne font normalement pas partie des matières prévues dans les accords de règlement de revendications territoriales globales.

[123] Au fond, l'erreur qui vicie la thèse des appelants selon laquelle tout traité moderne écarte, de par sa nature, l'obligation jurisprudentielle de consultation est qu'ils confondent la notion d'« accord sûr » et celle d'« accord complet ». L'impératif de sécurité juridique qui est à la base de la négociation d'un traité moderne et qui appelle au respect de la volonté

that requires a court to defer to the will of the parties must not blind the courts to omissions by the parties. That an agreement is complete cannot be presumed; it must be found to be complete.

[124] The Court obviously cannot bind itself in future cases by assuming that every modern treaty is free of omissions or other gaps with respect to consultation. The possibility of so important a matter being omitted from a modern treaty may at first blush seem unlikely, but as can be seen from the instant case, it is very real. Were it not for the transitional law provisions in Chapter 12, there would probably have been a gap in this case and, on an exceptional basis, in the legal context of the modern treaty, the common law duty to consult could duly have been applied to fill that gap. But no such gap can be found in this case. Yet it is in fact just such a "procedural gap" that Binnie J. finds (at para. 38) to be confirmed here, but he reaches this conclusion without considering the treaty's transitional law provisions, which, in my view, contain the answers to the questions raised in this case. I disagree with the argument that such a procedural gap exists in this case, and I also disagree with superimposing the common law duty to consult on the treaty. These, therefore, are the basic differences between us.

[125] Yukon also submits that the existence of a duty to consult may be inferred from a treaty only in accordance with its express terms. Once again, this is an argument that goes too far and is in no way consistent with the general principles of interpretation of treaties with Aboriginal peoples, even when those principles are applied to modern treaties. As we will see, the treaty itself contains interpretive provisions to the effect that an interpretation should not be limited to the express terms of the treaty, and in particular that its provisions must be read together and that any ambiguities should be resolved in light of the objectives set out at the beginning of each chapter.

des parties ne saurait rendre les tribunaux aveugles aux omissions de ces dernières. La complétude d'un accord ne se présume pas, elle se constate.

[124] La Cour ne peut évidemment pas se lier pour l'avenir et tenir pour acquis que tout traité moderne ne comporte aucune omission ou autre lacune en matière de consultation. La possibilité que, dans un traité moderne, on ait pu omettre une matière aussi importante peut sembler à première vue étonnante, mais nous verrons que la présente affaire démontre qu'une telle éventualité est pourtant bien réelle. En effet, si ce n'était des dispositions de droit provisoire que contient le chapitre 12, il y aurait probablement eu lacune en l'espèce et, à titre exceptionnel dans l'univers juridique des traités modernes au point de vue empirique, l'obligation jurisprudentielle de consultation aurait pu dûment s'appliquer pour combler cette lacune. Mais aucune lacune de ce genre ne peut être constatée dans la présente affaire. Il se trouve que c'est précisément une telle « lacune procédurale » (« *procedural gap* », par. 38) que le juge Binnie affirme être confirmée en l'espèce, et ce, sans se pencher sur le droit provisoire prévu au traité, dispositions qui, selon moi, apportent la réponse aux questions posées par les pourvois. Rejetant la thèse de l'existence, en l'espèce, d'un tel hiatus procédural, je ne souscris pas davantage à la surimposition au traité du régime jurisprudentiel de l'obligation de consultation. Voilà donc ce qui nous sépare pour l'essentiel.

[125] Dans son appel, le Yukon prétend en outre que l'existence d'une obligation de consultation ne pourra être inférée d'un traité que suivant les stipulations expresses de celui-ci. Une fois de plus, il s'agit d'un argument qui va trop loin et ne correspond d'aucune manière aux principes généraux d'interprétation des traités avec les peuples autochtones, même lorsque ces principes sont appliqués aux traités modernes. Comme nous le verrons, le traité lui-même contient des dispositions interprétatives qui précisent qu'il ne faut pas s'en tenir aux stipulations expresses, et notamment qu'il faut lire ses dispositions en corrélation et, au besoin, résoudre les ambiguïtés à la lumière des objectifs énoncés au début de chaque chapitre.

[126] These general considerations alone would form a sufficient basis for dismissing the appeal. But the provisions of the Final Agreement also confirm this conclusion, and they must, in any event, be reviewed in order to assess the respondents' argument.

II. Treaty in Issue

[127] The analysis of the treaty that must be conducted in this case has three steps. To begin, it will be necessary to review the general framework of the treaty and highlight its key concepts. The next step will be to identify the substantive treaty rights that are in issue here, namely, on the one hand, the Crown's right the exercise of which raises the issue of consultation and, on the other hand, the right or rights of the Aboriginal party, which could be limited by the exercise of the Crown's right. Finally, and this is the determining factor, it will be necessary to discuss the formal rights and duties that result from the consultation process provided for in the treaty.

A. *General Framework*

[128] "Comprehensive" Aboriginal land claims agreements form part of the corpus of our constitutional law. And the effect of the implementing legislation of such agreements is that they are usually binding on third parties. The agreements are most often the fruit of many years of intense negotiations. The documents in which they are set out therefore command the utmost respect.

[129] This Court was recently asked to interpret the *James Bay and Northern Québec Agreement* for the first time, some 35 years after it was signed in 1975. Since that year, 19 other similar agreements have been concluded across the country. Subsequently, to take the most striking example, although only one comprehensive claim in British Columbia has resulted in a final settlement and only seven others in that province are currently at relatively advanced stages of negotiation, no fewer than 52 other claims there have been accepted for negotiation by the Treaty Commission.

[126] Il serait possible, sur la seule base des considérations d'ordre général qui précèdent, de rejeter l'appel principal. Cependant, les dispositions de l'Entente définitive confirment elles aussi cette conclusion. Leur examen est d'ailleurs nécessaire pour évaluer la thèse des intimés.

II. Traité en cause

[127] L'analyse du traité que requiert la présente affaire comporte trois volets. Il faudra d'abord en discerner le régime général et en dégager les notions clés. Il s'agira ensuite de déterminer les droits matériels issus de traités qui sont ici en jeu, c'est-à-dire, d'une part, le droit de la partie étatique dont l'exercice soulève la question de la consultation et, d'autre part, le droit ou les droits de la partie autochtone qui, du fait de cet exercice risque de se retrouver limités par celui du droit de la Couronne. Enfin, élément déterminant, il sera question des droits et obligations formels qui résultent du processus de consultation prévu au traité.

A. *Régime général*

[128] Les accords portant règlement de revendications territoriales autochtones dites « globales » font partie de notre corpus constitutionnel. Qui plus est, par l'effet de leur loi de mise en œuvre, ces accords lient normalement les tiers. Ils sont d'habitude le fruit de nombreuses années d'intenses négociations. Les documents qui les consignent commandent donc le plus grand respect.

[129] Notre Cour a récemment été appelée à interpréter pour la première fois la *Convention de la Baie-James et du Nord québécois*, quelque 35 ans après sa signature en 1975. Or, depuis cette date, c'est 19 autres accords du genre qui ont été conclus à travers le pays. Ensuite, et pour prendre l'exemple le plus fort, si à ce jour une seule revendication globale a fait l'objet d'un accord de règlement définitif en Colombie-Britannique et si sept autres seulement y sont à un stade plus ou moins avancé de négociation, en revanche pas moins de 52 autres revendications y ont été acceptées pour négociation par la Commission des traités.

[130] It was after 20 years of negotiations that the Umbrella Final Agreement between the Government of Canada, the Council for Yukon Indians and the Government of the Yukon ("Umbrella Agreement") was signed on May 29, 1993. At that time, the Little Salmon/Carmacks First Nation was a member of the Council for Yukon Indians, and it still is today, along with nine other First Nations. The Umbrella Agreement provided for the conclusion, in accordance with its terms, of specific agreements with the various Yukon First Nations (s. 2.1.1).

[131] Although the Umbrella Agreement "does not create or affect any legal rights" (s. 2.1.2), it provides that "Settlement Agreements shall be land claims agreements within the meaning of section 35 of the *Constitution Act, 1982*" (s. 2.2.1). Moreover, according to the Umbrella Agreement, "[a] Yukon First Nation Final Agreement shall include the provisions of the Umbrella Final Agreement and the specific provisions applicable to that Yukon First Nation" (s. 2.1.3). It can be seen from the final agreements in question that the parties have given effect to this undertaking. Even the numbering of the Umbrella Agreement's provisions has been reproduced in the 11 final agreements that have been concluded under it so far. These 11 final agreements represent over half of all the "comprehensive" land claims agreements (that is, agreements resulting from claims that Aboriginal rights exist) signed across the country. The Final Agreement in issue here was signed near Carmacks on July 21, 1997 and was subsequently ratified and implemented by enacting legislation; this last step was a condition of validity (ss. 2.2.11 and 2.2.12).

[132] The Umbrella Agreement, as a whole, is founded on a few basic concepts. It should be noted from the outset that this agreement applies to a larger territory than the land claims settlement concluded under it actually does. The agreement refers to "Settlement Land", which is defined as "Category A Settlement Land, Category B Settlement Land or Fee Simple Settlement Land", and to "Non-Settlement Land", which is defined as "all land and water in the Yukon other than

[130] C'est au terme d'une vingtaine d'années de négociations que, le 29 mai 1993, était signé l'Accord-cadre définitif entre le gouvernement du Canada, le Conseil des Indiens du Yukon et le gouvernement du Yukon (« Accord-cadre »). La Première nation de Little Salmon/Carmacks était alors membre du Conseil des Indiens du Yukon. Elle l'est toujours, avec neuf autres premières nations. L'Accord-cadre prévoyait la conclusion, suivant ses stipulations, d'ententes particulières avec les diverses premières nations du Yukon (art. 2.1.1).

[131] Tandis que l'Accord-cadre « n'a pas pour effet de créer des droits légaux ou de porter atteinte à de tels droits » (art. 2.1.2), en revanche « [l]es ententes portant règlement constituent des accords sur des revendications territoriales au sens de l'article 35 de la *Loi constitutionnelle de 1982* » (art. 2.2.1). De plus, l'Accord-cadre précise que « [t]oute entente définitive conclue par une première nation du Yukon doit inclure les dispositions de l'Accord-cadre définitif ainsi que les dispositions spécifiques applicables à cette première nation du Yukon » (art. 2.1.3). La lecture des ententes définitives en question révèle que cet engagement a été tenu par les parties. On a même repris, dans les 11 ententes définitives conclues jusqu'à maintenant conformément à l'Accord-cadre, la numérotation des dispositions de cet accord. Ces 11 ententes représentent ainsi plus de la moitié de la totalité des accords de règlement de revendications territoriales « globales » (c'est-à-dire fondée sur l'allégation de droits ancestraux) conclus au pays. L'Entente définitive qui nous intéresse a été signée près de Carmacks, le 21 juillet 1997, et ultérieurement ratifiée et mise en œuvre par des lois, dernière étape qui constituait une condition de validité (art. 2.2.11 et 2.2.12).

[132] Certaines notions structurent l'ensemble de l'Accord-cadre. Soulignons d'entrée de jeu que celui-ci vise un territoire plus grand que ne le fait, comme tel, le règlement des revendications dont il est porteur. En effet, il y est question, outre d'une « terre visée par le règlement » ou « terre visée par un règlement » (« *Settlement Land* ») coïncidant avec, « [s]elon le cas, les terres visées par le règlement de catégorie A, les terres visées par le règlement de catégorie B ou les terres visées par le règlement

Settlement Land" and as including "Mines and Minerals in Category B Settlement Land and Fee Simple Settlement Land, other than Specified Substances" (Chapter 1). The nature of this distinction will be helpful in our analysis of the provisions relating to legal certainty (Division 2.5.0). But one point that should be made here is that the framework provided for in the agreement varies considerably depending on which of these two broad categories the land in question belongs to. It should also be pointed out that, under the agreement, "Crown land" — such as the land in issue here that was transferred to Mr. Paulsen on October 18, 2004 — is land that, as defined, is not settlement land. Another concept used in the Umbrella Agreement is that of "traditional territory", which transcends the distinction between settlement land and non-settlement land (Chapter 1 and Division 2.9.0). This concept of "traditional territory" is relevant not only to the possibility of overlapping claims of various Yukon First Nations, but also to the extension of claims beyond the limits of Yukon and to the negotiation of transboundary agreements (Division 2.9.0). As we will see, it is also central to the fish and wildlife co-management system established in Chapter 16 of the Final Agreement. The land that was in question in the decision of the Director of Agriculture dated October 18, 2004 in respect of Mr. Paulsen's application is located within the traditional territory of the Little Salmon/Carmacks First Nation, and more specifically in the northern part of that territory, in a portion that overlaps with the traditional territory of the Selkirk First Nation.

[133] The appellants' argument is based entirely on the principle that the agreement provides certainty. More precisely, it is based on an interpretation according to which that principle is indistinguishable from the principle of the "entire agreement". As a result, they have detached a key general provision of the Final Agreement from its context and

détenues en fief simple », d'une « terre non visée par un règlement » ou « terre non visée par le règlement » (« *Non-Settlement Land* »), expression qui s'entend ici « de terres et d'eaux du Yukon qui ne sont pas des terres visées par un règlement » ainsi que des « mines et [des] minéraux — à l'exclusion des matières spécifiées — des terres visées par le règlement de catégorie B et des terres visées par le règlement détenues en fief simple » (chapitre 1). La nature de cette distinction sera utile lorsque nous examinerons les dispositions relatives à la sécurité juridique ou certitude (section 2.5.0). Mais signalons déjà que le régime prévu par l'accord varie considérablement selon qu'il est question de terres relevant de l'une ou l'autre de ces deux grandes catégories. Il convient aussi de souligner que, aux termes de l'accord, une « terre de la Couronne » — telle celle dont la cession à M. Paulsen le 18 octobre 2004 est ici en cause — est une terre qui, par définition, n'est pas une terre visée par le règlement. L'Accord-cadre utilise aussi la notion de « territoire traditionnel » qui dépasse l'opposition entre les terres visées par le règlement de la revendication et celles qui ne le sont pas (chapitre 1 et section 2.9.0). Cette notion de « territoire traditionnel » n'intéresse pas seulement la question du possible chevauchement des revendications de différentes premières nations du Yukon, mais aussi de leur débordement au-delà des limites du Yukon et de la négociation d'accords transfrontaliers (section 2.9.0). Comme nous le verrons, cette notion est également au cœur du régime de cogestion des ressources halieutiques et fauniques instauré par le chapitre 16 de l'entente définitive. La terre qui, le 18 octobre 2004, faisait l'objet de la décision du directeur de l'agriculture relativement à la demande de M. Paulsen se situe à l'intérieur du territoire traditionnel de la Première nation de Little Salmon/Carmacks, plus précisément dans sa partie nord, sur une portion qui chevauche le territoire traditionnel de la Première nation de Selkirk.

[133] La thèse des appelants repose entièrement sur le principe de l'« accord sûr ». Plus exactement, elle repose sur une interprétation imperméable à ce qui le distingue de celui d'« accord complet ». C'est ce qui explique comment ils en arrivent à détacher de son contexte une disposition générale fort importante de l'entente définitive pour en donner

interpreted it in a way that I do not find convincing. The "entire agreement" clause (s. 2.2.15), the actual source of which is the Umbrella Agreement and on which the appellants rely, provides that "Settlement Agreements shall be the entire agreement between the parties thereto and [that] there shall be no representation, warranty, collateral agreement or condition affecting those Agreements except as expressed in them." This clause is consistent with the "out-of-court settlement" aspect of comprehensive land claims agreements. But it is not the only one, which means that such clauses must be considered in the broader context of the Final Agreement, and in particular of the provisions respecting legal certainty, which are set out under the heading "Certainty" (Division 2.5.0).

[134] On this key issue of legal certainty, the Umbrella Agreement and, later, all the final agreements negotiated under it were entered into in accordance with the 1986 federal policy on comprehensive claims (Saint-Hilaire, at pp. 407-8, note 45). It is actually possible to refer to the 1993 policy, as the 1986 policy was not modified on this point. Since 1986, the official federal policy has stated in this respect that rights with respect to land that are consistent with the agreement and "Aboriginal rights which are not related to land and resources or to other subjects under negotiation will not be affected by the exchange" (Indian and Northern Affairs Canada, *Federal Policy for the Settlement of Native Claims* (1993), at p. 9). In short, in the 1986 policy, the government announced that its conduct would be honourable in that it would aim for equitable, or [TRANSLATION] "orthodox", exchanges (Saint-Hilaire, at p. 407). In other words, the principle endorsed in the federal policy since 1986 has involved a distinction between the agreement that provides certainty and the "entire agreement". So much for the general principle behind the division of the agreement in issue entitled "Certainty". Let us now consider in greater detail the specific provisions applicable to the exchange of rights established in the Final Agreement.

une interprétation qui ne me convainc pas. La clause de l'« entente complète » (« *entire agreement clause* ») (art. 2.2.15), dont la source matérielle est l'Accord-cadre et sur laquelle les appelants se fondent, est rédigée ainsi : « Chaque entente portant règlement constitue l'entente complète intervenue entre les parties à cette entente et il n'existe aucune autre assertion, garantie, convention accessoire ou condition touchant cette entente que celles qui sont exprimées dans cette dernière. » Il s'agit ici de la dimension transaction ou « règlement à l'amiable » des accords portant règlement de revendications territoriales globales. Or, celle-ci n'est pas la seule, de sorte qu'il faut replacer une telle clause dans le contexte plus général de l'entente définitive, et notamment de ses dispositions relatives à la sécurité juridique — ou « certitude » — ou, comme ici, relative aux « Précisions » (section 2.5.0).

[134] Sur cette question essentielle de la sécurité juridique, l'Accord-cadre et, par la suite, toutes les ententes définitives négociées suivant les stipulations de celui-ci, ont été conclus conformément à la politique fédérale de 1986 sur les revendications globales (Saint-Hilaire, p. 407-408, note 45). En fait, on peut ici se reporter à la politique de 1993, puisque sur cette question celle-ci n'apportait aucune modification à la politique de 1986. Depuis 1986, la politique fédérale officielle indique à cet égard que « ne seront pas touchés par l'échange » les droits de nature foncière qui sont compatibles avec l'accord ni les « droits ancestraux qui ne sont pas liés aux terres et aux ressources ou à d'autres points négociés » (Affaires indiennes et du Nord Canada, *Politique du gouvernement fédéral en vue du règlement des revendications autochtones* (1993), p. 10). En somme, la politique de 1986 annonçait un comportement honorable en visant des échanges équitables c'est-à-dire « orthodoxes » (Saint-Hilaire, p. 407). Autrement dit, le principe promu par la politique fédérale depuis 1986 établit une distinction entre la notion d'« accord sûr » et celle d'« accord complet ». Voilà pour le principe général qui préside à la section relative aux « Précisions » de l'accord qui nous occupe. Voyons maintenant plus en détail les modalités précises de l'échange de droits établi par l'Entente définitive.

[135] The Umbrella Agreement provides (in s. 2.5.1) that, in consideration of the promises, terms, conditions and provisos in a Yukon First Nation's final agreement,

> 2.5.1.1 subject to 5.14.0 [which sets out a procedure for designating "Site Specific Settlement Land" to which s. 2.5.0 will not apply], that Yukon First Nation and all persons who are eligible to be Yukon Indian People it represents, as of the Effective Date of that Yukon First Nation's Final Agreement, cede, release and surrender to Her Majesty the Queen in Right of Canada, all their aboriginal claims, rights, titles, and interests, in and to,
>
> (a) Non-Settlement Land and all other land and water including the Mines and Minerals within the sovereignty or jurisdiction of Canada, except the Northwest Territories, British Columbia and Settlement Land,
>
> (b) the Mines and Minerals within all Settlement Land, and
>
> (c) Fee Simple Settlement Land; [and]
>
> 2.5.1.2 that Yukon First Nation and all persons eligible to be Yukon Indian People it represents, as of the Effective Date of that Yukon First Nation's Final Agreement, cede, release and surrender to Her Majesty the Queen in Right of Canada all their aboriginal claims, rights, titles and interests in and to Category A and Category B Settlement Land and waters therein, to the extent that those claims, rights, titles and interests are inconsistent or in conflict with any provision of a Settlement Agreement . . .

According to the agreement settling its comprehensive land claim, the Little Salmon/Carmacks First Nation therefore "surrender[ed]" any Aboriginal rights it might have *in respect of land, water, mines and minerals*, (1) subject to the procedure for designating "site specific settlement land" (of which

[135] L'Accord-cadre prévoit (art. 2.5.1) que, en contrepartie des promesses, conditions et réserves prévues par l'entente définitive conclue par une première nation du Yukon :

> 2.5.1.1 sous réserve de la section 5.14.0 [qui prévoit une procédure de désignation de « sites spécifiques » auxquels la section 2.5.0 ne s'appliquera pas], cette première nation du Yukon et toutes les personnes qui sont admissibles en tant qu'Indiens du Yukon représentées par cette première nation — à la date d'entrée en vigueur de cette entente définitive — renoncent, en faveur de Sa Majesté la Reine du chef du Canada, à l'ensemble de leurs revendications, droits, titres et intérêts ancestraux :
>
> a) concernant les terres non visées par le règlement et les autres terres et eaux — y compris les mines et les minéraux — relevant de la souveraineté ou de la compétence du Canada, à l'exception des Territoires du Nord-Ouest, de la Colombie-Britannique et des terres visées par le règlement;
>
> b) concernant les mines et les minéraux se trouvant à l'intérieur des terres visées par le règlement;
>
> c) concernant les terres visées par le règlement détenues en fief simple;
>
> 2.5.1.2 cette première nation du Yukon et toutes les personnes admissibles en tant qu'Indiens du Yukon représentées par cette première nation — à la date de cette entente définitive — renoncent, en faveur de Sa Majesté la Reine du chef du Canada, à l'ensemble de leurs revendications, droits, titres et intérêts ancestraux à l'égard des terres visées par le règlement de catégorie A et de catégorie B et des eaux qui s'y trouvent, dans la mesure où ces revendications, droits, titres et intérêts sont incompatibles ou entrent en conflit avec quelque disposition d'une entente portant règlement . . .

Aux termes de l'accord portant règlement de sa revendication globale, la Première nation de Little Salmon/Carmacks a donc « renonc[é] » à tous ses possibles droits ancestraux *relatifs aux terres, eaux, mines et minéraux*, (1) sous réserve de la procédure de désignation de « sites spécifiques » — dont

two parcels were located near the land in question in Mr. Paulsen's application), (2) except insofar as those rights extended into the Northwest Territories or British Columbia, and (3) except for those relating to settlement land and waters therein, but only to the extent that the rights in question were not inconsistent with the settlement and provided that they extended neither to land held in fee simple nor to mines and minerals — as is specified in the definition of non-settlement lands. For greater certainty, the Final Agreement accordingly adds that

> 2.5.1.4 neither that Yukon First Nation nor any person eligible to be a Yukon Indian Person it represents, their heirs, descendants and successors, shall, after the Effective Date of that Yukon First Nation's Final Agreement, assert any cause of action, action for declaration, claim or demand of whatever kind or nature, which they ever had, now have, or may hereafter have against Her Majesty the Queen in Right of Canada, the Government of any Territory or Province, or any person based on,
>
> (a) any aboriginal claim, right, title or interest ceded, released or surrendered pursuant to 2.5.1.1 and 2.5.1.2; [or]
>
> (b) any aboriginal claim, right, title or interest in and to Settlement Land, lost or surrendered in the past, present or future . . .

[136] It is also important to consider general provision 2.2.4, which reflects the new orthodox exchange principle introduced by the 1986 federal policy that applied to the negotiation of the Umbrella Agreement:

> Subject to 2.5.0, 5.9.0 [effects of the registration, granting, declaration or expropriation of any interest in a Parcel of Settlement Land less than the entire interest], 5.10.1 [effects of the registration, granting or expropriation of the fee simple title in a Parcel of Settlement Land] and 25.2.0 [negotiation of the transboundary aspect of claims], Settlement Agreements shall not affect the ability of aboriginal people of the Yukon to

deux se situent à proximité de la terre faisant l'objet de la demande de Paulsen —, (2) sauf dans la mesure où ces droits s'étendraient aux Territoires du Nord-Ouest ou à la Colombie-Britannique et (3) à l'exception de ceux qui porteraient sur des terres et eaux visées par le règlement, mais cela dans la seule mesure où ils ne seraient pas incompatibles avec celui-ci et ne s'étendraient ni à des terres détenues en fief simple ni aux mines et minéraux — ce qui précise la définition des terres non visées par un règlement. Pour plus de sûreté, l'Entente définitive ajoute qu'en conséquence :

> 2.5.1.4 ni cette première nation du Yukon ni aucune personne admissible en tant qu'Indien du Yukon représentée par cette première nation, ou leurs héritiers, descendants et successeurs, ne feront valoir ou présenteront, selon le cas, après la date d'entrée en vigueur de cette entente définitive, quelque cause d'action, action déclaratoire, réclamation ou demande de quelque nature que ce soit — passée, actuelle ou future — à l'encontre soit de Sa Majesté la Reine du chef du Canada, soit du gouvernement d'un territoire ou d'une province, ou de quelque autre personne, et qui serait fondée, selon le cas :
>
> a) sur quelque revendication, droit, titre ou intérêt ancestral visé par la renonciation prévue aux articles 2.5.1.1 et 2.5.1.2;
>
> b) sur quelque revendication, droit, titre ou intérêt ancestral relatif à des terres visées par le règlement qui a été ou sera perdu, ou qui a fait, fait ou fera l'objet d'une renonciation . . .

[136] Il est également important de souligner la disposition générale 2.2.4, qui reprend le nouveau principe des échanges orthodoxes introduit par la politique fédérale de 1986, laquelle a présidé à la négociation de l'Accord-cadre :

> Sous réserve des sections 2.5.0, 5.9.0 [effets de l'enregistrement, de l'octroi, de la déclaration ou de l'expropriation d'un intérêt inférieur à l'intérêt complet dans une parcelle de terre visée par le règlement] et 25.2.0 [négociation de la dimension transfrontalière des revendications] et de l'article 5.10.1 [effets de l'enregistrement, de l'octroi ou de l'expropriation du titre en fief simple dans une parcelle de terre visée par le règlement],

exercise, or benefit from, any existing or future constitutional rights for aboriginal people that may be applicable to them.

[137] The spirit of the Final Agreement is apparent on the very face of these provisions respecting legal certainty: except where otherwise provided in the agreement itself, the agreement replaces the common law Aboriginal rights framework with the one it establishes for the matters it covers. But that is not all.

[138] The Final Agreement also includes general and interpretive provisions, such as general provision 2.2.5, which, like so many others, is reproduced from the Umbrella Agreement. This provision states that "Settlement Agreements shall not affect the rights of Yukon Indian People as Canadian citizens and their entitlement to all of the rights, benefits and protection of other citizens applicable from time to time." There are also relevant provisions in Division 2.6.0 of the Umbrella Agreement:

2.6.1 The provisions of the Umbrella Final Agreement, the specific provisions of the Yukon First Nation Final Agreement and Transboundary Agreement applicable to each Yukon First Nation shall be read together.

2.6.2 Settlement Legislation shall provide that:

2.6.2.1 subject to 2.6.2.2 to 2.6.2.5, all federal, territorial and municipal Law shall apply to Yukon Indian People, Yukon First Nations and Settlement Land;

2.6.2.2 where there is any inconsistency or conflict between any federal, territorial or municipal Law and a Settlement Agreement, the Settlement Agreement shall prevail to the extent of the inconsistency or conflict;

2.6.2.3 where there is any inconsistency or conflict between the provisions of

les ententes portant règlement n'ont pas pour effet de porter atteinte à la capacité des peuples autochtones du Yukon d'exercer des droits constitutionnels — existants ou futurs — qui sont reconnus aux peuples autochtones et qui s'appliquent à eux ou de tirer parti de tels droits.

[137] L'esprit de l'Entente définitive ressort déjà à la lecture de ces dispositions relatives à l'objectif de sécurité juridique : sauf exception prévue par l'entente elle-même, celle-ci substitue au régime jurisprudentiel relatif aux droits ancestraux celui qu'elle instaure pour les matières dont elle dispose. Mais il y a plus.

[138] L'Entente définitive comporte également des dispositions générales et interprétatives, notamment la disposition générale 2.2.5, qui a comme tant d'autres été reprise de l'Accord-cadre et qui précise que « [l]es ententes portant règlement ne portent pas atteinte aux droits des Indiens du Yukon en tant que citoyens canadiens ni à leur droit de jouir de tous les droits, avantages et protections reconnus aux autres citoyens. » La section 2.6.0 de l'Accord-cadre contient elle aussi des dispositions pertinentes :

2.6.1 Les dispositions de l'Accord-cadre définitif, les dispositions spécifiques de l'entente définitive conclue par une première nation du Yukon ainsi que l'accord transfrontalier applicable à chaque première nation du Yukon doivent être lus en corrélation.

2.6.2 La loi de mise en œuvre doit renfermer des dispositions portant que:

2.6.2.1 sous réserve des articles 2.6.2.2 à 2.6.2.6, les règles de droit fédérales, territoriales et municipales s'appliquent aux Indiens du Yukon, aux premières nations du Yukon et aux terres visées par un règlement;

2.6.2.2 les dispositions d'une entente portant règlement l'emportent sur les dispositions incompatibles d'une règle de droit fédérale, territoriale ou municipale;

2.6.2.3 les dispositions de l'Accord-cadre définitif l'emportent sur les

the Umbrella Final Agreement and the specific provisions applicable to a Yukon First Nation, the provisions of the Umbrella Final Agreement shall prevail to the extent of the inconsistency or conflict; [and]

2.6.2.4 where there is any inconsistency or conflict between Settlement Legislation and any other Legislation, the Settlement Legislation shall prevail to the extent of the inconsistency or conflict;

. . .

2.6.3 There shall not be any presumption that doubtful expressions in a Settlement Agreement be resolved in favour of any party to a Settlement Agreement or any beneficiary of a Settlement Agreement.

. . .

2.6.5 Nothing in a Settlement Agreement shall be construed to preclude any party from advocating before the courts any position on the existence, nature or scope of any fiduciary or other relationship between the Crown and the Yukon First Nations.

2.6.6 Settlement Agreements shall be interpreted according to the *Interpretation Act*, R.S.C. 1985, c. I-21, with such modifications as the circumstances require.

2.6.7 Objectives in Settlement Agreements are statements of the intentions of the parties to a Settlement Agreement and shall be used to assist in the interpretation of doubtful or ambiguous expressions.

2.6.8 Capitalized words or phrases shall have the meaning assigned in the Umbrella Final Agreement.

These interpretive provisions establish, *inter alia*, a principle of equality between the parties (s. 2.6.3) and a principle of contextual interpretation based on the general scheme of the provisions, divisions and chapters and of the treaty as a whole in accordance with its systematic nature (s. 2.6.1). The latter principle is confirmed by the rule that in the event of ambiguity, the provisions of the treaty are to

dispositions spécifiques incompatibles, applicables à une première nation du Yukon;

2.6.2.4 les dispositions de la loi de mise en œuvre l'emportent sur les dispositions incompatibles de toute autre mesure législative;

. . .

2.6.3 Il n'existe aucune présomption que les expressions ambiguës d'une entente portant règlement doivent être interprétées en faveur soit d'une partie à cette entente soit de quelque personne en bénéficiant.

. . .

2.6.5 Les ententes portant règlement n'ont pas pour effet d'empêcher une partie de faire valoir, devant les tribunaux, sa position quant à l'existence, à la nature ou à l'étendue des rapports fiduciaires ou autres qui existeraient entre la Couronne et les premières nations du Yukon.

2.6.6 Les ententes portant règlement sont interprétées conformément à la *Loi d'interprétation*, L.R.C. (1985) ch. I-21, avec les adaptations nécessaires.

2.6.7 Les objectifs figurant dans une entente portant règlement constituent l'énoncé des intentions des parties à cette entente et doivent être utilisés dans l'interprétation des expressions douteuses ou ambiguës.

2.6.8 Les mots et expressions définis et utilisés dans l'Accord-cadre définitif ont le sens qui leur est attribué dans la définition correspondante.

De ces stipulations interprétatives se dégagent notamment le principe d'égalité des parties (art. 2.6.3) et le principe d'une interprétation contextuelle fondée sur l'économie générale des dispositions, sections, chapitres et de l'ensemble du traité suivant sa nature systématique (art. 2.6.1). Ce dernier principe est confirmé par la règle voulant que, en cas d'ambiguïté, l'interprétation des dispositions

be interpreted in light of the objectives stated at the beginning of certain chapters of the treaty (s. 2.6.7). The systematic nature of the treaty is also confirmed by the rule that when defined words and phrases are used, they have the meanings assigned to them in the definitions (s. 2.6.8). In other cases, the rules set out in the federal *Interpretation Act* apply (s. 2.6.6). This, then, is the framework for interpretation agreed on by the parties to the treaty. More precisely, this framework was first developed by the parties to the Umbrella Agreement, and was then incorporated by the parties into the various final agreements concluded under the Umbrella Agreement. Where there is any inconsistency or conflict, the rules of this framework prevail over the common law principles on the interpretation of treaties between governments and Aboriginal peoples.

[139] These general and interpretive provisions also establish certain rules with respect to the relationships of the Umbrella Agreement and any final agreement concluded under it, not only the relationship between them, but also that with the law in general. One of these rules is that in the event of inconsistency or conflict, the Umbrella Agreement prevails over the agreements concluded under it (s. 2.6.2.3). At first glance, this rule is surprising, since the parties to the Umbrella Agreement were very careful to specify that, on its own, that agreement "does not create or affect any legal rights" (s. 2.1.2). Section 2.6.2.3 is therefore somewhat imprecise. It can only refer to the provisions of the final agreement whose substance (and not form) derives from the Umbrella Agreement, and which prevail over the "specific" provisions. The implementing legislation, the *Yukon First Nations Land Claims Settlement Act*, S.C. 1994, c. 34, provides that "[i]n the event of a conflict or inconsistency between provisions of the Umbrella Final Agreement incorporated in a final agreement that is in effect and provisions of the final agreement that are specific to the first nation, the provisions of the Umbrella Final Agreement prevail to the extent of the conflict or inconsistency" (s. 13(4)). The other provisions of the treaty that relate to this issue of conflicting legislation have also been drawn from the federal implementing legislation (s. 13) and from its territorial

du traité tienne compte des objectifs énoncés au début de certains chapitres de celui-ci (art. 2.6.7). Le caractère systématique du traité est également confirmé par la règle selon laquelle les mots et expressions définis sont porteurs de ces définitions lorsqu'ils sont utilisés (art. 2.6.8). Pour le reste, ce sont les règles établies par la loi fédérale d'interprétation qui s'appliquent (art. 2.6.6). Voilà donc le régime interprétatif dont les parties au traité ont elles-mêmes convenu. Plus exactement, ce régime a d'abord été élaboré par les parties à l'Accord-cadre, puis repris par les parties aux différentes ententes définitives conclues conformément aux stipulations de cet accord. Advenant toute incompatibilité, ce régime l'emporte sur les principes dégagés par la jurisprudence en matière d'interprétation de traités conclus par les gouvernements et les peuples autochtones.

[139] Les dispositions interprétatives et générales que nous venons de voir posent aussi certaines normes relatives aux rapports qu'entretiennent l'Accord-cadre et toute entente définitive conclue conformément à ses stipulations, non seulement entre eux, mais avec le reste du droit également. On peut noter à cet égard la norme énonçant la prépondérance — en cas d'incompatibilité constatée — de l'Accord-cadre sur les ententes conclues suivant ses stipulations (art. 2.6.2.3). À première vue, cette norme surprend, dans la mesure où les parties à l'Accord-cadre ont bien pris soin de préciser que, à lui seul, ce dernier « n'a pas pour effet de créer des droits légaux ou de porter atteinte à de tels droits » (art. 2.1.2). L'article 2.6.2.3 souffre donc d'une imprécision. Il ne peut s'agir que des dispositions de l'entente définitive dont la source matérielle (et non pas formelle) est l'Accord-cadre, lesquelles ont préséance sur les dispositions dites « spécifiques ». La loi de mise en œuvre, nommément la *Loi sur le règlement des revendications territoriales des premières nations du Yukon*, L.C. 1994, ch. 34, précise d'ailleurs que ce sont « [l]es dispositions de l'accord-cadre reprises dans un accord définitif en vigueur [qui] l'emportent sur les dispositions incompatibles qui sont propres à la première nation » (par. 13(4)). Le reste des stipulations du traité relatives à cette question des « conflits de loi » est également repris dans la loi fédérale de mise en œuvre (art. 13)

equivalent (s. 5). The rules can therefore be summarized in the principle that the Final Agreement prevails over any other non-constitutional legal rule, subject to the requirement that its provisions not be so construed as to affect the rights of "Yukon Indian people" as Canadian citizens and their entitlement to all the rights, benefits and protections of other citizens (s. 2.2.5). In short, therefore, with certain exceptions, the treaty overrides Aboriginal rights related to the matters to which it applies, and in cases of conflict or inconsistency, it prevails over all other non-constitutional law.

[140] It should be noted that in certain circumstances, the principle applied in the treaty with respect to particular non-constitutional legislation — the *Indian Act*, R.S.C. 1985, c. I-5, where reserves are concerned — is that the treaty replaces that legislation rather than prevailing over it (s. 4.1.2).

[141] Regarding the relationship between the treaty in issue and the rest of our constitutional law other than the case law on Aboriginal rights, such a treaty clearly cannot on its own amend the "Constitution of Canada" within the meaning of s. 52 and Part V of the *Constitution Act, 1982*. Thus, to give one example, it cannot on its own alter either the protections of rights and freedoms provided for in Part I of that Act, the *Canadian Charter of Rights and Freedoms* (support for this can be found in s. 2.2.5 of the Final Agreement, which was discussed above), or the constitutional division of powers established in Part VI of the *Constitution Act, 1867*. Next, on the specific issue before us in the instant case, since the right to be consulted that corresponds to the common law duty to consult (1) transcends the distinction between Aboriginal rights and treaty rights, (2) is therefore not an Aboriginal right and even less so an Aboriginal right related to land and resources, and (3) accordingly cannot be surrendered under Division 2.5.0, it must be asked whether there is anything explicit in the treaty in issue about how the parties intended to deal with this duty. In other words, does the Final Agreement contain provisions that affect the general principle

ainsi que dans son équivalent territorial (art. 5). Les règles pertinentes peuvent donc être résumées par le principe selon lequel l'Entente définitive l'emporte sur toute autre règle de droit infraconstitutionnel, sous réserve du fait que ses dispositions ne doivent pas être interprétées d'une manière portant atteinte aux droits des « Indiens du Yukon » en tant que citoyens canadiens ni à leur droit de jouir de tous les droits, avantages et protections reconnus aux autres citoyens (art. 2.2.5). En somme, donc, sauf exception le traité se substitue aux droits ancestraux relativement aux matières dont il dispose et il a préséance, en cas d'incompatibilité, sur le reste du droit infraconstitutionnel.

[140] Il importe de souligner ici que, dans certaines circonstances, le traité fait également intervenir le principe de substitution plutôt que le principe de préséance à l'égard d'un texte infraconstitutionnel donné, en l'occurrence la *Loi sur les Indiens*, L.R.C. 1985, ch. I-5, pour ce qui est des réserves (art. 4.1.2).

[141] En ce qui a trait à la relation entre le traité en cause et le reste de notre droit constitutionnel au-delà du seul régime jurisprudentiel des droits ancestraux, un tel traité ne saurait évidemment à lui seul modifier la « Constitution du Canada » au sens de l'art. 52 et de la partie V de la *Loi constitutionnelle de 1982*. Il ne pourrait donc pas, par exemple, modifier à lui seul la protection des droits et libertés prévue à la partie I de cette dernière loi, c'est-à-dire la *Charte canadienne des droits et libertés* (ce qui tend à être confirmé par l'art. 2.2.5 de l'Entente définitive dont il a été question plus haut), ou la répartition fédérative des compétences prévue à la partie VI de la *Loi constitutionnelle de 1867*. Ensuite, relativement à la question qui nous intéresse particulièrement en l'espèce, dans la mesure où le droit d'être consulté qui est corrélatif de l'obligation de consultation de régime jurisprudentiel (1) dépasse l'opposition entre droits ancestraux et droits issus de traité, (2) qu'il n'est donc pas un droit ancestral et encore moins un droit ancestral aux terres et aux ressources et (3) que, par conséquent, il ne saurait avoir fait l'objet d'une renonciation en vertu de la section 2.5.0, il convient de se demander si le traité qui nous occupe contient quelque chose d'explicite

discussed above that the common law duty to consult will apply only where the parties have failed to address this issue? I see none.

[142] It should be borne in mind that an Aboriginal people cannot, by treaty, surrender its constitutional right to be consulted before the Crown takes measures in a manner not provided for in the treaty that might violate, infringe or limit a right that Aboriginal people is recognized as having in the same treaty. By analogy, in contract law, such a surrender would constitute an unconscionable term. But it is not this rule that is in issue here so much as the minimum required content of the duty in the context of treaties with Aboriginal peoples. As set out above, s. 2.6.5 of the Final Agreement, which was reproduced from the Umbrella Agreement, provides that "[n]othing in a Settlement Agreement shall be construed to preclude any party from advocating before the courts any position on the existence, nature or scope of any fiduciary or other relationship between the Crown and the Yukon First Nations". However, the fiduciary duty is not always constitutional in nature. Nor is it equivalent to the duty to consult implied by the principle of the honour of the Crown that the Crown must maintain in its relations with Aboriginal peoples as holders of special constitutional rights. The fiduciary duty may arise, for example, from relations the Crown maintains with Indians in managing reserve lands and, more generally, in administering the *Indian Act* (*Guerin*; *Osoyoos Indian Band v. Oliver (Town)*, 2001 SCC 85, [2001] 3 S.C.R. 746).

[143] In actual fact, two points are made in s. 2.6.5. First, the settlement of an Aboriginal nation's comprehensive claim does not automatically entail the settlement of any specific claim — based not on Aboriginal rights but rather on the *Indian Act* — that

au sujet de la façon dont les parties entendent régir cette obligation. Autrement dit, l'Entente définitive contient-elle des dispositions qui auraient une incidence sur le principe général dégagé plus haut, selon lequel l'obligation de consultation de régime jurisprudentiel ne s'appliquera qu'en cas d'omission des parties au traité d'avoir prévu cette matière? Je ne vois aucune disposition à cet effet.

[142] Il est utile de rappeler qu'un peuple autochtone ne saurait, par traité, renoncer à son droit constitutionnel d'être consulté avant la prise de mesures étatiques d'une manière non prévue par un traité et susceptible de violer, d'enfreindre ou de restreindre un droit reconnu aux Autochtones par ce même traité. Par analogie avec le droit des contrats, une telle renonciation constituerait une sorte de clause abusive. Or, ce n'est pas tant cette règle comme telle qui est en cause ici que le contenu minimal impératif de l'obligation dans le cas de traités conclus avec les peuples autochtones. Comme il a été souligné ci-dessus, l'art. 2.6.5 de l'Entente définitive — qui a été repris de l'Accord-cadre — précise que « [l]es ententes portant règlement n'ont pas pour effet d'empêcher une partie de faire valoir, devant les tribunaux, sa position quant à l'existence, à la nature ou à l'étendue des rapports fiduciaires ou autres qui existeraient entre la Couronne et les premières nations du Yukon ». L'obligation de fiduciaire n'a cependant pas toujours un caractère constitutionnel. De plus, elle ne coïncide pas avec l'obligation de consultation qu'implique le principe de l'honneur de la Couronne que celle-ci se doit de préserver dans ses relations avec les peuples autochtones en leur qualité de titulaires de droits constitutionnels spéciaux. Par exemple, l'obligation de fiduciaire peut naître des rapports qu'entretient la Couronne avec les Indiens dans sa gestion des terres de réserve et, de façon plus générale, dans l'administration de la *Loi sur les Indiens* (*Guerin*; *Bande indienne d'Osoyoos c. Oliver (Ville)*, 2001 CSC 85, [2001] 3 R.C.S. 746).

[143] En réalité, l'art. 2.6.5 vise à rappeler deux choses. Premièrement le règlement de la revendication globale d'une nation autochtone n'emporte pas nécessairement règlement de toute revendication particulière que pourrait avoir cette même nation et

this nation might have, generally on the strength of the Crown's fiduciary duty. A specific claim could also be based on a "historical" treaty. In the instant case, however, the Little Salmon/Carmacks First Nation expressly ceded, released and surrendered, in the agreement to settle its comprehensive land claim, namely the Final Agreement, any "claims, rights or causes of action which they may ever have had, may now have or may have hereafter" as a result of Treaty 11 (ss. 2.5.1.3, 2.5.1.4(c) and 2.5.2). Finally, unlike a comprehensive claim, a specific claim is not necessarily limited to land or resources. It was therefore quite natural to specify that the mere existence of a settlement of a Yukon First Nation's comprehensive land claim did not, without further verification, support a conclusion that any specific claim the First Nation might have had been settled.

[144] Second, s. 2.6.5 also evokes a more general principle. It provides that a final agreement does not preclude any party from advocating before the courts the existence of not only fiduciary, but also "other", relationships between the Crown and the Yukon First Nations. This, in reality, is but one manifestation of the equitable principle involving a higher standard for exchanges of rights between Aboriginal peoples and the Crown — which the Crown aimed to make more orthodox — that was first mentioned in the federal policy of 1986.

[145] Thus, s. 2.6.5 of the Final Agreement is not at all inconsistent with the general principle discussed above that the common law duty to consult, in its minimum required obligational form, will apply — despite the existence of a treaty — only if the parties to the treaty have clearly failed to provide for it. This will depend on whether the parties have come to an agreement on the issue, and if they have, the treaty will — unless, of course, the treaty itself provides otherwise — override the application to the parties of any parallel framework, including the common law framework.

qui reposerait, par exemple, non pas sur des droits ancestraux, mais sur la *Loi sur les Indiens*, le plus souvent sur le fondement de l'obligation de fiduciaire de la Couronne. Une revendication particulière pourrait aussi être basée sur un traité « historique ». En l'occurrence cependant, la Première nation de Little Salmon/Carmacks a renoncé expressément, dans l'accord de règlement de sa revendication globale que constitue l'Entente définitive, à tout éventuel « réclamation, droit ou cause d'action, passé, actuel ou futur » qui serait issu du Traité n^{o} 11 (art. 2.5.1.3, 2.5.1.4c) et 2.5.2). Enfin, contrairement à une revendication globale, une revendication particulière ne porte pas toujours uniquement sur des terres ou ressources. Il était donc normal de rappeler que la seule existence du règlement de la revendication globale d'une première nation du Yukon ne permet pas, sans autre forme de vérification, de conclure au règlement de toute revendication particulière que pourrait avoir cette première nation.

[144] Deuxièmement, l'article 2.6.5 vise aussi à rappeler un principe d'ordre plus général. En effet, il prévoit qu'une entente définitive n'empêche pas une partie de défendre en justice l'existence de rapports non seulement fiduciaires mais également « autres » entre la Couronne et les premières nations du Yukon. Il ne s'agit là en réalité que d'une manifestation du principe équitable visant des échanges d'une qualité supérieure entre les peuples autochtones et la Couronne — que celle-ci veut plus orthodoxes — qui a d'abord été exprimé dans la politique fédérale de 1986.

[145] L'article 2.6.5 de l'Entente définitive n'est donc nullement incompatible avec le principe général qui a été dégagé plus haut et suivant lequel, comme contenu obligationnel minimal impératif, l'obligation de consultation de régime jurisprudentiel ne s'appliquera, nonobstant la présence d'un traité, que dans les cas d'omission claire des parties à ce traité d'avoir stipulé à cet égard. En effet, tout dépendra de ce que les parties auront ou non convenu sur la question, auquel cas le traité, sauf bien sûr renvoi à l'effet contraire dans celui-ci, aura écarté l'application entre les parties de tout régime parallèle, y compris le régime jurisprudentiel.

[146] In short, in providing in s. 2.2.4 that, subject to certain restrictions, "Settlement Agreements shall not affect the ability of aboriginal people of the Yukon to exercise, or benefit from, any existing or future constitutional rights for aboriginal people that may be applicable to them", the parties could only have had an orthodox exchange of rights in mind. They most certainly did not intend that a consultation framework would apply in parallel with the one they were in the process of establishing in the treaty. If the treaty in issue establishes how the Crown is to exercise its rights under the treaty by providing for a given form of consultation with the Aboriginal party, then the effect of the entire agreement clause in s. 2.2.15 will be to override any parallel framework, including the one developed by this Court.

B. *Substantive Rights in Issue*

(1) Right to Transfer and Right of Access to Crown Land

[147] In the case at bar, it is Chapter 6 on rights of access that must be considered first in respect of the right of the Crown the exercise of which could affect the exercise of rights of the Aboriginal party. As I mentioned above, the agreement in issue establishes two broad categories of land: settlement land and non-settlement land. The category of non-settlement land includes Crown land, and the land in question in Mr. Paulsen's application was Crown land. Chapter 6 is structured on the basis of the principle that the Aboriginal party and third parties have rights of access to unoccupied Crown land, on the one hand, and that the Crown and third parties have rights of access to undeveloped settlement land, on the other. This is a general principle to which there may, of course, be exceptions.

[146] En somme, en stipulant à l'art. 2.2.4 que, sous certaines réserves, « les ententes portant règlement n'ont pas pour effet de porter atteinte à la capacité des peuples autochtones du Yukon d'exercer des droits constitutionnels — existants ou futurs — qui sont reconnus aux peuples autochtones et qui s'appliquent à eux ou de tirer parti de tels droits », les parties ne pouvaient avoir à l'esprit qu'un échange orthodoxe de droits. Elles n'avaient assurément pas l'intention de prévoir l'application d'un régime de consultation parallèle à celui qu'elles pouvaient être en train d'établir par traité. Si le traité qui nous occupe énonce les modalités d'exercice par la Couronne des droits qu'il lui confère en instaurant une forme ou une autre de consultation de la partie autochtone, alors la clause de l'entente complète figurant à l'art. 2.2.15 aura pour effet d'écarter tout régime parallèle, y compris celui qui a été élaboré par la jurisprudence de notre Cour.

B. *Droits matériels en cause*

(1) Droit de cession et droit d'accès aux terres de la Couronne

[147] C'est le chapitre 6 sur les droits d'accès qui doit d'abord retenir notre attention en l'espèce relativement à la question du droit de la Couronne dont l'exercice est susceptible d'affecter l'exercice des droits de la partie autochtone. J'ai mentionné précédemment que l'accord en cause établit deux grandes catégories de terres, les terres visées par le règlement (« *Settlement Lands* ») et les autres (« *Non-Settlement Lands* ») qui comprennent les terres de la Couronne, parmi lesquelles se trouvait la terre faisant l'objet de la demande de M. Paulsen. Le principe qui structure le chapitre 6 est celui des droits d'accès de la partie autochtone et des tiers aux terres inoccupées de la Couronne d'une part (« *unoccupied Crown Land* ») et des droits d'accès de la Couronne et des tiers aux terres visées par le règlement qui n'ont pas été « mises en valeur » (« *undeveloped Settlement Land* ») de l'autre. Il s'agit d'un principe général qui peut certes connaître des exceptions.

[148] It is in Division 6.2.0 that the parties to the Umbrella Agreement — Canada, Yukon and the Council for Yukon Indians — provided for the right of access to Crown land — to be confirmed in the final agreements — of every Yukon Indian person and Yukon First Nation. The effect of the reproduction of that provision in the various final agreements was to grant every Yukon Indian person and Yukon First Nation to which those agreements applied a right of access for non-commercial purposes (s. 6.2.1), which is the right being relied on in this case. However, a review of that right leads to the right of the Crown the exercise of which is in issue here and which constitutes an exception to the right of access.

[148] C'est à la section 6.2.0 que les parties à l'Accord-cadre, soit le Canada, le Yukon et le Conseil des Indiens du Yukon, ont prévu la confirmation dans les ententes définitives du droit de chaque Indien et première nation du Yukon d'accéder aux terres de la Couronne. La reprise de cette disposition dans les diverses ententes définitives a pour effet de conférer à chaque Indien et première nation du Yukon concerné un droit d'accès à des fins non commerciales (art. 6.2.1), droit qui est invoqué ici. Or, c'est en examinant ce droit qu'on arrive à cerner celui de la Couronne dont l'exercice est ici en cause et qui s'impose comme une exception au premier.

[149] The right of access of First Nations to Crown land for non-commercial purposes is subject to strict limits, and also to conditions and exceptions. It is limited in that the access in question is only "casual and insignificant" (s. 6.2.1.1), or "is for the purpose of Harvesting Fish and Wildlife in accordance with Chapter 16 — Fish and Wildlife" (s. 6.2.1.2), which is a chapter I will discuss below. The applicable conditions are set out in s. 6.2.4 — one example is a prohibition against significant interference with the use and peaceful enjoyment of the land by other persons. Finally, regarding the exceptions that are relevant here, the right of access in issue does not apply to Crown land "where access or use by the public is limited or prohibited" (s. 6.2.3.2), or "which is subject to an agreement for sale or a surface licence or lease", except "to the extent the surface licence or lease permits public access" or "where the holder of the interest allows access" (s. 6.2.3.1 (emphasis added)).

[149] En effet, le droit des premières nations d'accéder aux terres de la Couronne à des fins non commerciales est étroitement limité, en plus d'être assorti de conditions et d'exceptions. Il est limité en ce qu'il ne confère qu'un accès « occasionnel et négligeable » (art. 6.2.1.1) ou ayant « pour but la récolte de poissons ou d'animaux sauvages conformément aux dispositions du Chapitre 16 — Ressources halieutiques et fauniques » (art. 6.2.1.2), chapitre sur lequel je reviendrai. Les conditions applicables sont prévues à l'art. 6.2.4 — par exemple, une interdiction de porter atteinte de façon importante à l'utilisation et à la jouissance paisible de ces terres par d'autres personnes. Enfin, au sujet des exceptions qui sont pertinentes ici, le droit d'accès en cause ne s'applique pas aux terres de la Couronne « dont l'accès ou l'utilisation par le public est restreint ou prohibé » (art. 6.2.3.2) ou « faisant l'objet d'un contrat de vente, d'un permis ou d'un bail de surface », et ce, sauf « dans la mesure où le permis ou le bail de surface accorde un droit d'accès au public » ou « si le titulaire du contrat de vente ou encore du permis ou du bail de surface en permet l'accès » (art. 6.2.3.1 (je souligne)).

[150] This last provision is the very one on which the decision on Mr. Paulsen's application was based. It must therefore be determined whether the treaty requires the Crown to consult the Aboriginal party before exercising its right to transfer land belonging

[150] Cette dernière disposition est précisément celle sur laquelle se fonde la décision sur la demande de M. Paulsen. Il s'agit donc de vérifier si, aux termes du traité, avant d'exercer son droit de céder des terres lui appartenant, d'une manière

to it in a way that could limit one or more rights granted to the Aboriginal party in the treaty. As I explain below, there are provisions in the treaty in question that govern this very issue.

[151] The Crown's right is clear, however. This exception to the right of access of First Nations to Crown land obviously implies that the Crown's general right to transfer land belonging to it continues to exist. Crown land, in respect of which Yukon's Aboriginal peoples have surrendered all Aboriginal rights and all rights arising out of Treaty No. 11, and which is not included in the land covered by the settlement of their comprehensive land claims, is defined in the agreement itself as land "vested from time to time in Her Majesty in Right of Canada, whether the administration and control thereof is appropriated to the Commissioner of the Yukon or not" (Chapter 1). Ownership of property implies, with some exceptions, the right to dispose of the property. The Crown's right to transfer land belonging to it is confirmed not only by s. 6.2.3.1 of the treaty, but also by s. 6.2.7, which limits that right by indicating that "Government shall not alienate Crown Land abutting any block of Settlement Land so as to deprive that block of Settlement Land of access from adjacent Crown Land or from a highway or public road." The treaty right being specifically invoked by the Little Salmon/Carmacks First Nation in respect of access to Crown land clearly ends where the Crown's right to transfer such land begins.

[152] Moreover, in invoking the right granted in s. 6.2.1.2 to every Yukon Indian person and Yukon First Nation, that of access to Crown land for the purpose of "Harvesting Fish and Wildlife in accordance with Chapter 16", the respondents are also engaging that chapter on fish and wildlife management. They further submit that the transfer of the land in question would reduce the value of the trapline held by one of them, Johnny Sam, under the *Wildlife Act*, R.S.Y. 2002, c. 229, and — in a more direct, but certainly no less significant,

susceptible de restreindre un ou plusieurs droits que le traité reconnaît à la partie autochtone, la Couronne doit au préalable consulter cette dernière. Comme je l'explique ci-dessous, le traité en cause contient des dispositions régissant précisément cette question.

[151] Le droit de la Couronne est cependant clair. En effet, cette exception au droit d'accès des premières nations aux terres de la Couronne suppose de toute évidence le maintien du droit général de la Couronne de céder des terres lui appartenant. Les terres de la Couronne sur lesquelles les Autochtones du Yukon ont renoncé à tout droit ancestral ou issu du Traité n^{o} 11 et qui ne font pas partie des terres visées par le règlement de leur revendication territoriale globale sont définies dans l'accord même comme des terres « dont la propriété est dévolue à Sa Majesté du chef du Canada — que le commissaire du Yukon ait ou non pleine autorité sur celle-ci » (chapitre 1). Or, sauf exception, la propriété d'un bien implique le droit d'en disposer. Ce droit de la Couronne de céder des terres lui appartenant est confirmé non seulement par l'art. 6.2.3.1 du traité, mais aussi par l'art. 6.2.7 qui limite ce droit en indiquant que « [l]e gouvernement ne peut aliéner des terres de la Couronne attenantes à une pièce de terres visées par un règlement si cela aurait pour effet de couper cette pièce de terres soit des terres de la Couronne qui lui sont adjacentes, soit d'une route ou d'un chemin public. » Le droit issu de traité qu'invoque précisément la Première nation de Little Salmon/Carmacks relativement à l'accès aux terres de la Couronne s'arrête clairement là où commence le droit de celle-ci de céder de telles terres.

[152] Par ailleurs, en invoquant le droit que reconnaît l'art. 6.2.1.2 à chaque Indien et première nation du Yukon d'accéder aux terres de la Couronne pour s'adonner à « la récolte de poissons ou d'animaux sauvages conformément aux dispositions du Chapitre 16 », les intimés font également intervenir le chapitre relatif à la gestion des ressources halieutiques et fauniques. Ils soutiennent aussi que la cession de terre en cause diminuerait la valeur de la ligne de piégeage dont l'un d'entre eux, Johnny Sam, est titulaire en vertu de la *Loi sur la faune*,

manner — under the same Chapter 16 of the Final Agreement. Chapter 16 is accordingly in issue in this case and will have to be considered in greater detail.

(2) Fish and Wildlife Management

[153] Chapter 16 of the Final Agreement establishes a co-management framework with respect to fish and wildlife. It generally confirms the right of Yukon Indian people

> to harvest for Subsistence within their Traditional Territory, and with the consent of another Yukon First Nation in that Yukon First Nation's Traditional Territory, all species of Fish and Wildlife for themselves and their families at all seasons of the year and in any numbers on Settlement Land and on Crown Land to which they have a right of access pursuant to 6.2.0 . . . . [s. 16.4.2]

However, the actual scope of this general principle is limited in that the same provision concludes with the following words: ". . . subject only to limitations prescribed pursuant to Settlement Agreements" (s. 16.4.2). Those limitations are significant and they go beyond the exception to the right of access granted in Division 6.2.0, namely the Crown's exercise of its right to transfer land belonging to it. The exercise of the rights granted to the Aboriginal party in Chapter 16 is subject to limitations provided for not only in the final agreements, but also in "Legislation enacted for purposes of Conservation, public health or public safety" (s. 16.3.3); limitations provided for in legislation "must be consistent with this chapter, reasonably required to achieve those purposes and may only limit those rights to the extent necessary to achieve those purposes" (s. 16.3.3.1).

[154] There are other provisions in Chapter 16 of the Final Agreement, aside from s. 16.3.3, that regulate, in various ways, the right of Yukon Indian people to harvest fish and wildlife by, in particular, authorizing the fixing of quotas — referred to as

L.R.Y. 2002, ch. 229, et — de manière plus immédiate, mais assurément non moins importante — de ce même chapitre 16 de l'Entente définitive. Ce chapitre est donc en cause en l'espèce et il y a lieu de l'examiner plus en détail.

(2) Gestion des ressources halieutiques et fauniques

[153] Le chapitre 16 de l'Entente définitive instaure un régime de cogestion des ressources halieutiques et fauniques. Il vient confirmer de manière générale le droit des Indiens du Yukon

> de récolter, à des fins de subsistance, dans les limites de leur territoire traditionnel et, avec le consentement de celle-ci, sur le territoire traditionnel d'une autre première nation du Yukon, toute espèce de poisson et d'animal sauvage, pour eux-mêmes et pour leur famille, en toute saison et sans limite de prises, sur des terres visées par un règlement et sur des terres de la Couronne où ils bénéficient d'un droit d'accès conformément à la section 6.2.0 . . . [art. 16.4.2]

Cependant, la portée réelle de ce principe général est limitée dans la mesure où la même disposition se termine par les mots suivants : « . . . sous réserve seulement des limites prévues par les ententes portant règlement » (art. 16.4.2). Ces limites sont importantes et vont au-delà de l'exception au droit d'accès conféré par la section 6.2.0 que constitue l'exercice par la Couronne de son droit de céder des terres lui appartenant. L'exercice des droits reconnus à la partie autochtone par le chapitre 16 est assujetti non seulement aux restrictions prévues par les dispositions des ententes définitives, mais aussi aux « mesures législatives édictées à des fins de conservation, de santé publique ou de sécurité publique » (art. 16.3.3), mesures qui « doivent être compatibles avec les dispositions du présent chapitre, être raisonnablement nécessaires à la réalisation des fins susmentionnées et ne limiter les droits en question que dans la mesure nécessaire à la réalisation de ces fins » (art. 16.3.3.1).

[154] Outre l'article 16.3.3, d'autres dispositions du chapitre 16 de l'Entente définitive viennent encadrer de diverses manières le droit des Indiens du Yukon d'exploiter les ressources halieutiques et fauniques, notamment en permettant l'instauration

"total allowable harvest[s]" — "[w]hen opportunities to harvest Freshwater Fish or Wildlife are limited for Conservation, public health or public safety" (s. 16.9.1.1). Chapter 16 also establishes principles for sharing such harvests "between Yukon Indian People and other harvesters" (s. 16.9.1). Overall, the logic behind the principles used to allocate quotas is to "give priority to the Subsistence needs of Yukon Indian People while providing for the reasonable needs of other harvesters" (s. 16.9.1.1).

[155] Another goal of Chapter 16 of each of the final agreements, in addition to the simple fixing and allocation of quotas, is to regulate the exercise by Yukon Indian people of their rights to harvest fish and wildlife by setting up a multi-level management framework that combines the principle of participation of the First Nations in question and that of decentralization. Those with responsibilities in the context of that framework are, in each case, the First Nation in question, the renewable resources council ("council"), which has jurisdiction in respect of that First Nation's traditional territory, the Fish and Wildlife Management Board ("Board") (and its Salmon Sub-Committee), which has jurisdiction throughout the Yukon Territory, and, finally, the Minister responsible for the matter in issue. There is equal representation on the councils and the Board: thus, "[s]ubject to Transboundary Agreements and Yukon First Nation Final Agreements, each Council shall be comprised of six members consisting of three nominees of the Yukon First Nation and three nominees of the Minister" (s. 16.6.2), and "[t]he Board shall be comprised of six nominees of Yukon First Nations and six nominees of Government" (s. 16.7.2). Regarding the composition of the councils, the specific provisions of the final agreements add only that the First Nation and the Minister may each nominate one additional member as an alternate member (ss. 16.6.2.1 to 16.6.2.3). The chairperson of each council, and of the Board, is selected from the membership of the body in question in

de quotas, en l'occurrence des « récolte[s] totale[s] autorisée[s] », « [l]orsque les possibilités de récolter du poisson d'eau douce ou des animaux sauvages sont limitées pour des raisons de conservation, de santé publique ou de sécurité publique » (art. 16.9.1.1). Ce même chapitre prévoit aussi les principes de répartition de ces récoltes « entre les Indiens du Yukon et les autres personnes exerçant des activités de récolte » (art. 16.9.1). Dans l'ensemble, la logique présidant aux principes de répartition des quotas vise à « satisfaire en priorité les besoins pour fins de subsistance des Indiens du Yukon, tout en répondant aux besoins raisonnables des autres personnes qui s'adonnent à des activités de récolte » (art. 16.9.1.1).

[155] Au-delà des seules fins d'établissement et de répartition de quotas, le chapitre 16 de chacune des ententes définitives entend encadrer l'exercice par les Indiens du Yukon de leurs droits d'exploitation des ressources halieutiques et fauniques par la mise en place d'une structure de gestion à plusieurs niveaux conjuguant les principes de participation des premières nations concernées et de décentralisation. Les organes composant cette structure sont, dans chaque cas, la première nation concernée, le conseil des ressources renouvelables (« conseil ») compétent sur le territoire traditionnel de cette première nation, la Commission de gestion des ressources halieutiques et fauniques (« Commission ») (et son sous-comité du saumon) — qui a compétence à l'échelle du territoire du Yukon — et, enfin, le ministre responsable de la matière en question. Les conseils et la Commission sont des organismes paritaires; « [s]ous réserve des dispositions des accords transfrontaliers et des ententes définitives conclues par les premières nations du Yukon, chaque conseil est formé de six membres dont trois sont choisis par la première nation du Yukon visée et trois par le ministre » (art. 16.6.2), et « [l]a Commission est formée de six personnes choisies par les premières nations du Yukon et de six autres choisies par le gouvernement » (art. 16.7.2). Relativement à la composition des conseils, les dispositions spécifiques des ententes définitives ne font qu'ajouter la possibilité pour la première nation et le ministre de proposer chacun un membre supplémentaire à titre de membre suppléant (art. 16.6.2.1

accordance with procedures it has established for itself (ss. 16.6.3 and 16.7.3). If no chairperson is selected within 30 days in the case of a council, or 60 days in the case of the Board, the Minister must, after consulting the council or the Board, as the case may be, appoint one from its membership (ss. 16.6.3.1 and 16.7.3.1).

[156] There are very few instances in which the organs referred to in Chapter 16, other than the Minister, are given decision-making powers. In one of the rare cases, the First Nation is given, "for Category 1 Traplines, the final allocation authority" (ss. 16.11.10.6 and 16.5.1.2) — I should mention that this is not the category to which Johnny Sam's trapline belongs. The First Nation also has sole authority to "align, realign or group Category 1 Traplines where such alignments, realignments or groupings do not affect Category 2 Traplines" (s. 16.5.1.3).

[157] More generally, the First Nation also has the following decision-making powers:

> . . . [to] manage, administer, allocate or otherwise regulate the exercise of the rights of Yukon Indian People under 16.4.0 [concerning the harvesting of fish and wildlife] within the geographical jurisdiction of the Council established for that Yukon First Nation's Traditional Territory by,
>
> (a) Yukon Indian People enrolled pursuant to that Yukon First Nation Final Agreement,
>
> (b) other Yukon Indian People who are exercising rights pursuant to 16.4.2, and
>
> (c) except as otherwise provided in a Transboundary Agreement, members of a transboundary claimant group who are Harvesting pursuant to that Transboundary Agreement in that Yukon First Nation's Traditional Territory . . . [s. 16.5.1.1]

However, the final paragraph of this provision contains the following clarification: ". . . where not inconsistent with the regulation of those rights by

à 16.6.2.3). Le président de chaque conseil et celui de la Commission sont choisis parmi les membres de l'organe en question, conformément à la procédure de sélection établie par celui-ci (art. 16.6.3 et 16.7.3). Si cela n'est pas fait dans un délai de 30 ou 60 jours, suivant le cas et respectivement, le ministre, après consultation de l'organe concerné, désigne l'un des membres de celui-ci comme président (art. 16.6.3.1 et 16.7.3.1).

[156] Hormis le ministre, les organes prévus au chapitre 16 sont très rarement investis de pouvoirs décisionnels. L'un de ces rares cas est l'attribution à la première nation de la « compétence en dernier ressort en ce qui concerne la répartition des lignes de piégeage de catégorie 1 » (art. 16.11.10.6 et 16.5.1.2) — signalons qu'il ne s'agit pas de la catégorie à laquelle appartient la ligne de piégeage de Johnny Sam. La première nation est aussi seule compétente pour « tracer ou modifier le tracé des lignes de piégeage de catégorie 1 ou encore grouper ces lignes de piégeage, si ces mesures n'ont aucune incidence sur les lignes de piégeage de catégorie 2 » (art. 16.5.1.3).

[157] La première nation détient en outre, plus généralement, les pouvoirs décisionnels suivants :

> . . . gérer, administrer, répartir ou réglementer de quelque autre façon que ce soit l'exercice, par les personnes énumérées ci-après, des droits des Indiens du Yukon prévus par la section 16.4.0 [relativement au prélèvement des ressources halieutiques et fauniques], dans la région qui relève de la compétence du conseil établi pour son territoire traditionnel :
>
> a) les Indiens du Yukon inscrits en application de son entente définitive;
>
> b) les autres Indiens du Yukon qui exercent des droits prévus par l'article 16.4.2;
>
> c) sauf disposition contraire d'un accord transfrontalier, les membres d'un groupe revendicateur transfrontalier qui exercent, sur son territoire traditionnel, des activités de récolte conformément à cet accord transfrontalier . . . [art. 16.5.1.1]

Or, le dernier alinéa de cette même disposition donne la précision suivante : « . . . en respectant les mesures de réglementation de ces droits qui sont

Government in accordance with 16.3.3 and other provisions of this chapter" (s. 16.5.1.1, final portion). The reality is that, aside from the allocation of individual rights from a group harvesting allocation, Chapter 16 mainly concerns management activities that ultimately fall under the Minister's authority. The organs mentioned in Chapter 16 other than the Minister have in most cases — with some exceptions where they are given a form of decision-making authority — a power limited to holding consultations before a decision is made.

[158] It is in this context that the respondents' argument regarding the *Community-based Fish and Wildlife Management Plan: Little Salmon/Carmacks First Nation Traditional Territory, 2004-2009* (2004) must be considered. Management plans such as this one are referred to in Chapter 16 of the various final agreements and more specifically, for our purposes, in ss. 16.6.10 and 16.6.10.1, which read as follows:

Subject to Yukon First Nation Final Agreements, and without restricting 16.6.9 [on the Councils' general powers], each Council:

> 16.6.10.1 may make recommendations to the Minister on the need for and the content and timing of Freshwater Fish and Wildlife management plans, including Harvesting plans, Total Allowable Harvests and the allocation of the remaining Total Allowable Harvest [under 16.9.4], for species other than the species referred to in 16.7.12.2 [species included in international agreements, threatened species declared by the Minister as being of territorial, national or international interest, and Transplanted Populations and Exotic Species] . . .

[159] A management plan such as the one relied on by the respondents is a policy statement regarding proposed legal acts, in particular decision

appliquées par le gouvernement conformément à l'article 16.3.3 et aux autres dispositions du présent chapitre » (art. 16.5.1.1, *in fine*). Le fait est que, sauf en matière de répartition de droits individuels à partir d'une allocation de prélèvement de groupe, il est surtout question au chapitre 16 d'activités de gestion qui relèvent, en fin de processus, du ministre. Les organes mentionnés au chapitre 16 — à l'exception du ministre — se voient parfois confier un pouvoir quasi décisionnel, mais il ne s'agit le plus souvent que d'un simple pouvoir consultatif prédécisionnel.

[158] C'est dans ce contexte qu'il faut situer l'argument des intimés relatif au plan de gestion des ressources halieutiques et fauniques de la Première nation de Little Salmon/Carmacks — *Community-based Fish and Wildlife Management Plan : Little Salmon/Carmacks First Nation Traditional Territory, 2004-2009* (2004). Il est question de tels plans de gestion au chapitre 16 des diverses ententes définitives et, plus particulièrement, pour les fins qui nous intéressent, aux art. 16.6.10 et 16.6.10.1, qui prévoient ce qui suit :

Sous réserve des dispositions des ententes définitives conclues par les premières nations du Yukon et sans restreindre la portée générale de l'article 16.6.9 [relatif aux attributions générales des Conseils], chaque conseil peut :

> 16.6.10.1 présenter au ministre des recommandations quant au besoin d'établir des plans de gestion du poisson d'eau douce et des animaux sauvages, à la teneur de ces plans et au moment de leur production, notamment en ce qui concerne les plans de récolte, les récoltes totales autorisées et la répartition du reste de la récolte totale autorisée [en vertu de l'article 16.9.4], à l'égard des espèces autres que celles visées à l'article 16.7.12.2 [espèces visées par des accords internationaux, espèces menacées ou déclarées par le ministre comme étant d'intérêt territorial, national ou international, populations transplantées et espèces exotiques] . . .

[159] Un plan de gestion tel celui invoqué par les intimés constitue un énoncé de politique faisant état d'actes juridiques projetés, le plus souvent des

making and the making of regulations under statutory authority. As its title indicates, therefore, this plan only sets out an administrative agreement on how the partners plan to exercise their legal powers.

[160] The passage from the management plan to which the respondents refer reads as follows:

Concern: There is a need to protect the Yukon River from Tatchun Creek to Minto as important habitat for moose, salmon, and other wildlife.

This section of the Yukon River contains a number of sloughs and islands, and was identified as important habitat for moose during calving, summer and winter. Moose were commonly seen in this area back in the 1960s, but fewer have been seen in recent years. "Dog Salmon Slough" was one area noted in particular as an important habitat area. Bears use Dog Salmon Slough for fishing. Moose might be staying away from river corridors now with the increased river travel traffic during summer. The review process for land applications in this area needs to consider the importance of these habitat areas to fish and wildlife.

Solution: Conserve the important moose and salmon habitat along the Yukon River from Tatchun Creek to Minto.

Pursue designating the area between Tatchun Creek and Minto along the Yukon River as a Habitat Protection Area under the *Wildlife Act*.

The community and governments need to get together to decide what kind of activities should happen in this important wildlife habitat. This is an overlap area with Selkirk First Nation, and the CRRC [Carmacks Renewable Resource Council] needs to consult with them. A [Little Salmon/Carmacks First Nation] Game Guardian could also assist in evaluating the area for designation and providing management guidelines. [pp. 32-33]

[161] Two concerns can therefore be identified: the protection of fish and wildlife and the designation of areas. As I will explain below, the protection of fish and wildlife could be, and in fact

décisions ou des textes réglementaires devant être pris en vertu de la loi. Comme l'indique son titre, ce plan ne fait donc que consigner une entente administrative sur la façon dont les partenaires prévoient exercer leurs pouvoirs juridiques.

[160] Le passage pertinent du plan de gestion auquel renvoient les intimés est le suivant :

[TRADUCTION] **Préoccupation : Il faut protéger le fleuve Yukon, de Tatchun Creek jusqu'à Minto, puisqu'il s'agit d'un habitat important pour le saumon, les orignaux et d'autres animaux sauvages.**

Cette partie du fleuve Yukon contient un certain nombre de faux chenaux et d'îles, et elle est considérée comme un habitat important pour les orignaux pendant le vêlage, l'été et l'hiver. On y voyait couramment des orignaux dans les années 1960, alors qu'on en observe plus rarement au cours des dernières années. Le faux chenal Dog Salmon (« *Dog Salmon Slough* ») était un endroit particulièrement reconnu comme un habitat important. Les ours pêchent à cet endroit. C'est peut-être en raison de l'accroissement de la circulation maritime pendant l'été que les orignaux se tiennent loin des corridors fluviaux. Il faut, dans le cadre du processus d'examen des demandes d'aliénation de terres dans cette région, tenir compte de l'importance de ces habitats pour le poisson et les animaux sauvages.

Solution : Conserver l'habitat important pour les orignaux et le saumon le long du fleuve Yukon, de Tatchun Creek jusqu'à Minto.

Demander la désignation de la région entre Tatchun Creek et Minto, le long du fleuve Yukon, comme région de protection de l'habitat sous le régime de la *Loi sur la faune*.

La communauté et les gouvernements doivent se concerter pour décider quels types d'activités devraient être menées dans cet habitat faunique important. Il s'agit d'un territoire qui chevauche celui de la Première Nation de Selkirk, et le CRRC [Conseil des ressources renouvelables de Carmacks] doit consulter cette première nation. Un garde-faune [de la Première nation de Little Salmon/Carmacks] pourrait aussi aider à l'évaluation de la région devant être désignée et fournir des lignes directrices en matière de gestion. [p. 32-33]

[161] Deux préoccupations ressortent donc : la protection du poisson et des animaux sauvages et la désignation des sites. Comme je l'expliquerai plus loin, le processus menant à la cession de terre

was, taken into consideration in the process leading to the transfer of land. As for the designation of a protected area, which could have prevented any transfer of the land in question in Mr. Paulsen's application from occurring, it was a complex process. Such a designation would have required that three steps be completed successfully: (1) the Little Salmon/Carmacks First Nation would have to recommend the designation after consulting the Selkirk First Nation and the renewable resources council, in accordance with the relevant provisions of the management plan; (2) the Commissioner in Executive Council would have to designate the area by making a regulation under s. 187 of the *Wildlife Act*, the effect of which would simply be to make it possible to withdraw the lands in question from disposition; and (3) the Commissioner in Executive Council would have to actually withdraw the lands from disposition by making an order under s. 7(1)(a) of the Yukon *Lands Act*, R.S.Y. 2002, c. 132, which would be done if the Commissioner in Executive Council considered it advisable to do so in the public interest. These steps had not yet been taken, and in the meantime no provisional suspension of the processing of applications for land in the area in question had been agreed upon, despite the fact that such a suspension had been suggested in September 2004, a few weeks before the decision on Mr. Paulsen's application, at a meeting concerning an agricultural policy review that was attended by representatives from the First Nation and the Agriculture Branch.

[162] In sum, the provisions of Chapter 16 on fish and wildlife management establish a framework under which the First Nations are generally invited to participate in fish and wildlife management at the pre-decision stage. In particular, the invitation they receive to propose fish and wildlife management plans can be regarded as consultation.

(3) Trapline

[163] The respondents submit that the land transfer in issue will reduce the value of the trapline

pouvait prendre en considération la protection du poisson et des animaux sauvages et, de fait, il le faisait. Pour ce qui est d'une désignation d'aire protégée, ce qui aurait pu éventuellement conduire à soustraire à toute cession la terre visée par la demande de M. Paulsen, il s'agissait d'un processus complexe. Une telle désignation aurait requis que trois étapes soient franchies avec succès : (1) une recommandation de désignation formulée par la Première nation de Little Salmon/Carmacks après consultation avec la Première nation de Selkirk et le conseil des ressources renouvelables conformément aux dispositions pertinentes du plan de gestion; (2) une désignation effectuée par le commissaire en conseil exécutif au moyen d'un règlement pris en vertu de l'art. 187 de la *Loi sur la faune*, désignation qui a tout simplement pour effet d'ouvrir la possibilité de soustraire les terres à la cession; (3) la soustraction comme telle des terres à la cession par décret du commissaire en conseil exécutif pris en vertu de l'al. 7(1)a) de la loi du Yukon intitulée *Loi sur les terres*, L.R.Y. 2002, ch. 132, une telle mesure étant prise dans les cas où ce dernier l'estime conforme à l'intérêt public. De telles étapes restaient à franchir et, dans l'intervalle, aucune suspension provisoire du traitement des demandes portant sur des terres de la région visée n'avait été convenue, malgré une suggestion à cet effet formulée lors d'une rencontre qui avait eu lieu en septembre 2004, soit quelques semaines avant la décision sur la demande de M. Paulsen, et qui portait sur la révision de la politique agricole et réunissait des représentants de la première nation et de la Direction de l'agriculture.

[162] En somme, les dispositions du chapitre 16 qui concernent la gestion des ressources halieutiques et fauniques instaurent un régime par lequel les premières nations sont généralement invitées à participer à la gestion des ressources halieutiques et fauniques sur une base prédécisionnelle. Notamment, l'invitation qui leur est faite de proposer des plans de gestion des ressources halieutiques et fauniques peut être considérée comme une consultation.

(3) Ligne de piégeage

[163] Les intimés soutiennent que la cession de terre en cause diminuera la valeur de la ligne de

held by Johnny Sam under the *Wildlife Act*, to which Division 16.11.0 of the Final Agreement on trapline management and use applies. In addition to the principles on the allocation of possible quotas between the First Nations and other harvesters, Chapter 16 of the Yukon final agreements includes specific rules for the trapping of furbearers. Division 16.11.0 incorporates, with necessary changes, the framework for granting individual traplines, or "concessions", established in the *Wildlife Act*. The changes made to that general framework in the final agreements relate primarily to the allocation of traplines in the First Nations' traditional territory.

[164] Section 16.11.2 of the final agreements concluded with the Yukon First Nations under the Umbrella Agreement reads as follows:

In establishing local criteria for the management and Use of Furbearers in accordance with 16.6.10.6 [which delegates the authority to adopt bylaws under the *Wildlife Act*] and 16.6.10.7 [which grants the authority to make recommendations to the Minister and the First Nation], the Councils shall provide for:

16.11.2.1 the maintenance and enhancement of the Yukon's wild fur industry and the Conservation of the fur resource; and

16.11.2.2 the maintenance of the integrity of the management system based upon individual trapline identity, including individual traplines within group trapping areas.

[165] The Final Agreement contains a specific provision concerning the allocation of traplines between Aboriginal and non-Aboriginal people in the traditional territory of the Little Salmon/Carmacks First Nation, namely s. 16.11.4.1, which provides that "[t]he overall allocation of traplines which have more than 50 percent of their area in that portion of the Traditional Territory of the Little Salmon/Carmacks First Nation which is

piégeage dont est titulaire Johnny Sam en vertu de la *Loi sur la faune* et à laquelle se rapporte la section 16.11.0 de l'Entente définitive relative à la gestion et à l'utilisation des lignes de piégeage. Au-delà des principes relatifs à la répartition d'éventuels contingents entre les premières nations et les autres exploitants, le chapitre 16 des ententes définitives du Yukon assujettit le piégeage d'animaux à fourrure à des règles particulières. En fait, la section 16.11.0 renvoie avec les adaptations nécessaires au régime d'octroi de lignes, ou « concessions » de piégeage individuelles que prévoit la *Loi sur la faune*. Les modifications qu'apportent les ententes définitives à ce régime d'application générale concernent pour l'essentiel la répartition des lignes de piégeage au sein du territoire traditionnel des premières nations concernées.

[164] En effet, l'art. 16.11.2 des diverses ententes définitives conclues aux termes de l'Accord-cadre avec les premières nations du Yukon stipule que :

Dans l'établissement, conformément aux articles 16.6.10.6 [portant délégation d'un pouvoir réglementaire en vertu de la *Loi sur la faune*] et 16.6.10.7 [attribuant un pouvoir de recommandation auprès du ministre et de la première nation], des critères locaux en matière de gestion et d'utilisation des animaux à fourrure, les conseils doivent viser les objectifs suivants :

16.11.2.1 le maintien et la mise en valeur de l'industrie de la fourrure d'animaux sauvages au Yukon et la conservation de cette ressource;

16.11.2.2 le maintien de l'intégrité du système de gestion fondé sur l'identification des lignes de piégeage individuelles, y compris des lignes de piégeage individuelles situées dans des secteurs de piégeage collectif.

[165] L'Entente définitive contient une disposition spécifique relative à la répartition des lignes de piégeage entre Autochtones et allochtones sur le territoire traditionnel de la Première nation de Little Salmon/Carmacks. Il s'agit de l'art. 16.11.4.1, qui précise que « [l]e nombre total de lignes de piégeage qui sont situées dans une proportion de plus de 50 % dans la partie du territoire traditionnel de la première nation de Little Salmon/Carmacks

not overlapped by another Yukon First Nation's Traditional Territory is 11 traplines held by Yukon Indian People and three traplines held by other Yukon residents." This allocation does not apply to Johnny Sam's trapline, since it is located entirely within the portion of the traditional territory of the Little Salmon/Carmacks First Nation that overlaps the traditional territory of the Selkirk First Nation.

[166] Furthermore, as I mentioned above, the Final Agreement establishes two categories of traplines. After being granted to an individual, a trapline located in the traditional territory of a First Nation may, with the written consent of its registered holder, be designated a Category 1 trapline (s. 16.11.8). Otherwise, it will be a Category 2 trapline. Such a designation gives the First Nation the authority — particularly if the trapline is vacant or underused — to reallocate it (ss. 16.5.1.2 and 16.11.10.6), or to align it, realign it or group it with another line "where such alignments, realignments or groupings do not affect Category 2 Traplines" (s. 16.5.1.3). Authority over Category 2 lines rests not with the First Nation, but with the Minister (ss. 16.3.1 and 16.11.10.7 and Division 16.8.0). In their decisions, the courts below indicated that Johnny Sam's trapline is a Category 2 trapline.

[167] Section 16.11.13 establishes the right of "Yukon Indian People holding traplines whose Furbearer Harvesting opportunities will be diminished due to other resource development activities [to] be compensated". This right is broader than the right to compensation the holder of a trapline has under s. 82 of the *Wildlife Act*, which is limited to situations in which a concession is revoked or the re-issuance of a concession is refused for purposes related to the conservation of wildlife or to protection of the public interest, but without giving two years' notice. Regarding the consequences the transfer of land to one person might have on another person's right to trap, I would point out that the *Wildlife Act* (s. 13(1)) provides that "[a] person

qui ne coïncide pas avec le territoire traditionnel d'une autre première nation est de onze lignes de piégeage détenues par les Indiens du Yukon et de trois lignes de piégeage détenues par d'autres résidents du Yukon. » La ligne de piégeage dont est titulaire Johnny Sam n'est pas visée par cette répartition, dans la mesure où elle se situe entièrement dans cette portion du territoire traditionnel de la Première nation de Little Salmon/Carmacks qui chevauche celui de la Première nation de Selkirk.

[166] En outre, tel qu'il est mentionné ci-dessus, l'Entente définitive établit deux catégories de lignes de piégeage. Une fois octroyée à un individu, une ligne de piégeage se situant dans le territoire traditionnel d'une première nation peut, avec le consentement écrit de son détenteur inscrit, être désignée ligne de piégeage de catégorie 1 (art. 16.11.8). À défaut, la ligne sera donc de catégorie 2. Une telle désignation a pour effet de conférer compétence à la première nation en ce qui concerne — notamment en cas de vacance ou de sous-utilisation — sa réattribution (art. 16.5.1.2 et 16.11.10.6) ou encore son tracé ou son groupage avec une autre ligne « si ces mesures n'ont aucune incidence sur les lignes de piégeage de catégorie 2 » (art. 16.5.1.3). Les lignes de catégorie 2 relèvent quant à elles non pas de la première nation mais du ministre (art. 16.3.1 et 16.11.10.7 et section 16.8.0). Les décisions des juridictions inférieures indiquent que la ligne de piégeage détenue par Johnny Sam appartient à la catégorie 2.

[167] L'article 16.11.13 établit le droit des « Indiens du Yukon qui détiennent des lignes de piégeage et dont les possibilités de récolte d'animaux à fourrure diminueront en raison d'autres activités de mise en valeur des ressources [d']être indemnisés ». Ce droit va au-delà de ce que prévoit l'art. 82 de la *Loi sur la faune* en faveur du titulaire d'une ligne de piégeage, c'est-à-dire le droit d'être indemnisé pour seule cause de révocation ou refus de renouvellement, aux fins de protection de la faune ou de l'intérêt public, sans préavis d'au moins deux ans. Relativement aux conséquences que peut avoir la cession d'une terre à une personne sur le droit de trappe d'une autre, je signale que la *Loi sur la faune* (par. 13(1)) précise qu'« [i]l est interdit de chasser ou

shall not hunt or trap wildlife within one kilometre of a building which is a residence, whether or not the occupants are present in the building at the time, unless the person has the permission of the occupants to do so."

[168] Having discussed the granting of rights and establishment of duties in Chapter 16 of the Final Agreement, on which the respondents are relying, I must now ask whether this chapter establishes a specific procedure to be followed by the Yukon government to consult the signatory First Nation before exercising its right to transfer Crown land under the (Yukon) territory's jurisdiction. The answer is no. The consultation provided for in ss. 16.3.3.2, 16.5.4 and 16.7.16 relates to the management of fish and wildlife, not to the impact an action might have in relation to fish and wildlife. However, ss. 16.5.3, 16.6.11 and 16.7.13 provide that the First Nation, the renewable resources council and the Fish and Wildlife Management Board, respectively, have standing as interested parties to participate in the public proceedings of any agency, board or commission on matters that affect the management and conservation of fish and wildlife and their habitats in the particular traditional territory. But the terms "agency", "board" or "commission" refer, in particular, to the bodies in question in Chapter 12 of the Final Agreement, which establishes a procedure for consulting the First Nations signatories by ensuring their participation in the environmental and socio-economic assessment of development activities such as the one that resulted from the approval of Mr. Paulsen's application.

[169] I would nevertheless like to point out that Johnny Sam had rights as the holder of the trapline. He had the same rights as anyone else where procedural fairness is concerned. He also had the right to be compensated in accordance with s. 16.11.13. But the respondents are neither arguing that there has been a breach of procedural fairness nor asserting their right to compensation. What they are seeking

de piéger une espèce faunique dans un rayon d'un kilomètre d'une maison d'habitation, que les occupants soient présents ou non à ce moment, à moins d'avoir la permission de ces derniers. »

[168] Après avoir exposé la répartition de droits et d'obligations effectuée au chapitre 16 de l'Entente définitive invoqué par les intimés, il faut maintenant se demander si ce chapitre instaure une procédure particulière de consultation de la première nation signataire par le gouvernement du Yukon, préalablement à l'exercice par ce dernier de son droit de céder des terres de la Couronne relevant du Territoire (du Yukon). La réponse est négative. En effet, la consultation prévue aux art. 16.3.3.2, 16.5.4 et 16.7.16 se rapporte à la gestion des ressources halieutiques et fauniques et non pas aux répercussions qu'une mesure est susceptible d'entraîner en ce domaine. En revanche, les art. 16.5.3, 16.6.11 et 16.7.13 disposent que la première nation, le conseil des ressources renouvelables et la Commission de gestion des ressources halieutiques et fauniques, respectivement, ont qualité, en tant que partie intéressée, pour participer aux audiences publiques d'une agence, d'un office ou d'une commission relativement à des questions ayant une incidence sur la gestion et la conservation des ressources halieutiques et fauniques et de leurs habitats dans le territoire traditionnel concerné. Or, cette « agence », cet « office » ou cette « commission », ce seront notamment les organes dont il est question au chapitre 12 de l'Entente définitive, lequel prévoit une procédure de consultation des premières nations signataires concernées en garantissant leur participation à l'évaluation environnementale et socioéconomique des activités de développement, comme l'est l'activité qui résulte de l'approbation de la demande de M. Paulsen.

[169] Je tiens tout de même à signaler que la ligne de piégeage conférait des droits à Johnny Sam. Ce dernier bénéficiait en effet des droits que possède tout administré en matière d'équité procédurale. Il avait aussi le droit d'être indemnisé conformément aux dispositions de l'art. 16.11.13. Or, les intimés n'invoquent ni un manquement à l'équité procédurale ni leur droit à une

is to have the decision on Mr. Paulsen's application quashed on the ground that the Crown had a common law duty to consult them (R.F. on cross-appeal, at para. 86). It is my view, therefore, that a review of the rights granted in the Final Agreement with respect to consultation prior to a decision such as the one in issue in this case is indispensable.

C. *Formal Rights and Duties in Issue*

[170] The appellants argue that Chapter 12 is not applicable on the ground that it had not yet been implemented at the relevant time. According to the respondents, the process provided for in Chapter 12 would have been applicable had it been implemented, but it is only one form of consultation among all those that would be applicable — in their view, the common law duty is not excluded. Binnie J. also proposes that the common law duty to consult should apply where the Crown exercises a right granted to it in the treaty, even if the treaty provides for consultation in relation to that right. I disagree with him on this point. As I mentioned above, respect for the autonomy of the parties implies that effect must be given to the provisions they have agreed on in finalizing the relationship between them on a given matter. I cannot therefore agree with disregarding provisions adopted by the parties with respect to the transitional law.

[171] The Umbrella Agreement and the Final Agreement in issue here state that the settlement legislation must provide that a settlement agreement is binding on third parties (s. 2.4.2.3), and the *Yukon First Nations Land Claims Settlement Act* provides that "[a final agreement or transboundary agreement that is in effect] is binding on all persons and bodies that are not parties to it" (s. 6(2)). Both these agreements are binding not only on the parties, but also on third parties. Therefore, in my opinion, it is necessary for this Court to review the provisions of Chapter 12.

indemnité. Ce qu'ils réclament c'est la cassation de la décision sur la demande de M. Paulsen, au motif que la Couronne avait, selon la jurisprudence pertinente, l'obligation de les consulter (m.i. en appel incident, par. 86). Il est donc déterminant, à mon avis, d'examiner les droits que confère l'Entente définitive en matière de consultation lors d'une décision comme celle en cause en l'espèce.

C. *Droits et obligations formels en cause*

[170] Les appelants écartent l'application du chapitre 12, au motif qu'il n'aurait pas été mis en œuvre au moment des faits pertinents. Par ailleurs, du point de vue des intimés, le processus prévu par le chapitre 12 se serait appliqué s'il avait été mis en vigueur mais ne représente qu'une forme de consultation parmi toutes celles qui seraient applicables — l'obligation jurisprudentielle de consultation ne serait pas exclue. Le juge Binnie, quant à lui, propose aussi le maintien de l'obligation jurisprudentielle de consultation lors de l'exercice par la Couronne d'un droit prévu par le traité et ce, même en présence de dispositions relatives à la consultation relativement à ce droit. Je ne suis pas d'accord avec lui sur ce point. Comme je l'ai mentionné plus tôt, il en va du respect de l'autonomie des parties de respecter les stipulations dont elles ont convenu pour sceller leurs relations sur une matière donnée. Pour cette raison je ne peux accepter qu'on fasse fi des stipulations des parties concernant le droit transitoire.

[171] L'Accord-cadre et l'Entente définitive ici en cause prévoient que la loi de mise en œuvre devra indiquer que l'entente portant règlement lie les tiers (art. 2.4.2.3), et la *Loi sur le règlement des revendications territoriales des premières nations du Yukon* précise qu'« [i]l est entendu [que tout accord — définitif ou transfrontalier — en vigueur] a force obligatoire pour toute personne et tout organisme qui n'y sont pas parties » (par. 6(2)). Cet accord et cette entente lient non seulement les parties, mais aussi les tiers. Par conséquent, je suis d'avis que notre Cour ne saurait écarter l'examen des dispositions du chapitre 12.

[172] Chapter 12 of the Umbrella Agreement, which can also be found in the final agreements, did not simply lay the foundations for an environmental and socio-economic assessment process that was to be implemented by means of a statute other than the general implementing legislation for those agreements — which was done by enacting the *Yukon Environmental and Socio-economic Assessment Act*, S.C. 2003, c. 7 ("*YESAA*") — it also contains transitional law provisions regarding the duties of the parties to the Umbrella Agreement and the final agreements that would apply even before the enactment of that statute implementing the process in question.

[173] In reality, the Yukon final agreements provided that they would be implemented and would come into effect by way of legislation or of an order-in-council, as the case may be, and that their coming into effect was a condition precedent to their validity (ss. 2.2.11 and 2.2.12). This could be understood to mean that, since Chapter 12 required the enactment of specific implementing legislation, it constituted an exception to the general implementation of a final agreement and created no legal rights or duties until that legislation was enacted. But that is not what the Final Agreement says.

[174] In Division 12.2.0 of the Final Agreement, the expression "Development Assessment Legislation" is defined as "Legislation enacted to implement the development assessment process set out in this chapter" (emphasis added). This definition therefore does not concern special implementing legislation for Chapter 12 as a whole, but legislation to implement the *process* provided for in that chapter. This is confirmed by s. 12.3.1, which provides that "Government shall implement a development assessment process consistent with this chapter by Legislation". Logically, therefore, when a final agreement concluded under the Umbrella Agreement with the Yukon First Nations comes into effect, the result, even if the assessment process has not yet been implemented, is to give effect to several provisions of Chapter 12 that are common to all the final agreements, including

[172] Le chapitre 12 de l'Accord-cadre, qu'on retrouve aussi dans les ententes définitives, n'a pas fait que jeter les bases d'un processus d'évaluation environnementale et socioéconomique qui devait être mis en œuvre au moyen d'une loi distincte de la loi de mise en œuvre générale de ces ententes — ce qui fut fait par la *Loi sur l'évaluation environnementale et socioéconomique au Yukon*, L.C. 2003, ch. 7 (« *LÉESY* ») — mais il contient également des dispositions de droit provisoires relatives aux obligations des parties à l'Accord-cadre et aux ententes définitives qui s'appliquent même avant la promulgation de cette loi de mise en œuvre du processus qu'il envisage.

[173] En réalité, les ententes définitives du Yukon prévoient que leur mise en œuvre et mise en vigueur se font par loi ou par décret, selon le cas, et que leur mise en vigueur constitue une condition de leur validité (art. 2.2.11 et 2.2.12). On pourrait donc être amené à croire que, dans la mesure où il requiert la promulgation d'une loi de mise en œuvre spécifique, le chapitre 12 constitue une exception à la mise en vigueur générale d'une entente définitive, de telle sorte que, tant que n'a pas été promulguée cette loi, le chapitre 12 n'est porteur d'aucun droit ou obligation juridique. Or, ce n'est pas ce qui ressort du texte de l'Entente définitive.

[174] Aux termes de la section 12.2.0 de l'instrument qui nous occupe, l'expression « [loi] sur l'évaluation des activités de développement » s'entend de la « mesure législative édictée pour assurer la mise en œuvre du processus d'évaluation des activités de développement défini dans le présent chapitre » (je souligne). Cette définition ne renvoie donc pas à une loi de mise en œuvre particulière du chapitre 12 dans son ensemble, mais à la mise en œuvre du *processus* prévu à ce chapitre. Cette conclusion est confirmée par l'art. 12.3.1, qui prévoit que « [l]e gouvernement assure, au moyen d'une mesure législative, la mise en œuvre d'un processus d'évaluation des activités de développement conforme aux dispositions du présent chapitre ». Par conséquent, en toute logique, même si le processus d'évaluation n'a pas encore été mis en œuvre, l'entrée en vigueur d'une entente définitive conclue aux termes

those that establish the applicable transitional law.

[175] Section 12.19.5 provides that "[n]othing in [Chapter 12] shall be construed to affect any existing development assessment process in the Yukon prior to the Development Assessment Legislation coming into effect." This provision sets out the transitional law that would apply until the *YESAA* came into force, establishing that until then, existing statutes and regulations with respect to development assessment would constitute the minimum to which Yukon First Nations were entitled, which meant that those statutes and regulations could not be amended so as to reduce the level of protection enjoyed by the First Nations. Chapter 12 does not require that any amendments be made to that existing law in the meantime.

[176] In addition, s. 12.3.4 provides that "Government shall recommend to Parliament or the Legislative Assembly, as the case may be, the Development Assessment Legislation consistent with this chapter as soon as practicable and in any event no later than two years after the effective date of Settlement Legislation." The "settlement legislation" referred to here is clearly not the implementing legislation for the process contemplated in Chapter 12, but the "settlement legislation" provided for in Division 2.4.0 — the legislation to implement the particular final agreement. Both the territorial settlement legislation and the corresponding federal legislation came into force in 1995. As for the specific process contemplated in Chapter 12, it was ultimately implemented by Parliament by means of the *YESAA*.

[177] The transitional law, that is, the law that applied before the *YESAA* came into force, included, in addition to s. 12.19.5, which was discussed above, s. 12.3.6 of the Final Agreement, which read as follows:

de l'Accord-cadre avec les premières nations du Yukon donne effet à plusieurs dispositions de ce chapitre 12 que toutes les ententes définitives ont en commun, notamment ses dispositions établissant le droit provisoire applicable.

[175] L'article 12.19.5 dispose que le chapitre 12 « n'a pas pour effet de porter atteinte à tout processus existant d'évaluation des activités de développement au Yukon avant l'entrée en vigueur de la [loi] sur l'évaluation des activités de développement. » Cette disposition établit le droit provisoire applicable avant l'entrée en vigueur de la *LÉESY* et signifie que, avant son entrée en vigueur, les lois et règlements existants en la matière établissent le minimum auquel ont droit les premières nations du Yukon, de sorte que ces textes ne sauraient être modifiés d'une manière qui réduirait le niveau de protection reconnu à ces dernières. Par ailleurs, durant ce même intervalle aucune modification de ce même droit existant n'est exigée par le chapitre 12.

[176] En outre, l'art. 12.3.4 prévoit que « [l]e gouvernement recommande au Parlement ou à l'Assemblée législative, selon le cas, l'édiction d'une mesure législative sur l'évaluation des activités de développement qui soit compatible avec les dispositions du présent chapitre et ce, dès que possible ou au plus tard deux ans après la date d'entrée en vigueur de la loi de mise en œuvre. » Cette toute dernière loi de mise en œuvre n'est de toute évidence pas la loi de mise en œuvre du processus envisagé au chapitre 12, mais bien la loi de mise en œuvre dont il est question à la section 2.4.0 — la loi de mise en œuvre de l'entente définitive concernée. Tant la loi territoriale de mise en œuvre des premières ententes définitives que la loi fédérale correspondante sont entrées en vigueur en 1995. Quant à la mise en œuvre spécifique du processus prévu au chapitre 12, c'est finalement le Parlement qui y a procédé avec la *LÉESY*.

[177] Relativement au droit provisoire, c'est-à-dire au droit qui était applicable avant l'entrée en vigueur de la *LÉESY*, outre l'art. 12.19.5 vu plus haut, l'art. 12.3.6 de l'Entente définitive prévoyait ceci :

Prior to the enactment of Development Assessment Legislation, the parties to the Umbrella Final Agreement shall make best efforts to develop and incorporate in the implementation plan provided for in 12.19.1, interim measures for assessing a Project which shall be consistent with the spirit of this chapter and within the existing framework of Law and regulatory agencies. [Emphasis added.]

No implementation plan of the type provided for in s. 12.19.1 was produced in this case. Moreover, s. 12.19.4 provided that Chapter 12 was not to "be construed to prevent Government, in Consultation with Yukon First Nations, from acting to improve or enhance socio-economic or environmental procedures in the Yukon in the absence of any approved detailed design of the development assessment process". No evidence of any such action was adduced in the case at bar. By virtue of s. 12.19.5, therefore, the applicable interim framework corresponded to the "existing development assessment process in the Yukon prior to the Development Assessment Legislation coming into effect".

[178] However, it should be mentioned that the interim framework, which was intended to apply for only a relatively short period, was ultimately in effect longer than planned. This is because the bill that became the implementing legislation for the process contemplated in Chapter 12 was not introduced until October 3, 2002, that is, over five and a half years after the February 14, 1997 deadline provided for in s. 12.3.4 of the Final Agreement. In fact, that deadline had already passed when the Final Agreement was signed in 1997. Since it is clear from the provisions of Chapter 12 that before the *YESAA* came into force, the parties to the Umbrella Agreement were required to make best efforts to ensure that the Yukon First Nations received the benefit of the spirit of that chapter as soon as was practicable, it is important to begin — not in order to apply the *letter* of the *YESAA*, but in order to clearly understand the *spirit* of Chapter 12, of which certain other provisions that were applicable expressly stated that, in the interim, best efforts were to be made to honour that spirit — by

Avant l'édiction de la législation sur l'évaluation des activités de développement, les parties à l'Accord-cadre définitif s'efforcent d'élaborer et d'incorporer au plan de mise en œuvre prévu à l'article 12.19.1 des mesures provisoires d'évaluation des projets qui soient conformes à l'esprit du présent chapitre et respectent les limites existantes établies par les règles de droit applicables et les organismes réglementaires. [Je souligne.]

Aucun plan de mise en œuvre de la nature de celui visé à l'art. 12.19.1 n'a été produit en l'espèce. Du reste, l'art. 12.19.4 précisait que le chapitre 12 n'avait « pas pour effet d'empêcher le gouvernement, en consultation avec les premières nations du Yukon, de prendre des mesures afin d'améliorer les procédures existantes en matière socio-économique ou environnementale au Yukon, en l'absence d'un plan détaillé approuvé [« *approved detailed design* »] du processus d'évaluation des activités de développement ». Aucune preuve n'a été déposée en l'espèce à l'égard d'une telle mesure. Par conséquent, conformément à l'art. 12.19.5, le régime provisoire applicable correspondait au « processus existant d'évaluation des activités de développement au Yukon avant l'entrée en vigueur de la [loi] sur l'évaluation des activités de développement ».

[178] Il convient cependant de noter que le régime provisoire, qui ne devait s'appliquer que pendant une période relativement courte, s'est prolongé plus longtemps que prévu. En effet, je dois souligner que le projet qui est à l'origine de la loi de mise en œuvre du processus envisagé au chapitre 12 n'a été déposé que le 3 octobre 2002, soit plus de cinq ans et demi après l'échéance du 14 février 1997 prévue à l'art. 12.3.4 de l'Entente définitive. En fait, lorsque cette entente a été signée en 1997, cette échéance était déjà dépassée. Comme il ressort de l'économie des dispositions du chapitre 12 que, avant l'entrée en vigueur de la *LÉESY*, les parties à l'Accord-cadre devaient s'efforcer de faire en sorte que les premières nations du Yukon bénéficient de l'esprit de ce chapitre dans les meilleurs délais, il importe, dans un premier temps, de vérifier ce à quoi aurait eu droit la Première nation de Little Salmon/Carmacks en vertu de la *LÉESY* si le processus que celle-ci met en œuvre s'était appliqué à la demande de M. Paulsen, et ce, dans le but, non pas de rendre applicable la *lettre* de la *LÉESY*, mais

determining what the Little Salmon/Carmacks First Nation would have been entitled to under the *YESAA* if the process implemented in that Act had applied to Mr. Paulsen's application.

(1) Permanent Process: *YESAA*

[179] One objective of Chapter 12 of the final agreements concluded with the Yukon First Nations is to ensure the implementation of a development assessment process that "provides for guaranteed participation by Yukon Indian People and utilizes the knowledge and experience of Yukon Indian People in the development assessment process" (s. 12.1.1.2). This framework was designed to incorporate both the participation of the First Nations and a certain degree, if not of decentralization, at least of administrative deconcentration. These objectives are achieved through the membership of the bodies established in Chapter 12 of the final agreements and the *YESAA*, and through the oversight by those bodies of development activities planned for the territory in question. This integrated mechanism was intended, with some exceptions, to become Yukon's default assessment procedure. The relationship between the process established in Chapter 12 and the *Canadian Environmental Assessment Act*, S.C. 1992, c. 37, is made clear in s. 63 of the *YESAA*. In addition to the principle of a *single* assessment, Chapter 12 (ss. 12.14.1.2 and 12.14.3.2) and its implementing legislation (ss. 82(1), 83(1) and 84(1)) confirm the principle of *prior* assessment (prior to the authorization of any project).

[180] The process for which Chapter 12 lays the foundations involves two main organs: the Yukon Development Assessment Board and all the "designated offices" at the local level. The *YESAA* also refers to them as the "Board" and the "designated offices". The membership of the Board is established in s. 8 of the *YESAA*. The basis for its membership is equal representation. The Board's Executive Committee consists of one member nominated by the Council for Yukon Indians, one member nominated by the government and a chairperson appointed by the Minister after consultation with the first two members. The Minister then appoints additional members such that, excluding

de bien saisir l'*esprit* du chapitre 12, dont certaines autres dispositions qui étaient quant à elles applicables prévoyaient expressément qu'on devait provisoirement s'efforcer d'y faire honneur.

(1) Processus permanent : *LÉESY*

[179] Le chapitre 12 des ententes définitives conclues avec les premières nations du Yukon a notamment pour objectif d'assurer la mise en place d'un processus d'évaluation des activités de développement « garantissant la participation des Indiens du Yukon au processus d'évaluation des activités de développement et faisant appel à leurs connaissances et à leur expérience » (art. 12.1.1.2). Ce régime devait intégrer à la fois la participation des premières nations et un certain niveau, sinon de décentralisation, du moins de déconcentration administrative. Ces objectifs sont assurés par la composition des organes établis par le chapitre 12 des ententes définitives et la *LÉESY*, ainsi que par le droit de regard de ces organes sur les activités de développement prévues sur le territoire touché. Ce dispositif intégré était appelé, sous réserve d'exceptions, à devenir la procédure d'évaluation par défaut au Yukon. La relation entre le processus établi au chapitre 12 et la *Loi canadienne sur l'évaluation environnementale*, L.C. 1992, ch. 37, est précisée à l'art. 63 de la *LÉESY*. Outre le principe de l'évaluation *unique*, le chapitre 12 (art. 12.14.1.2 et 12.14.3.2) et sa loi de mise en œuvre (par. 82(1), 83(1) et 84(1)) reprennent celui de l'évaluation *préalable* (à toute autorisation d'un projet donné).

[180] Le processus dont le chapitre 12 jette les fondations est constitué de deux organes principaux : la Commission d'évaluation des activités de développement du Yukon et l'ensemble des « organismes désignés » au niveau local. Dans la *LÉESY*, la Commission devient un « Office » et les organismes des « bureaux ». La composition de l'Office est prévue à l'art. 8 de la *LÉESY*. L'Office se veut paritaire. Son comité de direction — appelé « comité exécutif » dans les ententes définitives — est composé d'un membre proposé par le Conseil des Indiens du Yukon, d'un membre proposé par le gouvernement et d'un président nommé par le ministre après consultation des deux premiers. Le

the chairperson, half the members are nominees of the Council for Yukon Indians and the other half are nominees of the government. As for the designated offices, they are, pursuant to the *YESAA*, outposts of the Board. Their staff "shall be composed of employees of the Board assigned to that office by the Board" (s. 23(1)).

[181] Chapter 12 establishes two broad categories of assessments — mandatory assessments and optional assessments — which are conducted upon request by the government or by a First Nation, but when the request is made by a First Nation, the government's consent is required, with some exceptions that are subject to specific conditions (ss. 12.8.1.4, 12.8.1.5, 12.8.1.8, 12.8.1.9 and 12.8.1.10 of the Final Agreement, and s. 60 of the *YESAA*). The Board is responsible for optional assessments. It is possible to simply except a project from assessment (s. 47(2) *YESAA*). As for mandatory assessments, they are the responsibility of the designated office for the assessment district in which the project is to be undertaken, or of the Board if the assessment district office refers the assessment to it (s. 50(1) *YESAA*) or if such projects have been classified by way of regulations as requiring submission to the Board (s. 122(*c*) *YESAA*). In short, if a project (1) is not excepted from assessment, (2) is not the subject of an accepted optional assessment, or (3) is not one that is required by regulations to be assessed by the Board or that has been referred to the Board by the office for the project's assessment district, it will be assessed by the assessment district office.

[182] If the environmental and socio-economic assessment process provided for in Chapter 12 — and in fact in the *YESAA*, which implements the process — had applied at the time of the events in this case, Mr. Paulsen's application would have had to be assessed by the designated office for the Mayo assessment district, which was established along with five others (for a total of six) by order of the Minister under s. 20(1) of the *YESAA*. Projects like the one in question in Mr. Paulsen's application were neither excepted by regulations nor required to be assessed by the Board. Section 2 of the

ministre y nomme ensuite des membres supplémentaires de façon à ce que, exclusion faite du président, la moitié des membres soient des personnes dont la nomination a été proposée par le Conseil des Indiens du Yukon et l'autre moitié par le gouvernement. Quant aux bureaux désignés, en vertu de la *LÉESY*, ils sont des antennes de l'Office. Leur personnel « est formé des personnes que l'Office y affecte parmi son propre personnel » (par. 23(1)).

[181] Le chapitre 12 établit deux grandes catégories d'évaluation : les évaluations obligatoires et les évaluations facultatives, lesquelles sont effectives sur demande du gouvernement ou d'une première nation, mais dans ce dernier cas, sauf exceptions et conditions prévues, avec l'assentiment du gouvernement (art. 12.8.1.4, 12.8.1.5, 12.8.1.8, 12.8.1.9 et 12.8.1.10 de l'Entente définitive et art. 60 de la *LÉESY*). Les évaluations facultatives relèvent de l'Office. Un projet peut aussi être simplement exclu de l'évaluation (par. 47(2) *LÉESY*). Les évaluations obligatoires relèvent quant à elles soit du bureau désigné de la circonscription où le projet doit être réalisé, soit de l'Office si le bureau de circonscription le lui réfère (par. 50(1) *LÉESY*) ou si un tel projet a fait l'objet d'une telle classification par règlement (al. 122*c*) *LÉESY*). En somme, si un projet (1) n'est pas exclu de toute évaluation, (2) ne fait pas l'objet d'une évaluation facultative acceptée ou (3) n'est pas soumis par règlement à une évaluation par l'Office ou ne lui a pas été déféré par le bureau de la circonscription du projet, il fera l'objet d'une évaluation par ce dernier.

[182] Si le processus d'évaluation environnementale et socioéconomique prévu au chapitre 12, en fait, à la *LÉESY* qui le met en œuvre, s'était appliqué au moment des faits, alors la demande de M. Paulsen aurait dû obligatoirement être évaluée par le bureau désigné de la circonscription de Mayo, créée avec cinq autres (pour un total de six) par arrêté ministériel en vertu du par. 20(1) de la *LÉESY*. En effet, un projet comme celui faisant l'objet de la demande de M. Paulsen n'a pas été exclu par règlement, ni fait l'objet d'une précision pour évaluation par l'Office. L'article 2 du *Règlement sur les*

Assessable Activities, Exceptions and Executive Committee Projects Regulations, SOR/2005-379, refers to Schedule 1 to those regulations concerning "activities that may . . . be made subject to assessment" within the meaning of s. 47 of the *YESAA*. The following activity is listed as Item 27 of Part 13 — entitled "Miscellaneous" — of Schedule 1:

On land under the administration and control of the Commissioner of Yukon or on settlement land, the construction, establishment, modification, decommissioning or abandonment of a structure, facility or installation for the purpose of agriculture, commercial recreation, public recreation, tourist accommodation, telecommunications, trapping or guiding persons hunting members of a species prescribed as a species of big game animal by a regulation made under the *Wildlife Act*, R.S.Y. 2002, c. 229.

[183] Finally, s. 5 of the *Assessable Activities, Exceptions and Executive Committee Projects Regulations* provides that "[p]rojects for which proposals are to be submitted to the executive committee under paragraph 50(1)(*a*) of the [*YESAA*] are specified in Schedule 3." Since nothing in that schedule corresponds to Mr. Paulsen's application, it must be concluded that the assessment would have been the responsibility of the Mayo designated office, although that office could have referred the project to the Board.

[184] Since Mr. Paulsen's project falls into the category of projects for which an assessment by an assessment district office is mandatory, it is possible to give a precise answer to the question of what measures the respondents would have been entitled to had the letter of the process provided for in Chapter 12 of the Final Agreement applied in the case of Mr. Paulsen's application.

[185] It should first be observed that neither the Final Agreement nor the *YESAA* provides for direct participation by the First Nation in the assessment itself. It is only through the Council for Yukon Indians, or more precisely through those of the Board's members assigned to the Mayo office who were appointed after being nominated by the Council, that the First Nation

activités susceptibles d'évaluation, les exceptions et les projets de développement soumis au comité de direction, DORS/2005-379, renvoie à l'annexe 1 de celui-ci concernant les « activités qui pourraient [. . .] être assujetties à l'évaluation » au sens de l'art. 47 de la *LÉESY*. Cette annexe, à l'art. 27 de sa partie 13, intitulée « Divers », fait état de l'activité suivante :

Sur une terre dont le commissaire du Yukon a la gestion et la maîtrise ou sur une terre désignée, construction, exploitation, modification, désaffectation, fermeture ou abandon d'une structure ou installation agricole, récréative commerciale ou publique, touristique, de télécommunication, de piégeage ou destinée aux guides de chasse au gros gibier d'une espèce prévue par règlement du Yukon pris en vertu de la *Loi sur la faune*, L.R.Y. 2002, ch. 229.

[183] Enfin, l'article 5 du *Règlement sur les activités susceptibles d'évaluation, les exceptions et les projets de développement soumis au comité de direction* indique que « [l]es projets de développement pour lesquels des propositions doivent être soumises au comité de direction en application du paragraphe 50(1) de la [*LÉESY*] sont précisés à l'annexe 3. » Or, comme rien dans cette annexe ne correspond à la demande de M. Paulsen, il faut donc en conclure que l'évaluation aurait ressorti au bureau désigné de Mayo, même si ce dernier aurait pu déférer le projet à l'Office.

[184] Comme le projet Paulsen appartient à la catégorie des projets impliquant une évaluation obligatoire par un bureau de circonscription, il est possible de répondre précisément à la question de savoir quelles sont les mesures auxquelles auraient eu droit les intimés si la lettre du processus prévu au chapitre 12 de l'Entente définitive s'était appliquée à la demande de M. Paulsen.

[185] Il faut d'abord constater que ni l'Entente définitive ni la *LÉESY* ne prévoient la participation directe de la première nation au travail d'évaluation comme tel. La première nation n'aurait *participé* à l'évaluation de la demande de M. Paulsen que par l'intermédiaire du Conseil des Indiens du Yukon, plus exactement par le truchement de ceux des membres détachés par l'Office au bureau de Mayo qui

would have *participated* in the assessment of Mr. Paulsen's application. Furthermore, no provisions regarding the proportion of Aboriginal assessors required for assessments by the designated offices can be found either in the final agreements or in the *YESAA*. All that we know in this respect is that the Final Agreement and the *YESAA* require equal representation in the Board's *overall* membership.

[186] Regarding the right of interested parties, not to actively take part in the assessment itself, but to be heard, the Final Agreement provides that "[i]n accordance with the Development Assessment Legislation, a Designated Office . . . shall ensure that interested parties have the opportunity to participate in the assessment process" (s. 12.6.1.3). Moreover, as I mentioned above, the organs — the First Nations, the renewable resources council and the Fish and Wildlife Management Board — that make up the co-management framework for fish and wildlife established in Chapter 16 of the Final Agreement have standing as interested parties to participate in public proceedings of any agency, board or commission on matters that affect the management and conservation of fish and wildlife and their habitats in the traditional territory in question (ss. 16.5.3, 16.6.11 and 16.7.13). Also, s. 55(1)(*b*) of the *YESAA* provides that "[w]here a proposal for a project is submitted to a designated office under paragraph 50(1)(*b*), the designated office shall . . . determine whether the project will be located, or might have significant environmental or socio-economic effects, in the territory of a first nation." The word "territory" is defined as follows in s. 2(1) of the *YESAA*: "in relation to a first nation for which a final agreement is in effect, that first nation's traditional territory and any of its settlement lands within Yukon that are not part of that traditional territory". After it has been determined under s. 55(1)(*b*) that the project will be so located or that it might have such effects, s. 55(4) of the *YESAA* applies. It reads as follows:

auraient été nommés sur proposition de ce conseil. D'ailleurs, ni les ententes définitives ni la *LÉESY* ne précisent la proportion d'évaluateurs autochtones en cas d'évaluation par les bureaux désignés. Tout ce que nous savons à cet égard est que l'Entente définitive et la *LÉESY* exigent la parité dans la composition d'*ensemble* de l'Office.

[186] Au sujet du droit des parties intéressées, non pas de prendre part activement à l'évaluation elle-même, mais d'être entendues, l'Entente définitive prévoit ceci : « Conformément à la législation sur l'évaluation des activités de développement, les organismes désignés [. . .] font en sorte que les parties intéressées aient l'occasion de participer au processus d'évaluation » (art. 12.6.1.3). D'ailleurs, les organes composant le système de cogestion des ressources halieutiques et fauniques mis en place par le chapitre 16 de l'Entente définitive — soit les premières nations, le conseil des ressources renouvelables et la Commission de gestion des ressources halieutiques et fauniques — ont, comme je l'ai mentionné plus tôt, qualité pour participer à titre de partie intéressée aux audiences publiques tenues par une agence, un office ou une commission relativement à des questions ayant une incidence sur la gestion et la conservation des ressources halieutiques et fauniques et de leurs habitats dans le territoire traditionnel concerné (art. 16.5.3, 16.6.11 et 16.7.13). Aussi, l'alinéa 55(1)*b*) de la *LÉESY* précise que, « [s]aisi d'une proposition relative à un projet de développement en application du paragraphe 50(1), le bureau désigné [. . .] établit si le lieu de réalisation se trouve dans le territoire d'une première nation ou si le projet est susceptible d'avoir, dans un tel territoire, des effets importants sur l'environnement ou la vie socioéconomique. » Il faut savoir que le par. 2(1) de cette même loi définit ainsi le terme « territoire » : « En ce qui touche les premières nations qui sont parties à un accord définitif en vigueur, leur territoire traditionnel ainsi que leurs terres désignées situées à l'extérieur de celui-ci mais au Yukon ». Une fois faite, la détermination prévue à l'al. 55(1)*b*), la *LÉESY* précise en conséquence, au par. 55(4), que

Before making a recommendation . . . a designated office shall seek views about the project, and information that it believes relevant to the evaluation, from any first nation identified under paragraph (1)(*b*) and from any government agency, independent regulatory agency or first nation that has notified the designated office of its interest in the project or in projects of that kind.

Therefore, under the process provided for in Chapter 12 of the Final Agreement and in the *YESAA*, the Little Salmon/Carmacks First Nation would have had the right only to be heard in the assessment of Mr. Paulsen's application, and not to actively take part in it by delegating assessors.

[187] This, therefore, is the collective consultation measure to which the respondents would have been entitled in the case of Mr. Paulsen's application had the process provided for in Chapter 12 of the Final Agreement and implemented by the *YESAA* applied to it. This should enable us now to answer the ultimate question in the case at bar: whether, given that the letter of that process does not apply, the respondents could receive the benefit of the spirit of the process, as was their right under the transitional provisions of Chapter 12 of the Final Agreement. For this purpose, we must reiterate that although those transitional provisions did impose a particular responsibility on the Crown party, they were nevertheless not silent with respect to the participation of the Aboriginal party. Thus, s. 12.3.6 refers in this regard to efforts on the part not only of "government", but of the parties to the Umbrella Agreement.

(2) Transitional Law: Any "Existing Process" Before the Coming Into Force of the *YESAA*

[188] As far as Mr. Paulsen's application is concerned, the "existing process" within the meaning of the transitional law provisions, that is, of ss. 12.3.6 and 12.19.5 of the Final Agreement, was the process provided for in the *Environmental Assessment Act*, S.Y. 2003, c. 2, and Yukon's 1991

[l]e bureau désigné ne formule ses recommandations [. . .] qu'après avoir, d'une part, demandé l'avis de la première nation dont le territoire est touché aux termes de l'alinéa (1)*b*) et des autorités publiques, organismes administratifs autonomes et premières nations l'ayant avisé de leur intérêt dans le projet de développement ou dans les projets de même catégorie et, d'autre part, cherché à obtenir d'eux l'information qu'il estime nécessaire à l'examen.

Aux termes du processus prévu au chapitre 12 de l'Entente définitive et des dispositions de la *LÉESY*, la Première nation de Little Salmon/Carmacks n'aurait donc eu droit que d'être entendue lors de l'évaluation de la demande de M. Paulsen, et non pas d'y prendre part activement en y déléguant des évaluateurs.

[187] Voilà donc ce à quoi auraient eu droit les intimés comme mesure de consultation collective relativement à la demande de M. Paulsen si le processus prévu au chapitre 12 de l'Entente définitive et mis en œuvre par la *LÉESY* s'était appliqué à cette demande. Cela devrait maintenant nous permettre de répondre à la question que pose la présente affaire en dernière analyse, soit celle de savoir si, à défaut d'applicabilité de la lettre de ce processus, les intimés ont pu bénéficier de l'esprit de celui-ci, comme ils y avaient droit en vertu de l'économie des dispositions provisoires du chapitre 12 de l'Entente définitive. Pour ce faire, il faudra nous rappeler que, même si ces dispositions de droit provisoire conféraient une responsabilité particulière à la partie étatique, elles n'étaient pas pour autant silencieuses quant à la participation de la partie autochtone. En effet, l'art. 12.3.6 parle à cet égard des efforts qui sont dus non seulement de la part du « gouvernement », mais de celle de toutes les parties à l'Accord-cadre.

(2) Droit provisoire : tout « processus existant » avant l'entrée en vigueur de la *LÉESY*

[188] Au sens des dispositions de droit provisoire, c'est-à-dire les art. 12.3.6 et 12.19.5 de l'Entente définitive, le « processus existant » était, en ce qui concerne la demande de M. Paulsen, celui prévu à la *Loi sur l'évaluation environnementale*, L.Y. 2003, ch. 2, et à la politique agricole yukonnaise

agriculture policy, which, moreover, also referred to the environmental legislation (*Agriculture for the 90s: A Yukon Policy* (1991) (the "agriculture policy"), Section II, at para. 6(1)). Since the parties did not rely on that Act, I will merely mention that the assessment provided for in it was completed, but more than five months after the date of the decision on Mr. Paulsen's application, despite the fact that it was a mandatory prior assessment.

[189] Under the 1991 agriculture policy, Mr. Paulsen's application first had to undergo a "prescreening" by the Land Claims and Implementation Secretariat, the Lands Branch and the Agriculture Branch. The prescreening process involved determining whether the application was eligible for consideration, and in particular whether the application was complete, whether the land in question was available, whether that land was under territorial jurisdiction, whether there was a possibility that the land would be subject to Aboriginal land claims, whether the land had agronomic capability and, more specifically, whether the application was, at first glance, consistent with the policy then in effect.

[190] Mr. Paulsen's application then had to undergo a more technical review by the Agriculture Land Application Review Committee ("ALARC"). ALARC is a cross-sector, interdepartmental committee that, among other things, reviews the farm development plan that every applicant for agricultural land must submit (agriculture policy, Section II, at subpara. 9(1)(c)). ALARC's review of Mr. Paulsen's application was originally scheduled for June 26, 2002, but it could not proceed on that date because the applicant had not yet submitted a farm development plan.

[191] On June 10, 2002, an analysis by the Agriculture Branch showed that if Mr. Paulsen's application were accepted as configured, it would not represent the most efficient use of the land. On October 20, 2003, Mr. Paulsen reconfigured the parcel in question in his application. On February 24, 2004, ALARC recommended that his

de 1991 qui renvoyait d'ailleurs aussi à la législation sur l'environnement (*Agriculture for the 90s : A Yukon Policy* (1991) (la « politique agricole »), section II, par. 6(1)). Comme les parties n'ont pas invoqué cette loi, je me limiterai à mentionner que l'évaluation prévue par celle-ci a été complétée, mais plus de cinq mois après la date de la décision sur la demande de M. Paulsen, et ce, même s'il s'agissait d'une évaluation préalable obligatoire.

[189] Aux termes de la politique agricole de 1991, la demande de M. Paulsen a d'abord fait l'objet d'un examen préliminaire par le Secrétariat des revendications territoriales et de la mise en œuvre, par la Direction des terres ainsi que par la Direction de l'agriculture. Cet examen préliminaire devait consister en un contrôle de recevabilité de la demande, et notamment de son caractère complet, de la disponibilité de la terre visée, de la compétence territoriale sur celle-ci, d'éventuelles revendications territoriales autochtones dont elle pouvait faire l'objet, de son potentiel agricole et, plus généralement, de la conformité a priori de la demande à la politique en vigueur.

[190] La demande de M. Paulsen devait ensuite faire l'objet d'un examen davantage technique par le Comité d'examen des demandes d'aliénation de terres agricoles (« CEDATA »). Il s'agit d'un comité intersectoriel et interministériel qui procède notamment à l'examen du plan d'exploitation exigé de toute personne sollicitant l'obtention d'une terre à des fins agricoles (politique agricole, section II, al. 9(1)c)). L'examen de la demande de M. Paulsen par le CEDATA avait été initialement prévu pour le 26 juin 2002. Toutefois, comme le demandeur n'avait toujours pas produit de plan d'exploitation à cette date, cet examen n'a pas pu avoir lieu au moment prévu.

[191] Le 10 juin 2002, une analyse effectuée par la Direction de l'agriculture a révélé que, si elle était acceptée suivant la délimitation proposée, la demande de M. Paulsen ne constituerait pas une utilisation optimale du sol. Le 20 octobre 2003, M. Paulsen a revu la délimitation de la terre qui faisait l'objet de sa demande. Le 24 février 2004, le

application proceed to an assessment by the Land Application Review Committee ("LARC").

[192] LARC is a body whose membership consists of representatives of the Yukon government and, depending on the case, of Yukon First Nations, Yukon municipalities and/or the federal Department of Fisheries and Oceans (*Land Application Review Committee (LARC): Terms of Reference*, Section 4.0: Membership/Public Participation, A.R., vol. II, at p. 29). It is chaired by a territorial government official. A First Nation will be represented on LARC if, as was the case here, the application to be reviewed has potential consequences for the management of its "traditional territory".

[193] LARC's mandate is, in particular, to "review matters concerning land applications from a technical land-management perspective, in accordance with legislation, First Nation Final & Self Government Agreements and criteria in specific land application policies" (*Land Application Review Committee (LARC): Terms of Reference*, Section 6.0: Land Application & Policy Development Procedures — Mandate, A.R., vol. II, at p. 32).

[194] A notice concerning Mr. Paulsen's application was published on March 26, 2004, and the public were invited to submit written comments within 20 days. On April 28, 2004, the Agriculture Branch sent a summarized version of the application to the Little Salmon/Carmacks First Nation (A.R., vol. II, at p. 6) together with a letter notifying the First Nation that the application was to be reviewed by LARC and asking it to submit its written comments within 30 days. The First Nation was also sent an information package, which included notice that the LARC meeting was scheduled for August 13, 2004.

[195] On July 27, 2004, Susan Davis, the Director of Land and Resources of the Little Salmon/Carmacks First Nation, sent Yukon's Lands Branch

CEDATA a recommandé que sa demande soit évaluée par le Comité d'examen des demandes d'aliénation de terres (« CEDAT »).

[192] Le CEDAT se compose de représentants du gouvernement du Yukon et, suivant les cas, des premières nations du Yukon, des municipalités du Yukon et/ou du ministère fédéral des Pêches et Océans (*Land Application Review Committee (LARC) : Terms of Reference*, section 4.0 : Membership/Public Participation, d.a., vol. II, p. 29). Il est présidé par un fonctionnaire territorial. Une première nation y est représentée si la demande à examiner peut avoir des conséquences sur la gestion de son « territoire traditionnel », ce qui était le cas en l'espèce.

[193] Le CEDAT a notamment pour mandat d'[TRADUCTION] « examiner d'un point de vue technique de gestion du territoire certains aspects des demandes d'aliénation de terres, conformément aux lois, aux ententes définitives et accords d'autonomie gouvernementale des premières nations et aux critères prévus par certaines politiques relatives aux demandes d'aliénation de terres » (*Land Application Review Committee (LARC) : Terms of Reference*, section 6.0 : Land Application & Policy Development Procedures — Mandate, d.a., vol. II, p. 32).

[194] Le 26 mars 2004, la demande de M. Paulsen a fait l'objet de publicité et le public a été invité à formuler ses observations par écrit dans les 20 jours suivant cette date. Le 28 avril 2004, la Direction de l'agriculture a communiqué une version résumée de la demande de M. Paulsen à la Première nation de Little Salmon/Carmacks (d.a., vol. II, p. 6), accompagnée d'une lettre informant celle-ci que la demande serait examinée par le CEDAT et l'invitant à présenter ses observations écrites dans les 30 jours suivant cette date. Une trousse d'information contenant notamment la date prévue de la réunion du CEDAT, en l'occurrence le 13 août 2004, a aussi été envoyée à la première nation.

[195] Le 27 juillet 2004, la directrice des terres et ressources de la Première nation de Little Salmon/Carmacks, Susan Davis, a fait parvenir à la Direction

a letter in which she expressed the First Nations' concerns about Mr. Paulsen's application (A.R., vol. II, at p. 22). Those concerns were threefold. First of all, the First Nation was concerned about the impact of the application on the trapline. It was also concerned about the anticipated impact on settlement land under its comprehensive land claim agreement, and in particular on two parcels of site specific settlement land (a concept referred to above) as well as on the cabin of the holder of the trapline concession, which was located on one of those parcels. Finally, the First Nation asked the Yukon government to take into consideration the fact that there might be sites of heritage or archaeological interest, including a historical trail, on the land in question in the agriculture land application.

[196] LARC met to review Mr. Paulsen's application on August 13, 2004. For reasons that are not explained in the record of this case, the Little Salmon/Carmacks First Nation, without notifying the other members in advance, did not attend the meeting and did not request an adjournment of the August 13, 2004 review, to which it had been invited as a member of LARC. However, it can be seen from the minutes of that meeting that even though no representatives of the First Nation attended, its concerns had been taken into account even before the meeting. The following passages are relevant:

> The original rectangular parcel was reconfigured in October, 2003. The NRO [Natural Resources Officer] inspection report in April this year recommended it be reconfigured again to remove a portion, which is a potential timber allocation area for point source premits [*sic*]. Opposition from the First Nation has caused the abandonment of that plan.
>
> . . .
>
> Little Salmon Carmacks First Nation [LSCFN] express concern that the application is within Trapline Concession Number 143, held by an elder [Johnny Sam]. Forestfire burns have impacted this trapline, and

des terres du Yukon une lettre exprimant les préoccupations de la première nation relativement à la demande de M. Paulsen (d.a., vol. II, p. 22). Les préoccupations exprimées étaient de trois ordres. La première nation s'inquiétait d'abord des répercussions de la demande sur la ligne de piégeage. Elle se préoccupait des conséquences à prévoir sur les terres visées par le règlement de la revendication territoriale globale de la première nation, notamment sur deux sites spécifiques (notion vue ci-haut) ainsi que sur le refuge de trappe du titulaire de la ligne de piégeage, qui se trouve sur l'un de ces sites. Enfin, la première nation invitait l'administration yukonnaise à prendre en considération la présence possible de sites pouvant revêtir une valeur patrimoniale ou archéologique, dont un sentier historique, sur la terre faisant l'objet de la demande d'aliénation à des fins agricoles.

[196] Le CEDAT a procédé à l'examen de la demande de M. Paulsen le 13 août 2004. Pour des raisons non précisées dans le présent dossier, sans prévenir d'avance les autres membres, la Première nation de Little Salmon/Carmacks n'a pas pris part à la réunion et n'a pas demandé l'ajournement de l'examen du 13 août 2004 auquel elle avait été invitée à titre de membre du CEDAT. Le procès-verbal de cette réunion atteste toutefois que, en dépit de l'absence de représentants de la première nation, les préoccupations de celles-ci ont été prises en compte, et ce, même avant la réunion en question. Je reproduis ci-après les extraits pertinents du procès-verbal :

> [TRADUCTION] La parcelle rectangulaire originale a été reconfigurée en octobre 2003. Le rapport d'inspection de l'agent des ressources naturelles d'avril de cette année recommandait sa reconfiguration afin d'en retirer une partie, qui constitue une zone potentielle d'attribution de permis de coupe de bois visant des sources ponctuelles. Par suite de l'opposition manifestée par la première nation, ce projet a été abandonné.
>
> . . .
>
> La Première nation de Little Salmon/Carmacks [PNLSC] s'est dite préoccupée par le fait que la demande vise une terre se trouvant à l'intérieur de la concession de piégeage nº 143 dont est titulaire un aîné [Johnny Sam].

the only area left is a small strip of land between the Klondike Highway and the Yukon River, which is considered to be suitable land for farming. As a result of the report, there have been several agriculture land applications requesting land in the area for raising livestock and building houses. The combination of agriculture and timber harvesting impacts on this already damaged trapline would be a significant deterrent to the ability of the trapper to continue his traditional pursuits. There are two site specifics, personal/traditional use areas considered to be LSCFN settlement lands in the area in question, S-4B and S-127B. Both of these locations are in close proximity to the point source timber permit application. The impact on these sites and users would be the loss of animals to hunt in the area. S-4B is also the site of Concession 143's base camp and trapper cabin.

. . .

Other LSCFN concerns relatied [*sic*] to cultural sites: There are potential areas of heritage and cultural interests which may be impacted by point source timber harvesting. An historic First Nation trail follows the ridge in the area. [A]t present these sites have not been researched or identified, and there would need to be an archaeological survey carried out in order to confirm the prescence [*sic*] or lack thereof of any such sites.

Environment advised they walked the site and discovered an old trap on top of the bluff, facing the Yukon River. The owner of Trapline #143 will have the right to seek compensation. An appropriate 30-metre setback is recommended from the bluff. There was evidence of bears and moose. There will be some loss of wildlife habitat in the area, but it is not significant.

. . .

Recommendation: Approval in principle. Setback from the bluff 30 meters . . . . Subdivision approval will be required. Trapper, based on reduced trapping opportunities, has opportunity to seek compensation.

Des incendies de forêt ont endommagé ce territoire et il n'en reste qu'une petite bande de terre entre la route Klondike et le fleuve Yukon, laquelle est considérée propice à l'agriculture. À la suite du rapport, plusieurs demandes d'aliénation de terres à des fins agricoles ont été présentées afin d'obtenir des terres dans la région en vue d'y élever du bétail et d'y construire des maisons. L'effet conjugué d'activités agricoles et d'activités de récolte du bois sur cette ligne de piégeage par ailleurs déjà endommagée nuirait de façon appréciable à la capacité du trappeur de continuer ses activités traditionnelles. Il y a, dans la région en question, deux zones utilisées à des fins personnelles ou traditionnelles, sites spécifiques S-4B et S-127B, qui sont considérées comme des terres visées par le règlement de la PNLSC. Ces deux emplacements se trouvent près de la zone concernant la demande de permis de coupe de bois visant des sources ponctuelles. L'effet des activités envisagées sur les sites et les usagers serait une réduction de la quantité d'animaux pouvant être chassés dans la région. Le site S-4B est aussi l'emplacement du camp de base et de la cabane du trappeur de la concession de piégeage n^{o} 143.

. . .

D'autres préoccupations exprimées par la PNLSC se rapportaient à des sites culturels : il y aurait certains endroits susceptibles de présenter de l'intérêt du point de vue culturel et patrimonial qui pourraient être touchés par les activités de récolte de bois. Un sentier historique de la première nation suit la ligne de crête dans la région. [A]ctuellement, aucun de ces sites n'a été identifié ou n'a fait l'objet de recherches. Il faudrait procéder à une reconnaissance archéologique pour confirmer la présence ou l'absence de tels sites.

Des fonctionnaires du ministère de l'Environnement ont affirmé avoir marché dans le site en question et y avoir découvert un vieux piège en haut de la falaise, face au fleuve Yukon. Le propriétaire de la ligne de piégeage n^{o} 143 aura le droit de demander d'être indemnisé. Il est recommandé de créer une zone tampon adéquate de 30 mètres à partir de la falaise. Certains éléments indiquaient la présence d'ours et d'orignaux. Il y aura une certaine perte au plan de l'habitat faunique dans la zone visée, mais peu importante.

. . .

Recommandation : Approbation de principe. Zone tampon de 30 mètres à partir de la falaise [. . .] Il faudra faire approuver le lotissement. Le trappeur pourra demander une indemnisation, sur la base de la réduction des possibilités de piégeage.

[197] On September 2, 2004, the territorial government's archaeologist reported that no evidence of prehistoric artifacts had been found on the land in question in the agriculture land application, but as a precaution he also recommended a 30-metre buffer between the bluff and the land that was to be transferred.

[198] The territorial government's conduct raises questions in some respects. In particular, there is the fact that the appellant David Beckman, in his capacity as Director of Agriculture, did not notify the respondent First Nation of his decision of October 18, 2004 until July 27, 2005. Under s. 81(1) of the *YESAA*, the designated office and, if applicable, the executive committee of the Board would have been entitled to receive copies of that decision and, one can only assume, to receive them within a reasonable time. Here, the functional equivalent of the designated office is LARC. Even if representatives of the respondent First Nation did not attend the August 13 meeting, it would be expected that the Director of Agriculture would inform that First Nation of his decision within a reasonable time. Nonetheless, the time elapsed after the decision did not affect the quality of the prior consultation.

[199] The territorial government's decision to proceed with Mr. Paulsen's application at the prescreening stage despite the requirement of consultation in the context of the respondent First Nation's fish and wildlife management plan was not an exemplary practice either. In that respect, Yukon's 1991 agriculture policy provided that "[a]pplications to acquire land for agriculture will be reviewed by the Fish and Wildlife Branch to safeguard wildlife interests", that "[m]easures will be taken to avoid overlap between allocation of lands for agriculture and key wildlife habitat" and that, in particular, all "key wildlife habitat will be excluded from agricultural disposition except where the Fish and Wildlife Branch determines that adverse effects upon wildlife interests can be successfully mitigated" (Section II, subpara. 6(3)(b)). As we have seen, however, Susan Davis did not express concern about this in her letter of July 27, 2004 to Yukon's

[197] Le 2 septembre 2004, l'archéologue du gouvernement territorial a rapporté n'avoir pu relever aucune trace d'artefact préhistorique sur la terre faisant l'objet de la demande d'aliénation à des fins agricoles, mais par prudence a recommandé à son tour la création d'une zone tampon de 30 mètres de largeur entre la falaise et la terre qui serait éventuellement cédée.

[198] À certains égards, la conduite des autorités territoriales soulève des interrogations. C'est notamment le cas en ce qui a trait au fait que, en sa qualité de directeur de l'agriculture, l'appelant M. Beckman n'a signifié que le 27 juillet 2005 à la première nation intimée sa décision du 18 octobre 2004. En vertu du par. 81(1) de la *LÉESY*, le bureau désigné et, le cas échéant, le comité de direction de l'Office auraient eu droit de recevoir une copie de cette décision, et ce, on peut le supposer, à l'intérieur d'un délai raisonnable. L'équivalent fonctionnel du bureau désigné est ici le CEDAT. Même si les représentants de la première nation intimée ne se sont pas présentés à la réunion du 13 août, on se serait attendu à ce que le directeur de l'agriculture informe cette première nation de sa décision dans un délai raisonnable. Ce délai, survenu après la décision, n'a cependant pas affecté la qualité de la consultation préalable.

[199] La décision qu'a prise l'administration territoriale, au terme de l'examen préalable, de poursuivre le traitement de la demande de M. Paulsen malgré la consultation qui avait cours dans le cadre du plan de gestion des ressources halieutiques et fauniques de la première nation intimée n'est pas davantage un exemple de bonne pratique. La politique agricole yukonnaise de 1991 prévoyait pourtant à ce sujet que les [TRADUCTION] « [d]emandes d'acquisition de terres à des fins agricoles seraient examinées par la Direction de la faune et du poisson en vue de protéger la faune », que des « [m]esures seraient prises pour éviter que, dans l'attribution de terres à des fins agricoles, on empiète sur des habitats essentiels pour la faune » et qu'en particulier tout « habitat essentiel pour faune serait exclu des terres susceptibles d'aliénation à des fins agricoles, sauf dans les cas où la Direction de la faune et du poisson juge qu'il est possible d'atténuer les effets

Lands Branch. And as can be seen from the minutes of the August 13, 2004 meeting, the concerns of the Little Salmon/Carmacks First Nation with respect to resource conservation were taken into consideration. Also, the required consultation in the context of the fish and wildlife management plan was far more limited than the consultation to which the First Nation was entitled in participating in LARC, which was responsible for assessing the specific project in issue in this appeal. Finally, the First Nation, the renewable resources council and the Minister had not agreed on a provisional suspension of the processing of applications for land in the area in question.

préjudiciables sur la faune » (section II, al. 6(3)b)). Cependant, comme on a pu le constater, Susan Davis n'a pas exprimé cette préoccupation dans sa lettre du 27 juillet 2004 à la Direction des terres du Yukon. De plus, comme le démontre le procès-verbal de la réunion du 13 août 2004, les préoccupations de la Première nation de Little Salmon/Carmacks concernant la conservation des ressources ont été prises en considération. Au surplus, la consultation qui avait cours dans le cadre du plan de gestion des ressources halieutiques et fauniques était beaucoup plus limitée que celle à laquelle donnait droit la participation de la première nation au CEDAT qui était chargé d'évaluer le projet spécifique faisant l'objet du présent pourvoi. De surcroît, la première nation, le conseil des ressources renouvelables et le ministre ne s'étaient pas entendus sur la suspension provisoire du traitement de toute demande d'aliénation de terres dans la région visée.

[200] Despite these aspects of the handling of Mr. Paulsen's application that are open to criticism, it can be seen from the facts as a whole that the respondents received what they were entitled to receive from the appellants where consultation as a First Nation is concerned. In fact, in some respects they were consulted to an even greater extent than they would have been under the *YESAA*. As we saw above, the only right the First Nation would have had under the *YESAA* was to be heard by the assessment district office as a stakeholder (s. 55(4)). That consultation would have been minimal, whereas in the context of the 1991 agriculture policy, the First Nation was invited to participate directly in the assessment of Mr. Paulsen's application as a member of LARC.

[200] Au-delà de ces aspects critiquables du cheminement de la demande de M. Paulsen, l'ensemble des faits révèle que les intimés ont reçu des appelants ce à quoi ils avaient droit de la part de ceux-ci en matière de consultation à titre de première nation. En réalité, ils ont même obtenu à certains égards davantage que ce que leur aurait procuré la *LÉESY*. En effet, comme on a pu le constater précédemment, le seul droit qu'aurait obtenu la première nation en vertu de la *LÉESY* est celui d'être entendue à titre de personne intéressée (par. 55(4)) par le bureau de circonscription. Il s'agissait là d'une consultation minimale, alors que, dans le contexte de l'application de la politique agricole de 1991, la première nation a été invitée à participer directement, à titre d'évaluateur membre du CEDAT, à l'évaluation de la demande de M. Paulsen.

[201] It is true that the First Nation's representatives did not attend the August 13, 2004 meeting. They did not notify the other members of LARC that they would be absent and did not request that the meeting be adjourned, but they had nonetheless already submitted comments in a letter.

[201] Il est vrai que les représentants de la première nation ne se sont pas présentés à la réunion du 13 août 2004. Cela est survenu sans qu'ils ne préviennent au préalable les autres membres du CEDAT et sans demander l'ajournement de la réunion, mais ils avaient néanmoins fait des commentaires par lettre.

[202] Thus, the process that led to the October 18, 2004 decision on Mr. Paulsen's application was

[202] Par conséquent, le processus qui a mené à la décision du 18 octobre 2004 relativement à la

consistent with the transitional law provisions of Chapter 12 of the Final Agreement. There is no legal basis for finding that the Crown breached its duty to consult.

III. Conclusion

[203] Whereas past cases have concerned unilateral actions by the Crown that triggered a duty to consult for which the terms had not been negotiated, in the case at bar, as in the Court's recent decision regarding the *James Bay and Northern Québec Agreement*, the parties have moved on to another stage. Formal consultation processes are now a permanent feature of treaty law, and the Final Agreement affords just one example of this. To give full effect to the provisions of a treaty such as the Final Agreement is to renounce a paternalistic approach to relations with Aboriginal peoples. It is a way to recognize that Aboriginal peoples have full legal capacity. To disregard the provisions of such a treaty can only encourage litigation, hinder future negotiations and threaten the ultimate objective of reconciliation.

[204] The appellants seek a declaration that the Crown did not have a duty to consult under the Final Agreement with respect to Mr. Paulsen's application. Their interpretation of the Final Agreement is supported neither by the applicable principles of interpretation nor by either the context or the provisions of the Final Agreement. The cross-appellants argue that the common law duty to consult continued to apply despite the coming into effect of the Final Agreement. As I explained above, it is my view that there is no gap in the Final Agreement as regards the duty to consult. Its provisions on consultation in relation to the management of fish and wildlife were in effect. And the Little Salmon/Carmacks First Nation had in fact submitted comments in the process provided for in that respect. Moreover, the administrative law rights of Johnny Sam are governed neither by the common law duty to consult nor by the Final Agreement. Although the Little Salmon/Carmacks First Nation's argument

demande de M. Paulsen respectait les dispositions de droit provisoire prévues au chapitre 12 de l'Entente définitive. Il n'existe aucun motif juridique permettant de conclure que l'obligation de consultation de la Couronne a été violée.

III. Conclusion

[203] Si, jusqu'ici, les litiges ont mis en cause une action unilatérale de la Couronne qui déclenchait une obligation de consulter dont les modalités n'avaient pas été négociées, le présent dossier, tout comme celui dans lequel la Cour a récemment été appelée à étudier la *Convention de la Baie-James et du Nord québécois*, indique que les parties sont maintenant passées à une autre étape. Les processus formels de consultation font maintenant résolument partie de l'univers juridique des traités. L'Entente définitive n'en est qu'un exemple. Donner leur plein effet aux stipulations d'un traité comme l'Entente définitive c'est renoncer à toute approche paternaliste à l'égard des peuples autochtones. Il s'agit d'une façon de reconnaître leur pleine capacité juridique. Méconnaître les stipulations d'un tel traité ne peut qu'encourager le recours aux tribunaux, nuire aux négociations futures et compromettre la réalisation de l'objectif ultime de réconciliation.

[204] L'appel principal visait à obtenir une déclaration portant que la Couronne n'avait pas d'obligation de consultation en vertu de l'Entente définitive en relation avec la demande de M. Paulsen. L'interprétation que font les appelants de l'Entente définitive n'est appuyée ni par les principes interprétatifs applicables, ni par le contexte de l'Entente définitive ou les stipulations de celle-ci. Par ailleurs, l'appel incident est fondé sur la survivance, malgré l'entrée en vigueur de l'Entente définitive, de l'obligation de consultation de source jurisprudentielle. Comme je l'ai expliqué précédemment, je suis d'avis qu'il n'existe aucun hiatus dans l'Entente définitive concernant l'obligation de consultation. Ses dispositions concernant la consultation en relation avec la gestion des ressources halieutiques et fauniques étaient en vigueur. La Première nation de Little Salmon/Carmacks a d'ailleurs présenté ses observations dans le cadre du processus prévu à cet effet. Par ailleurs, les droits de Johnny Sam,

that it had a right to be consulted with respect to Mr. Paulsen's application is valid, the source of that right is not the common law framework. The fact is that the transfer to Mr. Paulsen constituted an agricultural development project that was subject to Chapter 12 of the Final Agreement and that that chapter's transitional provisions established the applicable framework.

[205] In this case, given that Mr. Paulsen's application would have been subject to a mandatory assessment by the local assessment district office, the fact that recourse was had to the existing process to assess the application supports a conclusion that the actual consultation with the respondents was more extensive than the consultation to which they would have been entitled under the *YESAA*.

[206] For these reasons, I would dismiss the appeal and the cross-appeal, both with costs.

Appeal and cross-appeal dismissed with costs.

en tant qu'administré, ne sont régis ni par l'obligation de consultation de régime jurisprudentiel ni par l'Entente définitive. Si la Première nation de Little Salmon/Carmacks a raison de soutenir qu'elle avait le droit d'être consultée en ce qui a trait à la demande de M. Paulsen, ce n'est pas en vertu du régime jurisprudentiel. C'est que, conformément à l'Entente définitive la cession à M. Paulsen constituait un projet de développement agricole assujetti aux dispositions du chapitre 12 de ce traité et que ses dispositions provisoires établissaient le régime applicable.

[205] En l'espèce, le recours au processus existant pour l'évaluation de la demande de M. Paulsen, compte tenu du fait que cette demande aurait relevé d'une évaluation obligatoire par le bureau de circonscription locale, permet de conclure que les intimés ont bénéficié d'un régime supérieur à celui auquel ils auraient eu droit en vertu de la *LÉESY* en matière de consultation.

[206] Pour ces motifs, je rejetterais les pourvois principal et incident, avec dépens dans les deux cas.

IN THE SUPREME COURT OF BRITISH COLUMBIA

Citation: ***Blaney et al v. British Columbia (The Minister of Agriculture Food and Fisheries) et al,***
2005 BCSC 283

Date: 20050302
Docket: L043154
Registry: Vancouver

Between:

Darren Blaney, Chief Councillor, Florence Hackett, Bonnie Wilson, Clyde Leo, Bill Blaney, Band Councillors, suing on their own behalf and on behalf of all the members of the Homalco Indian Band, and the Homalco Indian Band

Petitioners

And

The Minister of Agriculture Food and Fisheries and Marine Harvest Canada

Respondents

Before: The Honourable Mr. Justice Powers

Reasons for Judgment

Counsel for the Petitioners	P.R. Grant, N.B. O'Reilly and L. Schmidt
Counsel for the Respondent, The Minister of Agriculture Food and Fisheries	L. Mrozinski and P.E. Yearwood
Counsel for the Respondent, Marine Harvest Canada	S.B. Armstrong, Q.C., J.M. Shore and C.J. Kowbel
Date and Place of Trial/Hearing:	January 24 – 28, January 31, February 1 & 2, February 10 & 11, 2005 Vancouver, B.C.

INTRODUCTION

[1] The petitioners, who I will refer to as “the Homalco”, are the Chief councillor and Band councillors suing on their own behalf, and on behalf of the members of the Homalco Indian Band. The Homalco Band is also known as the Xwèmalhkwu First Nation.

[2] The Minister of Agriculture, Food and Fisheries (“MAFF” or “Ministry”) is the Minister responsible on behalf of the Crown in right of British Columbia for licensing and approval of aquaculture facilities and amendments to aquaculture licenses.

[3] “Marine Harvest Canada” is a trade name for Nutreco Canada Inc. Marine Harvest Canada (“Marine Harvest”) operates an aquaculture facility in British Columbia at a site adjacent to the Church House Indian Reserve at Bute Inlet. The reserve is held in trust by the Crown in right of Canada on behalf of the Homalco.

[4] The Homalco seek judicial review of the decision by the Minister, through its decision maker, to approve an amendment to an existing fish farm licence on Bute Inlet. Marine Harvest has a licence to operate a fish farm and raise Chinook salmon at this facility. They applied to amend that licence in April of 2004 to allow them to raise Atlantic salmon. The amendment was granted effective December 8, 2004.

[5] The Homalco say the approval of the amendment was done without proper consultation and accommodation of their concerns, as required by law.

[6] The Homalco seek the following in their petition:

1. a declaration that the Minister has failed to properly consult and accommodate them with respect to the amendment;

2. an order quashing or setting aside the decision of the Minister;

3. relief in the nature of certiorari quashing the decision of the Minister approving the amendment;

4. a declaration that the decision of the Minister to proceed with the granting of approval of the amendment prior to meaningful consultation with the Homalco in good faith was a breach of the constitutional duty of the Crown to consult in good faith with the Homalco;

7. a permanent injunction prohibiting Marine Harvest from placing Atlantic salmon in the Church House fish farm without proper authorization from the Department of Fisheries and Oceans for the harmful alteration, disruption or destruction [HAAD] of fish habitat pursuant to s. 35(2) of the ***Fisheries Act***, R.S.C. 1985, c. F-14 ("***Fisheries Act***") and without obtaining a licence pursuant to s. 55 of the ***Fishery (General) Regulations***.

[7] They also seek an order that the Atlantic salmon which are presently located in this fish farm be removed.

BACKGROUND

[8] The Homalco Band are Aboriginal people who claim Aboriginal title and rights to an area on the central coast of British Columbia that includes Bute Inlet and the area surrounding the Church House and Barlett Island Indian Reserves.

[9] Marine Harvest operates the aquaculture facility which is at the site adjacent to the Church House Reserve and at the mouth of Bute Inlet. The licence was originally granted in 2002, allowing the raising of Chinook salmon. Marine Harvest applied in April of 2004 to amend the licence to allow them to raise Atlantic salmon. The MAFF wrote to Homalco on July 20, 2004 to notify them of the application and to obtain their input. A biologist at MAFF "approved" the application on July 28, 2004.

[10] Homalco replied, expressing their concerns about the amendment, and seeking additional information.

[11] These exchanges were followed by a number of letters and emails, as well as telephone communication between the Ministry representatives, Homalco's lawyers, and in some instances, the Homalco themselves. Despite this communication and the expressed desire and willingness to meet in some of the communications, the parties never did have a meeting to discuss the concerns raised by the Homalco. The Ministry, in late November, indicated that it intended to make its decision by December 9. In fact, its decision was made on December 8, without a meeting

occurring between the parties. The Homalco submitted further materials, and the Ministry responded to those materials on January 18, 2005.

[12] These proceedings were commenced on December 22, 2004, after Marine Harvest had placed 700,000 Atlantic smolts out of a possible 1 million in the Church House site.

THE LAW

[13] The Supreme Court of Canada has dealt with the issue of the obligation to consult and accommodate in two recent decisions. These decisions are ***Haida Nation v. British Columbia (Minister of Forests)*** 2004 SCC 73, [2004] S.C.J. No. 70 (S.C.C.) (Q.L.) and ***Taku River Tlingit First Nation v. (British Columbia) (Project Assessment Director)***, [2004] S.C.J. No. 69. These decisions were delivered November 18, 2004. They confirm the Crown's obligations to consult, and decided that a third party in the position of Marine Harvest did not have a duty to consult.

[14] The Supreme Court of Canada in ***Haida***, *supra,* said the following:

> ¶16 The government's duty to consult with Aboriginal peoples and accommodate their interests is grounded in the honour of the Crown. The honour of the Crown is always at stake in its dealings with Aboriginal peoples: see for example *R. v. Badger,* [1996] 1 S.C.R. 771, at para. 41; *R. v. Marshall*, [1999] 3 S.C.R. 456. It is not a mere incantation, but rather a core precept that finds its application in concrete practices.
>
> ¶17 The historical roots of the principle of the honour of the Crown suggest that it must be understood generously in order to reflect the underlying realities from which it stems. In all its dealings with Aboriginal peoples, from the assertion of sovereignty to the resolution

of claims and the implementation of treaties, the Crown must act honourably. Nothing less is required if we are to achieve "the reconciliation of the pre-existence of Aboriginal societies with the sovereignty of the Crown": *Delgamuukw, supra,* at para. 186, quoting *Van der Peet, supra,* at para. 31.

…

¶20 Where treaties remain to be concluded, the honour of the Crown requires negotiations leading to a just settlement of Aboriginal claims: *R. v. Sparrow*, [1990] 1 S.C.R. 1075, at pp. 1105-6. Treaties serve to reconcile pre-existing Aboriginal sovereignty with assumed Crown sovereignty, and to define Aboriginal rights guaranteed by s. 35 of the *Constitution Act*, 1982. Section 35 represents a promise of rights recognition, and "[i]t is always assumed that the Crown intends to fulfil its promises" (*Badger, supra,* at para. 41). This promise is realized and sovereignty claims reconciled through the process of honourable negotiation. It is a corollary of s. 35 that the Crown act honourably in defining the rights it guarantees and in reconciling them with other rights and interests. This, in turn, implies a duty to consult and, if appropriate, accommodate.

…

¶25 Put simply, Canada's Aboriginal peoples were here when Europeans came, and were never conquered. Many bands reconciled their claims with the sovereignty of the Crown through negotiated treaties. Others, notably in British Columbia, have yet to do so. The potential rights embedded in these claims are protected by s. 35 of the *Constitution Act, 1982.* The honour of the Crown requires that these rights be determined, recognized and respected. This, in turn, requires the Crown, acting honourably, to participate in processes of negotiation. While this process continues, the honour of the Crown may require it to consult and, where indicated, accommodate Aboriginal interests.

…

¶32 The jurisprudence of this Court supports the view that the duty to consult and accommodate is part of a process of fair dealing and reconciliation that begins with the assertion of sovereignty and continues beyond formal claims resolution. Reconciliation is not a final legal remedy in the usual sense. Rather, it is a process flowing from rights guaranteed by s. 35(1) of the *Constitution Act, 1982.* This process of reconciliation flows from the Crown's duty of honourable dealing toward Aboriginal peoples, which arises in turn from the

> Crown's assertion of sovereignty over an Aboriginal people and *de facto* control of land and resources that were formerly in the control of that people. As stated in *Mitchell v. M.N.R.,* [2001] 1 S.C.R. 911, 2001 SCC 33, at para. 9, "[w]ith this assertion [sovereignty] arose an obligation to treat Aboriginal peoples fairly and honourably, and to protect them from exploitation…" (emphasis added).

[15] The Supreme Court of Canada said in the ***Taku****, supra,* case:

> ¶24 The Province's submissions present an impoverished vision of the honour of the Crown and all that it implies. As discussed in the companion case of *Haida, supra,* the principle of the honour of the Crown grounds the Crown's duty to consult and if indicated accommodate Aboriginal peoples, even prior to proof of asserted Aboriginal rights and title. The duty of honour derives from the Crown's assertion of sovereignty in the face of prior Aboriginal occupation. It has been enshrined in s. 35(1) of the *Constitution Act, 1982,* which recognizes and affirms existing Aboriginal rights and titles. Section 35(1) has, as one of its purposes, negotiation of just settlement of Aboriginal claims. In all its dealings with Aboriginal peoples, the Crown must act honourably, in accordance with its historical and future relationship with the Aboriginal peoples in question. The Crown's honour cannot be interpreted narrowly or technically, but must be given full effect in order to promote the process of reconciliation mandated by s. 35(1).

WHEN DOES THE DUTY ARISE?

[16] The petitioner correctly argues that the duty arises when the Crown makes decisions that have a serious impact on asserted Aboriginal rights and title. The duty comes into existence when:

1. the Crown has knowledge, real or constructive of the potential existence of Aboriginal rights or titles; and

2. it contemplates conduct that might adversely affect them.

[17] The Supreme Court of Canada in ***Haida*** said:

> ¶35 But, when precisely does a duty to consult arise? The foundation of the duty in the Crown's honour and the goal of reconciliation, suggest that the duty arises when the Crown has knowledge, real or constructive, of the potential existence of the Aboriginal right or title and contemplates conduct that might adversely affect it. See *Halfway River First Nation v. British Columbia (Minister of Forests)*, [1997] 4 C.N.L.R. 45 (B.C.S.C.), at p. 71, *per* Dorgan J.

(Also see ***Taku*** at ¶25).

[18] In situations where claims have not yet been resolved, the court in ***Haida*** said:

> ¶36 This leaves the practical argument. It is said that before claims are resolved, the Crown cannot know that the rights exist, and hence can have no duty to consult or accommodate. This difficulty should not be denied or minimized. As I stated (dissenting) in *Marshall, supra,* at para. 112, one cannot "meaningfully discuss accommodation or justification of a right unless one has some idea of the core of that right and its modern scope". However, it will frequently be possible to reach an idea of the asserted rights and of their strength sufficient to trigger an obligation to consult and accommodate, short of final judicial determination or settlement. To facilitate this determination, claimants should outline their claims with clarity, focussing on the scope and nature of the Aboriginal rights they assert and on the alleged infringements. …
>
> ¶37 There is a distinction between knowledge sufficient to trigger a duty to consult and, if appropriate, accommodate, and the content or scope of the duty in a particular case. Knowledge of a credible but unproven claim suffices to trigger a duty to consult and accommodate. The content of the duty, however, varies with the circumstances, as discussed more fully below. A dubious or peripheral claim may attract a mere duty of notice, while a stronger claim may attract more stringent duties. The law is capable of differentiating between tenuous claims, claims possessing a strong *prima facie* case, and established claims. Parties can assess these matters, and if they cannot agree, tribunals and courts can assist. Difficulties associated with the absence of proof and definition of claims are addressed by assigning appropriate content to the duty, not be denying the existence of a duty.

¶ 38 I conclude that consultation and accommodation before final claims resolution, while challenging, is not impossible, and indeed is an essential corollary to the honourable process of reconciliation that s. 35 demands. It preserves the Aboriginal interest pending claims resolution and fosters a relationship between the parties that makes possible negotiations, the preferred process for achieving ultimate reconciliation: see S. Lawrence and P. Macklem, "From Consultation to Reconciliation: Aboriginal Rights and the Crown's Duty to Consult" (2000), 79 *Can. Bar Rev.* 252, at p. 262. Precisely what is required of the government may vary with the strength of the claim and the circumstances. But at a minimum, it must be consistent with the honour of the Crown.

D. *The Scope and Content of the Duty to Consult and Accommodate*

¶ 39 The content of the duty to consult and accommodate varies with the circumstances. Precisely what duties arise in different situations will be defined as the case law in this emerging area develops. In general terms, however, it may be asserted that the scope of the duty is proportionate to a preliminary assessment of the strength of the case supporting the existence of the right or title, and to the seriousness of the potentially adverse effect upon the right or title claimed.

¶ 40 In *Delgamuukw, supra*, at para. 168, the Court considered the duty to consult and accommodate in the context of established claims. Lamer C.J. wrote:

> The nature and scope of the duty of consultation will vary with the circumstances. In occasional cases, when the breach is less serious or relatively minor, it will be no more than a duty to discuss important decisions that will be taken with respect to lands held pursuant to Aboriginal title. Of course, even in these rare cases when the minimum acceptable standard is consultation, this consultation must be in good faith, and with the intention of substantially addressing the concerns of the Aboriginal peoples whose lands are at issue. In most cases, it will be significantly deeper than mere consultation. Some cases may even require the full consent of an Aboriginal nation, particularly when provinces enact hunting and fishing regulations in relation to Aboriginal lands.

¶ 41 Transposing this passage to pre-proof claims, one may venture the following. While it is not useful to classify situations into

watertight compartments, different situations requiring different responses can be identified. In all cases, the honour of the Crown requires that the Crown act with good faith to provide meaningful consultation appropriate to the circumstances. In discharging this duty, regard may be had to the procedural safeguards of natural justice mandated by administrative law.

¶ 42 At all stages, good faith on both sides is required. The common thread on the Crown's part must be "the intention of substantially addressing [Aboriginal] concerns" as they are raised (*Delgamuukw, supra*, at para. 168), through a meaningful process of consultation. Sharp dealing is not permitted. However, there is no duty to agree; rather, the commitment is to a meaningful process of consultation. As for Aboriginal claimants, they must not frustrate the Crown's reasonable good faith attempts, nor should they take unreasonable positions to thwart government from making decisions or acting in cases where, despite meaningful consultation, agreement is not reached: see *Halfway River First Nation v. British Columbia (Minister of Forests)*, [1999] 4 C.N.L.R. 1 (B.C.C.A.), at p. 44; *Heiltsuk Tribal Council v. British Columbia (Minister of Sustainable Resource Management)* (2003), 19 B.C.L.R. (4th) 107 (B.C.S.C.). Mere hard bargaining, however, will not offend an Aboriginal people's right to be consulted.

¶ 43 Against this background, I turn to the kind of duties that may arise in different situations. In this respect, the concept of a spectrum may be helpful, not to suggest watertight legal compartments but rather to indicate what the honour of the Crown may require in particular circumstances. At one end of the spectrum lie cases where the claim to title is weak, the Aboriginal right limited, or the potential for infringement minor. In such cases, the only duty on the Crown may be to give notice, disclose information, and discuss any issues raised in response to the notice. "'[C]onsultation' in its least technical definition is talking together for mutual understanding": T. Isaac and A. Knox, "The Crown's Duty to Consult Aboriginal People" (2003), 41 *Alta. L. Rev.* 49, at p. 61.

¶ 44 At the other end of the spectrum lie cases where a strong *prima facie* case for the claim is established, the right and potential infringement is of high significance to the Aboriginal peoples, and the risk of non-compensable damage is high. In such cases deep consultation, aimed at finding a satisfactory interim solution, may be required. While precise requirements will vary with the circumstances, the consultation required at this stage may entail the opportunity to make submissions for consideration, formal participation in the decision-making process, and provision of written reasons to show that

Aboriginal concerns were considered and to reveal the impact they had on the decision. This list is neither exhaustive, nor mandatory for every case. The government may wish to adopt dispute resolution procedures like mediation or administrative regimes with impartial decision-makers in complex or difficult cases.

¶ 45 Between these two extremes of the spectrum just described, will lie other situations. Every case must be approached individually. Each must also be approached flexibly, since the level of consultation required may change as the process goes on and new information comes to light. The controlling question in all situations is what is required to maintain the honour of the Crown and to effect reconciliation between the Crown and the Aboriginal peoples with respect to the interests at stake. Pending settlement, the Crown is bound by its honour to balance societal and Aboriginal interests in making decisions that may affect Aboriginal claims. The Crown may be required to make decisions in the face of disagreement as to the adequacy of its response to Aboriginal concerns. Balance and compromise will then be necessary.

¶ 46 Meaningful consultation may oblige the Crown to make changes to its proposed action based on information obtained through consultations. The New Zealand Ministry of Justice's *Guide for Consultation with Maori* (1998) provides insight:

> Consultation is not just a process of exchanging information. It also entails testing and being prepared to amend policy proposals in the light of information received, and providing feedback. Consultation therefore becomes a process which should ensure both parties are better informed ... (at s. 2.0 of Executive Summary)
> ... genuine consultation means a process that involves ...:
>
> - gathering information to test policy proposals
> - putting forward proposals that are not yet finalized
> - seeking Maori opinion on those proposals
> - informing Maori of all relevant information upon which those proposals are based
> - not promoting but listening with an open mind to what Maori have to say
> - being prepared to alter the original proposal
> - providing feedback both during the consultation process and after the decision-process. (at s. 2.2 of Deciding)

¶ 47 When the consultation process suggests amendment of Crown policy, we arrive at the stage of accommodation. Thus the effect of good faith consultation may be to reveal a duty to accommodate. Where a strong *prima facie* case exists for the claim, and the consequences of the government's proposed decision may adversely affect it in a significant way, addressing the Aboriginal concerns may require taking steps to avoid irreparable harm or to minimize the effects of infringement, pending final resolution of the underlying claim. Accommodation is achieved through consultation, as this Court recognized in *R. v. Marshall*, [1999] 3 S.C.R. 533, at para. 22: "... the process of accommodation of the treaty right may best be resolved by consultation and negotiation".

¶ 48 This process does not give Aboriginal groups a veto over what can be done with land pending final proof of the claim. The Aboriginal "consent" spoken of in *Delgamuukw* is appropriate only in cases of established rights, and then by no means in every case. Rather, what is required is a process of balancing interests, of give and take.

¶ 49 This flows from the meaning of "accommodate". The terms "accommodate" and "accommodation" have been defined as to "adapt, harmonize, reconcile" ... "an adjustment or adaptation to suit a special or different purpose ... a convenient arrangement; a settlement or compromise": *The Concise Oxford Dictionary of Current English* 9th ed. 1995) at p. 9. The accommodation that may result from pre-proof consultation is just this -- seeking compromise in an attempt to harmonize conflicting interests and move further down the path of reconciliation. A commitment to the process does not require a duty to agree. But it does require good faith efforts to understand each other's concerns and move to address them.

¶ 50 The Court's decisions confirm this vision of accommodation. The Court in *Sparrow* raised the concept of accommodation, stressing the need to balance competing societal interests with Aboriginal and treaty rights. In *R. v. Sióui*, [1990] 1 S.C.R 1025, at p. 1072, the Court stated that the Crown bears the burden of proving that its occupancy of lands "cannot be accommodated to reasonable exercise of the Hurons' rights". And *R. v. Côté*, [1996] 3 S.C.R. 139, at para. 81, the Court spoke of whether restrictions on Aboriginal rights "can be accommodated with the Crown's special fiduciary relationship with First Nations". Balance and compromise are inherent in the notion of reconciliation. Where accommodation is required in making decisions that may adversely affect as yet unproven Aboriginal rights and title claims, the Crown must balance Aboriginal concerns reasonably with the potential impact of the decision on the asserted right or title and with other societal interests.

> ¶ 51 It is open to governments to set up regulatory schemes to address the procedural requirements appropriate to different problems at different stages, thereby strengthening the reconciliation process and reducing recourse to the courts. As noted in *R. v. Adams*, [1996] 3 S.C.R. 101, at para. 54, the government "may not simply adopt an unstructured discretionary administrative regime which risks infringing Aboriginal rights in a substantial number of applications in the absence of some explicit guidance". It should be observed that, since October 2002, British Columbia has had a Provincial Policy for Consultation with First Nations to direct the terms of provincial ministries' and agencies' operational guidelines. Such a policy, while falling short of a regulatory scheme, may guard against unstructured discretion and provide a guide for decision makers.

[19] The court in ***Haida*** then went on to consider the nature of the review of the government's conduct where it is challenged. In particular, the court said the following:

> ¶ 60 Where the government's conduct is challenged on the basis of allegations that it failed to discharge its duty to consult and accommodate pending claims resolution, the matter may go to the courts for review. To date, the Province has established no process for this purpose. The question of what standard of review the court should apply in judging the adequacy of the government's efforts cannot be answered in the absence of such a process. General principles of administrative law, however, suggest the following.
>
> ¶ 61 On questions of law, a decision-maker must generally be correct: for example, *Paul v. British Columbia (Forest Appeals Commission)*, [2003] 2 S.C.R. 585, 2003 SCC 55. On questions of fact or mixed fact and law, on the other hand, a reviewing body may owe a degree of deference to the decision-maker. The existence or extent of the duty to consult or accommodate is a legal question in the sense that it defines a legal duty. However, it is typically premised on an assessment of the facts. It follows that a degree of deference to the findings of fact of the initial adjudicator may be appropriate. The need for deference and its degree will depend on the nature of the question the tribunal was addressing and the extent to which the facts were within the expertise of the tribunal: *Law Society of New Brunswick v. Ryan,* [2003] 1 S.C.R. 247, 2003 SCC 20; *Paul, supra*. Absent error on legal issues, the tribunal may be in a better position to evaluate the

> issue than the reviewing court, and some degree of deference may be required. In such a case, the standard of review is likely to be reasonableness. To the extent that the issue is one of pure law, and can be isolated from the issues of fact, the standard is correctness. However, where the two are inextricably entwined, the standard will likely be reasonableness: *Canada (Director of Investigation and Research) v. Southam Inc.*, [1997] 1 S.C.R. 748.
>
> ¶ 62 The process itself would likely fall to be examined on a standard of reasonableness. Perfect satisfaction is not required; the question is whether the regulatory scheme or government action "viewed as a whole, accommodates the collective Aboriginal right in question": *Gladstone, supra*, at para. 170. What is required is not perfection, but reasonableness. As stated in *Nikal, supra*, at para. 110, "in ... information and consultation the concept of reasonableness must come into play. ... So long as every reasonable effort is made to inform and to consult, such efforts would suffice ... ". The government is required to make reasonable efforts to inform and consult. This suffices to discharge the duty.
>
> ¶ 63 Should the government misconceive the seriousness of the claim or impact of the infringement, this question of law would likely be judged by correctness. Where the government is correct on these matters and acts on the appropriate standard, the decision will be set aside only if the government's process is unreasonable. The focus, as discussed above, is not on the outcome, but on the process of consultation and accommodation.
>
> H. *Application to the Facts*
>
> (1) *Existence of the Duty*

[20] The process of consultation and accommodation places obligations on both sides of the discussion. The parties are not obliged to reach an agreement, but they are obliged to make reasonable efforts in the process of consultation, and to keep an open mind. Failure to reach an agreement does not mean that consultation and reasonable accommodation has not occurred. Accommodation involves a balancing of competing societal interests with Aboriginal and treaty rights. The Supreme Court

of Canada has made it clear that balance and compromise are inherent in the notion of reconciliation as discussed in ***Haida***.

[21] I find that there is a duty on the Crown to consult in the circumstances of this case. The Crown has actual knowledge of the claims by the Homalco to Aboriginal title and rights in the area of the Bute Inlet. The basis of that knowledge includes the following:

1. The submissions of Homalco's statement of intent filed with the British Columbia Treaty Commission;

2. Information regarding Homalco's traditional and present day use of the Homalco territory transmitted directly to British Columbia and Canada by Homalco elders and other representatives in the course of the treaty process and regional planning process.

3. Information regarding Homalco's traditional and present day use of the Homalco Territory contained in the Homalco Traditional Use Study and in the March 2003 Marine Resources Study prepared by Dorothy Kennedy and Randy Bouchard and transmitted to British Columbia during the course of treaty negotiations.

4. Published information regarding Homalco traditional use and occupation of the Homalco Territory available on reasonable enquiry and Sliammon people, Sliammon lands, 1999.

5. The Homalco had made earlier submissions to MAFF regarding licensing applications with respect to the Marine Harvest fish farm.

[22] The fish farm in question is close to the Church House reserve. The Church House reserve is not presently occupied by the Homalco but it is an area which they have rights to and where they may attend.

[23] The Homalco have claimed the rights to harvest wild salmon stocks, clam beds, rock fish and other stocks and they are concerned about the management protection and enhancement of these resources within their claimed territory.

[24] The Crown is aware that the Homalco claim Aboriginal rights with regard to the wild Pacific salmon stocks that spawn in rivers and creeks flowing into Bute Inlet. The Homalco argue that these wild stocks can pass by the fish farm and be affected by it. The Homalco also argue that their rights to harvest shell fish and clams at sites in the vicinity of the fish farm can be impacted. They argue that these rights are an integral part of their Aboriginal culture for their sustenance needs, social needs and trade.

[25] There may be claims by other bands that overlap a portion of the territory claimed by the Homalco (the Sliammon and the Klahoose), however, I am satisfied that:

1. There is a reasonable probability that the Homalco will be able to establish Aboriginal title to at least some parts of the Homalco Territory including portions of Bute Inlet in the vicinity of Church House.

The Homalco certainly have rights to the use and occupation of the reserve lands;

2. There is a substantial probability that the Homalco will be able to establish Aboriginal rights to harvest wild Pacific salmon and other marine resources of the Homalco territory.

EXTENT OF THE SCOPE AND CONTENT OF THE OBLIGATION TO CONSULT AND ACCOMMODATE IN THIS CASE

[26] The parties disagree as to the scope and content of the obligation to consult and whether there has been reasonable accommodation.

[27] The Homalco argue that they have presented a strong *prima facie* case with regard to their claims to title and rights. The Homalco also argue that the evidence they have presented and the evidence which was submitted to the Ministry demonstrates the seriousness of their concerns and the serious potential risks to their Aboriginal rights to continue to harvest marine resources.

[28] The Ministry, supported by Marine Harvest, argue that in this case the scope and content of the consultation is at the low end of the scale. They say that the obligation to consult relates only to the amendment to the license to substitute Atlantic salmon for Chinook salmon. They argue that any issues regarding the existence or location of the fish farm have been resolved or dealt with when the license was initially granted. They argue that the evidence submitted by the Homalco with regard to the potential harm against wild salmon stocks or marine life

has already been considered when the Province conducted an extensive review of salmon aquaculture in the past. They argue that any new evidence submitted by the Homalco has been considered by the Ministry and is inconsistent with other expert opinions known to the Ministry. They argue that any risk to wild salmon or marine life from the introduction of Atlantic salmon to the Church House fish farm is low or non-existent.

[29] The parties have submitted voluminous affidavits including opinions of various scientists to support their positions. The parties have all agreed that it is not the function of the Court to decide which of these conflicting opinions is correct. Marine Harvest refers to the decision ***Vancouver Island Peace Society v. Canada***, [1992] 3 F.C. 42 at 51 (T.D.). This was a case dealing with a federal decision to allow nuclear powered ships into Canadian ports. Voluminous affidavit material was provided which offered opinions on environmental risks. The Honourable Mr. Justice Strayer said:

> It is not the role of the Court in these proceedings to become an academy of science to arbitrate conflicting scientific predictions, or to act as a kind of legislative upper chamber to weigh expressions of public concern and determine which ones should be respected. Whether society would be well served by the Court performing either of these roles, which I gravely doubt, they are not the roles conferred upon it in the exercise of judicial review under section 18 of the Federal Court Act [R.S.C., 1985, c. F-7]

They refer to this material, however, to support their arguments about the risks of potential harm or infringement of the rights claimed by the Homalco.

[30] In their supplemental argument, the Homalco identify what they say are the potential adverse impacts on wild salmon arising from the introduction of Atlantic salmon to include the following:

> (a) The potential of farmed Atlantic salmon from their net cages through accident, negligence or force of nature;
>
> (b) The certainty of 'leakage' of Atlantic salmon from the aquaculture facility;
>
> (c) The potential colonization of the spawning habitat of wild Pacific salmon stocks by escaped Atlantic salmon and their offspring;
>
> (d) The potential displacement of wild stocks through competition from escaped Atlantic salmon for competition for food and other resources;
>
> (e) The potential spread of diseases such as ISA, IHN and Kudoa from farmed Atlantic salmon to wild Pacific salmon stocks;
>
> (f) The potential spread of sea lice from farmed Atlantic salmon to migrating wild Pacific salmon smolts causing significant declines in those stocks;
>
> (g) The potential adverse impact on wild Pacific salmon stocks arising from the cumulative effect of any of these adverse impacts in the impact such as habitat loss, overfishing and climate change which are already causing a significant decline in wild stocks;
>
> (h) The potential scale effects of the introduction of Atlantic salmon to the facility at issue when taken together with the adverse impacts arising from other salmon farms which may have an impact on the relevant stocks.

[31] Regarding shell fish and other marine life the Homalco argue that the impact is effluent from the farm containing feces, food waste, and chemotheropeutants on nearby clam beds and other aquatic life forms may detrimentally affect their interests.

[32] They also raise the issue of the potential impact on marine mammals which may attempt to feed on the Atlantic salmon at the fish farm and be destroyed in order to prevent that.

[33] The Homalco argue that the Ministry has failed to properly consider the significant evidence of potential adverse impacts on their Aboriginal rights and failed to apply proper principles of risk assessment. They also argue that the Ministry, in making its decision, has failed to properly apply the "precautionary principle".

[34] I have been referred to large volumes of scientific information in the affidavits. However, as I said earlier, all of the parties agreed that the court should not become the arbitrator of scientific theories. I agree. However, what is clear from the material is that there are differences in scientific opinion about the effects and risks involved with salmon aquaculture, and particularly the farming of Atlantic salmon and its affect, or potential affect on wild salmon stocks. All of the scientists and panels involved in studying the issues confirm that there are serious gaps in knowledge and that research is needed to fill those gaps.

[35] The Ministry referred to the Salmon Aquaculture Review. The review commenced in 1995 and the report was released August 1997. The study was conducted through the Environmental Assessment Office. Input was received from various groups including scientists and technical experts. The presenters included government agencies, local governments, Aboriginal people, industry, support services to the industry, environmental organizations, wild salmon commercial fishing organizations, recreational and tourism organizations and labour.

[36] The review was to assess environmental, economic, social, cultural, heritage and health impacts related to issues of (1) escaped farm fish, (2) fish health, (3) waste discharges, (4) interactions between salmon farms and coastal mammals and other species, and (5) fish farm siting. The review did not deal with the issue of sea lice but that issue does not appear to have been identified at the time.

[37] The Salmon Aquaculture Review in its summary, Volume 1, p. 4 stated the following:

> The technical advisory team concluded that salmon farming in B.C. as presently practised and at current production levels, presents a low overall risk to the environment. However, this general finding is tempered by certain reservations. First, continuing concern about localized impacts on benthic (sea bed) organisms, shell fish populations and marine mammals suggests the need for additional measures to protect them. Second, significant gaps in the scientific knowledge on which the technical advisory teams' conclusions are based point to the need for monitoring and research in areas such as the potential impacts of interactions of escaped farm salmon with wild populations, identification and control of disease and disease pathogens, potential for disease transfer and impacts from antibiotic residues, and affects of waste discharges on water quality and sea bed life.
>
> Science rarely has the ability to reach definitive conclusions on the risk or potential severity of the consequences of human interactions with complex ecosystems. In the face of this uncertainty, governments still need to make land and resource management decisions. Direction is provided by the precautionary principle which advocates the consideration and anticipation of the potential negative impacts of any activity before it is approved. Similarly, the concept of preventative management allows government to manage, to prevent certain specific events even though not all potential outcomes can be predicted. Where the risk of environmental impacts from an economically important activity is low but the consequences of damages may be significant, the public interest may best be served by dealing with risk, by being precautionary and invoking a series of measures, including: preventative management, adaptive management, and performance-based standards. In the case of salmon farming, this means reducing

> risk by setting high standards for farm operations based on the best available knowledge, and rigorously enforcing the implementation of those standards. And it means being prepared to alter management practices over time to take account of increased understanding of risk and different means of reducing it. This means that industry will be required to adapt to evolving management schemes.

[38] The Ministry argues the response to this report included the development of extensive obligatory requirements dealing with the issues identified by the Salmon Aquaculture Review. The Ministry argues that as a result of this, the practices in salmon aquaculture have greatly improved and, therefore, argue the risks or any potential risks are reduced. It should be noted that since the review and the new regulations, the number of salmon aquaculture sites has also increased.

[39] The thrust of the Salmon Aquaculture Review is not that its recommendations will address all of the concerns. The thrust of the review is that its recommendations are important in reducing potential risks, but that further research and ongoing preventative management and review are required.

[40] The Homalco argue that the application of the precautionary principle or approach requires the Ministry to take steps to avoid the identified risks until further research allows the uncertainty with respect to the extent of those risks to be reduced or eliminated.

[41] The respondent's arguments are essentially that the precautionary principle does not require government action, but simply says that lack of scientific knowledge is not an excuse to fail to take action. The respondents argue that the adaptive

management approach that the government has taken is in line with precautionary principles and appropriate in this case.

[42] In correspondence and in argument, the Homalco referred to the precautionary principle as defined in the **Bergen Ministerial Declaration on Sustainable Development (1990)** as follows:

> In order to achieve sustainable development, policies must based on the precautionary principle. Environmental measures must anticipate, prevent and attack the cause of environmental degradation. Where there are threats of serious or irreversible damage, lack of full scientific certainty should not be used as a reason for postponing measures to prevent environmental degradation.

[43] The Homalco take the position that there should be no amendment to allow the aquaculture of Atlantic salmon until the Ministry and Marine Harvest can prove that there is no risk to wild salmon stock. They argue, that the gaps in scientific knowledge and research make it impossible to prove that there is no risk to wild salmon stock. Therefore, they argue that no amendment should be allowed.

[44] The respondents argue that the Homalco have misunderstood the precautionary principle. They argue that the principle really means that lack of scientific knowledge is not a basis for failing to pass regulations or controls to avoid potential serious or irreversible damage to the environment. They argue that it does not mean, nor are governments bound, to prevent all activities which might cause such harm however low the risk might be, or however speculative the risk might be, until it is proven as a certainty that there is no risk.

[45] I agree with the respondents that the precautionary principle does not require governments to halt all activity which may pose some risk to the environment until that can be proven otherwise. The decisions on what activity to allow and how to control it often require a balancing of interests and concerns and a weighing of risks. This is exactly the kind of situation which requires consultation, discussion, exchange of information, and perhaps accommodation.

[46] In some portions of the submissions, it appears the parties are confusing the issues of the obligation to consult and the appropriate accommodation after that consultation. However, I do not think I could say the adaptive management approach is not a proper means of accommodation, although there may be some other things that should be considered. Some of these may be the levels of enforcement of the regulations and monitoring those regulations, et cetera. These matters are certainly the proper subject of consultation and discussions about accommodation, and do not appear to have been considered here. I am sure there are many other matters as well that the parties can discuss, and that may amount to reasonable accommodation.

THE REQUIRED SCOPE AND CONTENT OF CONSULTATION

[47] The respondents argue that the only matters or issues that require consultation were those that involve the change in risks between the introduction of Atlantic as opposed to Chinook salmon at this fish farm. They argue the existence of the fish farm and any potential harm caused by fish farming in general has already been dealt with when the original license was granted. The respondents point to the

fact that the prior Chief and council supported the establishment of this fish farm at this particular location. Marine Harvest had originally considered a different location, but with the encouragement of the Chief agreed to establish the fish farm at the present Church House location. The Chief at that time wrote a letter of support for the granting of a license for a fish farm for Chinook salmon. The original application had been for Chinook and Atlantic salmon but Marine Harvest withdrew its request with regard to Atlantic salmon. Shortly after the licences were granted there were new elections within the band and the Chief and council were replaced. The new Chief and council appeared to oppose fish farming in general and the fish farm at Church House in particular.

[48] The Ministry has taken the position that it is only concerned with regard to the change of species which is the subject matter of consultation. Their position is that unless some new evidence was submitted to them to demonstrate some significant risk over and above that of salmon farming in general, to the Homalco's Aboriginal rights or title, there was no need for anything more than the lowest level of consultation. They argue that any consultation necessary did occur by an exchange of correspondence and the accommodations that were necessary have occurred as a result of the implementation of the detailed Aquaculture Regulations, following the Salmon Aquaculture Review.

[49] I agree that matters which have been extensively consulted on in the past do not require a full repetition of that consultation. However, that does not mean that these matters do not continue to be the subject of review and further consultation in

light of additional knowledge or information. The fact that there may be some controversy about the new evidence or information provided does not mean that it is not a proper matter of consultation. The underlying message in the Salmon Aquaculture Review is that the present state of knowledge is incomplete, further research is required, and that the approaches to management of salmon aquaculture need to be reviewed and altered as the circumstances dictate.

[50] The issue of siting of a particular aquaculture fish farm is not something that is concluded once and for all. Additional information may require a review of the siting and further consultation with the Homalco.

[51] The fact that the Salmon Aquaculture Review occurred and that some Aboriginal people may have been involved in that study does not eliminate or reduce the need for consultation on a site by site basis. Different Aboriginal groups may take different positions on aquaculture. The Homalco are a group of people whose claims to Aboriginal title and Aboriginal rights may well be affected by the actions of the government. It is the obligation of the Crown to consult with them and it is their entitlement to be consulted. In this case, the obligation to consult, and if appropriate, accommodate, is not at the lowest end of the spectrum as argued by the respondents. Nor is it the deep level of consultation that the petitioners argue.

WHAT HAS OCCURRED IN THIS CASE?

[52] The Homalco take the position that the Ministry has failed to fulfill the obligation to consult and accommodate. They argue that the Ministry has failed to

act in good faith through a meaningful process with the intention of substantially addressing the Homalco's concerns.

[53] The Homalco and the Ministry both appear to lack any faith in the good will of the other. The Homalco argue that the Ministry has acted in bad faith. The Homalco argue that the Ministry approved the application by Marine Harvest on July 28, only eight days after sending notice of the application to Homalco and before Homalco could respond. The Homalco argue that there was no genuine consultation after that.

[54] The Ministry argue and believe that the Homalco were not interested in consultation, but had simply decided that they no longer supported aquaculture of any kind. The Ministry believed that the Homalco were not really prepared to engage in meaningful consultation. The Ministry argues in any event that they did consult and have accommodated or addressed the concerns raised by the Homalco. The Ministry argues that the Homalco have not demonstrated any real risk or infringement on any of their claimed rights or title. The Ministry, therefore, argues that any obligation to consult is at the lower end of the scale in any event.

[55] The Ministry received the application to amend the license in April 2004. However, it was not until July 20, 2004, that they wrote to the Homalco advising them of this application, enquiring as to how it may affect the Homalco. The delay is explained by the workload the Ministry experienced at the time. The letter does indicate that the Ministry would be available to discuss any issues with regard to the amended application. The same correspondence was sent to the Klahoose First

Nation and the Sliammon First Nation. The Ministry believes they have overlapping claims to this area. The Klahoose and Sliammon First Nations did not respond to these letters.

[56] The Homalco responded with a letter from their counsel on August 9, 2004. The letter requests a copy of the amended management plan and any studies or documentation furnished by Marine Harvest regarding any applications whether new or for amendments. The Homalco say they require this information in order to properly consult.

[57] Prior to receiving that information, however, the initial response of the Chief and council was that they did not support the amendment application because of too many outstanding risks to the marine environment related to open netcage finfish aquaculture as it presently practiced at the site. They stated the introduction of the Atlantic salmon would only exacerbate those conditions.

[58] The letter included a July 16, 2003 correspondence and a report by Dorothy Kennedy dealing with the traditional use of that area. The July 2003 letter sent was a letter sent by the Homalco's lawyers. It is just over eighteen pages long and deals with an earlier application by Marine Harvest to expand the aquaculture operation by adding two additional pens. The application appears to be made in order to provide additional space for the same number of fish. The material in support of that application and the Ministry's response indicates that it was believed by having additional area there would be better disbursement of waste. It appears that the

application was not to add additional fish but merely to make more room for the fish that were there.

[59] The letter of July 2003 refers to the Homalco's claim and the obligation to consult. The letter refers to the traditional and current uses of the Church House area by the Homalco including the harvesting of clams, oysters, mussels, sea urchins, prawns, herring, red snapper, rock fish and various kinds of wild salmon. The letter makes clear the importance of the wild salmon and other marine resources to the Homalco. The letter then identifies what the Homalco believe to be extremely serious risks to the wild salmon and environment as a result of aquaculture. The risks identified include:

1. Spread of disease;
2. Spread of parasites such as sea lice;
3. Introduction of non-native species, being Atlantic salmon and potential escapements and competition with wild salmon;
4. Destruction of mammals attempting to feed or to feed at the net pens;
5. Pollution from waste feed, excrement, pesticides, antibiotics.

[60] The letter refers to the concerns about sea lice infestation in the Broughton Archipelago in June 2001, and the need to invoke the precautionary principle as a result of these concerns. The letter points out that the Church House site is on a wild salmon migration route and that the wild salmon species are already depressed making them more vulnerable.

[61] The letter makes it clear that the Salmon Aquaculture Review cannot be relied upon because it was based on the then levels of production and as it

identified, there was severe gaps in knowledge or research. The letter takes a position that most of the recommendations by the Salmon Aquaculture Review have not been meaningfully implemented. The letter takes a position that the precautionary principle must be applied "…where any risk of severe, irreversible impacts exist, that risk must be eliminated before those impacts have already occurred and it may then be too late to preserve the wild salmon stocks. It is even more important to apply the precautionary principle where what is at stake are the resources on which the exercise of the most fundamental rights of an Aboriginal people depend." The letter refers to the Supreme Court of Canada decision 114957, ***Canada Ltée (Spraytech, Sociéty and Sociétéd'arrosage the Hudson Town)*** [2001] S.C.J. 42, ¶31, where the precautionary principle is referred to as defined at ¶7 of The Burgen Ministerial Declaration on Sustainable Development (1990) as follows:

> In order to achieve sustainable development, policies must be based on the precautionary principle. Environmental measures must anticipate, prevent and attack the cause of environmental degradation. Where there are threats of serious or irreversible damage, lack of full scientific certainty should not be used as a reason for postponing measures to prevent environmental degradation.

[62] The letter does recognize that there is little or no evidence of these risks but says the reason is because of the lack of research by the provincial or federal government.

[63] The letter also refers to cumulative impacts they say could arise because of the location and a number of other fish farms in the vicinity.

[64] The letter does refer to the fact that the Homalco had approved Marine Harvest's original application including the one at Church House. The letter makes the point that those approvals were given before more current information was available particularly with regard to the potential impact of sea lice. The letter alleges a lack of full disclosure by the provincial government and Marine Harvest and says that vitiates any approval given.

[65] It is not clear to me what the claims of failure to disclose are based on. The letter concludes stating that meaningful consultation and accommodation is required with regard to the application to add additional netcages that was made in 2003.

[66] The August 9, 2004, letter also refers to a Johnstone Bute Coastal Plan and the submissions of the Homalco with regard to the area that includes the Church House site.

[67] The letter points out that the Homalco have declared this area as a Xwèmalhkwu salmon enhancement and protected area, as a Xwèmalhkwu Xwèmalhkwu rock fish conservation area, and as a Xwèmalhkwu krill conservation area, and a Xwèmalhkwu heritage and protected zone. The letter takes the position that the amendment by adding Atlantic salmon and even the fish farm aquaculture as it is presently practiced is in conflict with those designations.

[68] The letter included a report from a fisheries biologist that indicated the addition of Atlantic salmon would create new risks because of the possibility of

escaped Atlantic salmon competing with native species. The report also indicates that the existing wild salmon stocks are already under pressure or decline.

[69] The Homalco's lawyer sent a second letter dated August 9, 2004, which is a one page letter which encloses the Band Council's Resolution regarding the application and the submission of the Homalco to the Johnstone Bute Coastal Plan.

[70] The letter again asks for the amended management plan and any studies or documentation furnished by Marine Harvest to support the application. The final paragraph of the letter indicates the Homalco would be pleased to meet in person and provide information on their concerns and Aboriginal perspectives and traditional, ecological knowledge, and the potential infringements on their rights and titles.

[71] The August 8, 2004 Band Council Resolution that was attached resolves that the Band and council do not approve of open netcage fin fish aquaculture as presently practiced in British Columbia and in their traditional territory. The letter does not approve the facility at Church House or the amendment to add Atlantic salmon or any species to the operation.

[72] The Church House management plan was provided to Homalco's counsel by email October 4, 2004. The Homalco counsel responded by email on the same date and itemized the information that they required, including the Management Plan; any amended management plans, any studies or reports subsequent to the first management plan for the site, any environmental monitoring results with respect to

the site; any new policy or approach by the proponent to deal with potential escapees; any studies or updated studies by the proponent with respect to historical or current escapement data or monitoring of streams in the environs which they may have used in bringing forward this amendment or any previous amendment or the initial application; any specific consultation the proponent has carried out with my client with respect to learning of any Aboriginal interests in the site area and the surrounding Bute Inlet area, including any important fish streams or marine resources harvested close to or potentially affected by the introduction of yet another species to the site; any updated provincial policies on aquaculture, including specifically the introduction of Atlantic salmon and its potential harm to wild salmon stocks, clam beds, rock fish habitat, et cetera; any previous amendment applications or approvals, including rational for such approval and reconciliation with the potential harm to my client's interest.

[73] A letter dated October 7, 2004, from Homalco's counsel to the Ministry confirms a telephone conversation between counsel and Ministry representatives on September 28, 2004. Their letter repeats the submissions opposing the application and lists them. They ask for information about how Marine Harvest will monitor and respond to potential Atlantic salmon escapes. The letter again speaks of information necessary for consultation and asks if the Minister has taken into account the Johnstone Bute Coastal Plan including the Homalco submission and the conservation declarations made by the Homalco. The letter refers to the Johnstone Bute Coastal Plan with regard to Unit 15 where Church House is located and that

plan provides only tenure modifications relating to anchoring or waste management should be considered.

[74] The letter expresses concern that the Ministry refers to Marine Harvest by the term “client”. The letter confirms that the Ministry representative, Mr. Westlake, will review all of the materials submitted and provide a written response. The letter confirms that Mr. Westlake is prepared to meet with the Homalco and their counsel to review the process by which applications are organized and co-ordinate the status of outstanding applications. It also confirms that communications with regard to the application should be made through counsel and not directly to the Homalco. The letter states at p. 4:

> However, I have now advised our client that you confirm that no aquaculture application would be decided until meaningful consultation had occurred with Homalco. By this I understand that you agree that no decision will be made until any and all follow-up questions and information requests for original or amended management plans, studies or research information provided by the various proponents to your Ministry regarding each and every application has been provided to my client by your Ministry.

[75] A similar letter was sent on October 28, 2004, including further requests for specific information including the following:

> …any studies completed by the proponent since the original management plan for the site, including results of environmental monitoring, letters to the proponent approving any previous amendments, new technical information or reports to the ministry has been provided,and will use in relation to making such a decision.

[76] The Ministry responded to this by an email dated October 29, 2004 indicating they were working on a substantive response to the October 7 letter. The email also discusses the request for clarification about potential earlier escapes.

[77] The Homalco counsel responded by email November 2, 2004, referring to the earlier escape of Chinook salmon that they say occurred, and asking what remediation was proposed.

[78] The Homalco counsel sent an email to the Ministry on November 3, 2004 requesting a copy of Marine Harvest's fish health management plan for the Church House site. This is a document that was submitted by Marine Harvest to the Ministry as a condition of its licence. It again confirms that the Chief and council are prepared to meet with the Ministry to discuss their concerns.

[79] Mr. Westlake did provide a letter dated November 22, 2004 responding to the concerns raised by the Homalco. The letter does point out that the fish health management plan is proprietary, that is, the property of Marine Harvest, and cannot be released by the Ministry. The template for a fish health management plan is referred to. Mr. Westlake indicates that he believes that this information and that available on the electronic website should be sufficient for a response. The letter refers Chief Blaney to the Ministry of Water, Land and Air Protections, FinFish Agriculture Waste Control Regulations and a contact person where Chief Blaney can obtain information that has been gathered by the licence holder in fulfillment of those regulations.

[80] The letter makes it clear that the position of the Ministry is that the Homalco have already approved the initial site, and that the Ministry is seeking information in support of specific concerns relating to the addition of Atlantic salmon. The letter also makes it clear that the Ministry will consider information relating to potential infringements that may have arisen through the operation of the facility since the initial decision to grant the licence.

[81] The letter deals with the report of the biologist indicating that it had been reviewed by the Ministry's biologist and states:

> In their view, the concerns raised in the report are not sufficient to result in a rejection of the species amendment application.

[82] There is no further discussion about why that conclusion has been reached.

[83] The letter states that the anthropological information referred to in the July 2003 letter was relevant to the original licensing, and confirms that the ***Heritage Conservation Act,*** [RSBC 1996] c. 187 protects archaeological resources from disturbance or damage. The letter asks for any specific aspects of the anthropological information contained in the Kennedy report of July 31, 2003 that relates to potential infringement as a result of the amendment application.

[84] The letter states the Johnstone-Bute Coastal Plan is not in effect, but that the Ministry will refer to it for general guidance.

[85] The letter confirms that Atlantic salmon are an approved species for FinFish Aquaculture.

[86] The letter states that the Ministry has received no reports of escapes from the Church House facility, and that the regulations require reporting of any escapes. The letter confirms that Marine Harvest's plan to deal with escapes is contained in the management plan which was forwarded to the Homalco or their counsel. The letter refers to the regulatory framework that deals with escapes and its requirements that each aquaculture facility implemented Best Management Practices document describing how they will meet the regulations.

[87] The letter confirmed that the Department of Fisheries and Oceans ("DFO") did not object to the application pending negotiation of an authorization to "Harmfully Alter, Disrupt and Destroy" habitat under the federal ***Fisheries Act***.

[88] The letter confirms that it is aware of the Homalco's opposition to the application, and will ensure that the Ministry's statutory decision maker is aware of their position.

[89] The letter confirms the Ministry's interest in further discussions with Homalco, and suggests that a meeting could be arranged to discuss those concerns, particularly the monitoring of potential escapes and regarding the proximity of the fish farm to shellfish resources. The letter confirms that Marine Harvest has expressed a willingness to participate in those discussions. The letter also refers to the fact that Marine Harvest is participating in the development of a multi-stakeholder area management process for finfish aquaculture that includes areas within the Homalco's asserted traditional territory.

[90] The letter concludes:

> Unless there are specific infringement concerns, MAFF will be making a decision on this application on December 9, 2004. If there are specific infringement concerns related to this amendment application, we ask that you provide them to us by the end of November.

[91] The Homalco's counsel responded by letter dated November 29, 2004 indicating that they have significant substantive concerns and will be providing a substantive response in reply. The letter confirmed that Homalco had an interest in meeting with Mr. Westlake to attempt to address those concerns. The letter confirms that counsel had been asked by their clients to coordinate that meeting time.

[92] The Ministry replied by letter November 30, 2004 confirming that the Ministry would be happy to meet with Homalco and their counsel, but that they required a written copy of the substantive concerns so that they could be reviewed ahead of time and an agenda be formulated. The letter confirms that a decision will be made on the application on December 9, 2004. The letter asks for the substantive response no later than December 2.

[93] The letter confirms that if a meeting is not possible, the concerns of the Homalco will be taken into consideration.

[94] Chief Blaney responded to that letter by his of December 2, 2004, expressing his disappointment in the response from the Ministry, and seeking meaningful consultation by way of a meeting between the Ministry and the Chief and council.

He confirms that, in his opinion, meaningful consultation should include meeting with them and addressing their concerns prior to making a decision. He confirms that further submissions will be delivered. He states that the short timeline given by the Ministry is not reasonable, especially given that it took approximately a month for the Ministry to respond to counsel's letter at the end of October 2004. The letter asks that a decision not be made prior to the Ministry knowing the Homalco's concerns and meeting with them.

[95] The Ministry responded by letter dated December 3, 2004 confirming a willingness to meet with the Homalco, and confirming the need to develop an agenda before any meeting. The letter does state, however, that they are prepared to meet with the band and counsel, either on December 6 or December 8.

[96] Chief Blaney responded by letter dated December 3, 2004, and stated that a number of requests for information remained outstanding. He asked that at any meeting Ministry staff be prepared to substantially and meaningfully respond to numerous concerns and impacts on the Homalco rights that have already been raised. He expresses concern that substantial and meaningful consultations cannot occur if the meeting does not occur until December 8, when the decision is to be made December 9, 2004. He formally requests an extension of the deadline for making a decision on the application. He confirms that he will be unavailable on December 6 or 8, because he is required to be in Ottawa and asks for an extension of the deadline so that a proper meeting can occur. He confirms that Homalco's further submissions would be sent within a week.

[97] The actual approval by the Ministry was granted on December 8, 2004, and the Homalco were notified of this on December 10, 2004. They were told a decision had made, but not the nature of the decision. When learning of the decision, Homalco's counsel immediately forwarded their further submissions to the Ministry on December 10, 2004.

[98] The Ministry advised Chief Blaney, by letter dated December 17, 2004, that the decision was made before receiving the December 10 submission, but offers to continue discussions. The letter confirms that the Ministry will review the materials received on December 10 and 13, provide a response. The letter also confirms that the Ministry is prepared to meet and discuss the response with the Homalco, and consider any new information when renewals of the licence occur. The letter confirms that the application to amend the licence was approved.

[99] The Homalco's counsel then sent a letter December 20, 2004, seeking the name of the statutory decision maker and a copy of the decision as soon as possible.

[100] The Ministry provided a response to the December 10 submissions by letter dated January 18, 2005, after these proceedings were commenced. The covering letter pointed out that many of the concerns appeared to relate to the site and the original licence rather than the amendment to allow Atlantic salmon, as opposed to Chinook salmon. The letter confirms that the response deals with those issues, with the concerns about the site as well as the amendment. The letter also states that

the Ministry is committed to meaningful consultation, including meetings with the Homalco, if requested.

[101] The response consists of a twenty-seven page document that deals with the concerns raised in the material of the Homalco's on an item by item basis. Attached to the report were thirteen appendices referred to in the response. The response is extensive, and I accept that it is an honest attempt by Mr. Westlake to address the concerns raised. Basically, the position is that the government does apply the precautionary principle in dealing with aquaculture by way of an adapted management strategy and by implementation of detailed regulations controlling aquaculture. The Ministry states that the application of the precautionary approach includes an assessment of the proposed risks, incorporates mitigation and management strategies and adjustments based on experience. The response confirms that aquaculture has to develop in consideration of its possible effects on other marine resources and in a precautionary manner.

[102] The response also takes the position that the amendment to allow Atlantic salmon in the Church House facility will not produce any infringement of asserted Aboriginal rights, and then addresses the assertions made by the Homalco on an item by item basis.

[103] The response at page 9 indicates that the Ministry's position is that the initial approval by the Homalco of the Church House site is binding on the Homalco. The response states that the Ministry will continue to respond to new scientific information where appropriate, but that new information does not invalidate the

processes or approvals that predate that information. The response is that this information will be considered in future management strategies if appropriate. The response reviews the submissions made by the Homalco and the evidence in support of those submissions, and comments on it.

[104] Page 20 of the report deals with the requirement by DFO for an authorization to Harmfully Alter, Disrupt and Destroy habitat ("HADD"). The response essentially is that that is a matter between DFO and Marine Harvest, and it was not a condition of the amendment. The Homalco are simply referred to the DFO. The response is not particularly helpful to the Homalco. I would have expected that the Ministry would be concerned about whether Marine Harvest was compliant with all of the federal regulations as well as the provincial regulations.

[105] The response concludes this is an initial response provided for Homalco's consideration and future discussion. The response also states that the Ministry is committed to meaningful consultation, including meetings as are required to fully understand the Homalco's position and accommodate any unidentified infringements on rights or title.

HAS SUFFICIENT OR APPROPRIATE CONSULTATION OCCURRED?

[106] I agree with the Ministry that all of their responses are relevant. They form an excellent basis for continuing discussion. However, the responses by themselves do not amount to the level of consultation that I find was necessary in this case. I understand why the Ministry might conclude that the Homalco's statement of

concerns were really a statement of position, on which they had little interest in moving. Despite the strong position that the Homalco appeared to take, however, the communications from them made it clear that they wished to discuss their position with the Ministry. They did not assert, at any time, that they were not prepared to change their position as a result of further consultation.

[107] I do not agree with the Homalco's assertion that the Ministry was not prepared to engage in meaningful consultation because it had already made up its mind with regard to this application. The Homalco argue that the Ministry has been guilty of bad faith, or sharp dealing, because the licence has the word "Approved" dated July 28, 2004. I understand why this would initially give them some concern, but the explanation given by the Ministry is reasonable. The "Approved" simply indicates when the Ministry's biologist had reviewed the application to make an initial determination as to whether it meets their requirements. It is clear throughout the correspondence that the Ministry understood that consultation with the Homalco was necessary before a final determination was made as to whether the "Approval" would be made effective. The effective date of the approval was December 8, 2004. I am not convinced that the Ministry has been guilty of bad faith or sharp dealing as alleged by the Homalco.

[108] I find that the Ministry has erred in failing to consult to the extent necessary in these particular circumstances. The Ministry believed that the change of species from Chinook to Atlantic salmon was not a significant amendment, and did not have any different impact on the claims or rights of the Homalco than the original licence.

Based on that starting point, they believed that the level of consultation required was not great. Their approach also was that it was only with regard to the effect of the amendment itself that they were required to consult. They believed that the matter would proceed fairly quickly, and when correspondence continued until late 2004, found themselves in a situation where Marine Harvest was making inquiries as to when the amendment might be granted, because they had been raising smolts and needed to place them somewhere. This combination of circumstances led the Ministry to proceed with the final approval of the amendment before there was an opportunity for them to meet with the Homalco, discuss their concerns and the Ministry's response. The concerns raised by the Homalco were not frivolous or vexatious. The Ministry does not agree with the scientific opinions presented by the Homalco, and the response required was significantly more than that contained in the letter of November 22, 2004. The letter of January 18, 2005 is a good foundation for the face to face meetings that consultation requires. Consultation, in some cases, may include the parties educating each other as to their concerns and responses to those concerns. The concerns raised may not necessarily be accepted, but they may still lead to some reasonable accommodation of those concerns. This type of consultation should have occurred before the amendment to the existing licence was approved.

STANDARD OF REVIEW

[109] On the issue of standard of review, the counsel referred to the comments of the Supreme Court of Canada in ***Haida*** at ¶61 to 63 as follows:

> ¶ 61 On questions of law, a decision-maker must generally be correct: for example, *Paul v. British Columbia (Forest Appeals Commission)*, [2003] 2 S.C.R. 585, 2003 SCC 55. On questions of fact or mixed fact and law, on the other hand, a reviewing body may owe a degree of deference to the decision-maker. The existence or extent of the duty to consult or accommodate is a legal question in the sense that it defines a legal duty. However, it is typically premised on an assessment of the facts. It follows that a degree of deference to the findings of fact of the initial adjudicator may be appropriate. The need for deference and its degree will depend on the nature of the question the tribunal was addressing and the extent to which the facts were within the expertise of the tribunal: *Law Society of New Brunswick v. Ryan,* [2003] 1 S.C.R. 247, 2003 SCC 20; *Paul, supra*. Absent error on legal issues, the tribunal may be in a better position to evaluate the issue than the reviewing court, and some degree of deference may be required. In such a case, the standard of review is likely to be reasonableness. To the extent that the issue is one of pure law, and can be isolated from the issues of fact, the standard is correctness. However, where the two are inextricably entwined, the standard will likely be reasonableness: *Canada (Director of Investigation and Research) v. Southam Inc.*, [1997] 1 S.C.R. 748.
>
> ¶ 62 The process itself would likely fall to be examined on a standard of reasonableness. Perfect satisfaction is not required; the question is whether the regulatory scheme or government action "viewed as a whole, accommodates the collective aboriginal right in question": *Gladstone, supra*, at para. 170. What is required is not perfection, but reasonableness. As stated in *Nikal, supra*, at para. 110, "in ... information and consultation the concept of reasonableness must come into play. ... So long as every reasonable effort is made to inform and to consult, such efforts would suffice ... ". The government is required to make reasonable efforts to inform and consult. This suffices to discharge the duty.
>
> ¶ 63 Should the government misconceive the seriousness of the claim or impact of the infringement, this question of law would likely be judged by correctness. Where the government is correct on these matters and acts on the appropriate standard, the decision will be set aside only if the government's process is unreasonable. The focus, as discussed above, is not on the outcome, but on the process of consultation and accommodation.

[110] In determining the standard of review on a judicial review procedure, the courts often distinguish between questions of law where the standard is correctness,

and questions of fact or mixed fact in law, where the court may show a degree of deference to the decision maker. The deference recognizes in some cases the expertise of the decision maker in an area where the courts may not have the same expertise. In cases such as this, the decision maker may have expertise which the court does not have with regard to the analysis of scientific evidence. However, the decision maker does not have any special expertise over and above that of the court in determining when the obligation to consult arises. In determining whether the decision maker has correctly decided whether an obligation to consult has arisen, the standard of review is correctness.

REQUEST FOR INFORMATION

[111] The Homalco argue that there has been a breach of the obligation to consult because of a failure to provide information. Certainly, the obligation to consult includes the provision of relevant information that the Ministry may have in its possession. A great deal of information was provided, but there were some items that were still in contention between the parties. Some of the information that was only provided at the hearing included some survey results conducted on behalf of the Ministry or Marine Harvest of the seabed beneath and around the fish netcages. The Ministry failed to provide this information simply as a result of an oversight not with any intention to deprive the Homalco of information they required in order to engage in meaningful consultation.

[112] The Homalco were provided with the management plan relating to the Church House site, or at least part of it, but did not receive a copy of the fish health

management plan. Marine Harvest took the position that the information contained in that plan is proprietary information. They are concerned that if it is delivered to the Homalco that it could be used for purposes other than consultation. They are concerned that it may get into the hands of their competitors, or could be used by the Homalco themselves, if they decided to enter the aquaculture business. The Homalco are, at present, opposed to aquaculture in the area they claim as their traditional territory, but that has not always been the case. They were involved in applications to allow the aquaculture of Atlantic salmon in the Bute Inlet as recently as 2002. It does not appear that they are presently pursuing those applications. Marine Harvest is also concerned that the information may be delivered to the Georgia Strait Alliance, an organization opposed to aquaculture, and with whom the Homalco are presently cooperating.

[113] I accept Marine Harvest's argument that the Fish Health Management Plan, which is a 218 page comprehensive document, does contain confidential proprietary information. The document specifically details operational instructions and procedures during all stages of production, specifies operational instructions and procedures determined by their veterinarian or fish house staff. The document is for the use of the operators' site staff in training, and in day-to-day contact with the fish by the fish house staff. Marine Harvest also use this document in making decisions about fish health. The Fish Health Management also applies to sites other than the Church House site. I accept Marine Harvest's argument that it contains the collective experience and expertise in producing Chinook and Atlantic salmon. This

expertise is derived from extensive research and experience of their experts, and enables Marine Harvest to maintain a competitive advantage over its competitors.

[114] The Best Management Practices Plan may also contain confidential information. However, it was my understanding that this plan had been disclosed. The plan contains the process by which Marine Harvest meets its obligations under the regulations dealing with aquaculture. Some of the information may not be confidential or proprietary. However, I accept that some of it may contain in-house specific procedures, technologies and techniques developed and used by Marine Harvest. Marine Harvest says that this information is based on expertise that has allowed it to be the only aquaculture company in North America that is both IS014001 and IS09001 certified. Marine Harvest does say that it is prepared to share this information, provided there are confidentiality arrangements and communication protocol agreements in place.

[115] The Ministry and Marine Harvest point out that the template for the fish health management plan, that has been provided to the Homalco, which they were able to access on the Ministry's website, gives the Homalco a great deal of information about the sort of things which would be contained in the plan. Marine Harvest indicates that they are prepared to sit down with the Homalco and discuss the contents of the fish health management plan, as they do with the Ministry, but they wish some assurances to be made regarding the confidentiality of that information.

[116] I find that the concerns raised by Marine Harvest are reasonable. I would not order the production of the fish health management plan without specific terms that

protect the interests of Marine Harvest, if actual production of the plan is necessary. Marine Harvest's suggestion that they meet and discuss the contents of the plan with the Homalco under certain conditions may be sufficient to meet the needs of all of the parties.

THE REMEDY

[117] The Homalco argue that the only appropriate remedy is a declaration that the Ministry has failed to properly consult, and an order quashing the approval of the amendment. They say an order should then be made that all of the Atlantic salmon presently at the Church House site be removed until consultation and, if necessary, reasonable accommodation is made for their concerns. They say this is necessary to put them in the position they were in before December 8, 2004.

[118] The Ministry and Marine Harvest argue that such an order is unnecessary and inappropriate in these circumstances. They argue that even on the evidence provided by the Homalco, the risks that they raise regarding potential infringement of their Aboriginal rights are at the low end of the scale. Marine Harvest argues that it would cost them approximately $300,000.00 to move the Atlantic salmon that are presently at the Church House site. They also argue that this would have a significant impact on their potential earnings because they would lose the capacity for rearing salmon that they have at the Church House site. In other words, even if they had somewhere else to place these salmon, they will still lose the opportunity to use the Church House site and profit from the activities there. They estimate that

the value of the salmon presently at Church House will be approximately 15 million dollars when the salmon reaches the stage where they are able to harvest them.

[119] I find that it would be unreasonable to order the immediate removal of all of the Atlantic salmon presently at the Church House site.

[120] Marine Harvest, in their argument, points out that the court has a discretion to exercise in determining what remedy to apply in a judicial review proceeding. They cite from ***Brown and Evans, Judicial Review of Administrative Action in Canada:***

> The exercise of the court's supervisory jurisdiction is discretionary. That is, even where a litigant has established a ground on which the courts may intervene in the administrative process, relief will not necessarily be granted: the court may decline to provide a remedy for reasons other than the merits of the application for a judicial review.
>
> (**Judicial Review of Administrative Action in Canada Volume I Toronto**: canvas back, loose leaf updated August 2003 release chapter 3 … pages 3-1).

[121] Marine Harvest points to other cases in which the court did grant a remedy short of attempting to place the parties back in their original positions.

[122] Some of those cases are:

Cheslatta Carrier Nation v. British Columbia (Project Assessment Director) (1998), 53 B.C.L.R. (3D) 1 (S.C.). In this case, Chief Justice Williams, as he then was, attempted to balance the rights and potential prejudices to the parties, and

made orders requiring the respondents to fulfil their obligation to consult meaningfully and properly and made directions for production of information.

They refer to the ***Gitxsan First Nation v. British Columbia (Minister of Forests)*** 2002 BCSC 1701. In that case, Mr. Justice Tysoe dealt with the issue of remedies, beginning at ¶100. There Mr. Justice Tysoe also referred to a decision ***Haida Nation v. British Columbia (Minister of Forests)***, [2002] B.C.C.A 147 (Haida No. 1) where the court declined to quash a decision of the Ministry even though consultation had not occurred. Haida No. 1 was a decision of the Court of Appeal, and the Court of Appeal indicated that a decision on whether or not to quash the licence itself, or the transfer of the licence, is better determined after the extent of any infringement had been determined.

[123] Similarly, in ***Gitxsan****, supra,* Mr. Justice Tysoe determined at ¶106:

> …it is my view that it is preferable to first make a declaration with respect to the duty of consultation on an interim basis and to then allow the parties to undertake a proper process of consultation and accommodation. If the process does not succeed, the matter can be brought back before the Court for further directions or further declarations.

[124] Mr. Justice Tysoe also dealt with the issue of the disclosure of information. In that case, he found that there should be discussion between the parties as to the exact type and extent of information to be provided before the court makes a determination as to whether specific documents should be provided. (¶113).

[125] Marine Harvest suggests that an appropriate order in this case that would balance the interests of all of the parties would include:

1. an adjournment of the application for judicial review;

2. a declaration of the need for further consultation between the Homalco and the Crown;

3. some direction as to the scope and content of the consultation, and potentially the schedule for consultation;

4. an encouragement to Marine Harvest to participate in an appropriate way in the consultation (which Marine Harvest is prepared to do);

5. some direction on the provision of information, subject to protection for confidentiality with respect to the fish health management plan and the best management plan;

6. providing leave to the parties to seek further directions; and

7. providing leave to the Homalco to pursue its remedy in the event that they are of the view that further consultation and accommodation are inadequate.

[126] I find that the remedy suggested by Marine Harvest is appropriate.

[127] Therefore, I make the following orders:

1. I adjourn the application for judicial review generally;

2. I declare that the Minister had, and continues to have, a legally enforceable duty to the Homalco to consult with them in good faith, and to endeavour to seek workable accommodation between their interests and the long-term objectives of the Crown and Marine Harvest, and the public interest, both Aboriginal and non-Aboriginal. This includes issues surrounding the location and management of the Church House fish farm and the amendment to the existing licence to allow the introduction of Atlantic salmon;

3. The parties are at liberty to apply for further directions if they are unable to agree on a schedule for consultation;

4. Marine Harvest is to participate in an appropriate way in the consultation;

5. Marine Harvest will provide information subject to protection of confidentiality with respect to the fish health management plan and the best management plan. The parties have liberty to apply if they are unable to agree under the specific terms required to protect the confidentiality of the information;

6. Marine Harvest will not add any more Atlantic salmon to the Church House site until the process of consultation and potential accommodation has been completed, and the Ministry confirms the amendment of the licence, if it does so;

7. The Ministry is to approach this consultation with an open mind and be prepared to withdraw its approval of the amendment if, after reasonable consultation, it determines that it is necessary to do so, or add whatever conditions appear to be necessary for reasonable accommodation of the concerns of the Homalco;

8. The parties have leave to apply for further directions;

9. The Homalco have leave to bring the matter back before the court in the event that they are of the view that further consultation and accommodation are inadequate.

[128] In making this order I have considered the factors referred to in Marine Harvest's argument:

> Marine Harvest argues the factors to consider are:
>
> a) that there is no direct or immediate interference with Homalco's claimed rights arising from the farm raising Atlantic salmon rather than Pacific. I would point out, however, that it is not simply direct or immediate interference which is a concern. It is also indirect and potential future interference. This is the very subject matter of the consultation. This is also a matter on which the various scientists differ;
>
> b) concerns of the Homalco respecting risks to wild salmon and to the marine environment or substantively addressed through the regulatory

requirements which govern the operation of the fish farm (e.g. protection against escapes, and measures respecting fish health, waste management and general protection of the environment).

I have considered the regulatory requirements, but again, that is not the end of the matter. Those are the proper subject matters of discussion during consultation. There may well be additional measures which should be taken to address the concerns of the Homalco.

[129] Marine Harvest also refers to:

a) The fact that there was consultation prior to the decision, further submission issued by the Homalco after the decision (on December 10, 2004), and the substantive response giving additional reasons by the Crown on January 18, 2005;

b) This does indicate a willingness to consult and is a good starting point;

c) The recognition that the obligation to consult and accommodate is an evolving one, which was only fully articulated by the Supreme Court of Canada on November 18, 2004 (in ***Haida*** and in ***Taku River***), only twenty days before the decision of MAFF was made on December 8, 2004. Each of the parties to the consultation can take direction respecting rights and obligations from these cases.

However, I note the recognition of the obligation to consult is not a new one and did not arise simply out of the Supreme Court of Canada

decisions referred to. The obligation to consult has been recognized by the courts for a considerable period of time, and the British Columbia Court of Appeal decision in ***Haida*** certainly made it clear that the province had this obligation whether or not they agreed with that decision or were appealing it.

d) The fact that Marine Harvest, as a third party, has relied on the December 8, 2004 decision, and would suffer significant damages if the decision was quashed and the salmon requested to be removed. This would be particularly unjust if the only issue is further consultation and a similar decision may be the ultimate result.

I have pointed out the estimated financial cost to Marine Harvest. I also find that they are entitled to rely on the amendment granted to them.

e) The fact that further consultation may well satisfy the Homalco in their concerns, or identify some further accommodation which could be implemented, in other words, that setting aside the decision may be premature.

I agree that this is a reasonable matter to consider, including the willingness of Marine Harvest to participate in that consultation.

f) The fact that continuing with the Atlantic salmon in the fish farm will not cause irreparable harm (e.g. unlike carrying on with timber harvesting

> or building a road). If the ultimate decision of the court, after a period of further consultation, is that the December 8, 2004 decision should be set aside, the salmon could then be removed. The potential for any harm during an interim period allowing for further consultation is low (remote).
>
> To some extent this is part of the argument that is made and the disagreement between the scientists. The consultation, including the early portion of the consultation, could be specific steps that may be taken to further minimize the risk above and beyond the existing regulations, or steps that could be taken to ensure that the existing regulations are enforced.

[130] I have also considered the evidence submitted about Marine Harvest's practices. Marine Harvest's evidence is that they take seriously all of their obligations under the regulations, and pride themselves in the manner in which they operate their fish farms. They state they are the world's largest aquaculture company, and the largest producer and suppler of farmed salmon. They point out that they own or operate 19 salmon farms in British Columbia, all but five of which are currently licensed for both Chinook and Atlantic salmon production. They also point out that they own and operate two land-based fresh water hatcheries that produce almost all of the smolts that they use.

[131] Their position is that they are at the leading edge of development in aquaculture and are committed to conducting their operations to maximize

environmental protection of fish health. They argue that they impose their own stringent environmental management and fish health policies, as well as applying all of the governmental regulations and policies.

[132] Marine Harvest points out that its environmental management system for its fin fish production sites is registered to the Environmental Management System Standard IS014001: 1996 which is an international standard that specifies a process for controlling and improving a company's environmental performance. In addition to the creation and implementation of strict policies and procedures, there must be a monitoring system in place to monitor compliance. The standards also require internal and external audits to ensure compliance. Marine Harvest is also IS09001 certified, which deals with quality management systems, including product quality, management style, customer relations and other business related issues. Marine Harvest points out that they are one of only five aquaculture companies worldwide who hold both IS014001 and IS09001 registrations. Their management plan includes a goal to eliminate all escapes from marine netcage operations, and a detailed fish escape prevention and response plan. They say that this plan is implemented daily.

[133] I should deal with the comment made by Mr. Westlake in his affidavit #2 at paragraph 25, which reads as follows:

> In my view, if I were to recommend that MAFF deny Marine Harvest's application to farm Atlantic salmon on the basis that escapees might cause one or any of the various harms that are identified from time to time, I could not recommend approval of Atlantic or any other salmon farming at all in British Columbia.

[134] It was suggested that this was one of the principle reasons that Mr. Westlake recommended approval of the amendment. Counsel for the Ministry argues that Mr. Westlake is merely indicating the issues with regard to escapees have already been considered at length, and that the appropriate regulations and policies are in place to deal with that issue. The Ministry argues this is really not a new or significant issue.

[135] Clearly, the Ministry must deal with each application on its own merits, and consult and address the individual concerns of the Homalco with regard to this specific sight. If, after consultation, reasonable accommodation of the concerns raised by the Homalco required a refusal to allow the amendment, then that would be the decision that the Ministry must make. The Ministry must deal with the concerns of potential infringements on a sight by sight basis, not based on any general policy.

[136] There was a significant amount of argument about the admissibility and consideration of certain evidence, including the scientific evidence. Counsel have made it clear that they do not feel it is the court's position to chose between the scientific opinions. Therefore, I have not found it necessary to consider the arguments about the validity or qualifications of the various scientists making their opinions. The only use I have made of the scientific evidence, is for the purposes of concluding that there is some basis for the Homalco's concerns without deciding the strength or weight that should be given to those opinions of concern.

[137] The Homalco did argue that the provincial jurisdiction under s. 92(5) of the ***Constitution Act*** 1867 which is the basis of the authority for the ***Fisheries Act***,

[RSBC 1996) c. 149 and the way in which the regulations are framed as prohibitions or requirements for permission, supports the argument that the purpose and the constitutional obligations in the ***Fisheries Act*** are to conserve the stock of fish and to protect the fish environment. They referred to **Peter Hogg, Constitutional Law 3rd Edition** at 29.5(c) as follows:

> The management of public lands in section 92(5) [of the *Constitution Act 1867*] must include measures to conserve the stock of fish and to protect the fish environment. [my emphasis added]

[138] No authority was cited for the proposition that the ***Fisheries Act*** and regulations must conserve the stock of fish and protect the fish environment. I conclude that all Hogg was saying is that the powers that the province has under s. 92(5) must include measures to conserve, not that the province must pass legislation and regulations to conserve stock. He is merely stating what the province can do as a result of its legislative authority, not what it must do.

RELIEF UNDER PARAGRAPH 7 OF THE PETITION

[139] Paragraph 7 of the petition applies for the following relief:

> 7. An interlocutory and permanent injunction prohibiting the Respondent, Marine Harvest Canada, from placing Atlantic salmon in the Church House fish farm without proper authorization from the Department of Fisheries and Oceans for the harmful alteration, disruption or destruction ["HADD"] of fish habitat pursuant to s. 35(2) of the ***Fisheries Act*** and without obtaining a licence pursuant to s. 55 of the **Fisheries (General) Regulations**.

[140] Marine Harvest argues that relief applied for in paragraph 7 of the petition is not available under Rule 10 of the **Rules of Court** and that it is not available under the ***Judicial Review Procedures Act***.

[141] I am satisfied that if it were necessary, directions could be given as to how to resolve this issue to eliminate any concerns whether the petition under Rule 10 was the appropriate method of pursuing this relief. Rule 2(3) states:

> (3) The court shall not wholly set aside a proceeding on the ground that it was required to be commenced by an originating process other than the one employed.

[142] In other words, appropriate directions or orders could be made to allow the matter to be resolved, even though it had been commenced by way of petition.

[143] I agree with the petitioner that an injunction can be included in claims for relief under the ***Judicial Review Procedures Act***.

[144] Marine Harvest also argues that this claim for relief really relates to the exercise of the jurisdiction of the federal Minister of Fisheries and Oceans, and that the petitioners have started separate proceedings for relief in the federal court where these matters should be resolved.

[145] The Homalco respond by saying that they are simply attempting to prevent a breach of a federal statute, where that breach may have a direct impact upon themselves. They point to the decision ***Re National Capital Commission et al v. Pugliese et al***; ***Re Regional Municipality of Ottawa – Carleton et al and Dunn***,

97 D.L.R. (3d) 631. The Supreme Court of Canada found that individual homeowners had a right of action for damages to their property. They say that damage arose when the defendants breached the Ontario ***Water Resources Act*** by abstracting more than 10,000 gallons of water per day without a permit. They argued that the removal of under-surface water caused their properties to subside and suffer damage. The Homalco argue that this demonstrates that an individual may have the right to sue a party for breach of a statute.

[146] The Federal ***Fisheries Act*** provides that someone shall not cause a HADD without a permit. In this case, there is discussion between Marine Harvest and the Department of Fisheries as to whether they require a permit to cause a HADD in this case. The initial operation of the Church House site operated under an agreement not to cause a HADD. Marine Harvest is in the process of negotiating with the Department of Fisheries to determine whether a permit to cause a HADD is necessary, or should be granted. There is evidence that the Department of Fisheries may require a permit, but it is not clear on the evidence that Marine Harvest is operating in contravention of the ***Fisheries Act***. The Department of Fisheries and Oceans did send a letter to the Ministry on July 14, 2004 indicating that they were not opposed to the amendment of the licence, provided Marine Harvest obtained a HADD. Marine Harvest was in the process of negotiating for a HADD, but only as part of an overall process to convert permits not to cause a HADD to a permit to cause a HADD. It is not clear that they were unable to continue to operate with the existing permit.

[147] Marine Harvest also points out that the petition has not alleged that the Church House facility has caused a HADD, or is likely to cause a HADD. Nor is there any evidentiary foundation to conclude that the facility has caused a HADD, or is expected to cause a HADD. The Ministry has referred to the decision ***Operation Dismantle Inc. v. Canada***, [1985] 1 S.C.R. 441. This dealt with a judicial review of a Cabinet decision relating to missile testing. The opponents were concerned about risks of nuclear war and alleged that their s. 7 ***Charter*** rights, life and security of the person were being infringed. The court said that the government did not have a duty to refrain from the action it proposed to take based on the ***Charter*** rights, and the allegation of infringement was based on speculation or hypotheses about possible effects of the government action (¶29). The court in ***Operation Dismantle*** said the following at ¶34 through ¶36:

> ¶ 34 A similar concern with the problems inherent in basing relief on the prediction of future events is found in the principles relating to injunctive relief. Professor Sharpe, Injunctions and Specific [page458] Performance (1983), clearly articulates the difficulties in issuing an injunction where the alleged harm is prospective, at pp. 30-31:
>
> > All injunctions are future looking in the sense that they are intended to prevent or avoid harm rather than compensate for an injury already suffered....
> >
> > Where the harm to the plaintiff has yet to occur the problems of prediction are encountered. Here, the plaintiff sues quia timet -- because he fears -- and the judgment as to the propriety of injunctive relief must be made without the advantage of actual evidence as to the nature of harm inflicted on the plaintiff. The court is asked to predict that harm will occur in the future and that the harm is of a type that ought to be prevented by injunction.

> ¶ 35 The general principle with respect to such injunctions appears to be that "there must be a high degree of probability that the harm will in fact occur": (Sharpe, supra, at p. 31). In Redland Bricks Ltd. v. Morris, [1970] A.C. 652, at p. 665, per Lord Upjohn, the House of Lords laid down four general propositions concerning the circumstances in which mandatory injunctive relief could be granted on the basis of prospective harm. The first of these stated [at p. 665]:
>
> 1. A mandatory injunction can only be granted where the plaintiff shows a very strong probability upon the facts that grave damage will accrue to him in the future.... It is a jurisdiction to be exercised sparingly and with caution but in the proper case unhesitatingly.
>
> ¶ 36 It is clearly illustrated by the rules governing declaratory and injunctive relief that the courts will not take remedial action where the occurrence of future harm is not probable. This unwillingness to act in the absence of probable future harm demonstrates the courts' reluctance to grant relief where it cannot be shown that the impugned action will cause a violation of rights.

[148] I conclude that this is a matter better resolved through the process provided by the ***Fisheries*** Act, rather than making findings with only a portion of the evidence available. In these circumstances, even if I have discretion or the authority to grant an injunction, I decline to do so on the evidence before me.

[149] I am satisfied that this is a matter that is more properly handled, at this stage, through the Department of Fisheries and Oceans. Certainly, I anticipate the Department of Fisheries and Oceans would consult with the Homalco on the issue of whether a permit for a HADD should be granted, or whether an agreement to prevent a HADD is appropriate. Those matters, however, may be the subject of the proceedings in the federal court, and I do not wish to make any further comment on them.

[150] The parties have not addressed the issue of costs. They are at liberty to do so if they are unable to agree on that issue.

“”R.E. Powers, J.”
The Honourable Mr. Justice R.E. Powers

March 23, 2005 – ***Revised Judgment***

Corrigendum issued advising that on the first page, counsel for the Respondent, The Minister of Agriculture Food and Fisheries should read L. Mrozinski and P.E. Yearwood.

At paragraph 1, “Xwemahlkwu” should read “Xwèmalhkwu” and elsewhere throughout the judgment.

At paragraph 3, “Neutreco Canada Inc.” should be spelled “Nutreco Canada Inc.”.

At paragraph 8, “Bartlett” should read “Bartlett Island”.

At paragraph 21, clause 3: “Homalco Treaty” should read “Homalco Territory”.

At paragraph 24, the second line: “wild Pacific salmon stocks spawn” should read “wild Pacific salmon stocks that spawn”.

At paragraph 31, the reference to “affluent” should be “effluent”.

At paragraph 35, 26, 38 and 39 the courts refers to the “salmon agriculture report” and should be referred to the “Salmon Aquaculture Review”. Also at paragraph 35, the “Environmental Assessment Office” should be capitalized.

At paragraph 56, second line: “amendment management plan” should read “amended management plan”.

At paragraph 57, third line: “open netcage fin fish culture” should read “open netcage finfish aquaculture”.

At paragraph 61, 69 and 73, “Johnson” should read “Johnstone”.

At paragraph 98, fourth line: “received on December 10 and 13 and provides a response” should read “received on December 10 and 13 provide a response”.

At paragraph 122, ninth line: “(Haidia No. 1)” should read “(Haida No. 1)”.

At paragraph 127.7 it reads:

> "… to withdraw its approval of the amendment if, after reasonable compensation, it determines …"

and should read:

> "… to withdraw its approval of the amendment if, after reasonable consultation, it determines …"

2013 CarswellOnt 18046
Ontario Environmental Review Tribunal

Bovaird v. Director, Ministry of the Environment

2013 CarswellOnt 18046, [2013] O.E.R.T.D. No. 87, 83 C.E.L.R. (3d) 13

In the Matter of appeals filed on June 25, 2013 by D&C Vander Zaag Farms Ltd., Conserve Our Rural Environment, Dennis Sanford, Roselyn Bovaird, John Maguire, and Kathleen Kurtin for a Hearing before the Environmental Review Tribunal pursuant to section 142.1 of the Environmental Protection Act, R.S.O. 1990, c. E.19, as amended with respect to Renewable Energy Approval Number 5460-98BPH8 issued by the Director, Ministry of the Environment, on June 10, 2013 to Dufferin Wind Power Inc. under section 47.5 of the Environmental Protection Act, regarding the construction, installation, operation, use and retiring of a Class 4 wind facility with a total name plate capacity of 99.1 megawatts at a location described in the Renewable Energy Approval as Dufferin Wind Power Project, Various Properties SWTS as in MEL3218, Lot 270, Concession 1, in the Township of Melancthon, County of Dufferin, Ontario

In the Matter of a hearing held on August 20, 21, 22, 26-30, September 3-5, 9-13, 18, 24-26, October 7-11 and November 18, 2013 variously at the Grace Tipling Theatre, 203 Main Street East, Shelburne, Ontario, and at 655 Bay Street, Toronto, Ontario

Heather I. Gibbs Chair, Dirk VanderBent V-Chair, Maureen Carter-Whitney Member

Heard: August 20-22, 26-30; September 3-5, 9-13, 18, 24-26; October 7-11; November 18, 2013
Judgment: December 23, 2013
Docket: 13-070 to 13-075

Counsel: Laura Bisset, David Crocker, Chris Barnett, for Appellants, Roselyn Bovaird, Conserve Our Rural Environment (CORE), D&C Vander Zaag Farms Ltd., Kathleen Kurtin and John Maguire, and the Other Party, Dr. William Crysdale
Eric Gillespie, for Appellant, Dennis Sanford
Frederika Rotter, Phil Pothen, Matthew Horner, Sarah Wright, Courtney Harris, Daniel Huffaker, for Director, Ministry of the Environment
Dennis Mahony, John Terry, Andrew Finkelstein, Crawford Smith, Arlen Sternberg, Justin Necpal, for Approval Holder, Dufferin Wind Power Inc.
Mayor Don MacIvor, for Presenter, Corporation of the Township of Amaranth
Joan Lever, for herself
Leo Blydorp, for Dufferin Federation of Agriculture
Norm Wolfson, for himself
Bohdan Wynnycky, Linda Laflamme, for Niagara Escarpment Commission

Headnote

Environmental law --- Statutory protection of environment — Approvals, licences and orders — Appeals — To administrative tribunal — General principles

Ministry of Environment issued renewable energy approval to DWP Inc. for construction, installation, operation, use and retiring of wind facility with wind turbine generators — Appellants brought appeal — Appeal dismissed — Appellants did not establish that engaging in project as approved would cause serious and irreversible harm to plant life, animal life or natural environment — Appellants did not establish that engaging in project as approved would cause serious harm to human health — Appellants did not establish that renewable energy approval process violated right to security of person under s. 7 of Canadian Charter of Rights and Freedoms.

Environmental law --- Statutory protection of environment — Approvals, licences and orders — Species protection

Bats — Ministry of Environment issued renewable energy approval to DWP Inc. for construction, installation, operation, use and retiring of wind facility with wind turbine generators — Appellants brought appeal — Appeal dismissed — Appellants did not establish that engaging in project as approved would cause serious and irreversible harm to plant life, animal life or natural environment — At renewal energy approval stage, analysis of project's impact depended entirely on value of renewable energy approval regulation and MNR's bat guidelines in identifying threats to bat species by identifying only threats to what was deemed significant habitat — On other hand, Environmental Protection Act test did not focus on significant habitat but on plant life, animal life and natural environment — Fulfilment of regulatory and guideline requirements provided baseline amount of information that could begin to inform tribunal in its determination of whether requisite harm would occur but that was only part of information base that might have been relevant to statutory test utilized in appeal — Onus was on appellants to show that test had been met, regardless of inadequacies of information generated in renewable energy approval process.

Environmental law --- Constitutional issues — Charter of Rights and Freedoms

Right to life, liberty and security of person — Ministry of Environment issued renewable energy approval to DWP Inc. for construction, installation, operation, use and retiring of wind facility with wind turbine generators — Appellants brought appeal — Appeal dismissed — Assuming, without deciding, that wind turbines would cause annoyance in percentage of population, appellants had nevertheless not established that annoyance per se constituted serious harm to human health or that project would cause any health impacts at set-back distances and sound pressure levels mandated — Annoyance per se had not been proven to be health effect and was too vague to be considered serious harm so as to engage s. 7 of Canadian Charter of Rights and Freedoms — Appellants did not establish that annoyance could have been considered serious for either of tests sought to be met: s. 145.2.1(2)(a) of Environmental Protection Act "serious harm to human health" or "serious and profound effect on psychological integrity" — "Risk of harm"was better characterized as risk that harm might have resulted from wind turbine project operating at established decibel limit, not that known harm had increased chance of occurring.

Table of Authorities

Cases considered:

Generally — referred to

APPEAL from Ministry of Environment decision to issue renewable energy approval for construction, installation, operation, use and retiring of wind facility with wind turbine generators.

***Decision of the Board*:**

Background

1 On June 10, 2013, Vic Schroter, Director, Ministry of the Environment ("MOE"), issued Renewable Energy Approval No. 5460-98BPH8 (the "Approval" or the "REA") to Dufferin Wind Power Inc. (the "Approval Holder" or "Dufferin") for the construction, installation, operation, use and retiring of a Class 4 wind facility with 49 wind turbine generators with a total name plate capacity of 99.1 megawatts ("MW"). The location is described in the Approval as Dufferin Wind Power Project, Various Properties SWTS as in MEL3218, Lot 270, Concession 1, and described in the application for the Approval as bound by the following roads: the Melancthon-Osprey Townline to the north, the Melancthon-Mulmur Townline to the east, Sideroad 15 in Melancthon to the south and 5th Line/6th Line northeast/ Sideroad 240/ County Road 2 to the west, in the Township of Melancthon, County of Dufferin, Ontario (the "Project").

2 The Approval was issued pursuant to Part V.0.1, s. 47.5 of the *Environmental Protection Act* ("*EPA*").

3 On June 25, 2013, Conserve Our Rural Environment ("CORE"), D&C Vander Zaag Farms Ltd., Roselyn Bovaird, John Maguire and Kathleen Kurtin filed notices of appeal of the Approval with the Environmental Review Tribunal (the "Tribunal"). They are represented by Davis LLP and raised issues related to both the health and natural environment grounds under s. 142.2 of the *EPA*.

4 Also on June 25, 2013, Dennis Sanford, through his counsel Eric Gillespie, filed a notice of appeal with the Tribunal. He raised issues only in relation to the heatlh ground.

5 Therefore, the grounds for the appeals of the Approval are, collectively, that engaging in the Project will cause serious harm to human health and serious and irreversible harm to plant life, animal life or the natural environment, in accordance with s. 142.2 of the *EPA*.

6 On July 22, 2013, the Tribunal held the preliminary hearing in Shelburne, Ontario. The Tribunal subsequently issued an order granting party status to Dr. William Crysdale, and presenter status to the Niagara Escarpment Commission ("NEC"), Norman Wolfson and Sandra Wong, Joan Lever, the Corporation of the Township of Amaranth ("Amaranth"), and the Dufferin

Federation of Agriculture ("DFA"). Further details and the specific terms under which status was granted can be found in the Tribunal's order dated August 8, 2013 [2013 CarswellOnt 11267 (Ont. Environmental Review Trib.)].

7 On July 19, 2013, the Appellant Mr. Sanford served and filed a Notice of Constitutional Question (the "Notice"). In a letter dated August 8, 2013, Davis LLP filed a notice that Ms. Kurtin and Ms. Bovaird were joining Mr. Sanford in advancing the constitutional issues set out in his Notice. Those Appellants argue that the renewable energy approval process violated their right to security of the person under s. 7 of the *Canadian Charter of Rights and Freedoms* (the "*Charter*").

8 The Director brought a motion for an order striking the Appellants' claim for constitutional relief, which was heard on August 12, 2013. On August 15, 2013, the Tribunal issued a disposition dismissing the Director's motion, with written reasons issued on September 6, 2013. As a result, the constitutional challenge is a matter before this panel.

9 The hearing began on August 20, 2013. The Tribunal heard evidence and submissions over 26 days in August, September, October and November 2013. For the reasons that follow, the Tribunal dismisses the appeals.

Relevant Legislation

10 The relevant legislation can be found throughout the body of this decision except for the following provisions:

> **Environmental Protection Act**
>
> 1. (1) "natural environment" means the air, land and water, or any combination or part thereof, of the Province of Ontario; ("environnement naturel")
>
> **145.2.1** (2) The Tribunal shall review the decision of the Director and shall consider only whether engaging in the renewable energy project in accordance with the renewable energy approval will cause,
>
> (a) serious harm to human health; or
>
> (b) serious and irreversible harm to plant life, animal life or the natural environment.
>
> (3) The person who required the hearing has the onus of proving that engaging in the renewable energy project in accordance with the renewable energy approval will cause harm referred to in clause (2) (a) or (b).
>
> (4) If the Tribunal determines that engaging in the renewable energy project in accordance with the renewable energy approval will cause harm referred to in clause (2) (a) or (b), the Tribunal may,
>
> (a) revoke the decision of the Director;
>
> (b) by order direct the Director to take such action as the Tribunal considers the Director should take in accordance with this Act and the regulations; or
>
> (c) alter the decision of the Director, and, for that purpose, the Tribunal may substitute its opinion for that of the Director.

Issues

11 The issues are:

> 1. Whether engaging in the Project as approved will cause serious and irreversible harm to plant life, animal life or the natural environment;
>
> 2. Whether engaging in the Project as approved will cause serious harm to human health;

3. Whether the renewable energy approval process violated the Appellants' rights under s. 7 of the *Charter* to security of the person.

Issue 1: Whether engaging in the Project as approved will cause serious and irreversible harm to plant life, animal life or the natural environment

12 A number of Appellants raised issues including harm to farm animals due to electro-magnetic fields and harm to farming practices. Their evidence will be discussed below. However, counsel for the parties called expert evidence and focused on the following sub-issues under Issue No.1:

a) Harm to soils;

b) Harm to groundwater resources and local wells;

c) Harm to the Niagara Escarpment Plan ("NEP") area;

d) Harm to bats; and

e) Harm to other animal life.

13 As noted above, the Appellant Mr. Sanford raised issues only in relation to the health ground. In the discussion of Issue No. 1, the term "Appellants" refers to CORE, D&C Vander Zaag Farms Ltd., Ms. Bovaird, Mr. Maguire and Ms. Kurtin.

a) Harm to Soils

Evidence on Harm to Soils

14 The Appellants submit that harm to soils is harm to the natural environment. They also submit that soil assessment, in the context of an agricultural setting, requires expertise in crop production.

15 In the Appellants' submissions, there are four areas of dispute in relation to soils:

- the significance of Honeywood soils in the context of Ontario;
- the scale or amount of land permanently or temporarily affected by construction;
- the significance of the effect on soils arising from the construction, operation and decommissioning of the Project; and
- the ability to restore soil to preconstruction characteristics.

16 The evidence of the witnesses called in relation to this issue addressed these four areas of dispute.

David Vander Zaag

17 Mr. Vander Zaag, an owner of the Appellant D&C Vander Zaag Farms Ltd., did not seek to be qualified as an expert witness. He alleged that the Project will cause serious and irreversible harm to the natural environment and plant life. He expressed concern about the impact of the Project on the soils in the area that are rated Class 1 based on "soil capability class", a seven class rating system (classes 1 through 7) that follows the Canada Land Inventory ("CLI") system of soil classification. He also raised concerns that dairy cattle will be harmed by effects from the Project, and that the Project will sterilize farm properties for future agricultural use. He is a third generation farmer who grows 800 acres of potatoes adjacent to the Project site. He is also the owner and president of a dealership of specialized agricultural equipment and, as a result, has travelled extensively and gained knowledge of agricultural operations in many parts of the world.

18 He testified that the Project is located on a 15,000 acre contiguous block of Honeywood silt loam called the Honeywood Plateau, which he stated provides some of the most valuable potato production in Ontario. Mr. Vander Zaag believes the Honeywood Plateau is special and rare, and says that "the very unique natural attributes which make this land and landscape so special will be forever altered" if the Project proceeds as planned.

19 Mr. Vander Zaag submits that any harm to the soils should be considered serious due to the quality of the soils in the Project area. Specifically, they are Class 1 soils with premier characteristics. Mr. Vander Zaag testified that this land rates "excellent" on every one of the following seven characteristics, which make these soils so valuable:

- Soil type (sandy loam)
- Stone-free (ideal for potatoes; does not damage equipment)
- Flat (large equipment can work freely, and soil does not wash away)
- Uniform (each 100 acre block is the same soil type front to back)
- Contiguous (it is one large 15,000 acre block of the same soil type)
- Well drained (ideal for potatoes; underlain by karst limestone)
- Geographic Location (28" annual rainfall, moderate climate, 1 hour to large city)

20 Mr. Vander Zaag submits that Dufferin's land lease agreements allow it to place the Project infrastructure in any location it chooses, with no regard for farming practices. As a result, the Project could legally take far more land out of useful production than what is listed as the footprint of the infrastructure. With respect to the roadways, Mr. Vander Zaag points out that the Project Description Report estimates that 26 kilometres ("km") of 5 metre ("m") wide roads will be built. This will result in 13 hectares ("ha") of prime Class 1 vegetable land being taken out of production and, he submits, soil forever altered from its natural state. He notes that the lease agreements do not require Dufferin to minimize the roadways or keep them to any specific width.

21 Mr. Vander Zaag testified that vegetable production requires long straight flat fields for the operation of large and wide mechanical equipment. He said that obstructions, including laneways and "fenced 125 square metre blocks", seriously affect normal farming practices. This is particularly so for commercial potato farms, he noted, as the farmer must follow efficient practices to make the business viable. He also raised the concern that stripping topsoil and installing gravel laneways will cause irreversible harm to the soil profiles, which "have taken thousands of years to develop". In his view, the soil profiles of topsoil, subsoil, overburden and underlying limestone karst "are indeed one living thing". He stated that the edges of roadways are an example of how it is mechanically impossible to return soil to its natural state.

22 Mr. Vander Zaag plans to locate a dairy cattle operation at his home farm, which is within 550 m of a proposed 2.6 kW turbine. He is concerned that electromagnetic fields, stray voltage, nuisance noise and blade flicker will all negatively impact dairy animals, which are "notoriously" highly susceptible to these impacts.

23 Mr. Vander Zaag listed examples of how he believes the Project will sterilize lands from normal farming practices in the future. For the reasons noted above, he is concerned that new dairy facilities cannot be located at his home farm. He is also concerned that drainage and irrigation water lines across neighbouring fields, previously subject to understandings and cooperation between neighbours, will now be subject to permission from Dufferin. Mr. Vander Zaag alleges that this may interfere with historic practices as well as damage landowner cooperation. In addition, the presence of turbine towers will prevent aerial application of fertilizer or pesticides, which "will put local farmers at a needless disadvantage versus farmers in other areas." Similarly, the turbines will prevent the use of centre pivot irrigation in some locations. He testified that this "sterilizes the farm from future potential economic irrigation development."

24 In cross-examination, Mr. Vander Zaag agreed that he leases land from another local landowner, Arley Leader. Mr. Leader's land has four wind turbines that have been operational since 2006, part of the Melancthon Phase 1 wind project. Mr. Vander Zaag acknowledged that he has not expressed any concern to Mr. Leader regarding the adverse effects of the turbines on his farming operations; he also noted that he values his relationship with Mr. Leader, and that good potato land is scarce.

25 Mr. Vander Zaag agreed that he has removed buildings on land that he farms and remediated the soil, mainly because the building was in the way of a central pivot. However, he testified that the remediated soil is not the same as the surrounding soil, as the topsoil has been spread out thinly over top and now dries out faster.

Leo Blydorp, Dufferin Federation of Agriculture ("DFA")

26 Mr. Blydorp spoke on behalf of the DFA, which was granted Presenter status at the preliminary hearing. The DFA listed a number of reasons why it is opposed to Dufferin Wind Power's Project.

27 Mr. Blydorp raises the issue of the loss of prime agricultural land, testifying that only 0.5% of Canada's land mass is classified as Class 1 land, of which 52% is in Ontario. He stated that as of 2001, 18% of Class 1 land in Ontario had been urbanized. He testified that prime agricultural land in Ontario is being lost at an alarming rate. The DFA is opposed to further non-agricultural development on prime agricultural land. He pointed out that s. 2.3.3.1 of the Provincial Policy Statement ("PPS") states that permitted uses and activities in prime agricultural areas are "agricultural uses, secondary uses and agriculture-related uses."

28 Mr. Blydorp provided photographs to demonstrate how access roads cause the loss of agricultural land: under the road itself; on the edges of the road where gravel is present; in the adjacent fields due to water changes including flood damage; and on strips of land between the access road and the edge of the field where the strip of land is too small to farm.

29 Mr. Blydorp said that the DFA believes that it is not possible to return land to agricultural use after construction, contrary to assertions made in the Approval Holder's Construction Plan Report.

30 Mr. Blydorp raises the concern in his submission that Project construction would create impediments to agricultural use, noting that:

> [e]vidence from existing wind energy developments show that agricultural production problems continue to persist following commissioning of wind energy projects. Access roads have interfered with water flow and have damaged pre-existing subsurface tile drains.... Areas around the turbine are still littered with stones from the excavated subsoil removed to build turbine foundations.

31 Mr. Blydorp stated that the DFA is not convinced the sites will be restored to pre-construction conditions following de-commissioning of the Project. The turbine foundations will be left in the ground, and it will be very difficult to remove the gravel from the access roads without mixing it with the topsoil. He also noted a number of other concerns, including that stray voltage may adversely affect livestock, and that doing field work could be dangerous at certain times of the year due to the strobing effect of the turning turbine blade in front of the sun. DFA has also received some reports by farmers of headaches due to working in the vicinity of turbines.

32 He also noted that the DFA questions who will determine whether or not rehabilitation was successful and what the penalties will be if it is not successful, and noted that these questions are not answered in the REA.

Sam Squire

33 Mr. Squire, who testified on behalf of the Appellants, was recognized by the Tribunal as an expert in potato cultivation, qualified to give opinion evidence about conditions and practices required for potato growing.

34 In his witness statement, Mr. Squire noted that:

> The construction, operation and decommissioning of the wind project will significantly affect potato plant life and the natural environment by reducing the productivity of the area's farmland. The natural environment will be harmed by removing highly productive land from use for potato farming. As well, heavy machinery will compact the soil and undermine the unique benefits of Honeywood Loam, causing long term damage to the ability of the land to support strong plant growth.

35 Mr. Squire testified that the soil conditions required for potato cultivation are sandy loam/loam, well drained, stone-free, flat, and loose soil. He stated that all growers agree that potato land is in short supply. A field planted with potatoes should be in a three year rotation, so it is not used to grow potatoes for two out of three years. Mr. Squire testified that the predominant soil in the area between Shelburne and Honeywood is known as Honeywood loam, which was deposited by wind and covers an area of approximately 15,000 contiguous acres. He characterized it as ideal potato-growing soil, noting that "this is a very special soil and it is, in my view, irreplaceable." He said it has been carefully cultivated by farmers over the years to build on its inherent characteristics by, for example, rotating crops, fertilizing soil, installing drainage systems, and minimizing interference with fields.

36 Mr. Squire said that, due to the expense involved in properly maintaining fields for potato production (approximately $4,000 per acre), the yields must be good in order to remain in production. In this regard, Mr. Squire noted that Ontario has state-of-the-art machinery, growers and packaging. While he agreed on cross-examination that potatoes can probably be grown in soils from Classes 1 to 7, he added that they cannot profitably be grown in lower Classes of soils. If farmers cannot grow them profitably, he noted, they will not grow them. Thus, he said that the question of whether it would be theoretically possible to grow potatoes in Class 3 soil with appropriate inputs (like drainage tiles or fertilizer) is irrelevant.

37 Mr. Squire is concerned about damage to both the soils and subsoils, and contamination of the subsoils and stored soils by aggregate materials brought on site for the access roads. He stated that Honeywood soil is very susceptible to compaction, which changes the drainage and distorts root growth. He is also concerned that the buried collection lines will interfere with drainage tiles, thereby causing drainage problems that could affect productivity and require costly repairs. Given that Dufferin has full discretion to place the turbine and road anywhere in a given field, Mr. Squire is concerned that the Project could damage up to 30% of a 100 acre field, if the components are poorly placed.

38 With respect to rehabilitation of the land after development, Mr. Squire stated that he is unaware of any situation where "sensitive topsoil" has been taken off-site, replaced after damage to the subsoil, and returned to its previous state. He is not aware of any successful restoration of potato-growing agricultural land of this quality elsewhere.

Michael Hoffman

39 Mr. Hoffman was qualified to give opinion evidence as an agrologist with special expertise in soil science. He is President of AgPlan Limited, which was retained by the Appellants to undertake a land assessment of the Dufferin Project. Mr. Hoffman authored a report entitled *Land and Surficial Soils Report for the Dufferin Wind Power Undertaking Located in the County of Dufferin*, dated August 13, 2013.

40 In Mr. Hoffman's opinion, the Project will cause serious and irreversible harm to land. He states the harm will be irreversible due to a "loss of land due to wind turbine tower bases, permanent construction and/or maintenance areas and/or access areas," as well as an "alteration of soils due to mixing, compaction and the spreading of excess soil materials on existing soil surfaces which will result, at minimum, in changes to soil layers (horizons), soil organic matter content, soil structure, water infiltration rate, soil hydraulic conductivity and plant available water." Mr. Hoffman believes the harm will be serious because it affects the most productive soils. He noted that the definition of "natural environment" in the *EPA* is "air, land and water", and that the definition of "land" in the *EPA* includes surface land and subsoil.

41 Mr. Hoffman testified that he was unable to locate any scientific literature measuring the effects of wind turbine construction on productive lands. He therefore considered literature related to pipeline construction as a comparator. He disagreed with the conclusion of Dr. Gregory Wall, an expert witness for the Approval Holder, that the impact of construction of the Project on

potato production is "infinitesimal". He stated that, measured on the basis of area, potato production is the crop with the highest proportion (16%) of provincial production within Dufferin County. Mr. Hoffman noted that the Approval Holder's project information shows 19 ha of land will be affected permanently (i.e., for the life of the Project), and he stated that the temporary land areas to be affected amount to approximately 427 ha. He therefore concluded that the success of land/soil mitigation for temporary use areas is significant. He explained that the "area of effect" for his analysis was measured on the basis of the shape files supplied by Dillon Consulting Limited ("Dillon").

42 Mr. Hoffman interpreted the determination of "serious" as having three components: rarity (relatively rare or in 'short supply' at a regional through to a national scale); mitigation limitations (rehabilitation will not result in soil that will "match or exceed" the land's characteristics pre-construction); and necessity (a consideration of whether poorer lands are available).

43 Mr. Hoffman analyzed the soil capability classes of the Project site, and soil potential ratings, noting that the best soils with no limitations for production of common field crops are ranked as Class 1. He concluded from his analysis that soil capability likely to be affected by the Project is almost entirely Class 1, and is much higher than the average for Dufferin County.

44 He testified that, although the Project area has not been recognized as a specialty crop area from a land use planning perspective, the proposed Project location is at one of the locations in Dufferin County where it will cause the most serious harm. "Soil potential rank" rates soils for fruit and vegetable production. He testified that the Project site has the soil potential for a "restricted range" of specialty crop, in that the soil potential for potato production is high. Mr. Hoffman disagreed with Dr. Wall's contention that potatoes are considered a common field crop, and stated that potatoes "can reasonably be classified as a specialty crop" within the "fruit and vegetables" category. Mr. Hoffman further testified that, when corrected for size, Dufferin County is the most important potato producer in Ontario. He acknowledged that Simcoe County produces more potatoes, but noted that it is larger in size.

45 Mr. Hoffman agreed with Dr. Wall that *Planning Act* considerations do not apply to the wind project. However, he used the PPS to demonstrate a relative hierarchy of value in land. He also noted that *Planning Act* considerations are relevant where an environmental assessment is required for electricity projects, where the Ontario Energy Board is considering the location of hydrocarbon pipelines.

46 Mr. Hoffman considers "irreversible" to mean that "land will probably not regain its former productivity during the lifetime of the wind turbines." He believes crop yields in this case will be affected to such a degree that soil capability Class 1 will "reasonably be reclassified as soil capability Class 2". He concluded, at the end of his reply witness statement, the following:

> The Dufferin Wind Power Undertaking will cause irreversible harm to land because changes to soil structure due to soil compaction cannot be mitigated except by the natural processes that created the soil structure in the first place.

47 With respect to mitigation, Mr. Hoffman's view is that avoidance of the better agricultural land should be the first mitigation measure considered. His criticisms of the Project's planned mitigation measures are that little detail has been provided (e.g., no detailed soil map and locations of drainage swales), and there is no requirement for wet weather shutdown or criteria that would be used to indicate when the shutdown will occur. He disagreed with Dr. Wall's statement that construction practices and soil management techniques have evolved considerably over the past 30 years. In Mr. Hoffman's view, there is simply more oversight, which he calls a "policing" effect.

48 Mr. Hoffman believes that the Project will cause considerably more soil compaction than would farm equipment, due to the difference in the number of machines and frequency of their use. He pointed out that Mr. McEwan, in his affidavit, does not reference the total number of trips, vehicle loads, number of passes and conditions that are laid out in tables in Dillon's Final Construction Report (2012), such as Table 5 on page 42.

49 Mr. Hoffman acknowledged that he was involved in a study prepared for the MNR in 1985 which found it was possible to rehabilitate gravel pits to tender fruit production in some cases. However, he testified that the literature does not say that rehabilitated soils will have the same percentage of productivity, i.e., the same output given the same inputs.

50 In conclusion, Mr. Hoffman stated that the Project

> is not a reasonable location for wind turbine development. There will be lands permanently affected by the proposed Undertaking and there are poorer lands available to accommodate the wind turbine use. Therefore, the proposed Dufferin wind power Undertaking will result in serious and irreversible harm to land.

Dr. Gregory Wall

51 Dr. Wall was qualified as an expert in soil science. He was retained by the Approval Holder to provide opinion evidence on two points:

- Whether the Honeywood soils referred to in the Appellants' materials are unique soils particularly suited to potato farming; and

- Whether the Honeywood soils referred to in the Appellants' materials can be removed during the construction phase of Dufferin's wind farm project and subsequently restored to their current state.

52 It is Dr. Wall's opinion that, "while the Honeywood soils in Dufferin County are well-suited to potato production, they are not the only soils in Ontario that are well-suited to potato production." In addition, his view is that "soil restoration, including with respect to Honeywood soils, is possible following development projects."

53 Dr. Wall testified that the best farmland in Canada is within 100 miles of the Great Lakes, although nationally, it is in short supply. He said that Honeywood soils are fairly widespread in Ontario, Dufferin being only one county in which they are found (others include Oxford, Middlesex, Brant and Waterloo). He said that other soils are very similar, such as "Brant". Dr. Wall stated that there are approximately 45,000 acres of the Honeywood soil series in Dufferin County. He is not familiar with the "15,000 acre Honeywood Plateau" referred to by Mr. Vander Zaag, and does not believe there is any basis to differentiate the soils. He does not believe the soils in the Project area should be considered "unique".

54 Dr. Wall stated that he is aware of successful rehabilitation of Class 1 soils, in contrast to Mr. Squire who said that he is not aware of such examples. He noted that, over the last number of years,

> the installation of utilities on private land has undergone significant changes in terms of planning considerations, construction, restoration, and remediation techniques. The advent of comprehensive environmental assessments has resulted in much improved planning and construction techniques.

55 He gave examples of such techniques in pipeline construction, and hydro towers. One technique involves building temporary access roads to maintain towers, which are then removed. Another is to keep the various layers of topsoil, subsoil and geologic materials separate when excavating, and return them in the proper order and compacted to original densities.

56 Dr. Wall noted that some of the components and considerations of a plan for a new utility corridor on private land will now typically include:

> landowner input, grading to original contour, topsoil stripping and storage, subsoil de-compaction, drainage (field tile and natural) management, restoration plans, landowner access consideration, third party monitoring of construction activities, wet weather shut down criteria, and seasonal construction restrictions.

57 He testified that he is involved in monitoring construction of a pipeline in the London area, and that wet weather shut-down is an important component of the plan in that case. In his view, the soil modification required for a wind turbine is not as drastic as for a pipeline. The largest issue is one of compaction. He said that compaction is not irreversible; rather, it is the easiest thing to remediate. Dr. Wall testified that farmers, and pipeline companies, have been successfully remediating compacted soil for many years.

58 Dr. Wall compared the tower base to a pipeline situation, noting that current construction practices go to great lengths to separate the topsoil from the subsoil and to not allow them to be mixed. In addition, he agreed the wet weather issue is an important one. No bulldozers should be allowed in when the soil is too wet. In the concluding paragraph of his witness statement, Dr. Wall gave the example of a soil restoration project with which he is currently involved, installing a pipeline of over 1 m in depth in a clay loam textured till. He stated that using modern construction and management techniques in pipeline installations, he "expects these lands to return to original crop production levels within ten years. It is my understanding that landowners affected by pipeline construction are often compensated on this basis."

59 With respect to the scale of the impact, Dr. Wall referred to s. 1.8.3 of the PPS, which states that renewable energy projects should minimize impacts on agricultural operations:

> Alternative energy systems and renewable energy systems shall be permitted in settlement areas, rural areas and prime agricultural areas in accordance with provincial and federal requirements. In rural areas and prime agricultural areas, these systems should be designed and constructed to minimize impacts on agricultural operations.

60 Dr. Wall testified in his witness statement to his understanding, based on his review of the Approval Holder's website, that the "wind farm project will be spread out over approximately 2,400 hectares". He noted that the wind turbines and other project components would be constructed on privately owned land, under lease agreements between landowners and the Approval Holder, and that much of this land is, and will continue to be, used for agricultural purposes. He calculated that the amount of topsoil temporarily impacted by the construction represents approximately 110 ha, or less than 5%, based on that total area.

61 At para. 19, of his reply witness statement Dr. Wall put the amount of soil affected "into context" this way:

> To put this in context, all of Dufferin County accounts for only 16% of potato production in the province... The area of the Dufferin wind farm project represents a small fraction of Dufferin County (Dufferin County covers an area of approximately 150,000 hectares). Within that small subset of Dufferin County, less than 5% of the soils in the project area will be affected. Accordingly, the impact of the construction on Dufferin's wind farm project on the total potato production in the province will be infinitesimal.

62 He stated at para. 24 that "(t)here is no evidence that this effect will have any impact on the productivity of any farm in this area."

63 In cross-examination, Dr. Wall confirmed that in his experience environmental assessments have resulted in improved construction techniques, and that no environmental assessment took place for this Project. He noted, however, that in his opinion a detailed assessment of soils and agricultural activity had been undertaken. Nonetheless, he agreed that in an environmental assessment situation, decisions about placement of infrastructure would have been based on their environmental impact. He agreed there are no conditions in this REA that require the use of mitigation techniques related to soils.

64 Dr. Wall testified that pipelines that were installed without appropriate mitigation techniques in the 1960s resulted in significant yield restrictions. However, with the "major changes" in mitigation techniques, full yields are now experienced approximately two years post-construction.

65 Dr. Wall stated that climate also plays a major role in remediation of disturbed land. He did, however, agree that "you cannot get better than a Class 1 soil. Rehabilitated soil could, at its maximum, return to its original capability."

66 Dr. Wall noted that the Ontario Power Authority has been directed by the Minister of Energy not to enter into contracts for certain solar power projects when those facilities would be located on prime (Class 1 to 3) agricultural lands or specialty crop areas as defined in the PPS. He was not aware of a similar restriction for wind farm projects.

67 He acknowledged that the soil management plan referred to in para. 21 of his witness statement, which provides for the removal and temporary stockpiling of soil during construction, is not before the Tribunal, and that the REA has no condition requiring it.

Alex Campbell

68 Mr. Campell was qualified to give opinion evidence as a soil scientist with expertise in soil management. He testified on behalf of the Director. Mr. Campbell testified that any disruption to a soil surface as a result of construction will have some negative impact on the soil and crops grown, but that within five years or less crop yield rebounds and production levels are no longer affected. He cited as common examples: transmission power lines, pipelines, and drain layers. Even in cases of more serious disturbance, such as mine tailings storage, there are examples of areas rehabilitated to a point where crops could be grown. He indicated in cross-examination that these results were qualified, and that total crop failures had occurred in years of weather stress. However, he also noted that total crop failures could also occur on undisturbed land due to unfavourable weather.

69 Mr. Campbell testified that impacts like compaction can be offset by other advantages; for example, tile drain installation can result in drastic improvements even where an entire field is ripped apart and heavy construction vehicles pass over almost every inch of the field. He stated that crops can continue to thrive and do better due to drainage. In his view, crop yield may be significantly impacted in the short term and immediately after construction, but will not be significantly impacted over the long term. In his experience with pipeline rights-of-way, crop yield returns to pre-construction activity levels within five years, and usually within one to two years. He said that soil compaction is one of the easiest disturbance impacts to mitigate, and that after mitigation the crop yield is very close to, if not better than, the production in surrounding soils.

70 With respect to the amount of arable land involved, Mr. Campbell assessed the amount lost due to the presence of wind turbines to be insignificant. He noted that other normal farming practices would result in the loss of crops, such as putting in dairy facilities or using arable land as pasture. In response to Mr. Squire's contention that the soil is irreplaceable, Mr. Campbell's view was that "general best management practices and soil reclamation and conservation practices are such that the soil can be preserved, and a disturbed site can be rehabilitated to pre-disturbance conditions." He testified that these soils are very "forgiving".

71 Mr. Campbell stated at para. 35 of his witness statement that:

> Given proper land stewardship, best management practices, an environmental monitoring plan as required in the REA, the mitigation measures stipulated in the Public Consultations, Consultation Report, Final Construction Report and the Design and Operation Report of Dillon, for dealing with the construction activity, all but the permanent loss areas will be rehabilitated. It is necessary to ensure that these measures are undertaken, as per the required Environmental Monitoring Plan.

72 Mr. Campbell then examined the allegations of "permanent loss" and "temporary loss" areas made by Mr. Hoffman and Mr. Vander Zaag concerning the 196 ha to be used for temporary storage and laydown, 427 ha of temporarily disturbed soils and 19 ha of permanently removed soils, totalling 642 ha. He noted that a total of 623 ha (97%) of the area will be subject to temporary uses and therefore not irreversibly harmed, and that the remaining 3% comprises the 19 ha that will be permanently lost. In determining whether the 19 ha of permanently lost soil is significant, Mr. Campbell compared it to "all known Honeywood Series soils in Dufferin County", stating that it makes up 0.1%. He further noted that the entire disturbed area of 642 ha makes up 3.5% of the Honeywood soil series.

73 Mr. Campbell concluded that in his opinion, "what is being proposed and the resulting permanent loss is not serious as it represents less than 0.2% of the soils area of Melancthon Township and less than 0.1% of the estimated total amount of Honeywood soils." He noted that all of the Honeywood soils have not been mapped to date. Further, he testified that these soils are not unique, and not a special type of soil.

74 On cross-examination, Mr. Campbell agreed with the statement that to minimize damage, one must handle the soils carefully and use proper techniques, and that the REA does not include these requirements. However, he believes it is not possible to include every detail as a condition in the REA. Instead, it is necessary to include the basics and accept the methodologies and best management practices that will be applied. With respect to how long one can stockpile soil, Mr. Campbell testified

that it can be stored for a number of years, but that five to ten years would be "pushing the envelope" because organic matter would not be inputted again.

Discussion, Analysis and Findings on Harm to Soils

75 In addressing the question of harm to soils, the parties addressed the following issues:

(i) Are soils under agricultural production included in the definition of "natural environment" in s. 1 of the *EPA*?

(ii) Is the Appellants' concern harm to the natural environment or impact on commercial potato production?

(iii) Will the Project cause serious and irreversible harm to soils?

(i) Are soils under agricultural production included in the definition of "natural environment" in s. 1 of the EPA?

75 The Appellants note that the *EPA* defines "natural environment" as the "air, land and water", and submit that soils are part of the land. They note the decision in *Kawartha Dairy Ltd. v. Ontario (Director, Ministry of the Environment)* (2008), 41 C.E.L.R. (3d) 184 (Ont. Environmental Review Trib.) ("*Kawartha Dairy*"), in which the Tribunal accepted a residential dwelling to be part of the natural environment, and found that the "migration of a contaminant to the interior of a building resulted in an impairment of the quality of the nature of the natural environment for use as a residential property" (at para. 26).

76 The Appellants further state that the *Natural Heritage Assessment Guide for Renewable Energy Projects* ("NHA Guide") specifically lists an analysis of surface and subsurface soils as information that may be included on the existing environmental conditions for a proposed project (at page 43 - 44), and assert that soils are viewed as part of the natural environment in this context. They note Appendix A.2.1 to the NHA Guide, which lists information sources and techniques for describing existing environmental conditions, including with regard to soils.

77 The Approval Holder submits that not everything that resembles a natural feature is actually natural, or treated under environmental legislation as such. As examples, it points to settling ponds and drainage ditches that are constructed as part of approved water treatment systems, as well as the plantings, soil structure and passive hydration systems used to create manufactured wetlands for the treatment of effluent. The Approval Holder asserts that the soils at issue are not part of the "natural environment" because they are regularly processed and restructured due to agricultural activities.

78 The Director agrees that soils are part of the land, and form part of the natural environment. However, he submits that there is nothing natural about these significantly disturbed agricultural soils. The Director also asserts that soils are not natural heritage features that must be considered and evaluated under the NHA Guide and that the NHA Guide does not provide guidance in evaluating and assessing the significance of soils. Furthermore, he notes that while Ontario Regulation ("O. Reg.") 359/09 sets out categories of the natural environment where renewable energy facilities may not be built or may be built only subject to restrictions, it does not prohibit wind farms on productive agricultural soils.

79 The Tribunal finds that the soil in the Project area is included in the *EPA* definitions of "natural environment" and "land" in s. 1. The definition of "natural environment" lists "land", and soils are part of the land. The Tribunal sees no reason to exclude soils from the definition of "natural environment", even where those soils have been worked for agricultural production. The Tribunal also notes that the NHA Guide provides for the analysis of surface and subsurface soils as part of assessing natural heritage features in the context of renewable energy projects.

80 As noted by the Director, O. Reg. 359/09 does not prohibit wind farms on productive agricultural soils. The Tribunal notes that the Minister of Energy is prohibited from entering into contracts for solar panel projects on certain classes of agricultural soils. This suggests that wind projects are not prohibited on agricultural soils based on the assumption that they cover much smaller areas of land. However, this argument does not support a conclusion that agricultural soils are irrelevant to the analysis of harm to the natural environment.

(ii) Is the Appellants' concern harm to the natural environment or impact on commercial potato production?

81 The Appellants submit that it mischaracterizes their argument to say that their case is based on harm to commercial potato production. They say that the evidence of Mr. Hoffman, Mr. Squire and Mr. Vander Zaag was intended to give the Tribunal a practical understanding of how potato crop yields can serve as an indicator of the extent of the Project's impact on soil health and capability' i.e., to be used as a measurement tool.

82 The Appellants assert that evidence was led on the impact of the Project on soils, and that evidence was not led to quantify the loss of commercial production. They also state that the loss of arable land is not purely an economic loss because it impacts the ability of the land to receive and transmit rainfall through the surface and subsurface layers.

83 The Approval Holder submits that the Appellants' submissions and evidence indicate that their ultimate concern is to avoid any risk to commercial potato production on the lands at issue, and to preserve a commercial interest in potato production. It states that the Appellants claim that the soils in Dufferin County are well-suited to potato production, and assert that the Appellants are not asking the Tribunal to intervene to protect the natural environment.

84 The Approval Holder submits that the Legislature did not intend that the Tribunal weigh the relative commercial value of wind farm development over commercial potato production, and that such an exercise is not properly before this Tribunal.

85 The Director also submits that the Appellants' main concern is a disturbance in the ability to cultivate a profitable potato crop, and not harm to the environment. He states that the Appellants' evidence about the composition, characteristics, location and drainage of Honeywood soils does not establish them as significant natural heritage features, but does demonstrate that the terrain is well suited to potato production.

86 While the Appellants have presented the issues relating to harm to soils in the context of commercial potato production, the Tribunal accepts that their case concerns the issue of harm to the natural environment. While the Appellants did focus on the impacts on soil productivity to illustrate the nature of the harm to the soil, they did not characterize the issues in purely commercial terms, which would not be a relevant consideration under s. 145.2.1 test, and did lead evidence alleging that the Project would have an impact on the soil itself. For example, Mr. Vander Zaag raised the issue of irreversible harm to the soil profiles of topsoil, subsoil, overburden and underlying limestone karst, noting that they were, in his view, "one living thing". Mr. Hoffman testified about changes to soil layers, soil organic matter content, soil structure and water infiltration rates.

(iii) Will the Project cause serious and irreversible harm to soils?

87 The Appellants submit that the Project will cause serious and irreversible harm to soils in the Project area. They say that the soils in the Project area are significant based on a variety of measures of significance, stating that Mr. Hoffman testified on the scale of the disturbance to the soils and Mr. Squire and Mr. Vander Zaag identified additional harms to the soils, including the limitations on farming the land leased for the Project. The Appellants argue that, in assessing the extent of lands that will be affected by the Project, the Tribunal should consider that significant amounts of productive agricultural lands, which are undisturbed by construction activities, may also be rendered sterile and unproductive due to poor layout of the Project, and the unimpeded discretion of the Approval Holder with respect to project placement. They assert that the Project will reduce the productivity of the farmland in the Project area by removing highly productive land from use for potato farming, by interfering with adjacent land, by compacting the soils, by mixing in gravel from access roads, and by disrupting drainage systems. They say that the current four soil horizons will become two horizons, changing the water movement within the soil.

88 The Appellants argue that there are three components to "serious" harm in the context of soil: rarity; mitigation limitations; and necessity. They submit that significant disturbance to the soil and interruptions in drainage will affect productivity on lands with relatively rare characteristics and productivity. They say it is not possible for mitigation to restore or improve the soil characteristics to their pre-construction state. The Appellants assert that, even after temporary access roads are removed, the harm to the soil will not be reversible through human intervention because once the different horizons of the soil have been mixed, they cannot be unmixed and will be permanently changed. They also assert that it is not necessary to locate the Project on Class 1 lands with high soil capability, based on the seven CLI soil classes. They note other planning and assessment policies and guidelines that restrict the siting of development on prime agricultural lands.

89 The Appellants submit that there will be a permanent loss of soil under the cement pads required for the Project and a partial loss in areas where the soil cannot be returned to its original character. While they acknowledge that the soils may return to their original condition over a long period of time due to the natural processes that produced the soils in the first place, they say it is more reasonable to consider irreversibility in the context of a 25 year period relative to the life of the Project. As noted above, they assert that harm to the soil will not be reversible because the soil horizons cannot be unmixed, once mixed, and so will be permanently changed.

90 The Appellants argue that the harm will be irreversible because soil capability will be reduced and there will be crop yield losses following construction, even if mitigation measures are implemented and construction is adequately supervised, because the most productive soils cannot be returned, through rehabilitation, to pre-disturbance levels of productivity, with the same inputs and management. They further submit that the Tribunal has no reliable evidence before it regarding the mitigation measures that will be implemented, and there are no conditions in the REA as to how soils will be treated in the Project area.

91 The Approval Holder submits that the alleged harm to commercial soils is not serious, but narrow and economic. It further submits that all disturbance will be temporary, whether for construction or over the life of the Project. The Approval Holder disputes Mr. Hoffman's assumption that 427 ha will be affected by construction activities, and asserts that less than 110 ha of soil will be disturbed by construction. In response to Mr. Hoffman's allegation that 19 ha will be removed from the Project permanently, it says that approximately 17 ha will be affected throughout the life of the Project, or less than 1% of the entire 2,400 ha Project area.

92 The Approval Holder states that the question of whether the Honeywood soils are unique is irrelevant, although it argues that they are not unique but abundant in Ontario, and just one of many Class 1 soils in the area. It submits that the question of the CLI soil classification may be relevant, and notes that 60% of the soils in Dufferin County are rated Class 1, and Class 1 soils are abundant in southern Ontario. The Approval Holder states that, while the Class 1 soils in Dufferin County are well suited to potato production, many other soil types in Ontario are also well suited, including the sandy Class 3 soils in Simcoe County, which produces the most potatoes in the province. It asserts that the Ontario government has restricted the construction of ground-mounted solar generation facilities greater than 10 kilowatt ("kW") on Class 1 to 3 soils, but has placed no such restrictions on wind turbines, and concludes on this basis that the Ontario Government "does not consider the minor displacement of Class 1 soils resulting from the installation of wind turbines to be sufficiently significant to warrant restrictions."

93 The Approval Holder asserts that any impact of the Project on the soils will be minimal, both due to the small amount of land affected, as discussed above, and based on the Dufferin soil management plan that will be in place to protect the soils.

94 The Approval Holder states that the Appellants have not shown that any loss of harvestable area caused by the presence of wind turbines is irreversible. It submits that, to be "irreversible", harm to the natural environment must be incapable of remediation following the decommissioning of the Project. The Approval Holder cites *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*, [2013] O.E.R.T.D. No. 40 (Ont. Environmental Review Trib.) ("*APPEC*"), at para. 625, in which the Tribunal found that the wind power generation project at issue in that case would not cause irreversible harm to plant life, recognizing that vegetation recolonizes wind turbine bases after the removal of wind turbine infrastructure. It asserts that, with the use of soil management techniques planned for the Project, such as separately stockpiling the topsoil and subsoil, the soils can be brought back within one or two years, or up to four to five years in the case of the most disturbed areas.

95 The Director takes a similar position to that of the Approval Holder, and submits that construction will disrupt soils and have some negative impacts initially, but that mitigation measures can minimize impacts such as subsoil compaction. He argues that the loss of crop land as a result of the Project is comparable in scale to land used for other farm activities other than crop production, such as dairy facilities and pasture lands. The Director states that rehabilitation will depend on proper land stewardship, best management practices and compliance with the Environmental Effects Monitoring Plan ("EEMP"), as required in the REA, and with mitigation measures set out in the Approval Holder's application documents incorporated into the REA.

96 The Director also submits that the alleged harm is not irreversible, and that disturbance to land where no turbines are placed will be reversed and undetectable within five years. He further submits that best management practices can rehabilitate sites to pre-disturbance conditions, and that temporarily disturbed soil will be returned to its previous level of productivity or better.

97 When applying the environmental branch of the test in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*, the Tribunal stated at para. 206: "the relevant factors, and their respective importance and weight, must be assessed on a case by case basis." The Tribunal agrees with this approach and applies it in this case as well.

98 The Tribunal has considered a number of factors in this case in determining whether the proposed soil disturbance amounts to serious and irreversible harm to soils. These factors include: the amount of soils affected; the quality of the soils (based, for example, on soil capability class, soil potential rank or soil productivity index) and their relative rarity; the degree of harm to the soils that will be caused by the Project; and the degree to which it is possible to restore the soils (remediation or rehabilitation success).

99 The Tribunal finds that one of the factors listed by Mr. Hoffman, the "necessity" of using the soils in the Project location as compared to soils of a lesser quality elsewhere, is a land use planning consideration that is not within the purview of the Tribunal. Similarly, the concern raised by the some of the Appellants regarding interference with farming practices is not within the issues the Tribunal may determine under s. 145.2.1(2) of the *EPA*.

100 In this case, the amount of soils affected is not large by any of the relevant scales referred to in the hearing. There are numerous scales at which the amount of soils to be disturbed could be assessed, as compared to: the total amount of Class 1 soils for in the province, or in Dufferin County, or in the Project area; the amount of Honeywood soils available at any of these scales; or the amount of soils used for growing potatoes at any of these scales.

101 At the Project area scale, for example, there is a difference of opinion between the parties on the exact amount but it appears that, out of the 2,400 ha of land in the Project area, between 110 and 427 ha (or approximately 5 to 18%) of the soils will be disturbed by construction activities and between 17 and 19 ha (or approximately 0.7 to 0.8%) of the soils will be affected throughout the life of the Project. In addition, as noted by Mr. Campbell, approximately 196 ha of land (or 8%) will be used for temporary storage and laydown. Even assuming that potatoes are currently produced on all 2,400 ha of the land, the Tribunal finds these ranges to represent a relatively small percentage of the potential potato producing lands in the Project area.

102 Dr. Wall described the impact of the Project, including construction, on potato production in Dufferin County to be "infinitesimal". He said that Dufferin County covers approximately 150,000 ha of land. Map 3 in Mr. Hoffman's report, filed as Exhibit 65, Tab 2, shows an abundance of Class 1 soils outside of the Project area in Dufferin County. Given that Dufferin County accounts for 16% of potato production in Ontario, it is apparent that much of this land is used for potato production. The Tribunal notes that the Project area takes up only a small part of Dufferin County, and finds that the land potentially taken out of potato production in the Project area, for construction and during the life of the Project, is extremely small in the context of potato production in Dufferin County.

103 Honeywood soils are prevalent across Dufferin County. The Tribunal heard evidence, based on the May 25, 2010 report, "The Honeywood Soils Series and Potato Production in Dufferin County, Ontario," by Dr. J. Kenneth Torrance, that there are approximately 45,000 acres (or approximately 18,210 ha) of Honeywood soil series in Dufferin County. When considered as a percentage of the highly productive Honeywood soils in Dufferin County, the maximum area of 427 ha to be affected by construction activities and the maximum area of 19 ha to be affected for the life of the Project, taken together, represent less than 1%.

104 The Tribunal therefore finds that, at all of these scales, the amount of soils affected by the Project does not amount to serious harm.

105 It is clear that the construction activities and Project components, once installed, will impact the surface soil that has been disturbed by agriculture. However, as noted above, the Project area is small, relative to the size of Dufferin County. Thus,

a relatively small amount of soil will be disturbed for the Project. The Tribunal heard evidence that a certain amount of soil is disturbed and not available for crop production in the normal course of farming activities as well, through such activities as barn construction and pasture land. The Tribunal finds that the amount of soil to be disturbed in order to construct and operate the Project is consistent with the scale of disturbance for roads, farm buildings and other facilities required in the normal use of agricultural lands. The Tribunal adds that the above findings are specific to this case and that a relatively small disturbance to an environmental feature that is less widespread may be considered serious.

106 With respect to the quality of the soils, the Honeywood soils are not identified as a "specialty crop area" under the PPS, and the Tribunal heard no evidence that the Honeywood soils constitute a significant natural heritage feature. However, the Honeywood soils are Class 1 and clearly of high quality and prized, among other things, for profitable commercial potato farming. These soils possess special characteristics that allow potatoes, for example, to be grown at high production rates with relatively few inputs. The Tribunal finds that it is unnecessary to make a finding respecting whether reducing soils now classified as Class 1 to Class 2 or a lower CLI classification post-remediation would constitute serious and irreversible harm as the Tribunal finds, as discussed below, that in this case, the Appellants have not established that the soil will be reduced to a lower CLI classification post-remediation.

107 The Tribunal will now turn to the question of whether remediation of these Class 1 soils is likely to be successful. With respect to soil that is intended to be remediated after the Project is decommissioned, the Tribunal finds that a time scale spanning the operation and decommissioning is appropriate for analyzing irreversible harm to soil. The Tribunal notes that different time scales may be more appropriate for other environmental features and for different types of harm, such as animal mortality.

108 The Tribunal observes that, although it is not a condition of the REA, the Approval Holder is developing a soil management plan that seeks to preserve and ultimately restore the soils that are disturbed through construction of the Project.

109 The success of mitigation and remediation measures is crucial to determining the extent of the long-term impact. The Tribunal heard evidence that, in accordance with the soil management plan, soil would be removed in layers, stockpiled and eventually used to reconstruct reasonably productive agricultural soil. The experts had different views as to whether the reconstructed soil would be as productive as it was prior to disturbance, but no one testified that the reconstructed soils would not be capable of producing agricultural crops, nor even potatoes.

110 The Tribunal notes that the soil management plan is not included as a specific condition in the REA. However, condition J1 of the REA states that the Approval Holder shall implement the EEMP and the commitments made in the listed reports, including the Environmental Impact Study ("EIS") report. The EIS sets out a description of Project construction activities, including soil management, at s. 7.

111 The Appellants have not satisfied the Tribunal in this case that the soils will be reduced to a lower CLI classification post-remediation. The evidence of the Appellants on this point did not rise above the level of a concern. The Tribunal accepts Dr. Wall's evidence in this regard, which is based on his considerable experience with respect to pipeline construction, that Class 1 soils can be successfully rehabilitated.

112 The Tribunal accepts that the mitigation measures, if applied as described by the experts for the responding parties, will be successful in restoring the soils to productive agricultural use and are appropriate to the scale of soil disturbance as a result of the Project. Therefore, the Tribunal finds that the Appellants have not established that the Project will cause serious and irreversible harm to soils.

b) Harm to Groundwater Resources and Local Wells

113 Mr. Vander Zaag raised concerns related to water quality and quantity, in particular the potential for the Project to interfere with the water supply to irrigation wells in the area. He noted a concern that excavation during construction of the Project "could intersect our underground streams that exist in the karst as well as allow foreign material from the construction process to enter the karst 'water highways' unfiltered." Mr. Vander Zaag notes there is no detailed analysis in Dufferin's materials

of each foundation site, to determine if Dufferin is going to be blasting into the limestone rock. In addition, Ms. Bovaird's notice of appeal lists a concern about the impact of the Project on water bodies in the areas bordering the Niagara Escarpment.

114 No expert witnesses were called by the Appellants related to the impact of the Project on the water supply, although witnesses who testified on soil and agricultural impacts touched on water recharge and the permeability of the soil.

John Petrie

115 The Approval Holder called Mr. Petrie to give evidence on the impact of the Project on groundwater in the area. Mr. Petrie was qualified to give expert opinion evidence as a hydrogeologist. Mr. Petrie was asked by Dufferin to provide an opinion on the potential for the planned construction of the wind turbine foundations to affect the water supply of the underlying aquifer or interfere with the performance of the irrigation wells in the area. He concluded that "the planned construction will not affect the water supply potential of the underlying aquifer or the performance of any high yielding bedrock irrigation wells located 500 m and more from the nearest foundation."

116 Mr. Petrie described the Amabel limestone, found in the Project area, as a regionally extensive aquifer which provides water supplies for a number of municipalities, rural residences and commercial irrigation requirements. In his witness statement, he described the aquifer as being "typically in excess of 20 metres thick and contains abundant quantities of good quality groundwater." In oral testimony, Mr. Petrie described the limestone as being "weakly karstic in some places", which means the water moves underground through fractures, fissures and some tunnels. If soil or sediment gets into the karst, it may result temporarily in cloudy water from a well in the aquifer, but would get flushed out within a day or so due to the overall movement of the water underground.

117 Mr. Petrie explained that two tests have been done in the Project area to calculate the depth to groundwater. A study by SPL Consultants Limited ("SPL") on behalf of Dufferin found groundwater more than 4 m below surface, while Dillon located groundwater less than 4 m from the surface at 25% of the locations surveyed. Mr. Petrie stated the results likely differ due to the timing of the measurements, as groundwater rises in the spring. The SPL measurements took place in the winter, and the Dillon measurements took place in the spring.

118 In any event, Mr. Petrie testified, excavation for the turbine bases will be less than 3 m in depth and will not encounter groundwater. He described the footprint of each turbine tower as "small", measuring 25 m × 25 m, which would not eliminate recharge but deflect it to the sides of the turbine base. Mr. Petrie testified there is no reason to believe the Project will have any effect on local wells, or on the recharge of aquifers.

119 In cross-examination, Mr. Petrie testified that the amount of hydrogeological study that should take place prior to a development is dependent on the impact the proposed development is likely to have. A quarry, for example, which would excavate below the groundwater level and require pumping, would require far more extensive hydrogeological studies. In this case, however, there is no likelihood of interference with any local wells and sufficient study has taken place, in his view.

Analysis and Finding on Harm to Groundwater Resources and Local Wells

120 The expert evidence of Mr. Petrie was not challenged by the Appellants, who simply raised concerns unsupported by evidence. On the basis of Mr. Petrie's evidence, the Tribunal finds that the Appellants have not established that the Project will have a negative impact on the aquifer, and consequently on the well water, in the area. The Tribunal finds therefore that the Appellants have not established that the Project will cause serious and irreversible harm to groundwater resources and local wells.

c) Harm to the natural environment through visual impact in relation to the Niagara Escarpment

121 The NEC was granted Presenter status at the preliminary hearing. Two persons spoke at the hearing on its behalf: Bohdan Wynnycky, manager of the NEC, who was qualified to give expert opinion evidence as a professional planner; and Linda Laflamme, a landscape architect who was qualified to give expert opinion on visual impacts.

122 Under the *Niagara Escarpment Planning and Development Act* ("*NEPDA*"), the NEC is charged with implementing the NEP. While no portions of the Project are planned within the NEP boundaries, several proposed turbines are located adjacent to the NEP area.

123 The purpose of the NEP is:

> to provide for the maintenance of the Niagara Escarpment and the land in its vicinity substantially as a continuous natural environment, and to ensure only such development occurs as is compatible with that natural environment.

124 The objectives of the NEP include: (iv) "To maintain and enhance the open landscape character of the Niagara Escarpment in so far as possible, by such means as compatible farming or forestry and by preserving the natural scenery;" and (v), "to ensure that all new development is compatible with the purpose of the Plan."

125 The NEC has addressed the issue of wind power projects and the Niagara Escarpment in two policy papers, delivered in 2003 and 2004, which are now operational policy. Specifically, the Commission Recommendations from 2004 include the following:

> **Recommendation 4**
>
> The Niagara Escarpment Commission should review wind power proposals in areas adjacent to the Niagara Escarpment Plan boundaries where the physical presence of the structures and the motion of the blades may have a visual impact on prominent Escarpment features and landscapes, and provide comments based on the effects the facility(s) may have on the Escarpment landscape character and natural scenery.

Bohdan Wynnycky

126 Mr. Wynnycky testified that, from March to June 2012 there was active consultation and interaction between NEC staff and the Approval Holder's agent, Dillon, during which the Approval Holder was made aware of the NEC's specific concerns. A viewshed analysis was prepared by Dillon, on behalf of the Approval Holder.

127 Mr. Wynnycky said that s. 62.0.2 of the *Planning Act* provides that the NEP continues to apply with respect to renewable energy undertakings, while other provincial plans do not. It reads:

> 62.0.2 (1) Despite any Act or regulation, the following do not apply to a renewable energy undertaking, except in relation to a decision under section 28 or Part VI:
>
> 1. . . .
>
> 2. a provincial plan, subject to subsection (2)
>
> **Exception**
>
> (2) Subsection (1) does not apply in respect of,
>
> (a) the Niagara Escarpment Plan...

128 Mr. Wynnycky argues that the objectives of the NEP and its policies continue to be in play if the NEP area is impacted by a proposed development, whether or not the development is physically located in the NEP area.

129 In 1976, the Ministry of Natural Resources ("MNR") and the NEC jointly produced a Landscape Evaluation Study for the Niagara Escarpment Planning Area, which rates the scenic resources of the area. The introduction to that document notes that:

> the Niagara Escarpment Commission viewed the landscape study as a pre-requisite to pursuing one of the stated objectives of the Plan — that of "maintaining and enhancing the Escarpment's open landscape character". An assessment of landscape quality was regarded as an essential factor both in determining policies that might be developed to protect scenic areas and to arrive at judicious land use allocations in the planning process.

130 Mr. Wynnycky stated that several of the proposed turbines are in areas deemed to be of "outstanding" visual quality within the NEP area, which was the highest rating for scenic resources in the 1976 study. Such views are afforded an exceptional level of protection within the NEP. It is for this reason that the NEC argues that the Tribunal should give serious consideration where initiatives may have an impact.

131 Mr. Wynnycky agreed on cross-examination that the *NEPDA* includes an entire legislative scheme for development permits within the NEP development control area; a scheme which includes a review by the Hearing Officers where a permit is refused, and penalties for undertaking development without a permit. Development outside the development control area, however, does not require a development permit from the NEC.

Linda Laflamme

132 Ms. Laflamme testified to the viewshed report prepared by Dillon and the NEC's resulting recommendations.

133 She testified that the NEC has policies related to "open landscape character" and scenery. She referred to the Purpose of the NEP, which states it applies to the "vicinity" of the Escarpment.

134 The NEC has a policy that "adequate public access" includes visual as well as physical access to the NEP area.

135 The NEC considered the Project proposal and concluded that only four of the proposed 49 wind turbines would significantly visually impact the protected "outstanding" views, and recommended that four turbines (T1, T2, T20 and T21) be relocated to minimize the impact.

136 Ms. Laflamme testified that, rather than implement the NEC recommendations, Dufferin left all four turbines and further chose to replace T21 with a taller turbine, creating a more significant visual impact (from 130 m to 136.5 m).

137 Ms. Laflamme referred to several Observation Points ("OP"), and in particular OP 13, which looks across the Noisy River Valley. This particular viewscape, over a pristine/intact area is rated "outstanding" in the 1976 report. OP 13 is 5.5 km from the closest turbine, T1, with T2 a close second. The NEC recommended to Dufferin that those two turbines should be moved. The computer modeling analysis shows a number of other turbines will be clearly visible at OP 13.

Norman Wolfson

138 Mr. Wolfson was granted Presenter status. Mr. Wolfson, together with Sandra Wong, owns a 100-acre property on the crest of the Niagara Escarpment in Mulmur. They are primarily concerned about serious and irreversible harm to the natural environment, particularly as a result of visual impact, light pollution and flicker from the proposed 49 turbines. Mr. Wolfson states that the "natural environment in this area includes not only flora and fauna, but also landforms (and the visual integrity to, of and from the landform of the Niagara Escarpment)."

139 Mr. Wolfson supports the NEC's views that the turbines will have an impact on the visual landscape, and in particular he is concerned about their interference with the views of the Escarpment enjoyed from his home.

140 Mr. Wolfson is particularly concerned with turbine T21, which is situated between his home and the setting sun, and he fears the flicker impacts and pulsating lights "will prove to be intolerable". He said that his home is located approximately 3,000 m from T21. Mr. Wolfson is concerned he may have to make alterations to the house because currently, the bedroom, study and studio all face west. He is also concerned about the impacts of turbine noise on their peaceful enjoyment of their property.

141 Mr. Wolfson raised concerns with the accuracy of Dillon's visual assessment document, which he finds misleading. In particular, he believes the elevations are wrong as T21 is shown at 136 m above sea level while his house is approximately 500 m above sea level.

142 Mr. Wolfson further raised concerns regarding the loss of prime agricultural land, and negative impacts on birds and bats. In this regard he testified that his home is in a migration pathway and that geese barely get above the house, on the 500 m above sea level natural ridge. He recently counted 28 species of birds in one day. In addition, Mr. Wolfson sees numerous bats in the area, in the evening.

143 Mr. Wolfson and Ms. Wong request that the Project be deferred until study on health impacts currently underway by Health Canada is complete, especially in view of the fact that Melancthon Township already has a high concentration of turbines. Mr. Wolfson testified that the proposed Project will result in one industrial wind turbine for every 14.82 residents, making it the highest per capita concentration of turbines in North America.

Joan Lever

144 Ms. Lever, a Presenter at the hearing, also provided testimony and documents in support of the environmental concerns raised by the Appellants and other Presenters. Ms. Lever's submissions will be more fully described below, under the portion of the decision dealing with alleged harm to human health.

Eha Naylor

145 Ms. Naylor was qualified to give opinion evidence as an expert planner and landscape architect with expertise in assessing visual impacts. She is a partner at Dillon, which was retained by the Approval Holder to conduct a visual impact assessment of the potential impact of the Project to the viewsheds from the public areas within the NEP area, following concerns raised by the NEC. She confirmed that the "Draft" Report dated October 2012 is the only one that was prepared, and testified that this type of assessment is not a requirement of the REA process.

146 Ms. Naylor described the process for preparation of the visual impact assessment, which involved computer modeling of the location of the Project through GIS mapping which was layered with other information to predict where the turbines would be visible within the "Escarpment view". She testified that Dillon followed the NEC process, which was detailed and prescriptive, and resulted in a conservative estimate. For example, woodlots were considered to be at a 15 m height, while in Ms. Naylor's experience they are generally considered to be at a 25 m height, further obscuring views of the turbines.

147 Ms. Naylor's conclusion was that the four turbines about which the NEC is concerned, T1, T2, T20 and T21, have no significant impact on scenic resources. She acknowledged that a visual assessment is a largely subjective exercise, and that context is important. Elements considered include the complexity of the landscape, where the turbines are sited, and their distance from the viewer. The further away, she testified, the smaller the impact.

148 Ms. Naylor commented on the view from the various OPs modeled. Elements taken into consideration by Ms. Naylor, in assessing views from each observation point, include:

- Distance between OP and turbines;
- Other elements in the scene;
- Whether it is a "complex landscape";
- Whether or not it is a "continuous viewshed"; and
- The level of rated attractiveness of the scene to begin with.

149 In her analysis, Ms. Naylor considered whether the Project diminishes the "visual experience" in the NEP area. In general, Ms. Naylor considers the turbines to be "part of the view" and "part of the scene".

150 With respect to the concern expressed by the NEC witness that T1 and T21 were made taller after the NEC suggested they be moved due to diminishment of scenic value, Ms. Naylor's witness statement explains that some turbines were increased in height from the original plan, and others were reduced in height, depending on optimization of the Project. She agreed in her witness statement that T1 and T21 were modeled at 130 m, but then were changed to 136.5 m in height. Ms. Naylor testified that both T1 and T21 are located in close proximity to 136.5 m turbines, and that the 6.5 m difference in the turbine height would not be discernible from 3.7 km away, the closest OP.

151 Ms. Naylor agreed that it is a subjective assessment and what is acceptable to her, may not be acceptable to other viewers. She also agreed that the area is composed of forested hills and agricultural lands now, and that wind turbines introduce a visual quality very different from the current view. She agreed that areas ranked "attractive" or "very attractive" are sensitive to change, and that in a normally evolving rural landscape, acceptable change is incremental change.

152 Ms. Naylor further agreed that, where there are views of turbines from the NEP area, the visual characteristic will change. However, she testified that the issue Dillon addressed was whether there would be "significant change"; i.e., whether the change would significantly impact one's enjoyment when using the NEP area. She agreed there would be some diminishment of the visual experience.

153 When asked whether the Project view will be consistent with the Purpose of the NEP, "to maintain... as a continuous natural environment", (i.e., whether non-incremental change to a sensitive are of the Plan is "maintenance" of the Escarpment), Ms. Naylor testified that the Project is not within the NEP area, that the views across the Plan area to the Project area are in limited locations and a considerable distance from the Project, and that in her view maintenance of the quality within the Plan area remains intact.

154 When it was put to her in cross-examination that the NEP requires maintenance of land in the plan "and in its vicinity", Ms. Naylor testified that the Plan has boundaries, and that the "vicinity" of the Plan is not clearly established here. The closest turbine is 3.7 km away. In her view, "vicinity" would have to be interpreted as a very large distance to have any impact here.

Analysis and Finding on Harm to the Natural Environment through Visual Impact in Relation to the Niagara Escarpment

155 The Appellants support the submission of the NEC that if the Tribunal is satisfied that lands within the NEP area may be impacted by the Project, its decision should be subject to the policies of the NEC. They also support the NEC's position that the Project will have a visual impact on lands within the NEP area as viewed from the Escarpment. They submit that the Project is not in keeping with the purpose and objectives of the NEP because it will not maintain the Niagara Escarpment as a continuous natural environment and does not preserve the natural scenery of the NEP area.

156 The Approval Holder states that the NEC did not address the statutory test on this appeal under the *EPA*, but spoke to the NEC's governing statute, the *NEPDA*, and the NEP. It submits that there is no legal basis for the position that the policies of the NEC should apply to the Project and this proceeding. The Approval Holder says that the *NEPDA* empowers the Minister to designate lands within the Niagara Escarpment planning area as areas of development control, but the NEC cannot exercise its development control jurisdiction outside of the NEP, and the Project is not within the NEP. It goes on to assert that any impact on the views from the NEP area cannot constitute serious and irreversible harm to the natural environment within the meaning of the *EPA*.

157 The Director submits that the issue of visual impacts is not properly before the Tribunal because visual impacts are not natural heritage features that must be considered and evaluated in a NHA under O. Reg. 359/09. The Director states that the Project is not located within the NEP area and, therefore, is not subject to development control. He further submits that visual impact assessment is a subjective exercise and, in this case, the visual simulations provided by the Presenters demonstrate that the turbines appear as generally distant objects that have no negative impact on the view.

158 The Director asserts that the issue of visual impacts was not raised as an issue in this appeal by a party to these proceedings, while acknowledging that the Appellant Mr. Maguire raised the "considerable visual impact and degradation of the Niagara Escarpment" in his notice of appeal. The Director says, however, that Mr. Maguire did not raise visual impact as a specific issue, nor did he claim that the visual impact of the Project would cause serious and irreversible harm.

159 The Tribunal has recently addressed the distinction between grounds of appeal and issues in *Moseley v. Director, Ministry of the Environment*, [2013] O.E.R.T.D. No. 74 (Ont. Environmental Review Trib.). In that decision, the Tribunal stated, at paras. 24 and 25:

> Thus, in an appeal under s. 142.1 of the *EPA*, the maximum number of grounds that can be raised is two [serious harm to human health or serious and irreversible harm to plant life, animal life or the natural environment]. ...
>
> Rule 29(e) sets out an additional requirement that goes beyond the basic requirements of the *EPA*. This Rule requires an appellant to provide additional information so that the responding parties (and any proposed presenters and participants) know and can prepare for the issues and facts to be raised in the appeal, which is required to be expedited under the legislation.

160 Therefore, the "issues" that may be considered in a REA appeal are limited to those that the Appellants have identified in their notices of appeal. Mr. Maguire did raise the issue of visual impact in relation to the Niagara Escarpment in his notice of appeal. Thus, the Tribunal finds that this issue has been raised by an Appellant in these proceedings.

161 The Tribunal must next turn to the question of whether it has jurisdiction to deal with this issue in the context of a REA appeal. The Appellants submit that the NEP applies to the Project on the basis of the *Planning Act*, which states at s. 62.0.2(1)2 that provincial plans do not apply to renewable energy undertakings, but makes an exception to that provision in respect of the NEP in s. 62.0.2(2)(a).

162 While the NEC provided comments on the Project, it understood that the Project was outside of its specific geographic jurisdiction. The Tribunal accepts the Approval Holder's submission that the exemption in s. 62.0.2(2)(a) of the *Planning Act* applies only to renewable energy projects that are within the NEP. The Project is outside the boundaries of the Niagara Escarpment planning area, and those boundaries may only be altered by regulation by the Lieutenant Governor in Council, under s. 3(2) of the *NEPDA*. The exception in s. 62.0.2(2)(a) does not expand the scope of the NEP outside of the planning area with respect to a renewable energy project.

163 Section 145.2.1 of the *EPA* sets out what the Tribunal must consider in a REA hearing under s. 142.1. Pursuant to s. 145.2.1(2), the Tribunal shall review the decision of the Director and *shall consider only* whether engaging in the renewable energy project in accordance with the REA will cause: (a) serious harm to human health; and (b) serious and irreversible harm to plant life, animal life or the natural environment. In a REA appeal, the Tribunal is constrained by the legal tests set out in this provision.

164 The Tribunal, therefore, finds that it is beyond its jurisdiction to address the specific question of whether impacts on the scenic resources of the Niagara Escarpment are consistent with the NEP.

d) Harm to Bats

Evidence on Bats

165 The Tribunal heard evidence from six expert biologists, three of whom were experts specifically on bats.

166 The areas of dispute among the experts that are relevant to the issues the Tribunal must decide are the following:

- Whether the Project will negatively impact bat habitat (or whether there is sufficient information to make such an assessment);

- The extent to which the Project will cause bat collision mortality;
- The extent to which collision mortality caused by this Project will impact bat species through cumulative effects; and
- How the Project will impact endangered species of bats.

167 The following biological information was not in dispute. There are eight bat species in Ontario: five species of hibernating bats that are resident year-round; and three migratory species that are present in Ontario part of the year. Hibernating bats are active from late April to approximately October in Ontario. They roost in colonies in the summer, in barns or old trees called "snags". In the winter they hibernate in caves, mines and some in old buildings. Migratory bats are present from approximately early May until late September. They are strictly tree-roosting. Bats are insectivores and play an extremely important pest control role in the ecosystem. Each bat eats approximately half its body weight in insects, each night.

168 White-nose syndrome ("WNS"), a disease caused by a fungus that kills bats during hibernation, has devastated hibernating species in the last few years. Two species have recently been put on the endangered list in Ontario: the Little Brown Myotis, also known as the Little Brown Bat, and the Northern Myotis, also known as the Northern Long-eared Bat. Estimates are that 80 to 90% of the Little Brown Myotis species has been killed from WNS in the past few years.

169 Migratory bats make up the highest percentage of bat deaths due to wind turbines across Canada, and 80% of such deaths across North America. Most are killed in Canada during the fall migration from late July to September. Little is known about migratory bat species, and in particular their migratory routes.

170 In preparing its application for this Project, Dufferin retained Dillon to conduct a NHA of the Project area. Natural Resources Solutions Inc. ("NRSI") was in turn retained by Dillon to conduct portions of the NHA specific to bats and bat habitats. NRSI prepared the *2011 Bat Monitoring Report and Environmental Impact Study*, dated December 12, 2011 (the "Bat Report").

Dr. Robert Barclay

171 Dr. Barclay was qualified to give expert opinion evidence as a biologist with expertise in bats and their interaction with wind turbines. Dr. Barclay testified on behalf of the Appellants.

172 Dr. Barclay's criticisms of the bat work done for this Project include the following: it ignores cumulative effects; it relies on the MNR *Bat Guidelines* which use an arbitrary mortality threshold that is not based on science; it under-reports the bat use of the Project area; and two bat species became listed as species-at-risk under the *Endangered Species Act, 2007*, S.O. 2007, c. 6 (the "*ESA")* since the Bat Report was prepared.

173 Dr. Barclay contends that the MNR *Bat Guidelines'* threshold of 10 bats per turbine per year, before mitigation is required, is not based on science, but an arbitrary number.

174 Dr. Barclay testified that the Bat Report does not accurately reflect bat activity over the Project area, and opined that the area is more important to bats than reported. He gave the following reasons:

- The Bat Report focuses on bat roosting sites only, ignoring foraging habitat. Bats are not killed while roosting or hibernating, but when they are foraging for food, commuting or migrating. If there is significant foraging on site, bats can be attracted from a long way away. The *Bat Guidelines* ignore feeding habitat, which is critical habitat in Dr. Barclay's view. Other jurisdictions do consider feeding habitat, when considering the impact of development on bats.
- Most bats killed by wind projects are migratory, but the Bat Report and EIS looked only at hibernating bats. NRSI did its monitoring in late June and early July, prior to the commencement of the narrow six-week window during fall migration. It is simply unknown, therefore, whether the Project includes critical habitat for migratory species of bats. Wind turbine collision mortality impacts migratory bat populations at a broader scale than for hibernating bats, as it will impact their populations in their overwintering sites in the south, as well as summer roosting sites further north. The current state of

science is such that we are not able to identify migratory routes. If a project is located along a migratory route, it may eliminate that route altogether.

• Dillon and NRSI placed microphones to record sounds at only two snags (roost trees) for the entire Project area, which was insufficient. In addition, the chosen trees were in forested areas, but few bats feed within forests, as they prefer forest edges.

• In calculating abundance from the sound recordings, the number of calls was averaged out over 10 hours, while bats are only active at that time of year for 7.5 hours per night. Dr. Barclay calls this "sloppy science".

175 With respect to endangered species, the Little Brown Myotis and Northern Long-eared Myotis have been put on the endangered list in Ontario since the initial EIS studies were done. Dr. Barclay commented that Little Brown Myotis fatalities at the nearby Melancthon wind project represent a significant percentage of its population. The *ESA* prohibits the killing of endangered species. Dr. Barclay emphasized that the population is in desperate trouble, and that additional fatalities caused by wind turbines at this Project will only exacerbate the situation. Dr. Barclay noted that, according to the Bird and Bat monitoring database, almost 25% of bats killed at turbines in Ontario from 2006 to 2010 were Little Brown Myotis.

176 Dr. Barclay put the levels of permitted bat fatalities under the REA into context by stating that the 490 bats allowed to be killed per year at this Project without mitigation (10 per turbine, 49 turbines), cannot be replaced. The number represents several entire maternity colonies for the Little Brown Myotis.

177 In order to estimate the bat fatality rate that will occur from this Project, Dr. Barclay used the fatality rates recorded at the Melancthon wind project as a comparator. Based on his calculations, the fatality rate at Melancthon would result in approximately 78 bat deaths per year at this Project. It represents the approximate size of a Little Brown Myotis colony in a tree, and therefore is equal to killing an entire Little Brown Myotis colony per year. He testified that, with the population having been devastated by WNS, 78 bats deaths /year at one project could have a significant impact on the entire population.

178 Dr. Barclay acknowledged that, had he done his bat fatality estimate per turbine for the Melancthon data as opposed to per mW, then the fatality estimate for this Project would be 17% less. He noted that there is an ongoing debate as to which method of calculation is more relevant, but, in any event, it still represents thousands of bat deaths, which is especially harmful in conjunction with the other proposed or approved wind turbine facilities within 20 km of Dufferin.

179 It is estimated that WNS has killed 80 to 90% of the population of Little Brown Myotis. In Dr. Barclay's view, with endangered species any additional mortality is a significant impact, as it will speed up the demise of the population. One cannot simply discount other causes of mortality due to WNS.

180 In response to Dr. Fenton's comment that agricultural lands have low bat activity, Dr. Barclay noted that studies of wind turbine projects on agricultural lands in Alberta have shown high rates of bat fatality. Further, studies in Alberta have shown that, with an activity rate of six to eight bat passes per night, the project recorded a fatality rate of over 20 bats/turbine/year. Thus, although the activity rate was not deemed to be high, it was related to high levels of fatality.

181 With respect to cumulative effects, Dr. Barclay's concern is that MNR's *Bat Guidelines* view each facility in isolation. He said that both migratory and hibernating bats are very mobile, travelling tens of km per night for commuting and feeding. The *Bat Guidelines* provide that, where 10 bats or more are killed per turbine per year across a project, mitigation measures come into play. The *Bat Guidelines*' focus on a particular number of bats killed per turbine, rather than calculating mortality on a population or landscape level, could lead to very high bat mortality with no requirement for mitigation measures.

182 Dr. Barclay noted that three other wind projects already operate in the surrounding area (Plateau, Grand Valley I and II, and Melancthon), and 12 more are proposed or already approved. He indicated that the population of bats in the entire area should be considered, on a landscape scale.

183 With respect to the effectiveness of mitigation measures, Dr. Barclay agreed that bats do not fly at high wind speeds, and studies have shown that increasing the turbine blade cut-in speed to 5.5 m/sec has been shown to reduce bat fatalities by 60%.

184 Dr. Barclay noted that this REA focuses on mitigation during the migratory period (i.e., Condition J 8 (1) notes from July 15 to September 30). This is strange, he found, as the report itself focuses on resident hibernating bats. Dr. Barclay testified that, if the mitigation measures in this REA were to cover the active period for hibernating bats, it would extend from late April to the end of September.

Amy Cameron

185 The Director called Amy Cameron, a biologist with the MNR, who reviewed, and approved, the NHA. Ms. Cameron was qualified to give opinion evidence as a biologist with expertise in the MNR's REA Guidelines and as an expert in reviewing natural heritage assessments for REA projects. The Tribunal observes that, while Ms. Cameron was qualified to provide opinion evidence, the majority of her evidence was factual.

186 Ms. Cameron described the REA process, and testified that the Approval Holder's NHA was deemed to fulfill the requirements of the Regulation, and the MNR's *Bat Guidelines*.

187 Ms. Cameron noted that condition J15(2), with respect to reporting requirements for species at risk, requires immediate reporting to the MNR if a carcass of an endangered bat is found, so that mitigation measures can be taken immediately.

188 She testified that proponents are subject to the *ESA*, which is separate from the REA requirements.

David Restivo

189 Mr. Restivo was qualified, on behalf of the Approval Holder, as an expert biologist with expertise conducting environmental assessments of wind projects. He works for Dillon which prepared the NHA. Dillon conducted site investigations and identified six woodland candidate bat habitats for further consideration by NRSI biologists.

190 He stated that the "Project Location", as defined by the REA Regulation, includes all development activities proposed to occur on land or in the air. The "Project Area" includes all land, water and air within 120 m of the Project Location.

Andrew Ryckman

191 Mr. Ryckman was qualified by the Tribunal on consent of all parties to give opinion evidence as a biologist with expertise in conducting environmental assessments of wind projects, including assessment of impacts on bats and bat habitats. He testified on behalf of the Approval Holder.

192 Mr. Ryckman works for NRSI, which was retained by Dillon to do a bat study for the Project location. He testified that the work conducted by NRSI "confirmed the existence of the candidate significant bat habitat within the project area that had been identified by Dillon, assessed the likely impact of the project on such habitat and determined appropriate mitigation measures to address and minimize any potential negative impacts as need be." Mr. Ryckman's witness statement notes that "our overall conclusion in respect of the NHA bat assessment is that, assuming the mitigation measures incorporated in the REA are followed, the anticipated impacts of the Dufferin Project on bats and bat habitats are expected to be minimal."

193 In Mr. Ryckman's view, the habitat-based focus of the NHA ensures protection of significant wildlife habitats, and therefore protects the wildlife that rely on those habitats.

194 Mr. Ryckman said that, of the six woodland candidate bat habitats identified by Dillon, three are farther than 120 m from the nearest turbine and therefore fall outside the REA Regulation stipulation that "only suitable habitats within 120 m of the Project location be considered during the evaluation of significance."

195 Mr. Ryckman testified that, in the evaluation of significance stage, NRSI investigated for two types of habitat: bat hibernacula, and bat maternity colonies. Of the three candidate bat habitats that were within the 120 m setback, all three were considered to be significant after an evaluation in accordance with the bat monitoring protocol outlined in the MNR *Bat*

Guidelines 2010. Two were confirmed significant upon further investigation (BMA-003 and BMA-005), and one was assumed significant due to lack of access (BMA-006).

- BMA-003 is a natural feature 4.5 ha in size, which is 86 m to the closest turbine.
- BMA-005 is a natural feature 19.2 ha in size, which is 80 m to the closest turbine.
- BMA-006 is a natural feature 9 ha in size, which is 29 m to the closest turbine, identified as suitable habitat for roosting bats.

196 Mr. Ryckman noted that section 7.3 of the NRSI Bat Report states that NRSI biologists did not find suitable habitat for bat hibernacula within the Project area, according to the guidelines established in the MNR's Significant Wildlife Habitat Technical Guide ("SWHTG"), and the *Significant Wildlife Habitat Ecoregion Criteria Schedules Addendum (draft guidance, undated)*.

197 Mr. Ryckman indicated that, under the REA Regulation, since only three locations were identified as "significant natural features", an EIS leading to possible mitigation measures need only be conducted for these features.

198 Mr. Ryckman described the surveys conducted. Mr. Ryckman testified that provincial standards provide for a minimum of five hours of acoustic surveys, but NRSI chose 10 hours to get a better picture of bat activity in the woodlots through the night. In response to Dr. Barclay's concern that the survey took place partially during daylight hours, Mr. Ryckman testified that NRSI's interpretation of the MNR *Bat Guidelines* is that the standard time for surveying is to begin one half hour before sunset (in order not to miss the bats emerging from their roosts), and end at approximately sunrise. Mr. Ryckman stated that NRSI clarified with the MNR that "dusk" means one half hour before sunset.

199 Mr. Ryckman agreed with Dr. Barclay that the focus of the NRSI Bat Report was on maternity roosting colonies rather than bat foraging habitat, but in his view the protection of these habitats has the effect of also protecting foraging habitat, because any habitat that is considered to be significant is delineated to contain the entire woodlot in which it is found.

200 Mr. Ryckman testified that foraging bats are generally not at risk of collision mortality with wind turbines, because they fly at a lower height than the blade swept area.

201 Mr. Ryckman also agrees with Dr. Barclay that the Bat Report's focus was on hibernating bats, rather than migrating bats.

202 Mr. Ryckman testified that he is confident there is low bat use of the area, despite his acknowledgement that NRSI does not have information on the size of the bat population using the Project area. This is consistent with his understanding that bats do not make extensive use of agricultural fields.

Dr. Scott Reynolds

203 Dr. Reynolds, who testified on behalf of the Approval Holder, was qualified to give expert opinion evidence on bats and impacts of wind farms on bats.

204 Dr. Reynolds testified that the Dufferin site does not contain any of the features that would make it significant habitat for migratory bat activity, such as mountain ridges, large riparian corridors, or coastal shorelines which act as a visual marker during migration. Dr. Reynolds acknowledged that the Niagara Escarpment may act as a geographic landform for migrating bats, but if it were used by bats they would migrate along it, rather than across it. Given its orientation with respect to the Project site, Dr. Reynolds testified the Project would not put any migrating bats at greater risk and they would be unlikely to be impacted by turbines.

205 Dr. Reynolds testified there would be no loss of bat habitat because the EEMP provides there will be no removal of significant bat habitat, and in his view there will be no indirect effects on habitat.

206 With respect to collision mortality, Dr. Reynolds testified that foraging and commuting bats would fly below the turbine blade swept area and therefore not be at risk during those behaviours (3 to 12 m above the ground for commuting). Further, the mitigation measure of increasing the cut-in speed to 5.5 m/s has been proven to be an effective mitigation measure to reduce bat collision mortality. He provided his opinion that the threshold of 10 bats/turbine/year is a reasonable operational threshold.

207 Dr. Reynolds testified that the availability of bat mortality information for the neighbouring Melancthon wind project gives him further comfort in his conclusions. In his view, the Melancthon data, for a project on similar landscape to this Project and in the same general area, shows low collision mortality for bats. According to Dr. Reynolds' interpretation of the data, 98% of the mortality occurred during the fall migratory period, affecting migratory bats, whereas Dr. Barclay had interpreted the mortality as affecting endangered bats.

208 Dr. Reynolds stated that, while much is not known about bats, it is known that three species of bat have consistently been most affected by collision mortality at wind facilities: the migratory tree bats (silver-haired, red, and Hoary bats.) He stated that 80% to 87% of all bat mortality is attributed to these three species.

209 While the Bird and Bat Monitoring Database shows a figure of 23.5% of bat mortality attributed to local hibernating Little Brown Myotis, Dr. Reynolds is confident the number is not an accurate estimate for the Dufferin site for three reasons: the database number is a composite and not predictive for any one project; the data is from a time when the Little Brown Bats were much more numerous on the landscape (2006 to 2010); and almost all the projects from which the data was taken are located within 15 km of a shoreline of a major water body. It is common ground that bats are attracted to shorelines. Dr. Reynolds believes the location of the Dufferin Project inland, away from large water bodies, makes it a much lower risk for bat mortality.

210 Dr. Reynolds agreed in cross-examination that the sampling efforts of NRSI were to sample for summer resident bat activity, not for migratory activity. He testified that, since Melancthon data is available, from a location less than 10 km away, the absence of fall migratory data is not an impediment to reaching a conclusion on bat activity in this Project area.

211 Dr. Reynolds testified in cross-examination that, due to the current lack of knowledge about migratory habitats, he would look for features that suggest migratory concentrations to identify migratory routes. Dr. Reynolds agreed that it "would have been helpful" in this instance to monitor the wetlands on the Project site for bat activity.

Dr. Melville Fenton

212 Dr. Fenton was called by the Approval Holder and qualified to give expert opinion evidence as an expert on bats and bat habitats. Dr. Fenton is the Chair of the Committee on the Status of Species at Risk in Ontario ("COSSARO").

213 Dr. Fenton concludes that, regardless of the issues raised by Dr. Barclay with respect the NHA report underestimating bat use of the area, "it seems clear that, compared to other sites in southern Ontario, the Dufferin site is not an area of high bat activity". Dr. Fenton states that agricultural fields are typically low bat use areas, although no scientific literature was filed to back up this statement.

214 Dr. Fenton relies on the mitigation requirements of the REA to conclude that, even if the bat use of the area is higher than predicted, this does not mean the Project will cause serious and irreversible harm to bat species. He testified that the mitigation measures that will be triggered if the threshold of 10 bats/turbine/year were to be exceeded would significantly reduce the level of any mortality.

215 Dr. Fenton concludes there is unlikely to be any significant mortality risk from this Project to species-at-risk bats, for two reasons: (i) the site is "an area of low activity for them (again there is no hibernacula or swarming site present)", and (ii) the two endangered species of bats are not generally present in the blade-swept area. The Little Brown Myotis forages close to the ground, within 1 to 2 m of the surface of the water, and a maximum of 2 km from maternity roosting habitat. The commuting height for this bat is also below the blade-swept area. Northern Long-eared Myotis mainly forage within wooded areas close to vegetation, and their height depends on the tree canopy.

216 Dr. Fenton stated that the mitigation measures in the REA give him further comfort in stating that bats will not be seriously impacted by this Project.

217 With respect to cumulative impact, Dr. Fenton states that the sizes of the bat populations in Ontario are not known, and as a consequence it is not possible to know whether the mortality level, even if the MNR *Bat Guidelines* threshold were exceeded, would cause any serious and irreversible harm to populations of bats in southern Ontario.

218 Dr. Fenton agreed there is no population database for bats, in the way there is for birds. COSSARO recommended that two species of bats be listed as endangered because of "catastrophic declines" due to WNS, in the order of 95% of the population within one to two years. Based on MNR surveys, 30,000 bats were found to be hibernating in 2009 while in 2013, less than 100 were found.

219 Dr. Fenton reviewed the COSSARO and Committee on the Status of Endangered Wildlife in Canada ("COSEWIC") reports in his evidence. He testified that there is no evidence that wind turbines are causing a precipitous decline in bats. The COSSARO report mentions wind farms as an "additional potential agent of mortality" in deaths of endangered bat species, but Dr. Fenton said the Little Brown Myotis was listed due to concern about WNS, which in his view "trumps everything".

220 Dr. Fenton testified that it is expected that Little Brown Myotis will probably be extinct in five years. For the Northern Myotis, all information is based on American data as there is no data in Canada, and no data on population sizes in Canada. He stated that, regarding the question of how long it will be before the Northern Myotis are extinct, COSEWIC states five generations. However Dr. Fenton said this is a guess because of the lack of knowledge as to what a generation is.

221 In Dr. Fenton's view, the chance of mortality of either of these two endangered species due to operation of the Project is "extremely low".

Submissions, Analysis and Findings on Bats

222 To summarize, the Appellants assert that there will be serious and irreversible harm to bats if the Project is permitted in accordance with the REA. Their submissions greatly focus on hibernating bats, and particularly on the two endangered species, Little Brown Myotis and Northern Myotis. The Approval Holder and the Director argue that none of the experts on bats asserted that the Project will cause serious and irreversible harm to bats. The Director's submissions were generally consistent with those of the Approval Holder.

Appellants' Submissions

223 The Appellants argue that the Tribunal should apply the framework it established for the analysis of an endangered species in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*, and does not need to make a finding about the number of individual bat fatalities that would constitute serious and irreversible harm. They say that the Tribunal has the evidence it needs to make a finding on the population impact of the Project on Little Brown Myotis and Northern Myotis.

224 The Appellants submit that the Tribunal should apply the same factors as it did in its analysis of harm to the endangered Blanding's turtle in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*, because these two species of bat are also endangered. Those factors are: conservation status of the species; species habitat on the site and in the area; vulnerability of the population; type and extent of harm caused by the Project; vulnerability of the species to this type and extent of harm due to its life history traits; mitigation measures in the REA; and demonstrated effectiveness of the mitigation measures.

225 The Appellants state that although Little Brown Myotis and Northern Myotis are listed as endangered under the *ESA* in Ontario, they are not protected by that legislation due to the July 2013 exemption for wind facilities in O. Reg. 242/08. As a result of that exemption, the *ESA* prohibitions on killing, harming, harassing, capturing or taking a living member of an endangered species, and on damaging or destroying the habitat of the species, no longer apply to a person engaged in operating a wind facility if they meet the conditions included in the regulation. Those conditions include giving notice to the MNR of the

operation of the wind facility, preparing a mitigation plan, and monitoring and reporting on the effects of the operation on the endangered species. They note that the Approval Holder's mitigation plan under the *ESA* was not entered into evidence.

226 The Appellants assert that there is confirmed significant bat habitat for endangered bats in the Project area, noting that there are three bat maternal roost colony habitats that were evaluated by Dufferin as significant or deemed to be significant and potentially sensitive to development. These habitats include habitat for Little Brown Myotis and Northern Myotis. Two of these habitats are located 5 m from Project components, and the other is 20 m from Project components.

227 The Appellants submit that Dr. Barclay doubted that the acoustic and visual surveys conducted on behalf of the Approval Holder accurately assessed the abundance and diversity of bats in the Project area, and said that the *Bat Guidelines* do not require adequate habitat monitoring in the vicinity of renewable energy projects, making it likely that the extent of bat habitat and number of bats in the Project area have been underestimated. They also say that it is not clear that the distances between the bat habitat and the Project components are great enough to adequately scientifically assess the use of the Project area by bats.

228 The Appellants also raise concerns that, at the Evaluation of Significance stage of the REA application process, the MNR only requires assessment of bat hibernacula up to 1km from the Project area, bat maternity colonies within 120 m of the Project area, and bat migratory stopover areas.

229 The Appellants submit that the Little Brown Myotis is at imminent risk of extinction, and the Northern Myotis is also at risk of extinction in the future. They state that COSSARO has identified WNS and wind farms as direct threats to the endangered bat species, stating that COSSARO identified wind farms as "an additional agent of mortality" for Little Brown Myotis and as "an additional *potential* agent of mortality" for Northern Myotis.

230 The Appellants, based on Dr. Barclay's evidence, assert that, although much of the feeding by some of the resident bat species, such as the Little Brown Myotis, occurs relatively low to the ground, below the blade-swept area of turbines, these species often commute at greater heights, potentially placing them at risk. They say Dr. Barclay's opinion is substantiated by August 2012 post-construction monitoring data from the nearby Melancthon project indicating that Little Brown Myotis represent 24% of total bat fatalities from wind turbines in Ontario. They submit that the combined effect of WNS and wind turbine-related fatalities needs to be considered in assessing the vulnerability of the population.

231 The Appellants argue that the conservation status of the two species of endangered bats, and the cumulative impacts on their populations of the many wind farms in the region as well as WNS, render those populations vulnerable to serious and irreversible harm from the Project.

232 The Appellants say there is no dispute that the turbines are a direct mortality threat to bats, and it is nearly certain that bats will die as a direct result of the Project. They dispute the assertion by the Approval Holder that the Project Area is a low use area for bats, and any bat mortality will be low and mitigated. They assert that there is ample suitable habitat for bats in and around the Project Area, and that acoustic and visual monitoring has confirmed the presence of Little Brown Myotis and Northern Myotis in the Project Area. While the Appellants do not dispute that bats prefer woodland edge habitats and water bodies over all other habitat types, they assert that there is no evidence before the Tribunal that bats are not present on agricultural landscapes. Instead, they say there is evidence of bat fatalities from turbines in agricultural areas, and submit that post-construction fatality data shows that Little Brown Myotis is the second most frequently killed species of bat by wind turbines.

233 The Appellants note the evidence that bats have long lifespans and slow reproductive rates, so that bat populations cannot increase rapidly after a drop in population size. They submit that the life history traits of Little Brown Myotis and Northern Myotis do not allow their populations to absorb the impact of additional mortality from wind turbines. They further note that bats' feeding habits require them to leave their roosts and trees to search for food, and they must fly among wind turbines that are present in their habitats.

234 The Appellants note the mitigation measures related to bats in the REA, but submit that the Tribunal should be satisfied that the impacts to bats of the Project are acceptable without the mitigation measures in place, in the event that those measures fail. They say that none of the mitigation measures recommended by Mr. Ryckman are requirements in the REA. They observe

that there is no requirement that one of the three significant bat habitats be monitored because access to the property has been denied to the Approval Holder, and submit that the Project components impacting on that habitat should not be built if the area cannot be monitored.

235 The Appellants assert that the EIS Report does not contain any commitments and is incapable of implementation or enforcement, and that the EEMP contains mistakes. They state that the REA conditions do not indicate which turbines will be monitored or whether the turbines selected will indicate the direct mortality impacts across the site. They assert that, unless all of the turbines are monitored, it will not be possible to know for certain whether the mortality threshold is being exceeded.

236 The Appellants argue that 490 bats must die before operational mitigation is required, and that operational mitigation will not eliminate mortality given the evidence that these measures would reduce mortality by about 60%. They submit that wind turbine mortality will accelerate the extinction of the Little Brown Myotis and Northern Myotis species. They also point out that there is no basis for the Tribunal to evaluate the effectiveness of the contingency plan mitigation measures because contingency plans have not been developed.

237 The Appellants state that migratory bats are also vulnerable to wind turbine fatalities as they have long lives and slow reproduction rates, and there is greater potential that they will encounter wind turbines due to long distance travel during migration. They say that their submissions regarding mitigation measures and their effectiveness in respect of hibernating bats apply equally to migratory bats. They note that migratory bats do not share the same endangered status as hibernating bats, and there is there little information about the vulnerability of their populations to harm from wind turbines.

238 The Appellants submit that migratory bats were ignored in the Approval Holder's bat assessment, because the MNR does not require the assessment of migratory bat habitat. They note that proponents are not required to assess bat migratory stopover areas because there are no criteria in the Significant Wildlife Habitat Ecoregion 6E Criterion Schedule. They further submit that post-construction monitoring data from other projects indicates that migratory bats are the bats most harmed by wind facilities. The Director's Submissions

239 The Director disagrees with the Appellants' suggestion that O. Reg. 242/08 exempts wind farms from compliance with the general *ESA* prohibitions applicable to endangered species. He notes that the Approval Holder's compliance with the requirements in O. Reg. 242/08 will effectively minimize and mitigate any harm to endangered bats from the Project.

240 The Director submits that the evidence demonstrates that there is no reasonable expectation of high bat activity and use in the Project area due to its geographic and topographic features, and that no development of the Project will occur within the boundaries of any significant bat habitat, so no bat habitat will be affected or destroyed.

241 The Director also submits that WNS, not the negligible impacts of wind turbines, is responsible for the serious population decline in endangered species bats. He further states that the endangered bat species are unlikely to be present at the site in any significant numbers. The Director asserts that, based on the evidence of the Approval Holder, there will be very little, if any, collision mortality to the Little Brown Myotis from the operation of the Project. He says that any minimal collision mortality suffered by endangered bats will not cause serious and irreversible harm to those species.

242 The Director submits that the issue of cumulative impacts of all wind energy projects on bats is outside the Tribunal's jurisdiction because the test in s. 145.2.1(2) of the *EPA* is whether this Project will cause serious and irreversible harm to bats, not whether the cumulative impacts of all wind energy development in Ontario will cause serious and irreversible harm.

243 In response to the Appellants' argument that mitigation measures not specifically set out as REA conditions may not be implemented, the Director submits that all of the conditions, commitments and mitigation measures referred to in the Bat Report and the conditions in the EIS Report are incorporated by reference into the REA by condition J1. He notes that Ms. Cameron confirmed in cross-examination that these requirements are considered mandatory and the Approval Holder would be considered to have contravened the REA if they are not complied with. The Director also addressed the errors in the EEMP, saying that Ms. Cameron had indicated that she would ensure they are corrected. He also notes the finding by the Tribunal in

Alliance to Protect Prince Edward County v. Director, Ministry of the Environment, at para. 518, that the mitigation measures required to be implemented are effective at significantly reducing the risk of collision mortality.

244 The Director submits that there are no regulatory requirements or criteria for surveying bat migration pathways and stopover areas because it is currently not possible to effectively monitor where bats are travelling to and from. He says that the evidence of Dr. Fenton and Dr. Reynolds indicated that if migrating bats use the Project area as a migratory pathway, they would likely fly along the eastern side of the Niagara Escarpment, which is the furthest side from the Project.

Findings on Bats

Harm to Bats from the Project

245 It has been established in the evidence that there are three bat maternal roost colony habitats in the Project area that were evaluated as, or deemed to be, significant. It is clear that there are bats in the vicinity of the Project area, and pre-construction monitoring suggests the presence of the Little Brown Myotis and Northern Myotis in these habitats. Both of these hibernating bat species are listed as "endangered" under the *ESA*. However, as the Appellants point out, endangered species within a wind facility are subject to a regulatory exemption in amendments to O. Reg. 242/08 that came into effect in July 2013.

246 Under s. 23.20 of O. Reg. 242/08, a person engaged in operating a wind facility will not be subject to the prohibitions in s. 9(1)(a) and s. 10 of the *ESA*, which include killing or harming a listed species, or damaging or destroying their habitat, if the conditions set out in s. 23.20 are met. These conditions include giving notice to the MNR and preparing a mitigation plan. While the wind facility is operating, the proponent must comply with the mitigation plan and ensure that reasonable steps are taken to minimize adverse effects on listed species. Generally speaking, prior to the July 2013 amendments, wind facility proponents were required to obtain a permit under the *ESA* where species listed under the *ESA* were present. The mitigation plan required under O. Reg. 242/08 will be further discussed below, in addition to the mitigation measures required in the REA.

247 There is no dispute that WNS has caused the population decline, at the provincial scale, of the Little Brown Myotis and Northern Myotis, which has led to their being listed as endangered under the *ESA*. The Appellants acknowledge that the primary reason for the conservation status change for both species is the impact of WNS. This dramatic decline, which has taken place over a short period of time, makes it less likely that significant numbers of the endangered species bats will be present at the local scale in the Project area. As discussed below, it is possible that some additional endangered bats may be killed as a result of the operation of the Project. However, the Tribunal accepts the evidence of Dr. Reynolds that the current downward slope of the population trajectory of Little Brown Myotis is due to WNS, and that incidental mortalities from this Project will not be scientifically significant, and will not affect the slope of that trajectory, either at the local scale or the provincial scale. The Tribunal therefore finds that the Appellants have not shown that the number of fatalities of endangered bats, in addition to the overwhelming number of deaths due to WNS, will constitute serious and irreversible harm.

248 The evidence was clear that the Project does not require the removal of any of the significant bat habitats. All of the Project components will be located outside of these habitats and all of the construction will be done outside the boundaries of the habitats. The Tribunal finds that the evidence does not show that the construction and operation of the Project will impact the significant bat habitats in the Project area in any way other than the potential for collision fatalities.

249 The Appellants argue that the Project area is a high use bat activity area, based on Dr. Barclay's opinion that the surveys done to support the NHA report underestimate the bat use of the area. The responding parties say the surveys were adequate, and rely on evidence that bat activity is low on the type of agricultural habitat predominantly found in the Project area because it provides few areas for adequate roosting and foraging. Dr. Fenton, who is familiar with the region where the Project is proposed, testified that the Project site is an area of low activity where there are no hibernacula or swarming sites.

250 Although the MNR *Bat Guidelines* do not require an assessment of bat foraging habitat, the Approval Holder says that foraging habitats in woodlands were included in the surveys for the Project. However, the Appellants point out that wetlands were not surveyed, and assert that wetlands attract foraging bats. Dr. Reynolds agreed that wetlands should have been evaluated as potential bat habitat for the Project.

251 Dr. Barclay disagrees with the contention that this is a low use area on the basis that, in his opinion, the assessment of bat activity was flawed. The REA application process established that there are bats and significant bat habitats near the Project area, but the level of study required by the REA Regulation is not sufficient for the Tribunal to make a determination as to whether this is a low or high use area for bats. There may be higher use by bats of the area than was recorded.

252 There is a dispute between the Appellants and the responding parties concerning whether there is a risk to hibernating bats while foraging and commuting. The respondents' experts gave evidence that hibernating bats fly below the sweep of the turbine blades, and may prefer to forage over open water and along forest edges. It seems clear, however, that they are present in agricultural fields at times, given the evidence that Little Brown Myotis carcasses have been found at turbines located in agricultural fields. Dr. Barclay suggested that there was potential for bats to commute at greater heights and be put at risk. The Tribunal finds, based on the evidence, that the hibernating bats may at times fly at blade height where they are at risk to be killed as a result of the operation of the Project.

253 While the Tribunal accepts that there may be a higher use of the Project area by bats than was reflected in the NHA report, and that there is potential for the bats to fly at the height of the sweep of the rotor blades, the Tribunal finds that it was not presented with evidence that the Project will cause serious and irreversible harm to the bats when operated in accordance with the REA conditions.

Mitigation

254 The following monitoring and mitigation measures in the REA relate to bats:

> J4. The Company shall implement the post-construction monitoring described in the Environmental Effects Monitoring Plan and the Environmental Impact Study, described in Condition J l, including the following:
>
> (1) Disturbance Monitoring for Bat Maternal Roost Colony Habitat (BMRC 1 and BMRC 4).
>
> . . .
>
> **POST CONSTRUCTION MONITORING - BIRD AND BAT MONITORING**
>
> J6. The Company shall implement the post-construction bird and bat mortality monitoring described in the Environmental Effects Monitoring Plan, described in Condition J1, at a minimum of 15 of 49 constructed turbines. Turbine 15 must be monitored as one of the selected turbines.
>
> **THRESHOLDS AND MITIGATION**
>
> J7. The Company shall contact the Ministry of Natural Resources and the Director if any of the following bird and bat mortality thresholds, as stated in the Dufferin Wind Power Inc. Natural Heritage Environmental Effects Monitoring Plan for the Dufferin Wind Farm described in Condition J1, exceeds:
>
> (l) 10 bats; per turbine per year across the Facility
>
> . . .
>
> J8. If the bat mortality threshold described in Condition J7 (1) is exceeded, the Company shall:
>
> (1) implement operational mitigation measures consistent with those described in the Ministry of Natural Resources publication entitled "Bats and Bat Habitats: Guidelines for Wind Power Projects" dated July 2011, or in an amended version of the publication. Such measures shall include some or all of the following:

(i) increasing cut-in speed to 5.5 m/s and/or feather wind turbine blades when wind speeds are below 5.5 m/s between sunset and sunrise, from July 15 to September 30 at all turbines or a select number of turbines as deemed appropriate by the Ministry of Natural Resources; or

(ii) implementing an alternate plan agreed to between the Company and the Ministry of Natural Resources.

(2) implement an additional three (3) years of effectiveness monitoring.

J9. If the bat mortality threshold described in Condition J7 (1) is exceeded after operational mitigation is implemented in accordance with Condition J8, the Company shall prepare and implement a contingency plan, in consultation with the Ministry of Natural Resources, to address mitigation actions which shall include additional mitigation and scoped monitoring requirements.

. . .

REPORTING AND REVIEW OF RESULTS

J14. The Company shall report, in writing, the results of the post-construction disturbance monitoring described in Condition J4 and J5, to the Ministry of Natural Resources for three (3) years on an annual basis and within three (3) months of the end of each calendar year in which the monitoring took place.

J15. The Company shall report, in writing, bird and bat mortality levels to the Ministry of Natural Resources for three (3) years on an annual basis and within three (3) months of the conclusion of the November monthly monitoring, with the exception of the following:

(1) if either of the bird mortality thresholds described in Conditions J7 (5) or J7 (6) is exceeded, the Company shall report the mortality event to the Ministry of Natural Resources within 48 hours of observation;

(2) for any and all mortality of species at risk (including a species listed on the Species at Risk in Ontario list as Extirpated, Endangered or Threatened under the provincial Endangered Species Act, 2007) that occurs, the Company shall report the mortality to the Ministry of Natural Resources within 24 hours of observation or the next business day;

(3) if the bat mortality threshold described in Condition J7 (1) is exceeded, the Company shall report mortality levels to the Ministry of Natural Resources for the additional three (3) years of monitoring described in Condition J8, on an annual basis and within three (3) months of the conclusion of the October mortality monitoring for each year.

255 The Tribunal notes that the mitigation measures are consistent with those in other REAs, including the conditions before the Tribunal in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*. In *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*, at para. 518, the Tribunal accepted that, with these mitigation measures in place, the Project as approved would not cause serious and irreversible harm to bats.

256 The Appellants raised a concern about the mortality threshold of 10 bats/turbine/year across the Project, which must be met before mitigation measures under the REA are invoked. This threshold comes from the MNR *Bat Guidelines* and is a requirement in O. Reg. 359/09 under the *EPA*. Dr. Barclay testified that he could not discern any scientific basis to support this mortality threshold. According to Dr. Reynolds' evidence, it is a reasonable operational threshold.

257 The Tribunal observes that the state of scientific knowledge with respect to bats is very rudimentary at present. The Appellants' concerns with the protective effect of the threshold mortality levels in the *Bat Guidelines* arise because of recorded bat mortality elsewhere. However, the Tribunal was not provided with evidence upon which the Tribunal could rely to make a finding that the threshold of 10 bats/turbine/year will cause serious and irreversible harm to bats in relation to this Project. In fact, both Dr. Reynolds and Dr. Fenton testified that this threshold is protective.

258 The Appellants raise a number of other issues with the mitigation measures, including the following: the question of which turbines would be monitored; the fact that one habitat was not required to be monitored because the property owner had not granted access; lack of inclusion of commitments and mitigation measures in the Bat and EIS Reports; whether operational mitigation measures are likely to be successful; and lack of information about contingency plan measures. The responding parties put forward a number of responses to these issues, noting in particular that the measures referred to in the Bat and EIS Reports are incorporated by reference into the REA by condition J1, and that these requirements are considered mandatory.

259 The Appellants argue that a decision to issue an approval should not be based on the anticipated effectiveness of mitigation measures, but on adequate pre-construction site investigation. They say that the Tribunal should be satisfied that the impacts to bats from the Project are acceptable even without the mitigation measures in place.

260 The Tribunal finds that this recommended approach is not consistent with the wording of the *EPA* test. A "decision to issue an approval" is one taken by the Director. Whether it is "based on adequate pre-construction site investigation which demonstrates acceptable environmental impacts" is not a question for the Tribunal to determine. The Tribunal notes that the mitigation measures are precautionary in nature, and are required in order to address the currently insufficient knowledge about the natural environment to conclusively understand impacts.

261 The Tribunal observes that, in the case of the endangered species bats, condition J15 requires the Approval Holder to promptly report even a single mortality of an endangered bat. In addition, the provisions of s. 23.20 of O. Reg. 242/08 under the *ESA* come into play, which require the preparation of a mitigation plan for approval by the MNR. The mitigation plan must include the steps set out in s. 23.20(11) to minimize the adverse effects on the species from wind turbines. These steps include adjusting the blades of the turbines, changing the speed of wind turbines, and periodically shutting the turbines down at times of highest risk. The Tribunal accepts the evidence before it that these mitigation measures are effective at significantly reducing collision mortality.

Migratory Bats

262 The Tribunal received relatively little in the way of submissions and evidence with respect to migratory bats. There is no requirement in the REA application process to assess bat migratory pathways and stopover areas. The Director says that this is because it is currently not possible to monitor them. The evidence established that migratory bats are the most at risk from wind turbines, and are also more abundant than hibernating bats. The Tribunal notes that they are not listed under the *ESA*. The responding parties' evidence was that the Project area would not be a significant migratory pathway, and that monitoring of other projects in the area indicates that mortality to migratory bats will be low.

263 Based on the evidence before it, the Tribunal finds that the Appellants have not shown that the Project will cause serious and irreversible harm to migratory bats.

264 However, the Tribunal notes that the Appellants have raised some valid questions about the MNR *Bat Guidelines*, including whether the required surveys are adequate to determine the number of bats present in the area, and whether the 120 m setback of the Project area from significant bat habitats is sufficient to prevent bat fatalities. The regulatory requirements in the REA application process are based on an analysis of wildlife habitat and its significance within 120 m of the Project. The Tribunal notes the evidence of Dr. Reynolds that: when assessing bat hibernacula, he looks for hibernacula as far away as 100 miles from a project; when assessing foraging habitat he looks as far away as 10 miles; when assessing maternity roosts he looks as far away as two miles; and when assessing migratory habitat, he looks as far away as 20 miles. The MNR *Bat Guidelines* do not address the assessment of habitats used by migrating bats at all. The Tribunal heard no evidence as to why 120 m was chosen as an appropriate setback for bats.

265 Mr. Ryckman testified that the "habitat-based focus of the NHA ensures protection of significant wildlife habitats, and therefore protects the wildlife that rely on the habitats." The Tribunal notes two assumptions embedded in this statement: that the NHA process identifies all significant wildlife habitats; and that protecting "significant wildlife habitat", as defined by the MNR, is sufficient to protect the wildlife.

266 As set out in *Lewis v. Director, Ministry of the Environment*, [2013] O.E.R.T.D. No. 70 (Ont. Environmental Review Trib.) (at para. 16), the Tribunal must assess harm under the test set out in s.145.2.1 of the *EPA*, which is different from the REA approval process undertaken by the Director and the processes or regimes in which the MNR is involved. As the Tribunal stated in *Lewis* (para. 16) "[t]he information generated and decisions made by those agencies may be relevant to, though not determinative of, the question before the Tribunal."

267 The Tribunal found in *Lewis*, at para. 32, that

> the work done at the REA approval stage (including any MNR sign-off regarding natural heritage features) and in other regimes (such as the *ESA* and Bald Eagle Guidelines) may be relevant information to consider under the *EPA* test, but it is not determinative because the statutory test is part of a distinct appellate process, which involves a different test than what is used by other decision-makers in reviewing applications for renewable energy approvals and other regimes.

268 The guidance documents assume that, if no "significant habitat" is present in the project area or within 120 m, there will be minimal impact on a species. At the REA approval stage, the analysis of the Project's impact, therefore, depends entirely on the value of the REA Regulation and MNR's Bat Guidelines in identifying threats to a bat species by identifying only threats to what is deemed significant habitat. The *EPA* test that the Tribunal must apply, on the other hand, does not focus on "significant habitat" but on "plant life", "animal life", and the "natural environment", which is defined as "air, land and water".

269 In exercising its function, then, the Tribunal would be wrong to rely simply on O. Reg. 359/09 and the various MNR guides (including the SWHTG, and the *Bird* and *Bat Guidelines*) in assessing whether a project will cause serious and irreversible harm to plant life, animal life, or the natural environment.

270 This is clear in the present case, with respect to migratory bats. The MNR guidance documents recognize that migratory routes can be significant habitat. However, as there is no guidance in identifying them, they are simply disregarded. It is therefore conceivable that a project could cause serious and irreversible harm to migratory bats without causing serious and irreversible harm to resident local bats, because bat hibernacula and maternity roosting sites are the only two habitat types singled out for protection by the MNR guidance documents. The SWHTG identifies three types of significant habitat for bats, which proponents must identify and evaluate in the course of preparing their NHA. However, the Tribunal heard testimony that there are other elements to significant bat habitat, such as foraging grounds, migratory routes, and commuting areas. These areas are not identified in the NHA and thus not evaluated.

271 The legal test in the *EPA* cannot mean that the Tribunal is unable to find serious and irreversible harm where there has not been adequate research done by the Approval Holder or Director. The fulfillment of the regulatory and guideline requirements provides a baseline amount of information that can begin to inform the Tribunal in its determination of whether the requisite harm will occur, but that is only part of the information base that may be relevant to the statutory test utilized in an appeal. Appellants can bring evidence that the information generated in the REA approval process needs to be supplemented by other information more directly addressed at the appeal test. For example, information on significant wildlife habitat may be only part of the relevant evidence to determine if there will be serious and irreversible harm to animal life. Nevertheless, the onus is on the Appellants to show that the test has been met, regardless of the inadequacies of the information generated in the REA approval process. As noted above, the Tribunal recognizes that there are still many unknowns in the science regarding bats, particularly with respect to migratory bats. The Tribunal urges the MNR to monitor and support ongoing research on bats in order to strengthen the REA regulatory requirements and guidelines that relate to them.

Conclusion on Bats

272 In conclusion, the Tribunal finds that the Appellants have not met the legal test of demonstrating that the Project will cause serious and irreversible harm to plant life, animal life or the natural environment with respect to bats.

e) Harm to Other Animal Life

Roselyn Bovaird

273 Ms. Bovaird testified concerning health effects but also raised concerns about harm to animal life she has observed on her property and in the region, in addition to bats. These include snapping turtles and painted turtles.

Dr. Dale Strickland

274 Dr. Strickland was qualified to give opinion evidence as a wildlife ecologist with expertise in assessing impacts of wind turbines on wildlife, including turtles.

275 Dr. Strickland was called by the Approval Holder to address the concerns raised by Ms. Bovaird with respect to any possible impact of the Project on turtles.

276 Dr. Strickland testified that the Project data suggests there are very few turtles present. In his view there is very little potential turtle habitat in the Project area.

277 The Records Review Report identified that snapping turtles may exist within the Project area, and one was seen during the site investigation. Dr. Strickland testified, however, that there is no significant snapping turtle habitat based on MNR criteria. While snapping turtles are a special concern species under the *ESA*, Dr. Strickland notes that they may be legally harvested in Ontario with a valid fishing license. Few painted turtles were observed in the Project area. They are considered a common and secure species and have a healthy population in Ontario. Dr. Strickland testified there is no significant painted turtle habitat in the Project area according to MNR criteria.

278 According to the documents he reviewed, Dr. Strickland concluded Blanding's turtle is not present in the Project area. He noted that "using appropriate descriptions of habitat, and the information obtained through field investigations, potential habitat for Blanding's turtles in and adjacent on the project location was assessed by Dillon Consulting". Dillon concluded that no significant turtle habitat exists within the Project area or 120 m setback. Dr. Strickland concluded that "it is highly unlikely that Blanding's turtle occurs or will occur in the future in the Project area".

279 Dr. Strickland testified that no roads are planned through wetland areas, and it is very unlikely there would be any biologically significant turtle mortality due to the Project. Dr. Strickland testified that any contact with turtles would likely occur with workers, and therefore a Worker Awareness Program is essential.

Findings on Harm to Other Animal Life

280 The Tribunal finds that the Appellants have adduced no evidence to counter the expert evidence of Dr. Strickland. The Tribunal finds that the Appellants have not shown that the Project will cause serious and irreversible harm to other types of animal life.

281 While some of the Appellants raised concerns about harm to other animal life, such as dairy cattle, and to other unspecified plant life, no evidence was tendered other than that relating to the plant life and animal life already discussed.

Summary of Findings on Issue No. 1, Environment

282 In conclusion, the Tribunal finds that the Appellants have not established that engaging in the Project as approved will cause serious and irreversible harm to plant life, animal life or the natural environment.

Issue 2: Whether engaging in the Project in accordance with the REA will cause serious harm to human health

283 In the discussion of Issues 2 and 3, the term "Appellants" includes all of the Appellants, including Mr. Sanford.

Overview

284 The test under s. 145.2.1(2) (a) of the *EPA*, is whether engaging in the renewable energy project in accordance with the renewable energy approval will cause serious harm to human health (the "Health Test"). Pursuant to conditions imposed in the REA, noise generated by the Project cannot exceed 40 dbA measured at the exterior of buildings which are non-participating receptors as this term is defined in the regulations. Residential homes are an example of such non-participating receptors. The setback distance from Project components is 550 m. Section 145.2.1(3) of the *EPA* states that the onus of proving that such serious harm will occur rests with the Appellants. Therefore, they must demonstrate that serious harm to human health will occur in circumstances where these conditions have been met. If the evidence suggests that serious harm will occur only in circumstances where noise levels exceed 40 dbA at a non-participating receptor and/or at a distance less than 550 m from a receptor, then the Health Test will not be satisfied.

285 The Appellants were represented in two groups. CORE, D&C Vander Zaag Farms Ltd., Ms. Bovaird, Mr. Maguire, Dr. Crysdale, and Ms. Kurtin (collectively referenced as the "CORE Appellants"), and Mr. Sanford. However, these two groups relied on the evidence adduced by each other, and filed joint written submissions regarding the Health Test in this proceeding.

286 The Tribunal heard extensive evidence on this issue, and, as well, extensive written submissions from the parties numbering several hundred pages. While the Tribunal has reviewed and considered the evidence and submissions in detail, it is not feasible to include a detailed synopsis of all of the evidence or the submissions within a decision of reasonable length.

287 During the course of the hearing, the parties made several references to the Tribunal's decision in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*. In this regard, the Tribunal notes that many of the same witnesses testified in both this proceeding and *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*, and, particularly with respect to the same or similar issues that have been raised in both proceedings. The Appellants dispute an assertion made by the Director that the case presented by the Appellants is, in essence, a duplicate of the case presented in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*. The Tribunal finds that, although the evidence, issues, and submissions are very similar, this case is not a duplicate of *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*. The Tribunal has undertaken its own deliberation of the evidence and submissions of parties in this proceeding, and has independently arrived at its own conclusions respecting the issues raised. However, as the Tribunal's findings are similar to those in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*, the Tribunal has structured its analysis and discussion in a manner similar to the approach adopted by the Tribunal in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*. In this regard, the Tribunal accepts that its analysis of Issue 2 should be addressed under three sub-issues:

- 2A. Whether the Appellants have established a causal link between wind turbines and human health effects where there is a 550m setback and 40 dBA noise limit;
- 2B. Whether engaging in this Project in accordance with the REA will cause serious harm to human health; and
- 2C. Whether Sarah Laurie should be qualified as an expert to give opinion evidence.

288 In this proceeding, the Appellants approached the test outlined in s. 145.2.1(2) (a) of the *EPA* as building on the groundwork laid by *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment* and *Erickson v. Ontario (Director, Ministry of Environment)*, [2011] O.E.R.T.D. No. 29 (Ont. Environmental Review Trib.) ("*Erickson*").

289 As stated in the Appellants' joint submissions on the Health Test:

> 187. The following findings were made in *Erickson*, on a much more fulsome record with far more expert evidence available:
>
> > **The Known Effects of IWTs Are Serious**: Para. 640 - In this case, there is apparent agreement that many of the medical conditions discussed by the witnesses are serious (the debate on those is, therefore, confined to whether they will result from the Project).

> **Mechanism Is Not Required**: Para. 819 - For the purposes of this Decision, the Tribunal finds that the Appellants can attempt to satisfy the section 145.2.1(2) test even if there is uncertainty about the specific mechanism that causes the alleged health effects.
>
> **IWTs Can Cause Harm to Human Health**: Para. 872 - While the Appellants were not successful in their appeals, the Tribunal notes that their involvement and that of the Respondents, has served to advance the state of the debate about wind turbines and human health. This case has successfully shown that the debate should not be simplified to one about whether wind turbines can cause harm to humans. The evidence presented to the Tribunal demonstrates that they can, if facilities are placed too close to residents. The debate has now evolved to one of degree. The question that should be asked is: What protections, such as permissible noise levels or setback distances, are appropriate to protect human health?
>
> [Emphasis added]

188. The Appellants submit that the Tribunal's decision in the within proceedings should be reflective of the Erickson findings. These are fundamental issues that were fully considered and determined in Erickson. For many reasons, they should not be relitigated in this or future ERT hearings. The time and costs alone of revisiting each of these issues would be extremely onerous and unmanageable. *Erickson* allows the process to move forward, to look at the real question that must be determined in each subsequent case, which the Tribunal clearly articulated above.

. . .

290 The evidence on causation, as described in *Erickson* and subsequent Tribunal decisions, can be described as falling within one of two general categories. The first is described as a direct effect such as hearing loss. The second category is described as an indirect effect. This refers to health effects alleged to result from annoyance, stress and sleep disturbance associated with living in proximity to a wind turbine or related components.

291 Under either of these two categories, there are two bases on which the Appellants seek to establish that engaging in the Project in accordance with the REA will cause serious harm to human health. The first basis is to show that current experience with wind farm projects, both in Ontario, and elsewhere in the world, demonstrates that it is sufficiently predictable that some or all persons living within the vicinity of wind project components (wind turbine(s) being the prominent component) will experience serious health effects. This may be generally described as a generic approach, as it does not seek to establish causation with respect to specific identified individuals. To support their position in this regard the Appellants adduced evidence regarding the incidence of annoyance, which they assert will be caused by wind turbine projects, as well as evidence that environmental noise and annoyance cause stress and sleep disturbance. The Appellants also adduced evidence of persons living in the vicinity of existing wind turbine projects, both in Ontario and elsewhere in the world, who report adverse health effects attributed to their exposure to these wind turbine projects.

292 The second basis on which the Appellants seek to establish that the Health Test is met is to show that specific individuals have suffered serious harm to their health as a result of living in proximity to wind project components. In this case, the Appellants have adduced evidence of persons living in the vicinity of existing wind turbine projects in Ontario who report adverse health effects which they assert are caused by these wind turbine projects ("the post-turbine witnesses").

293 In overview the Appellants assert that they have established causation on both bases. Based on the generic approach, they maintain that it is predictable that a certain percentage of the persons living in proximity to the Project will suffer adverse health effects. Based on the approach respecting the experience of specific individuals, they maintain that the evidence of the post-turbine witnesses establishes that wind turbines do cause harm to human health, and, more specifically, that wind turbines exacerbate certain types of pre-existing medical conditions. The Appellants then argue that this evidence will establish causation with respect to this Project. In this regard, they point to evidence they have adduced respecting individuals who will live in the vicinity of wind turbines in the Project (the "pre-turbine witnesses"), asserting that each of these individuals currently suffers from medical conditions that will be exacerbated by exposure to wind turbines. The Appellants maintain that the evidence of

these pre-turbine witnesses "is highly relevant to establish a causal link between the proposed Project and the more likely than not probable effect on those living nearby."

294 In summary, it is the Appellants' position that this evidence, considered in the context of the *Erickson* and *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment* decisions, demonstrates that engaging in the project in accordance with the REA will cause serious harm to human health.

Issue 2A: Whether the Appellants have established a causal link between wind turbines and human health effects where there is a 550m setback and 40 dBA noise limit.

295 Paragraph 88 of the Appellants' written submissions states: "The causal links between the risk of harm and IWTs are amply established in the evidence." Implicitly, their argument is that this risk, if established, will be sufficient to meet the Health Test in this case. As discussed below, the Tribunal finds that the Appellants have not established this causal link. Consequently, it is unnecessary for the Tribunal to address whether such causal link, if established, would be sufficient to satisfy the Health Test as it applies to the Project under appeal in this proceeding.

296 The Appellants seek to establish the causal link between wind turbines and human health based on the following evidence:

- The evidence of the "post-turbine witnesses", who each report that they have experienced adverse health effects. They assert their conviction that these symptoms are caused by wind turbines.

- The medical opinion evidence of Dr. Robert McMurtry which supports the views of the post-turbine witnesses. Dr. McMurtry also provides his own opinion respecting the causation issue.

- The evidence of Ms. Laurie regarding her work with persons in Australia living in proximity to industrial wind projects, who have also reported that they experience some of the health effects listed above.

- The evidence of Brian Howe respecting annoyance.

297 The Tribunal has structured its analysis and findings in two sections: the Appellants' case based on the evidence of the post-turbine witnesses; and the Appellants' case based on the evidence of Ms. Laurie, Dr. McMurtry, and Mr. Howe.

Appellants' Case Based On The Evidence Of The Post-Turbine Witnesses

Appellants' Evidence

298 The Appellants' submissions summarize the evidence of the post-turbine witnesses, stating that they gave testimony:

> ... regarding their debilitating and enduring experiences with sleep disturbance, vertigo, nausea, tinnitus, heart palpitations, memory and concentration loss, mood swings, chronic fatigue, breathing difficulty, headaches/migraines, and even suicidal thoughts. Those with pre-existing medical conditions such as back pain, chronic fatigue, fibromyalgia, and high blood pressure, spoke of how these conditions worsened with the turbines becoming functional.
>
> They also testified that when away from their homes, they gained respite from their various symptoms.

299 The Appellants characterize these health effects as falling within the category of indirect harm. As stated at paras. 72 and 73 of the Appellants' submissions:

> 72. There is therefore undisputed evidence before this Tribunal that at sound levels at or below those approved for the operation of this Project, 6-20% of people will be very annoyed. There is a causal chain between annoyance, stress, sleep disturbance, and adverse health effects.
>
> 73. This causal chain is evidenced by the adverse health effects suffered by the post-turbine witnesses who testified in this case...

300 All of the post-turbine witnesses provided a witness information form which essentially sets out their responses to a list of questions regarding their medical history, self-reported health symptoms, and other personal information. They each provided medical records that they were able to obtain in time to present at the hearing. Some of these medical records included documents setting out medical opinions respecting specific conditions. None of these witnesses provided a medical opinion which attributed exposure to wind project components as the cause of their complaints. Dr. McMurtry has expressed an opinion in this regard. The Tribunal addresses his evidence below. Despite any pre-existing medical condition these witnesses may have, they each testified that, after the wind turbines became operational in their environs, they have experienced adverse health effects which they had not experienced before. They state their views that exposure to the wind farm project in the vicinity of their residences has caused these adverse health effects. They maintain that they had no negative perceptions or expectations respecting the impacts of wind turbine projects prior to experiencing adverse health effects.

301 They cite one or both of the following reasons to support their assertion regarding causality:

- The adverse health effects they have experienced manifested when the wind farm project commenced operation, or shortly thereafter, and they have been unable to find any other explanation for their condition; and

- They have gained respite from their various symptoms when they leave their homes, more specifically, when they are no longer in the vicinity of the wind farm for a period of time (where symptom relief is either immediate or gradual). Their symptoms resume upon returning to their homes either immediately or shortly thereafter.

302 Inherent in the views expressed by the post-turbine witnesses are two major premises: (i) for the post-turbine witnesses with pre-existing conditions, the adverse health effects they experience are in fact, different from the health effects associated with their pre-existing conditions, or potential side effects from the medication they are currently taking; and (ii) their inability to find another cause for their symptoms, considered together with the relief they experience when they remove themselves from exposure, is, in their view, conclusive evidence that their adverse health effects are caused by wind turbines. Both these premises are challenged by witnesses called by the Director and the Approval Holder.

Respondents' Evidence

303 The Director and the Approval Holder called the following witnesses:

- Dr. Robert McCunney, who was qualified as medical doctor specializing in occupational and environmental medicine with particular expertise in health implication of noise exposure;

- Dr. Cornelia Baines, who was qualified as an epidemiologist with special expertise in design measurement and evaluation of research studies.

- Dr. Kieran Moore, who was qualified as a physician with expertise in family and emergency medicine, public health, and preventative medicine.

304 For ease of reference, the Tribunal collectively describes these witnesses as the respondents' health experts. Each of them has testified in *Erickson*, *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*, or both. The Tribunal's decisions in these cases already provide detailed summaries of their evidence. Much of the evidence they gave in those cases has been repeated in this proceeding. Therefore, the Tribunal does not find it necessary to provide a detailed synopsis of all of their evidence in this decision.

305 In summary, the evidence of these witnesses is that the reliable determination of causality with respect to adverse health effects is a very complex exercise.

306 In addressing both premises, they note that many of the symptoms reported by the post-turbine witnesses are known to commonly occur in the general population and have numerous causes. Considerations related to medical causality assessment are discussed in paras. 75 to 82 of Dr. McCunney's witness statement:

Causality Assessment

75. The information in the Information Forms is insufficient to conduct formal individual causality assessments, most notably because of limited diagnostic work ups and the absence of noise measurements. The collection of statements is also not appropriate for a group analysis, in part, since they represent different sites and different times of exposure that may not be representative of each particular site.

76. A proper causality assessment includes a thorough review of symptoms and past medical history with appropriate diagnostic studies. The determination of causality is an important exercise in health care, but it is customarily only undertaken after diagnosis and treatment. A causality assessment should also consist of a thorough review of noise measurements conducted in the vicinity of the home along with a comparison of the symptoms, diagnosis and noise levels in light of what has been published in the peer reviewed scientific literature.

77. As noted above, the symptoms reported in the Information Forms are common in the general population and have numerous causes. ... Other groups of symptoms, such as fatigue, loss of energy and poor concentration, reported in the Information Forms strongly suggest depression as the appropriate diagnosis.

78. Sleep disturbance, one of the symptoms described in the Information Forms, can be due to many factors ranging from stress and medications to potential serious medical diagnoses such as sleep apnea. Vertigo, another symptom reported in the forms, has numerous causes; it must be appropriately diagnosed before attributing causal links to any potential environmental concern. ...

79. It is important to distinguish the medical activities necessary in (1) forming a diagnosis of symptoms and (2) assessing the cause of the symptoms. A causality assessment customarily begins with a thorough medical evaluation that leads to a diagnosis. The cause can be determined thereafter based on consideration of the scientific literature and alternative explanations.

80. Another key aspect of conducting a causality assessment is the determination of biological plausibility; in essence, does the proposed link make sense from a biological perspective? ... Since noise is the potential hazard associated with the operation of a wind turbine, it is not appropriate science to link these conditions to wind turbines if the conditions have not been definitively linked with noise exposure in other settings. Furthermore, many of the health conditions reported originated before the installation of wind turbines, thus making any causal connection with wind turbines implausible.

81. In any causality assessment, it is necessary to establish a diagnosis based on accepted medical criteria. ... Based on the information presented, it is not possible to determine whether the asthma reported in the symptom statements was made according to widely accepted medical criteria.

. . .

82. The symptoms and conditions described in the Information Forms need to be properly evaluated by a physician in the context of appropriate diagnostic studies before one could reliably form specific diagnoses or draw causal connections between the symptoms and living in the vicinity of a wind turbine. Forming a diagnosis is the first step in attempting to draw causal inferences between exposure to any type of hazard and health related symptoms from the exposure.

83. The Information Forms represent the self-reporting of individuals from various sites in Ontario who live in the vicinity of wind turbines. They do not represent a defined group of people, who could be evaluated in any systematic fashion, such as can be done in epidemiological studies. ...

307 The above comments are made in specific reference to the witness information forms. The Tribunal notes that the medical records and oral testimony of the post-turbine witnesses as well as the information provided in telephone interviews conducted by Dr. McMurtry, are, for the most part, consistent with the information provided in these witness information forms.

It should be noted that the information provided by the post-turbine witnesses in telephone interviews was not admitted into evidence by the Tribunal, as noted below.

308 This evidence underscores that determining the cause of an adverse health effect requires comprehensive investigation in order to accurately ascertain symptom etiology. In this regard, Dr. McCunney also noted that information regarding the level of noise experienced by the post-turbine witnesses is absent. He explained that an exposure assessment is critical to any evaluation of causality in order to assess how the specific exposure compares with the dose-response results described in applicable scientific literature.

309 Regarding the premise that a causal connection is demonstrated by the fact the post-turbine witnesses experience relief from their symptoms when they remove themselves from exposure to wind turbines, Dr. Moore also states in his witness statement at para. 106:

> 106. Since multiple witnesses have stated they have depression, this can be associated with somatoform disorders, which are characterized by physical symptoms that have a psychological, as opposed to a physical, cause. Also, conversion is a common disorder where stress and anxiety are unconsciously expressed as physical symptoms, such as sensation of tingling or discomfort, fatigue, abdominal pain, headaches, back or neck pain, weakness, loss of balance, and hearing and visual abnormalities. This could explain some of the symptoms that individuals report when returning to their homes, which is part of the syndrome discussed by Dr. McMurtry.

310 Dr. Moore also testified that it is understandable that if someone's symptoms started when a wind turbine project commenced, they could believe that this has caused their symptoms. However, he points out that a temporal association between these two events does not establish causation. In referring to sleep disturbance, he states at paras. 22 and 23 of his witness statement:

> 22. Hence, sleep disturbance is a very common condition in the general older adult population and especially in those with underlying medical conditions. Sleep disturbance must be put in context and investigated as to its etiology. Sleep disturbances increase with age.
>
> 23. By extrapolation of the population prevalence data of insomnia or sleep disturbance, approximately one third of all adults exposed to wind turbines will experience insomnia. A significant portion of these, due to chance alone, could be temporally associated with the commencement of a wind turbine development. If patients have any chronic medical condition that causes pain, such as osteoarthiritis the above study suggests that up to seventy percent could report poor sleep.

311 The respondents' health experts note that, as associations between events can occur by chance, an epidemiological approach to assessment of causation is required. They note that the most widely accepted criteria, referred to as the Bradford Hill criteria, provide a reasonable framework to be applied when determining causal associations. These criteria include strength of association, consistency, specificity, temporality, biological gradient, plausibility, coherence, experimental evidence, and analogy. As their evidence in applying these criteria to this case is both detailed and lengthy, the Tribunal does not include a synopsis of this evidence in this decision. In summary, the conclusion drawn by the respondents' health experts is that, in applying these criteria, causation cannot be established based on the evidence adduced by the Appellants.

Findings

312 The issue to be addressed by the Tribunal in respect of the post-turbine witnesses is whether they have experienced adverse health effects that have been caused by exposure to industrial wind turbines outside of the 550m regulated setback and under 40 dBA noise limit. For the following reasons, as well as the Tribunal's analysis and findings in respect of the other Appellants' health witnesses (discussed below), the Tribunal finds that the Appellants have not done so.

313 The Tribunal does not question the sincerity of the post-turbine witnesses in giving their evidence. They acknowledge that the identification of their adverse health effects is through their own self-diagnosis. They also acknowledge that they have

reached personal conclusions regarding the issue of causation. Several of them assert that they have had to do so, because they maintain that medical professionals either have no knowledge regarding the effects of wind turbines, or are skeptical or dismissive of the possibility that wind turbines can negatively affect human health. Nevertheless, none of the post-turbine witnesses adduced any medical opinion from their health practitioners which confirms that they have experienced symptoms caused by wind turbines. The Tribunal does not question that the post-turbine witnesses have experienced the symptoms they have described. After all, only they can say how they feel. However, in order to arrive at a reliable conclusion respecting causation, personal assessments which do not consider the full range of potential causes of these symptoms, are incomplete. Furthermore, the exercise of arriving at a diagnosis requires a level of education, training and experience, which none of the post-turbine witnesses possess. In this regard, the Tribunal notes that in *Kawartha Dairy*, the Tribunal found that confirmation of medical conditions requires the diagnostic skills of a qualified health professional. This conclusion was accepted in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*, and the Tribunal accepts that it applies in the circumstances of this case. As discussed below, the Tribunal also does not find that Dr. McMurtry's opinion about each of the post-turbine witnesses establishes they have experienced adverse health effects caused by wind turbines.

314 The evidence adduced must support a conclusion that the post-turbine witnesses have experienced serious harm that is caused by wind turbines or related components. The Tribunal accepts that causality assessment is a complex exercise. The Tribunal finds that the evidence adduced by Dr. McCunney, Dr. Baines, and Dr. Moore respecting causality assessment has not been seriously challenged by the Appellants. Therefore, the Tribunal accepts their evidence in this regard. Their evidence is that there is a level of uncertainty regarding the conclusions reached by the post-turbine witnesses in several areas including: (i) failure to obtain qualified medical investigation to rule out other potential causes of their symptoms, before arriving at the conclusion that their symptoms must by default, be caused by exposure to wind turbines or related components; (ii) failure to consider whether wind turbine noise is a plausible cause of their symptoms by considering existing known effects of noise exposure; and (iii) failure to consider the noise exposure levels experienced by these individuals. As a result, the Tribunal finds that the evidence adduced by the post-turbine witnesses is insufficient to support a conclusion that the post-turbine witnesses have experienced serious harm to their health caused by wind project components.

315 Even if the Tribunal accepted that causation is established, it is unclear whether this evidence could be extrapolated to apply to the Project under appeal in this proceeding. In this regard, the Tribunal has noted that the evidence adduced does not include confirmation of the noise exposure levels experienced by the post-turbine witnesses. As such, the Tribunal finds that it is has not been established that the adverse effects they have described, if attributable to industrial wind turbines, are caused by noise levels at or below 40 dbA.

316 Finally the Tribunal notes that, although causation has not been established with respect to these individuals, this does not preclude their evidence from being considered as data in support of the Appellants' position that current evidence demonstrates that it is sufficiently predictable that some or all persons living within the vicinity of wind project components (wind turbine(s) being the prominent component) will experience serious health effects. This is considered below in the Tribunal's analysis respecting the evidence of Dr. McMurtry, Ms. Laurie, and Mr. Howe.

Appellants' Case Based On The Evidence of Ms. Laurie, Dr. McMurtry, and Mr. Howe

Appellants' Evidence

317 As is discussed below, the Tribunal did not grant the Appellants' request that Ms. Laurie be qualified to given opinion evidence. Dr. McMurtry is a practicing medical doctor who was qualified to give opinion evidence as a physician and surgeon with experience in the delivery of health care, health care policy, and health policy. Mr. Howe was qualified to give opinion evidence as an acoustical engineer with specialized expertise in sound from, and the effects of sound from, wind turbines.

Ms. Laurie

318 Ms. Laurie is a non-practicing physician, who was called by the Appellant, Mr. Sanford, to give evidence in this proceeding. He requested that she be qualified to give opinion evidence, a request that was supported by the CORE Appellants,

and opposed by the Director and Approval Holder. In an oral ruling, the Tribunal refused Mr. Sanford's request, indicating that its written reasons for this disposition would follow. As the Tribunal's written reasons for this disposition are lengthy they have been addressed separately under Issue 2C below.

319 Ms. Laurie's experience respecting health impacts of industrial wind turbines has been gained primarily from her work for an organization known as the Waubra Foundation. In summary, Ms. Laurie testified that she has not approached communities to conduct surveys, and that she has not conducted formal structured research. She states that she conducts an ongoing survey, where, to date, she has spoken with approximately 130 people in Australia who live in the vicinity of industrial wind turbine projects. She indicated that these people have identified themselves to her, by contacting her directly, or indirectly by contacting the Waubra Foundation. She explained that these persons describe their symptoms to her and request information. She testified that the symptoms reported to her are consistent with the adverse health effects identified as being associated with industrial wind turbines by other researchers, including Dr. Geoff Leventhall, Dr. Nina Pierpont, and Dr. McMurtry. She provided a number of published articles and papers, and copies of written statements to agencies in Australia and elsewhere.

Dr. McMurtry

320 Dr. McMurtry's evidence in this proceeding is, in part, similar to the evidence he gave in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*. As noted at para. 74 of that decision:

> 74. Although Dr. McMurtry's witness statement from the Erickson proceeding was referenced in his current witness statement and included in his book of documents, the focus of Dr. McMurtry's evidence in this proceeding centred on his proposed case definition as described in his article "*Toward a Case Definition of Adverse Health Effects in the Environs of Industrial Wind Turbines: Facilitating a Clinical Diagnosis*", which was published in the peer-reviewed journal Bulletin of Science, Technology and Society, 2011 31: 316.

321 For purposes of this decision, this is referenced as the Case Definition.

322 Since giving his evidence in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*, Dr. McMurtry testified that he has prepared an update to the Case Definition. A copy of the Case Definition and this update are attached to this Decision as Appendix B. Dr. McMurtry testified that the updated Case Definition is intended to be used by primary health care physicians to diagnose whether a patient who lives in the environs of industrial wind turbines is experiencing adverse health effects. His update confirms that the deployment of the diagnostic criteria in the Case Definition "requires use by [a] health care practitioner licensed to take a history and make diagnoses." His update also states that a 'probable' diagnosis "indicates that AHE/IWT [adverse health effects in the environs of industrial wind turbines] more likely than not are the cause of the complaints. AHE/IWT is the working diagnosis. Other diagnostic possibilities continue to exist and should be considered in the differential diagnoses."

323 As noted in the Case Definition there are three categories of diagnosis: possible, probable, and confirmed. The update indicates the following:

- "possible" means that a diagnosis of such adverse effects is to be considered a potential diagnosis;
- "probable" indicates that it is more likely than not that living in the environs of industrial wind turbines is the cause of the complaints. This becomes the physician's working diagnosis. Other diagnostic possibilities continue to exist and should be considered in the differential diagnosis;
- "confirmed" indicates other diagnosis is very unlikely, i.e., less than one chance in 20.

324 Regarding a "confirmed" diagnosis, Dr. McMurtry explained that other diagnoses should be ruled out. As stated in the Case Definition, this is the responsibility of the licenced clinician.

325 In his witness statement, Dr. McMurtry lists several reasons supporting his proposed diagnosis including:

• He notes that there are reports of adverse health effects in all countries where industrial wind turbines are erected;

• There is convergent validity of reports of adverse health effects in different cultures and languages;

• Infrasound and low frequency noise is a plausible mechanism for adverse health effects;

• There is no medical evidence to support set back distances intended to protect individuals from experiencing adverse health effects;

• There is a common finding that persons experiencing adverse health effects prefer being away from their homes for restoration and in some cases even abandon their home, and this is unique to persons in the environs of industrial wind turbines who experience adverse health effects;

• A dose-response relationship has been confirmed in many studies;

• Dr. Leventhall, an industry expert, acknowledges that "always a few" experience adverse health effects, and a "non-trivial percentage" will be highly annoyed; and

• The working diagnosis accords with principles of evidence-based medicine, which is defined to be the conscientious, explicit and judicious use of current best evidence in making decisions about the care of individual patients. The practice of evidence based medicine means integrating individual clinical expertise with the best available external clinical evidence from systematic research.

326 Respecting the post-turbine witnesses, Dr. McMurtry testified that he reviewed their witness information forms and the medical records that they have provided. Dr. McMurtry reported information that he obtained from these witnesses by conducting a telephone interview with each of them. At the hearing, each of these witnesses testified before Dr. McMurtry did. However, none of the witnesses disclosed that they had participated in an interview with Dr. McMurtry. Consequently, the Tribunal did not admit Dr. McMurtry's evidence obtained from these interviews. In making this finding, the Tribunal noted that the best evidence regarding their medical condition is the testimony they each provided in this hearing. However, the Tribunal further notes that there was no substantive inconsistency between their oral evidence and what was reported by Dr. McMurtry.

327 Dr. McMurtry applies the diagnostic criteria as set out in the Case Definition, and for each witness states his opinion that they satisfy the 'probable' criterion for experiencing adverse health effects from living in the environs of industrial wind turbines.

328 Dr. McMurtry also provided his analysis of the Bradford Hill criteria, disagreeing with the conclusion of the respondent health experts. His evidence in this regard is summarized at para. 82 of the Appellants' submissions:

82. In his reply affidavit, Dr. McMurtry criticized Dr. Moore's comments regarding criteria for causation, by stating in is affidavit, that these have already been met in relation to IWTs through the Bradford Hill, Criteria for Causation.

(a) Strength: A small association does not mean that there is not a causal effect, though the larger the association, the more likely that it is causal.

(b) Consistency: Consistent findings observed by different persons in different places with different samples strengthens the likelihood of an effect.

(c) Specificity: Causation is likely if a very specific population at a specific site and disease with no other likely explanation. The more specific an association between a factor and an effect is, the bigger the probability of a causal relationship.

(d) Temporality: The effect has to occur after the cause (and if there is an expected delay between the cause and expected effect, then the effect must occur after that delay.

(e) Biological gradient: Greater exposure should generally lead to greater incidence of the effect. However, in some cases, the mere presence of the factor can trigger the effect. In other cases, an inverse proportion is observed: greater exposure leads to lower incidence.

(f) Plausibility: A plausible mechanism between cause and effect is helpful (but Hill noted that knowledge of the mechanism is limited by current knowledge).

(g) Coherence: Coherence between epidemiologist and laboratory findings increases the likelihood of an effect.

(h) Experiment: "Occasionally it is possible to appeal to experimental evidence".

(i) Analogy: The effect of similar factors may be considered. Unperceived stimuli of smell, touch, vision and taste are able to harm human health so there is no reason to believe that noise below the hearing threshold is harmless.

Mr. Howe

329 Mr. Howe co-authored a report for the MOE, dated December 2010, entitled *Low Frequency Noise and Infrasound Associated with Wind Turbine Generation Systems, A Literature Review* (the "MOE Review Report").

330 Mr. Howe testified that this report is a review of existing research papers on the topic, rather than being primary research. He confirmed that the statistics regarding the percentage of people very annoyed, and the decibel level of noise impacts, come from published studies.

331 Mr. Howe testified that the relationship between the sound levels and annoyance is not clear; there are a number of non-acoustic factors that influence a reaction of annoyance, an important one being attitude toward the noise source. He testified that, if you do not like a source, you are more likely to find the sound from it to be annoying. In this regard, Mr. Howe agreed with the statement from the MOE Review Report at page 19, heading 3.10:

> The wide availability of popular media items describing fears of direct health effects from wind turbine noise and infrasonic noise specifically may result in fears of the wind turbines in some people leading to increased annoyance with the sound. This may be exacerbated by certain moderating factors (Leventhall, 2004; Job, 1999; Guski, 1999; Fields, 1993), including "anxiety about the source" and "suspicion of those who control the sources".

332 Regarding the MOE Review Report, Mr. Howe's witness statement, at paras. 9 and 21, states:

> 9. The report concluded that, while the overall magnitude of the sound pressure levels, including infrasound, produced by wind turbine generators at the setback distances required in Ontario does not represent a direct health risk, annoyance will likely be experienced by some persons.
>
> 21. Based on research completed by HGC Engineering for the Ontario Ministry of the Environment, at the sound levels experienced at the receptor distances noted for this project, the audible sound from wind turbines is expected to result in a small percentage of persons being very annoyed. The largest and most comprehensive studies completed to date suggest that at noise impacts between 35 and 40 dBA, 6% will be very annoyed, while at noise impacts between 40 and 45 dBA, up to 20% of persons will be very annoyed. As with sounds from other sources, research has shown that annoyance associated with sound from wind turbines can be expected to contribute to stress-related health impacts in some persons. These finding have been supported by papers and general consensus of the Wind Turbine Noise 2011 conference held in Rome, http://www.windturbinenoise2011.org/ and a comprehensive review by the Oregon Health Authority, 2013. The relationship between the sound level and the prevalence of annoyance is complicated, and is often influenced by other non-acoustic factors. Given the number of receptors expected to be impacted at a sound level between 35 and 40 dBA, it would be statistically invalid to predict the exact number of persons expected to be very annoyed, other than noting that those predisposed against the project are more likely to be annoyed.

Respondents' Evidence

Dr. McCunney

333 The evidence of Dr. McCunney is summarized in the submissions of the Approval Holder and the Director.

334 On the issue of annoyance, the Approval Holder's submission states:

> With respect to annoyance, Dr. McCunney testified that annoyance is a subjective phenomenon that is usually self-reported. It is not considered a health effect. Dr. McCunney noted that he could not find "annoyance" in any medical dictionary and that annoyance is not part of the new International Classification of Diseases (10th edition). He stated that claims that "annoyance" is an adverse health effect reflect individual opinions rather than the consensus of the international medical community. He specifically noted that annoyance associated with wind turbines has been found to be primarily related to attitudes about the visual impact of wind turbines and financial interests, as reflected in the various studies referred to by the appellants' noise expert, Brian Howe. Dr. McCunney further explained that, given its subjective nature, annoyance in a given population is difficult to predict, and that even the largest studies of annoyance associated with wind farms (the Pedersen studies based on self-reports) are considered limited data sets by epidemiological standards, such that any attempt to apply those data sets to another population would be fraught with uncertainty and potential errors.

and the Director's submission states:

> Dr. McCunney categorically disagreed with the proposition that some people will always exhibit effects, and provided examples where this was not the case. He referred to the recent study by Dr. Simon Chapman which showed large spatio-temporal variations in complaints about noise and health from wind farms. Chapman found that 33 of 51 wind farms in Australia had never been subject to noise or health complaints. Dr. McCunney preferred the evidence in this study to the less current opinion from Dr. Leventhall, and questioned whether Dr. Leventhall would have the same view as he previously expressed, given this new information.

335 Respecting Dr. McMurtry's updated Case Definition, the Approval Holder's submission states:

> 108. Dr. McCunney was also critical of Dr. McMurtry's proposed case definition, concluding that it was devoid of scientific validity and of no value in assessing causal links between health effects and wind turbines. His specific criticisms included:
>
> (a) the flawed process by which it was developed and proposed for use (proposed by one individual, through a process that did not follow international standards for the development of consensus statements);
>
> (b) its lack of validation by any medical association (Dr. McMurtry himself admits that his proposed case definition has not been validated);
>
> (c) its lack of any scientific support for the exposure metric (i.e., living within 5 km of a wind turbine);
>
> (d) its lack of precision, which results in application difficulties (i.e. 3264 options for meeting second and third order criteria); and
>
> (e) its lack of any peer-reviewed citations to support its conclusions.

336 Respecting the effects of noise exposure, the Approval Holder's submission states:

> 102. ...Dr. McCunney conducted a comprehensive literature search to review scientific literature, government reports and other articles related to potential health implications of living in the vicinity of wind turbines that have been published since the expert panel report was released in 2009. He testified that he has not identified any scientific support for a direct causal link between chronic noise exposure of less than 40 dBA and adverse health effects. Dr. McCunney highlighted field studies in the vicinity of operating wind farms in many different countries. These studies have demonstrated that infrasound

and low-frequency sound from wind turbines are not at levels that are harmful to human health. He also highlighted human experimental studies conducted by NASA that found no adverse health effects of infrasound levels several orders of magnitude higher than those measured in the vicinity of wind farms.

337 Respecting the Appellants' post-turbine witness evidence, the Approval Holder's submission states:

103. With respect to the post-turbine witnesses, Dr. McCunney concluded that their evidence does not establish a causal link between health effects and living in the vicinity of wind turbines. He explained that to assess potential causal links between exposure to a hazard and an illness, the first step is to confirm the diagnosis of the illness or disease. Here, however, the information in respect of the post-turbine witnesses is too limited, according to Dr. McCunney, to make a definitive diagnosis of their symptoms based on contemporary medical standards. Dr. McCunney noted, in particular, the absence of appropriate diagnostic tests and results (such as sleep studies) in the medical records that had been provided by the post-turbine witnesses. He also noted that there were a number of inconsistencies between the self-reports of the witnesses and their medical records, such as pre-existing conditions and side-effects of medications that might explain the symptoms experienced by the witnesses after the installation of wind turbines.

104. Critical exposure information - the level of noise experienced by the post-turbine witnesses - was also absent. As Dr. McCunney explained, an exposure assessment is critical to any evaluation of causality in order to assess how the specific exposure compares with the dose-response results described in applicable scientific literature.

105. Dr. McCunney further noted that many of the symptoms reported by the post-turbine witnesses lack biological plausibility, based on his experience in evaluating health effects from high noise level exposures in industrial environments. Dr. McCunney explained that "biological implausibility" is one of the fundamental principles of occupational and environmental medicine: as he put it, "if there is no link at high levels of exposure to a hazard ... it is virtually implausible that low levels would cause an effect that is not noted at high levels." Dr. McCunney further noted that in his 30 years of experience in occupational and environmental medicine, he has never encountered so many symptoms attributable to a single hazard.

338 Dr. McCunney's opinion respecting the pre-turbine witnesses was that there was no reason to conclude that they will be affected by the operation of the Project, having regard to the medical information they provided and the scientific literature.

Dr. Baines

339 At para. 14 of Dr. Baines' witness statement, she states:

14. With respect to demonstrating causation, six criteria are applicable to wind turbines:

a. The first is an appropriate temporal relationship between cause and effect, namely that the cause precedes the effect. It is claimed the symptoms begin after exposure to wind turbines. However when data are gathered in a biased fashion (sampling bias) together with the potential for suggestibility bias (filling out a questionnaire labelled adverse health effects of IWTs, reading media reports of illness due to IWTs, concern about loss of property values) may all lead to heightened awareness of symptoms previously ignored.

b. The second criterion is a strong association between the cause and the effect. Unfortunately, the adverse effects reported are also observed in the absence of wind turbines and only a minority of those exposed experience symptoms.

c. The third criterion is specificity. Does the cause produce an effect not seen in other situations? Clearly this criterion is not fulfilled.

d. The fourth criterion is constancy, the effect reliably follows the cause, and we know that not all people exposed to IWTs experience the adverse effects claimed. As well, people not exposed experience the same symptoms reported by plaintiffs.

> e. A fifth criterion is a dose-response effect meaning that the more intense the exposure, the more severe the effect. This has never been persuasively demonstrated in the anti-turbine literature.
>
> f. The sixth criterion is biological plausibility. It is generally accepted that a wide range of symptoms involving many body systems will not be due to a single cause or, in the case of IWTs, arise from the visual and sound consequences of their presence. With the wide range of reported symptoms, virtually all of which are experienced widely in the general population, the case for causality due to IWTs is weak.

Findings

Dr. McMurtry's qualification as an expert witness

340 The Director and the Approval Holder opposed the Appellants' request that Dr. McMurtry be qualified to give opinion evidence as a physician and surgeon with expertise in the delivery of health care, health care policy and health policy. Dr. McMurtry testified in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*, where a request for the same qualification was also opposed. In APPEC, at paras. 72 and 73, the Tribunal provided a summary of the submissions made in respect of this request for qualification, and the Tribunal's reasons for granting the request:

> 72. The Approval Holder and the Director objected to the qualification of Dr. McMurtry and to the admissibility of his evidence. While the Approval Holder and Director took no issue with Dr. McMurtry's expertise as requested, they argued that it was irrelevant to the issue to be determined by the Tribunal. Specifically, he is an orthopedic surgeon, not an epidemiologist or an expert in any of the illnesses allegedly caused by exposure to wind turbines. Secondly, they argued the evidence should be inadmissible as Dr. McMurtry could not be neutral and unbiased as required of an expert witness under the Tribunal's Practice Direction, due to involvement in wind turbine issues as an advocate. Dr. McMurtry is a former Director of APPEC.
>
> 73. The Tribunal found that, despite Dr. McMurtry's involvement in wind turbine issues in general and with APPEC in particular, he could be qualified as an expert. The reasons include that health impacts of wind turbines is an emerging area of science with few experts at the ready to testify; that Dr. McMurtry has engaged with more individuals alleging these health effects than anyone in Canada; that Dr. McMurtry testified as an expert in the Erickson hearing; and due to his demonstrated personal integrity as an advocate of public health. The Tribunal found that issues of bias would go to weight, rather than admissibility of the evidence. With respect to the area of expertise, the Tribunal found Dr. McMurtry to be an expert in the area requested, and that it was not able to make a determination on relevance at the qualifications stage in the proceeding. ...

341 The Tribunal finds that these paragraphs adequately describe the submissions made and the Tribunal's reasons for granting the requested qualification in this case.

Whether Dr. McMurtry's proposed reply evidence should be accepted

342 As explained more fully in the Tribunal's order of November 27, 2013, it was not possible to hear *viva voce* evidence from the Appellants' proposed reply witnesses during the scheduled days for the hearing. The Tribunal therefore outlined a schedule whereby the Appellants' reply evidence would be filed by way of affidavits, along with the transcripts of the cross-examinations of those witnesses. As the Approval Holder and the Director submitted that the evidence was not proper reply, the Tribunal directed the parties to address this issue in their final written submissions. All parties did so.

343 The Director and Approval Holder argue that Dr. McMurtry's reply affidavit is improper reply and should not be accepted by the Tribunal. The Director discussed bringing a motion to exclude the proposed reply evidence, but the Tribunal ruled orally on October 7, 2013 that it would receive the evidence via affidavit, and consider submissions on admissibility of the proposed reply evidence along with the final submissions of the parties.

344 The Director and Approval Holder note that Dr. McMurtry's reply affidavit includes reference to studies by Pedersen and a report by the World Health Organization ("WHO") (Europe), *Burden of Disease from Environmental Noise: Quantification of Healthy Life Years Lost in Europe*, 2011 (the "WHO (Europe) 2011 Report"). They argue that, if Dr. McMurtry was relying on them, he should have included them in his original witness statements and during oral testimony before the Tribunal. They argue that the reply affidavit does not reply to constitutional evidence adduced by the Director.

345 The Appellants argue that Dr. McMurtry has been qualified as an expert in health care policy and his reply affidavit is within his expertise, and responds to the Director's evidence asserting that the purpose of the renewable energy approval provisions is constitutional. It is thus *Charter*-related reply, they submit, and is proper.

346 The Tribunal finds that paras. 6, 7 and 8 of Dr. McMurtry's reply affidavit discuss Ontario's energy mix and its electricity generating capacity. These are clearly not within Dr. McMurtry's area of expertise and the Tribunal does not admit them as evidence.

347 Paragraphs 9 to 13 of Dr. McMurtry's reply affidavit respond to Dr. Moore's comments regarding criteria for causation, and evidence entered during the Approval Holder's case regarding annoyance. An excerpt from the WHO (Europe) 2011 Report referred to in para. 13, for example, was entered into evidence during Dr. McCunney's testimony. For this reason, the Tribunal allows those paragraphs into evidence, along with the documents they refer to, as reply evidence on the health case.

Dr. McMurtry's opinions respecting the post-turbine witnesses

348 As noted earlier in the description of his evidence, Dr. McMurtry states his opinion that each of the post-turbine witnesses satisfies the 'probable' criteria for experiencing adverse health effects from living in the environs of industrial wind turbines. The Tribunal notes that he did not expressly state that this was his *diagnosis* respecting each of these individuals. However, as he noted in his update to the Case Definition, a 'probable' diagnosis "indicates that AHE/IWT [adverse health effects in the environs of industrial wind turbines] more likely than not are the cause of the complaints. AHE/IWT is the working diagnosis. Other diagnostic possibilities continue to exist and should be considered in the differential diagnoses."

349 The Tribunal notes the purpose of opinion evidence is to assist the Tribunal in making its decision respecting the statutory test under the *EPA*, which is a legal determination. Dr. McMurtry is clearly asserting that it is more likely than not that each of the post-turbine witnesses has suffered adverse health effects caused by industrial wind turbines. Consequently, the nature of this opinion evidence is to be assessed in this legal context, and not the context of how a health practitioner may differentiate between commenting on whether a post-turbine witness satisfies the criteria of the Case Definition and making a diagnosis. In the legal context, the Tribunal finds that any such differentiation is artificial.

350 The Tribunal also notes that Dr. McMurtry's updated Case Definition sets out diagnostic criteria intended for use by primary health care physicians to diagnose whether a patient who lives in the environs of industrial wind turbines is experiencing adverse health effects. As such, this Case Definition is based on the presumption that adverse health effects are caused by being in proximity to industrial wind turbines. Therefore, the Case Definition, in and of itself, does not establish causation. As stated in Dr. Moore's witness statement at para. 142, "Case studies and the associated methodology is a particular way of defining cases, and not a way of analyzing cases or a way of modeling causal relations."

351 The basis on which Dr. McMurtry concludes that industrial wind turbines cause adverse health effects is summarized in the Introduction to the Case Definition, which states:

> These [adverse] health effects *appear to correlate* with proximity to IWTs [industrial wind turbines], the frequency of the noise, the time of exposure, and individual response. The pattern of individual's complaints demonstrates a striking similarity internationally in media reports and in physician-generated case series.
>
> [emphasis added]

352 The Tribunal notes that evidence of the post-turbine witnesses, and Ms. Laurie's evidence respecting her survey of 130 Australians, provide data in support of this statement. However, while correlation can be indicative of causation, it is not synonymous with causation, because, as noted in Dr. Moore's evidence, associations between events can occur by chance. The evidence adduced by the respondents respecting causality assessment and the accepted use of the Bradford Hill criteria for assessing causal associations indicate that more than correlation is required in order to establish causation.

353 The Tribunal recognizes that the reasons advanced by Dr. McMurtry also include his observation respecting the incidence of reports of adverse health effects in all countries where industrial wind turbines are erected, and that the reports of adverse health effects are similar despite differing culture and languages (described as convergent validity). While these considerations are not to be discounted, the Tribunal finds that it has received insufficient evidence to establish that a causal association can be made, based on this information alone. While it is Dr. McMurtry's opinion that such a conclusion is established, the respondents' health experts clearly express their opinion that all of the Bradford Hill criteria must be satisfied, and, in this case, that these criteria have not been met.

354 As is discussed in greater detail below, the evidence here is closer to the hypothesis generating phase of scientific research than it is to the point where conclusions can be made on causation. Consequently, the Tribunal finds that the Case Definition does not establish causation. In reaching this conclusion, the Tribunal also relies on its analysis and findings, described below, respecting Dr. Leventhall, and the evidence respecting annoyance.

355 In light of the above finding, it follows that any diagnosis based on the assumption that adverse health effects are caused by living in the environs of industrial wind turbines, also does not establish causation.

356 As the Tribunal has found that the Case Definition does not establish causation, the Tribunal finds that it is unnecessary to address the respondents' submissions challenging other aspects of the validity of the Case Definition.

Appellants' Submission respecting evidence of Dr. Leventhall in Erickson

357 The Appellants assert that there is a causal chain between annoyance, stress, sleep disturbance, and adverse health effects. In their submissions in support of this position, they maintain that the evidence of Dr. Leventhall, as reported in *Erickson*, that annoyance is a psychological effect, predominantly somatoform disorders, which occur in small numbers of people. The Appellants further maintain that: (i) he stated that the effects of extreme annoyance include symptoms such as sleep disturbance, headache, tinnitus, ear pressure, dizziness, vertigo, nausea, visual blurring, tachycardia, irritability, problems with concentration and memory, panic episodes; and (ii) he acknowledged that sleep disturbance is an adverse health effect.

358 The Appellants state, that, in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*, the Tribunal found that if the approval holder disagreed with how Dr. Leventhall's evidence was interpreted in *Erickson*, or wished to have him give different or updated evidence, it had the opportunity to do so. The Appellants assert that the Tribunal, therefore, inferred that Dr. Leventhall's evidence from *Erickson* was not contested. The Appellants point out that the Approval Holder could have called Dr. Leventhall to give evidence in this proceeding and has not done so. Therefore, the Appellants submit that the Tribunal should draw the same inference in these proceedings as they assert was drawn in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*.

359 The Tribunal notes that the reference quoted from *Erickson* is with respect to the *evidence* of Dr. Leventhall, not any *finding* made with respect to this evidence. Nowhere in *Erickson* did the Tribunal make a specific finding in respect of this evidence. At paras. 832 and 836, the Tribunal in *Erickson* stated:

> 832. Given the current level of science, the Tribunal finds that it is not necessary to make major findings regarding the weight that should be attached to each witness' testimony.
>
> 836. In many cases, the evidence (as opposed to the conclusions) was simply different, but not divergent. To use an example, the Appellants put forward a non peer-reviewed study that showed an association between distance from turbines and

> reports of effects. The Director and Suncor did not counter with a similar study that did not find an association (a point that was generally made by Dr. Shepherd). Rather, they provided expert evidence on some of the apparent weaknesses in the study and conclusions on why definitive causal correlations could not be found. They also provided evidence about what the existing peer-reviewed articles have studied (for example, perceived impacts, such as "annoyance", "high annoyance", etc.) and contrasted them with what the legal test asks for. This type of evidence added to the evidentiary picture presented to the Tribunal. In very few instances did the scientific evidence run in completely opposite directions. Indeed, the Tribunal heard evidence from Dr. Mundt that many of the applicable peer-reviewed articles are about the perception of noise from wind turbines and not necessarily health effects. *This, in part, led to the significant debates about the applicability of words like "annoyance" in the perception of noise studies to the test used in this proceeding, which focuses on health. Obviously, the Tribunal would have preferred clear evidence from peer-reviewed studies that actually measured health effects and their relation to wind turbines, but research in that area is still quite limited.*
>
> [emphasis added]

360 Secondly, in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment*, the Tribunal did not make a finding accepting Dr. Leventhall's evidence. Instead, the Tribunal in *Alliance to Protect Prince Edward County v. Director, Ministry of the Environment* addressed an issue regarding the interpretation of Dr. Leventhall's evidence in *Erickson*. At para. 49, the Tribunal stated:

> Dr. Leventhall testified for the approval holder in *Erickson*, and although originally on the witness list for the Approval Holder in this proceeding, he was never called. If the Approval Holder disagreed with how Dr. Leventhall's evidence was interpreted in the earlier decision, or wished to have him give different or updated evidence, it clearly had the opportunity to do so. The Tribunal therefore infers that Dr. Leventhall's evidence, as reflected in *Erickson*, was not contested.

361 In any event, Dr. Leventhall did not testify in this proceeding. Consequently, his work in this area is relevant only to the extent that it has been referenced by the experts who have testified in this proceeding who rely on his work in support of the opinions they have expressed.

Annoyance

362 The Tribunal now turns to the Appellants' submissions regarding annoyance. They rely on Mr. Howe's evidence as described above. They submit that, there is, therefore, undisputed evidence before this Tribunal that, at sound levels at or below those approved for the operation of this Project: (i) 6 to 20% of people will be very annoyed, and (ii) such persons will experience adverse health effects, as there is a causal chain between annoyance, stress, sleep disturbance, and adverse health effects.

363 For the following reasons, the Tribunal does not accept the Appellants' assertion that this evidence is undisputed, or that it has been conclusively established that such persons will experience adverse health effects.

364 The Tribunal first notes that it accepts, as stated in *Erickson* at para. 630, that "sometimes a causal link can be established, even if the specific mechanism responsible for that link has not been identified with certainty within a suite of plausible pathways." However, to establish causation, there is still a requirement to demonstrate that annoyance *will* result in the adverse health effects listed by the Appellants, even if the exact mechanism is not identified.

365 Supporting the Appellants' position is the evidence of Mr. Howe, who is a professional engineer specializing in acoustics. While the Tribunal accepts that the nature of his work as an acoustician includes consideration of whether noise can cause annoyance, it has not been suggested that he has the qualification to comment on the health effects that can be expected to result from annoyance. Instead, in his witness statement, he states that research has shown that annoyance associated with sound from wind turbines can be expected to contribute to stress-related health impacts in some persons. Mr. Howe included as part of his evidence, a report he authored for the MOE, the MOE Review Report noted above, which indicates that the referenced research is primarily the published work of Dr. Leventhall. Mr. Howe also refers to a 2013 review conducted by the Oregon Health Authority, entitled *Strategic Health Impact Assessment on Wind Energy Development in Oregon* (the "Oregon Study"),

and a recent study conducted by the University of Scotland. Dr. McMurtry's evidence on these issues refers to Mr. Howe's MOE Review Report.

366 The Director and Approval Holder do not agree with the Appellants' position. They rely on the evidence of the respondents' health experts, and in particular, the evidence of Dr. McCunney described above, wherein he disputes that some people will always exhibit effects, and refers to a study which indicates that some wind projects had never been subject to noise or health complaints.

367 Based on the evidence adduced in this proceeding, the Tribunal finds that the proposition that annoyance will occur as a result of exposure to noise levels between 35 to 40 dBA has not been clearly established, as the expert opinion on this issue is divided. In this regard, for example, Mr. Howe relies on the work of Dr. Leventhall, as well as a 2009 study by a group of researchers (Pedersen et al.) that states that close to 20% of people were "very annoyed" by wind turbine sound levels. Dr. McCunney refers to a more recent report by Dr. Chapman which showed large spatio-temporal variations in complaints about noise and health from wind farms. Dr. Chapman found that 33 of 51 wind farms in Australia had never been subject to noise or health complaints. While the information respecting these studies has been provided to the Tribunal, no evidence has been provided to indicate that one study should be relied on over another. For example, when challenged in cross-examination as to whether Dr. Leventhall would accept the Chapman study, Dr. McCunney testified that Dr. Leventhall would have to testify to indicate how this more recent study would affect his views.

368 The divergence of opinion in this area is also documented by the WHO (Europe) 2011 Report referenced by Dr. McMurtry. This report includes a chapter on "Environmental Noise and Annoyance", which highlights the debate and uncertainty respecting noise annoyance. At page 91 the report states:

> Noise annoyance is widely accepted as an end-point of environmental noise that can be taken as a basis for evaluating the impact of noise on the exposed population. As a consequence, EU Directive 2002/49/EC recommends evaluating environmental noise exposures on the basis of estimated noise annoyance.
>
> As discussed in Chapter 1, WHO defines health as "a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity". This *implies* that noise-induced annoyance may be considered an adverse effect on health. People annoyed by noise may experience a variety of negative responses, such as anger, disappointment, dissatisfaction, withdrawal, helplessness, depression, anxiety, distraction, agitation or exhaustion. Furthermore, stress-related psycho-social symptoms such as tiredness, stomach discomfort and stress have been found to be associated with noise exposure as well as noise annoyance. *Some public health experts feel that severe forms of noise-related annoyance should considered a legitimate environmental issue affecting the well-being and quality of life of the population exposed to environmental noise.* The most important issue in the present context is to what extent health (according to the broad definition given above) is reduced by noise and whether a DW that expresses this reduction, when combined with the prevalence of annoyance, leads to a significant burden of "disease". *The other possibility would be that noise annoyance does not significantly contribute to disability and, hence, should not be taken into account when considering the noise-induced burden of disease.*
>
> (emphasis added)

369 At page 93, this report also confirms that data below 45 dBA was not considered "because the risk of unreliable noise data is high at very low levels ..." This report further notes, at page 97, that:

> **Uncertainty with respect to the exposure-response relationship**
>
> One cause of doubt regarding the predictability of noise annoyance is that the studies show a large variation in individual annoyance reactions to the same noise exposure level. The other cause of doubt is that attempts to integrate the results from different studies show that there is a large variation in the relationships found in different studies. The large individual variation and the large study variation suggest that it is difficult to predict annoyance with sufficient accuracy. Indeed, the

> annoyance response of a particular individual or group of individuals can be predicted on the basis of the exposure only with a large amount of uncertainty. ...

370 The Tribunal notes that it is also unclear whether adverse health effects will occur only at elevated levels of annoyance. In this regard, there is nothing in the evidence to indicate how levels of annoyance would be measured. In addition, Mr. Howe, in his witness statement, notes that "it would be statistically invalid to predict the exact number of persons expected to be very annoyed, other than noting that those predisposed against the project are more likely to be annoyed." Furthermore, if there is any consensus to be found among the experts who testified, it is that annoyance is not likely to result solely from exposure to noise, but includes other factors affecting an individual's attitude toward the project.

371 If the intent of this evidence regarding annoyance is to support a generic approach to establish causation, i.e., where causation is not in relation to specific identified individuals, then it is clear that the epidemiological framework set out in the Bradford Hill criteria is relevant. Dr. Baines was qualified to give opinion evidence as an epidemiologist. As noted above, in para. 14 of her witness statement, she reviews these criteria and concludes that, in respect of wind turbines, none of these criteria have been fulfilled. The opinion evidence respecting the application of the Bradford Hill criteria is conflicting. Dr. McMurtry's analysis of these criteria is clearly at odds with the conclusions of Dr. McCunney, Dr. Moore, and Dr. Baines. While the Tribunal does not conclusively reject Dr. McMurtry's evidence, the Tribunal finds that it is not sufficiently compelling to lead the Tribunal to conclude that the opinions of Dr. McCunney, Dr. Moore, and Dr. Baines should be rejected. Consequently, in weighing this evidence, the most that can be said is that the preponderance of this opinion evidence favours the position of the Director and the Approval Holder. Based on these conclusions, the Tribunal finds that the evidence is inconclusive respecting whether industrial wind turbines would cause annoyance. Assuming that the evidence established that annoyance will be caused, the Tribunal also finds this evidence is inconclusive regarding the degree of annoyance which would be caused, and, in turn, whether such annoyance will result in adverse health effects.

372 The Appellants assert that the causal chain between annoyance, stress, sleep disturbance, and adverse health effects, is evidenced by the adverse health effects suffered by the post-turbine witnesses who testified in this proceeding. The Tribunal does not accept that this has been established by the Appellants. Instead, the Tribunal finds that, based on the evidence adduced in this proceeding, the symptoms reported by the post-turbine witnesses *may* be evidence of the causal chain between annoyance, stress, sleep disturbance and adverse health effects. In this regard, the Tribunal notes that the Appellants did not adduce any opinion evidence by a qualified health practitioner to confirm that the symptoms reported by the post-turbine witnesses resulted from annoyance, manifested through a somatoform or other disorder or condition.

373 In summary, the Tribunal finds that the evidence is inconclusive on the issue of whether wind turbine noise at 40 dBA or less, and other associated factors, such as being predisposed against a wind turbine project, can be expected to cause annoyance that will result in serious harm to human health for a small percentage of the population that will be exposed to the Project under appeal. In this regard, Tribunal finds that the Tribunal's finding in *Erickson*, at para. 838, also applies here:

> 838. To summarize, the evidence in this Hearing on serious indirect harm was largely exploratory. The evidence on a lack of serious indirect harm was also limited (the evidence on a lack of serious direct harm is much stronger, however). The Tribunal is not giving significant weight to the latter and little to the former in reaching its conclusion. That is because the legal test itself tilts the balance in one direction. The onus is on one side (in this case, the Appellants). That side has provided evidence that the Tribunal finds to be exploratory in nature, even if given significant weight. Put another way (using the wording of Dr. Mundt), the present situation is closer to the hypothesis generating phase of scientific research than it is to the point where conclusions can be made on causation (with respect to the sound levels expected at the Project's receptors). Or, using the approach of Dr. Shepherd, it is clear that we are not yet at the third stage of research on a new condition where intensive research has been completed so as to determine causation. We are at a much earlier stage, where there have been adverse event reports and some exploratory studies, such as the Nissenbaum Study. It is, therefore, no surprise that the legal test, which requires proof of harm, has not been satisfied when the applicable scientific evidence is in such an early stage of development.

Low Frequency Noise and Infrasound ("LFNI")

374 Mr. Howe's evidence briefly touched on LFNI. Both Dr. McMurtry and Dr. McCunney addressed the issue of LFNI in greater detail in their witness statements. The Tribunal has not found it necessary to include a synopsis of this evidence in this decision, as they both testified in *Erickson* on this issue, and much of their evidence adduced in this proceeding is as described in that decision. Regarding Dr. McMurtry's evidence in this proceeding, he relies on his witness statement which was filed in *Erickson* in 2011. In this proceeding, Dr. McCunney's witness statement further addresses LFNI, providing reference to studies published after 2011. In summary, there is a clear difference of opinion between them regarding whether LFNI generated by wind turbines will cause harmful effects to humans.

375 The Tribunal notes that the Appellants' submissions did not address LFNI separately from the issue respecting the health effects resulting from annoyance. The Tribunal also notes that para. 193 of the Appellants' submissions states:

> ... there remain key gaps in the information available about the relationship between IWTs and human health:
>
> • Sleep disruption and health effects from long-term exposure to low levels of low frequency sound and infrasound.

376 In light of the divergent expert opinions on this issue, and the current status of the research in this area, the Tribunal finds that the present situation still remains closer to the hypothesis generating phase of scientific research than it is to the point where conclusions can be made on causation. Consequently, the Tribunal finds that the Appellants have not established that LFNI generated by wind turbines will cause serious harm to human health.

Conclusion on Issue 2A

377 For the above reasons, the Tribunal finds that the Appellants have not established a causal link between wind turbines and human health effects where there is a 550m setback and 40 dBA noise limit.

Issue 2B: Whether Engaging in This Project in Accordance with the REA Will Cause Serious Harm to Human Health

378 As the Tribunal has noted earlier in this decision, the Appellants seek to establish causation by establishing that specific individuals have suffered serious harm to their health as a result of living in proximity to wind project components, maintaining that this evidence establishes that wind turbines will exacerbate certain types of pre-existing medical conditions. The Appellants maintain that the pre-turbine witnesses who have testified in this proceeding, are vulnerable people living in the vicinity of the Project who have such pre-existing medical conditions. The Appellants assert, therefore, that their testimony respecting their pre-existing medical conditions is highly relevant to establish a causal link between the proposed Project and "the more likely than not probable effect on those living near the Project".

379 The pre-turbine witnesses each testified that they had or have a pre-existing medical condition. They each expressed their concern that, due to their proximity to the proposed wind turbines in the Project, they could experience a resumption or exacerbation of their symptoms, or suffer additional adverse health effects. They each produced medical records that they were able to obtain regarding their past medical history. However, none of them presented opinion evidence from a qualified health practitioner to confirm that their concerns will occur. In the absence of such medical opinion, the Appellants rely on the evidence of the post-turbine witnesses to establish their assertion that exposure to wind turbines will exacerbate pre-existing medical conditions.

380 In light of the Tribunal's findings above that the Appellants have not established a causal link between wind turbines and human health effects, and, in particular, that causation has not been established in respect of the post-turbine witnesses, the Tribunal finds that the Appellants have not established that any of the pre-turbine witnesses will suffer serious harm to their health as a result of the Approval Holder engaging in the Project in accordance with the REA. As such, the Tribunal finds it is unnecessary to engage in a detailed review of the medical evidence respecting their pre-existing conditions. However, the Tribunal will address the evidence of one pre-turbine witness, as her evidence includes an assertion of direct causation, namely, that shadow flicker will cause her to experience epileptic seizures. For ease of reference, the Tribunal will refer to this pre-turbine witness as "PTW".

Evidence of Witness PTW

381 PTW owns a 22 acre property in the Project area, and plans to retire in December 2013 and use this rural property as her primary residence. She believes the Project will cause serious harm to her health due to two health conditions: high blood pressure and epilepsy. She has been taking blood pressure medication for many years, having been hospitalized in the past due to high blood pressure. She testified that she monitors her blood pressure every day, and works hard to keep it at a reasonable level by, among other things, a daily fitness regime.

382 She testified that she has suffered from epileptic seizures from the age of two. PTW testified that she can recognize the onset of an episode with approximately two hours' warning, which has allowed her to live a fairly normal life. She states that each episode of an epileptic seizure is extremely physically taxing, and she fears ongoing damage to her health. She described episodes she has experienced, which she states have had a significant impact on her. She cites, for example, that a single seizure will leave her bedridden for days and take several weeks for a full recovery. Multiple seizures will require an even longer recovery process.

383 PTW has become attuned to triggers throughout her life, and finds that nausea is a trigger, as well as illness and fatigue. She states that she attempts to minimize the likelihood of epileptic seizures through lifestyle, including a regular exercise regime and sufficient sleep. When she feels a seizure coming on, it is very important to find a quiet place so she can "push it away".

384 PTW makes use of her property for outdoor recreation, gardening, and tapping maple trees in the early spring. She is concerned that the wind turbine project may cause her a loss of sleep, headaches and nausea, all of which increase the likelihood of suffering an epileptic seizure. In addition, she notes the shadow impacts will occur during seasons when she is using the outdoor space, including tapping the maple trees in early spring and gardening in the fall. She feels she cannot live on the property and put herself at risk of seizures, should the Project proceed.

385 In cross-examination, PTW agreed that flashing lights have never triggered a seizure in the past, but she is not willing to test it. Her main concern is nausea associated with moving shadows.

386 PTW filed a review of the literature on health impacts of wind turbines, in a paper prepared by Knopper and Ollson (2011). She notes that the authors state "in Ontario it has been common practice to attempt to ensure no more than 30 hours of shadow flicker per annum at any one residence" (page 6). She also notes that Germany has regulations related to shadow flicker, and stipulates a maximum of 30 hours per year for worst case scenario, and eight hours per year (30 minutes on any one day) actual amounts of shadow flicker. She states that the United Kingdom ("UK") takes the approach of a minimum setback (9 or 10 times the rotor diameter of the blade, and or 10 times the tower height to the hub) to reduce shadow flicker. According to her calculations, the UK regulations would result in Turbines T1 and T2 of the Project being set back 850 m to 1,030 m from her home, were they to apply in Ontario.

387 Regarding shadow flicker, Steve Hilditch gave opinion evidence regarding the time of the year that shadow flicker from the two turbines would affect PTW's property.

388 In response, the Approval Holder called Shant Dakouzian to respond to Mr. Hilditch's evidence. Both Mr. Hilditch and Mr. Dakouzian used computer simulation modelling as the basis for their evidence. It was not disputed by Mr. Dakouzian that PTW's property would be subject to shadow flicker at some times of the year, although it is his opinion that, given the distance from the turbines, the intensity of the shadow would be diffused. Mr. Hilditch's estimates of the amount of time each day that PTW's property would be exposed to shadow flicker is higher than Mr. Dakouzian's estimates. The Approval Holder also called Dr. McCunney to respond to PTW's health concerns. His evidence is described below.

Findings Regarding Evidence of PTW

389 In summary, PTW asserts that she will experience increased risk of having epileptic seizures as a result of potential for sleep deprivation from noise, or as a result of nausea and risk of increased blood pressure caused by wind turbine shadow

flicker from the two Project turbines to be located nearest her property. Regarding sleep deprivation from noise, this issue has already been addressed under Issue 2A, particularly in respect of the post-turbine witnesses.

390 The Tribunal finds that it does not need to make specific findings respecting these areas of disagreement between the shadow flicker experts, because (i) they both agree that her property will be affected to some degree by shadow flicker each year; and (ii) PTW's evidence is that she will be at risk of experiencing a seizure if she is exposed to any shadow flicker.

391 The Tribunal notes that PTW has adduced some evidence that shadow flicker affects people with photo-sensitive epilepsy. The Knopper and Ollson paper notes at page 5, however, that "turbines are designed not to pose a risk of photo-induced epilepsy". They state:

> Harding et al. and Smedley et al. investigated the relationship between photo-induced seizures (i.e., photo-sensitive epilepsy) and wind turbine blade flicker (also known as shadow flicker). This is an infrequent event, typically modelled to occur less than 30 hours a year form wind turbine projects we have reviewed and would be most common at dusk and dawn, when the sun is at the horizon. Both studies suggested that flicker from turbines that interrupt or reflect sunlight at frequencies greater than 3 Hz pose a potential risk of inducing photosensitive seizures in 1.7 people per 100,000 of the photosensitive population. For turbines with three blades, this translates to a maximum speed of rotation of 60 rpm. The normal practice for large wind farms is for frequencies well below this threshold.

392 The practice in Ontario to attempt to ensure no more than 30 hours of shadow flicker per annum on a residence, as referenced by PTW, is directed to reducing the "annoyance" factor, rather than any likelihood of photosensitive epileptic seizures.

393 In response to PTW's evidence, Dr. McCunney's uncontradicted opinion evidence is as follows:

> 7. Concerns about the potential health impact of wind turbine operations on people who have been diagnosed with epilepsy have been addressed in the peer reviewed scientific literature. (Smedley et al, 2010 and Harding et al, 2008) The type of epilepsy that has been suggested as possibly at risk from wind turbine operations is known as "photosensitive epilepsy". Photosensitive epilepsy, which occurs in about 1 in every 4000 people (0.025%), may be precipitated by flickering sunlight. However, flicker that occurs at less than 3 cycles per second, (180 revolutions per minute) such as occurs in wind turbine operations, does not pose a risk of provoking photo-epileptic seizures. (Harding et al, 2008) As indicated above, there is no evidence in [PTW's] records that she is part of the small fraction of the population that has photosensitive epilepsy. This conclusion is corroborated by the fact that [PTW] had an EEG on October 24, 2008 in which photic stimulation triggered no results.
>
> 8. In my view, the evidence does not support the view that shadow flicker from the wind turbines will pose a risk of provoking a seizure in [PTW] because the evidence does not indicate that [PTW] has photosensitive epilepsy. The type of her epilepsy - at the most recent evaluation - appears, based on the records produced, very stable in that she has had very few seizures since her early college days, and had a normal EEG in 2008.
>
> 9. Even if [PTW] did have photosensitive epilepsy, the shadow flicker from the wind turbines would not pose a significant risk of provoking a seizure. My opinion is based on a review of pertinent scientific studies (Harding, 2008; Smedley, 2010), and the technical Specifications for the GE turbines planned for the Dufferin wind farm which indicate that the rotating blade frequency will not exceed 16.18 revolutions per minute (rpm), which is less than 10% of the threshold proposed by Smedley et al as capable of provoking a photo-epileptic seizure. (Technical Documentation Wind Turbine Generator Systems GE 1.6-100-50 Hz/ 60 Hz and General Electric 2.75 MW Turbines) The turbine blades will not rotate at a sufficiently high frequency, i.e.> 3 cycles per second (180 revolutions per minute) to provoke a photo epileptic seizure. (Smedley et al, 2010) In a comprehensive report prepared for the state of Massachusetts, the expert panel came to a similar conclusion, finding that the scientific evidence suggests that there is no risk of seizure from shadow flicker caused by wind turbines. (MDPH, 2012)
>
> 10. *Effect of shadow flicker on blood pressure.* Apart from her concern about epilepsy, in her witness statement [PTW] also raised concern that shadow flicker has the potential to affect her blood pressure. There is insufficient scientific evidence

> to suggest that shadow flickering will cause blood pressure to elevate and cause hypertension, and in fact experts have concluded that shadow flicker does not cause any adverse health effects. (MDPH, 2012) As [PTW] herself has observed, there is only one German study that indicates that prolonged shadow flicker (more than 30 minutes) *could* result in stress — related health: effects, (Pohl et al, 1999) A single study does not constitute enough to prove a link. That is particularly true in light of the fact that other studies conducted among people living in the vicinity of wind turbines have not shown causal links between wind turbines and hypertension. (Pedersen, 2011)

394 The Tribunal notes that Dr. McCunney's uncontroverted evidence provides the only qualified medical opinion respecting PTW's condition. While the Tribunal accepts PTW's description of her symptoms, this evidence does not establish that: (i) she, in fact, suffers from photo-sensitive epilepsy; (ii) the frequency of shadow flicker from wind turbines will trigger photo-epileptic seizures; or that (iii) shadow flicker will cause elevated blood pressure resulting in hypertension. For these reasons, the Tribunal finds that the Appellants have has not established that PTW will suffer serious harm to her health caused by the Project wind turbines that will be located near her property.

Evidence of the Other Party, Participant and Presenter

Joan Lever (Participant)

395 Ms. Lever lives in the vicinity of the Project and expressed her view on the harm that she believes will be caused by the Project. She has been a dedicated follower of this proceeding, and she is a vocal opponent of locating wind project development close to peoples' homes.

396 Ms. Lever supports the position of the Appellants in this proceeding. Her evidence touched on many, if not all of the issues before the Tribunal, including the impact of wind turbine noise, and sleep disturbance on human health. She also spoke passionately regarding the social impact of turbine projects on communities.

397 Ms. Lever's evidence included a sophisticated multi-media presentation that included excerpts from the CBC television documentary, "Wind Rush", as well as video footage from community demonstrations, and of a case of turbine fire. She appended many of the scientific documents that were also referred to by Ms. Laurie.

398 Ms. Lever expressed concern about direct health effects from low-frequency noise and infrasound, as well as indirect effects from stress and sleep disturbance. She asserts that the current set-back distances are entirely insufficient, citing her understanding of set-back requirements in other jurisdictions, including Australia, New Zealand, and a number of US states. She maintains that, in all cases, they are well beyond Ontario's 550 m requirement.

399 Ms. Lever is also concerned with safety issues, such as fires and ice throw. She supports the submissions by the Municipality of Amaranth, with respect to the danger of installing overhead transmission lines within this municipality.

Dr. William Crysdale (Party)

400 Dr. Crysdale is a retired physician who, when in active practice, specialized in children's health. He testified as a witness with respect to human health issues, although he did not seek to be qualified to give opinion evidence. He stressed the importance of recognizing that adverse health effects are serious.

401 Dr. Crysdale expressed his concern that the regulated set-back of 550 m is insufficient and is becoming ever more insufficient, given the increasing size of wind turbines. He asserts that Australia and New Zealand currently have established residential setbacks of 1.5 to 2 km.

402 Dr. Crysdale refers to several abstracts of studies and other papers supporting the view that low frequency noise and infrasound may impact a person's health, and that chronic annoyance is a risk factor for other types of diseases.

403 Dr. Crysdale is particularly concerned with the impact of loss of sleep on children. He asserts that independent research into the health effects of existing wind farms is long overdue, and is alarmed that the current Health Canada study to better understand health impacts of wind turbine noise, will not include anyone under the age of 18.

404 Dr. Crysdale submits that "the precautionary principle is one of the central concepts of modern environmental policy." He discussed a number of examples where it has been applied. After examining factors used by an Ontario medical officer of health to apply the precautionary principle, Dr. Crysdale concludes, that "at least a moderate precautionary principle" approach should be adopted. In reaching this conclusion, he relies, in part, on his assertion that there is a "low societal need for the electricity produced".

405 Dr. Crysdale also commented that he has proposed to the Hospital for Sick Children, where he worked until his recent retirement, that they undertake a study related to wind turbine noise and its impact on children's health.

Don MacIver (Presenter)

406 Mr. MacIver is the mayor of the Corporation of the Municipality of Amaranth (the "Municipality"), in which the Project is located. He gave a detailed presentation of the Municipality's health and safety concerns regarding the Project's proposed overhead transmission line. As his presentation was extensive, the Tribunal will only highlight the subject areas covered in his presentation:

- high voltage transmission lines impact human health;
- the multi-use of an elevated recreational trail within the Municipality will be severely limited, as a section of the Project overhead transmission line will be situated in close proximity to a section of this trail, causing safety concerns;
- electro-magnetic fields caused by transmission lines may be linked to a variety of human health problems, impact property values, and effect livestock.

407 Mayor MacIver testified that the Municipality wants the transmission line buried throughout the Municipality.

Norman Wolfson (Presenter)

408 Mr. Wolfson testified regarding both the health case, and concerns related to the natural environment. In the portion of his presentation which addressed health issues, he expressed significant concern about the potential for noise generated by 49 industrial wind turbines, some of which, he stated, are to be built in close proximity to his home. He further stated that this noise will disrupt his family's peaceful enjoyment of their property and the surrounding area.

409 Mr. Wolfson asserts that the area already has an inordinately high number of wind turbines, and maintains that the Project area is much too small to accommodate 49 industrial wind turbines.

410 Mr. Wolfson states his understanding that the Approval Holder has not conducted studies on possible impacts on human health, and states that he cannot understand why the Approval Holder's application for the REA could not have been deferred until the completion of the current study by Health Canada.

Findings Regarding Evidence of the Other Party, Participant, and Presenter

411 The evidence of Ms. Lever, Dr. Crysdale, Mayor MacIver and Mr. Wolfson, has been of assistance to the Tribunal in better understanding the issues to be addressed in this proceeding. The Tribunal notes that much of the evidence presented by Ms. Lever, Dr. Crysdale, and Mr. Wolfson, has been addressed by the other parties in this proceeding, and as such, their concerns and submissions have been addressed by the Tribunal elsewhere in this decision.

412 Regarding the Municipality's evidence respecting the health and safety impacts of above ground transmission lines, the Tribunal notes that a presenter may only give evidence respecting the issues raised in the appeal. Some of the appeals, in referring

to adverse health effects, do state that it is more likely than not that they are caused by a number of factors including stray voltage or electromagnetic fields. However, neither the Appellants' evidence nor their submissions in respect of the Health Test, have directly addressed this issue. Therefore, it is not entirely clear that this issue is before the Tribunal. However, assuming that it is, the Tribunal notes that no expert opinion evidence has been adduced to support the views expressed in Mayor MacIver's presentation. Consequently, the Tribunal finds that Mayor MacIver's evidence does not establish that serious harm to human health will be caused by high voltage transmission lines.

Conclusion on Issue 2B

413 The Tribunal finds that the Appellants have not established that any pre-turbine witnesses will suffer serious harm to their health caused by the Project wind turbines.

414 As noted above, the evidence in this proceeding does not establish a causal link between wind turbines and either direct or indirect serious harm to human health under the conditions imposed in the REA requiring a setback distance of 550 m, and a maximum noise level of 40 dBA.

415 Consequently the Tribunal finds that the Appellants have not established that engaging in the Project in accordance with the REA will cause serious harm to human health.

Issue 2C: Whether Ms. Laurie should be qualified to give opinion evidence

416 The Appellant, Mr. Sanford, called Ms. Laurie as a witness to give opinion evidence respecting the issue whether engaging in the Project in accordance with the REA will cause serious harm to human health. As noted earlier in this decision, Mr. Sanford requested that she be qualified as "a physician with experience in the delivery of health care." In an oral ruling, the Tribunal refused Mr. Sanford's request, indicating that its written reasons for this disposition would follow. The Tribunal's reasons are provided below.

Ms. Laurie's Education, Training, and Experience

417 The factual evidence regarding this witness' education, training, and experience in support of the requested qualification is not in dispute. Ms. Laurie obtained a Bachelor of Medicine, Bachelor of Surgery in 1995 from Flinders University, South Australia, and subsequently practiced, and obtained a Fellowship with the Royal Australian College of General Practitioners ("RACGP") awarded in 1999, and Fellowship with the Australian College of Remote and Rural Medicine ("ACRRM") in March 2000. She stopped practicing medicine in April 2002 due to personal circumstances. Ms. Laurie testified that in order to practice medicine, and more specifically, to diagnose and treat patients, Australian law requires that she must be registered with Australian Health Practitioners Registration Authority ("AHPRA"). She indicates that she let her registration lapse approximately two and half years after she ceased practicing in 2002. Ms. Laurie indicates that it is her intention to re-register with AHPRA. However, she stated that she must complete some self-study, particularly to update her knowledge respecting medication regimes, before she will be ready to re-apply. She confirmed that, to date, she has not done so. In light of these circumstances, Ms. Laurie confirmed that she cannot diagnose patients or prescribe medication for them.

418 As a result of a complaint filed with the AHPRA in 2013 that her current activities (discussed below) constituted practice as a physician, she voluntarily agreed not to use the title/honourific "Doctor" or "Dr.". She states that she has done so, in order to avoid any potential misunderstanding by members of the public regarding her status as a practicing physician. Documentary evidence respecting the complaint was adduced in evidence and marked confidential, i.e., it is not included in the public record in this proceeding. Ms. Laurie was cross-examined on this evidence. The Tribunal finds that this evidence supports Ms. Laurie's assertion that the AHPRA did not make any finding in respect of the complaint made against her.

419 In terms of her other professional training and experience, Ms. Laurie acknowledges that she has no training or experience in conducting medical or scientific research. She further acknowledges that she also does not have any training or experience in research methodology and design, other than some undergraduate exposure when obtaining her medical degree, and does not have post-graduate experience in this area. She acknowledges that she is not a qualified acoustician, and she has no experience

or training in acoustics generally, or, in particular, pertaining to noise generated by industrial wind turbines, although she has reviewed publications in the subject area of acoustics, and has consulted with acousticians.

420 Ms. Laurie testified that she first became interested in the potential health impacts of industrial wind turbines, specifically resulting from noise generated by industrial wind turbines, in 2010, when a wind project was proposed to be a situated near her home (but subsequently never built). Since that time, she accepted an invitation to be the medical director of foundation known as the Waubra Foundation, a volunteer position, which has subsequently changed to her current volunteer position as Chief Executive Officer. Ms. Laurie testified that the Waubra Foundation was formed in March 2010 to facilitate research into the adverse health impacts being described by neighbours to wind developments in Australia. She also stated that this Foundation has a particular interest in the role of low frequency industrial noise from any source, and resultant health problems.

421 The majority of Ms. Laurie's work experience related to health impacts of industrial wind turbines, comes from her work for the Waubra Foundation which is a full time volunteer position. In summary, Ms. Laurie testified that she has not approached communities to conduct surveys, and that she has not conducted formal structured research. She states that she conducts an ongoing survey, where, to date, she has spoken with approximately 130 people in Australia who live in the vicinity of industrial wind turbine projects. She indicated that these people have identified themselves to her, by contacting her directly, or indirectly by contacting the Waubra Foundation. She explains that these persons describe their symptoms to her and request information. She maintains that, when speaking with these people, she does not provide an individual diagnosis. She states that she has not ever taken a formal medical history, which is what a registered medical practitioner would do. She asserts that, instead, she provides information which people can choose to take to their health care practitioner, if they wish to do so, and that, sometimes, their practitioner will contact her for information. Ms. Laurie states that she is interested in learning about their problems, so she can provide information to enable them to assist their own practitioners in working out whether or not their symptoms are related in any way to a source of noise, whether the source is an operating wind turbine, or some other source.

422 Ms. Laurie explained that the Waubra Foundation is solely concerned with the human health consequences of exposure to operating industrial wind turbines and other sources of infrasound and low frequency noise. She states that she does not oppose industrial wind projects *per se*, but is concerned about the current practice of siting wind turbines in locations where, in her view, they are likely, on the basis of current knowledge, to cause harm to human health.

423 Apart from interviewing self-identified individuals as described above, Ms. Laurie states that she also works with acousticians to advance multi-disciplinary research which she asserts is needed. She further testified that she has conducted reviews of the published literature in this field, both in the subject area of noise impacts on human health associated with or caused by wind turbines or other sources, and in the subject area of noise acoustics. She also consults with other professionals who are working in this area, both in Australia and internationally, and, in this context, is familiar with the work of Dr. McMurtry, who has also testified in this proceeding.

424 In her witness statement, Ms. Laurie, in describing her work in this area, makes the following assertions:

> My own field work, and knowledge of the field work of others including acoustic and psycho acoustic measurements and physiological research, is appreciated by those genuinely seeking to understand why people are becoming unwell living near wind turbines. My help, knowledge and advice is sought by doctors, acousticians and researchers working in this field in Australia and overseas. My ability to understand and communicate the essence of the existing acoustic and human health evidence, has contributed to the general community understanding of the existing known pathophysiological pathways which make this condition so devastating to a significant proportion of wind project neighbours.

Ms. Laurie's Proposed Opinion Evidence

425 Ms. Laurie's opinion evidence is set out in her witness statement which has been filed in this proceeding. Although the Tribunal has given careful consideration to each of the opinions advanced in her witness statement, for the purpose of this decision, it is sufficient to describe these opinions by way of a summary overview. Ms. Laurie's opinion evidence falls into three main areas.

426 First, Ms. Laurie reviewed the witness statements and other information respecting Ontario residents who have testified in this proceeding. These witnesses fall into two categories:

- The post-turbine witnesses who reside in the vicinity of existing wind turbine projects who assert they have suffered harm to their health as a result of exposure to operating wind turbines.

- the pre-turbine Witnesses residing in the vicinity of Project wind turbines.

427 There are other persons referenced in Ms. Laurie's witness statement who did not testify in this proceeding.

428 In her witness statement Ms. Laurie states that she was retained to read the witness statements from the people named in her witness statement, and comment on:

a) whether they conform with Dr. McMurtry's case definition (described previously in this decision); and

b) whether they are in accordance with her own knowledge of the range and pattern of health problems being reported by residents living near industrial wind turbines.

429 In this regard, Ms. Laurie also reviewed medical records provided by these witnesses and questionnaires completed by them, and conducted a telephone interview with each of the witnesses who testified in this proceeding.

430 In her concluding remarks regarding the post-turbine witnesses, Ms. Laurie states:

Despite the individual differences between these witnesses with respect to the type, range and severity of the symptoms experienced, the speed of onset of symptoms, there is a clear pattern of exposure to operating wind turbines being associated with the symptoms, which are relieved or improve with cessation of exposure, ...

Overall, it is clear that all of them have experienced serious health impacts as a result of exposure to wind turbines. This makes it probable that others will experience similar effects if they are exposed to turbines.

431 In her concluding remarks regarding the pre-turbine witnesses, Ms. Laurie states:

It is probable that each of these individual residents will have serious adverse health impacts from wind turbine emissions from the proposed wind development.

Each of them has one or more of the risk factors identified by Dr. Nina Pierpont and Dr. Geoff Leventhall, being either at the extremes of age, or a clinical history of migraines, motion sickness, or inner ear pathology.

In addition each of them have underlying medical conditions which make them more likely to suffer the health damaging consequences of exposure to wind turbine noise because of the well established effects of sleep deprivation and physiological stress from exposure to infrasound and low frequency noise.

432 In her witness statement, Ms. Laurie describes a study by Dr. Pierpont, who is a practicing medical physician. Ms. Laurie provides an overview of symptoms identified by Dr. Pierpont, and she states that Dr. Levanthall, an acoustician, has acknowledged that these symptoms have been known to him to result from exposure to environmental low frequency noise. These symptoms are:

- Sleep disturbance and sleep deprivation

- Headaches

- Tinnitus (ringing in the ears)

- Ear Pressure

- Dizziness
- Vertigo
- Nausea
- Visual Blurring
- Tachycardia (fast heart rate)
- Irritability
- Problems with concentration and memory
- Panic episodes associated with sensations of movement,
- Quivering inside the body that arise when awake or asleep

433 Ms. Laurie also describes four specific risk factors identified by Dr. Pierpont as increasing the risk of developing characteristic symptoms from exposure to wind turbine noise. These are:

- The extremes of age - babies and young children and older citizens
- History of migraines
- History of motion sickness
- History of pre-existing otological (ear) conditions including inner ear disorders and industrial deafness

434 Ms. Laurie also expressed opinions that each of the post-turbine and pre-turbine witnesses who testified in this proceeding, satisfy the criteria for the 'probable' category of diagnosis as defined in Dr. McMurtry's Case Definition. She also expressed further opinions respecting these witnesses as described below.

Findings Regarding Mr. Sanford's Request to Qualify Ms. Laurie to Give Opinion Evidence

435 Tribunal Rule 170 regarding the production of witness statements, confirms that the Tribunal requires that a witness who wishes to give opinion evidence must be qualified to do so. Regarding the nature of these qualifications, the Tribunal has issued a Practice Direction for Technical and Opinion Evidence (the "Practice Direction"). Paragraphs 5 and 9(c) of this Practice Direction state:

> 5. To give opinion evidence, a witness must have specialized education, training, or experience that qualified him or her to reliably interpret scientific or technical information or to express opinions about matters for which untrained or inexperienced person cannot provide reliable opinions. ...
>
> 9.(c) The witness should express an opinion to the Tribunal only when the opinion is based on adequate knowledge and sound conviction. The witness should be reluctant to accept an assignment to provide evidence for use by the Tribunal if the terms of reference of the assignment do not allow the witness to carry out the investigations and obtain the information necessary to provide such an opinion. A witness who accepts an assignment under these circumstances should advise the Tribunal of the limitations that the terms of reference place on his or her ability to provide the information necessary to assist the Tribunal in making a sound decision.

436 The Tribunal notes Rule 170(d) requires that a witness who proposes to give opinion evidence, must complete Form 5, which requires that the witness acknowledge that the witness' evidence will be fair, objective and non-partisan. Therefore, it is clear that the witness' duty in this regard, is provide opinions which will assist the Tribunal to make a sound decision.

437 The requirement set out in para. 5 of the Practice Direction, reflects the law of evidence that, in order to give opinion evidence, a witness must have acquired special or peculiar knowledge through study or experience that is beyond the knowledge of the common person. So long as the witness satisfies this requirement, the way in which a witness has acquired the knowledge is immaterial (see *R. v. Kinnie* (1989), 40 B.C.L.R. (2d) 369 (B.C. C.A.) ("*Kinnie*"), and *R. v. Mohan*, [1994] 2 S.C.R. 9 (S.C.C.) ("*Mohan*"), and cases cited therein). As such, the fact that Ms. Laurie is not registered with the AHPRA, and, therefore, cannot practice medicine (which includes making diagnoses and prescribing medication), does not, in and of itself, preclude her from being qualified to give opinion evidence. The test is whether she has the special or peculiar knowledge in respect of the matters on which she undertakes to testify.

438 However, the rationale for this requirement is to ensure that such opinions meet a basic threshold of reliability. As noted in *Mohan* (at page 25), where the proposed opinion evidence advances a novel scientific theory or technique, such evidence is to be subjected to special scrutiny to determine whether it meets the reliability threshold.

439 Clearly, the obligation of the expert witness is to provide opinions which are not subject to any limitation or deficiency which causes the Tribunal to question their reliability. In this regard, the Tribunal observes that para. 9(c) of the Practice Direction, is an example of such scrutiny. The underlying rationale for paragraph 9(c) is that opinion evidence which is proffered subject to restrictions or conditions, will limit its assistance to the Tribunal in making a sound decision.

440 In this case, the terms of reference of Ms. Laurie's retainer do not place any limits on her ability to provide the information necessary to assist the Tribunal in making a sound decision. Instead, Ms. Laurie herself stipulates the limitation that her opinion evidence cannot and does not include diagnostic opinion.

441 The Tribunal accepts that Ms. Laurie, in her curriculum vitae and her oral testimony during the qualification phase of her testimony, clearly indicates this limitation. However, such acknowledgment, in and of itself, does not mean that the opinions she proposes to advance are sufficiently reliable to assist the Tribunal in making a sound decision. The Tribunal's decision in this regard is discussed below.

442 The Tribunal has reviewed Ms. Laurie's proposed evidence in detail. For reasons described below, the Tribunal finds that Ms. Laurie, in expressing her opinions either:

- makes a diagnosis;

- applies diagnostic interpretation of pre-existing medical conditions to reach conclusions that exposure to operating industrial wind turbines has exacerbated such conditions, or has resulted in additional health problems; or

- as in the case of the pre-turbine witnesses, includes the application of diagnostic interpretation to formulate opinions as to the likelihood that these individuals will suffer health damaging consequences if exposed to an operating industrial wind turbine.

443 The Tribunal has addressed Dr. McMurtry's evidence previously in this decision. However, for the purpose of determining whether Ms. Laurie should be permitted to give opinion evidence in this proceeding, it is sufficient to note that Dr. McMurtry has clearly identified that the deployment of the diagnostic criteria set out in the Case Definition should be conducted by a health care practitioner licensed to take a history and make diagnoses.

444 Ms. Laurie testified that she did not consider that she made diagnoses of any of the pre-turbine or post-turbine witnesses. Her witness statement indicates that she was asked to comment on whether the medical information she reviewed for each witness, conforms with the Case Definition. In cross-examination, she stated that she is not making a diagnosis in the sense of seeing somebody professionally, providing medical services, and providing a diagnosis on the basis of seeing the patient. She acknowledged that she clearly is not able to do this at the present time, and stated that she would not do so. She also maintains that the purpose of the Case Definition is to assist physicians in making a diagnosis. Respecting this latter statement, the Tribunal notes that Ms. Laurie did not dispute that the Case Definition does describe a medical diagnosis.

445 In addressing this aspect of Ms. Laurie's evidence, the Tribunal first repeats its earlier finding made in respect of Dr. McMurtry's opinion evidence. The purpose of opinion evidence is to assist the Tribunal in making its decision respecting the statutory test under the *EPA*, which is a legal determination. Consequently, the nature of the proposed opinion evidence is to be assessed in this legal context, and not the context of how a health practitioner may differentiate between commenting on conformity with the Case Definition and making a diagnosis. In the legal context, the Tribunal finds that any such differentiation is artificial. An opinion that the diagnostic criteria set out in the Case Definition are satisfied *is* a medical diagnosis. As Dr. McMurtry noted in his update to the Case Definition, a 'probable' diagnosis "indicates that AHE/IWT [adverse health effects in the environs of industrial wind turbines] more likely than not are the cause of the complaints. AHE/IWT is the working diagnosis. Other diagnostic possibilities continue to exist and should be considered in the differential diagnoses."

446 In any event, the Tribunal also finds that the opinions expressed by Ms. Laurie go well beyond mere commentary regarding conformity with the Case Definition. As noted earlier in this decision, her general opinion in respect of the post-turbine witnesses is: "Overall, it is clear that all of them have experienced serious health impacts as a result of exposure to wind turbines." Her opinion in respect of the pre-turbine witnesses is: "In addition each of them have underlying medical conditions which make them more likely to suffer the health damaging consequences of exposure to wind turbine noise."

447 The Tribunal does not consider that a detailed review of every opinion in Ms. Laurie's witness statement is necessary. The Tribunal accepts that Ms. Laurie provided a fair overview of her opinions when providing what she describes as her overall conclusions. The Tribunal will, however, provide one example. In respect of the pre-turbine witness identified earlier in this decision as PTW, Ms. Laurie states:

> For someone like [PTW] with epilepsy, known by her to be triggered by sleep deprivation, she is rightly very concerned about the impact of wind turbine noise on her health, and her ability to live on her property, specifically because of the likely impact on her sleep, and therefore on her epilepsy....
>
> Sleep deprivation is known by clinicians generally to lower the threshold for seizures, ...
>
> She will have no control over the wind turbine infrasound and low frequency noise emissions she is exposed to inside her home if the project proceeds. In particular, there is no way of successfully preventing the effects of the frequencies below 200Hz (infrasound and low frequency noise) from penetrating, resonating and potentially amplifying inside her home and causing disturbed sleep. It is predictable the proposed wind turbine project in this case will cause serious adverse health impacts if the project is allowed to proceed.

448 Apart from the consideration that this opinion is, in part, based on assumptions regarding noise acoustics, the Tribunal finds that Ms. Laurie is clearly making a diagnostic interpretation of PTW's current medical condition, and applying this interpretation to formulate her opinion that PTW will suffer serious health impacts if exposed to noise from an operating industrial wind turbine.

449 The Tribunal has considered whether it should find Ms. Laurie is qualified to provide such diagnostic opinions, notwithstanding that she has indicated that she cannot provide such opinions. In this regard, the Tribunal notes that she has a medical degree and has a number of years of past experience practicing as treating physician. However, the Tribunal has found that most of the opinions expressed by Ms. Laurie do require the making of a diagnosis, or the application of diagnostic interpretation. Therefore, the Tribunal finds that it cannot ascribe sufficient reliability to these opinions, in contradictory circumstances where diagnostic opinion is being proffered by the witness, while, at the same time, the witness stipulates that she cannot provide such diagnostic opinion.

450 The above analysis and findings address the opinions in Ms. Laurie's witness statement which require the making of a diagnosis and/or the application of diagnostic interpretation as described above.

451 The Tribunal now turns to consideration of Ms. Laurie's opinions based on the risk factors identified by Dr. Pierpont. The Tribunal notes that Ms. Laurie made specific reference to these risk factors in her concluding remarks regarding the pre-

turbine witnesses, and that she included consideration of these factors in her individual evaluation of each of these witnesses. Although she did not make express reference to Dr. Pierpont's work in respect of the post-turbine witnesses, it is the Tribunal's understanding that her acceptance of these risk factors also informed her conclusions respecting these witnesses.

452 The Tribunal finds that Ms. Laurie's evaluation of:

(i) whether any of the witnesses exhibited symptoms identified by Dr. Pierpont as resulting from exposure to low frequency noise, and

(ii) whether the any of the witnesses exhibit the risk factors identified by Dr. Pierpont,

again, requires the application of diagnostic interpretation. To find otherwise, would be to conclude that no special expertise would, in most cases, be required to conduct such an evaluation. In further support of this finding, the Tribunal also observes that these symptoms and risk factors are similar to the adverse health effects identified in Dr. McMurtry's Case Definition. Again, Dr. McMurtry has clearly identified that the deployment of the Diagnostic Criteria set out in the Case Definition should be by a health care practitioner licensed to take a history and make diagnoses.

453 The Tribunal now turns to consideration of Ms. Laurie's experience in terms of her survey work in interviewing and documenting the health symptoms reported by people who have contacted her. As noted earlier in this decision, Ms. Laurie acknowledges that she has no training or experience in conducting medical or scientific research, nor has she any training or experience in research methodology. She states that her only training in research design has been some undergraduate exposure while obtaining her medical degree, but she provided no specific particulars of the education or training that she received. She acknowledges that she does not have post-graduate experience in this area. The Appellant, Mr. Sanford, did not seek to qualify Ms. Laurie as an expert in these areas. The Tribunal finds that, based on Ms. Laurie's acknowledgements, she cannot be qualified to give opinion evidence in these areas. Consequently, the Tribunal finds that Ms. Laurie is not qualified to give her proposed opinion evidence based on expertise in medical or scientific research or research methodology and design. However, for reasons discussed below, this does not preclude her from describing the results of the survey work she has done, including making comparisons to the similarity of the results from this survey work to the results of similar surveys conducted elsewhere.

454 The Tribunal now turns to another aspect of Ms. Laurie's witness statement, namely her review of published literature on the subject of the health impacts from noise exposure from a variety of noise sources, industrial wind turbines in particular. In her witness statement, she summarizes information from some of these publications, which includes publications in the subject area of noise acoustics. In her testimony, Ms. Laurie has acknowledged that she has no expertise as an acoustician. However, she has also stated that she consults with other experts in the areas of acoustics and psycho acoustic measurements, to promote a multi-disciplinary approach in order to contribute to the general community understanding of what she asserts are "the existing known pathophysiological pathways which make this condition so devastating to a significant proportion of wind project neighbours." Although she has undertaken self-study to inform herself on the issue of noise acoustics, Ms. Laurie did not suggest that her self-study is sufficient to qualify her to express expert opinion on noise acoustics. Consequently, the Tribunal finds that she is not qualified to give opinion evidence in the subject area of noise acoustics, and, in particular, opinions regarding the noise to be generated by the industrial wind turbines in the Project, and the noise levels at sensitive receptors in the Project area.

455 The Tribunal accepts that it is appropriate for Ms. Laurie to consider existing published research or other literature in formulating her opinions. However, the Tribunal has already found that Ms. Laurie cannot be qualified to give opinion evidence based on formal medical or scientific research, or research design and methodology. The Tribunal has also found that she cannot be qualified to give opinion evidence requiring diagnostic opinions, or the application of diagnostic interpretation to formulate conclusions on the potential health impacts of exposure to operating industrial wind turbines. This raises the question whether she can be qualified to give her proposed opinion evidence on the basis of the experience she has obtained through self-study of the published research and other literature. The Tribunal accepts that the time Ms. Laurie has devoted to this aspect of her work experience is not insignificant. However, Ms. Laurie's evidence does not indicate that she has conducted a comprehensive review of all literature, nor that she has the expertise to assess the sufficiency of the research methodology in individual research studies. Consequently, the Tribunal finds that her self-study of the published literature, as described in her witness statement,

even if considered in conjunction with her survey of self-identified participants, is not sufficient to meet the basic threshold of reliability necessary to assist the Tribunal in making a sound decision.

456 In summary, the Tribunal has found that the Appellant, Mr. Sanford has not established a basis on which Ms. Laurie can be qualified to give her proposed opinion evidence in this proceeding.

457 The above finding, however, does not preclude Ms. Laurie from giving evidence. As a fact witness, she can testify respecting her work in this area, particularly the information she has obtained from the survey work that she has conducted. It may be less clear whether other aspects of her evidence are strictly fact evidence. However, the Tribunal notes that the Practice Direction recognizes that a witness who provides technical evidence may, to some extent, interpret information that is essential to the Tribunal's understanding of the issues. In this regard, the Tribunal finds that Ms. Laurie's training, education and experience is certainly sufficient to qualify her to provide this level of interpretation. Accordingly, the Tribunal is prepared to hear her evidence regarding the similarity of health complaints obtained through her survey work, as compared to the health complaints reported in similar surveys conducted elsewhere in Australia and other jurisdictions.

458 Similarly, the Tribunal has allowed her evidence respecting her review of published research and literature to be submitted, as set out in her witness statement, subject to the important *caveat* that none of the articles, studies, or reports attached to, or described in her witness statement are being accepted as proof of the opinions and conclusions stated therein. This part of Ms. Laurie's witness statement has been accepted solely on the basis that it describes some of the current body of research and academic or other informed discussion which has been published in this field. In this regard, the Tribunal notes that the other parties did not object to the receipt of this part of Ms. Laurie's evidence, subject to this *caveat*.

459 Finally, the Approval Holder and the Director opposed Ms. Laurie's qualification on the grounds of bias. As stated earlier in this decision, the Tribunal, in its oral ruling, confirmed that the Tribunal would consider the evidence and submissions of the parties respecting the issue of bias, as it relates to the weight to be given to Ms. Laurie's evidence.

Issue 3: Whether the renewable energy approval process violated the Appellants' right under section 7 of the Charter to security of the person

460 The Appellants allege that the renewable energy approval process violates their right to security of the person under s.7 of the *Charter*.

461 Section 7 of the *Charter* provides:

> 7. Everyone has the right to life, liberty and security of the person and the right not to be deprived thereof except in accordance with the principles of fundamental justice.

462 The Appellants request a remedy under s. 24(1) of the *Charter* and s.52(1) of the *Constitution Act, 1982* which provide:

> 24. (1) Anyone whose rights or freedoms, as guaranteed by this Charter, have been infringed or denied may apply to a court of competent jurisdiction to obtain such remedy as the court considers appropriate and just in the circumstances.
>
> 52. (1) The Constitution of Canada is the supreme law of Canada, and any law that is inconsistent with the provisions of the Constitution is, to the extent of the inconsistency, of no force or effect.

463 A legal analysis of s. 7 of the Charter involves two steps: first, a determination of whether the legislation causes a deprivation of the right to security of the person; and second, a determination of whether the deprivation is in accordance with the principles of fundamental justice.

464 The provisions of the *EPA* that are challenged in this appeal are the following.

> 47.5 (1) After considering an application for the issue or renewal of a renewable energy approval, the Director may, if in his or her opinion it is in the public interest to do so,

(a) issue or renew a renewable energy approval; or

(b) refuse to issue or renew a renewable energy approval.

Terms and conditions

(2) In issuing or renewing a renewable energy approval, the Director may impose terms and conditions if in his or her opinion it is in the public interest to do so.

Other powers

(3) On application or on his or her own initiative, the Director may, if in his or her opinion it is in the public interest to do so,

(a) alter the terms and conditions of a renewable energy approval after it is issued;

(b) impose new terms and conditions on a renewable energy approval; or

(c) suspend or revoke a renewable energy approval.

Same

(4) A renewable energy approval is subject to any terms and conditions prescribed by the regulations.

142.1 (1) This section applies to a person resident in Ontario who is not entitled under section 139 to require a hearing by the Tribunal in respect of a decision made by the Director under section 47.5.

Same

(2) A person mentioned in subsection (1) may, by written notice served upon the Director and the Tribunal within 15 days after a day prescribed by the regulations, require a hearing by the Tribunal in respect of a decision made by the Director under clause 47.5 (1) (a) or subsection 47.5 (2) or (3).

Grounds for hearing

(3) A person may require a hearing under subsection (2) only on the grounds that engaging in the renewable energy project in accordance with the renewable energy approval will cause,

(a) serious harm to human health; or

(b) serious and irreversible harm to plant life, animal life or the natural environment.

465 During the preliminary stages of this proceeding, the Director brought a motion for an order striking the Appellants' claim for constitutional relief, on the basis that the s. 142.1 challenge was too vague, and that the Tribunal does not have jurisdiction to consider the constitutionality of s. 47.5. The Tribunal issued an order on August 15, 2013, with reasons issued September 6, 2013, dismissing that motion. With respect to the challenge to s. 47.5 of the *EPA*, the Tribunal made no ruling on the jurisdictional argument. It observed at para. 43 that "the focus of the constitutional claim relates to s. 47.5 only to the extent that it relates to the grounds stated in s. 142.1," and therefore the Tribunal "need not determine whether it has jurisdiction to consider a constitutional challenge to this more narrow aspect of s. 47.5. In effect, a determination of the constitutionality of s. 142.1 in this case will result in a similar legal effect for the challenged aspects of s. 47.5." The parties in this case, therefore, brought evidence and argument related to both challenged sections of the *EPA*, and the Tribunal has considered them only to the extent that they relate to the gounds stated in s. 142.1.

466 The following passages from Mr. Sanford's Notice of Constitutional Question, which the other Appellants support, outline the basis for the challenge:

4. The legislative scheme for granting approvals to wind farm projects violates the Applicant's right to security of the person as guaranteed by section 7 of the *Charter* in that approvals can be issued to project proponents notwithstanding the known adverse health effects.

5. Industrial wind turbines (IWT's) are recognized for causing a range of serious health effects such as sleep disturbance, headache, tinnitus, ear pressure, dizziness, vertigo, nausea, visual blurring, tachycardia, irritability, problems with concentration, and so on, particularly when IWTs are erected within 2 kilometres of an occupied residence.

6. As a result of the regulatory process which does not require the project proponent to establish that there are no adverse health effects associated with IWTs, it is clear that there will be health effects that will violate the section 7 rights of the Applicant.

7. Furthermore, reversing the burden of proof in circumstances where there ***is*** evidence of adverse health effects is itself a violation of s. 7.

8. The Director has the discretion to grant or refuse approval of a renewable energy project. The Director's decision ***must*** conform to the *Charter*. By approving this project the Director has violated the Applicant's right to security of the person and such violation is not in accordance with the principles of fundamental justice.

467 In addition, the following three paragraphs in the joint written submissions by all the Appellants also assist in understanding their constitutional challenge (emphasis added):

• The Appellants argue that "*permitting the Project as set out in the REA* puts the Appellants' physical and psychological integrity at risk, directly and indirectly, thereby depriving them of their right to security of the person." (para. 20)

• "In sum, the Appellants are at risk of serious physical and psychological harm as a *result of the approval of the Project pursuant to the REA provisions of the EPA*." (para. 88)

• In reply submissions, the Appellants clarify that they "assert *a right not to be placed in harm's way by state action*, which is a right the Charter protects."

468 Thus, the Appellants argue that it is the process by which the approval is issued, pursuant to the renewable energy legislative provisions, that deprives them of their right to security of the person.

469 The Director and Approval Holder argue there is no deprivation of the Appellants' right to security of the person. The Director includes three reasons for this position:

• For s. 7 to be engaged, the impugned laws must actively cause a serious harm to physical health or create serious state-imposed psychological stress. The impugned legislation in this case does not cause a deprivation of rights;

• For s. 7 to be engaged, the deprivation must be "serious". Taking the Appellants' evidence at its highest, the harm to human health in this case does not rise to the level of serious; and

• Even if s. 7 is engaged, the Appellants must prove a serious harm. They have not discharged their onus of proving serious harm to human health at a 550m setback/40 dBA sound level limit.

470 The Appellants disagree with the Director's position that s. 7 creates no positive obligation on the state to ensure security of the person. The Appellants argue that the courts have found a s. 7 violation where there was only indirect state action. Further, the Appellants argue that an increased risk of serious harm has been found to be sufficient for a s.7 violation.

471 The Tribunal's s. 7 analysis is structured according to the following three sub-issues:

(a) Whether s. 7 of the Charter is engaged due to state action.

(b) Whether the deprivation of security of the person is serious.

(c) Whether the Appellants have proven that the impugned provisions or government conduct will cause serious psychological or physical harm (i.e., has the Appellant proven the harm exists, or simply a risk of harm?)

472 As discussed below, the Tribunal finds that, assuming that the *Charter* is engaged, the Appellants have not established that there would be a serious deprivation of security of the person, nor that the impugned provisions or government conduct would cause serious psychological or physical harm. Consequently, it is not necessary to make a finding whether the *Charter* is engaged due to state action. However, as this Tribunal received extensive submissions respecting sub-issue (a), the Tribunal has included a review of these submissions in this decision.

Sub-issue (a): Whether s. 7 of the Charter is engaged due to state action

Submissions

473 The Appellants argue that the Supreme Court of Canada has not determined that s. 7 may never create a positive obligation on government to ensure the rights listed therein, but has consciously left the door open for such a finding. In support of its position, the Appellants cite Madam Justice Arbour's dissent in the case *Gosselin c. Québec (Procureur général)*, [2002] 4 S.C.R. 429 (S.C.C.) ("*Gosselin*"). Paragraphs 308 and 309 of her dissent in that decision read:

> [308] I would allow this appeal on the basis of the appellant's s.7 *Charter* claim. In doing so, I conclude that the s.7 rights to "life, liberty and security of the person" include a positive dimension. Few would dispute that an advanced modern welfare state like Canada has a positive moral obligation to protect the life, liberty and security of its citizens. There is considerably less agreement, however, as to whether this positive moral obligation translates into a legal one. Some will argue that there are interpretive barriers to the conclusion that s.7 imposes a positive obligation on the state to offer such basic protection.
>
> [309] In my view these barriers are all less real and substantial than one might assume. This Court has never ruled, nor does the language of the *Charter* itself require, that we must reject any positive claim against the state - as in this case - for the most basic positive protection of life and security. This Court has consistently chosen instead to leave open the possibility of finding certain positive rights to the basic means of subsistence within s.7. In my view, far from resisting this conclusion, the language and structure of the *Charter* - and of s.7 in particular - actually compel it.
>
> (emphasis in the original)

474 Further, the Appellants draw an analogy between the fact situation in *New Brunswick (Minister of Health & Community Services) v. G. (J.)*, [1999] 3 S.C.R. 46 (S.C.C.) ("*G(J)*"), referred to by Justice Arbour in her dissent, and the present case. In *G. (J.)*, a child was removed from the custody of the child's parents. The Supreme Court of Canada held that in the ensuing court proceedings, the failure of the state to provide legal aid to the child's parents engaged their s. 7 right to security of the person. The Appellants draw the analogy that the state acted by issuing the REA for the Project; the subsequent failure of the province to provide for safe set-back distances and/or to conduct studies that prove the safety of the Project then engage the Appellants' s. 7 rights.

475 The Appellants also argue that s. 7 can be engaged where the harm is caused by state action in an indirect way, citing *Bedford v. Canada (Attorney General)*, 2010 ONSC 4264 (Ont. S.C.J.), affd 2012 ONCA 186 (Ont. C.A.) (upheld by the Supreme Court of Canada on December 20, 2013 [2013 CarswellOnt 17681 (S.C.C.)]) ("*Bedford*"). *Bedford* addressed a claim that, by prohibiting prostitutes from taking certain actions that were protective of their health, such as working indoors, the state increased a risk of harm to sex workers. In that case, the Ontario Court of Appeal found s. 7 to be engaged despite the fact that it was the behaviour of the clients that directly caused the harm, not state action. Drawing a parallel to the present case, the Appellants argue that the Province does not need to own the turbines, in order to indirectly cause a harm sufficient to deprive the Appellants of their s. 7 right to security of the person.

476 The Director and the Approval Holder submit that there is an established line of cases from the Supreme Court of Canada stating that s. 7 of the *Charter* does not provide a "freestanding right" to security of the person. Only state action (i.e., legislation) that limits the right to life, liberty and security of the person will attract s. 7 scrutiny. They agree that the Supreme Court has determined that security of the person under s. 7 of the *Charter* protects against state interference with the physical and psychological integrity of the individual.

477 The Director points out that Madam Justice Arbour's dissent in *Gosselin* has been discussed but not been followed in subsequent Supreme Court jurisprudence. The Director notes that the majority opinion in *Gosselin* is stated in para. 81, by Chief Justice McLachlin:

> Even if s. 7 could be read to encompass economic rights, a further hurdle emerges. Section 7 speaks of the right not to be deprived of life, liberty and security of the person, except in accordance with the principles of fundamental justice. Nothing in the jurisprudence thus far suggests that s. 7 places a positive obligation on the state to ensure that each person enjoys life, liberty or security of the person. Rather, s. 7 has been interpreted as restricting the state's ability to deprive people of these. Such a deprivation does not exist in the case at bar.
>
> (emphasis in the original)

478 McLachlin, C.J. goes on to recognize that the Constitution is a "living tree" such that the current interpretation of s. 7 is not frozen, and that "one day it may be interpreted to include positive obligations" (para. 82). The Director argues, however, that thus far the Court has consistently refused to interpret it in that way and in every case where s. 7 has been engaged, there has been a legislative prohibition on conduct.

479 The Director argues that the case of *G. (J.)*, relied on by the Appellants, is not an example of the Court recognizing positive rights because there was a "profound" state-imposed deprivation of a s. 7 right (serious psychological harm through removal of the litigant's child), and for that reason it was found that legal aid funding had to be extended to the parents.

480 Similarly in *Chaoulli c. Québec (Procureur général)*, [2005] 1 S.C.R. 791 (S.C.C.) ("Chaoulli"), the Quebec provincial legislation in question prohibited people from obtaining private health care where it was established on the evidence that people died while on public health care waiting lists. It was the fact that the legislation deprived citizens of the opportunity to seek alternative forms of health care, that engaged s. 7.

481 The Approval Holder argues that the Appellants are incorrect in their submissions that the Ontario Court of Appeal in *Bedford* expanded the scope of state action that is proscribed by s. 7, to indirect effects. Rather, the Approval Holder argues that the Court of Appeal in that case found a direct link between the Criminal Code provisions and the impact on security of the person.

482 The Director argues that *Bedford* is also an example of state prohibition engaging the s. 7 right. There, the impugned provisions criminalized basic actions that sex workers might take to reduce their risk of physical harm. In para. 111, the Court of Appeal notes:

> On the facts as found by the application judge, each of the provisions criminalizes conduct that would mitigate, to some degree, the risk posed to prostitutes. On those findings, the relevant Criminal Code provisions, individually and in tandem, increase the risk of physical harm to persons in engaged in prostitution, a lawful activity.

Discussion of sub-issue (a)

483 The Supreme Court of Canada has consistently found that s. 7 of the *Charter* protects only against state-imposed deprivations of security of the person and rejected arguments that s. 7 can apply in the absence of a prohibition that deprives a person of a protected right. Examples of the approach include *Gosselin* and *Chaoulli*. The Supreme Court of Canada decision in *Bedford v. Canada (Attorney General)*, 2013 SCC 72 (S.C.C.), which was issued after final submissions had been filed in

this proceeding, upholds the Ontario Court of Appeal decision which was extensively referred to and cited by the parties, and is consistent with this pattern.

484 The following passage from *Flora v. Ontario Health Insurance Plan*, 2008 ONCA 538 (Ont. C.A.) ("*Flora*"), a case where Mr. Flora alleged that a refusal by the Ontario Health Insurance Plan ("OHIP") to reimburse him for an out-of-country medical treatment for liver cancer violated his right to security of the person, helps clarify the distinction between state conduct which might infringe s. 7 by imposing a legal prohibition, and other forms of state conduct:

> In *Chaoulli, Morgentaler* and *Rodriguez*, but not in Mr. Flora's situation, the state took action to prohibit something. The prohibition in these cases meant that the individual was not allowed to take his or her desired course of control over his or her own health without suffering consequences imposed by the state (*Chaoulli* at para. 122). These are all very much cases essentially dealing with freedom "from" state interference in the manner in which individuals arrange their health care. While the decision by the state to fund or not to fund a particular course of treatment may certainly impact a person's s. 7 interests, such an effect is not the type of infringement contemplated by s. 7. If it were, it would seem that the burden on the government would be limitless.

485 The Supreme Court of Canada has expressed the *caveat*, as noted in Chief Justice McLachlin's comments at para. 82 in *Gosselin*, that s. 7 may be interpreted more expansively in the future. This *caveat* was expressed by Cronk, J.A. of the Ontario Court of Appeal in *Flora* as "s. 7 may one day be interpreted to include positive obligations in special circumstances where, at a minimum, the evidentiary record discloses actual hardship" (at para. 105).

486 It is not a straightforward exercise in this case, however, to determine whether or not the alleged deprivation is attributable to the state. As Madam Justice Arbour observed in *Gosselin*: "It may also be the case that no such definitive state action can be located in the instant appeal, though this will largely depend on how one chooses to define one's terms and, in particular, the phrase "state action"." (para. 319)

487 The Appellants argue that they "do not assert a positive right to a constitutionally-mandated process for restricting the development of IWTs. The Appellants assert a right not to be placed in harm's way by state action, which is a right that the Charter protects." Further, the Appellants argue that "(t)he legislative means chosen to implement the decision to permit IWTs do cause or increase the risk of serious harm to the Appellants, at the hands of the state. There are known health effects associated with placing IWTs within 550 metres of human beings."

488 The Director and the Approval Holder argue that it is not state action that "places" the Appellants "in harm's way" (even if this were made out on the facts). They argue that renewable energy projects are private businesses, not government projects. On the contrary, they argue the renewable energy approval process is *protective* of human health by requiring set-backs and maximum sound levels for these private projects. The Approval Holder argues that the renewable energy approval regime prohibits wind projects to start with, unless they meet certain criteria, including an onerous, prescriptive process, intensive review, and an appeal process open to any person. The Approval Holder argues that the Appellants' real complaint here is that the protective measures should be more rigorous, which, it suggests, is an assertion of a right to positive state action.

489 The Approval Holder submits: "In stark contrast to the legislation at issue in such cases as *Morgentaler*, *Rodriguez*, *Chaoulli*, *Bedford* and *PHS*, the REA process imposes no prohibitions on individuals that would interfere with a person's ability to take control over his or her own body or impose serious psychological stress."

490 The Director argues that, unlike in *Bedford*, the alleged harm here is not state-imposed. Rather, the current situation is more like *Flora*, noted above. At issue there was a section in the regulation that had been amended to alter the test for OHIP funding, such that under the earlier version of the regulation Mr. Flora would have qualified for reimbursement for out-of-country medical treatment, but he did so no longer. The Ontario Court of Appeal found at para. 101 that the regulation in question "does not prohibit or impede anyone from seeking medical treatment":

> Section 28.4(2) neither prescribes nor limits the types of medical services available to Ontarians. Nor does it represent governmental interference with an existing right or other coercive state action. Quite the opposite. Section 28.4(2) provides

a defined benefit for out-of-country medical treatment that is not otherwise available to Ontarians - the right to obtain public funding for certain specific out-of-country medical treatments. By not providing funding for all out-of-country medical treatments, it does not deprive an individual of the rights protected by s.7 of the *Charter*.

491 Further, the Director argues that *Flora* clarifies the principle that a *Charter* breach is not made out where a change in law allegedly takes away privileges that were available under an earlier law. In this regard the Ontario Court of Appeal in *Flora* cites *Ferrell v. Ontario (Attorney General)* (1998), 42 O.R. (3d) 97 (Ont. C.A.) at p.110, as follows: "If there is no constitutional obligation to enact [the legislation at issue] in the first place, I think that it is implicit, as far as the requirements of the constitution are concerned, that the legislature is free to return the state of the statute book to what it was before [the impugned legislation]." On this point, the Director argues that if you strip away the regulatory protections such as set-back requirements and appeal rights, the only protections otherwise available to Ontarians are under the common law, not the *Charter*. Thus, it does not assist the *Charter* argument for the Appellants to claim that they have less protection under the current regime than under the pre-renewable energy approval regime.

492 The Approval Holder argues that the renewable energy approval process promotes and protects human health, including by:

- promoting renewable energy to protect the environment, including human life;
- establishing a mandatory application process for renewable energy projects, which includes, among other things, (i) an extensive consultation process; (ii) adherence to setback requirements; and (iii) demonstrated management of potential environmental effects;
- requiring compliance with the Noise Guidelines;
- requiring the Director to form an opinion as to whether it is in the public interest to issue a renewable energy approval;
- conferring on the Director significant continuing powers over renewable energy projects;
- conferring a wide right of appeal to a specialized tribunal for a specific, independent and fresh review of whether the project, as approved, will cause serious harm to human health;
- conferring a further right of appeal to the Minister of the Environment, for a further consideration of the public interest.

493 The Tribunal finds that the core of the Appellants' claim is that greater protections are required for human health than what are currently provided for under the requirements for renewable energy approvals. This claim applies to *all* renewable energy approvals, not just the current Project, despite the fact that under the legislative scheme it is the approval for the Project that is under appeal to the Tribunal.

494 Such a characterization might lend itself to a finding that the current appeal is analogous to the OHIP case of *Flora*; that is, the impugned sections of the *EPA* are protective of security of the person, rather than causing a deprivation of a freestanding right.

495 At the same time, the demand for greater health protections only arises because of the Director's decision to allow a wind project in an area where it did not previously exist. The Appellants argue that the protections built into the approval are insufficient *in the context of* a project that is being allowed to proceed. In this regard the present case is more akin to *G. (J.)*, where the state action in allowing the Project necessitates sufficient protections to prevent harm to human health. Viewed in this manner, it is the Director's decision, or the statutory scheme that has charged the Director with making this decision based on "public interest" factors, that would engage s. 7.

496 As noted above, the Tribunal finds that it is not necessary to determine which characterization is more appropriate in this case, in light of its findings respecting sub-issues (b) and (c). Either characterization may be argued and considered by the Tribunal in future.

Sub-issue (b): Whether the deprivation of security of the person is serious.

497 As noted above, for the purposes of analysis of this sub-issue, the Tribunal assumes that s. 7 is engaged due to state action in this case.

498 The Approval Holder cites the Supreme Court of Canada decision in *Blencoe v. British Columbia (Human Rights Commission)*, [2000] 2 S.C.R. 307 (S.C.C.) ("*Blencoe*") for the proposition that state action is a deprivation of security of the person only when it interferes "with an individual interest of fundamental importance" (at paras. 81-83).

499 The Director argues that the Supreme Court of Canada has been clear in holding that the right to security of the person is not engaged by ordinary stresses and anxiety, citing Chief Justice Lamer in *G. (J.)*.

500 The Approval Holder referred to two Supreme Court of Canada decisions in particular, as illustrative of what is, and what is not, serious harm engaging s. 7. In *Chaoulli*, the Court found that the anxiety associated with waiting for health care could "have a serious and profound effect on a person's psychological integrity", and therefore s. 7 was engaged. The evidence in that case was that patients had died as a result of waiting lists for public health care. On the other hand, the Court found in *Blencoe* that depression, anxiety and psychological problems associated with a delay in having a human rights complaint heard did not engage s. 7. In that case, the Approval Holder submits, the delay and associated psychological impacts did not interfere with an individual interest of fundamental importance.

Findings on sub-issue (b)

501 The Tribunal agrees with the Approval Holder and Director, that harm must be "serious" in order to engage s. 7. As the Supreme Court of Canada held in *Chaoulli* at para. 123:

> Not every difficulty rises to the level of adverse impact on security of the person under s. 7. The impact, whether psychological or physical, must be serious.

502 See also *Blencoe*, at para. 81:

> In order for security of the person to be triggered ... the impugned state action must have a serious and profound effect on the respondent's psychological integrity.

503 The Chief Justice in *G. (J.)* explained the threshold in a more fulsome way, at paras. 59 - 60:

> Dickson C.J. in *Morgentaler*, *supra*, at p. 56, suggested that security of the person would be restricted through "serious state-imposed psychological stress" (emphasis added). Dickson C.J. was trying to convey something qualitative about the type of state interference that would rise to the level of an infringement of this right. It is clear that the right to security of the person does not protect the individual from the ordinary stresses and anxieties that a person of reasonable sensibility would suffer as a result of government action. If the right were interpreted with such broad sweep, countless government initiatives could be challenged on the ground that they infringe the right to security of the person, massively expanding the scope of judicial review, and, in the process, trivializing what it means for a right to be constitutionally protected .... [emphasis in original]
>
> For a restriction of security of the person to be made out, then, the impugned state action must have a serious and profound effect on a person's psychological integrity. The effects of the state interference must be assessed objectively, with a view to their impact on the psychological integrity of a person of reasonable sensibility. This need not rise to the level of nervous shock or psychiatric illness, but must be greater than ordinary stress or anxiety.

504 As discussed above, the Appellants brought evidence in this case that some people will be annoyed by wind turbine projects. As noted in the Tribunal's findings in the health section above, whether a person will be annoyed by wind turbine

noise at 40 dBA is a subjective reaction which cannot be predicted with any accuracy, and the impact of that annoyance on the person's health status is not clear.

505 As concluded in the WHO (Europe) 2011 Report, annoyance is difficult to define. While it may be that severe and prolonged annoyance may lead to stress-related physical effects in some cases, the evidence before the Tribunal in this case does not make even that qualified a connection between possible stress-related physical effects and wind turbines, where noise is limited to 40 dBA.

506 On the evidence before us, the Tribunal finds that the annoyance referred to in the Howe study is a subjective psychological state. According to the Supreme Court of Canada in *Blencoe*, an interference with psychological integrity must have a "serious and profound effect on psychological integrity", to engage s. 7 of the *Charter*. The Appellants in this case have not established human health effects through annoyance to be more significant than "ordinary stress or anxiety", as discussed in *Blencoe* .

507 Supreme Court of Canada jurisprudence has stated that physical harm must be "serious" to engage s. 7. If annoyance were accepted to have physical effects, which was not established on the evidence, those effects would have to be serious to engage s. 7. The Tribunal finds the evidence in this proceeding does not rise to the level of seriousness required to engage s. 7.

508 With respect to the post-turbine witness' evidence, as noted above it has not been established that the health complaints they assert are causally connected to wind turbines, including those resulting from annoyance caused by wind turbines.

509 In conclusion, the Tribunal finds that the Appellants have not established that annoyance could be considered serious for either of the tests sought to be met: s. 145.2.1(2)(a) of the *EPA* "serious harm to human health", or serious enough for s. 7 of the *Charter* to be engaged (i.e., "serious" from *Chaoulli* para. 123, or "serious and profound effect on psychological integrity" from *Blencoe* para. 81).

Sub-issue (c): Whether the Appellants have proven that the impugned provisions or government conduct will cause serious psychological or physical harm (has the Appellant proven the harm exists, or simply a risk of harm?)

510 As noted above, for the purposes of analysis of this sub-issue, the Tribunal assumes that s. 7 is engaged due to state action in this case. The Appellants argue that the Supreme Court has found s. 7 of the *Charter* to be engaged where a risk of harm is established. They refer to *Bedford* (Criminal Code provisions preventing sex workers from taking steps to protect their health and safety), *Chaoulli* (risk of harm due to waiting lists for health care), and *PHS Community Services Society v. Canada (Attorney General)*, [2011] 3 S.C.R. 134 (S.C.C.) ("*Insite")* (decision to close safe injection site increases risk to intravenous drug users), as support.

511 The Appellants argue the Constitution should be given a generous interpretation (*R. v. Big M Drug Mart Ltd.*, [1985] 1 S.C.R. 295 (S.C.C.), at 344).

512 The Director argues that proving a risk of harm is not sufficient; rather, that real harm must be proven to be caused by the provision in question. The Director argues that, in cases where a "risk of harm" was established, such as the *Insite* and *Bedford* cases, the impugned prohibitions were proven to cause an increased risk of serious harm in circumstances where an existing serious harm has already been proven.

513 In *Insite*, the Court's finding of a deprivation of security of the person was grounded in the trial judge's finding of fact that there was a pre-existing risk of serious physical harm from drug addiction and the injection of drugs. The Court recognized that "[t]he risk of morbidity and mortality associated with addiction and injection is ameliorated by injection in the presence of qualified health professionals" and that the criminal prohibition (without an exemption) increased that risk. The Court in that case concluded that where a law "creates a risk to health by preventing access to health care, a deprivation of the right to security of the person is made out." (*Insite*, para. 93)

514 Similarly, in the case of *Chaoulli* (para. 123):

> ... because patients may be denied timely health care for a condition that is clinically significant to their current and future health, s.7 protection of security of the person is engaged. ... As we noted above, there is unchallenged evidence that in some serious cases, patients die as a result of waiting lists for public health care. ... The evidence here demonstrates that the prohibition on health insurance results in physical and psychological suffering that meets the threshold requirement of seriousness.

515 The Director argues that, in *Bedford*, the Ontario Court of Appeal found that by prohibiting prostitutes from working at home and hiring a bodyguard, the legislation increased pre-existing, inherent risks involved in the profession of prostitution, including physical violence or death (upheld by the Supreme Court of Canada).

516 The Director argues that the risk of a known harm was proven in each of the cases where s. 7 was found to be engaged. By contrast, the Director argues that the Appellants in this case have no such evidentiary basis.

517 The Approval Holder argues that *Charter* jurisprudence has consistently relied on expert evidence to establish the harm. In this regard the Approval Holder cites the Federal Court decision in *TrueHope Nutritional Support Ltd. v. Canada (Attorney General)*, 2011 FCA 114 (F.C.A.) (CanLII), para. 89, which held that determining whether psychological prejudice engages the right to security of the person requires "a critical analysis of not only [the plaintiff's] subjective evidence but also relevant objective evidence with respect to the content of [the plaintiff's] subjective claim in order to determine the weight to be given to [the] subjective evidence."

Findings on sub-issue (c)

518 The Tribunal finds that in all of the Supreme Court of Canada cases where a risk of harm has engaged s. 7 of the *Charter*, the "risk of harm" described is with respect to a proven pre-existing harm. In this case, the "risk of harm" is better characterized as a risk that a harm may result from a wind turbine project operating at the established decibel limit; not that a known harm has an increased chance of occurring. Tribunal decisions on wind energy appeals have consistently noted the lack of current scientific evidence establishing a causal link at regulated noise levels and setbacks, and indeed Health Canada has instigated a study on this topic in order to better understand the effects, if any, of wind turbines on human health.

519 The Tribunal finds that the state of the evidence in this case is on all fours with *Operation Dismantle Inc. v. R.*, [1985] 1 S.C.R. 441 (S.C.C.) *("Operation Dismantle")*, where the Supreme Court stated:

> Section 7 of the *Charter* cannot reasonably be read as imposing a duty on the government to refrain from those acts which might lead to consequences that deprive or threaten to deprive individuals of their life and security of the person. A duty of the federal cabinet cannot arise on the basis of speculation and hypothesis about possible effects of government action. Such a duty only arises, in my view, where it can be said that a deprivation of life and security of the person could be proven to result from the impugned government act. (at para 29)

520 Consequently, the Tribunal finds that the Appellants have not established that the impugned provisions or government conduct will cause serious psychological or physical harm.

Summary of Findings on Issue 3

521 Assuming, without deciding, that wind turbines will cause annoyance in a percentage of the population consistent with Mr. Howe's report, the Appellants have nevertheless not established that annoyance per se constitutes serious harm to human health, or even that this Project will cause any health impacts at the set-back distances and sound pressure levels mandated. Annoyance per se has not been proven to be a health effect, and is too vague a concept to be considered serious harm so as to engage s. 7 of the *Charter*. The constitutional challenge therefore fails on the evidence.

522 Given the Tribunal's finding that s. 7 of the *Charter* is not engaged due to lack of an evidentiary foundation of serious harm, there is no need to proceed to the second stage of the analysis relating to whether the deprivation is in accordance with the principles of fundamental justice.

Decision

523 The Tribunal finds that the Appellants have not established that engaging in the Project as approved will cause serious and irreversible harm to plant life, animal life or the natural environment.

524 The Tribunal finds that the Appellants have not established that engaging in the Project as approved will cause serious harm to human health.

525 The Tribunal finds that the Appellants have not established, on the facts of this case, that the renewable energy approval process violated the Appellants' right to security of the person under section 7 of the *Charter*.

Appeal dismissed.

Dr. McMurthy's Case Definition

Case Definition

The criteria for making an individual diagnosis of probable AHEs in the environs of IWTs are presented in the following paragraphs. The definition endeavors to be specific and sensitive. While the definition has not been validated formally in practice, it has proven useful. The case definition represents an important starting point for future international research collaboration. The genesis of the definition is based on a review of the literature and direct experience with those individuals experiencing AHE/IWT. It has been used to provide guidance to physicians and other primary health providers when they are asked to manage individuals following exposure to IWTs. The value of this proposal is based on the absence of a specific case definition either in the peer-reviewed or gray literature.

Diagnosis of Adverse Health Effects in the Environs of Industrial Wind Turbines Possible adverse health effects.

Report of a change in health status by people living within 5 km of a wind farm installation. Further confirmation is required to validate or exclude AHE/IWT by establishing a medical history that satisfies the criteria identified under "Probable Adverse Health Effects" below.

Probable adverse health effects.

1. First-order criteria (all four of the following must be present):

    (a) Domicile within 5 km of industrial wind turbines (IWT)

    (b) Altered health status following the start-up of, or initial exposure to, and during the operation of, IWTs. There may be a latent period of up to 6 months

    (c) Amelioration of symptoms when more than 5 km from the environs of IWTs

    (d) Recurrence of symptoms upon return to environs of IWTs within 5 km

2. Second-order criteria (at least three of the following occur or worsen after the initiation of operation of IWT):

    (a) Compromise of quality of life

    (b) Continuing sleep disruption, difficulty initiating sleep, and/or difficulty with sleep disruption

    (c) Annoyance producing increased levels of stress and/or psychological distress

    (d) Preference to leave residence temporarily or permanently for sleep restoration or well-being

3. Third-order criteria (at least three of the following occur or worsen following the initiation of IWTs):

(i) Otological and vestibular

(a) Tinnitus

(b) Dizziness

(c) Difficulties with balance

(d) Ear ache

(e) Nausea

(ii) Cognitive

(a) Difficulty in concentrating

(b) Problems with recall or difficulties with remembering significant information

(iii) Cardiovascular

(a) Hypertension

(b) Palpitations

(c) Enlarged heart (cardiomegaly)

(iv) Psychological

(a) Mood disorder, that is, depression, anxiety

(b) Frustration

(c) Feelings of distress

(d) Anger

(v) Regulatory disorders

(a) Difficulty in diabetes control

(b) Onset of thyroid disorders or difficulty controlling hypo- or hyperthyroidism

(vi) Systemic

(a) Fatigue

(b) Sleepiness

Confirmed adverse health effects.

The confirmation of AHE/IWT is achieved by a clinical evaluation and physiological monitoring of individuals during exposure to IWT sonic energy or an accurate facsimile (recording or other imitative source of IWT sound). Ideally, sleep studies should be carried out in the home of people experiencing AHEs. The complex physiological monitoring equipment required for a sleep

study is not readily made mobile. Accordingly, sleep studies need to be carried out in an established clinical sleep laboratory with a source of sonic energy that accurately reflects the person's exposure to IWTs.

The process may be simpler once controlled studies comparing possible victims with a nonexposed matched population are carried out. These studies could help determine the core physiological change(s) that is (are) likely occurring to those who live in the environs of IWTs.

The need to rule out alternate explanations is the responsibility of the licensed clinician. While adherence to the criteria has resulted in no false positive diagnosis to date further validation is required.

Update to Case Definition

1. The deployment of the Diagnostic Criteria requires use by health care practitioner licensed to take a history and make diagnoses.

2. Exclusion criteria were not included in the first paper and are itemized below.

A person is to be excluded those if the individual is;

- under the age of 18
- lacking in English language skills in the verbal domain
- sufficiently cognitively impaired to be unable to answer questions reasonably and consistently
- uffering from recent illness or injury which interferes with cognitive function

3. There are 3 categories of diagnosis, possible, probable and confirmed. "Possible" diagnosis indicates that the diagnosis of adverse health effects in the environs of industrial wind turbines (AHE/IWT) should be considered as a potential diagnosis and considered among differential diagnoses of the presenting complaints. "Probable" diagnosis indicates that AHE/IWT more likely than not are the cause of the complaints. AHE/IWT is the working diagnosis. Other diagnostic possibilities continue to exist and should be considered in the differential diagnoses. "Confirmed diagnosis" indicates that other diagnosis are very unlikely i.e. less than one chance in twenty.

4. Among the original three orders of criteria for diagnosis of AHE/IWT i.e. First-, Second- and Third-order, the first two orders have proven consistently vigorous in practice and robust when challenged in quasi-judicial processes (example Environmental Review Tribunals or ERT). In addition the Case Definition has been cited 10 times (1) in the literature according to Google Scholar. The Third-order criteria have been misunderstood and proven to be a major focus of authors criticizing and in some instances denying the existence of AHE/IWT (Simon Chapman).

ON APPEAL FROM THE COURT OF APPEAL FOR ONTARIO

EN APPEL DE LA COUR D'APPEL DE L'ONTARIO

Environmental law — Offences — Obligation to report to Ministry of Environment discharge of contaminant into natural environment — Subcontractor's blasting operations propelling rock debris into air, damaging home and car — Subcontractor failing to report to Ministry of Environment discharge of contaminant — Whether reporting requirement triggered in this case — Environmental Protection Act, R.S.O. 1990, c. E.19, s. 15(1).

The appellant C was conducting blasting operations for a highway-widening project when the operation went awry and rock debris known as "fly-rock" was propelled into the air by an explosion. The fly-rock shot approximately 90 metres in the air and damaged a home and a car. A significant amount of rock also landed in the yard. C did not report the incident to the Ministry of the Environment ("Ministry") and was subsequently charged with failing to report to the Ministry the discharge of a contaminant into the natural environment contrary to s. 15(1) of the *Environmental Protection Act* ("*EPA*"). C was acquitted by the Ontario Court of Justice. The

Droit de l'environnement — Infractions — Obligation d'aviser le ministère de l'Environnement du rejet d'un contaminant dans l'environnement naturel — Opérations de dynamitage d'un sous-traitant entraînent la projection dans les airs d'éclats de roc, endommageant une demeure et une voiture — Omission par le sous-traitant d'aviser le ministère de l'Environnement du rejet du contaminant — L'obligation d'aviser est-elle entrée en jeu en l'espèce? — Loi sur la protection de l'environnement, L.R.O. 1990, ch. E.19, art. 15(1).

L'appelante C effectuait des opérations de dynamitage dans le cadre de travaux d'élargissement d'une route lorsque l'opération a mal tourné et que des « éclats de roc » ont été projetés dans les airs par la force d'une explosion. Les éclats de roc ont été propulsés dans les airs sur une distance approximative de 90 mètres et ont endommagé une demeure et une voiture. Une quantité importante d'éclats sont aussi tombés dans la cour. C n'a pas signalé l'incident au ministère de l'Environnement (« ministère ») et, par la suite, a été accusée d'avoir omis, en violation du par. 15(1) de la *Loi sur la protection de l'environnement* (« *LPE* »), d'aviser

Ontario Superior Court of Justice set aside the acquittal and entered a conviction. A majority in the Court of Appeal dismissed C's appeal.

Held: The appeal should be dismissed.

Ontario's *EPA* requires that the Ministry of the Environment be immediately notified when a contaminant is discharged into the environment. There are two preconditions to this reporting requirement — the discharge must have been out of the normal course of events and it must have had — or was likely to have — an adverse environmental impact. The purpose of the requirement is to let the Ministry know about potential environmental damage so that any consequential remedial steps can be taken in a timely way.

The *EPA* is Ontario's principal environmental protection statute. Its status as remedial legislation entitles it to a generous interpretation. Environmental protection is a complex subject matter — the environment itself and the wide range of activities which might harm it are not easily conducive to precise codification. As a result, environmental legislation embraces an expansive approach to ensure that it can adequately respond to a variety of environmentally harmful scenarios, including ones which might not have been foreseen by the drafters of the legislation. Because the legislature is pursuing the objective of environmental protection, its intended reach is wide and deep.

The overall purpose of the *EPA* is set out in s. 3: "The purpose of this Act is to provide for the protection and conservation of the natural environment." The *EPA* also protects those who *use* the natural environment by protecting human health, plant and animal life, and property. The *EPA* seeks to achieve its goal of protecting the natural environment and those who use it through a series of regulations, prohibitions and reporting requirements. It also provides for a wide range of inspection, enforcement, preventative and remedial powers.

One of the means by which the *EPA* promotes its protective and preventative purposes is through the prohibition in s. 14(1) against discharging a contaminant into the natural environment where it is likely to have an

le ministère qu'elle avait rejeté un contaminant dans l'environnement naturel. C a été acquittée par la Cour de justice de l'Ontario, mais la Cour supérieure de justice de l'Ontario a annulé l'acquittement et inscrit une déclaration de culpabilité. Les juges majoritaires de la Cour d'appel ont rejeté l'appel de C.

Arrêt : Le pourvoi est rejeté.

La *LPE* exige que le ministère de l'Environnement soit avisé sans délai lorsqu'un contaminant a été rejeté dans l'environnement. Cette obligation de signalement est assujettie à deux conditions préalables — il doit s'agir d'un rejet accompli en dehors du cours normal des événements, et qui cause — ou causera vraisemblablement — une conséquence préjudiciable sur l'environnement. L'obligation en question a pour but d'informer le ministère des dommages possibles à l'environnement, afin que puissent être prises en temps utile les mesures correctives qui s'imposent.

La *LPE* est la principale loi ontarienne en matière de protection de l'environnement. Comme elle constitue une loi réparatrice, elle doit recevoir une interprétation généreuse. La protection de l'environnement est un sujet complexe — en effet, l'environnement lui-même et la vaste gamme d'activités susceptibles d'en causer la dégradation ne se prêtent pas aisément à une codification précise. Par conséquent, les lois protégeant l'environnement reposent sur l'application d'une approche générale, qui permet de réagir adéquatement à une gamme d'atteintes environnementales, y compris celles qui n'ont peut-être même pas été envisagées par leurs rédacteurs. Parce que l'objectif poursuivi par le législateur est la protection de l'environnement, la portée voulue de ces lois est large et profonde.

L'objectif général de la *LPE* est énoncé à l'art. 3 : « La présente loi a pour objet d'assurer la protection et la conservation de l'environnement naturel. » La *LPE* protège également les personnes qui *utilisent* l'environnement naturel en protégeant la santé des humains, les végétaux, les animaux et les biens. La *LPE* cherche à réaliser son objectif de protection de l'environnement naturel et des personnes qui l'utilisent au moyen d'un ensemble de règlements, d'interdictions et d'obligations de signalement. Elle prévoit également un large éventail de pouvoirs en matière d'inspection, de mise en application de la loi, de prévention et de réparation.

L'un des moyens par lesquels la *LPE* tend à l'atteinte de ses objectifs de protection et de prévention réside dans l'interdiction, énoncée au par. 14(1), de rejeter dans l'environnement naturel un contaminant qui causera

"adverse effect". This purpose is reinforced by the related requirement in s. 15(1) that any such discharge which is out of the normal course of events be reported to the Ministry of the Environment.

When a contaminant is discharged, the discharger may not know the full extent of the damage caused or likely to be caused. The purpose of the reporting requirement in s. 15(1) is to ensure that it is the Ministry, and not the discharger, who decides what, if any, further steps are required. Moreover, many potential harms may be difficult to detect without the expertise and resources of the Ministry. As a result, the statute places both the obligation to investigate and the decision about what further steps are necessary with the Ministry and not the discharger. Notification provides the Ministry with the opportunity to conduct an inspection as quickly as possible and to obtain information in order to take any necessary remedial action and to fulfill its statutory mandate. This enables the Ministry to respond in a timely way to the discharge of a contaminant into the natural environment and to be involved in determining what, if any, preventative or remedial measures are appropriate.

"Adverse effect" is defined in s. 1(1) of the *EPA*. It has eight definitional components. These eight branches of the definition reflect a statutory recognition that protecting the natural environment requires, among other strategies, maximizing the circumstances in which the Ministry of the Environment may investigate and remedy environmental harms. Each of the eight branches provides an independent trigger for the duty to report.

Section 15(1) of the *EPA* was clearly engaged in the circumstances of this case and C was required to report the discharge of fly-rock forthwith to the Ministry of the Environment. C "discharged" fly-rock into the "natural environment", and there is no doubt that fly-rock meets the definition of "contaminant". The discharge was "out of the normal course of events", and it caused an "adverse effect" under the definition of that term in s. 1(1), namely, it caused injury or damage to property and loss of enjoyment of the normal use of property. The adverse effects were not trivial. The force of the blast, and the rocks it produced, were so powerful they caused extensive

vraisemblablement une « conséquence préjudiciable ». Cet objectif est renforcé par l'obligation connexe, prévue au par. 15(1), d'aviser le ministère de l'Environnement d'un tel rejet s'il est accompli en dehors du cours normal des événements.

Lors du rejet d'un contaminant, il est possible que l'auteur ne connaisse pas toute l'ampleur des dommages qui sont causés ou qui peuvent vraisemblablement être causés. L'obligation de signalement prescrite par le par. 15(1) a pour but de faire en sorte que ce soit le ministère, et non l'auteur du rejet, qui décide si des mesures supplémentaires sont requises et, dans l'affirmative, lesquelles. En outre, de nombreuses nuisances éventuelles peuvent être difficiles à détecter sans l'expertise et les ressources dont dispose le ministère. En conséquence, la loi confère au ministère, et non à l'auteur du rejet, l'obligation d'enquêter ainsi que le pouvoir de décider des mesures supplémentaires qui sont nécessaires. La réception de l'avis prescrit donne au ministère la possibilité de procéder aussi rapidement que possible à une inspection et d'obtenir des renseignements en vue de prendre toutes les mesures réparatrices nécessaires et de s'acquitter du mandat que lui confie la loi. Ce processus lui permet également de réagir en temps utile au rejet d'un contaminant dans l'environnement naturel et de participer à la détermination, s'il y a lieu, des mesures préventives ou réparatrices appropriées.

La définition du terme « conséquence préjudiciable » est énoncée au par. 1(1) de la *LPE* et comporte huit éléments. Ceux-ci montrent que la loi reconnaît que la protection de l'environnement naturel exige, entre autres stratégies, de maximiser l'éventail des circonstances dans lesquelles le ministère de l'Environnement peut enquêter sur les nuisances environnementales et y remédier. Chacune des huit formes de la notion de « conséquence préjudiciable » constitue une source autonome de responsabilité.

Le paragraphe 15(1) entrait manifestement en jeu dans les circonstances de la présente espèce et C était tenue de signaler sans délai au ministère de l'Environnement le rejet des éclats de roc. C « a rejeté » dans « l'environnement naturel » des éclats de roc et il ne fait aucun doute que ces éclats de roc sont visés par la définition de « contaminant ». Le rejet a été accompli « en dehors du cours normal des événements » et a causé une « conséquence préjudiciable » au sens de la définition de ce terme énoncée au par. 1(1), c'est-à-dire qu'il a causé un tort ou des dommages à des biens et la perte de jouissance de l'usage normal de ces biens. Les

and significant property damage, penetrating the roof of a residence and landing in the kitchen. A vehicle was also seriously damaged. The fly-rock could easily have seriously injured or killed someone. Accordingly, C was required to report the discharge of fly-rock forthwith to the Ministry of Environment under s. 15(1) of the *EPA*.

conséquences préjudiciables n'étaient pas négligeables. La force de l'explosion et les éclats de roc qu'elle a produits étaient si puissants que d'importants dommages aux biens ont été causés, les éclats ayant en effet traversé le toit d'une résidence et fini leur course dans la cuisine. En outre, un véhicule a été gravement endommagé. Les éclats de roc auraient pu facilement blesser sérieusement une personne ou la tuer. En conséquence, en application du par. 15(1) de la *LPE*, C était tenue de signaler le rejet des éclats de roc sans délai au ministère de l'Environnement.

Sara Blake, *Paul McCulloch* and *Danielle Meuleman*, for the respondent.

Joseph F. Castrilli and *Ramani Nadarajah*, for the interveners.

The judgment of the Court was delivered by

[1] Abella J. — Ontario's *Environmental Protection Act*, R.S.O. 1990, c. E.19 ("*EPA*"), requires that the Ministry of the Environment be immediately notified when a contaminant is discharged into the environment. There are two preconditions to this reporting requirement — the discharge must have been out of the normal course of events and it must have had — or was likely to have — an adverse environmental impact. The purpose of the requirement is to let the Ministry know about potential environmental damage so that any consequential remedial steps can be taken in a timely way.

[2] The interpretive exercise engaged in this appeal is to determine when the reporting requirement is triggered. In my view, there is clarity both of legislative purpose and language: the Ministry of the Environment must be notified when there has been a discharge of a contaminant out of the normal course of events without waiting for proof that the natural environment has, in fact, been impaired. In other words: when in doubt, report.

Background

[3] In 2007, Castonguay Blasting Ltd. was hired as a subcontractor to conduct blasting operations for a highway-widening project commissioned by the Ontario Ministry of Transportation.

[4] On November 26, 2007, Castonguay was blasting rock when the operation went awry and rock debris known as "fly-rock" was propelled into

J. Bruce McMeekin, *Andrea Farkouh* et *Marie-France Major*, pour l'appelante.

Joseph F. Castrilli et *Ramani Nadarajah*, pour les intervenantes.

Version française du jugement de la Cour rendu par

[1] La juge Abella — La *Loi sur la protection de l'environnement* de l'Ontario, L.R.O. 1990, ch. E.19 (« *LPE* »), exige que le ministère de l'Environnement soit avisé sans délai de tout rejet d'un contaminant dans l'environnement. Cette obligation de signalement est assujettie à deux conditions préalables — il doit s'agir d'un rejet accompli en dehors du cours normal des événements, et qui cause — ou causera vraisemblablement — une conséquence préjudiciable sur l'environnement. L'obligation en question a pour but d'informer le ministère des dommages possibles à l'environnement, afin que puissent être prises en temps utile les mesures correctives qui s'imposent.

[2] L'exercice d'interprétation que requiert le présent pourvoi consiste à déterminer à quel moment entre en jeu l'obligation de donner l'avis en question. Selon moi, tant le texte de la *LPE* que son objet sont clairs : le ministère de l'Environnement doit être avisé lorsqu'un contaminant a été rejeté en dehors du cours normal des événements, sans qu'il soit nécessaire d'attendre la preuve que l'environnement naturel a bel et bien été dégradé. Autrement dit : quand on doute, on signale.

Contexte

[3] En 2007, Dynamitage Castonguay Ltée a été engagée comme sous-traitant pour effectuer des opérations de dynamitage dans le cadre de travaux d'élargissement d'une route commandés par le ministère des Transports de l'Ontario.

[4] Le 26 novembre 2007, Castonguay dynamitait un rocher lorsque l'opération a mal tourné et que des « éclats de roc » ont été projetés dans les airs

the air by an explosion. Had the blast been carried out according to plan, the force of the blast would have been contained and concentrated inwards, reducing the risk of shattered rock becoming airborne. In this case, however, the fly-rock shot approximately 90 metres in the air and crashed through the roof of a home, damaging the kitchen ceiling, the siding and the eavestroughs. Some of the fly-rock hit a car, breaking the windshield and damaging the hood. There was also a significant amount of rock in the yard.

[5] Castonguay immediately reported the incident to the contract administrator, who in turn reported it to the Ministry of Transportation (which had commissioned the project) and the provincial Ministry of Labour in accordance with the requirements in s. 53 of the *Occupational Health and Safety Act*, R.S.O. 1990, c. O.1. Further blasting on the project stopped until the site was inspected and remedial steps were agreed to with the Ministry of Labour.

[6] Castonguay did not report the incident to the Ministry of the Environment. That Ministry was not notified until May 2008, when it was told about the incident by the Ministry of Transportation.

[7] In September 2009, Castonguay was charged with failing to report the "discharge of a contaminant into the natural environment" to the Ministry of the Environment contrary to s. 15(1) of the *EPA*. Castonguay was acquitted by the Ontario Court of Justice. The Ontario Superior Court of Justice set aside the acquittal and entered a conviction (2011 ONSC 767, 57 C.E.L.R. (3d) 142). Castonguay appealed on the basis that s. 15(1) was not triggered in these circumstances.

[8] In the Court of Appeal (2012 ONCA 165, 109 O.R. (3d) 401), MacPherson J.A., writing for the majority, concluded that the plain meaning of the relevant provisions of the *EPA*, the relevant case law, and a proper understanding of the broad purposes of the *EPA* confirmed that the discharge of the

par la force d'une explosion. Si le dynamitage avait été effectué comme prévu, la force de l'explosion aurait été circonscrite et concentrée vers l'intérieur, ce qui aurait diminué le risque de voir des éclats de roc s'envoler. Dans le cas qui nous intéresse toutefois, les éclats de roc ont été propulsés dans les airs et, après avoir franchi approximativement 90 mètres, ils ont traversé le toit d'une demeure, endommageant le plafond de la cuisine, le revêtement mural extérieur et les gouttières. Certains éclats ont frappé une auto, fracassant le pare-brise et endommageant le capot. En outre, une quantité importante d'éclats sont tombés dans la cour.

[5] Castonguay a immédiatement signalé l'incident à l'administrateur du contrat qui, à son tour, en a avisé le ministère des Transports (qui avait commandé les travaux) ainsi que le ministère du Travail provincial, conformément aux exigences prescrites par l'art. 53 de la *Loi sur la santé et la sécurité au travail*, L.R.O. 1990, ch. O.1. Les opérations de dynamitage sur le chantier ont alors cessé jusqu'à ce que le site ait été inspecté et des mesures correctives convenues avec le ministère du Travail.

[6] Castonguay n'a pas signalé l'incident au ministère de l'Environnement. Ce ministère n'en a été avisé qu'en mai 2008, lorsque le ministère des Transports l'a informé de ce qui s'était passé.

[7] En septembre 2009, Castonguay a été accusée d'avoir omis, en violation du par. 15(1) de la *LPE*, d'aviser le ministère de l'Environnement qu'elle avait « rejet[é] un contaminant dans l'environnement naturel ». L'entreprise a été acquittée par la Cour de justice de l'Ontario, mais la Cour supérieure de justice de l'Ontario a annulé l'acquittement et inscrit une déclaration de culpabilité (2011 ONSC 767, 57 C.E.L.R. (3d) 142). Castonguay a ensuite interjeté appel, au motif que les circonstances de l'espèce n'avaient pas déclenché l'application du par. 15(1).

[8] En Cour d'appel (2012 ONCA 165, 109 O.R. (3d) 401), le juge MacPherson a conclu, au nom des juges majoritaires, que le sens ordinaire des dispositions pertinentes de la *LPE*, la jurisprudence applicable et l'interprétation adéquate des objectifs généraux de la *LPE* confirmaient que

fly-rock in this case was covered by s. 15(1) of the *EPA* and that Castonguay was therefore required to report the incident to the Ministry of the Environment. In dissent, Blair J.A. found no breach of s. 15(1) in these circumstances. I agree with the majority that Castonguay was required to report the incident.

le rejet des éclats de roc survenu en l'espèce était une situation visée par le par. 15(1) de la *LPE* et que Castonguay avait en conséquence l'obligation de signaler l'incident au ministère de l'Environnement. Le juge Blair, dissident, n'a constaté aucune violation du par. 15(1) dans les circonstances de la présente affaire. Je suis d'accord avec les juges majoritaires pour dire que Castonguay était tenue de signaler l'incident.

Analysis

[9] The *EPA* is Ontario's principal environmental protection statute. Its status as remedial legislation entitles it to a generous interpretation (*Legislation Act, 2006*, S.O. 2006, c. 21, Sch. F, s. 64; *Ontario v. Canadian Pacific Ltd.*, [1995] 2 S.C.R. 1031, at para. 84). Moreover, as this Court recognized in *Canadian Pacific*, environmental protection is a complex subject matter — the environment itself and the wide range of activities which might harm it are not easily conducive to precise codification (para. 43). As a result, environmental legislation embraces an expansive approach to ensure that it can adequately respond "to a wide variety of environmentally harmful scenarios, including ones which might not have been foreseen by the drafters of the legislation" (para. 43). Because the legislature is pursuing the objective of environmental protection, its intended reach is wide and deep (para. 84).

Analyse

[9] La *LPE* est la principale loi ontarienne en matière de protection de l'environnement. Comme elle constitue une loi réparatrice, elle doit recevoir une interprétation généreuse (*Loi de 2006 sur la législation*, L.O. 2006, ch. 21, ann. F, art. 64; *Ontario c. Canadien Pacifique Ltée*, [1995] 2 R.C.S. 1031, par. 84). En outre, comme notre Cour l'a établi dans l'affaire *Canadien Pacifique*, la protection de l'environnement est un sujet complexe — en effet, l'environnement lui-même et la vaste gamme d'activités susceptibles d'en causer la dégradation ne se prêtent pas aisément à une codification précise (par. 43). Par conséquent, les lois protégeant l'environnement reposent sur l'application d'une approche générale, qui permet de réagir adéquatement « à une vaste gamme d'atteintes environnementales, y compris celles qui n'ont peut-être même pas été envisagées par leurs rédacteurs » (par. 43). Parce que l'objectif poursuivi par le législateur est la protection de l'environnement, la portée voulue de ces lois est large et profonde (par. 84).

[10] The overall purpose of the *EPA* is set out in s. 3: "The purpose of this Act is to provide for the protection and conservation of the natural environment." "[N]atural environment" is defined in s. 1(1) as the "air, land and water, or any combination or part thereof, of the Province of Ontario". The *EPA* also protects those who *use* the natural environment by protecting human health, plant and animal life, and property. This purpose was aptly summarized by MacPherson J.A. in *R. v. Dow Chemical Canada Inc.* (2000), 47 O.R. (3d) 577 (C.A.), as being "to protect the natural environment and the people who live, work and play in it" (para. 49).

[10] L'objectif général de la *LPE* est énoncé à l'art. 3 : « La présente loi a pour objet d'assurer la protection et la conservation de l'environnement naturel. » La notion d'« environnement naturel » est définie ainsi au par. 1(1) : « Air, terrain et eau ou toute combinaison ou partie de ces éléments qui sont compris dans la province de l'Ontario. » La *LPE* protège également les personnes qui *utilisent* l'environnement naturel en protégeant la santé des humains, les végétaux, les animaux et les biens. Dans *R. c. Dow Chemical Canada Inc.* (2000), 47 O.R. (3d) 577 (C.A.), le juge MacPherson a d'ailleurs bien résumé cet objectif comme étant [TRADUCTION] « la protection de l'environnement naturel et des personnes qui y vivent, travaillent et jouent » (par. 49).

[11] The *EPA* seeks to achieve its goal of protecting the natural environment and those who use it through a series of regulations, prohibitions and reporting requirements. It also provides for a wide range of inspection, enforcement, preventative and remedial powers, such as the authority to issue control orders (s. 7), stop orders (s. 8), orders requiring the repair of damage (s. 17), preventative measure orders requiring steps to ensure that a discharge does not occur or recur (s. 18), or contravention orders requiring a discharger to take compliance steps (s. 157).

[11] La *LPE* cherche à réaliser son objectif de protection de l'environnement naturel et des personnes qui l'utilisent au moyen d'un ensemble de règlements, d'interdictions et d'obligations de signalement. Elle prévoit également un large éventail de pouvoirs en matière d'inspection, de mise en application de la loi, de prévention et de réparation, comme le pouvoir de prendre des arrêtés d'intervention (art. 7), de suspension immédiate (art. 8), des ordonnances de réparation des dommages (art. 17), de prise de mesures préventives précisant celles qui doivent être appliquées pour empêcher qu'un rejet ne se produise ou ne se produise de nouveau (art. 18), ou des arrêtés constatant une violation de la loi et ordonnant à l'auteur de la violation de prendre des mesures pour se conformer à la loi (art. 157).

[12] One of the means by which the *EPA* promotes its protective and preventative purposes is through the prohibition in s. 14(1) against discharging a contaminant into the natural environment where it is likely to have an adverse effect, and the related requirement in s. 15(1) that any such discharge which is out of the normal course of events be reported to the Ministry of the Environment.

[12] L'un des moyens par lesquels la *LPE* tend à l'atteinte de ses objectifs de protection et de prévention réside dans l'interdiction, énoncée au par. 14(1), de rejeter dans l'environnement naturel un contaminant qui causera vraisemblablement une conséquence préjudiciable, et dans l'obligation connexe, prévue au par. 15(1), d'aviser le ministère de l'Environnement d'un tel rejet s'il est accompli en dehors du cours normal des événements.

[13] The issue in this appeal is the proper interpretation of the reporting requirement in s. 15(1). This provision states:

[13] La question soulevée dans le présent pourvoi concerne l'interprétation qu'il convient de donner à l'obligation de signalement que prévoit le par. 15(1). Cette disposition est rédigée comme suit :

15.—(1) Every person who discharges a contaminant or causes or permits the discharge of a contaminant into the natural environment shall forthwith notify the Ministry if the discharge is out of the normal course of events, the discharge causes or is likely to cause an adverse effect and the person is not otherwise required to notify the Ministry under section 92.

15.—(1) Quiconque rejette un contaminant dans l'environnement naturel, ou permet ou fait en sorte que cela se fasse, en avise sans délai le ministère si un tel acte est accompli en dehors du cours normal des événements, s'il cause ou causera vraisemblablement une conséquence préjudiciable et si la personne qui l'accomplit n'est pas tenue par ailleurs d'aviser le ministère aux termes de l'article 92.

[14] The terms "discharge", "contaminant", "natural environment" and "adverse effect" are defined in s. 1(1) of the *EPA*, as follows:

[14] Les termes « rejet », « rejeter », « contaminant », « environnement naturel » et « conséquence préjudiciable » sont définis comme suit au par. 1(1) de la *LPE* :

"**natural environment**" means the air, land and water, or any combination or part thereof, of the Province of Ontario;

« **environnement naturel** » Air, terrain et eau ou toute combinaison ou partie de ces éléments qui sont compris dans la province de l'Ontario.

"**discharge**", when used as a verb, includes add, deposit, leak or emit and, when used as a noun, includes addition, deposit, emission or leak;

"**contaminant**" means any solid, liquid, gas, odour, heat, sound, vibration, radiation or combination of any of them resulting directly or indirectly from human activities that causes or may cause an adverse effect;

"**adverse effect**" means one or more of,

(a) impairment of the quality of the natural environment for any use that can be made of it,

(b) injury or damage to property or to plant or animal life,

(c) harm or material discomfort to any person,

(d) an adverse effect on the health of any person,

(e) impairment of the safety of any person,

(f) rendering any property or plant or animal life unfit for human use,

(g) loss of enjoyment of normal use of property, and

(h) interference with the normal conduct of business;

« **rejet** » S'entend en outre d'un ajout, d'un dépôt, d'une perte ou d'une émission; le verbe « **rejeter** » s'entend en outre d'ajouter, de déposer, de perdre ou d'émettre.

« **contaminant** » Solide, liquide, gaz, son, odeur, chaleur, vibration, radiation ou combinaison de ces éléments qui proviennent, directement ou indirectement, des activités humaines et qui ont ou peuvent avoir une conséquence préjudiciable.

« **conséquence préjudiciable** » L'une ou plusieurs des conséquences suivantes :

a) la dégradation de la qualité de l'environnement naturel relativement à tout usage qui peut en être fait;

b) le tort ou les dommages causés à des biens, des végétaux ou des animaux;

c) la nuisance ou les malaises sensibles causés à quiconque;

d) l'altération de la santé de quiconque;

e) l'atteinte à la sécurité de quiconque;

f) le fait de rendre des biens, des végétaux ou des animaux impropres à l'usage des êtres humains;

g) la perte de jouissance de l'usage normal d'un bien;

h) le fait d'entraver la marche normale des affaires.

[15] Castonguay conceded that the discharge of fly-rock caused property damage, but argued that injury or damage to private property alone is insufficient to engage the reporting requirement. Since the discharge did not impair the natural environment — the air, land or water — Castonguay was not required to report the incident to the Ministry.

[15] Castonguay a concédé que le rejet des éclats de roc avait causé des dommages à des biens, mais a plaidé que le tort ou les dommages causés à une propriété privée ne suffisent pas à eux seuls à déclencher l'application de l'obligation de signalement. Et donc, que comme le rejet n'a pas dégradé l'environnement naturel — à savoir l'air, le terrain ou l'eau —, elle n'était pas tenue de signaler l'incident au ministère.

[16] Castonguay's argument is, in essence, an argument that while the definition of "adverse effect" has eight components — paras. (a) to (h) — para. (a) is an umbrella clause. In other words, there *must* be, in the language of para. (a), "impairment of the quality of the natural environment for any use that can be made of it" before

[16] Essentiellement, l'argument de Castonguay consiste à dire que, quoique la définition de « conséquence préjudiciable » comporte huit éléments — les al. a) à h) — l'al. a) constitue une exigence applicable dans tous les cas. En d'autres mots, il *doit* exister, comme le prévoit cet alinéa, une « dégradation de la qualité de l'environnement

any of the other seven elements come into play. They are not stand-alone elements and only constitute an "adverse effect" if they are accompanied by the impairment to the quality of the natural environment set out in para. (a). An adverse effect as defined in paras. (b) through (h) *without* any accompanying impairment to the quality of the natural environment under para. (a) will not be sufficient to trigger s. 15(1).

[17] The Minister of the Environment, on the other hand, argued that if the discharge caused or was likely to cause *one or more of* the adverse effects listed in paras. (a) to (h) of the statutory definition, the obligation to report the discharge of a contaminant under s. 15(1) materializes. Each of the eight listed components is a separate impact that can trigger the requirement to report.

[18] The Minister's position is demonstrably supported by the language of s. 15(1) and the relevant definitions in the *EPA*. The purpose of the reporting requirement in s. 15(1) is to ensure that it is the Ministry of the Environment, and not the discharger, who decides what, if any, further steps are required. When a contaminant is discharged, the discharger may not know the full extent of the damage caused or, in the words of s. 15(1), likely to be caused. Moreover, many potential harms such as harm to human health, or injury to plants and animals, and even impairment of the natural environment, may be difficult to detect without the expertise and resources of the Ministry. As a result, the statute places both the obligation to investigate and the decision about what further steps are necessary with the Ministry and not the discharger.

[19] Notification provides the Ministry with the opportunity to conduct an inspection as quickly

naturel relativement à tout usage qui peut en être fait » avant que l'un des sept autres éléments puisse entrer en jeu. Ceux-ci ne seraient pas des éléments indépendants et ils ne constitueraient une « conséquence préjudiciable » que s'ils s'accompagnent d'une dégradation de la qualité de l'environnement naturel prévue à l'al. a). Pour cette raison, une conséquence préjudiciable définie aux al. b) à h), *qui ne serait pas* accompagnée de la dégradation de la qualité de l'environnement naturel visée à l'al. a), ne suffirait pas pour déclencher l'application du par. 15(1).

[17] Le ministre de l'Environnement a pour sa part plaidé que, si un rejet cause ou peut vraisemblablement causer *une ou plusieurs des* conséquences préjudiciables énumérées aux al. a) à h) de la définition énoncée dans la loi, l'obligation que fait le par. 15(1) de signaler le rejet d'un contaminant se matérialise alors. Chacun des huit éléments du paragraphe constitue une conséquence distincte, susceptible de faire naître l'obligation de signalement.

[18] Le texte du par. 15(1) et les définitions pertinentes de la *LPE* appuient manifestement la thèse du ministre. L'obligation de signalement prescrite par le par. 15(1) a pour but de faire en sorte que ce soit le ministère de l'Environnement, et non l'auteur du rejet, qui décide si des mesures supplémentaires sont requises et, dans l'affirmative, lesquelles. Lors du rejet d'un contaminant, il est possible que l'auteur ne connaisse pas toute l'ampleur des dommages qui sont causés ou qui, comme le dit le par. 15(1), peuvent vraisemblablement être causés. En outre, de nombreuses nuisances éventuelles, par exemple des atteintes à la santé humaine ou le tort aux végétaux ou aux animaux, et même la dégradation de l'environnement naturel, peuvent être difficiles à détecter sans l'expertise et les ressources dont dispose le ministère. En conséquence, la loi confère au ministère, et non à l'auteur du rejet, l'obligation d'enquêter ainsi que le pouvoir de décider des mesures supplémentaires qui sont nécessaires.

[19] La réception de l'avis prescrit donne au ministère la possibilité de procéder aussi rapidement

as possible and to obtain information in order to take any necessary remedial action and to fulfill its statutory mandate. This enables the Ministry to respond in a timely way to the discharge of a contaminant into the natural environment and to be involved in determining what, if any, preventative or remedial measures are appropriate.

[20] As the interveners Canadian Environmental Law Association and Lake Ontario Waterkeeper pointed out in their joint factum, s. 15(1) is also consistent with the precautionary principle. This emerging international law principle recognizes that since there are inherent limits in being able to determine and predict environmental impacts with scientific certainty, environmental policies must anticipate and prevent environmental degradation (O. McIntyre and T. Mosedale, "The Precautionary Principle as a Norm of Customary International Law" (1997), 9 *J. Envtl. L.* 221, at pp. 221-22; *114957 Canada Ltée (Spraytech, Société d'arrosage) v. Hudson (Town)*, 2001 SCC 40, [2001] 2 S.C.R. 241, at paras. 30-32). Section 15(1) gives effect to the concerns underlying the precautionary principle by ensuring that the Ministry of the Environment is notified and has the ability to respond once there has been a discharge of a contaminant out of the normal course of events, without waiting for proof that the natural environment has, in fact, been impaired.

[21] Parsing the language of s. 15(1) illuminates its clear preventative and protective purposes. First, a person must discharge a *contaminant*. Second, the contaminant must be discharged *into the natural environment*. Third, the discharge must be *out of the normal course of events*. Fourth, the discharge must be one that *causes or is likely to cause an adverse effect*. Finally, the person must not be otherwise required to notify the Ministry under s. 92, which refers to the spill of pollutants from a structure, vehicle or container and is therefore not applicable to the circumstances of this case.

que possible à une inspection et d'obtenir des renseignements en vue de prendre toutes les mesures réparatrices nécessaires et de s'acquitter du mandat que lui confie la loi. Ce processus lui permet également de réagir en temps utile au rejet d'un contaminant dans l'environnement naturel et de participer à la détermination, s'il y a lieu, des mesures préventives ou réparatrices appropriées.

[20] Comme le soulignent dans leur mémoire conjoint les intervenantes l'Association canadienne du droit de l'environnement et Lake Ontario Waterkeeper, le par. 15(1) est également compatible avec le principe de précaution. Ce principe émergent en droit international reconnaît en effet que, parce qu'il est intrinsèquement difficile de déterminer et de prédire avec une certitude scientifique les répercussions environnementales, les politiques en la matière doivent anticiper et prévenir les dégradations environnementales (O. McIntyre et T. Mosedale, « The Precautionary Principle as a Norm of Customary International Law » (1997), 9 *J. Envtl. L.* 221, p. 221-222; *114957 Canada Ltée (Spraytech, Société d'arrosage) c. Hudson (Ville)*, 2001 CSC 40, [2001] 2 R.C.S. 241, par. 30-32). Le paragraphe 15(1) répond aux préoccupations à la base du principe de précaution en faisant en sorte que le ministère de l'Environnement soit avisé et ait la possibilité de réagir dès qu'il y a eu rejet de contaminants en dehors du cours normal des événements, sans qu'il soit nécessaire d'attendre la preuve d'une dégradation effective de l'environnement naturel.

[21] L'analyse grammaticale du texte du par. 15(1) fait bien ressortir les objectifs limpides de prévention et de protection qu'il vise. En premier lieu, il faut qu'une personne rejette un *contaminant*. Deuxièmement, ce contaminant doit être rejeté *dans l'environnement naturel*. Troisièmement, le rejet doit être accompli *en dehors du cours normal des événements*. Quatrièmement, il faut que ce soit un rejet qui *cause ou causera vraisemblablement une conséquence préjudiciable*. Enfin, l'auteur du rejet ne doit pas être par ailleurs tenu d'aviser le ministère conformément à l'art. 92; cet article vise le déversement de polluants à partir d'un ouvrage, d'un véhicule ou d'un contenant, et il ne s'applique donc pas dans les circonstances de l'espèce.

[22] Taking each phrase in turn, the full scope of the reporting requirement is revealed. Section 15(1) applies to the discharge of "contaminant[s]" as defined by the *EPA*. The definition of contaminant in s. 1(1) of the *EPA* includes "any solid liquid, gas, odour, heat, sound, vibration, radiation or combination of any of them resulting directly or indirectly from human activities that causes or may cause an adverse effect". The reference to human activities in the definition of contaminant, when read in the context of s. 15 and the *EPA* as a whole, recognizes that the *EPA* applies only to those activities which engage the natural environment — the air, land or water in the province. This ensures that the definition of contaminant and s. 15 of the *EPA* maintain a nexus to the statutory objective of environmental protection.

[22] L'examen de chacune de ces expressions à tour de rôle révèle toute la portée de l'obligation de signalement. Le paragraphe 15(1) s'applique au rejet de « contaminant[s] » au sens de la *LPE*. Le mot « contaminant » est défini ainsi au par. 1(1) de la *LPE* : « Solide, liquide, gaz, son, odeur, chaleur, vibration, radiation ou combinaison de ces éléments qui proviennent, directement ou indirectement, des activités humaines et qui ont ou peuvent avoir une conséquence préjudiciable. » La mention de l'expression activités humaines dans la définition de contaminant, lorsqu'elle est considérée dans le contexte de l'art. 15 et de la *LPE* dans son ensemble, indique que la *LPE* ne s'applique qu'aux activités touchant l'environnement naturel — l'air, le terrain et l'eau dans la province. Cela permet de rattacher la définition de contaminant et l'art. 15 de la *LPE* à l'objectif de la loi, c'est-à-dire la protection de l'environnement.

[23] The discharge must be *into the natural environment*, defined as the air, land and water of Ontario. Section 15(1) does not impose any restrictions on the length of time the contaminant remains in the natural environment, nor does it require that the contaminant become part of the natural environment.

[23] Il doit s'agir d'un rejet *dans l'environnement naturel*, expression définie comme étant l'air, le terrain et l'eau en Ontario. Le paragraphe 15(1) n'impose aucune restriction quant à la durée de la présence du contaminant dans l'environnement naturel et il n'exige pas non plus que le contaminant s'y intègre.

[24] Only discharges that are *out of the normal course of events* are required to be reported to the Ministry. This restricts the application of s. 15(1) by excluding many everyday, routine activities. Although driving a car, for example, discharges fumes into the natural environment, the discharge is not out of the normal course of events and no report to the Ministry is required.

[24] L'obligation de signaler un rejet au ministère vise seulement les rejets accomplis *en dehors du cours normal des événements*. Cette précision a pour effet de restreindre le champ de l'application du par. 15(1) du fait qu'elle exclut de celui-ci de nombreuses activités courantes de la vie quotidienne. Par exemple, bien que la conduite d'une automobile entraîne le rejet de gaz d'échappement dans l'environnement naturel, un tel rejet n'est pas accompli en dehors du cours normal des événements et, en conséquence, aucun avis au ministère n'est requis à cet égard.

[25] The key, in my view, to understanding s. 15(1) is that the discharge of the contaminant caused or was likely to cause an "adverse effect". As previously noted, adverse effect is defined as:

[25] Selon moi, le facteur clé pour bien comprendre le par. 15(1) est la condition requérant que le rejet du contaminant ait causé ou causerait vraisemblablement une « conséquence préjudiciable ». Comme je l'ai souligné précédemment, l'expression conséquence préjudiciable est définie ainsi :

"**adverse effect**" *means one or more of*,

(a) impairment of the quality of the natural environment for any use that can be made of it,

(b) injury or damage to property or to plant or animal life,

(c) harm or material discomfort to any person,

(d) an adverse effect on the health of any person,

(e) impairment of the safety of any person,

(f) rendering any property or plant or animal life unfit for human use,

(g) loss of enjoyment of normal use of property, and

(h) interference with the normal conduct of business;

[26] There is already a jurisprudential trail from this Court and the Ontario Court of Appeal to guide our interpretation. In *Canadian Pacific*, this Court considered an earlier version of the *EPA*, which did not specifically mention the term "adverse effect". The appeal focused on what was then s. 13(1) of the *EPA*, R.S.O. 1980, c. 141, which stated:

13.—(1) Notwithstanding any other provision of this Act or the regulations, no person shall deposit, add, emit or discharge a contaminant or cause or permit the deposit, addition, emission or discharge of a contaminant into the natural environment that,

(*a*) causes or is likely to cause impairment of the quality of the natural environment for any use that can be made of it;

(*b*) causes or is likely to cause injury or damage to property or to plant or animal life;

(*c*) causes or is likely to cause harm or material discomfort to any person;

« **conséquence préjudiciable** » *L'une ou plusieurs des conséquences suivantes* :

a) la dégradation de la qualité de l'environnement naturel relativement à tout usage qui peut en être fait;

b) le tort ou les dommages causés à des biens, des végétaux ou des animaux;

c) la nuisance ou les malaises sensibles causés à quiconque;

d) l'altération de la santé de quiconque;

e) l'atteinte à la sécurité de quiconque;

f) le fait de rendre des biens, des végétaux ou des animaux impropres à l'usage des êtres humains;

g) la perte de jouissance de l'usage normal d'un bien;

h) le fait d'entraver la marche normale des affaires.

[26] Il existe déjà un certain nombre de décisions de notre Cour et de la Cour d'appel de l'Ontario susceptibles de guider notre interprétation. Ainsi, dans l'arrêt *Canadien Pacifique*, notre Cour a examiné une version antérieure de la *LPE*, qui ne comportait pas expressément l'expression « conséquence préjudiciable ». Le pourvoi portait principalement sur l'ancien par. 13(1) de la *LPE*, L.R.O. 1980, ch. 141, qui était rédigé en ces termes :

[TRADUCTION]

13.—(1) Malgré toute autre disposition de la présente loi et des règlements, nul ne doit déposer, ajouter, émettre ou rejeter un contaminant, ou causer ou permettre le dépôt, l'ajout, l'émission ou le rejet dans l'environnement naturel d'un contaminant qui

(*a*) cause ou risque de causer la dégradation de la qualité de l'environnement naturel relativement à tout usage qui peut en être fait;

(*b*) cause ou risque de causer du tort ou des dommages à des biens, des végétaux ou des animaux;

(*c*) cause ou risque de causer de la nuisance ou des malaises sensibles à quiconque;

(*d*) adversely affects or is likely to adversely affect the health of any person;

(*e*) impairs or is likely to impair the safety of any person;

(*f*) renders or is likely to render any property or plant or animal life unfit for use by man;

(*g*) causes or is likely to cause loss of enjoyment of normal use of property; or

(*h*) interferes or is likely to interfere with the normal conduct of business.

[27] The first part of s. 13(1) is now s. 14(1).[1] Paragraphs (*a*) to (*h*) now form part of the definition of "adverse effect" found in s. 1(1) of the *EPA*.

[28] The issue in *Canadian Pacific* was whether the words "for any use that can be made of it" in para. (*a*) of s. 13(1) were unconstitutionally vague or overbroad. Although the Court's reasoning was focused on the constitutional issues raised in that case, the Court made several statements about the interpretation of s. 13(1)(*a*) of the *EPA* which are helpful in resolving the interpretive issue in this appeal. Notably, in finding that the provision was neither vague nor overbroad, Gonthier J., writing for the majority, held that the application of s. 13(1)(*a*) was confined to the discharge of contaminants that cause, or are likely to cause, *non-trivial* impairment of the quality of the natural environment for any use that could be made of it.

[29] Lamer C.J., in concurring reasons which were not endorsed by the majority, was of the view

1 Section 14(1) of the *EPA* states:

14. (1) Subject to subsection (2) but despite any other provision of this Act or the regulations, a person shall not discharge a contaminant or cause or permit the discharge of a contaminant into the natural environment, if the discharge causes or may cause an adverse effect.

(*d*) cause ou risque de causer l'altération de la santé de quiconque;

(*e*) cause ou risque de causer l'atteinte à la sécurité de quiconque;

(*f*) rend ou risque de rendre des biens, des végétaux ou des animaux impropres à l'usage des êtres humains;

(*g*) cause ou risque de causer la perte de jouissance de l'usage normal d'un bien;

(*h*) entrave ou risque d'entraver la marche normale des affaires.

[27] La première partie du par. 13(1) constitue maintenant le par. 14(1)[1]. Quant aux al. (*a*) à (*h*), ils sont maintenant intégrés à la définition de « conséquence préjudiciable » figurant au par. 1(1) de la *LPE*.

[28] La question qui se posait dans l'arrêt *Canadien Pacifique* était de savoir si les mots « relativement à tout usage qui peut en être fait » utilisés à l'al. 13(1)(*a*) étaient imprécis ou de portée excessive sur le plan constitutionnel. Bien que, dans son raisonnement, la Cour se soit attachée aux questions constitutionnelles que soulevait cette affaire, elle a tout de même formulé plusieurs observations concernant l'interprétation de l'al. 13(1)(*a*) de la *LPE* qui sont utiles pour résoudre les questions d'interprétation du présent pourvoi. En particulier, en décidant que cette disposition n'était ni imprécise ni de portée excessive, le juge Gonthier, qui a rédigé les motifs de la majorité, a conclu que l'application de l'al. 13(1)(*a*) ne visait que le rejet de contaminants causant ou risquant de causer une dégradation *non négligeable* de la qualité de l'environnement naturel relativement à tout usage qui peut en être fait.

[29] Dans des motifs concordants auxquels n'a toutefois pas souscrit la majorité, le juge en chef

1 Le paragraphe 14(1) de la *LPE* est libellé comme suit :

14. (1) Sous réserve du paragraphe (2), mais malgré toute autre disposition de la présente loi ou des règlements, nul ne doit rejeter un contaminant dans l'environnement naturel ou permettre ou faire en sorte que cela se fasse si le rejet cause ou peut causer une conséquence préjudiciable.

that para. (*a*) should be interpreted as an umbrella clause so that harm to the quality of the natural environment was independently required before the rest of the provisions in paras. (*b*) to (*h*) of s. 13(1) were engaged.

[30] Castonguay advocates that we adopt the minority approach of Lamer C.J. in *Canadian Pacific*. This, with respect, is an argument that cannot survive the amended language in the *EPA* after *Canadian Pacific* was decided. The most significant change to the *EPA* was the creation of a separate statutory definition of "adverse effect". The definition included the words "*means one or more of*" the eight components set out in paras. (a) through (h). None of these components is said to be an overriding requirement, and each is stated to be an adverse effect. As a result, all eight branches of "adverse effect" provide independent triggers for liability. Castonguay's interpretation reads out these crucial legislative directives that *each* effect is deemed to be adverse.

[31] To interpret "adverse effect" restrictively not only reads out the plain and obvious meaning of the definition, it narrows the scope of the reporting requirement, thereby restricting its remedial capacity and the Ministry's ability to fulfill its statutory mandate.

[32] *Canadian Pacific* was interpreted and applied by the Ontario Court of Appeal in *Dow Chemical*. In that case, Dow Chemical, like Castonguay, argued that, in order to establish an adverse effect under the *EPA*, "impairment of the quality of the natural environment" under para. (a) *must* be made out *in addition* to any of the other effects set out

Lamer a conclu que l'al. (*a*) devait être considéré comme une exigence applicable dans tous les cas, de telle sorte qu'il fallait d'abord conclure, de façon indépendante, à l'existence d'un préjudice causé à la qualité de l'environnement naturel avant de pouvoir prendre en compte les autres dispositions, soit les al. (*b*) à (*h*) du par. 13(1).

[30] Pour sa part, Castonguay nous demande de retenir la démarche de la minorité qu'a formulée le juge en chef Lamer dans *Canadien Pacifique*. Avec égards, cet argument ne saurait être adopté compte tenu des modifications apportées au libellé de la *LPE* postérieurement à l'arrêt *Canadien Pacifique*. La modification la plus importante au texte de la *LPE* fut la création d'une définition législative particulière du terme « conséquence préjudiciable ». Cette définition comportait les mots « *[l]'une ou plusieurs des* » avant l'énumération des huit situations décrites aux al. a) à h). Rien ne précise que l'une d'elles représente une exigence impérative, et chacune est présentée comme étant une conséquence préjudiciable. Par conséquent, chacune des huit formes de la notion de « conséquence préjudiciable » constitue une source autonome de responsabilité. L'interprétation préconisée par Castonguay fait abstraction de ces directives cruciales du législateur selon lesquelles *chaque* conséquence est réputée préjudiciable.

[31] Le fait d'interpréter restrictivement l'expression « conséquence préjudiciable » a non seulement pour effet d'écarter le sens évident et manifeste de la définition, mais également de restreindre la portée de l'obligation de signalement, limitant en conséquence la capacité réparatrice de cette obligation ainsi que la capacité du ministère de s'acquitter du mandat que lui confie la loi.

[32] Dans *Dow Chemical*, la Cour d'appel de l'Ontario a interprété et appliqué l'arrêt *Canadien Pacifique*. À l'instar de Castonguay, Dow Chemical prétendait que, pour démontrer l'existence d'une conséquence préjudiciable sous le régime de la *LPE*, il était *nécessaire* d'établir « la dégradation de la qualité de l'environnement naturel » prévue à

in paras. (b) through (h). MacPherson J.A. rejected this approach, concluding instead that

> [paragraph] (*a*) is just one of eight defined adverse effects. It relates to the natural environment, which is defined in the Act as "the air, land and water" (s. 1(1)). The other seven [paragraphs] set out other forms of adverse effect. Some relate to plants and animals ([paras.] (*b*) and (*f*)); some relate to people ([paras.] (*c*), (*d*) and (*f*)) and their property ([para.] (*g*)) and business ([para.] (*h*)). [para. 29]

[33] Applying Gonthier J.'s language in *Canadian Pacific*, MacPherson J.A. accepted that each of the eight enumerated adverse effects must be more than trivial but that any of them was sufficient to satisfy the definition (para. 30).

[34] The effects set out in paras. (a) to (h) are designed to capture a broad range of impacts. Some are limited to impacts on animals, people or property and do not require any impairment of the air, land or water in Ontario. Since the *EPA* protects the natural environment *and those who use it*, this is consistent with the broader protections the *EPA* was intended to provide. Paragraphs (a) through (h) also reflect a statutory recognition that protecting the natural environment requires, among other strategies, maximizing the circumstances in which the Ministry of the Environment may investigate and remedy environmental harms, including those identified in paras. (a) to (h).

[35] Moreover, it is important to note that the words "adverse effect" appear in many provisions of the *EPA*. Sections 6, 14, 18, 91.1, 93, 94, 97, 132, 156, 157.1, and 188.1 deal with a range of environmental concerns such as when an order to take preventative measures may be issued or the development of spill prevention and contingency plans. Restricting the definitional scope of "adverse effect" would therefore also limit the scope of the *EPA*'s protective and preventative capacities and,

l'al. a), *en plus* de l'une ou l'autre des conséquences énoncées aux al. b) à h). Le juge MacPherson a rejeté cette thèse, concluant plutôt ainsi :

> [TRADUCTION] L'alinéa (*a*) ne constitue que l'une des huit conséquences préjudiciables définies. Il porte sur l'environnement naturel, qui est défini dans la Loi comme étant « [l']air, [le] terrain et [l']eau » (par. 1(1)). Les sept autres alinéas précisent d'autres formes de conséquences préjudiciables. Certaines ont trait aux végétaux et aux animaux (al. (*b*) et (*f*)), alors que d'autres concernent les personnes (al. (*c*), (*d*) et (*f*)), leurs biens (al. (*g*)) et leurs affaires (al. (*h*)). [par. 29]

[33] Appliquant les propos du juge Gonthier dans l'arrêt *Canadien Pacifique*, le juge MacPherson a reconnu que chacune des huit conséquences préjudiciables devait être plus que négligeable, mais par ailleurs que l'existence de n'importe laquelle de ces conséquences suffisait pour satisfaire à la définition (par. 30).

[34] Les conséquences énoncées aux al. a) à h) visent à couvrir un large éventail de répercussions. Certaines se limitent aux répercussions sur les animaux, les personnes ou les biens et ne requièrent pas de dégradation de l'air, du terrain ou de l'eau en Ontario. Comme la *LPE* protège l'environnement naturel *et quiconque en fait usage*, tout cela est compatible avec les mesures de protection plus étendues qu'elle a pour but d'offrir. Les alinéas a) à h) montrent également que la loi reconnaît que la protection de l'environnement naturel exige, entre autres stratégies, de maximiser l'éventail des circonstances dans lesquelles le ministère de l'Environnement peut enquêter sur les nuisances environnementales et y remédier, notamment celles précisées aux al. a) à h).

[35] Qui plus est, il importe de signaler que l'expression « conséquence préjudiciable » figure dans un grand nombre de dispositions de la *LPE*. Ainsi, les art. 6, 14, 18, 91.1, 93, 94, 97, 132, 156, 157.1 et 188.1 traitent d'une gamme de préoccupations environnementales, par exemple les circonstances dans lesquelles peut être pris un arrêté ordonnant la mise en place de mesures préventives, ou encore l'élaboration de plans de prévention et de plans d'urgence en matière de

consequently, the Ministry's ability to respond to the broad purposes of the statute.

[36] In summary, the requirement to report "forthwith" in s. 15(1) of the *EPA* is engaged where the following elements are established:

i. a "contaminant" is discharged;

ii. the contaminant is discharged into the natural environment (the air, land and water or any combination or part thereof, of the Province of Ontario);

iii. the discharge is out of the normal course of events;

iv. the discharge causes, *or is likely to cause*, an adverse effect, namely one or more of the effects listed in paras. (a) to (h) of the definition;

v. the adverse effect or effects are not trivial or minimal; and

vi. the person is not otherwise required to notify the Ministry under s. 92, which addresses the spill of pollutants.

[37] Applying these elements to this case, s. 15(1) was clearly engaged. Castonguay "discharged" fly-rock, large pieces of rock created by the force of a blast, into the "natural environment". There is also no doubt that fly-rock meets the definition of "contaminant". The discharge in this case was "out of the normal course of events" — it was an accidental consequence of Castonguay's blasting operation. Had the blast been conducted routinely, the fly-rock would not have been thrust into the air.

déversements. Limiter la portée de la définition de « conséquence préjudiciable » aurait donc aussi pour effet de restreindre la portée des moyens dont la *LPE* permet la mise en œuvre en matière de prévention et de protection et, par conséquent, la capacité du ministère de réaliser les objectifs généraux de la loi.

[36] En résumé, l'obligation de donner « sans délai » l'avis prescrit par le par. 15(1) de la *LPE* entre en jeu lorsque les éléments suivants sont établis :

i. un « contaminant » est rejeté;

ii. le contaminant est rejeté dans l'environnement naturel (l'air, le terrain et l'eau, ou toute combinaison ou partie de ces éléments qui sont compris dans la province de l'Ontario);

iii. le rejet est accompli en dehors du cours normal des événements;

iv. le rejet cause *ou causera vraisemblablement* une conséquence préjudiciable, à savoir une ou plusieurs des conséquences énoncées aux al. a) à h) de la définition;

v. la ou les conséquences préjudiciables ne sont ni négligeables ni minimes;

vi. la personne concernée n'est pas tenue par ailleurs d'aviser le ministère conformément à l'art. 92, lequel vise le déversement de polluants.

[37] Il ressort de l'application de ces éléments à la présente affaire que le par. 15(1) entrait manifestement en jeu en l'espèce. Castonguay « a rejeté » dans « l'environnement naturel » des éclats de roc, soit de gros morceaux de roc créés par la force d'une explosion. Il ne fait aucun doute que ces éclats de roc sont visés par la définition de « contaminant ». En l'espèce, le rejet a été accompli « en dehors du cours normal des événements » — il s'agissait d'une conséquence accidentelle des activités de dynamitage menées par Castonguay. Si le dynamitage s'était déroulé de façon routinière, les éclats de roc n'auraient pas été projetés dans l'air.

[38] Finally, the discharge of fly-rock caused an "adverse effect" under paras. (b) and (g) of the definition, namely, it caused injury or damage to property and loss of enjoyment of the normal use of the property. Because the reporting requirement is also engaged when the discharge is "likely to cause an adverse effect", para. (e) is also applicable since the potential existed for "impairment of the safety of any person".

[39] The adverse effects were not trivial. The force of the blast, and the rocks it produced, were so powerful they caused extensive and significant property damage, penetrating the roof of a residence and landing in the kitchen. A vehicle was also seriously damaged. The fly-rock could easily have seriously injured or killed someone.

[40] Accordingly, s. 15(1) of the *EPA* applied and Castonguay was required to report the discharge of fly-rock forthwith to the Ministry of the Environment.

[41] I would therefore dismiss the appeal. In accordance with the Minister of the Environment's request, there will be no order as to costs.

Appeal dismissed.

Solicitors for the appellant: Miller Thomson, Markham; Supreme Advocacy, Ottawa.

Solicitor for the respondent: Attorney General of Ontario, Toronto.

Solicitor for the interveners: Canadian Environmental Law Association, Toronto.

[38] Enfin, le rejet d'éclats de roc a causé une « conséquence préjudiciable » au sens des al. b) et g) de la définition, c'est-à-dire qu'il a causé un tort ou des dommages à des biens et la perte de jouissance de l'usage normal de ces biens. Comme l'obligation de signalement entre également en jeu lorsque le rejet « causera vraisemblablement une conséquence préjudiciable », l'al. e) est lui aussi applicable, puisqu'il existait une possibilité d'« atteinte à la sécurité de quiconque ».

[39] Les conséquences préjudiciables n'étaient pas négligeables. La force de l'explosion et les éclats de roc qu'elle a produits étaient si puissants que d'importants dommages aux biens ont été causés, les éclats ayant en effet traversé le toit d'une résidence et fini leur course dans la cuisine. Un véhicule en outre a été gravement endommagé. Les éclats de roc auraient pu facilement blesser sérieusement une personne ou la tuer.

[40] En conséquence, le par. 15(1) de la *LPE* s'appliquait et Castonguay était tenue de signaler sans délai au ministère de l'Environnement le rejet des éclats de roc.

[41] Je suis donc d'avis de rejeter le pourvoi. Conformément à la demande du ministre de l'Environnement, aucune ordonnance n'est rendue concernant les dépens.

Pourvoi rejeté.

[*] Ce jugement a été modifié le 30 octobre 2017, par adjonction des notes en bas de page qui figurent maintenant aux par. 31 et 47 des versions anglaise et française des motifs.

Crown can rely on Board's process to fulfill its duty — Role of Board in considering Crown consultation before approval of project — Whether consultation was adequate in this case — Canada Oil and Gas Operations Act, R.S.C. 1985, c. O-7, s. 5(1)(b).

The National Energy Board (NEB), a federal administrative tribunal and regulatory agency, is the final decision maker for issuing authorizations for activities such as exploration and drilling for the production of oil and gas in certain designated areas. The proponents applied to the NEB to conduct offshore seismic testing for oil and gas in Nunavut. The proposed testing could negatively affect the treaty rights of the Inuit of Clyde River, who opposed the seismic testing, alleging that the duty to consult had not been fulfilled in relation to it. The NEB granted the requested authorization. It concluded that the proponents made sufficient efforts to consult with Aboriginal groups and that Aboriginal groups had an adequate opportunity to participate in the NEB's process. The NEB also concluded that the testing was unlikely to cause significant adverse environmental effects. Clyde River applied for judicial review of the NEB's decision. The Federal Court of Appeal found that while the duty to consult had been triggered, the Crown was entitled to rely on the NEB to undertake such consultation, and the Crown's duty to consult had been satisfied in this case by the NEB's process.

Held: The appeal should be allowed and the NEB's authorization quashed.

The NEB's approval process, in this case, triggered the duty to consult. Crown conduct which would trigger the duty to consult is not restricted to the exercise by or on behalf of the Crown of statutory powers or of the royal prerogative, nor is it limited to decisions that have an immediate impact on lands and resources. The NEB is not, strictly speaking, "the Crown" or an agent of the Crown. However, it acts on behalf of the Crown when making a final decision on a project application. In this context, the NEB is the vehicle through which the Crown acts. It therefore does not matter whether the final decision maker is Cabinet or the NEB. In either case, the decision constitutes Crown action that may trigger the duty to consult.

Projet autorisé par l'Office national de l'énergie — Le processus d'approbation de l'Office a-t-il donné naissance à l'obligation de consulter de la Couronne? — La Couronne peut-elle s'en remettre au processus de l'Office pour satisfaire à son obligation? — Rôle de l'Office dans l'appréciation de la consultation incombant à la Couronne avant l'approbation d'un projet — La consultation a-t-elle été adéquate en l'espèce? — Loi sur les opérations pétrolières au Canada, L.R.C. 1985, c. O-7, art. 5(1)b).

L'Office national de l'énergie (ONÉ), tribunal administratif fédéral et organisme de réglementation, prend en dernier ressort la décision d'autoriser ou non des activités telles la recherche et l'exploitation des ressources pétrolières et gazières dans certains endroits désignés. Les promoteurs ont demandé à l'ONÉ l'autorisation de mener des essais sismiques extracôtiers liés aux ressources pétrolières et gazières au Nunavut. Les essais proposés pourraient avoir des incidences négatives sur les droits issus de traités des Inuits de Clyde River, qui se sont opposés aux essais sismiques, affirmant qu'il n'avait pas été satisfait à l'obligation de consultation en ce qui a trait à ces essais. L'ONÉ a accordé l'autorisation demandée. Il a conclu que les promoteurs avaient déployé suffisamment d'efforts pour consulter les groupes autochtones et que ces groupes avaient eu une possibilité adéquate de participer au processus d'évaluation environnementale de l'ONÉ. L'ONÉ a également conclu que les essais n'étaient pas susceptibles de causer des effets environnementaux négatifs et importants. Clyde River a demandé le contrôle judiciaire de la décision de l'ONÉ. La Cour d'appel fédérale a jugé que l'obligation de consulter avait pris naissance, mais que la Couronne pouvait s'en remettre à l'ONÉ pour que celui-ci procède à la consultation, et que le processus de l'ONÉ avait permis de satisfaire à l'obligation de consulter de la Couronne en l'espèce.

Arrêt : Le pourvoi est accueilli et l'autorisation de l'ONÉ est annulée.

Dans la présente affaire, le processus d'approbation de l'ONÉ a donné naissance à l'obligation de consulter. Les mesures de la Couronne susceptibles de donner naissance à l'obligation de consulter ne se limitent pas à l'exercice, par la Couronne ou en son nom, de la prérogative royale ou de pouvoirs conférés par la loi, et ne se limitent pas non plus aux décisions qui ont une incidence immédiate sur les terres et les ressources. L'ONÉ n'est pas, à proprement parler, « la Couronne » ou un mandataire de la Couronne. Cependant, il agit pour le compte de la Couronne lorsqu'il prend une décision définitive à l'égard d'une demande de projet. Dans ce contexte, l'ONÉ est le moyen par lequel la Couronne agit. Par conséquent, il importe

The substance of the duty does not change when a regulatory agency holds final decision-making authority.

It is open to legislatures to empower regulatory bodies to play a role in fulfilling the Crown's duty to consult. While the Crown always holds ultimate responsibility for ensuring consultation is adequate, it may rely on steps undertaken by a regulatory agency to fulfill its duty to consult. Where the regulatory process being relied upon does not achieve adequate consultation or accommodation, the Crown must take further measures. Also, where the Crown relies on the processes of a regulatory body to fulfill its duty in whole or in part, it should be made clear to affected Indigenous groups that the Crown is so relying. The NEB has the procedural powers necessary to implement consultation, and the remedial powers to, where necessary, accommodate affected Aboriginal claims, or Aboriginal and treaty rights. Its process can therefore be relied on by the Crown to completely or partially fulfill the Crown's duty to consult.

The NEB has broad powers to hear and determine all relevant matters of fact and law, and its decisions must conform to s. 35(1) the *Constitution Act, 1982*. It follows that the NEB can determine whether the Crown's duty has been fulfilled. The public interest and the duty to consult do not operate in conflict here. The duty to consult, being a constitutional imperative, gives rise to a special public interest that supersedes other concerns typically considered by tribunals tasked with assessing the public interest. A project authorization that breaches the constitutionally protected rights of Indigenous peoples cannot serve the public interest. When affected Indigenous groups have squarely raised concerns about Crown consultation with the NEB, the NEB must usually address those concerns in reasons. The degree of consideration that is appropriate will depend on the circumstances of each case. Above all, any decision affecting Aboriginal or treaty rights made on the basis of inadequate consultation will not be in compliance with the duty to consult. Where the Crown's duty to consult remains unfulfilled, the NEB must withhold project

peu que le décideur ultime soit le Cabinet ou l'ONÉ. Dans les deux cas, la décision constitue une mesure de la Couronne qui peut donner naissance à l'obligation de consulter. La substance de cette obligation ne change pas lorsqu'un organisme de réglementation détient le pouvoir de prendre la décision définitive.

Il est loisible aux législateurs d'habiliter des organismes de réglementation à contribuer à la réalisation de l'obligation de consulter de la Couronne. Bien que ce soit toujours à la Couronne qu'incombe la responsabilité ultime de veiller au caractère adéquat de la consultation, elle peut s'en remettre aux mesures prises par un organisme de réglementation pour satisfaire à son obligation de consulter. Lorsque le processus réglementaire auquel s'en remet la Couronne ne lui permet pas de satisfaire adéquatement à son obligation de consulter ou d'accommoder, elle doit prendre des mesures supplémentaires pour ce faire. De plus, lorsque la Couronne s'en remet aux processus d'un organisme de réglementation pour satisfaire en tout ou en partie à son obligation, il doit être clairement indiqué aux groupes autochtones touchés que la Couronne s'en remet à un tel processus. L'ONÉ dispose des pouvoirs procéduraux nécessaires pour mener des consultations, ainsi que des pouvoirs de réparation lui permettant de prendre, au besoin, des mesures d'accommodement à l'égard des revendications autochtones ou des droits ancestraux ou issus de traités touchés. La Couronne peut donc s'en remettre au processus de l'ONÉ pour satisfaire, en tout ou en partie, à l'obligation de consulter qui lui incombe.

L'ONÉ dispose de vastes pouvoirs l'autorisant à entendre et à trancher toute question pertinente de droit et de fait, et ses décisions doivent respecter le par. 35(1) de la *Loi constitutionnelle de 1982*. Par conséquent, l'ONÉ peut décider s'il a été satisfait à l'obligation de consulter de la Couronne. L'intérêt public et l'obligation de consulter ne sont pas incompatibles en l'espèce. En tant qu'impératif constitutionnel, l'obligation de consulter fait naître un intérêt public spécial, qui l'emporte sur les autres préoccupations dont tiennent habituellement compte les tribunaux administratifs appelés à évaluer l'intérêt public. Lorsque l'autorisation accordée à l'égard d'un projet viole les droits constitutionnels des peuples autochtones, cette autorisation ne saurait servir l'intérêt public. Lorsque les groupes autochtones touchés soulèvent directement auprès de l'ONÉ des préoccupations concernant la consultation qui a été menée par la Couronne, l'ONÉ doit habituellement traiter de ces préoccupations dans des motifs. L'étendue de l'analyse qui conviendra variera selon les circonstances propres à chaque cas. Par-dessus tout, toute décision touchant des droits ancestraux ou issus

approval. Where the NEB fails to do so, its approval decision should be quashed on judicial review.

While the Crown may rely on the NEB's process to fulfill its duty to consult, the consultation and accommodation efforts in this case were inadequate and fell short in several respects. First, the inquiry was misdirected. The consultative inquiry is not properly into environmental effects *per se*. Rather, it inquires into the impact on the right itself. No consideration was given in the NEB's environmental assessment to the source of the Inuit's treaty rights, nor to the impact of the proposed testing on those rights. Second, although the Crown relies on the processes of the NEB as fulfilling its duty to consult, that was not made clear to the Inuit. Finally, and most importantly, the process provided by the NEB did not fulfill the Crown's duty to conduct the deep consultation that was required here. Limited opportunities for participation and consultation were made available. There were no oral hearings and there was no participant funding. While these procedural safeguards are not always necessary, their absence in this case significantly impaired the quality of consultation. As well, the proponents eventually responded to questions raised during the environmental assessment process in the form of a practically inaccessible document months after the questions were asked. There was no mutual understanding on the core issues — the potential impact on treaty rights, and possible accommodations. As well, the changes made to the project as a result of consultation were insignificant concessions in light of the potential impairment of the Inuit's treaty rights. Therefore, the Crown breached its duty to consult in respect of the proposed testing.

de traités prise sur la base d'une consultation inadéquate ne respectera pas l'obligation de consulter. Lorsque la Couronne n'a pas satisfait à son obligation de consulter, l'ONÉ doit refuser d'approuver le projet. S'il l'approuve, sa décision devrait être annulée à l'issue d'un contrôle judiciaire.

Bien que la Couronne puisse s'en remettre au processus mené par l'ONÉ pour satisfaire à son obligation de consulter, les efforts de consultation et d'accommodement déployés dans le présent cas ont été inadéquats et lacunaires à plusieurs égards. Premièrement, la consultation était mal orientée. Le processus consultatif ne vise pas vraiment les effets environnementaux en tant que tels, mais plutôt les effets sur le droit lui-même. Dans son évaluation environnementale, l'ONÉ n'a pas pris en considération la source des droits issus de traités des Inuits, ni l'incidence des essais proposés sur ces droits. Deuxièmement, il n'a pas été indiqué clairement aux Inuits que la Couronne s'en remettait aux processus de l'ONÉ pour satisfaire à son obligation de consulter. Enfin, élément le plus important, le processus de l'ONÉ n'a pas permis de satisfaire à l'obligation de la Couronne de mener la consultation approfondie qui était requise dans la présente affaire. Très peu de possibilités de participation et de consultation ont étés offertes. Il n'y a pas eu d'audiences en l'espèce ni d'aide financière à l'intention des participants. Bien que ces garanties procédurales ne soient pas toujours nécessaires, leur absence dans la présente instance a réduit de façon importante la qualité de la consultation. De plus, les promoteurs ont finalement répondu aux questions soulevées durant le processus d'évaluation environnementale, mais au moyen d'un document pratiquement inaccessible, et ce, des mois après que les questions aient été posées. Il n'existait aucune compréhension mutuelle sur les points fondamentaux — à savoir les effets potentiels sur les droits issus de traités et les possibles accommodements. En outre, les changements apportés au projet par suite de la consultation ne représentaient que des concessions négligeables au regard de l'atteinte potentielle aux droits issus de traités des Inuits. En conséquence, la Couronne a manqué à son obligation de consulter en ce qui concerne les essais proposés.

Jurisprudence

The judgment of the Court was delivered by

KARAKATSANIS AND BROWN JJ. —

I. Introduction

[1] This Court has on several occasions affirmed the role of the duty to consult in fostering reconciliation between Canada's Indigenous peoples and the Crown. In this appeal, and its companion *Chippewas of the Thames First Nation v. Enbridge Pipelines Inc.*, 2017 SCC 41, [2017] 1 S.C.R. 1099, we consider the Crown's duty to consult with Indigenous peoples before an independent regulatory agency authorizes a project which could impact upon their rights. The Court's jurisprudence shows that the substance of the duty does not change when a regulatory agency holds final decision-making authority in respect of a project. While the Crown always owes the duty to consult, regulatory processes can partially or completely fulfill this duty.

[2] The Hamlet of Clyde River lies on the northeast coast of Baffin Island, in Nunavut. The community is situated on a flood plain between Patricia Bay and the Arctic Cordillera. Most residents of Clyde River are Inuit, who rely on marine mammals for food and for their economic, cultural, and spiritual well-being. They have harvested marine mammals for generations. The bowhead whale, the narwhal, the ringed, bearded, and harp seals, and the polar bear are of particular importance to them. Under the *Nunavut Land Claims Agreement* (1993), the Inuit of Clyde River ceded all Aboriginal claims, rights, title, and interests in the Nunavut Settlement Area, including Clyde River, in exchange for defined treaty rights, including the right to harvest marine mammals.

Maxime Faille, *Jaimie Lickers* et *Guy Régimbald*, pour l'intervenant Chiefs of Ontario.

Version française du jugement de la Cour rendu par

LES JUGES KARAKATSANIS ET BROWN —

I. Introduction

[1] À plusieurs reprises, la Cour a confirmé la place que tient l'obligation de consultation de la Couronne lorsqu'il s'agit de favoriser la réconciliation entre les peuples autochtones du Canada et la Couronne. Dans le présent pourvoi, ainsi que dans le pourvoi connexe *Chippewas of the Thames First Nation c. Pipelines Enbridge inc.*, 2017 SCC 41, [2017] 1 R.C.S. 1099, nous examinons l'obligation de la Couronne de consulter les peuples autochtones avant qu'un organisme de réglementation indépendant n'autorise un projet susceptible d'avoir des incidences sur leurs droits. Selon la jurisprudence de notre Cour, la substance de cette obligation ne change pas lorsqu'un organisme de réglementation détient le pouvoir de prendre la décision définitive à l'égard d'un projet. Bien que la Couronne soit toujours tenue de consulter, elle peut satisfaire partiellement ou totalement à cette obligation dans le cadre du processus de réglementation.

[2] Le hameau de Clyde River est situé sur la côte nord-est de l'île de Baffin, au Nunavut. La communauté se trouve dans une plaine inondable entre la Baie Patricia et la cordillère arctique. La plupart des résidents sont des Inuits et ils comptent sur les mammifères marins pour se nourrir et assurer leur bien-être économique, culturel et spirituel. Ils récoltent les mammifères marins depuis des générations. Ils accordent une importance particulière à la baleine boréale, au narval, au phoque annelé, au phoque barbu, au phoque du Groenland et à l'ours polaire. Aux termes de l'*Accord sur les revendications territoriales du Nunavut* (1993), les Inuits de Clyde River ont cédé l'ensemble de leurs revendications, droits, titres et intérêts ancestraux dans la région du Nunavut, qui comprend Clyde River, contre des droits définis par traité, notamment le droit de récolter des mammifères marins.

[3] In 2011, the respondents TGS-NOPEC Geophysical Company ASA, Multi Klient Invest As and Petroleum Geo-Services Inc. (the proponents) applied to the National Energy Board (NEB) to conduct offshore seismic testing for oil and gas resources. It is undisputed that this testing could negatively affect the harvesting rights of the Inuit of Clyde River. After a period of consultation among the project proponents, the NEB, and affected Inuit communities, the NEB granted the requested authorization.

[4] While the Crown may rely on the NEB's process to fulfill its duty to consult, considering the importance of the established treaty rights at stake and the potential impact of the seismic testing on those rights, we agree with the appellants that the consultation and accommodation efforts in this case were inadequate. For the reasons set out below, we would therefore allow the appeal and quash the NEB's authorization.

II. Background

A. *Legislative Framework*

[5] The *Canada Oil and Gas Operations Act*, R.S.C. 1985, c. O-7 (*COGOA*), aims, in part, to promote responsible exploration for and exploitation of oil and gas resources (s. 2.1). It applies to exploration and drilling for the production, conservation, processing, and transportation of oil and gas in certain designated areas, including Nunavut (s. 3). Engaging in such activities is prohibited without an operating licence under s. 5(1)(a) or an authorization under s. 5(1)(b).

[6] The NEB is a federal administrative tribunal and regulatory agency established by the *National Energy Board Act*, R.S.C. 1985, c. N-7 (*NEB Act*). In this case, it is the final decision maker for issuing an authorization under s. 5(1)(b) of *COGOA*. The NEB has broad discretion to impose requirements for authorization under s. 5(4), and can ask parties to

[3] En 2011, les intimées TGS-NOPEC Geophysical Company ASA, Multi Klient Invest As et Petroleum Geo-Services Inc. (les promoteurs) ont demandé à l'Office national de l'énergie (ONÉ) l'autorisation de mener des essais sismiques extracôtiers liés aux ressources pétrolières et gazières. Nul ne conteste que ces essais pourraient avoir des incidences négatives sur les droits de récolte des Inuits de Clyde River. Après une période de consultation entre les promoteurs du projet, l'ONÉ et les communautés inuites touchées, l'ONÉ a accordé l'autorisation demandée.

[4] Bien que la Couronne puisse s'en remettre au processus mené par l'ONÉ pour satisfaire à son obligation de consulter, vu l'importance des droits issus de traités reconnus en jeu et l'incidence que les essais sismiques pourraient avoir sur ces droits, à l'instar des appelants nous estimons que les efforts de consultation et d'accommodement en l'espèce ont été inadéquats. Pour les motifs qui suivent, nous sommes donc d'avis d'accueillir le pourvoi et d'annuler l'autorisation de l'ONÉ.

II. Contexte

A. *Cadre législatif*

[5] La *Loi sur les opérations pétrolières au Canada*, L.R.C. 1985, c. O-7 (*LOPC*), vise en partie à promouvoir la recherche et l'exploitation responsables des ressources pétrolières et gazières (art. 2.1). Elle s'applique à la recherche, notamment par forage, à la production, à la rationalisation de l'exploitation, à la transformation et au transport du pétrole et du gaz dans certains endroits désignés, notamment au Nunavut (art. 3). Il est interdit de se livrer à de telles activités sans avoir obtenu le permis de travaux prévu à l'al. 5(1)a) ou l'autorisation prévue à l'al. 5(1)b).

[6] L'ONÉ est un tribunal administratif fédéral et un organisme de réglementation établi par la *Loi sur l'Office national de l'énergie*, L.R.C. 1985, c. N-7 (*Loi sur l'ONÉ*). En l'espèce, c'est lui qui prend en dernier ressort la décision d'accorder ou non l'autorisation prévue à l'al. 5(1)b) de la *LOPC*. L'ONÉ est investi d'un large pouvoir discrétionnaire

provide any information it deems necessary to comply with its statutory mandate (s. 5.31).

B. *The Seismic Testing Authorization*

[7] In May 2011, the proponents applied to the NEB for an authorization under s. 5(1)(b) of *COGOA* to conduct seismic testing in Baffin Bay and Davis Strait, adjacent to the area where the Inuit have treaty rights to harvest marine mammals. The proposed testing contemplated towing airguns by ship through a project area. These airguns produce underwater sound waves, which are intended to find and measure underwater geological resources such as petroleum. The testing was to run from July through November, for five successive years.

[8] The NEB launched an environmental assessment of the project.[1]

[9] Clyde River opposed the seismic testing, and filed a petition against it with the NEB in May 2011. In 2012, the proponents responded to requests for further information from the NEB. They held meetings in communities that would be affected by the testing, including Clyde River.

[10] In April and May 2013, the NEB held meetings in Pond Inlet, Clyde River, Qikiqtarjuaq, and Iqaluit to collect comments from the public on the project. Representatives of the proponents attended these meetings. Community members asked basic questions about the effects of the survey on marine mammals in the region, but the proponents were unable to answer many of them. For example, in

[1] This assessment was initially required under the *Canadian Environmental Assessment Act*, S.C. 1992, c. 37. Since its repeal and replacement by the *Canadian Environmental Assessment Act, 2012*, S.C. 2012, c. 19, s. 52, the NEB has continued to conduct environmental assessments in relation to proposed projects, taking the position that it is still empowered to do so under *COGOA*.

qui l'habilite à assortir de conditions, en vertu du par. 5(4), les autorisations qu'il délivre, et il peut demander aux parties tout renseignement qu'il juge nécessaire pour s'acquitter du mandat que lui confère la loi (art. 5.31).

B. *L'autorisation relative aux essais sismiques*

[7] En mai 2011, les promoteurs ont demandé à l'ONÉ, aux termes de l'al. 5(1)b) de la *LOPC*, l'autorisation d'effectuer des essais sismiques dans la baie de Baffin et le détroit de Davis, lieux adjacents à la région où les Inuits peuvent, conformément à des droits issus de traités, récolter des mammifères marins. Les essais proposés prévoyaient que des canons à air seraient remorqués par navire à travers une région visée par le projet. Ces canons produisent des ondes sonores sous-marines qui permettent de trouver et de mesurer les ressources géologiques sous-marines tel le pétrole. Les essais devaient avoir lieu de juillet à novembre, pendant cinq années consécutives.

[8] L'ONÉ a procédé à une évaluation environnementale du projet[1].

[9] Clyde River s'est opposé aux essais sismiques et a présenté à l'ONÉ une pétition à l'encontre de ces essais en mai 2011. En 2012, les promoteurs ont répondu à des demandes de renseignements supplémentaires de l'ONÉ. Ils ont tenu des assemblées dans des communautés qui seraient touchées par les essais, notamment à Clyde River.

[10] En avril et en mai 2013, l'ONÉ a tenu des assemblées dans les hameaux de Pond Inlet, Clyde River, Qikiqtarjuaq et Iqaluit afin de recueillir les commentaires des membres du public concernant le projet. Des représentants des promoteurs ont assisté à ces assemblées. Les membres des communautés ont posé des questions de base au sujet de l'effet des essais sur les mammifères marins de la région, mais

[1] Cette évaluation était initialement exigée par la *Loi canadienne sur l'évaluation environnementale*, L.C. 1992, c. 37. Depuis l'abrogation de cette loi et son remplacement par la *Loi canadienne sur l'évaluation environnementale (2012)*, L.C. 2012, c. 19, art. 52, l'ONÉ continue de mener des évaluations environnementales relativement aux projets proposés, considérant qu'il possède toujours le pouvoir de le faire en vertu de la *LOPC*.

Pond Inlet, a community member asked the proponents which marine mammals would be affected by the survey. The proponents answered: "That's a very difficult question to answer because we're not the core experts" (A.R., vol. III, at p. 541). Similarly, in Clyde River, a community member asked how the testing would affect marine mammals. The proponents answered:

> . . . a lot of work has been done with seismic surveys in other places and a lot of that information is used in doing the environmental assessment, the document that has been submitted by the companies to the National Energy Board for the approval process. It has a section on, you know, marine mammals and the effects on marine mammals.

(A.R., vol. III, at p. 651)

[11] These are but two examples of multiple instances of the proponents' failure to offer substantive answers to basic questions about the impacts of the proposed seismic testing. That failure led the NEB, in May 2013, to suspend its assessment. In August 2013, the proponents filed a 3,926-page document with the NEB, purporting to answer those questions. This document was posted on the NEB website and delivered to the hamlet offices. The vast majority of this document was not translated into Inuktitut. No further efforts were made to determine whether this document was accessible to the communities, and whether their questions were answered. After this document was filed, the NEB resumed its assessment.

[12] Throughout the environmental assessment process, Clyde River and various Inuit organizations filed letters of comment with the NEB, noting the inadequacy of consultation and expressing concerns about the testing.

les promoteurs n'ont pas été en mesure de répondre à bon nombre de celles-ci. Par exemple, à Pond Inlet, un membre de la communauté a demandé aux promoteurs quels mammifères marins seraient touchés par les essais. Ceux-ci ont donné la réponse suivante : [TRADUCTION] « Il est très difficile de répondre à cette question parce que nous ne sommes pas des experts à ce sujet » (d.a., vol. III, p. 541). De même, à Clyde River, un membre de la communauté voulait savoir quel serait l'effet des essais sur les mammifères marins. Les promoteurs ont répondu ce qui suit :

> [TRADUCTION] . . . il y a eu beaucoup de travaux en matière d'essais sismiques à d'autres endroits, et une grande partie de cette information est utilisée dans la réalisation de l'évaluation environnementale, le document qui a été soumis à l'Office national de l'énergie par les entreprises pour les besoins du processus d'approbation. Il comporte une section sur, vous savez, les mammifères marins et les effets sur ceux-ci.

(d.a., vol. III, p. 651)

[11] Ce ne sont là que deux exemples des nombreux cas où les promoteurs n'ont pas su donner de réponses concrètes à des questions de base au sujet des répercussions des essais sismiques proposés. C'est ce qui a amené l'ONÉ à suspendre son évaluation en mai 2013. En août 2013, les promoteurs ont déposé auprès de l'ONÉ un document de 3 926 pages censé répondre à ces questions. Ce document a été affiché sur le site Web de l'ONÉ et envoyé aux bureaux des hameaux. La majeure partie de ce document n'a pas été traduite en inuktitut. Aucun effort additionnel n'a été déployé pour vérifier si les communautés avaient accès à ce document, et si elles avaient obtenu des réponses à leurs questions. Après le dépôt du document, l'ONÉ a repris son évaluation.

[12] Tout au long du processus d'évaluation environnementale, Clyde River et diverses organisations inuites ont déposé auprès de l'ONÉ des lettres de commentaires dans lesquelles ils affirmaient que la consultation était inadéquate et ils exprimaient leurs inquiétudes au sujet des essais.

[13] In April 2014, organizations representing the appellants and Inuit in other communities wrote to the Minister of Aboriginal Affairs and Northern Development and to the NEB, stating their view that the duty to consult had not been fulfilled in relation to the testing. This could be remedied, they said, by completing a strategic environmental assessment[2] before authorizing any seismic testing. In May, the Nunavut Marine Council also wrote to the NEB, with a copy to the Minister, asking that any regulatory decisions affecting the Nunavut Settlement Area's marine environment be postponed until completion of the strategic environmental assessment. This assessment was necessary, in the Council's view, to understand the baseline conditions in the marine environment and to ensure that seismic tests are properly regulated.

[14] In June 2014, the Minister responded to both letters, "disagree[ing] with the view that seismic exploration of the region should be put on hold until the completion of a strategic environmental assessment" (A.R., vol. IV, at p. 967). A Geophysical Operations Authorization letter from the NEB soon followed, advising that the environmental assessment report was completed and that the authorization had been granted.

[15] In its environmental assessment report, the NEB discussed consultation with, and the participation of, Aboriginal groups in the NEB process. It concluded that the proponents "made sufficient efforts to consult with potentially-impacted Aboriginal groups and to address concerns raised" and that

[13] En avril 2014, des organisations représentant les appelants et des Inuits d'autres communautés ont écrit au ministre des Affaires autochtones et du Nord et à l'ONÉ, affirmant qu'à leur avis il n'avait pas été satisfait à l'obligation de consultation en ce qui a trait aux essais. Selon ces organisations, il était possible de remédier à cette situation en réalisant une évaluation environnementale stratégique[2] avant que des essais sismiques ne soient autorisés. En mai, le Conseil du milieu marin du Nunavut a lui aussi écrit à l'ONÉ, avec copie au ministre, et demandé que toute décision réglementaire touchant le milieu marin de la région du Nunavut soit reportée jusqu'à ce que l'évaluation environnementale stratégique soit terminée. De l'avis du Conseil, cette évaluation était nécessaire pour que l'on comprenne les conditions de référence du milieu marin et pour veiller à ce que les essais sismiques soient adéquatement réglementés.

[14] En juin 2014, le ministre a répondu à ces deux lettres, exprimant son [TRADUCTION] « désaccord avec l'idée de suspendre l'exploration sismique de la région jusqu'à ce que l'évaluation environnementale stratégique soit terminée » (d.a., vol. IV, p. 967). Peu de temps après, une lettre émanant de l'ONÉ qui accordait l'autorisation de mener des travaux géophysiques a suivi, indiquant que le rapport d'évaluation environnementale était terminé et que l'autorisation avait été accordée.

[15] Dans son rapport d'évaluation environnementale, l'ONÉ a traité de la consultation et de la participation des groupes autochtones dans le cadre de son processus. Il a conclu que les promoteurs [TRADUCTION] « ont déployé suffisamment d'efforts pour consulter les groupes autochtones susceptibles

[2] At the time, the Department of Aboriginal Affairs and Northern Development was preparing a strategic environmental assessment — specifically, the "Eastern Arctic Strategic Environmental Assessment" — for Baffin Bay and Davis Strait, meant to examine "all aspects of future oil and gas development." Once complete, it would "inform policy decisions around if, when, and where oil and gas companies may be invited to bid on parcels of land for exploration drilling rights in Baffin Bay/Davis Strait" (Letter to Cathy Towtongie et al. from the Honourable Bernard Valcourt, A.R., vol. IV, at pp. 966-67).

[2] À cette époque, le ministère des Affaires indiennes et du Nord canadien préparait une évaluation environnementale stratégique — plus précisément l'[TRADUCTION] « Évaluation environnementale stratégique dans l'Arctique de l'Est » — pour la baie de Baffin et le détroit de Davis, qui visait l'examen de « tous les aspects de l'exploitation pétrolière et gazière future ». Une fois terminée, cette évaluation « guiderait les décisions de politique générale concernant l'opportunité d'inviter les sociétés pétrolières et gazières à soumissionner à l'égard de parcelles de terre afin d'y obtenir des droits d'exploration par forage dans la baie de Baffin et le détroit de Davis, ainsi que le moment où cela pourrait se faire et les endroits qui seraient visés » (lettre de l'honorable Bernard Valcourt à Cathy Towtongie et autres, d.a., vol. IV, p. 966-967).

"Aboriginal groups had an adequate opportunity to participate in the NEB's [environmental assessment] process" (A.R., vol. I, at p. 24). It also determined that the testing could change the migration routes of marine mammals and increase their risk of mortality, thereby affecting traditional harvesting of marine mammals including bowhead whales and narwhals, which are both identified as being of "Special Concern" by the Committee on the Status of Endangered Wildlife in Canada (COSEWIC). The NEB concluded, however, that the testing was unlikely to cause significant adverse environmental effects given the mitigation measures that the proponents would implement.

C. *The Judicial Review Proceedings*

[16] Clyde River applied to the Federal Court of Appeal for judicial review of the NEB's decision to grant the authorization. Dawson J.A. (Nadon and Boivin JJ.A. concurring) found that the duty to consult had been triggered because the NEB could not grant the authorization without the minister's approval (or waiver of the requirement for approval) of a benefits plan for the project, pursuant to s. 5.2(2) of *COGOA* (2015 FCA 179, [2016] 3 F.C.R. 167). The Federal Court of Appeal characterized the degree of consultation owed in the circumstances as deep, as that concept was discussed in *Haida Nation v. British Columbia (Minister of Forests)*, 2004 SCC 73, [2004] 3 S.C.R. 511, at para. 44, and found that the Crown was entitled to rely on the NEB to undertake such consultation.

[17] The Court of Appeal also concluded that the Crown's duty to consult had been satisfied by the nature and scope of the NEB's processes. The conditions upon which the authorization had been granted showed that the interests of the Inuit had been sufficiently considered and that further consultation would be expected to occur were the proposed testing to be followed by further development

d'être touchés et pour répondre aux préoccupations qu'ils ont soulevées », et que « les groupes autochtones ont eu une possibilité adéquate de participer au processus d'évaluation environnementale de l'ONÉ » (d.a., vol. I, p. 24). L'ONÉ a également conclu que les essais pouvaient modifier les routes migratoires des mammifères marins et augmenter le risque de mortalité chez ces animaux, situation qui influerait sur la récolte traditionnelle des mammifères marins, notamment les baleines boréales et les narvals, deux espèces qualifiées d'« espèces préoccupantes » par le Comité sur la situation des espèces en péril au Canada (COSEPAC). L'ONÉ a toutefois conclu que les essais n'étaient pas susceptibles de causer des effets environnementaux négatifs et importants compte tenu des mesures d'atténuation que les promoteurs mettraient en œuvre.

C. *La demande de contrôle judiciaire*

[16] Clyde River a demandé à la Cour d'appel fédérale le contrôle judiciaire de la décision de l'ONÉ accordant l'autorisation. La juge Dawson (avec l'appui des juges Nadon et Boivin) a conclu que l'obligation de consulter avait pris naissance, parce que l'ONÉ ne pouvait pas accorder l'autorisation tant que le ministre n'aurait pas approuvé (ou renoncer à l'obligation d'approuver) un plan de retombées économiques relativement au projet, conformément au par. 5.2(2) de la *LOPC* (2015 CAF 179, [2016] 3 R.C.F. 167). La Cour d'appel fédérale a considéré que les circonstances requéraient une consultation approfondie, suivant le sens donné à cette notion dans l'arrêt *Nation haïda c. Colombie-Britannique (Ministre des Forêts)*, 2004 CSC 73, [2004] 3 R.C.S. 511, par. 44, et elle a jugé que la Couronne pouvait s'en remettre à l'ONÉ pour que celui-ci procède à la consultation.

[17] La Cour d'appel a également conclu que, du fait de la nature et de l'étendue des processus de l'ONÉ, il avait été satisfait à l'obligation de consulter incombant à la Couronne. Les conditions auxquelles l'ONÉ avait accordé son autorisation montraient qu'il avait suffisamment pris en compte les intérêts des Inuits et qu'il était permis de s'attendre à ce que de nouvelles consultations soient

activities. In the circumstances, a strategic environmental assessment report was not required.

III. Analysis

[18] The following issues arise in this appeal:

1. Can an NEB approval process trigger the duty to consult?

2. Can the Crown rely on the NEB's process to fulfill the duty to consult?

3. What is the NEB's role in considering Crown consultation before approval?

4. Was the consultation adequate in this case?

A. *The Duty to Consult — General Principles*

[19] The duty to consult seeks to protect Aboriginal and treaty rights while furthering reconciliation between Indigenous peoples and the Crown (*Rio Tinto Alcan Inc. v. Carrier Sekani Tribal Council*, 2010 SCC 43, [2010] 2 S.C.R. 650, at para. 34). It has both a constitutional and a legal dimension (*R. v. Kapp*, 2008 SCC 41, [2008] 2 S.C.R. 483, at para. 6; *Carrier Sekani*, at para. 34). Its constitutional dimension is grounded in the honour of the Crown (*Kapp*, at para. 6). This principle is in turn enshrined in s. 35(1) of the *Constitution Act, 1982*, which recognizes and affirms existing Aboriginal and treaty rights (*Taku River Tlingit First Nation v. British Columbia (Project Assessment Director)*, 2004 SCC 74, [2004] 3 S.C.R. 550, at para. 24). And, as a legal obligation, it is based in the Crown's assumption of sovereignty over lands and resources formerly held by Indigenous peoples (*Haida*, at para. 53).

menées si les essais proposés étaient suivis d'autres activités de mise en valeur. Dans les circonstances, un rapport d'évaluation environnementale stratégique n'était pas nécessaire.

III. Analyse

[18] Le présent pourvoi soulève les questions suivantes :

1. Un processus d'approbation de l'ONÉ peut-il donner naissance à l'obligation de consulter?

2. La Couronne peut-elle s'en remettre au processus de l'ONÉ pour satisfaire à l'obligation de consulter?

3. Quel est le rôle de l'ONÉ dans l'appréciation de la consultation incombant à la Couronne avant l'approbation d'un projet?

4. La consultation a-t-elle été adéquate en l'espèce?

A. *L'obligation de consulter — principes généraux*

[19] L'obligation de consulter vise la protection des droits ancestraux et issus de traités tout en favorisant la réconciliation entre les peuples autochtones et la Couronne (*Rio Tinto Alcan Inc. c. Conseil tribal Carrier Sekani*, 2010 CSC 43, [2010] 2 R.C.S. 650, par. 34). Elle revêt à la fois une dimension constitutionnelle et une dimension légale (*R. c. Kapp*, 2008 CSC 41, [2008] 2 R.C.S. 483, par. 6; *Carrier Sekani*, par. 34). Sa dimension constitutionnelle découle du principe de l'honneur de la Couronne (*Kapp*, par. 6). Ce principe est lui-même consacré au par. 35(1) de la *Loi constitutionnelle de 1982*, qui reconnaît et confirme les droits existants ancestraux et issus de traités (*Première nation Tlingit de Taku River c. Colombie-Britannique (Directeur d'évaluation de projet)*, 2004 CSC 74, [2004] 3 R.C.S. 550, par. 24). Et, en tant qu'obligation légale, elle découle de la proclamation de la souveraineté de la Couronne sur des terres et ressources autrefois détenues par les peuples autochtones (*Haïda*, par. 53).

[20] The content of the duty, once triggered, falls along a spectrum ranging from limited to deep consultation, depending upon the strength of the Aboriginal claim, and the seriousness of the potential impact on the right. Each case must be considered individually. Flexibility is required, as the depth of consultation required may change as the process advances and new information comes to light (*Haida*, at paras. 39 and 43-45).

[21] This Court has affirmed that it is open to legislatures to empower regulatory bodies to play a role in fulfilling the Crown's duty to consult (*Carrier Sekani*, at para. 56; *Haida*, at para. 51). The appellants argue that a regulatory process alone cannot fulfill the duty to consult because at least some direct engagement between "the Crown" and the affected Indigenous community is necessary.

[22] In our view, while the Crown may rely on steps undertaken by a regulatory agency to fulfill its duty to consult in whole or in part and, where appropriate, accommodate, the Crown always holds ultimate responsibility for ensuring consultation is adequate. Practically speaking, this does not mean that a minister of the Crown must give explicit consideration in every case to whether the duty to consult has been satisfied, or must directly participate in the process of consultation. Where the regulatory process being relied upon does not achieve adequate consultation or accommodation, the Crown must take further measures to meet its duty. This might entail filling any gaps on a case-by-case basis or more systemically through legislative or regulatory amendments (see e.g. *Ross River Dena Council v. Yukon*, 2012 YKCA 14, 358 D.L.R. (4th) 100). Or, it might require making submissions to the regulatory body, requesting reconsideration of a decision, or seeking a postponement in order to carry out further consultation in a separate process before the decision is rendered. And, if an affected Indigenous group is (like the Inuit of Nunavut) a party to a modern treaty and perceives the process to be deficient, it should, as it did here, request such direct Crown engagement in a timely manner (since parties to treaties

[20] Une fois que l'obligation a pris naissance, son contenu se situe sur un continuum qui va de la consultation limitée à la consultation approfondie, selon la solidité de la revendication autochtone et la gravité de l'impact potentiel sur le droit concerné. Il faut procéder au cas par cas et faire preuve de souplesse, car le caractère approfondi de la consultation nécessaire peut varier au fur et à mesure que se déroule le processus et que sont mis au jour de nouveaux renseignements (*Haïda*, par. 39 et 43-45).

[21] Notre Cour a affirmé qu'il est loisible aux législateurs d'habiliter des organismes de réglementation à contribuer à la réalisation de l'obligation de consulter de la Couronne (*Carrier Sekani*, par. 56; *Haïda*, par. 51). Les appelants plaident qu'un processus réglementaire ne peut à lui seul assurer le respect de l'obligation de consulter, parce qu'il faut au moins un certain dialogue direct entre « la Couronne » et la communauté autochtone touchée.

[22] À notre avis, bien que la Couronne puisse s'en remettre aux mesures prises par un organisme de réglementation pour satisfaire, en tout ou en partie, à son obligation de consulter et, lorsque cela se justifie, à son obligation d'accommoder, c'est toujours à elle qu'incombe la responsabilité ultime de veiller au caractère adéquat de la consultation. Sur le plan pratique, cela ne signifie pas qu'un ministre doive dans chaque cas se demander explicitement s'il a été satisfait à l'obligation de consulter, ou qu'il doive participer directement au processus de consultation. Lorsque le processus réglementaire auquel s'en remet la Couronne ne lui permet pas de satisfaire adéquatement à son obligation de consulter ou d'accommoder, elle doit prendre des mesures supplémentaires pour ce faire. Elle pourrait devoir combler les lacunes soit au cas par cas, soit de manière plus systématique au moyen de modifications législatives ou réglementaires (voir, par ex., *Ross River Dena Council c. Yukon*, 2012 YKCA 14, 358 D.L.R. (4th) 100). Elle pourrait également exiger la présentation d'observations à l'organisme de réglementation, demander le réexamen de la décision ou solliciter le report de l'audience afin de mener d'autres consultations dans le cadre d'un processus distinct avant que la décision ne soit rendue. Par ailleurs, si un groupe autochtone

are obliged to act diligently to advance their respective interests) (*Beckman v. Little Salmon/Carmacks First Nation*, 2010 SCC 53, [2010] 3 S.C.R. 103, at para. 12).

[23] Further, because the honour of the Crown requires a meaningful, good faith consultation process (*Haida*, at para. 41), where the Crown relies on the processes of a regulatory body to fulfill its duty in whole or in part, it should be made clear to affected Indigenous groups that the Crown is so relying. Guidance about the form of the consultation process should be provided so that Indigenous peoples know how consultation will be carried out to allow for their effective participation and, if necessary, to permit them to raise concerns with the proposed form of the consultations in a timely manner.

[24] Above all, and irrespective of the process by which consultation is undertaken, any decision affecting Aboriginal or treaty rights made on the basis of inadequate consultation will not be in compliance with the duty to consult, which is a constitutional imperative. Where challenged, it should be quashed on judicial review. That said, judicial review is no substitute for adequate consultation. True reconciliation is rarely, if ever, achieved in courtrooms. Judicial remedies may seek to undo past infringements of Aboriginal and treaty rights, but adequate Crown consultation *before* project approval is always preferable to after-the-fact judicial remonstration following an adversarial process. Consultation is, after all, "[c]oncerned with an ethic of ongoing relationships" (*Carrier Sekani*, at para. 38, quoting D. G. Newman, *The Duty to Consult: New Relationships with Aboriginal Peoples* (2009), at p. 21). As the Court noted in *Haida*, "[w]hile Aboriginal claims can be and are pursued through litigation, negotiation is a preferable way of reconciling state and Aboriginal

touché est (comme les Inuits du Nunavut) partie à un traité moderne et juge que le processus est déficient, il devrait, comme ce fut le cas en l'espèce, demander une intervention directe de la Couronne en temps opportun (puisque les parties aux traités sont tenues d'agir de façon diligente pour faire valoir leurs intérêts respectifs) (*Beckman c. Première nation de Little Salmon/Carmacks*, 2010 CSC 53, [2010] 3 R.C.S. 103, par. 12).

[23] De plus, étant donné que l'honneur de la Couronne commande que celle-ci agisse de bonne foi et tienne une véritable consultation (*Haïda*, par. 41), lorsque la Couronne s'en remet aux processus d'un organisme de réglementation pour satisfaire en tout ou en partie à son obligation, il doit être clairement indiqué aux groupes autochtones touchés que la Couronne s'en remet à un tel processus. Les peuples autochtones doivent être avisés de la forme que prendra le processus de consultation, afin de savoir comment les consultations se dérouleront, de pouvoir y participer activement et, au besoin, d'être en mesure de soulever en temps opportun leurs préoccupations au sujet de la forme des consultations proposées.

[24] Par-dessus tout, et peu importe le processus de consultation entrepris, toute décision touchant des droits ancestraux ou issus de traités prise sur la base d'une consultation inadéquate ne respectera pas l'obligation de consulter, laquelle est un impératif constitutionnel. En cas de contestation, la décision devrait être annulée à l'issue d'un contrôle judiciaire. Cela dit, le contrôle judiciaire ne saurait remplacer une consultation adéquate. On ne parvient que rarement, voire jamais, à une véritable réconciliation dans une salle d'audience. Un recours judiciaire peut tendre à corriger des atteintes passées à des droits ancestraux ou issus de traités, mais une consultation adéquate par la Couronne *avant* que le projet ne soit approuvé est toujours préférable à des remontrances judiciaires formulées après le fait, au terme d'une procédure contradictoire. Après tout, la consultation [TRADUCTION] « s'attache au maintien de relations constantes » (*Carrier Sekani*, par. 38, citant D. G. Newman, *The Duty to Consult : New Relationships with Aboriginal Peoples* (2009),

interests" (para. 14). No one benefits — not project proponents, not Indigenous peoples, and not non-Indigenous members of affected communities — when projects are prematurely approved only to be subjected to litigation.

B. *Can an NEB Approval Process Trigger the Duty to Consult?*

[25] The duty to consult is triggered when the Crown has actual or constructive knowledge of a potential Aboriginal claim or Aboriginal or treaty rights that might be adversely affected by Crown conduct (*Haida*, at para. 35; *Carrier Sekani*, at para. 31). Crown conduct which would trigger the duty is not restricted to the exercise by or on behalf of the Crown of statutory powers or of the royal prerogative, nor is it limited to decisions that have an immediate impact on lands and resources. The concern is for adverse impacts, however made, upon Aboriginal and treaty rights and, indeed, a goal of consultation is to identify, minimize and address adverse impacts where possible (*Carrier Sekani*, at paras. 45-46).

[26] In this appeal, all parties agreed that the Crown's duty to consult was triggered, although agreement on *just what* Crown conduct triggered the duty has proven elusive. The Federal Court of Appeal saw the trigger in *COGOA*'s requirement for ministerial approval (or waiver of the requirement for approval) of a benefits plan for the testing. In the companion appeal of *Chippewas of the Thames*, the majority of the Federal Court of Appeal concluded that it was not necessary to decide whether the duty to consult was triggered since the Crown was not a party before the NEB, but suggested the only Crown action involved might have been the 1959 enactment

p. 21). Comme notre Cour l'a souligné dans *Haïda*, « [m]ême si les revendications autochtones sont et peuvent être réglées dans le cadre de litiges, il est préférable de recourir à la négociation pour concilier les intérêts de la Couronne et ceux des Autochtones » (par. 14). Il n'est à l'avantage de personne — promoteurs du projet, peuples autochtones ou membres non autochtones des communautés touchées — qu'un projet soit approuvé prématurément mais fasse ensuite l'objet d'un litige.

B. *Un processus d'approbation de l'ONÉ peut-il donner naissance à l'obligation de consulter?*

[25] L'obligation de consulter prend naissance lorsque la Couronne a connaissance, concrètement ou par imputation, de l'existence potentielle d'une revendication autochtone ou de droits ancestraux ou issus de traités susceptibles de subir des effets préjudiciables en raison d'une mesure prise par la Couronne (*Haïda*, par. 35; *Carrier Sekani*, par. 31). Les mesures de la Couronne susceptibles de donner naissance à l'obligation de consulter ne se limitent pas à l'exercice, par la Couronne ou en son nom, de la prérogative royale ou de pouvoirs conférés par la loi, et ne se limitent pas non plus aux décisions qui ont une incidence immédiate sur les terres et les ressources. Il faut se demander si la mesure a des effets préjudiciables, quelle qu'en soit la cause, sur des droits ancestraux ou issus de traités. D'ailleurs, un des objectifs de la consultation consiste à cerner les effets préjudiciables, à les réduire au minimum et à y remédier si possible (*Carrier Sekani*, par. 45-46).

[26] Dans le présent pourvoi, toutes les parties ont reconnu que l'obligation de consulter de la Couronne avait pris naissance, mais elles ont été incapables de s'accorder sur la *nature exacte* de la mesure de la Couronne qui a donné naissance à cette obligation. La Cour d'appel fédérale a considéré que l'élément ayant fait naître l'obligation est l'exigence prévue par la *LOPC* qui requiert que le ministre approuve (ou renonce à l'obligation d'approuver) un plan de retombées économiques pour les essais. Dans l'affaire connexe *Chippewas of the Thames*, les juges majoritaires de la Cour d'appel fédérale ont conclu qu'il n'était pas nécessaire de

of the *NEB Act*[3] (*Chippewas of the Thames First Nation v. Enbridge Pipelines Inc.*, 2015 FCA 222, [2016] 3 F.C.R. 96). In short, the Federal Court of Appeal in both cases was of the view that only action by a minister of the Crown or a government department, or a Crown corporation, can constitute Crown conduct triggering the duty to consult. And, before this Court in *Chippewas of the Thames*, the Attorney General of Canada argued that the duty was triggered by the NEB's approval of the pipeline project, because it was state action with the potential to affect Aboriginal or treaty rights.

[27] Contrary to the Federal Court of Appeal's conclusions on this point, we agree that the NEB's approval process, in this case, as in *Chippewas of the Thames*, triggered the duty to consult.

[28] It bears reiterating that the duty to consult is owed by the Crown. In one sense, the "Crown" refers to the personification in Her Majesty of the Canadian state in exercising the prerogatives and privileges reserved to it. The Crown also, however, denotes the sovereign in the exercise of her formal legislative role (in assenting, refusing assent to, or reserving legislative or parliamentary bills), and as the head of executive authority (*McAteer v. Canada (Attorney General)*, 2014 ONCA 578, 121 O.R. (3d) 1, at para. 51; P. W. Hogg, P. J. Monahan and W. K. Wright, *Liability of the Crown* (4th ed. 2011), at pp. 11-12; but see *Carrier Sekani*, at para. 44). For this reason, the term "Crown" is commonly used to symbolize and denote executive power. This was described by Lord Simon of Glaisdale in *Town Investments Ltd. v. Department of the Environment*, [1978] A.C. 359 (H.L.), at p. 397:

[3] *National Energy Board Act*, S.C. 1959, c. 46.

décider si l'obligation de consulter s'appliquait, puisque la Couronne n'était pas partie à l'instance devant l'ONÉ, mais ils ont évoqué l'idée que la seule mesure de la Couronne en cause pourrait être l'adoption en 1959 de la *Loi sur l'ONÉ*[3] (*Première Nation des Chippewas de la Thames c. Pipelines Enbridge Inc.*, 2015 CAF 222, [2016] 3 R.C.F. 96). Bref, dans les deux affaires la Cour d'appel fédérale était d'avis que seule une mesure prise par un ministre ou un ministère du gouvernement, ou une société d'État, peut constituer une mesure de la Couronne donnant naissance à l'obligation de consulter. Et devant notre Cour, dans le pourvoi *Chippewas of the Thames*, la procureure générale du Canada a plaidé que c'est l'approbation du projet de pipeline par l'ONÉ qui a donné naissance à l'obligation, puisqu'il s'agissait d'une mesure de l'État susceptible d'avoir une incidence sur des droits ancestraux ou issus de traités.

[27] Contrairement aux conclusions de la Cour d'appel fédérale sur ce point, nous sommes d'avis qu'en l'espèce, tout comme dans *Chippewas of the Thames*, c'est le processus d'approbation de l'ONÉ qui a donné naissance à l'obligation de consulter.

[28] Il importe de répéter que l'obligation de consulter incombe à la Couronne. En un sens, la « Couronne » s'entend de la personnification de Sa Majesté de l'État canadien dans l'exercice des prérogatives et des privilèges qui lui sont réservés. Cependant, la Couronne désigne aussi la souveraine dans l'exercice de son rôle législatif officiel (lorsqu'elle sanctionne les projets de loi, qu'elle refuse de les sanctionner ou qu'elle réserve sa décision), et en tant que chef du pouvoir exécutif (*McAteer c. Canada (Attorney General)*, 2014 ONCA 578, 121 O.R. (3d) 1, par. 51; P. W. Hogg, P. J. Monahan et W. K. Wright, *Liability of the Crown* (4e éd. 2011), p. 11-12; mais voir *Carrier Sekani*, par. 44). Pour cette raison, le mot « Couronne » est couramment employé comme symbole du pouvoir exécutif et pour désigner ce pouvoir. C'est ce que lord Simon of Glaisdale a décrit dans *Town Investments Ltd. c. Department of the Environment*, [1978] A.C. 359 (H.L.), p. 397 :

[3] *Loi sur l'Office national de l'énergie*, S.C. 1959, c. 46.

The crown as an object is a piece of jewelled headgear under guard at the Tower of London. But it symbolises the powers of government which were formerly wielded by the wearer of the crown; so that by the 13th century crimes were committed not only against the king's peace but also against "his crown and dignity": *Pollock and Maitland, History of English Law*, 2nd ed. (1898), vol. I, p. 525. The term "the Crown" is therefore used in constitutional law to denote the collection of such of those powers as remain extant (the royal prerogative), together with such other powers as have been expressly conferred by statute on "the Crown."

[29] By this understanding, the NEB is not, strictly speaking, "the Crown". Nor is it, strictly speaking, an agent of the Crown, since — as the NEB operates independently of the Crown's ministers — no relationship of control exists between them (Hogg, Monahan and Wright, at p. 465). As a statutory body holding responsibility under s. 5(1)(b) of *COGOA*, however, the NEB acts on behalf of the Crown when making a final decision on a project application. Put plainly, once it is accepted that a regulatory agency exists to exercise executive power as authorized by legislatures, any distinction between its actions and Crown action quickly falls away. In this context, the NEB is the vehicle through which the Crown acts. Hence this Court's interchangeable references in *Carrier Sekani* to "government action" and "Crown conduct" (paras. 42-44). It therefore does not matter whether the final decision maker on a resource project is Cabinet or the NEB. In either case, the decision constitutes Crown action that may trigger the duty to consult. As Rennie J.A. said in dissent at the Federal Court of Appeal in *Chippewas of the Thames*, "[t]he duty, like the honour of the Crown, does not evaporate simply because a final decision has been made by a tribunal established by Parliament, as opposed to Cabinet" (para. 105). The action of the NEB, taken in furtherance of its statutory powers under s. 5(1)(b) of *COGOA* to make final

[TRADUCTION] La couronne, en tant qu'objet, est une coiffure ornée de bijoux conservée sous garde à la tour de Londres. Mais elle symbolise les pouvoirs du gouvernement qui étaient auparavant exercés par la personne portant la couronne; c'est ainsi qu'au 13e siècle, les crimes étaient commis non seulement contre la paix du roi, mais aussi contre « sa couronne et sa dignité » : *Pollock and Maitland, History of English Law*, 2e éd. (1898), vol. I, p. 525. Par conséquent, on utilise l'expression « la Couronne » en droit constitutionnel pour désigner l'ensemble des pouvoirs de cette nature qui subsistent (la prérogative royale), ainsi que les autres pouvoirs que la loi confère expressément à « la Couronne ».

[29] Selon cette interprétation, l'ONÉ n'est pas, à proprement parler, « la Couronne ». Il n'est pas non plus, à proprement parler, un mandataire de la Couronne, étant donné que — comme l'ONÉ exerce ses activités de manière indépendante des ministres de la Couronne — il n'existe entre eux aucun lien de dépendance (Hogg, Monahan et Wright, p. 465). Cependant, en tant qu'organisme créé par la loi à qui incombe la responsabilité visée à l'al. 5(1)b) de la *LOPC*, l'ONÉ agit pour le compte de la Couronne lorsqu'il prend une décision définitive à l'égard d'une demande de projet. En termes simples, dès lors que l'on accepte qu'un organisme de réglementation existe pour exercer le pouvoir de nature exécutive que le législateur concerné l'autorise à exercer, toute distinction entre les mesures de cet organisme et celles de la Couronne disparaît rapidement. Dans ce contexte, l'ONÉ est le moyen par lequel la Couronne agit, d'où l'emploi interchangeable dans *Carrier Sekani* des expressions « mesure gouvernementale » et « mesure [. . .] de la Couronne » (par. 42-44). Par conséquent, il importe peu que le décideur ultime dans un projet soit le Cabinet ou l'ONÉ. Dans les deux cas, la décision constitue une mesure de la Couronne qui peut donner naissance à l'obligation de consulter. Comme l'a affirmé en dissidence le juge Rennie de la Cour d'appel fédérale dans *Chippewas of the Thames*, « [l]'obligation,

decisions respecting such testing as was proposed here, clearly constitutes Crown action.

C. *Can the Crown Rely on the NEB's Process to Fulfill the Duty to Consult?*

[30] As we have said, while ultimate responsibility for ensuring the adequacy of consultation remains with the Crown, the Crown may rely on steps undertaken by a regulatory agency to fulfill the duty to consult. Whether, however, the Crown is capable of doing so, in whole or in part, depends on whether the agency's statutory duties and powers enable it to do what the duty requires in the particular circumstances (*Carrier Sekani*, at paras. 55 and 60). In the NEB's case, therefore, the question is whether the NEB is able, to the extent it is being relied on, to provide an appropriate level of consultation and, where necessary, accommodation to the Inuit of Clyde River in respect of the proposed testing.

[31] We note that the NEB and *COGOA* each predate judicial recognition of the duty to consult. However, given the flexible nature of the duty, a process that was originally designed for a different purpose may be relied on by the Crown so long as it affords an appropriate level of consultation to the affected Indigenous group (*Beckman*, at para. 39; *Taku River*, at para. 22). Under *COGOA*, the NEB has a significant array of powers that permit extensive consultation. It may conduct hearings, and has broad discretion to make orders or elicit information in furtherance of *COGOA* and the public interest (ss. 5.331, 5.31(1) and 5.32). It can also require

comme l'honneur de la Couronne, ne s'envole pas en fumée simplement parce qu'une décision sans appel a été rendue par un tribunal établi par le Parlement, plutôt que par le Cabinet » (par. 105). La mesure qu'a prise l'ONÉ dans l'exercice du pouvoir qu'il possède, en vertu de l'al. 5(1)b) de la *LOPC*, de prendre la décision ultime concernant des essais tels ceux proposés en l'espèce, constitue manifestement une mesure de la Couronne.

C. *La Couronne peut-elle s'en remettre au processus de l'ONÉ pour satisfaire à l'obligation de consulter?*

[30] Comme nous l'avons déjà dit, bien que la Couronne demeure ultimement responsable de veiller au caractère adéquat de la consultation, celle-ci peut s'en remettre aux mesures prises par un organisme de réglementation pour satisfaire à l'obligation de consulter. Cependant, la question de savoir si la Couronne est en mesure de le faire, en tout ou en partie, dépend de la réponse à la question de savoir si les attributions que la loi confère à l'organisme habilitent ce dernier à faire ce que l'obligation exige dans les circonstances particulières (*Carrier Sekani*, par. 55 et 60). En conséquence, dans le cas de l'ONÉ, la question consiste à décider si celui-ci peut, dans la mesure où la Couronne s'en remet à lui, assurer un niveau de consultation adéquat et, au besoin, accorder aux Inuits de Clyde River des mesures d'accommodement à l'égard des essais proposés.

[31] Nous constatons que tant l'ONÉ que la *LOPC* sont antérieurs à la reconnaissance judiciaire de l'obligation de consulter. Toutefois, compte tenu du caractère souple de cette obligation, la Couronne peut s'en remettre à un processus qui a été initialement conçu pour une autre fin, tant que ce processus rend possible un niveau approprié de consultation du groupe autochtone touché (*Beckman*, par. 39; *Taku River*, par. 22). En vertu de la *LOPC*, l'ONÉ dispose d'un large éventail de pouvoirs qui permettent une consultation étendue. Il peut tenir des audiences, en plus de posséder un vaste pouvoir discrétionnaire l'habilitant à rendre des ordonnances ou obtenir

studies to be undertaken and impose preconditions to approval (s. 5(4)). In the case of designated projects, it can also (as here) conduct environmental assessments, and establish participant funding programs to facilitate public participation (s. 5.002).[4]

[32] *COGOA* also grants the NEB broad powers to accommodate the concerns of Indigenous groups where necessary. The NEB can attach any terms and conditions it sees fit to an authorization issued under s. 5(1)(b), and can make such authorization contingent on their performance (ss. 5(4) and 5.36(1)). Most importantly, the NEB may require accommodation by exercising its discretion to deny an authorization or by reserving its decision pending further proceedings (ss. 5(1)(b), 5(5) and 5.36(2)).

[33] The NEB has also developed considerable institutional expertise, both in conducting consultations and in assessing the environmental impacts of proposed projects. Where the effects of a proposed project on Aboriginal or treaty rights substantially overlap with the project's potential environmental impact, the NEB is well situated to oversee consultations which seek to address these effects, and to use its technical expertise to assess what forms of accommodation might be available.

[34] In sum, the NEB has (1) the procedural powers necessary to implement consultation; and (2) the remedial powers to, where necessary, accommodate affected Aboriginal claims, or Aboriginal and treaty rights. Its process can therefore be relied on by the Crown to completely or partially fulfill

[4] While s. 5.002 (participant funding) and s. 5.331 (public hearings) of *COGOA* were not in force at the time the NEB considered and authorized the project at issue here, they were added later (see S.C. 2015, c. 4, ss. 7 and 13).

des renseignements pour l'application de la *LOPC* et dans l'intérêt public (art. 5.331, par. 5.31(1), art. 5.32). Il peut également exiger que des études soient entreprises et imposer des conditions préalables à l'approbation (par. 5(4)). Dans le cas de projets désignés, il peut aussi (comme c'est le cas en l'espèce) réaliser des évaluations environnementales et créer un programme d'aide financière pour faciliter la participation du public (art. 5.002)[4].

[32] La *LOPC* confère aussi à l'ONÉ de vastes pouvoirs d'accommodement afin de répondre, au besoin, aux préoccupations des groupes autochtones. L'ONÉ peut assortir l'autorisation qu'il accorde en vertu de l'al. 5(1)b) de toute condition qu'il juge appropriée, et peut faire dépendre la prise d'effet de cette autorisation de l'exécution de ces conditions (par. 5(4) et 5.36(1)). Plus important encore, l'ONÉ peut exiger que des accommodements soient apportés soit en exerçant son pouvoir discrétionnaire de refuser une autorisation, soit en réservant sa décision pendant le règlement d'autres questions (al. 5(1)b), et par. 5(5) et 5.36(2)).

[33] L'ONÉ a également acquis une importante expertise institutionnelle, tant en effectuant des consultations qu'en évaluant les effets environnementaux des projets proposés. Lorsque les effets d'un projet proposé sur un droit ancestral ou issu d'un traité chevauchent considérablement les répercussions environnementales potentielles du projet, l'ONÉ est bien placé pour superviser les consultations visant l'examen de ces effets, et pour utiliser son expertise technique afin d'évaluer les formes d'accommodement possibles.

[34] En somme, l'ONÉ dispose (1) des pouvoirs procéduraux nécessaires pour mener des consultations et (2) des pouvoirs de réparation lui permettant de prendre, au besoin, des mesures d'accommodement à l'égard des revendications autochtones ou des droits ancestraux ou issus de traités touchés. La

[4] Même si les art. 5.002 (aide financière) et 5.331 (audiences publiques) de la *LOPC* n'étaient pas en vigueur lorsque l'ONÉ a examiné et autorisé le projet litigieux en l'espèce, ils ont été ajoutés à la loi par la suite (voir L.C. 2015, c. 4, art. 7 et 13).

the Crown's duty to consult. Whether the NEB's process did so in this case, we consider below.

D. *What Is the NEB's Role in Considering Crown Consultation Before Approval?*

[35] The appellants argue that, as a tribunal empowered to decide questions of law, the NEB *must* exercise its decision-making authority in accordance with s. 35(1) of the *Constitution Act, 1982* by evaluating the adequacy of consultation before issuing an authorization for seismic testing. In contrast, the proponents submit that there is no basis in this Court's jurisprudence for imposing this obligation on the NEB. Although the Attorney General of Canada agrees with the appellants that the NEB has the legal capacity to decide constitutional questions when doing so is necessary to its decision-making powers, she argues that the NEB's environmental assessment decision in this case appropriately considered the adequacy of the proponents' consultation efforts.

[36] Generally, a tribunal empowered to consider questions of law must determine whether such consultation was constitutionally sufficient if the issue is properly raised. The power of a tribunal "to decide questions of law implies a power to decide constitutional issues that are properly before it, absent a clear demonstration that the legislature intended to exclude such jurisdiction from the tribunal's power" (*Carrier Sekani*, at para. 69). Regulatory agencies with the authority to decide questions of law have both the duty and authority to apply the Constitution, unless the authority to decide the constitutional issue has been clearly withdrawn (*R. v. Conway*, 2010 SCC 22, [2010] 1 S.C.R. 765, at para. 77). It follows that they must ensure their decisions comply with s. 35 of the *Constitution Act, 1982* (*Carrier Sekani*, at para. 72).

Couronne peut donc s'en remettre au processus de l'ONÉ pour satisfaire, en tout ou en partie, à l'obligation de consulter qui lui incombe. Nous allons examiner ci-après si le processus de l'ONÉ a permis de satisfaire à cette obligation en l'espèce.

D. *Quel est le rôle de l'ONÉ dans l'appréciation de la consultation incombant à la Couronne avant l'approbation d'un projet?*

[35] Les appelants soutiennent que, en tant que tribunal administratif habilité à trancher des questions de droit, l'ONÉ *doit* exercer son pouvoir décisionnel en conformité avec le par. 35(1) de la *Loi constitutionnelle de 1982*, et ce, en évaluant le caractère adéquat de la consultation avant d'accorder une autorisation pour des essais sismiques. À l'inverse, les promoteurs plaident que rien dans la jurisprudence de notre Cour ne permet d'imposer cette obligation à l'ONÉ. Bien que la procureure générale du Canada soit d'accord avec les appelants pour dire que l'ONÉ possède la capacité juridique de trancher des questions constitutionnelles lorsque cela est nécessaire dans l'exercice de ses pouvoirs décisionnels, elle soutient que, dans sa décision relative à l'évaluation environnementale en l'espèce, l'ONÉ a examiné de manière appropriée le caractère adéquat des efforts de consultation déployés par les promoteurs.

[36] En général, un tribunal administratif habilité à examiner des questions de droit doit décider si une consultation de ce genre était suffisante sur le plan constitutionnel dans le cas où cette question est régulièrement soulevée devant lui. Le pouvoir d'un tribunal administratif « de statuer en droit emporte celui de trancher une question constitutionnelle dont il est régulièrement saisi, sauf lorsqu'il est clairement établi que le législateur a voulu le priver d'un tel pouvoir » (*Carrier Sekani*, par. 69). Les organismes de réglementation investis du pouvoir de trancher des questions de droit ont le devoir et le pouvoir d'appliquer la Constitution, sauf si le pouvoir de statuer sur la question constitutionnelle a clairement été écarté (*R. c. Conway*, 2010 CSC 22, [2010] 1 R.C.S. 765, par. 77). Il s'ensuit qu'ils doivent s'assurer que leurs décisions sont conformes à l'art. 35 de la *Loi constitutionnelle de 1982* (*Carrier Sekani*, par. 72).

[37] The NEB has broad powers under both the *NEB Act* and *COGOA* to hear and determine all relevant matters of fact and law (*NEB Act*, s. 12(2); *COGOA*, s. 5.31(2)). No provision in either statute suggests an intention to withhold from the NEB the power to decide the adequacy of consultation. And, in *Quebec (Attorney General) v. Canada (National Energy Board)*, [1994] 1 S.C.R. 159, this Court concluded that NEB decisions must conform to s. 35(1) of the *Constitution Act, 1982*. It follows that the NEB can determine whether the Crown's duty to consult has been fulfilled.

[38] We note that the majority at the Federal Court of Appeal in *Chippewas of the Thames* considered that this issue was not properly before the NEB. It distinguished *Carrier Sekani* on the basis that the Crown was not a party to the NEB hearing in *Chippewas of the Thames*, while the Crown (in the form of BC Hydro, a Crown corporation) was a party in the utilities commission proceedings in *Carrier Sekani*. Based on the authority of *Standing Buffalo Dakota First Nation v. Enbridge Pipelines Inc.*, 2009 FCA 308, [2010] 4 F.C.R. 500, the majority of the Federal Court of Appeal in *Chippewas of the Thames* reasoned that the NEB is not required to evaluate whether the Crown's duty to consult had been triggered (or whether it was satisfied) before granting a resource project authorization, except where the Crown is a party before the NEB.

[39] The difficulty with this view, however, is that — as we have explained — action taken by the NEB in furtherance of its powers under s. 5(1)(b) of *COGOA* to make final decisions is *itself* Crown conduct which triggers the duty to consult. Nor, respectfully, can we agree with the majority of the Federal Court of Appeal in *Chippewas of the Thames* that an NEB decision will comply with s. 35(1) of the *Constitution Act, 1982* so long as the NEB ensures the proponents engage in a "dialogue" with potentially affected Indigenous groups (para. 62). If the Crown's duty to consult has been

[37] L'ONÉ dispose, tant en vertu de la *Loi sur l'ONÉ* que de la *LOPC*, de vastes pouvoirs l'autorisant à entendre et à trancher toute question pertinente de droit et de fait (*Loi sur l'ONÉ*, par. 12(2); *LOPC*, par. 5.31(2)). Aucune disposition de l'une ou l'autre de ces lois ne tend à indiquer que le législateur entendait priver l'ONÉ du pouvoir de statuer sur le caractère adéquat de la consultation. De plus, dans *Québec (Procureur général) c. Canada (Office national de l'énergie)*, [1994] 1 R.C.S. 159, notre Cour a conclu que les décisions de l'ONÉ doivent respecter le par. 35(1) de la *Loi constitutionnelle de 1982*. Par conséquent, l'ONÉ peut décider s'il a été satisfait à l'obligation de consulter de la Couronne.

[38] Nous constatons que, dans l'affaire *Chippewas of the Thames*, les juges majoritaires de la Cour d'appel fédérale ont considéré que l'ONÉ n'avait pas été régulièrement saisi de cette question. Ils ont distingué cette affaire de l'arrêt *Carrier Sekani* sur la base que, dans *Chippewas of the Thames*, la Couronne n'était pas partie à l'audience devant l'ONÉ, tandis que dans *Carrier Sekani* la Couronne (par l'entremise de BC Hydro, une société d'État) était partie à l'instance devant la commission des services d'utilité publique. Se fondant sur l'arrêt *Première nation dakota de Standing Buffalo c. Enbridge Pipelines Inc.*, 2009 CAF 308, [2010] 4 R.C.F. 500, les juges majoritaires de la Cour d'appel fédérale dans *Chippewas of the Thames* ont estimé que l'ONÉ n'est pas tenu de se demander si l'obligation de consulter incombant à la Couronne a pris naissance (ou s'il a été satisfait à cette obligation) avant d'autoriser un projet lié aux ressources, sauf dans le cas où la Couronne est une partie à l'instance devant l'ONÉ.

[39] Toutefois, la difficulté que soulève cette opinion est que — comme nous l'avons expliqué — les mesures prises par l'ONÉ en application de son pouvoir de rendre des décisions définitives en vertu de l'al. 5(1)b) de la *LOPC* sont *elles-mêmes* des mesures prises par la Couronne qui donnent naissance à l'obligation de consulter. Nous ne pouvons pas non plus, soit dit en tout respect, souscrire à l'opinion des juges majoritaires de la Cour d'appel fédérale dans l'affaire connexe *Chippewas of the Thames* selon laquelle une décision de l'ONÉ respecte le par. 35(1) de la *Loi constitutionnelle de 1982* dans

triggered, a decision maker may only proceed to approve a project if Crown consultation is adequate. Although in many cases the Crown will be able to rely on the NEB's processes as meeting the duty to consult, because the NEB is the final decision maker, the key question is whether the duty is fulfilled prior to project approval (*Haida*, at para. 67). Accordingly, where the Crown's duty to consult an affected Indigenous group with respect to a project under *COGOA* remains unfulfilled, the NEB must withhold project approval. And, where the NEB fails to do so, its approval decision should (as we have already said) be quashed on judicial review, since the duty to consult must be fulfilled prior to the action that could adversely affect the right in question (*Tsilhqot'in Nation v. British Columbia*, 2014 SCC 44, [2014] 2 S.C.R. 257, at para. 78).

la mesure où l'ONÉ s'assure que les promoteurs participent à des « discussions » avec les groupes autochtones susceptibles d'être touchés (par. 62). Si l'obligation de la Couronne de consulter a pris naissance, un décideur ne peut approuver un projet que si la consultation incombant à la Couronne est adéquate. Même si dans bien des cas la Couronne peut s'en remettre aux processus de l'ONÉ pour satisfaire à son obligation de consulter, étant donné que c'est l'ONÉ qui prend la décision définitive, la question fondamentale consiste à décider s'il a été satisfait à l'obligation avant l'approbation du projet (*Haïda*, par. 67). En conséquence, lorsque la Couronne n'a pas satisfait à son obligation de consulter les groupes autochtones touchés par un projet visé par la *LOPC*, l'ONÉ doit refuser d'approuver le projet. S'il l'approuve, sa décision devrait (comme nous l'avons dit précédemment) être annulée à l'issue d'un contrôle judiciaire, puisque l'obligation de consulter doit être respectée avant la prise de mesures susceptibles d'avoir des effets préjudiciables sur le droit en question (*Nation Tsilhqot'in c. Colombie-Britannique*, 2014 CSC 44, [2014] 2 R.C.S. 257, par. 78).

[40] Some commentators have suggested that the NEB, in view of its mandate to decide issues in the public interest, cannot effectively account for Aboriginal and treaty rights and assess the Crown's duty to consult (see R. Freedman and S. Hansen, "Aboriginal Rights vs. The Public Interest", prepared for Pacific Business & Law Institute Conference, Vancouver, B.C. (February 26-27, 2009) (online), at pp. 4 and 14). We do not, however, see the public interest and the duty to consult as operating in conflict. As this Court explained in *Carrier Sekani*, the duty to consult, being a constitutional imperative, gives rise to a special public interest that supersedes other concerns typically considered by tribunals tasked with assessing the public interest (para. 70). A project authorization that breaches the constitutionally protected rights of Indigenous peoples cannot serve the public interest (*ibid.*).

[40] Certains auteurs affirment que, comme l'ONÉ a pour mission de trancher des questions dans l'intérêt public, il ne peut, de manière effective, tenir compte des droits ancestraux et issus de traités et apprécier l'obligation de consulter de la Couronne (voir R. Freedman et S. Hansen, « Aboriginal Rights vs. The Public Interest », préparé pour une conférence du Pacific Business & Law Institute, Vancouver, C.-B. (26-27 février 2009) (en ligne), p. 4 et 14). À notre avis, cependant, l'intérêt public et l'obligation de consulter ne sont pas incompatibles. Comme l'a expliqué la Cour dans *Carrier Sekani*, en tant qu'impératif constitutionnel, l'obligation de consulter fait naître un intérêt public spécial, qui l'emporte sur les autres préoccupations dont tiennent habituellement compte les tribunaux administratifs appelés à évaluer l'intérêt public (par. 70). Lorsque l'autorisation accordée à l'égard d'un projet viole les droits constitutionnels des peuples autochtones, cette autorisation ne saurait servir l'intérêt public (*ibid.*).

[41] This leaves the question of what a regulatory agency must do where the adequacy of Crown

[41] Il reste à déterminer ce qu'un organisme de réglementation doit faire dans les cas où se soulève

consultation is raised before it. When affected Indigenous groups have squarely raised concerns about Crown consultation with the NEB, the NEB must usually address those concerns in reasons, particularly in respect of project applications requiring deep consultation. Engagement of the honour of the Crown does not predispose a certain outcome, but promotes reconciliation by imposing obligations on the manner and approach of government (*Haida*, at paras. 49 and 63). Written reasons foster reconciliation by showing affected Indigenous peoples that their rights were considered and addressed (*Haida*, at para. 44). Reasons are "a sign of respect [which] displays the requisite comity and courtesy becoming the Crown as Sovereign toward a prior occupying nation" (*Kainaiwa/Blood Tribe v. Alberta (Energy)*, 2017 ABQB 107, at para. 117 (CanLII)). Written reasons also promote better decision making (*Baker v. Canada (Minister of Citizenship and Immigration)*, [1999] 2 S.C.R. 817, at para. 39).

devant lui la question du caractère adéquat de la consultation incombant à la Couronne. Lorsque les groupes autochtones touchés soulèvent directement auprès de l'ONÉ des préoccupations concernant la consultation qui a été menée par la Couronne, l'ONÉ doit habituellement traiter de ces préoccupations dans des motifs, plus particulièrement s'il s'agit d'une demande d'approbation de projet requérant une consultation approfondie. Le fait que l'honneur de la Couronne soit en jeu ne permet pas de préjuger d'un résultat donné, mais favorise la réconciliation en imposant des obligations quant à l'approche et à la façon de faire du gouvernement (*Haïda*, par. 49 et 63). L'existence de motifs écrits favorise la réconciliation, parce que ces motifs montrent aux peuples autochtones touchés que leurs droits ont été considérés et comment on en a tenu compte (*Haïda*, par. 44). Des motifs constituent [TRADUCTION] « une marque de respect [qui] démontre la courtoisie dont doit faire preuve la Couronne en tant que souverain envers une nation qui occupait le territoire avant elle » (*Kainaiwa/Blood Tribe c. Alberta (Energy)*, 2017 ABQB 107, par. 117 (CanLII)). Les motifs écrits favorisent également une meilleure prise de décision (*Baker c. Canada (Ministre de la Citoyenneté et de l'Immigration)*, [1999] 2 R.C.S. 817, par. 39).

[42] This does not mean, however, that the NEB is always required to review the adequacy of Crown consultation by applying a formulaic "*Haida* analysis", as the appellants suggest. Nor will explicit reasons be required in every case. The degree of consideration that is appropriate will depend on the circumstances of each case. But where deep consultation is required and the affected Indigenous peoples have made their concerns known, the honour of the Crown will usually oblige the NEB, where its approval process triggers the duty to consult, to explain how it considered and addressed these concerns.

[42] Cependant, cela ne signifie pas, contrairement à ce qu'affirment les appelants, que l'ONÉ est toujours tenu d'examiner le caractère adéquat de la consultation qui a été menée en appliquant mécaniquement l'« analyse requise par l'arrêt *Haïda* ». Des motifs explicites ne sont pas non plus requis dans tous les cas. L'étendue de l'analyse qui conviendra variera selon les circonstances propres à chaque cas. Mais dans les cas où une consultation approfondie est nécessaire et que les peuples autochtones touchés ont fait connaître leurs préoccupations, l'honneur de la Couronne obligera généralement l'ONÉ, lorsque son processus d'approbation donne naissance à l'obligation de consulter, à expliquer de quelle manière il a considéré ces préoccupations et il en a tenu compte.

E. *Was the Consultation Adequate in This Case?*

E. *La consultation a-t-elle été adéquate en l'espèce?*

[43] The Crown acknowledges that deep consultation was required in this case, and we agree. As

[43] La Couronne reconnaît qu'une consultation approfondie était requise dans le cas qui nous

this Court explained in *Haida*, deep consultation is required "where a strong *prima facie* case for the claim is established, the right and potential infringement is of high significance to the Aboriginal peoples, and the risk of non-compensable damage is high" (para. 44). Here, the appellants had *established treaty rights* to hunt and harvest marine mammals. These rights were acknowledged at the Federal Court of Appeal as being extremely important to the appellants for their economic, cultural, and spiritual well-being (para. 2). Jerry Natanine, the former mayor of Clyde River, explained that hunting marine mammals "provides us with nutritious food; enables us to take part in practices we have maintained for generations; and enables us to maintain close relationships with each other through the sharing of what we call 'country food'" (A.R., vol. II, at p. 197). The importance of these rights was also recently recognized by the Nunavut Court of Justice:

> The Inuit right which is of concern in this matter is the right to harvest marine mammals. Many Inuit in Nunavut rely on country food for the majority of their diet. Food costs are very high and many would be unable to purchase food to replace country food if country food were unavailable. Country food is recognized as being of higher nutritional value than purchased food. But the inability to harvest marine mammals would impact more than . . . just the diet of Inuit. The cultural tradition of sharing country food with others in the community would be lost. The opportunity to make traditional clothing would be impacted. The opportunity to participate in the hunt, an activity which is fundamental to being Inuk, would be lost. The Inuit right which is at stake is of high significance. This suggests a significant level of consultation and accommodation is required.
>
> (*Qikiqtani Inuit Assn. v. Canada (Minister of Natural Resources)*, 2010 NUCJ 12, 54 C.E.L.R. (3d) 263, at para. 25)

occupe, et nous en convenons. Comme notre Cour l'a expliqué dans l'arrêt *Haïda*, une consultation approfondie est requise dans « les cas où la revendication repose sur une preuve à première vue solide, où le droit et l'atteinte potentielle sont d'une haute importance pour les Autochtones et où le risque de préjudice non indemnisable est élevé » (par. 44). En l'espèce, les appelants possèdent des *droits issus de traités établis* leur permettant de chasser et de récolter des mammifères marins. La Cour d'appel fédérale a reconnu que ces droits étaient extrêmement importants pour le bien-être économique, culturel et spirituel des appelants (par. 2). Jerry Natanine, l'ancien maire de Clyde River, a fourni les explications qui suivent à ce sujet : [TRADUCTION] « [la chasse aux mammifères marins] nous fournit des aliments nutritifs, en plus de nous permettre d'exercer des pratiques observées depuis des générations et d'entretenir d'étroites relations les uns avec les autres grâce au partage de ce que nous appelons les "aliments traditionnels" » (d.a., vol. II, p. 197). Récemment, la Cour de justice du Nunavut a également reconnu l'importance de ces droits :

> [TRADUCTION] Le droit inuit qui nous intéresse en l'espèce est le droit de récolter les mammifères marins. Le régime alimentaire de nombreux Inuits au Nunavut se compose en grande partie d'aliments traditionnels. Le coût des aliments est très élevé, et plusieurs habitants seraient dans l'incapacité d'acheter des aliments pour remplacer les aliments traditionnels si ceux-ci n'étaient plus disponibles. Il est reconnu que les aliments traditionnels ont une valeur nutritive plus élevée que les aliments achetés. Cependant, l'incapacité de récolter des mammifères marins n'aurait pas uniquement des répercussions sur le régime alimentaire des Inuits. La tradition culturelle qu'ont les Inuits de partager les aliments traditionnels entre eux dans la communauté serait perdue. La fabrication de vêtements traditionnels serait aussi touchée. Les Inuits perdraient la possibilité de participer à la chasse, une activité qui constitue un aspect fondamental de l'identité inuite. Le droit des Inuits qui est en jeu est d'une grande importance, d'où la nécessité d'une consultation approfondie et de mesures d'accommodement substantielles.
>
> (*Qikiqtani Inuit Assn. c. Canada (Minister of Natural Resources)*, 2010 NUCJ 12, 54 C.E.L.R. (3d) 263, par. 25)

[44] The risks posed by the proposed testing to these treaty rights were also high. The NEB's environmental assessment concluded that the project could increase the mortality risk of marine mammals, cause permanent hearing damage, and change their migration routes, thereby affecting traditional resource use. Given the importance of the rights at stake, the significance of the potential impact, and the risk of non-compensable damage, the duty owed in this case falls at the highest end of the spectrum.

[45] Bearing this in mind, the consultation that occurred here fell short in several respects. First, the inquiry was misdirected. While the NEB found that the proposed testing was not likely to cause significant adverse environmental effects, and that any effects on traditional resource use could be addressed by mitigation measures, the consultative inquiry is not properly into environmental effects *per se*. Rather, it inquires into the impact on the *right*. No consideration was given in the NEB's environmental assessment to the source — in a treaty — of the appellants' rights to harvest marine mammals, nor to the impact of the proposed testing on those rights.

[46] Furthermore, although the Crown relies on the processes of the NEB as fulfilling its duty to consult, that was not made clear to the Inuit. The significance of the process was not adequately explained to them.

[47] Finally, and most importantly, the process provided by the NEB did not fulfill the Crown's duty to conduct deep consultation. Deep consultation "may entail the opportunity to make submissions for consideration, formal participation in the decision-making process, and provision of written reasons to show that Aboriginal concerns were considered and to reveal the impact they had on the decision" (*Haida*, at para. 44). Despite the NEB's broad powers under *COGOA* to afford those advantages, limited opportunities for participation and consultation were made available to the appellants.

[44] Les essais proposés comportent également des risques importants pour ces droits issus de traités. Selon l'évaluation environnementale de l'ONÉ, ce projet est susceptible d'accroître le risque de mortalité chez les mammifères marins, de causer des dommages permanents à leur ouïe et de modifier leurs routes migratoires, situation qui a en conséquence une incidence sur l'utilisation des ressources traditionnelles. En raison de l'importance du droit en jeu, de la portée des effets potentiels et du risque de préjudice non indemnisable, l'obligation qui s'impose dans la présente affaire se situe à l'extrémité supérieure du continuum.

[45] Dans cette optique, la consultation qui a eu lieu en l'espèce a été lacunaire à plusieurs égards. Premièrement, la consultation était mal orientée. Bien que l'ONÉ ait conclu que les essais proposés n'étaient pas susceptibles d'avoir des effets environnementaux négatifs importants, et que tout effet sur l'utilisation des ressources traditionnelles pourrait faire l'objet de mesures d'atténuation, le processus consultatif ne vise pas vraiment les effets environnementaux en tant que tels, mais plutôt les effets sur le *droit*. Dans son évaluation environnementale, l'ONÉ n'a pas pris en considération la source — un traité — des droits des appelants de récolter des mammifères marins, ni l'incidence des essais proposés sur ces droits.

[46] Deuxièmement, il n'a pas été indiqué clairement aux Inuits que la Couronne s'en remettait aux processus de l'ONÉ pour satisfaire à son obligation de consulter. L'importance du processus ne leur a pas été expliquée adéquatement.

[47] Enfin, élément le plus important, le processus de l'ONÉ n'a pas permis de satisfaire à l'obligation de la Couronne de mener une consultation approfondie. Une telle consultation « pourrait comporter la possibilité de présenter des observations, la participation officielle à la prise de décisions et la présentation de motifs montrant que les préoccupations des Autochtones ont été prises en compte et précisant quelle a été l'incidence de ces préoccupations sur la décision » (*Haïda*, par. 44). Malgré les vastes pouvoirs que la *LOPC* confère à l'ONÉ pour offrir de telles mesures avantageuses, les appelants n'ont bénéficié

Unlike many NEB proceedings, including the proceedings in *Chippewas of the Thames*, there were no oral hearings. Although the appellants submitted scientific evidence to the NEB, this was done without participant funding. Again, this stands in contrast to *Chippewas of the Thames*, where the consultation process was far more robust. In that case, the NEB held oral hearings, the appellants received funding to participate in the hearings, and they had the opportunity to present evidence and a final argument.[5] While these procedural protections are characteristic of an adversarial process, they may be required for meaningful consultation (*Haida*, at para. 41) and do not transform its underlying objective: fostering reconciliation by promoting an ongoing relationship (*Carrier Sekani*, at para. 38).

[48] The consultation in this case also stands in contrast to *Taku River* where, despite its entitlement to consultation falling only at the midrange of the spectrum (para. 32), the Taku River Tlingit First Nation, with financial assistance (para. 37), fully participated in the assessment process as a member of the project committee, which was "the primary engine driving the assessment process" (paras. 3, 8 and 40).

[49] While these procedural safeguards are not always necessary, their absence in this case significantly impaired the quality of consultation. Although the appellants had the opportunity to question the proponents about the project during the NEB meetings in the spring of 2013, the proponents were unable to answer many questions, including

[5] The NEB process in *Chippewas of the Thames* was undertaken pursuant to the *NEB Act*, not *COGOA*. Under the *NEB Act*, the NEB had at the relevant time, and still has today, explicit statutory powers to conduct public hearings (s. 24) and provide participant funding for such hearings (s. 16.3). As noted above, Parliament conferred similar powers upon the NEB under *COGOA* in 2015.

que de très peu de possibilités de participation et de consultation. Contrairement à de nombreuses autres instances de l'ONÉ, y compris celle dans l'affaire *Chippewas of the Thames*, il n'y a pas eu d'audiences en l'espèce. Bien que les appelants aient soumis des éléments de preuve scientifique à l'ONÉ, ils l'ont fait sans recevoir d'aide financière à l'intention des participants. Une autre situation qui contraste avec l'affaire *Chippewas of the Thames*, où le processus de consultation a été beaucoup plus robuste. Dans cette affaire, l'ONÉ a tenu des audiences, les appelants ont reçu des fonds pour y participer et ils ont eu l'occasion de présenter des éléments de preuve et des observations finales[5]. Quoique ces garanties procédurales constituent des caractéristiques d'un processus contradictoire, elles peuvent être nécessaires pour qu'une véritable consultation ait lieu (*Haïda*, par. 41) et elles ne transforment pas l'objectif sous-jacent de cette consultation, soit encourager la réconciliation tout en favorisant le maintien de relations constantes (*Carrier Sekani*, par. 38).

[48] La consultation qui s'est déroulée en l'espèce contraste également avec celle tenue dans l'affaire *Taku River* où, même si elle avait droit uniquement à un niveau de consultation se trouvant à mi-chemin du continuum (par. 32), la Première Nation Tlingit de Taku River a obtenu de l'aide financière (par. 37) et a participé pleinement au processus d'évaluation en tant que membre du comité responsable du projet, comité qui était le « principal moteur du processus d'évaluation » (par. 3, 8 et 40).

[49] Bien que ces garanties procédurales ne soient pas toujours nécessaires, leur absence en l'espèce a réduit de façon importante la qualité de la consultation. Même si les appelants ont eu la possibilité d'interroger les promoteurs au sujet du projet lors des rencontres organisées par l'ONÉ au printemps 2013, ces derniers ont été incapables de répondre à

[5] Le processus suivi par l'ONÉ dans l'affaire *Chippewas of the Thames* s'est déroulé conformément à la *Loi sur l'ONÉ*, et non à la *LOPC*. En vertu de la *Loi sur l'ONÉ*, l'ONÉ possédait au moment pertinent, et possède encore aujourd'hui, le pouvoir explicite de tenir des audiences publiques (art. 24) et de verser de l'aide financière en vue de faciliter la participation à de telles audiences (art. 16.3). Comme il a été indiqué précédemment, le Parlement a conféré à l'ONÉ des pouvoirs similaires dans la *LOPC* en 2015.

basic questions about the effect of the proposed testing on marine mammals. The proponents did eventually respond to these questions; however, they did so in a 3,926 page document which they submitted to the NEB. This document was posted on the NEB website and delivered to the hamlet offices in Pond Inlet, Clyde River, Qikiqtajuak and Iqaluit. Internet speed is slow in Nunavut, however, and bandwidth is expensive. The former mayor of Clyde River deposed that he was unable to download this document because it was too large. Furthermore, only a fraction of this enormous document was translated into Inuktitut. To put it mildly, furnishing answers to questions that went to the heart of the treaty rights at stake in the form of a practically inaccessible document dump months after the questions were initially asked in person is not true consultation. "'[C]onsultation' in its least technical definition is talking together for mutual understanding" (T. Isaac and A. Knox, "The Crown's Duty to Consult Aboriginal People" (2003), 41 *Alta. L. Rev.* 49, at p. 61). No mutual understanding on the core issues — the potential impact on treaty rights, and possible accommodations — could possibly have emerged from what occurred here.

[50] The fruits of the Inuit's limited participation in the assessment process here are plain in considering the accommodations recorded by the NEB's environmental assessment report. It noted changes made to the project as a result of consultation, such as a commitment to ongoing consultation, the placement of community liaison officers in affected communities, and the design of an Inuit Qaujimajatuqangit (Inuit traditional knowledge) study. The proponents also committed to installing passive acoustic monitoring on the ship to be used in the proposed testing to avoid collisions with marine mammals.

de nombreuses questions, y compris des questions de base sur les effets des essais proposés sur les mammifères marins. Les promoteurs ont finalement répondu à ces questions; cependant, ils l'ont fait dans un document de 3 926 pages, qu'ils ont soumis à l'ONÉ. Ce document a été affiché sur le site Web de l'ONÉ et remis aux bureaux des hameaux de Pond Inlet, Clyde River, Qikiqtajuak et Iqualuit. Toutefois, l'Internet est lent au Nunavut, et la bande passante est coûteuse. L'ancien maire de Clyde River a déclaré avoir été incapable de télécharger le document, puisque celui-ci était trop volumineux. De plus, une fraction seulement de cet énorme document a été traduite en inuktitut. Le moins que l'on puisse dire, c'est que le fait de répondre à des questions qui touchent à l'essence des droits issus de traités en cause au moyen d'un amas documentaire pratiquement inaccessible, et ce, des mois après que les questions aient été posées en personne ne constitue pas une véritable consultation. Selon des auteurs, le mot [TRADUCTION] « "consultation", dans son sens le moins technique, s'entend de l'action de se parler dans le but de se comprendre les uns les autres » (T. Isaac et A. Knox, « The Crown's Duty to Consult Aboriginal People » (2003), 41 *Alta. L. Rev.* 49, p. 61). Aucune compréhension mutuelle sur les points fondamentaux — à savoir les effets potentiels sur les droits issus de traités et les possibles accommodements — n'aurait pu vraiment aboutir de ce qui s'est déroulé dans la présente affaire.

[50] Les fruits de la participation limitée des Inuits au processus d'évaluation en l'espèce ressortent clairement de l'examen des mesures d'accommodement consignées dans le rapport d'évaluation environnementale de l'ONÉ. Il y est fait état des changements apportés au projet par suite de la consultation, par exemple un engagement à poursuivre les consultations, l'affectation d'agents de liaison auprès de la communauté dans les communautés touchées et un projet d'étude sur les Inuit Qaujimajatuqangit (connaissances traditionnelles inuites). Les promoteurs se sont aussi engagés à doter le navire devant être utilisé pour les essais proposés d'appareils de surveillance acoustique passive afin d'éviter les collisions avec des mammifères marins.

[51] These changes were, however, insignificant concessions in light of the potential impairment of the Inuit's treaty rights. Further, passive acoustic monitoring was no concession at all, since it is a requirement of the Statement of Canadian Practice With Respect to the Mitigation of Seismic Sound in the Marine Environment which provides "minimum standards, which will apply in all non-ice covered marine waters in Canada" (A.R., vol. I, at p. 40), and which would be included in virtually all seismic testing projects. None of these putative concessions, nor the NEB's reasons themselves, gave the Inuit any reasonable assurance that their constitutionally protected treaty rights were considered as *rights*, rather than as an afterthought to the assessment of environmental concerns.

[52] The consultation process here was, in view of the Inuit's established treaty rights and the risk posed by the proposed testing to those rights, significantly flawed. Had the appellants had the resources to submit their own scientific evidence, and the opportunity to test the evidence of the proponents, the result of the environmental assessment could have been very different. Nor were the Inuit given meaningful responses to their questions regarding the impact of the testing on marine life. While the NEB considered potential impacts of the project on marine mammals and on Inuit traditional resource use, its report does not acknowledge, or even mention, the Inuit treaty rights to harvest wildlife in the Nunavut Settlement Area, or that deep consultation was required.

IV. Conclusion

[53] For the foregoing reasons, we conclude that the Crown breached its duty to consult the appellants in respect of the proposed testing. We would allow the appeal with costs to the appellants, and quash the NEB's authorization.

Appeal allowed with costs.

[51] Cependant, ces changements ne représentaient que des concessions négligeables au regard de l'atteinte potentielle aux droits issus de traités des Inuits. En outre, la surveillance acoustique passive ne constituait aucunement une concession, puisqu'elle est exigée par l'Énoncé des pratiques canadiennes d'atténuation des ondes sismiques en milieu marin, lequel énonce des « normes minimales, qui s'appliquent dans toutes les eaux marines du Canada libres de glace » (d.a., vol. I, p. 40), et qui figureraient virtuellement dans tous les projets d'essais sismiques. Aucune de ces soi-disant concessions, ni les motifs eux-mêmes exposés par l'ONÉ, n'ont donné aux Inuits une assurance raisonnable que leurs droits issus de traités protégés par la Constitution avaient été considérés en tant que *droits*, plutôt que comme un aspect accessoire de l'évaluation des préoccupations environnementales.

[52] Compte tenu des droits issus de traités établis que possèdent les Inuits et des risques que posent pour ces droits les essais proposés, le processus de consultation qui s'est déroulé en l'espèce a comporté d'importantes lacunes. Si les appelants avaient disposé des ressources nécessaires pour présenter leur propre preuve scientifique, et s'ils avaient eu l'occasion de vérifier la validité de la preuve des promoteurs, le résultat de l'évaluation environnementale aurait pu être bien différent. Les Inuits n'ont pas non plus reçu de réponses concrètes à leurs questions au sujet de l'effet des essais sur la vie marine. Bien que l'ONÉ ait examiné les répercussions potentielles du projet sur les mammifères marins et sur l'utilisation traditionnelle des ressources par les Inuits, son rapport ne reconnaît pas, ni même ne mentionne, l'existence des droits issus de traités des Inuits de récolter des ressources fauniques au Nunavut ou le fait qu'une consultation approfondie était nécessaire.

IV. Conclusion

[53] Pour ces motifs, nous concluons que la Couronne a manqué à son obligation de consulter les appelants au sujet des essais proposés. Nous sommes d'avis d'accueillir le pourvoi, avec dépens en faveur des appelants, et d'annuler l'autorisation de l'ONÉ.

Pourvoi accueilli avec dépens.

Headnote

Environmental law --- Statutory protection of environment — Approvals, licences and orders — Appeals — To administrative tribunal — General principles

Director of Ministry of Environment and Climate Change issued Renewable Energy Approval (REA) to G Inc., as general partner for and on behalf of approval holder under s. 47.5 of Environmental Protection Act — REA was for renewable energy product consisting of construction, installation, operation, use and retiring of Class 4 wind facility with total nameplate capacity of 18 megawatts — E Inc. appealed REA to Environmental Review Tribunal — Appeal dismissed — Views and expressions of concerns expressed by E Inc.'s witnesses in respect of Health Test and Environmental Test pertained to matters requiring expert or technical expertise — As no such supporting opinion evidence was adduced, lay opinions could not be relied upon to make finding of causation in respect of health effects of noise — Evidence adduced by E Inc.'s lay witnesses only rose to level of expression of concern — Relevant factual evidence that had been adduced by E Inc.'s witnesses was limited and insufficient to establish that Environmental Test had been met.

Environmental law --- Statutory protection of environment — Approvals, licences and orders — Appeals — To administrative tribunal — Grounds for appeal — Irreparable harm

Director of Ministry of Environment and Climate Change issued Renewable Energy Approval (REA) to G Inc., as general partner for and on behalf of approval holder under s. 47.5 of Environmental Protection Act — REA was for renewable energy product consisting of construction, installation, operation, use and retiring of Class 4 wind facility with total nameplate capacity of 18 megawatts — E Inc. appealed REA to Environmental Review Tribunal — Appeal dismissed — E Inc. failed to establish, on balance of probabilities, that Environmental Test had been met — E Inc. had adduced no expert opinion evidence to support opinions advanced by its lay witnesses — Opinions expressed by lay witnesses would only be accepted as expressions of their views — Many of views and expressions of concern expressed by E Inc.'s witnesses in respect of Environmental Test pertained to matters requiring expert or technical expertise — No such supporting opinion evidence had been adduced by E Inc. and relevant factual evidence that had been adduced by E Inc.'s witnesses was limited and insufficient to establish that Environmental Test had been met.

Environmental law --- Statutory protection of environment — Approvals, licences and orders — Appeals — To administrative tribunal — Grounds for appeal — Miscellaneous

Director of Ministry of Environment and Climate Change issued Renewable Energy Approval (REA) to G Inc., as general partner for and on behalf of approval holder under s. 47.5 of Environmental Protection Act — REA was for renewable energy product consisting of construction, installation, operation, use and retiring of Class 4 wind facility with total nameplate capacity of 18 megawatts — E Inc. appealed REA to Environmental Review Tribunal — Appeal dismissed — With exception of evidence of one expert witness, E Inc. had provided no expert opinion evidence to support opinions expressed by its lay witnesses — All of views and expressions of concerns expressed by E Inc.'s witnesses in respect of Health Test pertained to matters requiring expert or technical expertise — As no such supporting opinion evidence was adduced, lay opinions could not be relied upon to make finding of causation in respect of health effects of noise — Evidence adduced by E Inc.'s lay witnesses only rose to level of expression of concern — Health Test required that Tribunal consider only whether engaging in Project, in accordance with REA, would cause serious harm to human health — REA included condition which imposed limits on noise emissions — Evidence of E Inc.'s expert witness did not address this requirement and his evidence fell short of establishing that Health Test had been met.

Environmental law --- Statutory protection of environment — Approvals, licences and orders — Noise

Director of Ministry of Environment and Climate Change issued Renewable Energy Approval (REA) to G Inc., as general partner for and on behalf of approval holder under s. 47.5 of Environmental Protection Act — REA was for renewable energy product consisting of construction, installation, operation, use and retiring of Class 4 wind facility with total nameplate capacity of 18 megawatts — E Inc. appealed REA to Environmental Review Tribunal — Appeal dismissed — With exception of evidence of one expert witness, E Inc. had provided no expert opinion evidence to support opinions expressed by its lay witnesses — All of views and expressions of concerns expressed by E Inc.'s witnesses in respect of Health Test pertained to matters requiring expert or technical expertise — As no such supporting opinion evidence was adduced, lay opinions could not be relied upon to make finding of causation in respect of health effects of noise — Evidence adduced by E Inc.'s lay witnesses only rose to level of expression of concern — Health Test required that Tribunal consider only whether engaging in Project, in accordance with REA, would cause serious harm to human health — REA included condition which imposed limits on noise emissions — Evidence of E Inc.'s expert witness did not address this requirement and his evidence fell short of establishing that Health Test had been met.

Environmental law --- Statutory protection of environment — Approvals, licences and orders — Practice and procedure

Director of Ministry of Environment and Climate Change issued Renewable Energy Approval (REA) to G Inc., as general partner for and on behalf of approval holder under s. 47.5 of Environmental Protection Act — REA was for renewable energy product consisting of construction, installation, operation, use and retiring of Class 4 wind facility with total nameplate capacity of 18 megawatts — E Inc. appealed REA to Environmental Review Tribunal — Hearing commenced and on second day approval holder brought motion to dismiss — Motion dismissed — Rule 111(c) of Tribunal's Rules of Practice did not apply — Onus was on moving party to establish that its motion to dismiss should be granted — Parties had not addressed important questions which Tribunal must consider in making determination of matter — There was insufficient information on which to base finding to grant relief requested by approval holder in its motion to dismiss — Approval holder had not met onus to establish that its motion to dismiss should be granted.

APPEAL from issuance of Renewable Energy Approval; MOTION for dismissal of appeal.

***The Board*:**

Reasons

Background

1 On April 9, 2015, Mohsen Keyvani, Director, Ministry of the Environment and Climate Change ("MOECC") issued Renewable Energy Approval No. 6862-9RDJZX (the "REA") to GHLP General Partner Inc., as general partner for and on behalf of Gunn's Hill LP (the "Approval Holder") under s. 47.5 of the *Environmental Protection Act* ("*EPA*"). The REA is for a renewable energy project known as the Gunn's Hill Wind Farm, consisting of the construction, installation, operation, use and retiring of a Class 4 wind facility with a total nameplate capacity of 18 megawatts, located on Middletown Line R.R. 4, Lot 12, Concession 5 in Norwich Township, County of Oxford, Ontario (the "Project").

2 On April 24, 2015, East Oxford Community Alliance Inc. (the "Appellant") appealed the REA to the Environmental Review Tribunal (the "Tribunal"). The Appellant appeals under s. 142.1(3) of the *EPA* on the grounds that "engaging in the Project in accordance with the REA will cause serious harm to human health" (the "Health Test") and also that "engaging in the Project in accordance with the REA will cause serious and irreversible harm to plant life, animal life or the natural environment" (the "Environmental Test").

3 A preliminary hearing was held on May 25, 2015. At that time, the Tribunal granted the Township of Norwich's request for presenter status, and gave procedural directions respecting the main hearing in the proceeding, as set out in the order of June 18, 2015.

4 On June 29, 2015 the hearing commenced in Woodstock and continued over several days, continuing into July. On the second day of the hearing, when the Tribunal had heard the testimony from all of the Appellant's witnesses, and following the Township of Norwich's presentation, the Approval Holder brought a motion to dismiss. The Approval Holder had previously served and filed its Notice of Motion, as required by Rule 98 of the Tribunal's *Rules of Practice* (the "Rules") and had notified the other parties and the Tribunal regarding the intended timing of the motion.

5 On July 7, 2015, the Approval Holder requested that the motion be heard orally. However, given the complexity of the issues raised by this motion and having regard to the expedited timeline for the main hearing of the evidence in this renewable energy approval appeal, the Tribunal directed that the motion be heard in writing. On consent of counsel for the Parties, the Tribunal set due dates for filing submissions in respect of this motion. At the request of the Approval Holder, and on consent of counsel for the Director and the Appellant, the Tribunal directed that the hearing would continue as previously scheduled. This Decision includes the Tribunal's reasons and disposition of the Approval Holder's motion.

6 Having considered the evidence submitted in respect of the motion and the evidence adduced in the main hearing, as well as the submissions of the parties on the motion and on the main hearing, the Tribunal dismisses the motion to dismiss, dismisses the appeal. The decision of the Director is confirmed.

Relevant Legislation

7 The relevant legislation is as follows:

> **Environmental Protection Act**
>
> 1. (1) "natural environment" means the air, land and water, or any combination or part thereof, of the Province of Ontario;
>
> ***Director's powers***
>
> 47.5 (1) After considering an application for the issue or renewal of a renewable energy approval, the Director may, if in his or her opinion it is in the public interest to do so,
>
> (a) issue or renew a renewable energy approval; or
>
> (b) refuse to issue or renew a renewable energy approval.
>
> ***Terms and conditions***
>
> (2) In issuing or renewing a renewable energy approval, the Director may impose terms and conditions if in his or her opinion it is in the public interest to do so.
>
> ***Other powers***
>
> (3) On application or on his or her own initiative, the Director may, if in his or her opinion it is in the public interest to do so,
>
> (a) alter the terms and conditions of a renewable energy approval after it is issued;
>
> (b) impose new terms and conditions on a renewable energy approval; or
>
> (c) suspend or revoke a renewable energy approval.
>
> ***Same***

(4) A renewable energy approval is subject to any terms and conditions prescribed by the regulations.

145.2.1(2) The Tribunal shall review the decision of the Director and shall consider only whether engaging in the renewable energy project in accordance with the renewable energy approval will cause,

(a) serious harm to human health; or

(b) serious and irreversible harm to plant life, animal life or the natural environment.

(3) The person who required the hearing has the onus of proving that engaging in the renewable energy project in accordance with the renewable energy approval will cause harm referred to in clause (2) (a) or (b).

(4) If the Tribunal determines that engaging in the renewable energy project in accordance with the renewable energy approval will cause harm referred to in clause (2) (a) or (b), the Tribunal may,

(a) revoke the decision of the Director;

(b) by order direct the Director to take such action as the Tribunal considers the Director should take in accordance with this Act and the regulations; or

(c) alter the decision of the Director, and, for that purpose, the Tribunal may substitute its opinion for that of the Director.

Issues

8 The issues on the appeal are:

1. Whether engaging in the Project in accordance with the REA will cause serious harm to human health.

2. Whether engaging in the Project in accordance with the REA will cause serious and irreversible harm to plant life, animal life or the natural environment.

3. Whether the Tribunal should grant the Approval Holder's motion to dismiss the Appellant's appeal on the basis that the Appellant has failed to establish a *prima facie* case.

9 Because the Tribunal has dismissed the motion to dismiss, the Tribunal will address this as the third issue in this Decision.

Issue 1: Whether engaging in the Project in accordance with the REA will cause serious harm to human health.

Discussion, Analysis and Findings

Evidence of the Appellant

Overview

10 The Appellant called seven lay witnesses: Joan Morris, Carol Hopkins-Engberts, Keith McKay, Michelle Poulin, George Rand, Karen Wesseling, and John Eacott. The Appellant also called one expert witness, William Palmer. With the exception of Mr. Palmer, the Appellant did not request that any of its witnesses be qualified to give opinion or technical evidence.

Joan Morris

11 Joan Morris and her husband live on a farm in East Oxford. The Project's closest turbine will be located approximately 700 metres ("m") from their dairy barn. Ms. Morris did not request to be qualified as an expert witness in this proceeding, but she notes for the Tribunal's information that she holds an Honours Bachelor of Science degree in Human Biology and a

Master of Health Science degree in Community Health and Epidemiology, and that she is also a Certified Clinical Research Professional. She characterizes herself and her husband as "stewards of the land and ... guardians for our livestock", and says her main concerns about the Project are for her family's health and safety, and their ability to continue with their livelihood of dairy farming. Ms. Morris included a large number of documents in support of her testimony, and also gave evidence that she has communicated with other individuals in Ontario who have experienced health effects from living in proximity to wind turbines. Ms. Morris testified to the World Health Organization's definition of health as a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity, and referenced several documents pointing to the conclusion that the audible presence of wind turbines will cause annoyance in certain individuals.

Carol Hopkins-Engberts

12 Carol Hopkins-Engberts testified on behalf of herself and her husband Gerhard Hopkins-Engberts. They live near the location of the Project and operate a farming business there. Four turbines will be located within 900 m of the Hopkins-Engberts property, and a further three turbines will be located within 1500 m. Ms. Hopkins-Engberts stated their concerns about the Project in terms of noise, environmental issues regarding birds, bats, insects, deer and other wildlife, land use, safety, and potential impacts of the Project on views from their home, and on the future sale of their property. Ms. Hopkins-Engberts expressed her concern and that of her husband, that "low-grade noise is a source of stress" and that the Project's turbines could possibly cause illness related to lack of sleep.

Keith McKay and Michelle Poulin

13 Keith McKay and Michelle Poulin provided a joint witness statement and gave oral testimony together. Their home is located in the vicinity of the Project, with turbines to be located to the east, west, and south of their property. They stated their concerns about the Project in terms of the negative effects on their personal health, and the impact of radar interference on air traffic, public safety and their own personal safety during takeoff and landing at the nearby Curries Aerodrome, where Mr. McKay hangars his plane and uses the runways for takeoff and landings. Attached to the Poulin/McKay witness statement is a letter from Paul A. Hayes, President of Aerocan Aviation Specialists Inc. to George Rand, owner of Curries Aerodrome. Mr. Hayes had recommended "a safety setback zone of 4 km from the ends of an aerodrome runway, and 2.5 km laterally from each side of the runway". The document was included as having informed Ms. Poulin and Mr. McKay's opinions but not was not admitted for the truth of its contents.

14 Ms. Poulin and Mr. McKay testified to their concerns about adverse health effects caused by noise from wind turbines, saying in their joint witness statement, "infrasound emitted by turbines has negative effects on the mechanism of inner ear function which controls equilibrium", and "regular frequency audible noise is an irritant which negatively impacts health".

George Rand

15 George Rand lives in the vicinity of the proposed Project and is the owner and operator of Curries Aerodrome, which has two airstrips. His main concern is air safety, for himself and for the general public using the airspace near the Project turbines. Mr. Rand also farms approximately 1100 acres spread throughout Norwich Township and in the past has conducted seed and fertilizer application by air. He states that these farming methods are in jeopardy now, stating that he has spoken with pilots who refuse to fly in areas where turbines are located. Mr. Rand testified that Curries Aerodrome is a registered Aerodrome, but it is not a certified airport. He confirmed that he is aware that, on occasion, some pilots will use his airstrips without notifying him in advance, and that he has given a generalized permission to flying clubs in the area and others, to use the strips. He also testified that he was unaware of Condition N in the REA that specifically requires development of any mitigation measures that may be required for the Curries Aerodrome.

Karen Wesseling

16 Karen Wesseling and her family live adjacent to the Project site and operate a dairy farm. Turbine 4 will be located approximately 86 m from her property line. Ms. Wesseling expressed concern about not being able to use a walking path located on her property, due to its proximity to one of the Project's turbines. She also expressed concern about the health and safety

of her family and farm employees due to the possibility that debris or ice may be thrown from the nearest proposed turbine onto her property.

17 Ms. Wesseling's main concern is for the health of the cows on the property due to potential negative effects caused by the Project from stray voltage. Ms. Wesseling testified as to what she had been told by her veterinarian about negative impacts on cows near other wind projects. Ms. Wesseling testified in cross-examination that she did not know whether stray voltage will occur on her property as a result of the configuration of the turbines, and she confirmed that the buried electrical cable does not travel under her property.

18 Ms. Wesseling also testified regarding her concern that shadow flicker will be a source of annoyance and create a safety risk for her husband and others working in and around her family's milking barn.

William Palmer

19 William Palmer is a professional engineer who retired from Bruce Power in 2004. Since retiring, Mr. Palmer has conducted research into public safety and acoustics, and has written and presented a number of technical papers at conferences. On consent of the parties, he was qualified by the Tribunal as a professional engineer with expertise in public safety risks due to turbine failure and some experience in the acoustics of wind turbines. Mr. Palmer's testimony focussed on turbine safety issues, including blade throw, turbine collapse, fires, and ice throw. He also testified regarding amplitude modulation created by turbines and its possible contribution to annoyance. In this respect, he cited a number of papers in support of this proposition, such as the Council of Canadian Academies report and the Health Canada study with regards to annoyance from wind turbine noise and health.

20 In its final submissions, the Appellant summarizes Mr. Palmer's evidence on the effects of noise from wind turbines on human health as follows:

> He testified that wind turbine noise annoyance was found to be statistically related to several self-reported health effects including, but not limited to blood pressure, migraines, tinnitus, dizziness and perceived stress. While not an expert in health, Mr. Palmer factored available information into forming his opinion about the public safety risks created by wind turbines.

21 Mr. Palmer's testimony regarding safety concerns related to the Project was that nearby non-participating properties would be susceptible to debris, ice throw and tower collapse due to their proximity to the Project turbines. In his witness statement he referenced a table that he had compiled of turbine failure incidents in the last five years, and based on this table he estimated that the rate of failure is 0.0006 turbine failures per year in Ontario. In cross-examination, he corrected this to a failure rate of 0.0005. Mr. Palmer estimated that the probability is one in ten that a neighbour will be impacted by turbine failure within the 20 year Project life. Mr. Palmer confirmed in cross-examination, that he has not done an assessment of the probability that a person would be in the vicinity of a turbine when it failed and explained that his assessment assumed that there would be someone at the location of the turbine failure when the failure occurred, which he described as a deterministic risk assessment.

22 Mr. Palmer also raised the issue of turbine fires and questioned the capacity of local fire services to effectively deal with a fire should one occur.

Evidence of the Approval Holder

Overview

23 The Approval Holder called five expert witnesses: Terrance F. Kelly, Dr. Jim Salmon, Dr. Dariush Faghani, Dr. Christopher Ollson, and Dr. Robert McCunney. The Approval Holder also called two lay witnesses: Rochelle Rumney and Juan Anderson.

Terrance F. Kelly

24 Terrance F. Kelly testified that he has been a pilot since 1974 and has held positions in the aviation safety field for approximately 35 years. He is a former employee of Transport Canada, the Canadian Aviation Safety Board, and of NAV Canada.

Mr. Kelly was qualified by the Tribunal to provide expert opinion evidence in the field of aviation safety risk management including the proactive identification of aviation hazards and the development of mitigation strategies. The focus of his evidence was on the impacts of the Project on aviation safety.

25 Mr. Kelly expressed his opinion that:

> provided pilots operate their aircraft in accordance with Transport Canada regulations and standards, and supplementary procedures that will be developed and implemented in accordance with Condition N1 of the REA — the future safety risks to aircraft operating at or in the vicinity of the Curries Aerodrome will be effectively mitigated.

26 Mr. Kelly addressed the witnesses' concerns that turbines will be obstacles to aircraft operating at or in the vicinity of the aerodrome; generate turbulent air; affect the safety of Ornge (air ambulance) operations; impact radar services provided by NAV Canada; and induce vertigo in pilots caused by 'shadow flicker'.

27 With regard to concerns about wind turbines being obstacles to aircraft operating at or in the vicinity of the aerodrome, Mr. Kelly's evidence was that:

> (i) The Canadian Aviation Regulations (CARs) direct and govern the safe operation of aircraft in the presence of obstacles such as wind turbines;
>
> (ii) Prevailing winds will cause most flight operations to take place in directions away from the turbines;
>
> (iii) Pilots will be aware of the location of the turbines because of information depicted on or contained within air navigation maps and charts, Notices To Airmen and the Canadian Flight Supplement;
>
> (iv) Customized procedures for operating at the Curries Aerodrome will be published in the CFS, and conveyed to local pilots and organizations who regularly operate from or in the vicinity of the aerodrome; and
>
> (v) Itinerant and other pilots will be advised of locally developed procedures when they seek permission to use the aerodrome.

28 Regarding the concern that Project turbines will generate turbulent air, Mr. Kelly stated that he was not an expert in "turbulent air generated by wind turbines", but was of the opinion that the concerns will be addressed because:

> (i) Turbulence generated by Turbines 6 through 10 will occur at locations and altitudes at which aircraft do not normally operate;
>
> (ii) Prevailing winds will cause turbulent air generated by Turbines 1 through 5 to exist at locations and altitudes at which aircraft do not normally operate;
>
> (iii) Northerly winds will not be sufficiently strong to cause turbulent air generated by T1, T2 and T3 to be found in the vicinity of the runways;
>
> (iv) Mitigation strategies can be developed to help detect and avoid turbine generated turbulent air; and
>
> (v) On those few occasions when strong easterly winds could cause turbulence from T4 and T5 in the vicinity of runway 09, the runways will not normally be usable, and the conditions will normally be forecast, and mitigated.

29 In response to the concern that Project turbines could affect the safety of Ornge operations, Mr. Kelly's opinion was that modern navigational aids make it easy for all pilots to know precisely their position in relation to every wind turbine in Ontario, and thus navigate accordingly, and that the pilots of Ornge helicopters operating to and from the Woodstock General Hospital will manage the hazards and risks relating to the wind turbines that make up the Project.

30 Mr. Kelly also responded to concerns regarding the Project's impact on radar services provided by NAV Canada. He stated that the NAV Canada contract with the Approval Holder, signed in February 2015, describes a relatively standard mitigation strategy that NAV Canada employs to negate the effect of the turbines on radar facilities such as those at London and Hamilton. He stated that it was important to note that NAV Canada did not cite safety concerns in its correspondence with the proponent in 2014, or in its contract with Prowind in 2015.

31 Mr. Kelly confirmed that he was not an expert in shadow flicker but was of the opinion that "research and evidence related to shadow flicker suggests that shadow flicker may occur infrequently — if ever — during takeoff and landing at the Curries Aerodrome, and in the rare case where it did exist, a pilot would experience very few changes in light intensity when passing through the area.

Dr. Jim Salmon

32 Dr. Jim Salmon is the President of Zephyr North, a wind energy consulting company. He has completed 30 to 40 noise assessments of wind projects in the last five to six years, and previously completed wind resource assessments for the Meteorological Service of Canada (previously Atmospheric Environment Service), a service of Environment Canada. Dr. Salmon was qualified by the Tribunal to provide expert opinion evidence with respect to wind resources assessment including wind farm design, energy production, shadow flicker, and noise assessment. The focus of his evidence was on the noise expected to be generated by the Project.

33 Dr. Salmon expressed his opinion that Mr. Palmer's concerns with respect to noise assessment are generally irrelevant with regard to amplitude modulation. Dr. Salmon stated in response to many of the paragraphs contained in the witness statement of Mr. Palmer, that there is no requirement "in Ontario O. Reg.359/09 and amendments, Ontario MOECC Guidelines for Wind Farms (2008), or the ISO 9613-2 Standard to consider "amplitude modulation" in noise assessments."

34 In response to the McKay/Poulin evidence, Dr. Salmon testified that: their residence is located 1048 m from the nearest project turbine (T3); the estimated cumulative sound pressure level at this site is 34.3 dBA; and this level is 5.7 dB below the 40 dBA level mandated by the MOECC. Regarding the Hopkins-Engberts property, he testified that, the estimated cumulative sound pressure level at this site is 38.1 dBA, which is 1.9 dB below the 40 dBA level.

Dr. Dariush Faghani

35 Dr. Dariush Faghani is a Senior Engineer in Development and Engineering Services at DNV GL, where he has been employed since 2006. His work involves the design, configuration, and optimization of wind farms. Dr. Faghani has worked on a dozen ice throw, shadow flicker, and/or overall risk assessments for wind farms. He was qualified by the Tribunal to provide expert opinion evidence with respect to public safety risks associated with wind turbines, and testified in respect of shadow flicker, turbine fires, ice throw, and debris and blade failure.

36 Dr. Faghani responded to Mr. Palmer's evidence regarding safety concerns. With respect to ice throw, he referred to a letter from the wind turbine supplier Senvion, which indicates that the radius around a turbine where ice might fall is 290 m. Dr. Faghani testified that beyond 290 m the risk of ice throw is "negligible". He also testified that the turbines to be used in the Project are equipped with a blade icing detection system and an automated shutdown mode, which are designed to reduce the chance of ice build-up and of ice being thrown by the blades. Dr. Faghani also testified that the risk of blade failure or tower collapse is very low.

37 Dr. Faghani responded to Ms. Wesseling's concern regarding shadow flicker. He testified that there are no local or Canadian regulations on shadow flicker, and that noise receptor setbacks typically mitigate the risk of shadow flicker annoyance. He further testified that the estimated annual shadow flicker calculated for Ms. Wesseling's residence is low.

38 Dr. Faghani also expressed his opinion that the risk that a fire may occur in this Project is low. However, he agreed under cross-examination that he could not say the extent of harm that might result should a fire occur.

Dr. Christopher Ollson

39 Dr. Christopher Ollson is the Vice President, Strategic Development, and Senior Environmental Health Scientist at Intrinsik Environmental Sciences Inc. Dr. Ollson holds Bachelor of Science, Master of Science, and Doctorate of Philosophy, Environmental Science degrees, and teaches at the Royal Military College of Canada and the University of Toronto. He was retained by the Approval Holder in 2012 to provide expertise and information on the current scientific and government literature related to wind turbines and health matters. Dr. Ollson was qualified by the Tribunal to provide expert opinion evidence in the field of environmental health science as it relates to windfarms. The focus of his evidence was on shadow flicker, stray voltage, and potential health impacts of the Project. Dr. Ollson's evidence on the health effects of wind turbines was unequivocal, and he concurred with Dr. McCunney in concluding that the Project would not cause serious harm to human health.

40 Dr. Ollson responded to the concerns expressed by the Appellant's witnesses respecting stray voltage, stating that the potential for stray voltage to affect livestock health can be prevented through adequate design, and that in his opinion, the operation of the Project in accordance with its REA will not result in serious or irreversible harm to livestock.

41 Regarding concerns expressed respecting shadow flicker, Dr. Ollson testified that the frequency of the flickering should not cause a significant risk to health, and that he is not aware of any such issues from a health and safety perspective.

Dr. Robert McCunney

42 Dr. Robert McCunney is a medical doctor, board certified in occupational and environmental medicine, a research scientist at the Massachusetts Institute of Technology, a staff physician in occupational/environmental medicine at Brigham and Women's Hospital in Boston, and a co-author of a recent review of the peer-reviewed scientific literature with respect to wind turbines and human health. He is also lead author of an article published in the Journal of Occupational and Environmental Medicine, entitled "Wind Turbines and Health: A Critical Review of the Scientific Literature." He was qualified by the Tribunal to give expert opinion evidence as a medical doctor specializing in occupational and environmental medicine with particular expertise in health implications of noise exposure. The focus of his evidence was with respect to the potential health implications of the Project. Dr. McCunney's overall conclusion was that the Project operating in accordance with the REA will not cause harm to human health.

43 Regarding the concerns about shadow flicker from the Project affecting human health, Dr. McCunney testified that the major concern has to do with whether shadow flicker could trigger photosensitive epilepsy. He testified that, at the speed at which modern turbines rotate, this is not a concern.

44 In response to Ms. Morris' evidence, Dr. McCunney testified that the World Health Organization definition of health is a hypothetical ideal which is not used by physicians because it is so broad as to have no useful diagnostic application.

45 Dr. McCunney contradicted the evidence of Mr. Palmer with respect to several of the documents provided by Mr. Palmer to support his proposition that the Project's wind turbines could cause harm to human health through annoyance. Regarding the Health Canada Summary of Results, Dr. McCunney noted that it expressly indicates that the study should only be considered final following peer review and publication in the scientific literature, and that the authors of the summary were explicit that it did not permit any conclusions about causality. With respect to the Council of Canadian Academies study, his opinion was that while the evidence supports an association between wind turbine noise and annoyance, it does not support causation. Dr. McCunney also testified that annoyance is not an adverse health effect recognized by the international medical community, and not recognized in the International Classification of Diseases. He described annoyance as an "outcome measure" that has been used for many decades in the context of environmental noise regardless of the noise source, (highways, airports, construction, etc.) but not as a health effect.

Rochelle Rumney

46 Rochelle Rumney is the Environmental Coordinator at Prowind Canada Inc., and has been working in the wind energy industry since 2007. Gunn's Hill Wind Farm has been the primary focus of her work since mid-2012 and she is primarily responsible for environmental application preparation, including environmental permitting and managing environmental field work. Ms. Rumney testified as to her involvement in the design of the Project and the REA application process.

Juan Anderson

47 Juan Anderson is Vice President, Director and Secretary of Prowind Canada Inc., which is a limited partner in Gunn's Hill LP. Mr. Anderson has worked on 10 wind projects that are now in operation or construction in seven Canadian provinces. He oversaw the submission of the application for the REA that is under appeal, and worked on the preparation of the application from its inception in 2009. He testified regarding his involvement in the design of the Project and the REA application process.

48 Mr. Anderson also provided additional evidence on the issue of fire safety, confirming that the nearest fire hall to the Project is located between 1 and 3.2 kilometres ("km") from every entrance to the turbine access roads, with the closest being 800 m from the fire hall.

49 In response to the concerns raised by Mr. Rand, Ms. Poulin and Mr. McKay regarding air safety, Mr. Anderson provided evidence in his witness statement that the Approval Holder designed a Project turbine layout that:

> a. Allowed significant separation distance from turbines to the ends of runways (1.5 km from T3 to end of runway 35, 1.8 km from T1 to end of runway 35) to allow sufficient space for a pilot who is not comfortable with flying above or between turbines to make a slight turn to avoid them all together;
>
> b. Provided for optional use of a common right-hand approach circuit where desired so that each runway has an approach option that does not involve flying directly above turbines, should a pilot be uncomfortable with this permitted procedure of flying over obstacles;
>
> c. Allowed sufficient separation distance between T1 and T2/T3 to allow for flying between the turbines on takeoff/approach to runways 17/35 should it be deemed desirable or necessary;
>
> d. Allowed sufficient lateral separation of turbines T5, T8, and T9 from the runway 09/27 centre line to allow for unimpeded use of that runway.

Evidence of the Director

Denton Miller

50 Denton Miller is a Senior Review Engineer with MOECC's Environmental Assessment Branch, Renewable Energy Assessment Section, and has been employed by MOECC since 1991. He has reviewed over 800 applications involving various industrial sectors, including approximately 40 wind energy generation projects. Mr. Miller was qualified by the Tribunal as a noise engineer with specific expertise in the MOECC's Noise Guidelines and Compliance Protocols for Wind Turbines. His evidence focused on the noise implications of the Project.

51 In responding to Mr. Palmer's position with respect to amplitude modulation, that New Zealand imposes a penalty for amplitude modulation but Ontario does not, but should, Mr. Miller explained that the New Zealand standard imposes a 6 dB penalty where special audible characteristics of wind turbine sound are experienced. However, he said, this penalty is not applied in calculating predicted noise levels, but is applied when the project is in the operational stage and these characteristics are observed. Mr. Miller further explained that no jurisdiction currently requires a penalty for amplitude modulation in predicting noise levels, that this phenomenon happens very infrequently (about 0.25 percent of the time), and that if this phenomenon occurs, audits would be able to identify it, and the MOECC could impose a penalty if necessary.

52 Mr. Miller also responded to Mr. Palmer's comments regarding MOECC standard NPC-104, explaining that while NPC-104 requires proponents to account for beating or other amplitude modulation, this is not required by the Wind Turbine Noise Guidelines. He explained that an adjustment for special quality of sound in NPC-104 is typically not used for modelling, but rather for compliance purposes and that thumping sounds are not expected to occur in this Project as they are associated with older models of downwind turbines, not with the type that will be used in this Project.

Michael Lucking

53 Michael Lucking is the Technical Team Lead, Civil Aviation Safety Operations, Specialties, for Transport Canada, Civil Aviation — Ontario Region. In his previous position with Transport Canada he was an Aerodromes and Air Navigation Inspector for 7.5 years. Mr. Lucking was qualified by the Tribunal as an expert in civil aviation safety, with special expertise in aerodromes and air navigation. He testified with respect to the impacts of the Project on aviation safety.

54 Mr. Lucking testified that the Curries Aerodrome is not classified as an airport, and, therefore, is not subject to the strict regulations and standards applicable. He explained that the Curries Aerodrome is day use only in visual flight rules conditions and pilots are required to get prior permission to use the aerodrome. He further explained that pilots are responsible to contact the aerodrome operator for current conditions and ensure it is suitable for their intended flight. He stated that there are many aerodromes in Canada where obstacles, including wind farms, are located in close proximity, and that these obstacles are assessed to determine if they are a hazard to air navigation and if they require marking and lighting in accordance with the Canadian Aviation Regulations.

55 Mr. Lucking noted that the MOECC submitted a request to Transport Canada to review an assessment of the Curries Aerodrome, which was prepared on behalf of the Approval Holder and submitted in support of its application for the REA. Mr. Lucking stated that Transport Canada agreed with the assessment's recommendations for lighting and marking of eight wind turbines. He further observed that, recognizing that standard operating procedures are for left-hand circuits, Transport Canada also indicated that should the aerodrome operator request right-hand circuits as further mitigation to the proximity of the turbines, then Transport Canada would certainly consider authorizing them. He expressed his opinion that these mitigating measures as well as publication of the obstacles provide an effective means of indicating the presence of objects likely to present a hazard to aviation safety so that they may be visually detected and avoided by pilots of aircraft. He further stated that based on the above, Transport Canada advised that it has no concerns regarding the proposed wind farm and recommended that consultation with the aerodrome operator should proceed.

Evidence of the Presenter, the Township of Norwich

56 Wayne Buchanan made a presentation on behalf of the Township of Norwich. Mr. Buchanan's written and oral presentations focused on the Township of Norwich's past and ongoing objections to the Project. He provided the Tribunal with a copy of three letters:

- a letter dated October 14, 2011 to then Premier Dalton McGuinty, requesting a moratorium on industrial wind turbine projects until additional health studies are completed;
- a letter, dated September 27, 2012, to the Approval Holder requesting postponement of any development until noise and health studies are available; and
- a letter, dated April 15, 2013, to Premier Kathleen Wynne advising of the Township of Norwich's declaration, in 2011, that it is an unwilling host of industrial wind turbines.

Submissions of the Appellant

57 The Appellant relies on the evidence of its witnesses, and submits that this evidence established that the Project will cause harmful health effects which include:

> ...sleep disturbance, headache, tinnitus, ear pressure, dizziness, vertigo, nausea, visual blurring, tachycardia, irritability, problems with concentration, memory and panic episodes associated with sensations of internal pulsation or quivering when awake or asleep, excessive tiredness, loss of quality of life and the further impacts that these effects can lead to, these being increased morbidity and significant chronic disease and health effects.

58 The Appellant, acknowledging that it has the onus of proving on a balance of probabilities that engaging in the Project in accordance with the REA will cause serious harm to human health, submits that an application of the facts to the law in this instance clearly dictates a finding of serious harm to human health. The Appellant submits that as such, it has led sufficient evidence to meet its onus, and, therefore, the REA should be revoked.

Submissions of the Director

59 The Director submits that none of the testimony of the Appellant's witnesses was supported by expert medical evidence to speak directly to the Health Test. The Director further submits that the Appellant has failed to prove on a balance of probabilities that engaging in the Project in accordance with the REA will cause the harm it alleges, and at its highest, the Appellant's evidence establishes that the Project may result in harm, not that it will result in harm, as is the Appellant's burden of proof under the *EPA*.

60 Finally, the Director submits that the expert evidence called by the Director and Approval Holder responds to all of the Appellant witnesses' concerns, and establishes that the Project will not result in serious harm to human health. Accordingly, the Director submits that the Tribunal should dismiss the appeal and confirm the decision of the Director to issue the REA.

Submissions of the Approval Holder

61 The Approval Holder submits that the Appellant has fallen far short of meeting its onus of proving on a balance of probabilities that proceeding with the Project in accordance with the REA will cause serious harm to human health. The Approval Holder further submits that "neither the expert evidence, nor the evidence of the fact witnesses establishes that the Project will result in any harm, much less serious harm, to health", and "the Appellant has not presented any evidence from a qualified medical professional to link any of the expressions of concerns with the Health Test".

62 The Approval Holder asks that the Tribunal confirm the decision of the Director to issue the REA, and dismiss the appeal.

Findings on Issue 1

63 The Appellant relies primarily on the testimony of Ms. Morris, Ms. Hopkins-Engberts, Ms. Poulin, Mr. McKay, and Mr. Palmer to support its position that noise from the Project will cause serious harm to human health. However, as noted by the Director and Approval Holder, with the exception of the evidence of Mr. Palmer, the Appellant has provided no expert opinion evidence to support the opinions expressed by its lay witnesses. The Tribunal clearly indicated that it would only accept these opinions as an expression of the witnesses' views, and would only accept the scientific/technical papers filed by them, as information which describes and informs their views. The Tribunal notes that all of the views and expressions of concerns expressed by the Appellant's witnesses in respect of the Health Test pertain to matters requiring expert or technical expertise. As no such supporting opinion evidence has been adduced by the Appellant, the Tribunal cannot rely on the lay opinions to make a finding of causation in respect of the health effects of noise and finds that the evidence adduced by Appellant's lay witnesses, at best, only rises to the level of an expression of concern.

64 The remaining evidence on which the Appellant relies, is the opinion evidence of Mr. Palmer. Most of Mr. Palmer's opinion evidence in this proceeding is similar to the opinion evidence he has given in previous proceedings, in particular, *Mothers Against Wind Turbines Inc. v. Ontario (Director, Ministry of the Environment and Climate Change)*, [2015] O.E.R.T.D. No. 19 (Ont. Environmental Review Trib.) ("*MAWT*"). In *MAWT*, the Tribunal provided specific analysis and findings respecting Mr. Palmer's evidence, as set out in paras. 229 to 235. The Tribunal finds that the analysis and findings in *MAWT*, apply equally in this case.

65 Although Mr. Palmer also raised the issue of turbine fires and questioned the capacity of local fire services to effectively deal with a fire should one occur, he provided no evidence to indicate the likelihood that such a fire will occur, and if so, the likelihood that it would result in injury. Therefore, the Tribunal finds that his evidence, again, raises only a concern, which falls short of establishing that the Health Test has been met.

66 In addition to his evidence respecting public safety risks, Mr. Palmer also testified respecting noise issues. His evidence refers to his views regarding deficiencies in the noise assessment submitted to the MOECC in support of the Approval Holder's application for the REA. However, the Tribunal notes that Mr. Palmer did not conduct his own modelling assessment. Instead, he referred to published papers by other authors. The problem with this evidence is that it does not address an evaluation of the noise levels to be produced by the wind turbines approved for *this* Project. He expresses his opinion that the noise assessment submitted by the Approval Holder under-estimates the noise levels that will be generated by the Project's wind turbines. However, the Health Test requires that the Tribunal consider only whether engaging in the Project, *in accordance with the REA*, will cause serious harm to human health. The REA includes a condition, generally referred to as the 40 dBA limit, which imposes limits on noise immissions, i.e. the permitted noise levels at a receptor. In previous decisions, the Tribunal has consistently found that the Health Test requires that an appellant must establish that serious harm to human health will be caused by noise immission levels at or below the 40 dBA limit, which is a requirement of the REA. The Tribunal finds that Mr. Palmer's evidence does not address this requirement. His evidence, if accepted, could only establish that noise immission levels would exceed 40dBA, which is not permitted under the conditions of the REA.

67 The Tribunal notes that Mr. Palmer's evidence does include reference to amplitude modulation which is not expressly governed by a condition in the REA. However, his evidence only includes discussion of papers on amplitude modulation, and his assertions that these papers indicate amplitude modulation explains why people find wind turbine noise particularly annoying. Even if Mr. Palmer's evidence respecting amplitude modulation and annoyance were to be accepted by the Tribunal, Mr. Palmer has clearly acknowledged that he is not a health expert, and this aspect of his evidence cannot be given the weight that could be ascribed to expert evidence. In his evidence, he refers only to the Health Canada Study, asserting that its findings support a *potential* link between long term annoyance and health. The Tribunal finds that, despite his reference to amplitude modulation as a mechanism whereby harm to human health could occur, there is nothing in his evidence to confirm that harm to human health *will* occur. Consequently, the Tribunal finds that his evidence falls short of establishing that the Health Test has been met.

68 With respect to the evidence of the Appellant's witnesses regarding the Project's potential impact on the safe operation of the Curries aerodrome, and the impact of wind turbines on radar services provided by NAV Canada, the Tribunal notes, again, that none of the Appellant's witnesses who testified respecting these issues were qualified to give opinion evidence. As such, the opinions they expressed rise only to the level of statements of concern. The Tribunal finds that their evidence did not undermine the evidence of Mr. Kelly and Mr. Lucking.

69 Regarding Mr. Buchanan's testimony on behalf of the presenter, the Township of Norwich, his testimony includes only a statement of the Township's position on the issues raised in this appeal, as well as the Township's agreement with the material facts set out in the Appellant's Notice of Appeal. As such, his testimony did not provide any probative evidence for the Tribunal to consider.

70 In determining whether the Health Test has been met, the Tribunal must also consider the evidence of the Director and the Approval Holder. In this case, the Tribunal notes that the expert evidence of the Director's and Approval Holder's witnesses directly contradict the assertions made by the Appellant's lay witnesses and Mr. Palmer.

71 In summary, in considering the totality of the evidence, the Tribunal finds that the Appellant's evidence, at best, rises only to the level of expressions of concern that harm could occur.

Conclusion on Issue 1

72 Based on the above analyses and findings in respect of Issue 1, the Tribunal finds that, in the circumstances of this case, the Appellant has failed to establish, on a balance of probabilities, that the Health Test has been met.

Issue 2: Whether engaging in the Project in accordance with the REA will cause serious and irreversible harm to plant life, animal life or the natural environment.

Discussion, Analysis and Findings

Evidence of the Appellant

John Eacott

73 Mr. Eacott testified that he has lived for some 40 years in the area where the Project will be situated. Mr. Eacott states that he is intimately familiar with the natural life of the area. He testified that he has planted endangered species of trees and created an amphibian pond on his property.

74 Mr. Eacott expressed his view respecting the anticipated rate at which wind turbines across Ontario are expected to kill birds, raptors and bats. He indicated that, to the best of his knowledge, the MOECC is ignoring the cumulative effect of these deaths on those affected species. He extrapolated the anticipated kill rate for his estimate of 7000 wind turbines proposed or existing in Ontario, expressing the view that in 20 years, renewable energy projects will kill some 1,400,000 bats and 2,000,000 birds.

75 Mr. Eacott expressed his view that the methodologies employed by those hired to carry out the studies for the Project are conflicting and inadequately detailed to provide for the protection of any endangered species. He stated that while there are two examples of endangered raptors given, he asserts that no mention is made of other birds on the list which are known to nest within the designated area of study, notably, Barn Swallow, and Eastern Meadowlark. He maintained that inadequate study and protective measures will leave species at risk vulnerable to serious harm from the Project construction and operation, asserting that Project plans have not accounted for their habitat and natural environment.

76 In cross-examination, Mr. Eacott stated that he could not say for sure whether he had reviewed the Species at Risk report prepared for the Project, and is not familiar with O. Reg. 359/09 or the MOECC's Natural Heritage Assessment Guide for Renewable Energy Projects.

77 Mr. Eacott confirmed that he did not have the benefit of reviewing the confidential Species at Risk report, but that he is very concerned that Barn Swallows, an endangered species, thrive in the area. He indicated that he has no confidence in the measures proposed by the Approval Holder to monitor the presence of this bird. As such, he expressed his view that it is quite likely that the destruction of Barn Swallows or their habitat will cause serious and irreversible harm to animal life.

78 Mr. Eacott also expressed his view that the alignment of the Project turbines will act like a screen that filters animal life coming and going from nearby wetlands. He expressed his concern that this screen will, in effect, kill animal life, including Canada Geese and Monarch Butterflies.

79 Mr. Eacott expressed his concern for a maternal colony of Little Brown Bat (an endangered species) which he stated exists within the Project area, but has remained unidentified because of the limitations in what the Approval Holder is required to include in its studies.

Ms. Morris and Ms. Wesseling

80 Both Ms. Morris and Ms. Wesseling referred to the effects of stray voltage or low level sound on cattle, attaching to their witness statements, articles which inform their views. Ms. Wesseling summarized their concerns as follows: "In summary, given the effects known to have occurred in the vicinity of operating wind turbine projects, lack of adequate safeguards, and the proximity of this project to homes and livestock, including ours, there is overwhelming evidence of the serious harm to human and animal health this project poses."

Evidence of the Director

81 The Director called no witnesses in respect of the Environmental Test.

Evidence of the Approval Holder

David Charlton

82 David Charlton is a Senior Principal, Environmental Management at Stantec, and certified as a Professional Agrologist. He has participated in environmental assessments for many proposed wind energy generating facilities across Ontario and has helped develop, implement, and monitor mitigation measures to minimize environmental impacts of wind power projects. Mr. Charlton was qualified by the Tribunal to provide expert opinion evidence as an ecologist with expertise in conducting environmental assessments including natural heritage assessments and species at risk assessments for wind energy projects.

83 In reviewing the evidence of Ms. Morris and Ms. Wesseling, Mr. Charlton expressed his opinion that they cite no evidence in support of their assertions. He noted that "much of the material presented by the appellants is not scientific peer reviewed papers and relates to anecdotal concerns with "stray voltage" or uncontrolled electricity...", and stated that he has "not seen any independent evidence that wind farm projects contribute to the on farm problem anymore than the rest of Ontario's electrical system, or that the problem could be considered 'serious and irreversible harm to animal life'."

84 Respecting Mr. Eacott's concerns that the natural environment studies completed for the Project were inadequate, Mr. Charlton disagreed, stating the Ministry of Natural Resources and Forestry ("MNRF") has confirmed that the Natural Heritage Assessment and Environmental Impact Studies:

> were conducted using procedures, methods and criteria established by, or accepted by, the MNRF. These measures are designed to ensure an acceptable standard of due diligence and consistency in planning for the protection of the natural environment during turbine location and impact mitigation.

85 Mr. Charlton further noted that Mr. Eacott's concerns regarding "study and protective measures" for species at risk are dealt with in the Species at Risk report, which includes the results of field studies and mitigation measures targeted specifically at Barn Swallow, Bobolink and Eastern Meadowlark. He noted that the Species at Risk report was accepted by the MNRF on June 10, 2014 and includes measures to prevent harm to individuals or habitat for Species at Risk.

86 Mr. Charlton emphasized that conditions I and J of the REA establish a complete range of natural environment thresholds and mitigation requirements to be implemented through a comprehensive monitoring program and regular reporting to the MNRF.

87 Regarding the Little Brown Bat, Mr. Charleton stated that, in his experience, the documentation in Ontario from multiple wind farms supports the ongoing position of the MNRF that the mortality rates of birds and bats is relatively low compared to other population pressures and can be controlled to stay below established mortality thresholds. Mr. Charleton responded to Carol Hopkins-Engbert's statement that there is "Documented proof of the destruction of birds, bats and insects that would be disseminated by the intrusion of the turbines." He stated that this does not reflect the way in which the rigorous post-construction mortality monitoring, mandated by the conditions of the REA, prevent serious harm to animal life, specifically birds and bats.

88 Mr. Charlton stated in cross-examination that he was aware that there are individuals of this species within the Project location, and expressed his opinion that, although some bat mortalities will occur, serious harm to this species will not occur, and would not be irreversible, considering the monitoring and mitigation measures required by the conditions of the REA. He also confirmed that a permit in respect of the Little Brown Bat is required under *Endangered Species Act, 2007*, S.O. 2007, c. 6 ("*ESA*") but he was unsure of how far the Approval Holder's permit application process had progressed in this regard.

Submissions of the Appellant

89 The Appellant relies on the evidence of Mr. Eacott, in submitting that the Environmental Test has been met. The Appellant maintains that there is no question Little Brown Bats live in the area, noting that the Approval Holder's expert, Mr. Charlton is

also of the opinion the Project will kill bats. The Appellant relies on Mr. Eacott's contention that those deaths alone are sufficient to meet the threshold for serious and irreversible harm to animal life.

90 The Appellant also asserts that the Project poses an immediate threat to certain species and also represents a cog in a province-wide mechanism that will bring certain species to the tipping point towards extinction from which it is impossible to recover.

91 The Appellant cites *Monture v. Ontario (Director, Ministry of the Environment)* (2012), 68 C.E.L.R. (3d) 191 (Ont. Environmental Review Trib.), in support of its assertions that: (i) the Environmental Test does not require a consideration of the harm caused to the sustainability of the plant population, animal population or the natural environment or the level of sustainability of a population; and (ii) although a single mortality does not automatically satisfy the Environmental Test, this does not preclude that a single mortality could, in some circumstances, meet this Test.

Submissions of the Director

92 The Director maintains that Mr. Eacott's evidence amounts to expressions of concern about the Project, and that his evidence is not supported by expert environmental evidence that speak directly to the Environmental Test. As such, the Director submits that the Appellant has failed to prove, on a balance of probabilities, that engaging in the Project in accordance with the REA will cause the environmental harm it alleges. The Director further submits that, at its highest, the Appellant's evidence establishes that the Project may result in harm, not that it will result in harm, the latter being the Appellant's burden of proof under the *EPA*.

93 The Director submits that the expert evidence called by the Approval Holder is extensive and responds to all of the Appellant witnesses' concerns and establishes that the Project will not result in serious and irreversible harm to plant life, animal life or the natural environment.

Submissions of the Approval Holder

94 The Approval Holder's submissions are essentially the same as the submissions of the Director.

Findings on Issue 2

95 As the Director and Approval Holder have correctly pointed out, the Appellant has adduced no expert opinion evidence to support the opinions advanced by its lay witnesses. As the Tribunal has already stated in its findings respecting the Health Test, the Tribunal clearly indicated that it would only accept the opinions expressed by lay witnesses as an expression of their views, and would only accept the scientific/technical papers filed by them, as information which describes and informs their views. The Tribunal notes that many of the views and expressions of concerns expressed by the Appellant's witnesses in respect of the Environmental Test pertain to matters requiring expert or technical expertise. No such supporting opinion evidence has been adduced by the Appellant. Furthermore, the relevant factual evidence that has been adduced by the Appellant' witnesses in this proceeding is limited, and in and of itself, is insufficient to establish that the Environmental Test has been met. For these reasons, the Tribunal finds that the evidence adduced by the Appellant's witnesses, at best, only rises to the level of an expression of concern. In this proceeding, the Tribunal must also consider the evidence of the Approval Holder's witness, which contradicts the assertions made by the Appellant's witnesses. The Tribunal finds that, having considered all of the opinion and factual evidence adduced in this proceeding, the Appellant has not established, on a balance of probabilities, that the Environmental Test has been met.

Conclusion on Issue 2

96 Based on the above analysis and findings in respect of Issue 2, the Tribunal finds that, in the circumstances of this case, the Appellant has failed to establish, on a balance of probabilities, that the Environmental Test has been met.

Issue 3: Should the Tribunal grant the Approval Holder's motion to dismiss the Appellant's appeal on the basis that the Appellant has failed to establish a prima facie case.

Introduction

97 After the Appellant had completed calling its witnesses, and the Township of Norwich had given its presentation, and before the Approval Holder and the Director called their witnesses, the Approval Holder, by way of motion, requested that the Tribunal dismiss the Appellant's appeal on the grounds that the Appellant had failed to establish a *prima facie* case. This motion is described by the Approval Holder as a "non-suit" motion. Due to the complexity of this motion, the Tribunal indicated that it could not rule on the motion based on brief oral submissions. Consequently, on consent of the parties, the Tribunal directed that this motion would be heard in writing. As the request for dismissal raises complex issues, the Tribunal directed the parties to file comprehensive written submissions in respect of this motion.

98 As the hearing of this motion could not be completed before the Approval Holder's witnesses were scheduled to testify, a question arose as to whether the Approval Holder would call these witnesses in accordance with the existing hearing schedule or seek an adjournment of the main hearing to call these witnesses at a later date, if its motion to dismiss was denied. The Tribunal questioned whether the Approval Holder's witnesses could be called at a later date that would provide the Hearing Members with sufficient time to complete their deliberations and issue a decision by October 23, 2015, following which, by operation of s. 145.2.1(6) of the *EPA*, there will be a deemed confirmation of the REA if no decision has been issued. The parties conferred, and counsel for the Approval Holder advised the Tribunal that, although the Approval Holder was proceeding with its motion to dismiss, the Approval Holder would proceed to call its witnesses in accordance with the existing hearing schedule.

Submissions of the Approval Holder

99 The Approval Holder submits that the Appellant has presented and closed its case, noting that the Appellant has the onus of proving that the Health and Environmental Tests have been met. The Approval Holder submits that the Appellant's evidence, together with the presentation of the presenter, the Township of Norwich, both taken at their highest, fail to make out a *prima facie* case for either of these tests and as such, the appeal should be dismissed without requiring the Approval Holder and Director to call evidence.

100 In support of its assertion that the Appellant has failed to make out a *prima facie* case, the Approval Holder submits that the Appellant's evidence before this Tribunal consists of expressions of concern from seven non-expert "pre-turbine witnesses", and evidence from a single expert, whose evidence has previously been considered by the Tribunal in other renewable energy approval hearings and found to be insufficient. The Approval Holder further asserts that the evidence presented by the presenter, the Township of Norwich, similarly constitutes expressions of concern without supporting expert opinion. The Approval Holder asserts that the Tribunal has consistently held that evidence of expressions of concern, without expert evidence capable of linking the concerns to the alleged harms, is not sufficient to meet either the Health Test or the Environmental Test.

101 In its submissions, the Approval Holder reviews the evidence of the witnesses who testified for the Appellant and the County of Norwich in support of the above submissions. The Approval Holder then asserts that the Appellant has fallen far short of meeting its onus of proving, on a balance of probabilities, that proceeding with the Project in accordance with the REA will cause serious harm to human health. The Approval Holder submits that neither the expert evidence, nor the evidence of the fact witnesses, establishes that the Project will result in any harm, much less serious harm, to health or establish that the Environmental Test has been met.

102 Regarding the legal test to be applied on a motion to dismiss, the Approval Holder refers to Rules 96 and 111 of the Tribunal's Rules, stating that, at this stage of the proceeding, its motion to dismiss is in effect a "non-suit" motion. The Approval Holder submits that the principles governing "non-suit" motions before administrative tribunals have recently been summarized by the Ontario Grievance Settlement Board in *Ontario (Ministry of Natural Resources and Forestry) and OPSEU (Bharti), Re*, [2015] O.G.S.B.A. No. 40 (Ont. Grievance S.B.) ("*OPSEU v. MNRF*") at paragraph 8 as follows:

> i. The Board will not put the moving party to an election of whether or not to call its own evidence as a matter of course. The appropriateness of putting the moving party to such an election will be determined based upon the considerations of expedition and fairness in the particular circumstances of each case.

ii. In a non-suit motion, the issue is whether the party responding to the motion has made out a *prima facie* case.

iii. In determining whether a *prima facie* case has been made out, the test is whether the evidence presented by the party responding to the motion is sufficient to allow the Board to rule that it has proven its case on a balance of probabilities, if the Board assumed its witnesses to be credible and drew in its favour all inferences reasonably supported by direct evidence. No weight, however, should be given to the evidence of a witness on a point about which he or she has given contradictory accounts. (See *Ontario Public Service Employees Union (Gareh) v. Ontario (Ministry of the Attorney General)*, 2002 CanLII 45791 at paragraphs 8 - 10.)

iv. In assessing the existence of a *prima facie* case, *viva voce* evidence as well as all documentary evidence before the Board must be considered.

v. Where a non-suit motion is granted, a written decision with reasons will follow. However, where a motion is denied, no reasons, oral or written, will be issued.

103 In its submissions, the Approval Holder then cites its understanding of the relevant Tribunal decisions which address the scope of the legal test under s. 145.2.1 of the *EPA*, as well as decisions in support of the Approval Holder's assertions that:

- evidence of expressions of concern without supporting expert opinion is insufficient to establish that either the Health or Environmental Tests have been met;
- without a connecting medical diagnosis, "post-turbine witness" evidence cannot prove that wind turbines have caused harm to human health;
- "pre-turbine witnesses" cannot rely on the evidence of "post-turbine witnesses" to establish that exposure to wind turbines will cause serious harm to human health;
- responding parties are not required to prove an alternate explanation for the symptoms experienced by "post-turbine" witnesses; and
- consistency in decision-making is a principle of administrative law applicable to appeals of renewable energy approvals.

Submissions of the Director

104 The Director agrees with the Approval Holder's submission that the Appellant has not established a *prima facie* case. The Director's submission also includes a review of the evidence of the witnesses who testified for the Appellant in support of this submission.

105 Regarding the legal test to be applied on a motion to dismiss, the Director submits that the Tribunal has the ability to dismiss an appeal mid-hearing. The Director notes that, Rule 111, which allows motions for dismissal, lists four grounds for such a motion. However, the Director emphasizes that Rule 111 states that the motion "may include" these grounds. The Director submits, therefore, that the grounds listed as (a) to (d) in Rule 111, are a non-exhaustive list of potential bases for dismissing an appeal. The Director submits that it is consistent with the purposes and interpretive principles of the Rules to interpret Rule 111 to include dismissing a hearing where no *prima facie* case has been established.

106 The Director also submits that the Approval Holder's "non-suit" motion falls within the ground set out in Rule 111 (c), namely that some aspect of the statutory requirements for bringing the proceeding has not been met. In this regard, the Director argues that, in failing to establish a *prima facie* case, the Appellant has not met the statutory requirement under the *EPA*, more specifically, that the Health and Environmental Tests have not been met.

107 The Director further submits that the Approval Holder's "non-suit" motion falls within Rule 111 (a), namely, that this proceeding is frivolous. The Director maintains that the Tribunal, in previous proceedings, has interpreted "frivolous" in the

context of Rule 111(a) as meaning lacking "a legal basis or legal merit" and raising "no genuine issue" or having "no foundation in fact or law." The Director maintains that this interpretation of "frivolous" as including "no genuine issue for a hearing" has been applied by the Tribunal in the context of motions to dismiss appeals in previous renewable energy appeals. In this regard, the Director notes that, while all of these motions in previous proceedings were dismissed, they were all brought before the start of the hearing, before the Tribunal had heard the appellant's evidence. The Director asserts that the Approval Holder's motion to dismiss was brought at an appropriate time. The Director maintains that, as the Tribunal has had the benefit of hearing the Appellant' evidence, and no experts in health or natural heritage issues have testified, it is clear that the Appellant cannot prove its case.

108 The Director also submits that, in the context of renewable energy appeals in particular, where any person in Ontario may appeal a renewable energy approval and leave to appeal is not required, and in practice where many of these appeals are brought on similar grounds, it is appropriate for Rule 111 to be interpreted in a manner that provides a mechanism whereby an appeal that lacks an adequate evidentiary base can be dismissed without a full hearing.

109 The Director cites Rule 1:

> The purposes of these Rules are: to provide a fair, open, accessible and understandable process for Parties and other interested persons; to *facilitate and enhance access and public participation*; to encourage co-operation among Parties; to *assure the efficiency and timeliness of proceedings*; and to assist the Tribunal in fulfilling its statutory mandate.
>
> [emphasis added]

110 The Director also cites Rule 4:

> These Rules shall be liberally construed to secure the *just, most expeditious and cost effective determination* of every proceeding on its merits.
>
> [emphasis added]

111 In light of these Rules, the Director submits that dismissing this appeal without requiring the responding parties to call evidence and prepare final submissions would save considerable time and resources. The Director asserts that a motion to dismiss at the close of the Appellant's case strikes the appropriate balance between the purposes of enhancing "access and public participation", arguing that the Appellant has had an opportunity to present its case. The Director further asserts that allowing "non-suit" motions will assure "efficiency and timeliness of proceedings", by allowing appeals to be dismissed without a full hearing where an appellant has not established a *prima facie* case. The Director submits that this interpretation is also consistent with Rule 4, in that it would provide a just, expeditious and cost effective determination of a proceeding based on the merits of an appellant's case.

Submissions of the Appellant

112 The Appellant submits that Approval Holder's motion to dismiss should be dismissed and the Tribunal should render its decision based on its weighing of the totality of the evidence.

113 The Appellant emphasizes that the Approval Holder was presented with a choice to adjourn the main hearing to accommodate written submissions on its Notice of Motion or arrive at another approach in discussion with counsel. The Appellant states that, on consent of the parties, the Approval Holder chose to continue with the hearing of evidence in spite of the allegation in its Notice of Motion that the Appellant had not met its evidentiary burden. The Appellant submits that, in so doing, the Approval Holder has effectively rendered its motion for dismissal moot, since the test for the appeal and the motion are identical for all intents and purposes.

114 The Appellant maintains that, although all counsel consented to the continuation of the hearing, while keeping the motion "alive" to respect the time constraint for issuing a decision in this proceeding, this should not preclude the conclusion that the motion is redundant to the question before the Tribunal.

115 The Appellant argues that, more importantly, it would be an absurd result for the Tribunal to pretend it has arrived at its findings on the motion as though it had not heard the Approval Holder's and the Director's cases. The Appellant submits that such a fictive weighing of the evidence would render the Tribunal's reasons meaningless without some way of knowing whether its conclusions were based solely on the Appellant's evidence or also on the contradictory evidence of the Director and Approval Holder.

Submissions of the Approval Holder in reply

116 The Approval Holder submits that, in light of the agreement reached by counsel, the Appellant's claim that the motion to dismiss is redundant or moot because the Approval Holder and the Director presented their evidence on the appeal, should be rejected as improper, unfair, and prejudicial. Instead, the Approval Holder submits that this Tribunal should proceed to hear the motion on its merits, in writing, as agreed to by counsel for the Appellant.

117 In determining whether the motion to dismiss is moot, the Approval Holder refers to the general principles stated by the Supreme Court of Canada in *Borowski v. Canada (Attorney General)*, [1989] 1 S.C.R. 342 (S.C.C.). The Approval Holder maintains that there is no hypothetical or abstract question before the Tribunal as to whether the Appellant has presented a *prima facie* case, and that the decision in respect of the motion to dismiss will have the effect of resolving a controversy which affects, or may affect, the rights of the parties.

118 The Approval Holder disputes the Appellant's assertion that proceeding with the motion to dismiss, where the witnesses for the Approval Holder and Director have been heard, would require fictive weighing of the evidence in support of the motion. The Approval Holder cites a decision of the Supreme Court of Canada in *R. v. Stinchcombe*, [1991] 3 S.C.R. 326 (S.C.C.), in support of its assertion that knowledge of the Approval Holder's evidence does not, at law, prejudice the Tribunal's ability to determine the motion to dismiss on the basis of the Appellant's evidence alone. The Approval Holder maintains that, "simply put, the Tribunal is fully capable of assigning no weight to the Approval Holder and Director's evidence for the purpose of determining the Motion."

Findings Respecting Motion to Dismiss

119 The Tribunal first turns to consideration of its jurisdiction to entertain a "non-suit" motion. Rule 111, which addresses motions to dismiss, states:

> A Party bringing a motion to dismiss a proceeding shall specify the basis for the motion, which may include that:
>
> (a) the proceeding is frivolous, vexatious or is commenced in bad faith;
>
> (b) the proceeding relates to matters that are outside the jurisdiction of the Tribunal;
>
> (c) some aspect of the statutory requirements for bringing the proceeding has not been met; or
>
> (d) another Party has caused undue delay or has not complied with orders, undertakings, written requests from the Tribunal or these Rules.

120 The Director submits that the Approval Holder's "non-suit" motion falls within ground (a) of Rule 111, asserting that this proceeding is frivolous because the Appellant's case raises no genuine issue. In support of this submission the Director asserts that the Appellant cannot prove its case. For the following reasons, the Tribunal does not accept this submission. The Tribunal notes that frivolous conduct, though not necessarily accompanied by an improper motivation, involves putting forward groundless arguments. A frivolous argument is not synonymous with an unsuccessful argument (see *Spellman v. Ontario (Director, Ministry of the Environment)* (2007), 34 C.E.L.R. (3d) 83 (Ont. Environmental Review Trib.) at para 109). In this proceeding, it is not disputed that the Appellant has advanced proper grounds in support of its appeal. Rather, the Approval Holder and the Director argue that the Appellant has adduced insufficient evidence to establish the Health and Environmental Tests have been met. If that is so, all that can be said is that the Appellant's arguments will be unsuccessful. To repeat, a

frivolous argument is not synonymous with an unsuccessful argument. The Tribunal also notes that the Director advanced no other grounds for finding that the Appellant's appeal is frivolous.

121 The Director also submits that the Approval Holder's "non-suit" motion falls within ground (c) of Rule 111, asserting that the Appellant, in failing to establish a *prima facie* case, has not met the statutory requirement under s. 145.2.1 of the *EPA*, i.e. the Health and Environmental Tests. For the following reasons, the Tribunal does not accept this submission. The Tribunal notes that Rule 111 (c) states that "some aspect of the statutory requirements *for bringing the proceeding* has not been met [emphasis added]". Under s. 145.2.1 of the *EPA* the Health and Environmental Tests are not statutory requirements for bringing the proceeding. They are part of the grounds to be addressed in the proceeding. Consequently, the Tribunal finds that Rule 111(c) does not apply to the circumstances of this case.

122 The Tribunal now turns to the Director's submission that Rule 111 allows the Tribunal to consider motions to dismiss based on "non-suit". It is not disputed that the Tribunal's Rules do not include a rule which expressly governs motions to dismiss on the basis of "non-suit". As noted in the Director's submissions, Rule 111 provides that the moving party shall specify the basis for its motion to dismiss which "may include" the enumerated grounds (a) to (d). The Tribunal accepts the Director's submission that the phrase "may include", indicates that this is not an exhaustive list. In other words, the moving party may advance another basis in support of its motion to dismiss, which can include "non-suit". However, Rule 111 does not state that the Tribunal must entertain another basis. Under s. 25.0.1 of the *Statutory Powers Procedure Act* R.S.O. 1990, c. S.22, a tribunal has the power to determine its own procedures and practices. Therefore, the first question which the Tribunal must address, is whether it should entertain a "non-suit" motion in this proceeding. This, in turn, requires consideration of what a "non-suit" motion means.

123 The Approval Holder relies on *Ontario (Ministry of Natural Resources and Forestry) and OPSEU (Bharti), Re*, in maintaining that a "non-suit" motion is a motion to dismiss a proceeding, which is made by a responding party, after an appellant has called its witnesses. In such a motion, an administrative tribunal may at its discretion, based on considerations of efficiency and fairness, decide that it will not put the moving party "to an election of whether or not to call its own evidence as a matter of course."

124 This definition raises several questions. First, it is unclear whether the "election" requires that the moving party must choose not to call its witnesses at all, thus relying solely on its motion to dismiss, or whether, if the motion to dismiss is denied, the moving party may then proceed to call its witnesses. Secondly, the Tribunal notes that the Approval Holder relies on the statement of principles which apply to "non-suit" motions as set out in the decision of the Ontario Grievance Settlement Board in *Ontario (Ministry of Natural Resources and Forestry) and OPSEU (Bharti), Re*. However, the Approval Holder has failed to point out that the decisions, on which the Board relied to formulate its statement of principles, are all decisions of that Board. The Tribunal is not bound by a decision of the Ontario Grievance Settlement Board. However, the Tribunal received no submissions on this point. In this proceeding, none of the parties provided the Tribunal with jurisprudence from the courts or other administrative boards or tribunals to indicate whether the approach taken by the Ontario Grievance Settlement Board is accepted practice and procedure, either in the courts, or under administrative law generally. In particular, none of the parties indicated whether such a "non-suit" motion has been previously considered by this Tribunal, or its predecessor boards. Similarly, the parties did not make submissions on whether the courts have addressed this issue in the context of an appeal or judicial review of a decision of an administrative tribunal. Furthermore, *Ontario (Ministry of Natural Resources and Forestry) and OPSEU (Bharti), Re* does not indicate the source of its jurisdiction to adopt such practice and procedure.

125 The Director, in referring to Rule 1, asserts that a motion to dismiss at the close of the Appellant's case strikes the appropriate balance between the purposes of enhancing "access and public participation" and argues that the Appellant has had an opportunity to present its case. The Tribunal finds that this is too narrow an interpretation of Rule 1. The Tribunal adjudicates in the public interest, which is why Tribunal practice and procedure includes the opportunity for members of the public to participate in proceedings as added parties, participants or presenters. In light of this public interest consideration, the question arises whether the public interest requires that all available evidence should be heard? If the answer is yes, this, in turn, raises the question whether the Tribunal should adopt such a "non-suit" motion procedure, and, if it does, whether the moving party should be allowed to proceed with its motion without calling its witnesses.

126 It must be emphasized that, in most appeals of renewable energy approvals, there are two responding parties, namely the MOECC director, and the approval holder. Where their positions align, for efficiency purposes, and to avoid repetition of evidence, they will often co-ordinate the witnesses to be called, i.e., one of them may not call its own witness, relying instead, on a witness to be called by the other. In such circumstances, if the Tribunal entertains a "non-suit" motion by one respondent which is unsuccessful, and that respondent has been put to its election and has decided not to call its witnesses, would this outcome be prejudicial to the other respondent's case?

127 Similarly, the Tribunal must also consider that an appellant's case is not based solely on the evidence adduced by its own witnesses, but on evidence obtained by cross-examining the witnesses testifying on behalf of the director and approval holder. Should the Tribunal have the benefit of hearing this evidence, when adjudicating in the public interest?

128 Assuming that the Tribunal would entertain motions for dismissal based on "non-suit", the Tribunal, when evaluating whether a *prima facie* case has been made out, would have to determine whether the evidence of added parties, participants, and presenters should be considered. The Approval Holder implicitly assumes that the Tribunal must do so, as its submissions addressed the evidence of the presenter (the County of Norfolk) in this proceeding. However, the submissions of the Director did not appear to take this evidence into account. It must be emphasized that participants and presenters have separate status from an appellant, and, while individual or group participants or presenters may wholly support an appellant's position, this is not always the case. In such circumstances, is the Tribunal is to consider the evidence of participants and presenters when evaluating whether a *prima facie* case has been made out, and, if so, is the Tribunal to exclude from this consideration, evidence which does not support the appellant's case?

129 The Tribunal notes again, that it received no submissions from the parties respecting any of these considerations of procedural fairness to be taken into account when adjudicating in the public interest.

130 Assuming that the Tribunal would entertain motions for dismissal based on "non-suit", the Tribunal would also have to determine the test to be applied in determining whether a "*prima facie*" case has been made out. The Approval Holder relies on the statement of the Ontario Grievance Settlement Board in *Ontario (Ministry of Natural Resources and Forestry) and OPSEU (Bharti), Re* that "In determining whether a *prima facie* case has been made out, the test is whether the evidence presented by the party responding to the motion is sufficient to allow the Board to rule that it has proven its case on a balance of probabilities, ...". Again, the authority cited by the Board in support of this conclusion is one of the Board's previous decisions. Therefore, the question arises whether the test to be applied by this Tribunal should be that an appellant must prove its case on a balance or probabilities, or should the appellant be required to meet a less onerous test, such as whether the appellant's case establishes a reasonable prospect of success, or, whether the appellant's case establishes a case for the responding parties to answer. None of the parties referred the Tribunal to decisions by the courts or other boards or tribunals to assist in answering this question. The parties also did not address whether the courts have addressed this question in the context of an appeal or application for judicial review of a decision of an administrative board or tribunal. Finally, the Tribunal was provided with no submissions on whether the expedited timelines for REA appeals is another factor that the Tribunal should consider when deciding whether or not to add procedures to allow for "non-suit" motions in REA hearings.

131 The onus is on the moving party to establish that its motion to dismiss should be granted. As noted above, the parties have not addressed the important questions which the Tribunal must consider in making a determination of this matter. As such, the Tribunal finds that it has insufficient information on which it can base a finding to grant the relief requested by the Approval Holder in its motion to dismiss. Consequently, the Tribunal finds that the Approval Holder has not met its onus to establish that its motion to dismiss should be granted, and, therefore, the motion is dismissed. For purposes of clarity, the Tribunal confirms that it has not made a general determination, one way or the other, whether a motion to dismiss, based on some form of "non-suit" procedure, would be appropriate in another hearing. Such a determination is left to be addressed in a future proceeding in which the parties provide more comprehensive and relevant authorities and properly address the expedited and public interest context in which renewable energy approval appeals take place.

Overall Conclusion

132 The Tribunal finds that the Appellant has failed to meet the onus required by the statutory test, to show that engaging the Project in accordance with the REA will cause serious harm to human health, or serious and irreversible harm to plant life, animal life or the natural environment, and that, therefore, the appeal should be dismissed.

Decision

133 The appeal by East Oxford Community Alliance Inc. is dismissed and the decision of the Director is confirmed.

Appeal and motion dismissed.

Couronne — Immunité — Provinces — La Couronne du chef de la province est-elle liée par les dispositions de la Loi sur la protection des eaux navigables, L.R.C. (1985), ch. N-22? — Loi d'interprétation, L.R.C. (1985), ch. I-21, art. 17.

Droit administratif — Contrôle judiciaire — Redressements — Pouvoir discrétionnaire — Construction d'un barrage par l'Alberta sur la rivière Oldman — Barrage touchant des domaines de compétence fédérale comme les eaux navigables et les pêches — Groupe environnemental, par demande de bref de certiorari et de bref de mandamus à la Cour fédérale, cherche à for-

guidelines order — Applications dismissed on grounds of unreasonable delay and futility — Whether Court of Appeal erred in interfering with motions judge's discretion not to grant remedy sought.

The respondent Society, an Alberta environmental group, brought applications for *certiorari* and mandamus in the Federal Court seeking to compel the federal departments of Transport and Fisheries and Oceans to conduct an environmental assessment, pursuant to the federal *Environmental Assessment and Review Process Guidelines Order*, in respect of a dam constructed on the Oldman River by the province of Alberta — a project which affects several federal interests, in particular navigable waters, fisheries, Indians and Indian lands. The Guidelines Order was established under s. 6 of the federal *Department of the Environment Act* and requires all federal departments and agencies that have a decision-making authority for any proposal (i.e., any initiative, undertaking or activity) that may have an environmental effect on an area of federal responsibility to initially screen such proposal to determine whether it may give rise to any potentially adverse environmental effects. The province had itself conducted extensive environmental studies over the years which took into account public views, including the views of Indian bands and environmental groups, and, in September 1987, had obtained from the Minister of Transport an approval for the work under s. 5 of the *Navigable Waters Protection Act*. This section provides that no work is to be built in navigable waters without the prior approval of the Minister. In assessing Alberta's application, the Minister considered only the project's effect on navigation and no assessment under the Guidelines Order was made. Respondent's attempts to stop the project in the Alberta courts failed and both the federal Ministers of the Environment and of Fisheries and Oceans declined requests to subject the project to the Guidelines Order. The contract for the construction of the dam was awarded in 1988 and the project was 40 percent complete when the respondent commenced its action in the Federal Court in April 1989. The Trial Division dismissed the applications. On appeal, the Court of Appeal reversed the judgment, quashed the approval under s. 5 of the *Navigable Waters Protection Act*, and ordered the Ministers of Transport and of Fisheries and Oceans to comply with the Guidelines Order. This appeal raises the constitutional and statutory validity of the Guidelines Order as well as its nature and applicability. It also raises the

cer le ministre des Transports et le ministre des Pêches et des Océans à se conformer au décret fédéral sur les lignes directrices en matière d'environnement — Demandes rejetées en raison du retard déraisonnable et de la futilité de la procédure — La Cour d'appel a-t-elle commis une erreur en modifiant la décision du juge des requêtes, prise dans l'exercice de son pouvoir discrétionnaire, de ne pas accorder la réparation demandée?

L'intimée, la Friends of the Oldman River Society (la «Société»), un groupe environnemental de l'Alberta, par demande de bref de *certiorari* et de bref de *mandamus* présentée à la Cour fédérale, cherche à forcer deux ministères fédéraux, le ministère des Transports et le ministère des Pêches et des Océans, à procéder à une évaluation environnementale conformément au *Décret fédéral sur les lignes directrices visant le processus d'évaluation et d'examen en matière d'environnement*, relativement à un barrage construit sur la rivière Oldman par la province d'Alberta—un projet qui touche plusieurs sphères de compétence fédérale, notamment les eaux navigables, les pêcheries, les Indiens et les terres indiennes. Le Décret sur les lignes directrices a été pris en vertu de l'art. 6 de la *Loi sur le ministère de l'Environnement* et exige de tous les ministères et organismes fédéraux qui exercent un pouvoir de décision à l'égard d'une proposition (c'est-à-dire une entreprise ou activité) susceptible d'entraîner des répercussions environnementales sur une question de compétence fédérale, qu'ils procèdent à un examen initial de cette proposition afin de déterminer si elle peut éventuellement comporter des effets défavorables sur l'environnement. La province a elle-même procédé au cours des années à d'importantes études environnementales qui ont donné lieu à des consultations publiques, notamment auprès des bandes indiennes et des groupes environnementaux, et, en septembre 1987, avait obtenu du ministre des Transports une approbation de l'ouvrage en vertu de l'art. 5 de la *Loi sur la protection des eaux navigables*. Cette disposition prévoit qu'il est interdit de construire un ouvrage dans les eaux navigables à moins qu'il n'ait préalablement été approuvé par le ministre. Dans l'évaluation de la demande de l'Alberta, le ministre n'a examiné que l'incidence du projet sur la navigation et aucune évaluation n'a été faite en vertu du Décret sur les lignes directrices. Les tentatives de l'intimée devant les tribunaux de l'Alberta pour faire arrêter le projet ont échoué et les ministres fédéraux de l'Environnement et des Pêches et des Océans ont refusé d'assujettir le projet à l'évaluation en vertu du Décret sur les lignes directrices. Le contrat de construction du barrage a été octroyé en 1988 et les travaux étaient achevés à 40 pour 100 lorsque la présente action a été intentée

question whether the motions judge properly exercised his discretion in deciding not to grant the remedy sought on grounds of unreasonable delay and futility.

Held (Stevenson J. dissenting): The appeal should be dismissed, with the exception that there should be no order in the nature of mandamus directing the Minister of Fisheries and Oceans to comply with the Guidelines Order.

Statutory Validity of the Guidelines Order

The Guidelines Order was validly enacted pursuant to s. 6 of the *Department of the Environment Act*, and is mandatory in nature. When one reads s. 6 as a whole, rather than focusing on the word "guidelines" in isolation, it is clear that Parliament has elected to adopt a regulatory scheme that is "law", and amenable to enforcement through prerogative relief. The "guidelines" are not merely authorized by statute but must be formally enacted by "order" with the approval of the Governor in Council. That is in striking contrast with the usual internal ministerial policy guidelines intended for the control of public servants under the minister's authority.

The Guidelines Order, which requires the decision maker to take socio-economic considerations into account in the environmental impact assessment, does not go beyond what is authorized by the *Department of the Environment Act*. The concept of "environmental quality" in s. 6 of the Act is not confined to the biophysical environment alone. The environment is a diffuse subject matter and, subject to the constitutional imperatives, the potential consequences for a community's livelihood, health and other social matters from environ-

devant la Cour fédérale en avril 1989. La Section de première instance a rejeté les demandes. La Cour d'appel a infirmé le jugement, annulé l'approbation accordée en vertu de l'art. 5 de la *Loi sur la protection des eaux navigables* et ordonné aux ministres des Transports et des Pêches et des Océans de se conformer au Décret sur les lignes directrices. Le présent pourvoi soulève la validité constitutionnelle et législative du Décret sur les lignes directrices et porte sur la nature et l'applicabilité de celui-ci. Il soulève aussi la question de savoir si le juge des requêtes a bien exercé son pouvoir discrétionnaire dans sa décision de ne pas accorder le redressement demandé en raison du retard déraisonnable et de la futilité de la procédure.

Arrêt (le juge Stevenson est dissident): Le pourvoi est rejeté, sauf qu'il ne sera pas délivré de bref de la nature d'un *mandamus* ordonnant au ministre des Pêches et des Océans de se conformer au Décret sur les lignes directrices.

La validité législative du Décret sur les lignes directrices

Le Décret sur les lignes directrices a été validement adopté conformément à l'art. 6 de la *Loi sur le ministère de l'Environnement* et il est de nature impérative. Lorsqu'on examine l'art. 6 dans son ensemble, plutôt que seulement le terme «directives» en vase clos, on se rend compte que le législateur fédéral a opté pour l'adoption d'un mécanisme de réglementation auquel on est soumis «légalement» et dont on peut obtenir l'exécution par bref de prérogative. Les «directives» ne sont pas simplement autorisées par une loi, mais elles doivent être officiellement adoptées par «arrêté», sur approbation du gouverneur en conseil. Ce processus contraste vivement avec le processus habituel d'établissement de directives de politique interne ministérielle destinées à exercer un contrôle sur les fonctionnaires relevant de l'autorité du ministre.

Le Décret sur les lignes directrices, qui exige du décideur qu'il tienne compte de facteurs socio-économiques dans l'évaluation des répercussions environnementales, ne va pas au-delà de ce qui est autorisé par la *Loi sur le ministère de l'Environnement*. Le concept de la «qualité de l'environnement» prévu à l'art. 6 de la Loi ne se limite pas à l'environnement biophysique seulement. L'environnement est un sujet diffus et, sous réserve des impératifs constitutionnels, les conséquences éventuelles d'un changement environnemental sur le gagne-pain, la santé et les autres préoccupations sociales d'une collectivité font partie intégrante de la prise de décisions

mental change, are integral to decision making on matters affecting environmental quality.

The Guidelines Order is consistent with the *Navigable Waters Protection Act*. There is nothing in the Act which explicitly or implicitly precludes the Minister of Transport from taking into consideration any matters other than marine navigation in exercising his power of approval under s. 5 of the Act. The Minister's duty under the Order is supplemental to his responsibility under the *Navigable Waters Protection Act*, and he cannot resort to an excessively narrow interpretation of his existing statutory powers to avoid compliance with the Order. There is also no conflict between the requirement for an initial assessment "as early in the planning process as possible and before irrevocable decisions are taken" in s. 3 of the Guidelines Order, and the remedial power under s. 6(4) of the Act to grant approval after the commencement of construction. That power is an exception to the general rule in s. 5 of the Act requiring approval prior to construction, and in exercising his discretion to grant approval after commencement, the Minister is not precluded from applying the Order.

Applicability of the Guidelines Order

The scope of the Guidelines Order is not restricted to "new federal projects, programs and activities"; the Order is not engaged every time a project may have an environmental effect on an area of federal jurisdiction. However, there must first be a "proposal" which requires an "initiative, undertaking or activity for which the Government of Canada has a decision making responsibility". The proper construction to be placed on the term "responsibility" is that the federal government, having entered the field in a subject matter assigned to it under s. 91 of the *Constitution Act, 1867*, must have an affirmative regulatory duty pursuant to an Act of Parliament which relates to the proposed initiative, undertaking or activity. "Responsibility" within the definition of "proposal" means a legal duty or obligation and should not be read as connoting matters falling generally within federal jurisdiction. Once such a duty exists, it is a matter of identifying the "initiating department" assigned responsibility for its performance, for it then becomes the "decision making authority" for the proposal and

concernant des questions ayant une incidence sur la qualité de l'environnement.

Le Décret sur les lignes directrices est compatible avec la *Loi sur la protection des eaux navigables*. La Loi n'a pas pour effet d'empêcher explicitement ou implicitement le ministre des Transports de tenir compte de facteurs autres que ceux touchant la navigation dans l'exercice de son pouvoir d'approbation en vertu de l'art. 5 de la Loi. La fonction confiée au ministre en vertu du Décret vient s'ajouter à la responsabilité qu'il a en vertu de la *Loi sur la protection des eaux navigables*, et il ne peut invoquer une interprétation trop étroite des pouvoirs qui lui sont conférés par des lois pour éviter de se conformer au Décret. Il n'existe pas non plus de conflit entre, d'une part, le fait d'exiger, à l'art. 3 du Décret sur les lignes directrices, qu'un examen soit effectué «le plus tôt possible au cours de l'étape de planification et avant de prendre des décisions irrévocables» et, d'autre part, le pouvoir de redressement, prévu au par. 6(4) de la Loi, permettant au ministre d'accorder une approbation après le début des travaux. Ce pouvoir constitue une exception à la règle générale énoncée à l'art. 5 de la Loi selon laquelle il faut obtenir une approbation avant le début de la construction et, dans l'exercice de son pouvoir discrétionnaire d'accorder une approbation après le début des travaux, rien n'empêche le ministre d'appliquer le Décret.

L'applicabilité du Décret sur les lignes directrices

L'application du Décret sur les lignes directrices n'est pas restreinte aux «nouveaux projets, programmes et activités fédéraux»; le Décret ne reçoit pas application chaque fois qu'un projet peut comporter des répercussions environnementales sur un domaine de compétence fédérale. Il doit toutefois s'agir tout d'abord d'une «proposition» qui vise une «entreprise ou activité à l'égard de laquelle le gouvernement du Canada participe à la prise de décisions». L'interprétation qu'il faut donner à l'expression «participe à la prise de décisions» est que le gouvernement fédéral, se trouvant dans un domaine relevant de sa compétence en vertu de l'art. 91 de la *Loi constitutionnelle de 1867*, doit avoir une obligation positive de réglementation en vertu d'une loi fédérale relativement à l'entreprise ou à l'activité proposée. L'expression «participe à la prise de décisions» dans la définition du terme «proposition» signifie une obligation légale et ne devrait pas être interprétée comme ayant trait à des questions relevant généralement de la compétence fédérale. Si cette obligation existe, il s'agit alors de déterminer qui est le «ministère responsable» en la matière, puisque c'est ce ministère qui exerce le «pouvoir de

thus responsible for initiating the process under the Guidelines Order.

The Oldman River Dam project falls within the ambit of the Guidelines Order. The project qualifies as a proposal for which the Minister of Transport alone is the "initiating department" under s. 2 of the Order. The *Navigable Waters Protection Act*, in particular s. 5, places an affirmative regulatory duty on the Minister of Transport. Under that Act there is a legislatively entrenched regulatory scheme in place in which the approval of the Minister is required before any work that substantially interferes with navigation may be placed in, upon, over or under, through or across any navigable water.

The Guidelines Order does not apply to the Minister of Fisheries and Oceans, however, because there is no equivalent regulatory scheme under the *Fisheries Act* which is applicable to this project. The discretionary power to request or not to request information to assist a Minister in the exercise of a legislative function does not constitute a "decision making responsibility" within the meaning of the Order. The Minister of Fisheries and Oceans under s. 37 of the *Fisheries Act* has only been given a limited *ad hoc* legislative power which does not constitute an affirmative regulatory duty.

The scope of assessment under the Guidelines Order is not confined to the particular head of power under which the Government of Canada has a decision-making responsibility within the meaning of the term "proposal". Under the Order, the initiating department which has been given authority to embark on an assessment must consider the environmental effect on all areas of federal jurisdiction. The Minister of Transport, in his capacity of decision maker under the *Navigable Waters Protection Act*, must thus consider the environmental impact of the dam on such areas of federal jurisdiction as navigable waters, fisheries, Indians and Indian lands.

Crown Immunity

Per Lamer C.J. and La Forest, L'Heureux-Dubé, Sopinka, Gonthier, Cory, McLachlin and Iacobucci JJ.: The Crown in right of Alberta is bound by the *Navigable Waters Protection Act* by necessary implication. The proprietary right the province may have in the bed of the Oldman River is subject to the public right of navigation, legislative jurisdiction over which has been exclusively vested in Parliament. Alberta requires statutory

décision» à l'égard de la proposition et qui doit donc entamer le processus d'évaluation visé par le Décret sur les lignes directrices.

Le projet de barrage sur la rivière Oldman est visé par le Décret sur les lignes directrices. Il peut être qualifié de proposition dont le ministre des Transports seul est le «ministère responsable» en vertu de l'art. 2 du Décret. La *Loi sur la protection des eaux navigables*, notamment son art. 5, impose une obligation positive de réglementation au ministre des Transports. Cette loi a mis en place un mécanisme de réglementation qui prévoit qu'il est nécessaire d'obtenir l'approbation du ministre avant qu'un ouvrage qui gêne sérieusement la navigation puisse être placé dans des eaux navigables ou sur, sous, au-dessus ou à travers de telles eaux.

Cependant, le Décret sur les lignes directrices ne s'applique pas au ministre des Pêches et des Océans, puisque la *Loi sur les pêches* ne renferme pas de disposition de réglementation équivalente qui serait applicable au projet. Le fait que le ministre possède le pouvoir discrétionnaire de demander des renseignements visant à l'aider dans l'exercice d'une fonction législative ne signifie pas qu'il «participe à la prise de décisions» au sens du Décret. Le ministre des Pêches et des Océans a, en vertu de l'art. 37 de la *Loi sur les pêches*, un pouvoir législatif spécial limité qui ne constitue pas une obligation positive de réglementation.

L'étendue de l'évaluation en vertu du Décret sur les lignes directrices n'est pas limitée au domaine particulier de compétence à l'égard duquel le gouvernement du Canada participe à la prise de décisions au sens du terme «proposition». En vertu du Décret, le ministère responsable qui a reçu le pouvoir de procéder à l'évaluation doit tenir compte des répercussions environnementales dans tous les domaines de compétence fédérale. Le ministre des Transports, à titre de décideur en vertu de la *Loi sur la protection des eaux navigables*, doit examiner les incidences environnementales du barrage sur les domaines de compétence fédérale, comme les eaux navigables, les pêcheries, les Indiens et les terres indiennes.

L'immunité de la Couronne

Le juge en chef Lamer et les juges La Forest, L'Heureux-Dubé, Sopinka, Gonthier, Cory, McLachlin et Iacobucci: La Couronne du chef de l'Alberta est par déduction nécessaire liée par la *Loi sur la protection des eaux navigables*. Le droit de propriété que la province peut détenir sur le lit de la rivière Oldman est assujetti au droit public de navigation, sur lequel le Parlement exerce une compétence législative exclusive. L'Alberta

authorization from Parliament to erect any obstruction that substantially interferes with navigation in the Oldman River, and the *Navigable Waters Protection Act* is the means by which it must be obtained. The Crown in right of Alberta is bound by the Act, for it is the only practicable procedure available for getting approval. The purpose of the Act would be wholly frustrated if the province was not bound by the Act. The provinces are among the bodies that are likely to engage in projects that may interfere with navigation. Were the Crown in right of a province permitted to undermine the integrity of the essential navigational networks in Canadian waters, the legislative purpose of the *Navigable Waters Protection Act* would effectively be emasculated.

Per Stevenson J. (dissenting): The province of Alberta is not bound by the *Navigable Waters Protection Act*. The Crown is not bound by legislation unless it is mentioned or referred to in the legislation. Here, there are no words in the Act "expressly binding" the Crown and no clear intention to bind "is manifest from the very terms of the statute". As well, the failure to include the Crown would not wholly frustrate the purpose of the Act or produce an absurdity. There are many non-governmental agencies whose activities are subject to the Act and there is thus no emasculation of the Act. If the Crown interferes with a public right of navigation, that wrong is remediable by action. There is no significant benefit in approval under the Act. Tort actions may still lie.

Constitutional Validity of the Guidelines Order

The "environment" is not an independent matter of legislation under the *Constitution Act, 1867*. Understood in its generic sense, it encompasses the physical, economic and social environment and touches upon several of the heads of power assigned to the respective levels of government. While both levels may act in relation to the environment, the exercise of legislative power affecting environmental concerns must be linked to an appropriate head of power. Local projects will generally fall within provincial responsibility, but federal participation will be required if, as in this case, the project impinges on an area of federal jurisdiction.

The Guidelines Order is *intra vires* Parliament. The Order does not attempt to regulate the environmental effects of matters within the control of the province but

doit obtenir l'autorisation législative du Parlement pour construire un ouvrage qui entraverait sérieusement la navigation dans la rivière Oldman; la *Loi sur la protection des eaux navigables* est le mécanisme qu'elle doit utiliser à cette fin. La Couronne du chef de l'Alberta est liée par la Loi, car il s'agit là du seul moyen pratique d'obtenir l'approbation requise. Par ailleurs, si la province n'était pas liée par la Loi, celle-ci serait privée de toute efficacité. Les provinces font partie des organismes susceptibles de participer à des projets qui peuvent obstruer la navigation. Si la Couronne du chef d'une province était habilitée à saper l'intégrité des réseaux essentiels de navigation dans les eaux canadiennes, l'objet de la *Loi sur la protection des eaux navigables* serait, en fait, annihilé.

Le juge Stevenson (dissident): La province d'Alberta n'est pas liée par la *Loi sur la protection des eaux navigables*. Nul texte législatif ne lie la Couronne, sauf dans la mesure qui y est mentionnée ou prévue. En l'espèce, la Loi ne renferme pas de termes qui «lient expressément» la Couronne et il n'existe pas d'intention claire de la lier qui «ressort du texte même de la loi». En outre, le fait que la Couronne ne soit pas liée ne priverait pas la Loi de toute efficacité ni ne donnerait lieu à une absurdité. Il existe de nombreux organismes non gouvernementaux dont les activités sont régies par la Loi et l'objet de la Loi n'est donc pas annihilé. Si la Couronne porte atteinte à un droit public de navigation, il est possible de la poursuivre en justice. Il n'y a pas d'avantage important lié à l'approbation en vertu de la Loi. Il peut toujours y avoir ouverture à responsabilité civile.

La validité constitutionnelle du Décret sur les lignes directrices

L'«environnement» n'est pas un domaine distinct de compétence législative en vertu de la *Loi constitutionnelle de 1867*. Dans son sens générique, il englobe l'environnement physique, économique et social touchant plusieurs domaines de compétence attribués aux deux paliers de gouvernement. Bien que les deux paliers puissent œuvrer dans le domaine de l'environnement, l'exercice d'une compétence législative, dans la mesure où elle se rapporte à l'environnement, doit se rattacher au domaine de compétence approprié. Les projets de nature locale relèvent généralement de la compétence provinciale, mais ils peuvent exiger la participation du fédéral dans le cas où ils empiètent sur un domaine de compétence fédérale comme en l'espèce.

Le Décret sur les lignes directrices est *intra vires* du Parlement. Il ne tente pas de réglementer les répercussions environnementales de matières qui relèvent de la

merely makes environmental impact assessment an essential component of federal decision making. The Order is in pith and substance nothing more than an instrument that regulates the manner in which federal institutions must administer their multifarious duties and functions. In essence, the Order has two fundamental aspects. First, there is the substance of the Order dealing with environmental impact assessment to facilitate decision making under the federal head of power through which a proposal is regulated. This aspect of the Order can be sustained on the basis that it is legislation in relation to the relevant subject matters enumerated in s. 91 of the *Constitution Act, 1867*. The second aspect of the Order is its procedural or organizational element that coordinates the process of assessment, which can in any given case touch upon several areas of federal responsibility, under the auspices of a designated decision maker (the "initiating department"). This facet of the Order has as its object the regulation of the institutions and agencies of the Government of Canada as to the manner in which they perform their administrative functions and duties. This is unquestionably *intra vires* Parliament. It may be viewed either as an adjunct of the particular legislative powers involved, or, in any event, be justifiable under the residuary power in s. 91.

The Guidelines Order cannot be used as a colourable device to invade areas of provincial jurisdiction which are unconnected to the relevant heads of federal power. The "initiating department" is only given a mandate to examine matters directly related to the areas of federal responsibility potentially affected. Any intrusion under the Order into provincial matters is merely incidental to the pith and substance of the legislation.

Discretion

Per Lamer C.J. and La Forest, L'Heureux-Dubé, Sopinka, Gonthier, Cory, McLachlin and Iacobucci JJ.: The Federal Court of Appeal did not err in interfering with the motions judge's discretion not to grant the remedies sought on the grounds of unreasonable delay and futility. Respondent made a sustained effort, through legal proceedings in the Alberta courts and through correspondence with federal departments, to challenge the legality of the process followed by the province to build the dam and the acquiescence of the appellant Ministers, and there is no evidence that Alberta has suffered any prejudice from any delay in taking the present action. Despite ongoing legal proceedings, the construction of the dam continued. The province was not prepared to

compétence de la province, mais fait simplement de l'évaluation des incidences environnementales un élément essentiel de la prise de décisions fédérales. De par son caractère véritable, le Décret n'est rien de plus qu'un instrument qui régit la façon dont les institutions fédérales doivent gérer leurs diverses fonctions. Essentiellement, le Décret comporte deux aspects fondamentaux. Il y a tout d'abord l'aspect de fond qui porte sur l'évaluation des incidences environnementales, dont l'objet est de faciliter la prise de décisions dans le domaine de compétence fédérale qui régit une proposition. Cet aspect du Décret peut être maintenu au motif qu'il s'agit d'un texte législatif se rapportant aux matières pertinentes énumérées à l'art. 91 de la *Loi constitutionnelle de 1867*. Le deuxième aspect est l'élément procédural ou organisationnel coordonnant le processus d'évaluation, qui peut dans un cas donné toucher plusieurs domaines de compétence fédérale, relevant d'un décideur désigné (le «ministère responsable»). Cette facette vise à réglementer la façon dont les institutions et organismes du gouvernement du Canada exercent leurs fonctions et responsabilités administratives. Cela est indiscutablement *intra vires* du Parlement. Cet aspect peut être considéré comme un pouvoir accessoire de la compétence législative en cause, ou de toute façon, être justifié en vertu du pouvoir résiduel prévu à l'art. 91.

Le Décret sur les lignes directrices ne peut être utilisé comme moyen déguisé d'envahir des champs de compétence provinciale qui ne se rapportent pas aux domaines de compétence fédérale concernés. Le «ministère responsable» n'a que le mandat d'examiner les questions se rapportant directement aux domaines de compétence fédérale concernés. Toute ingérence dans la sphère de compétence provinciale est simplement accessoire au caractère véritable du texte législatif.

Le pouvoir discrétionnaire

Le juge en chef Lamer et les juges La Forest, L'Heureux-Dubé, Sopinka, Gonthier, Cory, McLachlin et Iacobucci: La Cour d'appel fédérale n'a pas commis d'erreur en modifiant la décision du juge des requêtes, prise dans l'exercice de son pouvoir discrétionnaire, de ne pas accorder la réparation sollicitée en raison du retard déraisonnable et de la futilité de la procédure. L'intimée s'est efforcée d'une façon soutenue de contester, dans le cadre des poursuites judiciaires devant les tribunaux de l'Alberta et dans les lettres envoyées aux ministères fédéraux, d'une part, la légalité des mesures prises par l'Alberta relativement à la construction du barrage, et d'autre part, l'acquiescement des ministres appelants; il n'existe pas de preuve que l'Alberta a subi

accede to an environmental impact assessment under the Order until it had exhausted all legal avenues. The motions judge did not weigh these considerations adequately, giving the Court of Appeal no choice but to intervene. Futility was also not a proper ground to refuse a remedy in the present circumstances. Prerogative relief should only be refused on that ground in those few instances where the issuance of a prerogative writ would be effectively nugatory. It is not obvious in this case that the implementation of the Order even at this late stage will not have some influence over the mitigative measures that may be taken to ameliorate any deleterious environmental impact from the dam on an area of federal jurisdiction.

Per Stevenson J. (dissenting): The Federal Court of Appeal erred in interfering with the motions judge's discretion to refuse the prerogative remedy. The court was clearly wrong in overruling his conclusion on the question of delay. The common law has always imposed a duty on an applicant to act promptly in seeking prerogative relief. Given the enormity of the project and the interests at stake, it was unreasonable for the respondent Society to wait 14 months before challenging the Minister of Transport's approval. It is impossible to conclude that Alberta was not prejudiced by the delay. The legal proceedings in the Alberta courts brought by the respondent and others need not have been taken into account by the motions judge. These proceedings were separate and distinct from the relief sought in this case and were irrelevant to the issues at hand. The present action centres on the constitutionality and applicability of the Guidelines Order. It raises new and different issues. In determining whether he should exercise his discretion against the respondent, the motions judge was obliged to look only at those factors which he considered were directly connected to the application before him. Interference with his exercise of discretion is not warranted unless it can be said with certainty that he was wrong in doing what he did. The test has not been met in this case.

Costs

Per Lamer C.J. and La Forest, L'Heureux-Dubé, Sopinka, Gonthier, Cory, McLachlin and Iacobucci JJ.:

un préjudice quelconque en raison d'un retard à intenter la présente action. Malgré les contestations judiciaires en cours, la construction du barrage s'est poursuivie. La province n'était pas disposée à consentir à une évaluation des incidences environnementales en vertu du Décret avant l'épuisement de tous les recours légaux. Le juge des requêtes n'a pas suffisamment accordé d'importance à ces considérations, ne laissant à la Cour d'appel d'autre choix que d'intervenir. Le motif de la futilité de la procédure ne pouvait justifier un refus dans les circonstances. On ne devrait refuser la délivrance d'un bref de prérogative pour ce motif que dans les rares cas où sa délivrance serait vraiment inefficace. En l'espèce, il n'est pas évident que l'application du Décret, même à cette étape tardive, n'aura pas un certain effet sur les mesures susceptibles d'être prises pour atténuer toute incidence environnementale néfaste que pourrait avoir le barrage sur un domaine de compétence fédérale.

Le juge Stevenson (dissident): La Cour d'appel fédérale a commis une erreur en modifiant la décision du juge des requêtes, prise dans l'exercice de son pouvoir discrétionnaire, de ne pas accorder une réparation par voie de bref de prérogative. La cour a clairement commis une erreur en rejetant sa conclusion relativement à la question du retard. La common law a toujours exigé du requérant qu'il agisse avec diligence lorsqu'il sollicite un bref de prérogative. Compte tenu de l'envergure du projet et des intérêts en jeu, il n'était pas raisonnable que la Société intimée attende 14 mois avant de contester l'approbation du ministre des Transports. Il est impossible de conclure que l'Alberta n'a pas subi un préjudice en raison du retard. Le juge des requêtes n'avait pas à tenir compte des procédures judiciaires que l'intimée et d'autres parties avaient entamées devant les tribunaux de l'Alberta. Ces procédures constituaient des recours distincts et différents du redressement sollicité en l'espèce et n'étaient pas pertinentes quant aux questions en litige. La présente action porte sur la constitutionnalité et l'applicabilité du Décret sur les lignes directrices. Il soulève des questions nouvelles et différentes. Pour déterminer s'il devait exercer son pouvoir discrétionnaire contre l'intimée, le juge des requêtes devait examiner seulement les facteurs qui, selon lui, se rattachaient directement à la demande dont il était saisi. On n'est pas justifié de modifier la décision qu'il a prise dans l'exercice de son pouvoir discrétionnaire, sauf si l'on peut affirmer avec certitude qu'il a eu tort de procéder ainsi. L'on n'a pas répondu au critère en l'espèce.

Les dépens

Le juge en chef Lamer et les juges La Forest, L'Heureux-Dubé, Sopinka, Gonthier, Cory, McLachlin

It is a proper case for awarding costs on a solicitor-client basis to the respondent, given the Society's circumstances and the fact that the federal Ministers were joined as appellants even though they did not earlier seek leave to appeal to this Court.

Per Stevenson J. (dissenting): The appellants should not be called upon to pay costs on a solicitor and client basis. There is no justification in departing from our own general rule that a successful party should recover costs on the usual party and party basis. Public interest groups must be prepared to abide by the same principles as apply to other litigants and be prepared to accept some responsibility for the costs.

et Iacobucci: Il s'agit d'un cas où il est approprié d'accorder les dépens comme entre procureur et client à la Société intimée, compte tenu de la situation de cette dernière et du fait que les ministères fédéraux ont été joints comme appelants même s'ils n'avaient pas auparavant présenté une demande d'autorisation de pourvoi à notre Cour.

Le juge Stevenson (dissident): Les appelants ne devraient pas être contraints de payer les dépens comme entre procureur et client. Il n'y a pas de raison de déroger à notre règle générale que la partie qui a gain de cause a droit aux dépens sur la base des frais entre parties. Les groupes d'intérêt public doivent être disposés à se plier aux mêmes principes que les autres plaideurs et accepter une certaine responsabilité quant aux dépens.

Version française du jugement du juge en chef Lamer et des juges La Forest, L'Heureux-Dubé, Sopinka, Gonthier, Cory, McLachlin et Iacobucci rendu par

LE JUGE LA FOREST—La protection de l'environnement est devenue l'un des principaux défis de notre époque. Pour y faire face, les gouvernements et les organismes internationaux ont participé à la création d'un éventail important de

lative schemes and administrative structures. In Canada, both the federal and provincial governments have established Departments of the Environment, which have been in place for about 20 years. More recently, however, it was realized that a department of the environment was one among many other departments, many of which pursued policies that came into conflict with its goals. Accordingly at the federal level steps were taken to give a central role to that department, and to expand the role of other government departments and agencies so as to ensure that they took account of environmental concerns in taking decisions that could have an environmental impact.

To that end, s. 6 of the *Department of the Environment Act*, R.S.C., 1985, c. E-10, empowered the Minister for the purposes of carrying out his duties relating to environmental quality, by order, with the approval of the Governor in Council, to establish guidelines for use by federal departments, agencies and regulatory bodies in carrying out their duties, functions and powers. Pursuant to this provision the *Environmental Assessment and Review Process Guidelines Order* ("*Guidelines Order*") was established and approved in June 1984, SOR/84-467. In general terms, these guidelines require all federal departments and agencies that have a decision-making authority for any proposal, i.e., any initiative, undertaking or activity that may have an environmental effect on an area of federal responsibility, to initially screen such proposal to determine whether it may give rise to any potentially adverse environmental effects. If a proposal could have a significant adverse effect on the environment, provision is made for public review by an environmental assessment panel whose members must be unbiased, free of political influence and possessed of special knowledge and

régimes législatifs et de structures administratives. Au Canada, les gouvernements fédéral et provinciaux ont mis sur pied des ministères de l'environnement, qui existent maintenant depuis environ 20 ans. Cependant, on s'est récemment rendu compte qu'un ministère de l'environnement est entouré d'un grand nombre d'autres ministères dont les politiques entrent en conflit avec ses objectifs. En conséquence, le gouvernement fédéral a pris des mesures pour confier au ministère de l'Environnement un rôle central et élargir le rôle d'autres ministères et organismes gouvernementaux pour s'assurer qu'ils tiennent compte des préoccupations touchant l'environnement dans la prise de décisions susceptibles d'entraîner des incidences environnementales.

À cette fin, en vertu de l'art. 6 de la *Loi sur le ministère de l'Environnement*, L.R.C. (1985), ch. E-10, le ministre peut par arrêté, au titre de celles de ses fonctions qui portent sur la qualité de l'environnement et avec l'approbation du gouverneur en conseil, établir des directives à l'usage des ministères et des organismes fédéraux dont ceux de réglementation dans l'exercice de leurs pouvoirs et fonctions. Conformément à cette disposition, le *Décret sur les lignes directrices visant le processus d'évaluation et d'examen en matière d'environnement* («*Décret sur les lignes directrices*») a été pris et approuvé en juin 1984, DORS/84-467. Dans l'ensemble, ces lignes directrices exigent de tous les ministères et organismes fédéraux qui exercent un pouvoir de décision à l'égard d'une proposition, c'est-à-dire une entreprise ou activité susceptible d'entraîner des répercussions environnementales sur une question de compétence fédérale, qu'ils procèdent à un examen initial de cette proposition afin de déterminer si elle peut éventuellement comporter des effets néfastes sur l'environnement. Advenant le cas où une proposition risque d'avoir un effet néfaste important sur l'environnement, on prévoit la tenue d'un examen public effectué par une commission d'évaluation environnementale dont les membres doivent faire preuve d'objectivité, être à l'abri de l'ingérence politique et posséder des connaissances et une expérience particulières se rapportant aux

experience relevant to the technical, environmental and social effects of the proposal.

The present case raises the constitutional and statutory validity of the *Guidelines Order* as well as its nature and applicability. These issues arise in a context where the respondent Society, an environmental group from Alberta, by applications for *certiorari* and mandamus, seeks to compel two federal departments, the Department of Transport and the Department of Fisheries and Oceans, to conduct a public environmental assessment pursuant to the *Guidelines Order* in respect of a dam constructed on the Oldman River by the Government of Alberta. That government had itself conducted extensive environmental studies which took into account public views. However, since the project affects navigable waters, fisheries, Indians and Indian lands, federal interests are involved. Specifically, the Society argues that the Minister of Transport must approve the project under the *Navigable Waters Protection Act*, R.S.C., 1985, c. N-22, and in doing so is required to provide for public assessment of the project pursuant to the *Guidelines Order*. It also argues that the Minister of Fisheries and Oceans has a similar duty in the performance of his functions under the *Fisheries Act*, R.S.C., 1985, c. F-14.

The case also raises the question whether the motions judge properly exercised his discretion in deciding whether or not to grant *certiorari* or mandamus. Accordingly the material background must be set forth in some detail.

Background

The history of the project begins in May 1958 when Alberta asked the Prairie Farm Rehabilitation Administration ("P.F.R.A.") of the federal Department of Agriculture to determine the feasibility of constructing a storage reservoir on the Oldman River, at a site called Livingstone Gap. In

effets de la proposition sur les plans technique, environnemental et social.

Le présent pourvoi soulève la validité constitutionnelle et législative du *Décret sur les lignes directrices* et porte sur la nature et l'applicabilité de celui-ci. Ces questions s'inscrivent dans un contexte où l'intimée, la Friends of the Oldman River Society (la «Société»), un groupe environnemental de l'Alberta, par demande de bref de *certiorari* et de bref de *mandamus*, cherche à forcer deux ministères fédéraux, le ministère des Transports et le ministère des Pêches et des Océans, à procéder à une évaluation environnementale publique conformément au *Décret sur les lignes directrices* relativement à un barrage construit sur la rivière Oldman par le gouvernement de l'Alberta. Ce dernier a lui-même procédé à d'importantes études environnementales qui ont donné lieu à des consultations publiques. Toutefois, puisque le projet touche des eaux navigables, des pêcheries, des Indiens et des terres indiennes, il comporte des questions de compétence fédérale. Plus particulièrement, la Société soutient que le ministre des Transports doit approuver le projet en vertu de la *Loi sur la protection des eaux navigables*, L.R.C. (1985), ch. N-22, et que, ce faisant, il doit prévoir la tenue d'une évaluation publique du projet conformément au *Décret sur les lignes directrices*. Elle soutient également que le ministre des Pêches et des Océans, a une obligation similaire dans l'exécution de ses fonctions en vertu de la *Loi sur les pêches*, L.R.C. (1985), ch. F-14.

Le présent pourvoi soulève aussi la question de savoir si le juge des requêtes a bien exercé son pouvoir discrétionnaire dans sa décision concernant la délivrance d'un bref de *certiorari* ou de *mandamus*. En conséquence, les faits pertinents doivent être présentés en détail.

Les faits

L'historique du projet débute en mai 1958 au moment où le gouvernement de l'Alberta a demandé à l'Administration du rétablissement agricole des Prairies («ARAP») du ministère fédéral de l'Agriculture d'évaluer la possibilité de la construction d'un réservoir pour le stockage de

December 1966 the P.F.R.A. submitted its report and proposed another location, the Three Rivers site on the Oldman River, for further study. There followed a federal-provincial water supply study which lasted from 1966 to 1974. After this, in July 1974, the Alberta Department of the Environment initiated an examination of water demand and potential storage sites on the Oldman River and its tributaries, to be conducted in two phases.

The first phase consisted of an initial evaluation of sites in the Oldman basin for water storage carried out by a Technical Advisory Committee comprised of representatives from several provincial government departments including Environment, Culture and Multiculturalism, Energy Resources Conservation Board, Fish and Wildlife Division, Agriculture, as well as representatives from local municipal districts and industry. The Committee's report was released on July 14, 1976 and was followed by a series of public consultations with local authorities and other groups and individuals. The responses received were evaluated and issues arising from them were identified for further study in the second phase.

The second phase began on February 4, 1977 when the Minister of the Environment announced the creation of the Oldman River Study Management Committee consisting of six representatives of the public and three representatives of the provincial government. Its task was to address the issues raised by the public during the first study, and to make recommendations concerning overall water management in the river basin, including the incorporation of the concerns of area residents. This it was required to do in a more comprehensive way than the first phase by, *inter alia*, studying issues affecting the whole of the river basin such as salinization, sedimentation, recreation, fish habitat and other environmental issues. Public par-

l'eau de la rivière Oldman à un endroit appelé Livingston Gap. En décembre 1966, l'ARAP a déposé son rapport et proposé la réalisation d'une étude plus poussée relativement à un autre emplacement le long de la rivière Oldman, en l'occurrence Three Rivers. Entre 1966 et 1974, une étude fédérale-provinciale sur l'approvisionnement en eau a été réalisée. Après quoi, en juillet 1974, le ministère de l'Environnement de l'Alberta a entrepris des études visant à examiner les besoins en eau et à déterminer quels emplacements sur la rivière Oldman et ses affluents seraient susceptibles de servir au stockage de l'eau. Ces études devaient se dérouler en deux étapes.

La première consistait en une évaluation initiale des emplacements dans le bassin de la rivière Oldman aux fins du stockage de l'eau et a été réalisée par un comité consultatif technique composé de représentants de plusieurs organismes et ministères du gouvernement provincial, notamment Environnement, Culture et Multiculturalisme, l'Energy Resources Conservation Board, la division du poisson et de la faune de l'Agriculture, ainsi que de représentants des districts municipaux et de l'industrie. Le comité a déposé son rapport le 14 juillet 1976; et, par la suite, une série de consultations publiques s'est tenue auprès des autorités locales et d'autres groupes et particuliers. On a procédé à l'évaluation des réponses reçues et déterminé les questions qui en découlaient en vue de les examiner au cours de la seconde étape.

La seconde étape a commencé le 4 février 1977 au moment de l'annonce par le ministre de l'Environnement de la mise sur pied du «Oldman River Study Management Committee» (le comité de gestion de l'étude sur la rivière Oldman), qui était formé de six représentants du public et de trois représentants du gouvernement provincial. Ce comité devait examiner les questions soulevées par le public au cours de la première étape et présenter des recommandations sur la gestion globale des eaux du bassin de la rivière, devant notamment tenir compte des préoccupations des résidents de la région. Cette étape devait être plus approfondie que la première et comporter notamment l'étude de questions touchant l'ensemble du bassin de la

ticipation was encouraged, a series of public meetings and public workshops was held, and oral and written submissions were made by a variety of interest groups including Indian bands and environmental groups. The Management Committee released its final report in 1978.

That same year, a panel of the Environment Council of Alberta was constituted to hold public hearings on the management of water resources within the Oldman basin. Again, several public hearings were held throughout southern Alberta and the Council received briefs from a wide cross-section of Albertans representing the interests of business, agriculture, local governments, Indian bands and others. The Council submitted its report to the Minister of the Environment in August 1979 and recommended yet another location, the Brocket site on the Peigan Indian Reserve, should a dam be needed.

The provincial government then reviewed this report and the 1978 report and on August 29, 1980 announced its decision to build a dam on the Oldman River. It also stated that the Three Rivers site was the preferred location, but added that the final decision would be deferred until the Peigan Indian Band had an opportunity to submit a proposal for construction at the Brocket site. In November 1983 the Peigan Band presented a position to the Minister of the Environment describing its expected economic compensation if the dam were to be built at the Brocket site.

On August 8, 1984 the Premier of Alberta announced the government's decision to proceed with construction of the dam at the Three Rivers site. Before that announcement was made, however, the dam proposal was reviewed by the Regional Screening and Co-ordinating Committee ("R.S.C.C."), a committee of the federal Department of the Environment. The purpose of the

rivière, savoir la salinisation, la sédimentation, les loisirs, l'habitat du poisson et d'autres questions environnementales. On a encouragé le public à participer, une série de rencontres et d'ateliers publics ont eu lieu et divers groupes d'intérêts, dont les bandes indiennes et les groupes environnementaux, ont présenté des observations orales et écrites. Le comité de gestion a soumis son rapport final en 1978.

La même année, un groupe a été constitué au sein de l'Environment Council of Alberta (le «conseil»); on lui a ordonné de tenir des audiences publiques sur la gestion des ressources en eau dans le bassin de la rivière Oldman. Plusieurs audiences publiques ont de nouveau eu lieu dans tout le sud de l'Alberta et le conseil a reçu de nombreux exposés représentant les vues d'un large échantillon de la population albertaine, notamment le milieu des affaires, le secteur agricole, les gouvernements locaux et les bandes indiennes. Le conseil a soumis son rapport au ministre de l'Environnement en août 1979 et a recommandé un nouvel emplacement, à Brocket, situé sur la réserve indienne de Peigan, dans l'hypothèse où un barrage serait nécessaire.

Le gouvernement provincial a ensuite examiné ce rapport et celui de 1978 et a annoncé le 29 août 1980 qu'il avait décidé de construire un barrage sur la rivière Oldman. Il a précisé que l'emplacement de Three Rivers était l'emplacement privilégié, mais qu'il reportait sa décision définitive quant à ce choix jusqu'à ce que la bande indienne de Peigan ait pu présenter une proposition concernant la construction du barrage à Brocket. En novembre 1983, la bande de Peigan a présenté sa position au ministre de l'Environnement et précisé l'indemnisation qu'elle prévoyait dans l'hypothèse où le barrage serait construit à Brocket.

Le 8 août 1984, le premier ministre de l'Alberta a annoncé que le gouvernement avait décidé de construire le barrage à l'emplacement de Three Rivers. Toutefois, avant cette annonce, le projet de construction du barrage avait été examiné par le Comité régional de sélection et de coordination («CRSC»), un comité du ministère fédéral de l'Environnement. Le CRSC devait s'assurer que

R.S.C.C. was to ensure that proposals that may affect federal areas of concern are subjected to environmental review, and it actively followed the progress of the dam proposal until it was decided that the dam would not be built on Indian land.

Following the Three Rivers site announcement, Alberta commenced the design of the dam and launched an "Environmental Mitigation/Opportunities Action Plan" which spawned further environmental studies and public meetings. The provincial Department of the Environment opened a project information office close to the Three Rivers site to answer public enquiries. Several subcommittees were established by the Municipal District of Pincher Creek to provide input to the Alberta Department of the Environment on areas of local concern, including land use, fish and wildlife, recreation, and agriculture. In addition, the provincial Minister of the Environment ordered the appointment of a Local Advisory Committee to advise the Minister on such matters as road relocation, fish and wildlife concerns, and recreational opportunities. After gathering information from public meetings, the Committee submitted a report to the Minister with recommendations concerning fisheries, wildlife, historical resources, agriculture, recreation and transportation systems.

In 1987 the federal R.S.C.C. once again became involved in the project at the request of the Department of Indian and Northern Affairs to study its impact on federal interests, particularly on the Peigan Indian Reserve located approximately 12 kilometres downstream from the dam site. Alberta had already provided the Peigans with funding to conduct an independent study of the project's effect on the Reserve and its inhabitants. The Peigan report was submitted to the provincial Minister of the Environment in February 1987. It addressed such subjects as irrigation, surface and ground water considerations, dam safety, fisheries

les projets susceptibles d'entraîner une incidence sur les domaines de compétence fédérale soient soumis à une évaluation environnementale, et il a suivi l'évolution du projet de construction du barrage jusqu'à ce qu'il soit décidé qu'il ne serait pas construit sur les terres indiennes.

Après l'annonce de la construction du barrage à Three Rivers, l'Alberta a entrepris la conception du barrage et l'élaboration d'un plan d'atténuation ou d'exploitation des incidences environnementales qui a donné lieu à d'autres études environnementales et à la tenue de rencontres publiques. Le ministère provincial de l'Environnement a alors ouvert un bureau d'information sur le projet, situé à proximité de Three Rivers, afin de répondre aux demandes de renseignements du public. Le district municipal de Pincher Creek a ensuite constitué plusieurs sous-comités afin de faire connaître au ministère albertain de l'Environnement les préoccupations d'intérêt local concernant notamment l'utilisation des terres, le poisson et la faune, les loisirs et l'agriculture. En outre, le ministre provincial de l'Environnement a demandé la constitution d'un comité consultatif local chargé de le conseiller sur des questions touchant le réaménagement des routes, les préoccupations dans le domaine de la pêche et de la faune et les possibilités offertes en matière de loisirs. Après avoir recueilli des renseignements au cours de rencontres publiques, le comité a soumis au ministre son rapport accompagné de recommandations au sujet des pêches, de la faune, des ressources historiques, de l'agriculture, des loisirs et du transport.

En 1987, le CRSC fédéral a de nouveau participé au projet, à la demande du ministère des Affaires indiennes et du Nord canadien, afin d'en examiner l'incidence sur les intérêts fédéraux, notamment sur la réserve indienne de Peigan située à environ 12 kilomètres en aval de l'emplacement du barrage. L'Alberta avait déjà octroyé à la bande indienne de Peigan des fonds pour qu'elle effectue une étude indépendante de l'incidence du projet sur la réserve et ses habitants. La bande de Peigan a soumis son rapport au ministre provincial de l'Environnement en février 1987. Il portait notamment sur l'irrigation, les questions des eaux de sur-

assessment, and spiritual and cultural assessment. The report prepared at the behest of the R.S.C.C. in July 1987 concluded that the project's effects on the Reserve would be either favourable or mitigable, but did note the possibility of negative environmental impacts affecting the Reserve—i.e., increased dust storms, increased mercury levels in fish and the extinction of flood plain cottonwood forests.

face et des eaux souterraines, la sécurité du barrage, l'évaluation des pêches et l'incidence du projet sur les plans spirituel et culturel. Le rapport préparé sur l'ordre du CRSC en juillet 1987 concluait que les effets du projet sur la réserve seraient favorables ou atténuables, mais faisait ressortir la possibilité de répercussions environnementales négatives sur la réserve, soit un accroissement des tourbillons de poussière, une augmentation du niveau de mercure dans le poisson et l'extinction des forêts de peupliers dans le périmètre d'inondation.

I come now to a step of prime importance in this action. On March 10, 1986 the Alberta Department of the Environment applied to the federal Minister of Transport for approval of the work under s. 5 of the *Navigable Waters Protection Act*. That provision provides that no work is to be built in navigable waters without the prior approval of the Minister. In assessing the application, the Minister considered the project's effect on marine navigation and approved the application on September 18, 1987 subject to certain conditions relating to marine navigation. I underline, however, that he did not subject the application to an assessment under the *Guidelines Order*. As we shall see, whether he should have done so raises several of the major issues in this appeal.

J'arrive maintenant à une étape d'importance primordiale. Le 10 mars 1986, le ministère de l'Environnement de l'Alberta a demandé au ministre fédéral des Transports d'approuver l'ouvrage en vertu de l'art. 5 de la *Loi sur la protection des eaux navigables*. Cette disposition prévoit qu'il est interdit de construire un ouvrage dans les eaux navigables à moins qu'il n'ait préalablement été approuvé par le ministre. Dans l'évaluation de la demande, le ministre a examiné l'incidence du projet sur la navigation et l'a approuvé, le 18 septembre 1987, sous réserve de certaines conditions relatives à la navigation. Je tiens toutefois à indiquer qu'il n'a pas assujetti la demande à une évaluation en vertu du *Décret sur les lignes directrices*. Comme nous le verrons, plusieurs des principales questions soulevées dans le présent pourvoi découle de la question de savoir s'il aurait dû le faire.

It is not until after this transpired that the respondent Society came into the picture. The Society was incorporated on September 8, 1987 to oppose the project and became aware of the approval granted by the Minister of Transport on February 16, 1988. However, earlier efforts to check the progress of the development had been made by certain individuals who later became members of the Society on its formation. Thus in the summer of 1987 the Southern Alberta Environmental Group had written a letter to the Minister of Fisheries and Oceans asking that an initial assessment be conducted under the *Guidelines Order*. The request was refused for the reason that the potential problems were being addressed and

Ce n'est qu'ensuite que la Société intimée commence à jouer un rôle. En effet, l'intimée a été constituée en société le 8 septembre 1987 pour s'opposer au projet et a été informée que le ministre des Transports avait approuvé le projet le 16 février 1988. Toutefois, certains particuliers, qui sont ensuite devenus membres de la Société lors de sa constitution, s'étaient efforcés d'empêcher l'évolution du projet. À l'été 1987, le Southern Alberta Environmental Group avait écrit au ministre des Pêches et des Océans pour lui demander de procéder à une évaluation initiale en vertu du *Décret sur les lignes directrices*. Cette demande fut refusée au motif que les problèmes possibles avaient été pris en charge et en raison de

because of the "long-standing administrative arrangements that are in place for the management of fisheries in Alberta". This, like the Minister of Transport's action described earlier, plays an important part in the legal arguments that were subsequently made. Another early effort came on December 3, 1987 when the respondent Society wrote to the Minister of the Environment asking that the matter be subjected to the *Guidelines Order* but again the request was declined, this time principally on the grounds that the dam project fell primarily within provincial jurisdiction and that Environment Canada was satisfied that Alberta's proposed mitigation plan would remedy any detrimental effects on the fisheries. The Society tried once again to have the Minister of the Environment invoke the *Guidelines Order* on February 22, 1988, but was turned down in June 1988 for the same jurisdictional reason.

The Society was also busy on the provincial front to have the project stopped. On October 26, 1987 it brought an application in the Court of Queen's Bench of Alberta to quash an interim licence granted under the *Water Resources Act*, R.S.A. 1980, c. W-5. The licence was, in fact, quashed by order on December 8, 1987. A second interim licence was granted on February 5, 1988 and the Society applied in the Court of Queen's Bench to have that one quashed as well. However, that application was dismissed on April 21, 1988. The Society also asked the Alberta Energy Resources Conservation Board to conduct a public hearing under the *Hydro and Electric Energy Act*, R.S.A. 1980, c. H-13, but its request was refused. That decision was affirmed by the Alberta Court of Appeal. In August 1988 the vice-president of the Society swore an information before a justice of the peace alleging that an offence had been committed against the federal *Fisheries Act* but the Attorney General for Alberta stayed the proceedings.

The contract for construction of the dam was awarded in February 1988, and as of March 31, 1989 the dam was 40 percent complete. The pre-

l'existence des [TRADUCTION] «arrangements administratifs qui régissent depuis longtemps la gestion des pêches en Alberta». Ce refus, à l'instar des mesures susmentionnées prises par le ministre des Transports, joue un rôle important dans l'argumentation juridique qui a suivi. Dans une lettre du 3 décembre 1987, la Société intimée a demandé au ministre de l'Environnement d'assujettir le projet à l'évaluation en vertu du *Décret sur les lignes directrices*; cette demande a de nouveau été refusée, cette fois principalement au motif que le projet de barrage relevait fondamentalement de la compétence provinciale et qu'Environnement Canada était convaincu que le plan d'atténuation proposé par l'Alberta devait pallier tout effet néfaste sur les ressources halieutiques. Le 22 février 1988, la Société a de nouveau tenté d'inciter le ministre de l'Environnement à invoquer l'application du *Décret sur les lignes directrices*, mais a de nouveau essuyé un refus en juin 1988 pour le même motif de compétence.

La Société a également tenté à l'échelon provincial de faire arrêter le projet. Le 26 octobre 1987, elle a présenté une demande auprès de la Cour du Banc de la Reine de l'Alberta sollicitant l'annulation d'un permis provisoire délivré en vertu de la *Water Resources Act*, R.S.A. 1980, ch. W-5. Ce permis a été annulé le 8 décembre 1987 et un second permis provisoire délivré le 5 février 1988; la Société a de nouveau demandé à la Cour du Banc de la Reine d'annuler ce permis. Toutefois, cette demande a été rejetée le 21 avril 1988. La Société a également demandé à l'Alberta Energy Resources Conservation Board de tenir une audience publique en vertu de l'*Hydro and Electric Energy Act*, R.S.A. 1980, ch. H-13, mais cette demande a été refusée. La Cour d'appel de l'Alberta a confirmé cette décision. En août 1988, la vice-présidente de la Société a déposé une plainte devant un juge de paix, alléguant qu'il y avait eu contravention à la *Loi sur les pêches* du fédéral; toutefois, le procureur général de l'Alberta a ordonné un arrêt des procédures.

Le contrat de construction du barrage a été octroyé en février 1988 et, le 31 mars 1989, les travaux étaient achevés à 40 pour 100. La présente

sent action was commenced on April 21, 1989 in the Trial Division of the Federal Court, [1990] 1 F.C. 248. In the action, the Society sought an order in the nature of *certiorari* to quash the approval granted by the Minister of Transport as well as an order in the nature of mandamus requiring the Minister of Transport and the Minister of Fisheries and Oceans to comply with the *Guidelines Order*. Jerome A.C.J. dismissed the application but the Society's appeal to the Federal Court of Appeal was successful, [1990] 2 F.C. 18. This Court granted leave to appeal on September 13, 1990, [1990] 2 S.C.R. x.

Legislation

Before going further, it will be useful to set forth the major parts of the relevant legislation. The *Department of the Environment Act* reads in relevant part:

4. (1) The powers, duties and functions of the Minister extend to and include all matters over which Parliament has jurisdiction, not by law assigned to any other department, board or agency of the Government of Canada, relating to

(*a*) the preservation and enhancement of the quality of the natural environment, including water, air and soil quality;

. . .

5. The Minister, in exercising his powers and carrying out his duties and functions under section 4, shall

(*a*) initiate, recommend and undertake programs, and coordinate programs of the Government of Canada that are designed

(i) to promote the establishment or adoption of objectives or standards relating to environmental quality, or to control pollution,

(ii) to ensure that new federal projects, programs and activities are assessed early in the planning process for potential adverse effects on the quality of the natural environment and that a further review is carried out of those projects, programs, and activities that are found to have probable significant adverse effects, and the results thereof taken into account, and

action a été intentée le 21 avril 1989 devant la Section de première instance de la Cour fédérale, [1990] 1 C.F. 248. Dans cette action, la Société sollicitait une ordonnance cassant par voie de *certiorari* l'approbation donnée par le ministre des Transports ainsi qu'un bref de la nature d'un *mandamus* ordonnant au ministre des Transports et au ministre des Pêches et des Océans de se conformer au *Décret sur les lignes directrices*. Le juge en chef adjoint Jerome a rejeté la demande, mais la Société a eu gain de cause devant la Cour d'appel fédérale, [1990] 2 C.F. 18. Notre Cour a accordé l'autorisation de pourvoi le 13 septembre 1990, [1990] 2 R.C.S. x.

Les dispositions législatives

Avant de poursuivre, il est utile de présenter les principales parties des textes législatifs pertinents. La *Loi sur le ministère de l'Environnement*:

4. (1) Les pouvoirs et fonctions du ministre s'étendent d'une façon générale à tous les domaines de compétence du Parlement non attribués de droit à d'autres ministères ou organismes fédéraux et liés:

a) à la conservation et l'amélioration de la qualité de l'environnement naturel, notamment celle de l'eau, de l'air et du sol;

. . .

5. Dans le cadre des pouvoirs et fonctions que lui confère l'article 4, le ministre:

a) lance, recommande ou entreprend à son initiative et coordonne à l'échelle fédérale des programmes visant à:

(i) favoriser la fixation ou l'adoption d'objectifs ou de normes relatifs à la qualité de l'environnement ou à la lutte contre la pollution,

(ii) faire en sorte que les nouveaux projets, programmes et activités fédéraux soient, dès les premières étapes de planification, évalués en fonction de leurs risques pour la qualité de l'environnement naturel, et que ceux d'entre eux dont on aura estimé qu'ils présentent probablement des risques graves fassent l'objet d'un réexamen dont les résultats devront être pris en considération,

(iii) to provide to Canadians environmental information in the public interest;

(*b*) promote and encourage the institution of practices and conduct leading to the better preservation and enhancement of environmental quality, and cooperate with provincial governments or agencies thereof, or any bodies, organization or persons, in any programs having similar objects; and

(*c*) advise the heads of departments, boards and agencies of the Government of Canada on all matters pertaining to the preservation and enhancement of the quality of the natural environment.

6. For the purposes of carrying out his duties and functions related to environmental quality, the Minister may, by order, with the approval of the Governor in Council, establish guidelines for use by departments, boards and agencies of the Government of Canada and, where appropriate, by corporations named in Schedule III to the *Financial Administration Act* and regulatory bodies in the exercise of their powers and the carrying out of their duties and functions.

Pursuant to s. 6, the Minister, by order, with the approval of the Governor in Council, established the *Guidelines Order*. It reads in relevant part as follows:

2. In these Guidelines,

. . .

"initiating department" means any department that is, on behalf of the Government of Canada, the decision making authority for a proposal;

. . .

"proponent" means the organization or the initiating department intending to undertake a proposal;

"proposal" includes any initiative, undertaking or activity for which the Government of Canada has a decision making responsibility.

3. The Process shall be a self assessment process under which the initiating department shall, as early in the planning process as possible and before irrevocable decisions are taken, ensure that the environmental implications of all proposals for which it is the decision making authority are fully considered and where the impli-

(iii) fournir, dans l'intérêt public, de l'information sur l'environnement à la population;

b) favorise et encourage des comportements tendant à protéger et améliorer la qualité de l'environnement, et coopère avec les gouvernements provinciaux ou leurs organismes, ou avec tous autres organismes, groupes ou particuliers, à des programmes dont les objets sont analogues;

c) conseille les chefs des divers ministères ou organismes fédéraux en matière de conservation et d'amélioration de la qualité de l'environnement naturel.

6. Au titre de celles de ses fonctions qui portent sur la qualité de l'environnement, le ministre peut par arrêté, avec l'approbation du gouverneur en conseil, établir des directives à l'usage des ministères et organismes fédéraux et, s'il y a lieu, à celui des sociétés d'État énumérées à l'annexe III de la *Loi sur la gestion des finances publiques* et des organismes de réglementation dans l'exercice de leurs pouvoirs et fonctions.

Conformément à l'art. 6, le ministre a par arrêté, avec l'approbation du gouverneur en conseil, établi le *Décret sur les lignes directrices*, dont les dispositions pertinentes sont:

2. Les définitions qui suivent s'appliquent aux présentes lignes directrices.

. . .

«ministère responsable» Ministère qui, au nom du gouvernement du Canada, exerce le pouvoir de décision à l'égard d'une proposition.

. . .

«promoteur» L'organisme ou le ministère responsable qui se propose de réaliser une proposition.

«proposition» S'entend en outre de toute entreprise ou activité à l'égard de laquelle le gouvernement du Canada participe à la prise de décisions.

3. Le processus est une méthode d'auto-évaluation selon laquelle le ministère responsable examine, le plus tôt possible au cours de l'étape de planification et avant de prendre des décisions irrévocables, les répercussions

cations are significant, refer the proposal to the Minister for public review by a Panel.

. . .

6. These Guidelines shall apply to any proposal

(*a*) that is to be undertaken directly by an initiating department;

(*b*) that may have an environmental effect on an area of federal responsibility;

(*c*) for which the Government of Canada makes a financial commitment; or

(*d*) that is located on lands, including the offshore, that are administered by the Government of Canada.

Reference must also be made to s. 5 of the *Navigable Waters Protection Act* which reads as follows:

5. (1) No work shall be built or placed in, on, over, under, through or across any navigable water unless

(*a*) the work and the site and plans thereof have been approved by the Minister, on such terms and conditions as the Minister deems fit, prior to commencement of construction;

(*b*) the construction of the work is commenced within six months and completed within three years after the approval referred to in paragraph (*a*) or within such further period as the Minister may fix; and

(*c*) the work is built, placed and maintained in accordance with the plans, the regulations and the terms and conditions set out in the approval referred to in paragraph (*a*).

environnementales de toutes les propositions à l'égard desquelles il exerce le pouvoir de décision.

. . .

6. Les présentes lignes directrices s'appliquent aux propositions

a) devant être réalisées directement par un ministère responsable;

b) pouvant avoir des répercussions environnementales sur une question de compétence fédérale;

c) pour lesquelles le gouvernement du Canada s'engage financièrement; ou

d) devant être réalisées sur des terres administrées par le gouvernement du Canada, y compris la haute mer.

On doit aussi mentionner l'art. 5 de la *Loi sur la protection des eaux navigables*:

5. (1) Il est interdit de construire ou de placer un ouvrage dans des eaux navigables ou sur, sous, au-dessus ou à travers de telles eaux à moins que:

a) préalablement au début des travaux, l'ouvrage, ainsi que son emplacement et ses plans, n'aient été approuvés par le ministre selon les modalités qu'il juge à propos;

b) la construction de l'ouvrage ne soit commencée dans les six mois et terminée dans les trois ans qui suivent l'approbation visée à l'alinéa *a*) ou dans le délai supplémentaire que peut fixer le ministre;

c) la construction, l'emplacement ou l'entretien de l'ouvrage ne soit conforme aux plans, aux règlements et aux modalités que renferme l'approbation visée à l'alinéa *a*).

Judicial History

Trial Division

Jerome A.C.J. identified the four main issues in the action as follows: (1) the standing of the applicant to bring the application; (2) whether the federal Ministers named were bound to invoke the *Guidelines Order*; (3) the applicability of *Canadian Wildlife Federation Inc. v. Canada (Minister of the Environment)*, [1989] 3 F.C. 309 (T.D.), aff'd (1989), 99 N.R. 72 (F.C.A.), to the facts of this case; and (4) whether he should exercise his discretion to grant the remedies sought. He dealt

L'historique judiciaire

La Section de première instance

Le juge en chef adjoint Jerome a présenté les quatre questions principales de la façon suivante: (1) la requérante a-t-elle qualité pour présenter la demande en l'espèce? (2) les ministres fédéraux nommés sont-ils tenus d'invoquer le *Décret sur les lignes directrices*? (3) la décision *Fédération canadienne de la faune Inc. c. Canada (Ministre de l'Environnement)*, [1989] 3 C.F. 309 (1re inst.), confirmée par (1989), 99 N.R. 72 (C.A.F.), s'applique-t-elle aux faits de la présente espèce? (4) la

with the first issue by simply assuming, without deciding, that the Society had the requisite standing to bring the application.

With respect to the *Guidelines Order*, Jerome A.C.J. first held that the Minister of Transport was not bound to apply it in assessing the application under the *Navigable Waters Protection Act*, and indeed he found that the Minister would have exceeded his jurisdiction had he invoked the *Guidelines Order*. The reasoning was that the Act sets out no requirement for environmental review but instead confines the Minister to consider only factors affecting marine navigation. Similarly, the Minister of Fisheries and Oceans was without jurisdiction to apply the *Guidelines Order* because his department had not undertaken a project. In the alternative, if the *Guidelines Order* could be said to apply to provincially initiated projects, it would only apply where a federal department received a "proposal" requiring its approval. As the *Fisheries Act* did not contemplate an approval procedure for a permit or licence, the *Guidelines Order* did not apply. Nor were environmental factors raised under either the *Fisheries Act* or the *Department of Fisheries and Oceans Act*, R.S.C., 1985, c. F-15.

Jerome A.C.J. then turned to the *Canadian Wildlife* case. In that case, which I shall discuss with more particularity later, the Federal Court of Appeal had held that before the project in question there, the Rafferty-Alameda Dam, could be undertaken, it was necessary to obtain the approval of the Minister of the Environment. Jerome A.C.J. distinguished that case on two grounds. First, the case involved authorization under the *International River Improvements Act*, R.S.C., 1985, c. I-20, which required prior approval from the Minister of

cour devait-elle exercer son pouvoir discrétionnaire d'accorder les redressements demandés? En ce qui concerne la première question, il a simplement tenu pour acquis, sans en décider, que la Société avait la qualité voulue pour présenter la demande.

En ce qui concerne le *Décret sur les lignes directrices*, le juge en chef adjoint Jerome a tout d'abord statué que le ministre des Transports n'était pas tenu de l'appliquer dans l'évaluation de la demande présentée en vertu de la *Loi sur la protection des eaux navigables* et, en fait, il a conclu que, s'il avait invoqué le *Décret sur les lignes directrices*, le ministre aurait excédé les limites de sa compétence. Le raisonnement était que la Loi n'établit pas d'obligation de tenir un examen des incidences environnementales, mais limite plutôt le ministre à prendre en considération seulement les facteurs touchant la navigation. Par ailleurs, le ministre des Pêches et des Océans n'avait pas compétence pour appliquer le *Décret sur les lignes directrices* parce que son ministère n'avait pas entrepris de projet. Par contre, dans l'hypothèse où le *Décret sur les lignes directrices* pouvait être étendu aux projets lancés par les provinces, il ne se serait appliqué que dans les cas où un ministère fédéral aurait reçu une «proposition» exigeant son approbation. Comme la *Loi sur les pêches* ne prévoit pas de procédure d'approbation qui serait applicable à un permis ou à une licence, le *Décret sur les lignes directrices* ne s'applique pas. En outre, les facteurs environnementaux ne sont soulevés ni dans la *Loi sur les pêches* ni dans la *Loi sur le ministère des Pêches et des Océans*, L.R.C. (1985), ch. F-15.

Le juge en chef adjoint Jerome examine ensuite l'arrêt *Fédération canadienne de la faune*. Dans cette affaire, que j'analyserai plus à fond plus loin, la Cour d'appel fédérale a statué que le ministre de l'Environnement devait approuver le projet en question, le barrage Rafferty-Alameda, avant sa mise en œuvre. Le juge en chef adjoint Jerome estime que cette affaire se distingue de celle de l'espèce pour deux raisons. Premièrement, il était question d'une autorisation requise aux termes de la *Loi sur les ouvrages destinés à l'amélioration*

the Environment, as opposed to the instant case where approval may be granted under the *Navigable Waters Protection Act* after the project is commenced. Second, the Rafferty-Alameda project involved the Minister of the Environment whose statutory duties under the *Department of the Environment Act* included consideration of environmental factors.

Lastly, on the issue of the discretionary nature of the relief sought, Jerome A.C.J. found against the Society because of delay and the unnecessary duplication that would result. Between the grant of approval on September 18, 1987 and the commencement of this action on April 21, 1989, he noted, no steps had been taken to quash the approval and compel the application of the *Guidelines Order*. By the time the action was started the project was 40 percent complete. Furthermore, Alberta had already conducted an extensive environmental review of the project and had "identified every possible area of environmental social concern and ha[d] given every citizen, including the members of the applicant organization, ample opportunity to voice their views and to mobilize their opposition" (pp. 273-74). That being so, applying the *Guidelines Order* would be needlessly repetitive. Accordingly, he dismissed the application.

The Society then launched an appeal to the Federal Court of Appeal.

Court of Appeal

Stone J.A., writing for the court, began by noting that the Oldman River Dam may have an environmental effect on at least three areas of federal responsibility, namely fisheries, Indians and Indian lands. He disagreed with the view that the Minister of Transport was restricted to considering matters affecting marine navigation only. He found that the dam project fell within the ambit of the *Guidelines*

des cours d'eau internationaux, L.R.C. (1985), ch. I-20, nécessitant l'approbation préalable du ministre de l'Environnement; en l'espèce, l'approbation en vertu de la *Loi sur la protection des eaux navigables* peut être accordée une fois la réalisation du projet entamée. Deuxièmement, le projet de construction du barrage de Rafferty-Alameda faisait intervenir le ministre de l'Environnement à qui la *Loi sur le ministère de l'Environnement* imposait l'obligation de se prononcer sur des facteurs environnementaux.

Enfin, en ce qui concerne le caractère discrétionnaire du redressement recherché, le juge en chef adjoint Jerome n'a pas fait droit à la demande de la Société en raison du retard et du chevauchement inutile qui s'ensuivraient. Entre l'approbation accordée le 18 septembre 1987 et le début de la présente action le 21 avril 1989, il précise qu'aucune mesure n'a été prise pour faire annuler cette approbation et forcer l'application du *Décret sur les lignes directrices*. À la date où la présente action a été intentée, le projet était déjà complété à environ 40 pour 100. Par ailleurs, la province d'Alberta avait déjà procédé à un examen exhaustif des incidences environnementales du projet qui «a permis le recensement complet des questions pouvant faire l'objet de préoccupations sociales environnementales, en sorte de donner à tous les citoyens, y compris les membres de l'organisation requérante, l'entière possibilité d'exprimer leur opinion et de se mobiliser en vue de contester le projet» (pp. 273 et 274). Cela étant, l'application du *Décret sur les lignes directrices* serait inutilement répétitive. Il a donc rejeté la demande.

La Société a alors interjeté appel auprès de la Cour d'appel fédérale.

La Cour d'appel

Le juge Stone, s'exprimant au nom de la cour, a tout d'abord fait remarquer que la construction du barrage sur la rivière Oldman peut avoir des répercussions environnementales sur au moins trois domaines de compétence fédérale, soit les pêcheries, les Indiens et les terres indiennes. Il n'est pas d'accord avec la proposition selon laquelle le ministre des Transports pouvait seulement prendre

Order and that the Department of Transport was an "initiating department" for the purposes of the *Guidelines Order* thereby engaging the application of the *Guidelines Order*. Stone J.A. referred to the *Canadian Wildlife* case for authority that the *Guidelines Order* was a law of general application, and as such imposed on the Minister a "superadded" duty over and above his other statutory powers. Nor was there any conflict between the requirement for an initial assessment "as early in the planning process as possible and before irrevocable decisions are taken" in the *Guidelines Order*, and the remedial power under s. 6 of the *Navigable Waters Protection Act* to grant approval after the commencement of construction. That power, he held, is an exception to the general rule in s. 5 of the Act requiring approval prior to construction, and in exercising his discretion to grant approval after commencement, the Minister is not precluded from applying the *Guidelines Order*.

Stone J.A. next turned to the question whether the Minister of Fisheries and Oceans was compelled to apply the *Guidelines Order*. He first considered whether the Minister had been seized with a "proposal" as defined in the Act so as to make him subject to the *Guidelines Order*. He concluded in the affirmative. "Proposal", in Stone J.A.'s view, is there used in a far broader sense than its ordinary meaning. In particular it is not limited to something in the nature of an application. An application is but one way in which an "initiative, undertaking or activity" can come to the attention of the Minister but it is not the only way. Another way is for an individual to request that the Minister take action under the appropriate statute, as was done here, and since the Minister was aware of an initiative within a federal area of responsibility, there was a "proposal" as defined in the *Guidelines Order*. Moreover, the Minister's decision not to intervene constituted him as a "decision making

en considération les facteurs touchant la navigation. Il a conclu que le projet de barrage était visé par le *Décret sur les lignes directrices* et que le ministère des Transports était le «ministère responsable» aux fins de l'application de ce décret, ce qui en déclenchait l'application. Le juge Stone s'appuie ensuite sur l'arrêt *Fédération canadienne de la faune* pour déclarer que le *Décret sur les lignes directrices* est une règle d'application générale et qu'il impose au ministre une fonction qui «s'ajoute» à l'exercice des autres pouvoirs qui lui sont conférés par des lois. Il n'existe pas de conflit entre, d'une part, le fait d'exiger dans le *Décret sur les lignes directrices* qu'un examen soit effectué «le plus tôt possible au cours de l'étape de planification et avant de prendre des décisions irrévocables» et, d'autre part, le pouvoir de redressement permettant au ministre d'accorder une approbation après le début des travaux, en vertu de l'art. 6 de la *Loi sur la protection des eaux navigables*. Selon le juge Stone, ce pouvoir constitue une exception à la règle générale énoncée à l'art. 5 de la Loi selon laquelle il faut obtenir une approbation avant le début de la construction et, dans l'exercice de son pouvoir discrétionnaire, rien n'empêche le ministre d'appliquer le *Décret sur les lignes directrices*.

Le juge Stone examine ensuite la question de savoir si le ministre des Pêches et des Océans était tenu d'appliquer le *Décret sur les lignes directrices*. Il tente tout d'abord de déterminer si le ministre était saisi d'une «proposition» au sens de la Loi de façon à déclencher l'application du *Décret sur les lignes directrices*. Il arrive à une conclusion affirmative. Selon le juge Stone, le terme «proposition» est un terme défini dont la portée est beaucoup plus large que sa portée courante. En particulier il n'est pas limité à quelque chose de la nature d'une demande. Une demande n'est qu'un moyen, parmi d'autres, d'attirer l'attention du ministre sur l'existence d'une «entreprise ou activité». Un ministre peut aussi être mis au courant par une démarche d'un particulier sollicitant des mesures spécifiques aux termes d'une loi, comme en l'espèce, et, puisque le ministre était au courant d'un projet dans un domaine de compétence fédérale, il existait une «proposition» au sens

authority" and thus triggered his obligations under the *Guidelines Order*.

Stone J.A. then dealt with the issue of discretion and reviewed the relevant principles which apply to an appellate court interfering with a trial judge's exercise of discretion. Shortly put, such interference is not warranted absent a finding that the trial judge proceeded on an erroneous principle or a misapprehension of the facts, or where the order is not just and reasonable. Parenthetically, and by way of footnote, Stone J.A. was of the view that refusing to grant prerogative relief on the ground of delay was not "well-founded in principle", because the delay was explained by the facts, especially that the respondent did not become aware of the approval granted by the Minister of Transport until only two months before the action was commenced. Further, the respondent was otherwise engaged in challenging the provincial licence issued, and it was not until the eve of this action that the Trial Division of the Federal Court handed down its decision in the *Canadian Wildlife* case holding that the *Guidelines Order* was binding on the Minister of the Environment.

As to the unnecessary duplication that could result from granting the relief sought, Stone J.A. found that the provincial environmental review process was deficient in two respects when contrasted with the environmental impact assessment required by the *Guidelines Order*. First, the provincial legislation did not place the same emphasis on public participation in the process as the *Guidelines Order*. Secondly, there was nothing in the provincial legislation requiring the same degree of independence of the review panel.

du *Décret sur les lignes directrices*. Par ailleurs, la décision du ministre de ne pas intervenir faisait de lui celui qui «exerce le pouvoir de décision», déclenchant ainsi ses obligations en vertu du *Décret sur les lignes directrices*.

Le juge Stone examine ensuite la question du pouvoir discrétionnaire et analyse les principes pertinents applicables à une cour d'appel quant à la modification d'une décision rendue par un juge de première instance dans l'exercice d'un pouvoir discrétionnaire. Bref, une cour d'appel ne serait pas justifiée de modifier en appel la décision, sauf si le juge de première instance a agi sur le fondement d'un principe erroné ou d'une appréciation fautive des faits ou si l'ordonnance prononcée n'est pas juste et raisonnable. Entre parenthèses, et dans la note en bas de page, le juge Stone se dit d'avis que la décision de refuser la délivrance du bref de prérogative parce que les procédures auraient été intentées trop tard n'est pas «bien fondée dans son principe», parce que les faits expliquent le retard, particulièrement que l'intimée n'a eu connaissance de la décision du ministre des Transports d'accorder l'approbation que deux mois avant le début des procédures. Par ailleurs, l'intimée avait tenté de contester le permis provincial délivré et ce n'est qu'à la veille du commencement des procédures que la Section de première instance de la Cour fédérale a décidé, dans l'affaire *Fédération canadienne de la faune*, que le ministre de l'Environnement était lié par le *Décret sur les lignes directrices*.

En ce qui concerne la répétition inutile à laquelle pourrait donner lieu l'octroi de la réparation demandée, le juge Stone a statué que le processus provincial d'examen en matière d'environnement échoue sous deux aspects lorsqu'on le compare au processus d'évaluation des incidences environnementales prévu dans le *Décret sur les lignes directrices*. Premièrement, les textes législatifs provinciaux n'accordent pas la même importance à la participation du public au processus que le *Décret sur les lignes directrices*. Deuxièmement, rien dans les textes législatifs provinciaux n'exige le même degré d'indépendance que celui qui est exigé de la commission d'examen.

The last issue addressed by Stone J.A. that has been raised in this appeal is whether the *Navigable Waters Protection Act* binds the Crown in right of Alberta. Referring to this Court's decision in *Alberta Government Telephones v. Canada (Canadian Radio-television and Telecommunications Commission)*, [1989] 2 S.C.R. 225, he held that the Act, especially s. 4 when read in context, evidenced an intention to bind the Crown. Furthermore, the purpose of the Act would be wholly frustrated if the Crown were not bound, it being well known that many obstructions placed in navigable waters are sponsored by government.

As a result the appeal was allowed, the approval was quashed and the Ministers of Transport and Fisheries and Oceans ordered to comply with the *Guidelines Order*.

The Appeal to this Court

As earlier noted, leave to appeal to this Court was sought and granted, and the Chief Justice stated the following constitutional question on October 29, 1990:

> Is the *Environmental Assessment and Review Process Guidelines Order*, SOR/84-467, so broad as to offend ss. 92 and 92A of the *Constitution Act, 1867* and therefore constitutionally inapplicable to the Oldman River Dam owned by the appellant, Her Majesty the Queen in right of Alberta?

Interventions were then filed by the Attorneys General of Quebec, New Brunswick, Manitoba, British Columbia, Saskatchewan and Newfoundland and the Minister of Justice of the Northwest Territories, and a number of environmental groups, namely the Sierra Legal Defence Fund, the Canadian Environmental Law Association, the Sierra Club of Western Canada, the Cultural Survival (Canada), Friends of the Earth and the Alberta Wilderness Association, as well as several Indian organizations, namely, the National Indian Brotherhood and the Assembly of First Nations, the Dene Nation and the Metis Association of the

La dernière question analysée par le juge Stone et qui est aussi soulevée dans le présent pourvoi est celle de savoir si la *Loi sur la protection des eaux navigables* lie la Couronne du chef de l'Alberta. En se fondant sur la décision rendue par notre Cour dans *Alberta Government Telephones c. Canada (Conseil de la radiodiffusion et des télécommunications canadiennes)*, [1989] 2 R.C.S. 225, le juge Stone a statué que la Loi, tout particulièrement l'art. 4 examiné dans son contexte, permet de constater une intention de lier la Couronne. Par ailleurs, la Loi serait privée de toute efficacité si ses dispositions ne liaient pas la Couronne, puisqu'il est notoire qu'un grand nombre d'ouvrages obstruant des eaux navigables sont construits sous l'égide des gouvernements.

En conséquence, l'appel a été accueilli, l'approbation a été annulée et le ministre des Transports et celui des Pêches et des Océans ont été enjoints de se conformer au *Décret sur les lignes directrices*.

Le pourvoi devant notre Cour

Comme je l'ai déjà mentionné, une autorisation de pourvoi a été demandée à notre Cour, qui l'a accordée, et le Juge en chef a formulé la question constitutionnelle suivante le 29 octobre 1990:

> Le *Décret sur les lignes directrices visant le processus d'évaluation et d'examen en matière d'environnement*, DORS/84-467, est-il général au point de contrevenir aux art. 92 et 92A de la *Loi constitutionnelle de 1867* et d'être, par conséquent, constitutionnellement inapplicable au barrage de la rivière Oldman appartenant à l'appelante Sa Majesté la Reine du chef de l'Alberta?

Des interventions ont ensuite été déposées par les procureurs généraux du Québec, du Nouveau-Brunswick, du Manitoba, de la Colombie-Britannique, de la Saskatchewan et de Terre-Neuve, le ministre de la Justice des Territoires du Nord-Ouest et un certain nombre de groupes environnementaux, notamment le Sierra Legal Defence Fund, l'Association canadienne du droit de l'environnement, le Sierra Club of Western Canada, Survie culturelle (Canada), les Amis de la Terre et l'Alberta Wilderness Association, ainsi que par plusieurs organisations indiennes, notamment la Fraternité des Indiens du Canada et l'Assemblée

Northwest Territories, and the Native Council of Canada (Alberta).

Issues

The many issues arising in this appeal have been variously ordered by the parties in their written submissions, but I prefer to deal with them as follows:

1. Statutory Validity of the *Guidelines Order*

   a. Is the *Guidelines Order* authorized by s. 6 of the *Department of the Environment Act*?

   b. Is the *Guidelines Order* inconsistent with the *Navigable Waters Protection Act* and the *Fisheries Act*?

2. Obligation of the Ministers to Comply with the *Guidelines Order*

   a. Does s. 4(1) of the *Department of the Environment Act* preclude the application of the *Guidelines Order* to the Ministers?

   b. Does the *Guidelines Order* apply to projects other than new federal projects?

   c. Are the Ministers "initiating departments"?

   d. Is the *Navigable Waters Protection Act* binding on the Crown in right of Alberta?

3. Constitutional Question

   Is the *Guidelines Order* so broad as to offend ss. 92 and 92A of the *Constitution Act, 1867* and therefore constitutionally inapplicable to the Oldman River Dam owned by Alberta?

des premières nations, la Nation dénée et l'Association des Métis des Territoires du Nord-Ouest ainsi que le Conseil national des autochtones du Canada (Alberta).

Les questions en litige

Les parties ont présenté de diverses façons dans leur mémoire les nombreuses questions soulevées dans le présent pourvoi, mais je préfère les analyser dans l'ordre suivant:

1. La validité législative du *Décret sur les lignes directrices*

   a. Le *Décret sur les lignes directrices* est-il autorisé par l'art. 6 de la *Loi sur le ministère de l'Environnement*?

   b. Le *Décret sur les lignes directrices* est-il incompatible avec la *Loi sur la protection des eaux navigables* et la *Loi sur les pêches*?

2. L'obligation des ministres de se conformer au *Décret sur les lignes directrices*

   a. Le paragraphe 4(1) de la *Loi sur le ministère de l'Environnement* écarte-t-il l'application aux ministres du *Décret sur les lignes directrices*?

   b. Le *Décret sur les lignes directrices* s'applique-t-il aux projets autres que les nouveaux projets fédéraux?

   c. Les ministres sont-ils des «ministères responsables»?

   d. La *Loi sur la protection des eaux navigables* lie-t-elle la Couronne du chef de l'Alberta?

3. La question constitutionnelle

   Le *Décret sur les lignes directrices* est-il général au point de contrevenir aux art. 92 et 92A de la *Loi constitutionnelle de 1867*, et d'être, par conséquent, constitutionnellement inapplicable au barrage de la rivière Oldman appartenant à l'Alberta?

4. Discretion

Did the Federal Court of Appeal err in interfering with the discretion of Jerome A.C.J. whereby he declined to grant the remedies sought?

Statutory Validity of the Guidelines Order

Is the *Guidelines Order* Authorized by s. 6 of the *Department of the Environment Act*?

The appellant Alberta argued that the *Guidelines Order* is *ultra vires* because it does not fall within the scope of the powers conferred under its enabling legislation, s. 6 of the *Department of the Environment Act*. For convenience, I shall repeat this provision:

6. For the purposes of carrying out his duties and functions related to environmental quality, the Minister may, by order, with the approval of the Governor in Council, establish guidelines for use by departments, boards and agencies of the Government of Canada and, where appropriate, by corporations named in Schedule III to the *Financial Administration Act* and regulatory bodies in the exercise of their powers and the carrying out of their duties and functions.

The principal ground on which it is contended that the *Guidelines Order* is invalid is that by using the term "guidelines" s. 6 does not empower the enactment of mandatory subordinate legislation, but instead only contemplates a purely administrative directive not intended to be legally binding on those to whom it is addressed. There is of course no doubt that the power to make subordinate legislation must be found within the four corners of its enabling statute, and it is there that one must turn to determine if the Act can support delegated legislation of a mandatory nature, the non-compliance with which can found prerogative relief.

This issue was addressed in *Canadian Wildlife*, *supra*. In that case the applicant challenged the issuance of a licence by the Minister of the Environment under the *International River Improvements Act* and sought an order in the nature of *cer-*

4. Le pouvoir discrétionnaire

La Cour d'appel fédérale a-t-elle commis une erreur en modifiant la décision de refuser d'accorder les réparations demandées, prise par le juge en chef adjoint Jerome dans l'exercice de son pouvoir discrétionnaire?

La validité législative du Décret sur les lignes directrices

Le *Décret sur les lignes directrices* est-il autorisé par l'art. 6 de la *Loi sur le ministère de l'Environnement*?

L'appelante l'Alberta soutient que le *Décret sur les lignes directrices* est *ultra vires* parce qu'il n'est pas compris dans les pouvoirs prévus dans le texte habilitant, soit l'art. 6 de la *Loi sur le ministère de l'Environnement*. Par souci de commodité, je reproduis la disposition en question:

6. Au titre de celles de ses fonctions qui portent sur la qualité de l'environnement, le ministre peut par arrêté, avec l'approbation du gouverneur en conseil, établir des directives à l'usage des ministères et organismes fédéraux et, s'il y a lieu, à celui des sociétés d'État énumérées à l'annexe III de la *Loi sur la gestion des finances publiques* et des organismes de réglementation dans l'exercice de leurs pouvoirs et fonctions.

Le principal motif invoqué à l'appui de la prétention que le *Décret sur les lignes directrices* n'est pas valide est que l'emploi du terme «directives» à l'art. 6 ne permet pas l'adoption de textes réglementaires impératifs, mais envisage seulement l'établissement de directives purement administratives qui ne visent pas à lier juridiquement ceux à qui elles s'adressent. Il n'y a pas de doute que le pouvoir d'adopter des textes réglementaires doit être prévu dans la loi habilitante et c'est celle-ci que l'on doit examiner pour déterminer si la Loi peut appuyer l'adoption d'un texte réglementaire impératif, dont la violation peut entraîner une demande de bref de prérogative.

Cette question a été analysée dans l'arrêt *Fédération canadienne de la faune*, précité. Dans cette affaire, la requérante contestait la délivrance d'un permis par le ministre de l'Environnement en vertu de la *Loi sur les ouvrages destinés à l'amélioration*

tiorari quashing the licence, and mandamus requiring the Minister to comply with the *Guidelines Order*. In the Trial Division, Cullen J. found that the *Guidelines Order* is an enactment or regulation as defined in s. 2(1) of the *Interpretation Act*, R.S.C., 1985, c. I-21, which provides:

2. (1) In this Act,

. . .

"enactment" means an Act or regulation or any portion of an Act or regulation;

. . .

"regulation" includes an order, regulation, rule, rule of court, form, tariff of costs or fees, letters patent, commission, warrant, proclamation, by-law, resolution or other instrument issued, made or established

(*a*) in the execution of a power conferred by or under the authority of an Act, or

(*b*) by or under the authority of the Governor in Council;

Cullen J. then concluded, at p. 322:

Therefore, EARP Guidelines Order is not a mere description of a policy or programme; it may create rights which may be enforceable by way of *mandamus* (see *Young v. Minister of Employment and Immigration* (1987), 8 F.T.R. 218 (F.C.T.D.) at page 221).

In the Court of Appeal, Hugessen J.A. relied on both the English and French versions of s. 6 of the *Department of the Environment Act* to find that it was capable of supporting a power to enact binding subordinate legislation. "The word 'guidelines'", he stated, "in itself is neutral in this regard." Turning then, to the question whether the Guidelines were so written as to make them mandatory, he observed, at pp. 73-74:

Finally, there is nothing in the text of the Guidelines themselves which indicates that they are not mandatory; on the contrary, the repeated use of the word "shall" . . . throughout, and particularly in ss. 6, 13 and 20, indicates a clear intention that the Guidelines shall bind all those to whom they are addressed, including the Minister of the Environment himself.

des cours d'eau internationaux et sollicitait une ordonnance de la nature d'un *certiorari* annulant le permis, et un *mandamus* enjoignant au ministre de l'Environnement de se conformer au *Décret sur les lignes directrices*. Le juge Cullen de la Section de première instance a statué que le *Décret sur les lignes directrices* est un texte ou un règlement au sens du par. 2(1) de la *Loi d'interprétation*, L.R.C. (1985) ch. I-21:

2. (1) Les définitions qui suivent s'appliquent à la présente loi.

. . .

«règlement» Règlement proprement dit, décret, ordonnance, proclamation, arrêté, règle judiciaire ou autre, règlement administratif, formulaire, tarif de droits, de frais ou d'honoraires, lettres patentes, commission, mandat, résolution ou autre acte pris:

a) soit dans l'exercice d'un pouvoir conféré sous le régime d'une loi fédérale;

b) soit par le gouverneur en conseil ou sous son autorité.

«texte» Tout ou partie d'une loi ou d'un règlement.

Le juge Cullen conclut à la p. 322:

Par conséquent, le Décret n'est pas un simple énoncé de politique ou de programme; il est susceptible de créer des droits qu'on peut faire respecter par voie de *mandamus* (voir *Young c. Ministre de l'emploi et de l'immigration* (1987), 8 F.T.R. 218 (C.F. 1re inst.), à la p. 221).

En Cour d'appel, le juge Hugessen s'est fondé sur les versions française et anglaise de l'art. 6 de la *Loi sur le ministère de l'Environnement* pour statuer que cette loi pouvait appuyer l'existence d'un pouvoir d'adopter un texte réglementaire impératif. «Le mot «directives» en lui-même, a-t-il précisé, est neutre à cet égard«. Quant à la question de savoir si les Lignes directrices avaient été rédigées de façon à les rendre impératives, il écrit aux pp. 73 et 74:

En dernier lieu, rien dans le textes des Directives elles-mêmes n'indique qu'elles ne sont pas impératives; au contraire, l'emploi répété du verbe «shall» [. . .] dans la version anglaise des Directives, et particulièrement aux articles 6, 13 et 20, montre l'intention évidente que les Directives aient force obligatoire pour tous ceux qu'elles visent, y compris le ministre de l'Environnement lui-même.

I would agree with him on both points. The first question depends on legislative intent. The guidelines under the Act reviewed by this Court in the *Reference re Anti-Inflation Act*, [1976] 2 S.C.R. 373, for example, were clearly mandatory in nature. I am satisfied that s. 6 of the Act can sustain the enactment of mandatory guidelines, and that the Guidelines as framed are mandatory in nature.

There is nothing here to indicate that the *Guidelines Order* is merely another form of administrative directive which cannot confer enforceable rights, as was the case in *Martineau v. Matsqui Institution Inmate Disciplinary Board*, [1978] 1 S.C.R. 118. In *Martineau* the issue was whether a directive concerning the discipline of inmates, authorized by s. 29(3) of the *Penitentiary Act*, R.S.C. 1970, c. P-6, was "law" within the wording of s. 28 of the *Federal Court Act*, S.C. 1970-71-72, c. 1, and thus gave the Federal Court jurisdiction to review a disciplinary order made by the Board. This Court, by majority, held that the directive was not "law" within s. 28, Pigeon J. noting, at p. 129:

> It is significant that there is no provision for penalty and, while they are authorized by statute, they are clearly of an administrative, not a legislative, nature. It is not in any legislative capacity that the Commissioner is authorized to issue directives but in his administrative capacity. I have no doubt that he would have the power of doing it by virtue of his authority without express legislative enactment. [Emphasis added.]

There is little doubt that ordinarily a Minister has an implicit power to issue directives to implement the administration of a statute for which he is responsible; see for example *Maple Lodge Farms Ltd. v. Government of Canada*, [1982] 2 S.C.R. 2. It is also clear that a violation of such directives will only give rise to administrative rather than judicial sanction because they do not have the full force of law.

Je suis d'accord avec lui sur ces deux points. La première question dépend de l'intention du législateur. Les lignes directrices, établies en vertu de la Loi que notre Cour a analysée dans le *Renvoi relatif à la Loi anti-inflation*, [1976] 2 R.C.S. 373, par exemple, étaient clairement impératives. Je suis convaincu que l'art. 6 de la Loi permet l'adoption de lignes directrices impératives et que les Lignes directrices sont formulées de façon à les rendre impératives.

En l'espèce, rien n'indique que le *Décret sur les lignes directrices* ne constitue qu'une autre forme de directive administrative qui ne peut établir de droits exécutoires, comme dans l'arrêt *Martineau c. Comité de discipline des détenus de l'Institution de Matsqui*, [1978] 1 R.C.S. 118. Dans cette affaire, la question était de savoir si l'on était «légalement» soumis, au sens de l'art. 28 de la *Loi sur la Cour fédérale*, S.C. 1970-71-72, ch. 1, à une directive concernant les mesures disciplinaires prises contre les détenus, adoptée en vertu du par. 29(3) de la *Loi sur les pénitenciers*, S.R.C. 1970, ch. P-6, de façon que la Cour fédérale avait compétence pour examiner une décision disciplinaire prononcée par le Comité. Notre Cour à la majorité a statué que la décision du comité ne se trouvait pas, au sens de l'art. 28, «légalement» soumise au processus prescrit par la directive. Le juge Pigeon indique à la p. 129:

> Il est significatif qu'il n'est prévu aucune sanction pour elles et, bien qu'elles soient autorisées par la Loi, elles sont nettement de nature administrative et non législative. Ce n'est pas en qualité de législateur que le commissaire est habilité à établir des directives, mais en qualité d'administrateur. Je suis convaincu qu'il aurait l'autorité d'établir ces directives même en l'absence d'une disposition législative expresse. [Je souligne.]

Il y a peu de doute qu'un ministre possède habituellement un pouvoir implicite d'établir des directives visant l'application d'une loi dont il est responsable; voir, par exemple, l'arrêt *Maple Lodge Farms Ltd. c. Gouvernement du Canada*, [1982] 2 R.C.S. 2. Il est également évident que la violation de ces directives ne donnerait lieu qu'à une sanction administrative et non judiciaire puisque celles-ci n'ont pas force de loi.

Here though we are dealing with a directive that is not merely authorized by statute, but one that is required to be formally enacted by "order", and promulgated under s. 6 of the *Department of the Environment Act*, with the approval of the Governor in Council. That is in striking contrast with the usual internal ministerial policy guidelines intended for the control of public servants under the minister's authority. To my mind this is a vital distinction. Its effect is thus described by R. Dussault and L. Borgeat in *Administrative Law* (2nd ed. 1985), vol. 1, at pp. 338-39:

When a government considers it necessary to regulate a situation through norms of behaviour, it may have a law passed or make a regulation itself, or act administratively by means of directives. In the first case, it is bound by the formalities surrounding the legislative or regulatory process; conversely, it knows that once these formalities have been observed, the new norms will come within a framework of "law" and that by virtue of the Rule of Law they will be applied by the courts. In the second case, that is, when it chooses to proceed by way of directives, whether or not they are authorized by legislation, it opts instead for a less formalized means based upon hierarchical authority, to which the courts do not have to ensure obedience. To confer upon a directive the force of a regulation is to exceed legislative intent. It is said that the Legislature does not speak without a purpose; its implicit wish to leave a situation outside the strict framework of "law" must be respected.

The word "guidelines" cannot be construed in isolation; s. 6 must be read as a whole. When so read it becomes clear that Parliament has elected to adopt a regulatory scheme that is "law", and thus amenable to enforcement through prerogative relief.

Alberta also argues that the *Guidelines Order* is *ultra vires* on the ground that the scope of the subject matter covered in the delegated legislation goes far beyond that authorized by the *Department of the Environment Act*. More specifically, it contends that the authority to establish guidelines for the purposes of carrying out the Minister's duties related to "environmental quality" does not comprehend a process of environmental impact assess-

Cependant, en l'espèce, il s'agit d'une directive qui n'est pas simplement autorisée par une loi, mais qui doit être officiellement adoptée par «arrêté» et promulguée en vertu de l'art. 6 de la *Loi sur le ministère de l'Environnement*, sur approbation du gouverneur en conseil. Ce processus contraste vivement avec le processus habituel d'établissement de directives de politique interne ministérielle destinées à exercer un contrôle sur les fonctionnaires relevant de l'autorité du ministre. À mon avis, il s'agit là d'une distinction essentielle. Voici comment R. Dussault et L. Borgeat décrivent l'effet de cette distinction dans *Traité de droit administratif* (2e éd. 1984), t. I, à la p. 429:

Lorsqu'un gouvernement juge nécessaire de régir une situation par des normes de comportement, il peut faire adopter une loi ou édicter lui-même un règlement, ou bien procéder administrativement par voie de directives. Dans le premier cas, il doit s'astreindre aux formalités de l'adoption des lois et des règlements; par contre, il sait que, une fois ces formalités respectées, les nouvelles normes entreront dans le cadre de la «légalité» et qu'en vertu de la *Rule of law* elles seront appliquées par les tribunaux. Dans le second cas, c'est-à-dire s'il choisit de procéder par directives, que celles-ci soient ou non autorisées législativement, il opte plutôt pour la voie moins formalisée de l'autorité hiérarchique, dont les tribunaux n'ont pas à assurer le respect. Attribuer à des directives l'effet de règlements, c'est aller au-delà de l'intention du législateur. Celui-ci ne parlant pas pour ne rien dire, il faut respecter sa volonté implicite de laisser une situation hors du cadre strict de la «légalité».

On ne doit pas examiner le terme «directives» en vase clos; il faut interpréter l'art. 6 dans son ensemble. On se rend alors compte que le législateur fédéral a opté pour l'adoption d'un mécanisme de réglementation auquel on est soumis «légalement» et dont on peut obtenir l'exécution par bref de prérogative.

L'Alberta prétend également que le *Décret sur les lignes directrices* est *ultra vires* au motif que l'étendue du sujet traité dans la législation déléguée va bien au-delà de ce qui est autorisée par la *Loi sur le ministère de l'Environnement*. Plus particulièrement, l'Alberta soutient que le pouvoir du ministre de prendre des directives au titre de celles de ses fonctions qui portent sur la «qualité de l'environnement» ne comprend pas l'établissement

ment, such as found in the *Guidelines Order*, in which the decision maker is required to take into account socio-economic considerations. Rather, it is argued, the Act only permits the enactment of delegated legislation that is strictly concerned with matters relating to environmental quality as understood in a physical sense.

I cannot accept that the concept of environmental quality is confined to the biophysical environment alone; such an interpretation is unduly myopic and contrary to the generally held view that the "environment" is a diffuse subject matter; see *R. v. Crown Zellerbach Canada Ltd.*, [1988] 1 S.C.R. 401. The point was made by the Canadian Council of Resource and Environment Ministers, following the "Brundtland Report" of the World Commission on Environment and Development, in the *Report of the National Task Force on Environment and Economy*, September 24, 1987, at p. 2:

> Our recommendations reflect the principles that we hold in common with the World Commission on Environment and Development (WCED). These include the fundamental belief that environmental and economic planning cannot proceed in separate spheres. Long-term economic growth depends on a healthy environment. It also affects the environment in many ways. Ensuring environmentally sound and sustainable economic development requires the technology and wealth that is generated by continued economic growth. Economic and environmental planning and management must therefore be integrated.

Surely the potential consequences for a community's livelihood, health and other social matters from environmental change are integral to decision making on matters affecting environmental quality, subject, of course, to the constitutional imperatives, an issue I will address later.

I have therefore concluded that the *Guidelines Order* has been validly enacted pursuant to the

d'un processus d'évaluation des incidences environnementales, comme celui que prévoit le *Décret sur les lignes directrices*, dans l'exécution duquel le décideur doit tenir compte de facteurs socio-économiques. On fait valoir plutôt que la Loi permet seulement l'adoption de textes réglementaires qui visent strictement les questions portant sur la qualité de l'environnement, prise dans un sens physique.

Je ne puis accepter que le concept de la qualité de l'environnement se limite à l'environnement biophysique seulement; une telle interprétation est indûment étroite et contraire à l'idée généralement acceptée que l'«environnement» est un sujet diffus; voir l'arrêt *R. c. Crown Zellerbach Canada Ltd.*, [1988] 1 R.C.S. 401. Ce point a été énoncé par le Conseil canadien des ministres des Ressources et de l'Environnement, à la suite du «Rapport Brundtland» de la Commission mondiale sur l'environnement et le développement, dans le *Rapport du Groupe de Travail national sur l'environnement et l'économie*, 24 septembre 1987, à la p. 2:

> Nos recommandations reflètent des principes que nous partageons avec la Commission mondiale sur l'environnement et le développement. Nous croyons notamment que la planification environnementale et la planification économique ne peuvent pas se faire dans des milieux séparés. La croissance économique à long terme dépend de l'environnement. Elle affecte aussi l'environnement de bien des façons. Pour assurer un développement économique durable et compatible avec l'environnement, nous avons besoin de la technologie et de la richesse produites par une croissance économique soutenue. La planification et la gestion de l'économie et de l'environnement doivent donc être intégrées.

Certes, les conséquences éventuelles d'un changement environnemental sur le gagne-pain, la santé et les autres préoccupations sociales d'une collectivité font partie intégrante de la prise de décisions concernant des questions ayant une incidence sur la qualité de l'environnement, sous réserve, bien entendu, des impératifs constitutionnels, question que j'examinerai plus loin.

Je conclus en conséquence que le *Décret sur les lignes directrices* a été validement adopté confor-

Department of the Environment Act, and is mandatory in nature.

Inconsistency With the *Navigable Waters Protection Act* and *Fisheries Act*

The appellants Alberta and the federal Ministers argue that the *Guidelines Order* is inconsistent with and therefore must yield to the requirements of the *Navigable Waters Protection Act* for obtaining an approval under s. 5 of that Act. Specifically, they say, the Minister of Transport is confined by the Act to a consideration of matters pertaining to marine navigation alone, and that the *Guidelines Order* cannot displace or add to the criteria mentioned in the Act. Alberta also submits that the *Guidelines Order* is similarly inconsistent with the *Fisheries Act*, but for the reasons set out later I do not find it necessary to address that issue.

The basic principles of law are not in doubt. Just as subordinate legislation cannot conflict with its parent legislation (*Belanger v. The King* (1916), 54 S.C.R. 265), so too it cannot conflict with other Acts of Parliament (*R. & W. Paul, Ltd. v. Wheat Commission*, [1937] A.C. 139 (H.L.)), unless a statute so authorizes (*Re Gray* (1918), 57 S.C.R. 150). Ordinarily, then, an Act of Parliament must prevail over inconsistent or conflicting subordinate legislation. However, as a matter of construction a court will, where possible, prefer an interpretation that permits reconciliation of the two. "Inconsistency" in this context refers to a situation where two legislative enactments cannot stand together; see *Daniels v. White*, [1968] S.C.R. 517. The rule in that case was stated in respect of two inconsistent statutes where one was deemed to repeal the other by virtue of the inconsistency. However, the underlying rationale is the same as where subordinate legislation is said to be inconsistent with another Act of Parliament—there is a presumption that the legislature did not intend to make or empower the making of contradictory enactments. There is also some doctrinal similarity to the principle of paramountcy in constitutional division of powers cases where incon-

mément à la *Loi sur le ministère de l'Environnement* et qu'il est de nature impérative.

L'incompatibilité avec la *Loi sur la protection des eaux navigables* et la *Loi sur les pêches*

Les appelants, l'Alberta et les ministres fédéraux, prétendent que le *Décret sur les lignes directrices* est incompatible avec les exigences de la *Loi sur la protection des eaux navigables* pour ce qui est de l'obtention d'une approbation en vertu de l'art. 5 de cette loi et que celle-ci doit avoir préséance sur le Décret. Plus particulièrement, ils disent que le ministre des Transports ne peut, en vertu de la Loi, tenir compte que des facteurs touchant la navigation et que le *Décret sur les lignes directrices* ne peut remplacer les critères prévus dans la Loi ni ajouter à ceux-ci. L'Alberta soutient aussi que le *Décret sur les lignes directrices* est également incompatible avec la *Loi sur les pêches*; toutefois, pour les motifs exprimés plus loin, j'estime inutile d'analyser cette question.

On ne met pas en doute les principes fondamentaux du droit. Il ne peut y avoir incompatibilité entre le texte réglementaire et la loi en vertu duquel il est adoptée (*Belanger c. The King* (1916), 54 R.C.S. 265), pas plus qu'il ne peut y en avoir avec les autres lois fédérales (*R. & W. Paul, Ltd. c. Wheat Commission*, [1937] A.C. 139 (H.L.)), sauf si la loi l'autorise (*Re Gray* (1918), 57 R.C.S. 150). Normalement, la loi fédérale doit l'emporter sur le texte réglementaire incompatible. Toutefois, en matière d'interprétation, un tribunal préférera, dans la mesure du possible, une interprétation qui permet de concilier les deux textes. Dans ce contexte, l'«incompatibilité» renvoie à une situation où le texte législatif et le texte réglementaire ne peuvent être conciliés; voir l'arrêt *Daniels c. White*, [1968] R.C.S. 517. Dans cette affaire, la règle a été énoncée à l'égard de deux lois incompatibles dont l'une était réputée abroger l'autre en raison de l'incompatibilité. Toutefois, la justification fondamentale est la même que dans le cas où le texte réglementaire serait incompatible avec une autre loi fédérale—il existe une présomption que le législateur n'a pas eu l'intention d'adopter des textes contradictoires ou d'habiliter quiconque à le faire. Il existe également une ressemblance doctri-

sistency has also been defined in terms of contradiction—i.e., "compliance with one law involves breach of the other"; see *Smith v. The Queen*, [1960] S.C.R. 776, at p. 800.

The inconsistency contended for is that the *Navigable Waters Protection Act* implicitly precludes the Minister of Transport from taking into consideration any matters other than marine navigation in exercising his power of approval under s. 5 of the Act, whereas the *Guidelines Order* requires, at a minimum, an initial environmental impact assessment. The appellant Ministers concede that there is no explicit prohibition against his taking into account environmental factors, but argue that the focus and scheme of the Act limit him to considering nothing other than the potential effects on marine navigation. If the appellants are correct, it seems to me that the Minister would approve of very few works because several of the "works" falling within the ambit of s. 5 do not assist navigation at all, but by their very nature interfere with, or impede navigation, for example bridges, booms, dams and the like. If the significance of the impact on marine navigation were the sole criterion, it is difficult to conceive of a dam of this sort ever being approved. It is clear, then, that the Minister must factor several elements into any cost-benefit analysis to determine if a substantial interference with navigation is warranted in the circumstances.

It is likely that the Minister of Transport in exercising his functions under s. 5 always did take into account the environmental impact of a work, at least as regards other federal areas of jurisdiction, such as Indians or Indian land. However that may be, the *Guidelines Order* now formally mandates him to do so, and I see nothing in this that is inconsistent with his duties under s. 5. As Stone J.A. put it in the Court of Appeal, it created a duty which is "superadded" to any other statutory

nale avec le principe de la prépondérance dans les affaires de partage constitutionnel des compétences dans lesquelles l'incompatibilité a aussi été définie dans le sens de contradiction—c'est-à-dire lorsque le fait de [TRADUCTION] «se conformer à une loi signifie que l'on enfreint l'autre»; voir l'arrêt *Smith c. The Queen*, [1960] R.C.S. 776, à la p. 800.

L'incompatibilité invoquée est que la *Loi sur la protection des eaux navigables* empêche implicitement le ministre des Transports de tenir compte de facteurs autres que ceux touchant la navigation dans l'exercice de son pouvoir d'approbation en vertu de l'art. 5 de la Loi, alors que le *Décret sur les lignes directrices* exige tout au moins l'établissement d'une évaluation initiale des incidences environnementales. Les ministres appelants reconnaissent qu'il n'existe pas d'interdiction explicite de tenir compte des facteurs environnementaux, mais prétendent que l'objet et l'esprit de la Loi limitent le ministre des Transports à l'examen des effets possibles d'un ouvrage sur la navigation seulement. Si les appelants ont raison, il me semble que le ministre approuverait très peu d'ouvrages parce que plusieurs des «ouvrages» visés par l'art. 5 ne favorisent pas la navigation en tant que telle, mais la gênent plutôt, ou y font obstacle, en raison même de leur nature, par exemple, les ponts, les estacades, les barrages et autres choses du même genre. Si l'importance de l'incidence sur la navigation constituait le seul critère, il est difficile d'envisager l'approbation d'un barrage du même type que celui en l'espèce. Il est donc évident que le ministre doit tenir compte de plusieurs éléments dans toute analyse coûts-avantages visant à déterminer s'il est justifié dans les circonstances de gêner d'une façon importante la navigation.

Il se peut que le ministre des Transports dans l'exercice de ses fonctions en vertu de l'art. 5 ait toujours tenu compte de l'incidence environnementale d'un ouvrage, tout au moins en ce qui concerne d'autres domaines de compétence fédérale, comme les Indiens ou les terres indiennes. Bien que cela puisse être le cas, le Décret sur les lignes directrices exige officiellement qu'il le fasse et, je ne vois rien là d'incompatible avec les fonctions que lui attribue l'art. 5. Comme le juge Stone de la

power residing in him which can stand with that power. In my view the Minister's duty under the *Guidelines Order* is indeed supplemental to his responsibility under the *Navigable Waters Protection Act*, and he cannot resort to an excessively narrow interpretation of his existing statutory powers to avoid compliance with the *Guidelines Order*.

Cour d'appel l'a indiqué, le Décret a créé une fonction qui «s'ajoute» à tout autre pouvoir qui lui est conféré par des lois et qui n'entre pas en conflit avec ce pouvoir. À mon avis, la fonction confiée au ministre en vertu du *Décret sur les lignes directrices* vient en fait s'ajouter à la responsabilité qu'il a en vertu de la *Loi sur la protection des eaux navigables* et il ne peut invoquer une interprétation trop étroite des pouvoirs qui lui sont conférés par des lois pour éviter de se conformer au *Décret sur les lignes directrices*.

Section 8 of the *Guidelines Order* already recognizes that the environmental impact assessment thereunder will not apply where it would conflict with other statutory provisions. It reads:

L'article 8 du *Décret sur les lignes directrices* reconnaît déjà que l'évaluation des incidences environnementales ne recevra pas application s'il est incompatible avec les dispositions d'autres textes législatifs.

8. Where a board or an agency of the Government of Canada or a regulatory body has a regulatory function in respect of a proposal, these Guidelines shall apply to that board, agency or body only if there is no legal impediment to or duplication resulting from the application of these Guidelines.

8. Lorsqu'une commission ou un organisme fédéral ou un organisme de réglementation exerce un pouvoir de réglementation à l'égard d'une proposition, les présentes lignes directrices ne s'appliquent à la commission ou à l'organisme que si aucun obstacle juridique ne l'empêche ou s'il n'en découle pas de chevauchement des responsabilités.

A broad interpretation of the application of the *Guidelines Order* is consistent with the objectives stated in both the Order itself and its parent legislation—to make environmental impact assessment an essential component of federal decision making. A similar approach has been followed in the United States with respect to their *National Environmental Policy Act*. As Pratt J. put it in *Environmental Defense Fund, Inc. v. Mathews*, 410 F.Supp. 336 (D.D.C. 1976), at p. 337:

Une interprétation libérale de l'application du *Décret sur les lignes directrices* est compatible avec les objectifs mentionnés à la fois dans le Décret et dans la loi en vertu de laquelle il a été adopté—faire de l'évaluation des incidences environnementales un élément essentiel de la prise de décisions fédérales. Une analyse similaire a été adoptée aux États-Unis relativement à la *National Environmental Policy Act*. Comme l'affirme le juge Pratt dans l'arrêt *Environmental Defense Fund, Inc. c. Mathews*, 410 F.Supp. 336 (D.D.C. 1976), à la p. 337:

NEPA does not supersede other statutory duties, but, to the extent that it is reconcilable with those duties, it supplements them. Full compliance with its requirements cannot be avoided unless such compliance directly conflicts with other existing statutory duties.

[TRADUCTION] La *National Environmental Policy Act* ne l'emporte pas sur les autres fonctions conférées par des lois mais, dans la mesure où cette loi est conciliable avec ces fonctions, elle vient les compléter. On ne peut éviter de se conformer pleinement aux exigences de cette loi, sauf si la conformité entrerait directement en conflit avec d'autres fonctions existantes conférées par des lois.

To hold otherwise would, in my view, set at naught the legislative scheme for the protection of the environment envisaged by Parliament in enacting

Toute autre interprétation ne tiendrait pas compte, à mon avis, du régime législatif de protection de l'environnement envisagé par le législateur lors-

the *Department of the Environment Act*, and in particular s. 6.

Nor do I think s. 3 of the *Guidelines Order*, which requires that the assessment process be initiated "as early in the planning process as possible and before irrevocable decisions are taken", is in any way inconsistent with s. 6 of the *Navigable Waters Protection Act*. Section 6 is largely concerned with empowering the Minister to remove or take other remedial action in relation to works constructed without complying with s. 5, but the appellants draw attention to s. 6(4) which permits the Minister to approve of a work that has already been built. On this point, I am in complete agreement with Stone J.A. where, at p. 41, he stated:

> As I see it, the provisions of section 6 of that Act pertain to the remedial powers of the Minister in deciding what action he might take in the event of a failure to secure a section 5 approval prior to the commencement of construction. Subsection (4) thereof is an exception to the general rule, is entirely discretionary and clearly subservient to the fundamental requirement set out in paragraph 5(1)(*a*) that an approval be obtained prior to the commencement of construction. Nor can I see anything in the Guidelines Order that would prevent the Minister from complying with its terms to the fullest extent possible in exercising his discretion under subsection 6(4) of the *Navigable Waters Protection Act*. That being so, I can find no inconsistency or conflict between these two pieces of federal legislation.

It is thus clear to me that the *Guidelines Order* not only falls within the powers given by the *Department of the Environment Act*, but is completely consistent with the *Navigable Waters Protection Act*. It therefore falls to be decided whether the Order applies in the instant case.

qu'il a adopté la *Loi sur le ministère de l'Environnement*, et, plus particulièrement, l'art. 6.

Je ne crois pas non plus que l'art. 3 du *Décret sur les lignes directrices*, qui exige que l'évaluation soit réalisée «le plus tôt possible au cours de l'étape de planification et avant de prendre des décisions irrévocables», soit d'une façon quelconque incompatible avec l'art. 6 de la *Loi sur la protection des eaux navigables*. L'article 6 vise principalement à habiliter le ministre qui constate qu'un ouvrage a été construit sans qu'aient été respectées les exigences de l'art. 5 à prendre des mesures pour le faire détruire ou toute autre mesure de redressement nécessaire; toutefois, les appelants ont attiré notre attention sur le par. 6(4) qui habilite le ministre à approuver un ouvrage qui a déjà été construit. Sur ce point, je suis entièrement d'accord avec le juge Stone de la Cour d'appel, qui mentionne à la p. 41:

> À mon avis, les dispositions de l'article 6 de la Loi concernent les pouvoirs de redressement que détient le ministre lorsqu'il détermine les mesures qu'il pourrait prendre advenant un défaut d'obtenir une approbation conformément à l'article 5 avant le début de la construction. Le pouvoir prévu au paragraphe (4) de l'article 6 constitue une exception à la règle générale; il est entièrement discrétionnaire et se trouve clairement subordonné à l'exigence fondamentale de l'alinéa 5(1)*a*) selon laquelle une approbation doit être obtenue avant le début de la construction. Je suis également incapable de trouver dans le Décret sur les lignes directrices une disposition qui empêcherait le ministre de se conformer à ses prescriptions dans toute la mesure du possible lorsqu'il exerce son pouvoir discrétionnaire sous le régime du paragraphe 6(4) de la *Loi sur la protection des eaux navigables*. Cela étant, je ne puis conclure à aucune incompatibilité et à aucun conflit entre ces deux textes de la législation fédérale.

Il me paraît donc évident non seulement que le *Décret sur les lignes directrices* s'inscrit dans le cadre des pouvoirs conférés par la *Loi sur le ministère de l'Environnement*, mais qu'il est entièrement compatible avec la *Loi sur la protection des eaux navigables*. Il faut donc se demander si le Décret s'applique en l'espèce.

Obligation of the Ministers to Comply with the Guidelines Order

Section 4(1) of the *Department of the Environment Act*

Section 4(1)(*a*) of the *Department of the Environment Act* reads as follows:

> **4.** (1) The powers, duties and functions of the Minister extend to and include all matters over which Parliament has jurisdiction, not by law assigned to any other department, board or agency of the Government of Canada, relating to
>
> (*a*) the preservation and enhancement of the quality of the natural environment, including water, air and soil quality;

Alberta contends that by restricting the Minister of the Environment's jurisdiction to "matters over which Parliament has jurisdiction, not by law assigned to any other department, board or agency of the Government of Canada" (emphasis added), s. 4 has rendered the *Guidelines Order* inoperative in the present case. Because the *Fisheries Act* regulates the management of Canada's fisheries resource, it is argued, the Minister of the Environment's jurisdiction has been ousted in respect of all matters affecting fish habitat. This argument can be dealt with shortly. Its premise entirely misapprehends the "matters" covered by the respective pieces of legislation. The *Guidelines Order* establishes an environmental assessment process for use by all federal departments in the exercise of their powers and the performance of their duties and functions, whereas the *Fisheries Act* embraces the substantive matter of protecting fish and fish habitat. There is, of course, a connection between the two, but the crucial difference is that one is fundamentally procedural while the other is substantive in nature. Again, the approach suggested by the appellants would make the power given by s. 6 of the *Department of the Environment Act* virtually meaningless.

New Federal Projects

Alberta next takes issue with the purported application of the *Guidelines Order* to proposals

L'obligation des ministres de se conformer au Décret sur les lignes directrices

Le paragraphe 4(1) de la *Loi sur le ministère de l'Environnement*

Voici le texte de l'al. 4(1)*a*) de la *Loi sur le ministère de l'Environnement*:

> **4.** (1) Les pouvoirs et fonctions du ministre s'étendent d'une façon générale à tous les domaines de compétence du Parlement non attribués de droit à d'autres ministères ou organismes fédéraux et liés:
>
> *a*) à la conservation et l'amélioration de la qualité de l'environnement naturel, notamment celle de l'eau, de l'air et du sol;

L'Alberta prétend qu'en restreignant la compétence du ministre de l'Environnement aux «domaines de compétence du Parlement non attribués de droit à d'autres ministères ou organismes fédéraux» (je souligne), l'art. 4 rend le *Décret sur les lignes directrices* inopérant en l'espèce. Parce que la *Loi sur les pêches* réglemente la gestion des ressources halieutiques du Canada, on soutient que la compétence du ministre de l'Environnement a été écartée à l'égard de toutes les questions concernant l'habitat du poisson. Cet argument peut être tranché rapidement. Il est fondé sur une interprétation tout à fait erronée des «domaines» visés par les divers textes législatifs. Le *Décret sur les lignes directrices* établit une méthode d'évaluation des incidences environnementales à l'intention de tous les ministères fédéraux dans l'exercice de leurs pouvoirs et dans l'exécution de leurs obligations et fonctions, alors que la *Loi sur les pêches* traite de la question de fond de la protection du poisson et de son habitat. Il existe certes un lien entre les deux, mais la différence essentielle est que l'une porte fondamentalement sur la procédure, alors que l'autre porte sur le fond. L'analyse proposée par les appelants rendrait pratiquement vide de sens le pouvoir conféré par l'art. 6 de la *Loi sur le ministère de l'Environnement.*

Les nouveaux projets fédéraux

L'Alberta s'attaque ensuite à la prétendue application du *Décret sur les lignes directrices* à des

other than "new federal projects, programs and activities" mentioned in s. 5(*a*)(ii) of the *Department of the Environment Act*. That provision reads:

> **5.** The Minister, in exercising his powers and carrying out his duties and functions under section 4, shall
>
> (*a*) initiate, recommend and undertake programs, and coordinate programs of the Government of Canada that are designed
>
> . . .
>
> (ii) to ensure that new federal projects, programs and activities are assessed early in the planning process for potential adverse effects on the quality of the natural environment and that a further review is carried out of those projects, programs, and activities that are found to have probable significant adverse effects, and the results thereof taken into account . . . [Emphasis added.]

The wording of that subparagraph, it is argued, is determinative of Parliament's intention to restrict the scope of the *Guidelines Order* to new federal projects, and consequently cannot apply to any project that is provincially sponsored. Here again, as I see it, Alberta seeks to place an unduly narrow construction on the extent of the Minister of the Environment's duties and functions under s. 6 of the Act. The *Guidelines Order* was enacted under s. 6, not s. 5, and the powers, duties and functions of the Minister there referred to encompass matters found in s. 4 as well as s. 5, including, *inter alia*, "the preservation and enhancement of the quality of the natural environment" (s. 4(1)(*a*)). Section 6 is thus not confined to new projects, programs and activities. Section 5 merely defines the Minister's minimum duties under s. 4. Section 4 is much broader. It is there that one finds the true range of the Minister's duties and functions related to environmental quality for which guidelines may be established.

Initiating Departments

Central to the arguments of the appellant Ministers is whether the *Guidelines Order* by its own terms has any application to the Oldman River

propositions autres que les «nouveaux projets, programmes et activités fédéraux» visés au sous-al. 5*a*)(ii) de la *Loi sur le ministère de l'Environnement*:

> **5.** Dans le cadre des pouvoirs et fonctions que lui confère l'article 4, le ministre:
>
> *a*) lance, recommande ou entreprend à son initiative et coordonne à l'échelle fédérale des programmes visant à:
>
> . . .
>
> (ii) faire en sorte que les nouveaux projets, programmes et activités fédéraux soient, dès les premières étapes de planification, évalués en fonction de leurs risques pour la qualité de l'environnement naturel, et que ceux d'entre eux dont on aura estimé qu'ils présentent probablement des risques graves fassent l'objet d'un réexamen dont les résultats devront être pris en considération . . . [Je souligne.]

On soutient que le libellé de ce sous-alinéa permet d'établir que le législateur avait l'intention de restreindre l'application du *Décret sur les lignes directrices* aux nouveaux projets fédéraux et que celui-ci ne saurait en conséquence s'appliquer à un projet parrainé par une province. À mon avis, l'Alberta cherche encore ici à interpréter d'une façon trop étroite l'étendue des fonctions du ministre de l'Environnement en vertu de la l'art. 6 de la Loi. Le *Décret sur les lignes directrices* a été adopté en vertu de l'art. 6 et non de l'art. 5 et les pouvoirs et fonctions du ministre qui y sont mentionnés visent à englober des domaines qu'on trouve à l'art. 4 ainsi qu'à l'art. 5, y compris: «la conservation et l'amélioration de la qualité de l'environnement» (al. 4(1)*a*)). L'article 6 n'est donc pas limité aux nouveaux projets, programmes et activités. L'article 5 ne fait que décrire les fonctions minimales du ministre en vertu de l'art. 4, lequel est beaucoup plus vaste. C'est là que l'on trouve la véritable gamme des fonctions du ministre en matière de qualité de l'environnement relativement à laquelle des directives peuvent être établies.

Les ministères responsables

Au cœur des moyens invoqués par les ministres appelants est la question de savoir si le *Décret sur les lignes directrices*, de par son libellé, est appli-

Dam project. That question was not addressed by Alberta, and the Ministers concede that the Minister of Transport is an "initiating" department but argue that the *Guidelines Order* is inconsistent with and thus cannot stand with the *Navigable Waters Protection Act*. I have found the two enactments compatible for reasons already given, so there remains no issue between the parties that the provisions of the *Guidelines Order* govern the Minister of Transport. For the Minister of Fisheries and Oceans, it is argued that he is not bound to invoke the *Guidelines Order* in the instant case because he does not have "decision making authority" pursuant to the relevant provisions of the *Fisheries Act*. Because the matter of the *Guidelines Order*'s application was the subject of profound disagreement in the courts below, I feel that it is necessary to first consider the terms of the *Guidelines Order* to construe its general application provisions.

The starting point, in my view, must be s. 6 of the *Guidelines Order* which sets out its governing principle of application. It bears repeating here:

> 6. These Guidelines shall apply to any proposal
>
> (*a*) that is to be undertaken directly by an initiating department;
>
> (*b*) that may have an environmental effect on an area of federal responsibility;
>
> (*c*) for which the Government of Canada makes a financial commitment; or
>
> (*d*) that is located on lands, including the offshore, that are administered by the Government of Canada. [Emphasis added.]

There can be no serious doubt that the Oldman River Dam project may have an environmental effect on an area of federal responsibility, including the matters falling within s. 91 of the *Constitution Act, 1867* already identified—i.e., navigation, Indians, lands reserved for the Indians and inland fisheries. Thus, the *Guidelines Order*

cable au projet de construction d'un barrage sur la rivière Oldman. L'Alberta n'a pas soulevé cette question et les ministres reconnaissent que le ministre des Transports est un ministère «responsable» mais ils soutiennent que le *Décret sur les lignes directrices* est incompatible avec la *Loi sur la protection des eaux navigables* et ne peut recevoir application. J'ai conclu que les deux textes sont compatibles pour les motifs déjà énoncés; il n'existe donc plus de controverse entre les parties quant à savoir si le ministre des Transports est régi par les dispositions du *Décret sur les lignes directrices*. En ce qui concerne le ministre des Pêches et des Océans, on soutient qu'il n'est pas tenu d'invoquer l'application du *Décret sur les lignes directrices* en l'espèce parce qu'il n'exerce pas un «pouvoir de décision» conformément aux dispositions pertinentes de la *Loi sur les pêches*. Puisque la question de l'application du *Décret sur les lignes directrices* a donné lieu à un profond désaccord devant les tribunaux d'instance inférieure, j'estime nécessaire d'analyser tout d'abord le *Décret sur les lignes directrices* pour interpréter les dispositions qui en déterminent l'application.

À mon avis, le point de départ est l'art. 6 du *Décret sur les lignes directrices* qui énonce son principe d'application. Il vaut la peine de le reproduire de nouveau:

> 6. Les présentes lignes directrices s'appliquent aux propositions
>
> *a*) devant être réalisées directement par un ministère responsable;
>
> *b*) pouvant avoir des répercussions environnementales sur une question de compétence fédérale;
>
> *c*) pour lesquelles le gouvernement du Canada s'engage financièrement; ou
>
> *d*) devant être réalisées sur des terres administrées par le gouvernement du Canada, y compris la haute mer. [Je souligne.]

On ne peut sérieusement mettre en doute que le projet de barrage sur la rivière Oldman peut avoir des répercussions environnementales sur une question de compétence fédérale, notamment les domaines visés par l'art. 91 de la *Loi constitutionnelle de 1867* déjà mentionnés, soit la navigation, les Indiens, les terres réservées aux Indiens et les

applies if the project here is a "proposal" within the meaning of s. 2, which defines that term as follows:

2. In these Guidelines,

. . .

"proposal" includes any initiative, undertaking or activity for which the Government of Canada has a decision making responsibility. [Emphasis added.]

If there is such a proposal, the *Guidelines Order* under ss. 3 and 10 allocates responsibility for the application of the process to the "initiating department" to ensure that it fully considers the environmental implications of a proposal properly before it and subjects such proposal to an initial assessment to determine whether there may be any potentially adverse environmental effects from it. The entity designated as an "initiating department" is also defined by s. 2. It provides that an:

2. In these Guidelines,

. . .

"initiating department" means any department that is, on behalf of the Government of Canada, the decision making authority for a proposal; [Emphasis added.]

It has been argued that the definite article "the" in the definition of "initiating department", as contrasted with the indefinite article "a" used in the definition of "proposal", may evince an intention to narrow the scope of the application of the *Guidelines Order* to projects where the federal government is the predominant or sole decision-making authority; see for example C. J. Gillespie, "Enforceable Rights from Administrative Guidelines?" (1989-1990), 3 *C.J.A.L.P.* 204. I do not agree. As I see it, the only consequence of shifting from the indefinite in "proposal" to the definite in "initiating department" is to designate the particular emanation of the Government of Canada that is charged with the implementation of the *Guidelines*

pêcheries de l'intérieur. En conséquence, le *Décret sur les lignes directrices* s'applique si le projet en l'espèce constitue une «proposition» au sens de l'art. 2:

2. Les définitions qui suivent s'appliquent aux présentes lignes directrices.

. . .

«proposition» S'entend en outre de toute entreprise ou activité à l'égard de laquelle le gouvernement du Canada participe à la prise de décisions. [Je souligne.]

Si une telle proposition existe, les art. 3 et 10 du *Décret sur les lignes directrices* confient l'application de la méthode d'évaluation au «ministère responsable», qui doit s'assurer d'une part, d'examiner à fond les répercussions environnementales de toute proposition dont il est saisi et d'autre part, de soumettre cette proposition à une évaluation initiale afin de déterminer la nature des effets néfastes qu'elle peut avoir sur l'environnement. L'article 2 définit aussi l'entité désignée comme «ministère responsable»:

2. Les définitions qui suivent s'appliquent aux présentes lignes directrices.

. . .

«ministère responsable» Ministère qui, au nom du gouvernement du Canada, exerce le pouvoir de décision à l'égard d'une proposition. [Je souligne.]

On soutient que, dans la version anglaise, l'emploi de l'article défini «*the*» dans la définition de «*initiating department*», par opposition à l'emploi de l'article indéfini «*a*» dans la définition du terme «*proposal*», peut indiquer une intention de limiter l'application du *Décret sur les lignes directrices* aux projets sur lesquels le gouvernement fédéral exerce le principal ou le seul pouvoir de décision; voir, par exemple, C. J. Gillespie, «Enforceable Rights from Administrative Guidelines?» (1989-1990), 3 *C.J.A.L.P.* 204. Je ne suis pas d'accord avec cette interprétation. À mon avis, la seule conséquence qu'entraîne le fait de passer de l'emploi de l'article indéfini dans la définition du terme «*proposal*» à celui de l'article défini dans la définition de «*initiating department*» est de désigner de façon précise, une fois établi que le gouverne-

Order once it has been determined that the federal government has a decision-making responsibility.

In *Angus v. Canada*, [1990] 3 F.C. 410 (C.A.), Décary J.A. adopted a similar approach to construing the *Guidelines Order* but in a different context. There the issue was whether the *Guidelines Order* applied to an order in council issued by the Governor in Council under s. 64 of the *National Transportation Act, 1987*, R.S.C., 1985, c. 28 (3rd Supp.), which required VIA Rail to eliminate or reduce certain passenger services. Although the case turned on the narrow issue of whether the *Guidelines Order* was binding on the Governor in Council, which does not arise here, and Décary J.A. was dissenting on this point, his overall analysis of the application of the *Guidelines Order* is helpful where he stated, at p. 434:

> The emphasis has been put by the learned Trial Judge and by the respondents on the words "initiating department" which relate to the administration of the Guidelines. I would rather put the emphasis on the words "proposal" and "Government of Canada", which relate to the "application" of the Guidelines. There is no requirement, in the definition of "proposal", that it be made by an initiating department within the meaning of the Guidelines. The intention of the drafter seems to be that whenever there is an activity that may have an environmental effect on an area of federal responsibility and whoever the decision-maker may be on behalf of the Government of Canada, be it a department, a Minister, the Governor in Council, the Guidelines apply and it then becomes a matter of practical consideration, when the final decision-maker is not a department, to find which department or Minister is the effective original decision-maker or the effective decision-undertaker, for there is always a department or a Minister involved "in the planning process" and "before irrevocable decisions are taken" or in the "direct undertaking" of a proposal.

Since the issue does not arise, I do not wish to comment on the application of the *Guidelines Order* to the Governor in Council, but the foregoing

ment fédéral participe à la prise de décisions, l'autorité particulière au sein du gouvernement du Canada qui sera responsable de la mise en œuvre du *Décret sur les lignes directrices*.

Dans l'arrêt *Angus c. Canada*, [1990] 3 C.F. 410 (C.A.), le juge Décary a adopté une analyse similaire relativement à l'interprétation du *Décret sur les lignes directrices*, mais dans un contexte différent. Dans cette affaire, la question en litige était de savoir si le *Décret sur les lignes directrices* s'appliquait à un décret pris par le gouverneur en conseil en vertu de l'art. 64 de la *Loi de 1987 sur les transports nationaux*, L.R.C. (1985), ch. 28 (3e suppl.), qui ordonnait à VIA Rail d'éliminer ou de réduire certains services voyageurs. Bien que cette affaire ait porté sur la question précise de savoir si le gouverneur en conseil était tenu de se conformer au *Décret sur les lignes directrices*, ce qui n'est pas soulevé en l'espèce, et que le juge Décary ait été dissident sur ce point, l'analyse globale qu'il fait, à la p. 434, de l'application du *Décret sur les lignes directrices* est utile:

> Le juge de première instance et les intimés ont mis l'accent sur les mots «ministère responsable» qui ont trait à l'administration des Lignes directrices. Je mettrais plutôt l'accent sur les mots «proposition» et «gouvernement du Canada» qui ont trait au «champ d'application» des Lignes directrices. Rien n'exige dans la définition du mot «proposition» que celle-ci soit faite par un ministère responsable, au sens des Lignes directrices. L'intention du rédacteur semble être que les Lignes directrices doivent s'appliquer chaque fois qu'une activité peut avoir des répercussions environnementales sur une question de compétence fédérale et quel que soit le preneur de décision au nom du gouvernement, qu'il s'agisse d'un ministère, d'un ministre ou du gouverneur en conseil, et cela devient alors une question purement pratique, lorsque le preneur de décision ultime n'est pas un ministère, de déterminer quel ministère ou ministre est le preneur de décision originel ou celui qui va effectivement mettre la décision à exécution, car il se trouve toujours un ministère ou un ministre qui est présent «à l'étape de planification» et «avant» que ne soient prises «des décisions irrévocables» ou qui voit à la «réalisation directe» de la proposition.

Puisque cette question n'est pas soulevée, je ne vois pas l'intérêt de faire des observations sur l'application au gouverneur en conseil du *Décret sur*

ing passage does capture the essence of its framework.

That is not to say that the *Guidelines Order* is engaged every time a project may have an environmental effect on an area of federal jurisdiction. There must first be a "proposal" which requires an "initiative, undertaking or activity for which the Government of Canada has a decision making responsibility". (Emphasis added.) In my view the proper construction to be placed on the term "responsibility" is that the federal government, having entered the field in a subject matter assigned to it under s. 91 of the *Constitution Act, 1867*, must have an affirmative regulatory duty pursuant to an Act of Parliament which relates to the proposed initiative, undertaking or activity. It cannot have been intended that the *Guidelines Order* would be invoked every time there is some potential environmental effect on a matter of federal jurisdiction. Therefore, "responsibility" within the definition of "proposal" should not be read as connoting matters falling generally within federal jurisdiction. Rather, it is meant to signify a legal duty or obligation. Once such duty exists, it is a matter of identifying the "initiating department" assigned responsibility for its performance, for it then becomes the decision-making authority for the proposal and thus responsible for initiating the process under the *Guidelines Order*.

That there must be an affirmative regulatory duty for a "decision making responsibility" to exist is evident from other provisions found in the *Guidelines Order* which suggest that the initiating department must have some degree of regulatory power over the project. For example s. 12 provides:

12. Every initiating department shall screen or assess each proposal for which it is the decision making authority to determine if

. . .

les lignes directrices; toutefois, le passage précité permet de bien saisir l'essence de son application.

Je ne veux pas dire pour autant que le *Décret sur les lignes directrices* reçoit application chaque fois qu'un projet peut comporter des répercussions environnementales sur un domaine de compétence fédérale. Il doit tout d'abord s'agir d'une «proposition» qui vise une «entreprise ou activité à l'égard de laquelle le gouvernement du Canada participe à la prise de décisions». (Je souligne.) À mon avis, l'interprétation qu'il faut donner à l'expression «participe à la prise de décisions» est que le gouvernement fédéral, se trouvant dans un domaine relevant de sa compétence en vertu de l'art. 91 de la *Loi constitutionnelle de 1867*, doit avoir une obligation positive de réglementation en vertu d'une loi fédérale relativement à l'entreprise ou à l'activité proposée. On n'a pas pu vouloir que le *Décret sur les lignes directrices* soit invoqué chaque fois qu'il existe certaines possibilités de répercussions environnementales sur un domaine de compétence fédérale. En conséquence, l'expression «participe à la prise de décisions» dans la définition du terme «proposition» ne devrait pas être interprétée comme ayant trait à des questions relevant généralement de la compétence fédérale. Cette expression signifie plutôt une obligation légale. Si cette obligation existe, il s'agit alors de déterminer qui est le «ministère responsable» en la matière, puisque c'est ce ministère qui exerce le pouvoir de décision à l'égard de la proposition et qui doit donc entamer le processus d'évaluation visé par le *Décret sur les lignes directrices*.

La nécessité d'une obligation positive de réglementation pour que le gouvernement du Canada «participe à la prise de décisions» ressort d'autres dispositions du *Décret sur les lignes directrices*, qui laissent entendre que le ministère responsable doit détenir un certain pouvoir de réglementation sur le projet. Par exemple, l'art. 12 dispose que:

12. Le ministère responsable examine ou évalue chaque proposition à l'égard de laquelle il exerce le pouvoir de décision, afin de déterminer:

. . .

(*f*) the potentially adverse environmental effects that may be caused by the proposal are unacceptable, in which case the proposal shall either be modified and subsequently rescreened or reassessed or be abandoned.

Again, s. 14 reads:

14. Where, in any case, the initiating department determines that mitigation or compensation measures could prevent any of the potentially adverse environmental effects of a proposal from becoming significant, the initiating department shall ensure that such measures are implemented.

Those provisions amplify the regulatory authority with which the Government of Canada must have clothed itself under an Act of Parliament before it will have the requisite decision-making responsibility.

Applying that interpretation to the present case, it will be seen that the Oldman River Dam project qualifies as a proposal for which the Minister of Transport alone is the initiating department. In my view the *Navigable Waters Protection Act* does place an affirmative regulatory duty on the Minister of Transport. Under that Act there is a legislatively entrenched regulatory scheme in place in which the approval of the Minister is required before any work that substantially interferes with navigation may be placed in, upon, over or under, through or across any navigable water. Section 5 gives the Minister the power to impose such terms and conditions as he deems fit on any approval granted, and if those terms are not complied with the Minister may order the owner to remove or alter the work. For these reasons I would hold that this is a "proposal" for which the Minister of Transport is an "initiating department".

There is, however, no equivalent regulatory scheme under the *Fisheries Act* which is applicable to this project. Section 35 prohibits the carrying on of any work or undertaking that results in the harmful alteration, disruption or destruction of fish habitat, and s. 40 lends its weight to that prohibition by penal sanction. The Minister of Fisheries and Oceans is given a discretion under s. 37(1) to

f) si les effets néfastes que la proposition peut avoir sur l'environnement sont inacceptables, auquel cas la proposition est soit annulée, soit modifiée et soumise à un nouvel examen ou évaluation initiale.

L'article 14:

14. Le ministère responsable voit à la mise en application de mesures d'atténuation et d'indemnisation, s'il est d'avis que celles-ci peuvent empêcher que les effets néfastes d'une proposition sur l'environnement prennent de l'ampleur.

Ces dispositions amplifient le pouvoir de réglementation que doit avoir le gouvernement du Canada en vertu d'une loi fédérale avant de pouvoir participer à la prise de décisions.

Si on applique cette interprétation à l'espèce, on se rendra compte que le projet de barrage sur la rivière Oldman peut être qualifié de proposition dont le ministre des Transports seul est le ministère responsable. À mon avis, la *Loi sur la protection des eaux navigables* impose une obligation positive de réglementation au ministre des Transports. Cette loi a mis en place un mécanisme de réglementation qui prévoit qu'il est nécessaire d'obtenir l'approbation du ministre avant qu'un ouvrage qui gêne sérieusement la navigation puisse être placé dans des eaux navigables ou sur, sous, au-dessus ou à travers de telles eaux. L'article 5 accorde au ministre le pouvoir de fixer les modalités qu'il juge à propos lorsqu'il approuve un ouvrage; si le propriétaire ne se conforme pas aux modalités, le ministre peut lui ordonner d'enlever l'ouvrage ou de le modifier. Pour ces motifs, je conclurais qu'il s'agit ici d'une «proposition» dont le ministre des Transports est un «ministère responsable».

La *Loi sur les pêches* ne renferme cependant pas de disposition de réglementation équivalente qui serait applicable au projet. L'article 35 interdit d'exploiter des ouvrages ou entreprises entraînant la détérioration, la destruction ou la perturbation de l'habitat du poisson, et l'art. 40 assortit cette interdiction d'une sanction pénale. En vertu du par. 37(1), le ministre des Pêches et des Océans

request information from any person who carries on or proposes to carry on any work or undertaking that will or may result in the alteration, disruption or destruction of fish habitat. However, the purpose of making such a request is not to further a regulatory procedure, but is merely to assist the Minister in exercising an *ad hoc* delegated legislative power granted under s. 37(2) to allow an exemption from the general prohibition. That provision reads:

37. . . .

(2) If, after reviewing any material or information provided under subsection (1) and affording the persons who provided it a reasonable opportunity to make representations, the Minister or a person designated by the Minister is of the opinion that an offence under subsection 40(1) or (2) is being or is likely to be committed, the Minister or a person designated by the Minister may, by order, subject to regulations made pursuant to paragraph (3)(*b*), or, if there are no such regulations in force, with the approval of the Governor in Council,

(*a*) require such modifications or additions to the work or undertaking or such modifications to any plans, specifications, procedures or schedules relating thereto as the Minister or a person designated by the Minister considers necessary in the circumstances, or

(*b*) restrict the operation of the work or undertaking,

and, with the approval of the Governor in Council in any case, direct the closing of the work or undertaking for such period as the Minister or a person designated by the Minister considers necessary in the circumstances. [Emphasis added.]

In my view a discretionary power to request or not to request information to assist a Minister in the exercise of a legislative function does not constitute a decision-making responsibility within the meaning of the *Guidelines Order*. Whereas the Minister of Transport is responsible under the terms of the *Navigable Waters Protection Act* in his capacity as regulator, the Minister of Fisheries and Oceans under s. 37 of the *Fisheries Act* has been given a limited *ad hoc* legislative power which does not constitute an affirmative regulatory duty. For that reason, I do not think the application

peut demander des renseignements à quiconque exploite ou se propose d'exploiter des ouvrages ou entreprises de nature à entraîner la détérioration, la perturbation ou la destruction de l'habitat du poisson. Toutefois, cette demande n'a pas pour objet la mise en œuvre d'une procédure de réglementation; elle aide simplement le ministre à exercer le pouvoir législatif spécial, qui lui a été délégué en vertu du par. 37(2), d'autoriser une exception à l'interdiction générale. En voici le libellé:

37. . . .

(2) Si, après examen des documents et des renseignements reçus et après avoir accordé aux personnes qui les lui ont fournis la possibilité de lui présenter leurs observations, il est d'avis qu'il y a infraction ou risque d'infraction au paragraphe 35(1) ou à l'article 36, le ministre ou son délégué peut, par arrêté et sous réserve des règlements d'application de l'alinéa (3)*b*) ou, à défaut, avec l'approbation du gouverneur en conseil:

a) soit exiger que soient apportées les modifications et adjonctions aux ouvrages ou entreprises, ou aux documents s'y rapportant, qu'il estime nécessaires dans les circonstances;

b) soit restreindre l'exploitation de l'ouvrage ou de l'entreprise.

Il peut en ouvre, avec l'approbation du gouverneur en conseil dans tous les cas, ordonner la fermeture de l'ouvrage ou de l'entreprise pour la période qu'il juge nécessaire en l'occurrence. [Je souligne.]

À mon avis, le fait que le ministre possède le pouvoir discrétionnaire de demander des renseignements visant à l'aider dans l'exercice d'une fonction législative ne signifie pas qu'il participe à la prise de décisions au sens du *Décret sur les lignes directrices*. Alors que le ministre des Transports a une responsabilité en vertu de la *Loi sur la protection des eaux navigables* à titre d'autorité réglementante, le ministre des Pêches et des Océans a, en vertu de l'art. 37 de la *Loi sur les pêches*, un pouvoir législatif spécial limité qui ne constitue pas une obligation positive de réglemen-

for mandamus to compel the Minister to act is well founded.

Crown Immunity

Alberta takes the position that even if the *Guidelines Order* could be said to apply to the project in its own terms, the Crown in right of Alberta is not bound by the *Navigable Waters Protection Act* and hence there can be no "decision making responsibility" on the part of the Government of Canada within the meaning of the *Guidelines Order* which could affect the province. The appellant Ministers agree that the Act is not binding on the Crown in right of a province, but argue that Alberta has waived its immunity by making application for approval under the Act.

The starting point on this issue is s. 17 of the *Interpretation Act* which codifies the presumption that the Crown is not bound by statute:

17. No enactment is binding on Her Majesty or affects Her Majesty or Her Majesty's rights or prerogatives in any manner, except as mentioned or referred to in the enactment.

It is agreed by all concerned that there are no express words in the *Navigable Waters Protection Act* binding the Crown, and it therefore remains to be decided whether the Crown is bound by necessary implication.

It is helpful to turn first to the common law. The leading case is the Privy Council decision in *Province of Bombay v. Municipal Corporation of Bombay*, [1947] A.C. 58. The issue there was whether the province of Bombay was exempt from the *City of Bombay Municipal Act*, 1888, which conferred power on the city to lay water-mains "into, through or under any land whatsoever within the city". The province owned land under which it was proposed to lay a water-main and it objected to the city's plans, unless the city complied with certain conditions which the city found unacceptable. Although there were no express words in the statute binding the Crown, the High Court of Bombay held that the Crown was bound by necessary implication

tation. Pour ce motif, je ne crois pas que la demande de bref de *mandamus* visant à forcer le ministre à agir soit bien fondée.

L'immunité de la Couronne

Selon l'Alberta, même si on pouvait dire que le *Décret sur les lignes directrices* s'applique de lui-même au projet, la Couronne du chef de l'Alberta n'est pas liée par la *Loi sur la protection des eaux navigables*. Dès lors, la participation «à la prise de décisions», au sens du *Décret sur les lignes directrices*, par le gouvernement du Canada, ne saurait avoir une incidence sur la province. Les ministres appelants conviennent que la Loi ne lie pas la Couronne du chef d'une province, mais prétendent que l'Alberta a renoncé à cette immunité en présentant une demande d'approbation en vertu de la Loi.

Le point de départ de cet argument est l'art. 17 de la *Loi d'interprétation* qui codifie la présomption que la Couronne n'est pas liée par un texte législatif.

17. Sauf indication contraire y figurant, nul texte ne lie Sa Majesté ni n'a d'effet sur ses droits et prérogatives.

Toutes les parties intéressées reconnaissent que la *Loi sur la protection des eaux navigables* ne prévoit pas expressément qu'elle lie la Couronne; il reste donc à déterminer si la Couronne est liée par déduction nécessaire.

Il est utile d'examiner tout d'abord la situation en common law. L'arrêt de principe en la matière est *Province of Bombay c. Municipal Corporation of Bombay*, [1947] A.C. 58, rendu par le Conseil privé. Dans cette affaire, il s'agissait de savoir si la province de Bombay était exemptée de l'application de la *City of Bombay Municipal Act*, 1888, laquelle conférait à la ville le pouvoir d'installer des conduites d'eau [TRADUCTION] «sur, à travers ou sous tout bien-fonds situé à l'intérieur des limites de la ville». La province était propriétaire d'un bien-fonds sous lequel on se proposait d'installer une conduite d'eau et elle s'opposait aux plans de la ville, sauf si celle-ci acceptait de se conformer à certaines conditions, jugées inaccep-

because the statute "cannot operate with reasonable efficiency unless the Crown is bound".

The Privy Council agreed that the rule of Crown immunity admitted of at least one exception, necessary implication. Lord du Parcq explained the exception as follows, at p. 61:

> If, that is to say, it is manifest from the very terms of the statute, that it was the intention of the legislature that the Crown should be bound, then the result is the same as if the Crown had been expressly named. It must then be inferred that the Crown, by assenting to the law, agreed to be bound by its provisions.

Their Lordships then went on to consider the argument, supported by some early authority, that a statute enacted for the public good must be held to bind the Crown, because the Act was manifestly intended to secure the public welfare. That contention was rejected on the simple ground that all statutes are presumptively for the public good. That, however, did not necessarily mean that the purpose of an enactment is altogether irrelevant. At page 63, it is stated:

> Their Lordships prefer to say that the apparent purpose of the statute is one element, and may be an important element, to be considered when an intention to bind the Crown is alleged. If it can be affirmed that, at the time when the statute was passed and received the royal sanction, it was apparent from its terms that its beneficent purpose must be wholly frustrated unless the Crown were bound, then it may be inferred that the Crown has agreed to be bound.

As I mentioned in *Sparling v. Quebec (Caisse de dépôt et placement du Québec)*, [1988] 2 S.C.R. 1015, at p. 1022, some doubt was expressed in *R. v. Eldorado Nuclear Ltd.*, [1983] 2 S.C.R. 551, and *Her Majesty in right of Alberta v. Canadian Transport Commission*, [1978] 1 S.C.R. 61 (cf. *R. v. Ouellette*, [1980] 1 S.C.R. 568), as to whether the necessary implication exception survived the 1967 revision of what is now s. 17 of the *Interpretation Act*. There may also have been room for doubt as

tables par la ville. Même si le texte législatif ne renfermait pas de dispositions expresses liant la Couronne, la Haute Cour de Bombay a statué que la Couronne était liée par déduction nécessaire parce que la loi [TRADUCTION] «ne peut avoir une efficacité raisonnable si elle ne lie pas la Couronne».

Le Conseil privé a reconnu que la règle de l'immunité de la Couronne souffre au moins une exception, la déduction nécessaire. Lord du Parcq explique cette exception, à la p. 61:

> [TRADUCTION] C'est-à-dire que, s'il ressort du texte même de la Loi que le législateur entendait lier la Couronne, le résultat est le même que si cette dernière était expressément mentionnée. Il faut donc en déduire que la Couronne, en promulguant la loi, a accepté d'être liée par ses dispositions.

Leurs Seigneuries ont ensuite analysé l'argument, fondé sur une jurisprudence antérieure, qu'une loi adoptée pour le bien public doit recevoir une interprétation qui lie la Couronne parce que cette loi vise manifestement à garantir le bien-être public. Cette prétention a été rejetée pour le simple motif que toutes les lois sont présumées être adoptées pour le bien public. Toutefois, cela ne signifiait pas nécessairement que l'objet d'un texte législatif ne présente aucune pertinence (à la p. 63):

> [TRADUCTION] Leurs Seigneuries préfèrent dire que l'objet apparent de la loi constitue un élément, et peut être un élément important, à examiner lorsque l'on prétend que l'intention était de lier la Couronne. Si l'on peut affirmer qu'au moment où la Loi a été adoptée et a reçu la sanction royale, il ressortait clairement de son texte qu'elle serait privée de toute efficacité si elle ne liait pas la Couronne, on peut déduire que la Couronne a accepté d'être liée.

Comme je l'ai mentionné dans l'arrêt *Sparling c. Québec (Caisse de dépôt et placement du Québec)*, [1988] 2 R.C.S. 1015, à la p. 1022, certains doutes ont été exprimés dans l'arrêt *R. c. Eldorado Nucléaire Ltée*, [1983] 2 R.C.S. 551, et dans l'arrêt *Sa Majesté du chef de la province de l'Alberta c. Commission canadienne des transports*, [1978] 1 R.C.S. 61 (cf. *R. c. Ouellette*, [1980] 1 R.C.S. 568), quant à savoir si l'exception de la déduction nécessaire survivait à la révision de ce qui est

to whether the "wholly frustrated" test articulated in *Bombay* was determinative in finding the Crown bound by necessary implication. Professor Hogg in his text *Liability of the Crown* (2nd ed. 1989), argues that the necessary implication exception set out at the beginning of *Bombay* refers to a contextual analysis of the statute whereby one may discern an intention to bind the Crown by logical implication, and is thus a different species of necessary implication from that which arises when the purpose of the statute is wholly frustrated. He states, at p. 210:

> What is contemplated in this passage is that a statute, while lacking an express statement that the Crown is bound, may contain references to the Crown or to governmental activity which make no sense unless the Crown is bound. If these textual indications are sufficiently clear, the courts will hold that the presumption is rebutted and the Crown is bound.

However, any uncertainty in the law on these points was put to rest by this Court's recent decision in *Alberta Government Telephones*, *supra*. After reviewing the authorities, Dickson C.J. concluded, at p. 281:

> In my view, in light of *PWA* and *Eldorado*, the scope of the words "mentioned or referred to" must be given an interpretation independent of the supplanted common law. However, the qualifications in *Bombay*, *supra*, are based on sound principles of interpretation which have not entirely disappeared over time. It seems to me that the words "mentioned or referred to" in s. 16 [now s. 17 of the *Interpretation Act*] are capable of encompassing: (1) expressly binding words ("Her Majesty is bound"); (2) a clear intention to bind which, in *Bombay* terminology, "is manifest from the very terms of the statute", in other words, an intention revealed when provisions are read in the context of other textual provisions, as in *Ouellette*, *supra*; and, (3) an intention to bind where the purpose of the statute would be "wholly frustrated" if the government were not bound, or, in other words, if an absurdity (as opposed to simply an undesirable result) were produced. These three points should provide a

maintenant l'art. 17 de la *Loi d'interprétation*, effectuée en 1967. On aurait également pu se demander si le critère de l'absence de toute efficacité de la loi énoncé dans l'arrêt *Bombay* était déterminant dans la décision que la Couronne était liée par déduction nécessaire. Le professeur Hogg dans son ouvrage intitulé *Liability of the Crown* (2e éd. 1989) soutient que l'exception de la déduction nécessaire énoncée au début de l'arrêt *Bombay* renvoie à une analyse contextuelle de la loi au terme de laquelle on peut dégager une intention de lier la Couronne par déduction logique; il s'agit donc là d'une espèce différente de déduction nécessaire de celle qui existe lorsque l'objet de la loi serait privé de toute efficacité. Il affirme à la p. 210:

> [TRADUCTION] Ce qui est envisagé dans ce passage est qu'une loi, en l'absence de termes qui lient expressément la Couronne, peut contenir des renvois à la Couronne ou à une activité gouvernementale, qui n'auraient aucun sens sauf si la Couronne était liée. Si ces indications dans le texte sont suffisamment claires, les tribunaux concluront que la présomption a été réfutée et que la Couronne est liée.

Toutefois, notre Cour a dissipé toute incertitude quant à la situation du droit dans l'arrêt récent *Alberta Government Telephones*, précité. Après une analyse de la jurisprudence, le juge en chef Dickson conclut à la p. 281:

> À mon avis, compte tenu des affaires *PWA* et *Eldorado*, la portée des termes «mentionnée ou prévue» doit s'interpréter indépendamment de la règle de *common law* supplantée. Toutefois, les réserves exprimées dans l'arrêt *Bombay*, précité, sont fondées sur de bons principes d'interprétation que le temps n'a pas complètement effacés. Il me semble que les termes «mentionnée ou prévue» contenus à l'art. 16 [maintenant l'art. 17 de la *Loi d'interprétation*] peuvent comprendre: (1) des termes qui lient expressément la Couronne («Sa Majesté est liée»); (2) une intention claire de lier qui, selon les termes de l'arrêt *Bombay*, «ressort du texte même de la loi», en d'autres termes, une intention qui ressorte lorsque les dispositions sont interprétées dans le contexte d'autres dispositions, comme dans l'arrêt *Ouellette*, précité; et (3) une intention de lier lorsque l'objet de la loi serait «privé [. . .] de toute efficacité» si l'État n'était pas lié ou, en d'autres termes, s'il donnait lieu à une absurdité (par opposition à un simple résultat non souhaité). Ces trois éléments devraient servir de guide lors-

guideline for when a statute has clearly conveyed an intention to bind the Crown.

In my view, this passage makes it abundantly clear that a contextual analysis of a statute may reveal an intention to bind the Crown if one is irresistibly drawn to that conclusion through logical inference.

That analysis however cannot be made in a vacuum. Accordingly, the relevant "context" should not be too narrowly construed. Rather the context must include the circumstances which led to the enactment of the statute and the mischief to which it was directed. This view is consistent with the reasoning in *Bombay* as is evident from the passages quoted above where the test for necessary implication is expressed in terms of the time of enactment. In fact the approach taken by the High Court of Bombay in that case was criticized by the Privy Council for that very reason, at p. 62:

> Even if the High Court were correct in its interpretation of the principle, its method of applying it would be open to the objection that regard should have been had, not to the conditions which it found to be in existence many years after the passing of the Act, but to the state of things which existed, or could be shown to have been within the contemplation of the legislature, in the year 1888.

I begin then by examining the circumstances that existed when the legislation was first enacted, bearing in mind that the general subject matter of the statute concerns navigation.

In so doing, it is useful to return to some of the fundamental principles of water law in this area, particularly those pertaining to navigable waters. It is important to recall that the law of navigation in Canada has two fundamental dimensions—the ancient common law public right of navigation and the constitutional authority over the subject matter of navigation—both of which are necessarily interrelated by virtue of s. 91(10) of the *Constitution Act, 1867* which assigns exclusive legislative authority over navigation to Parliament.

qu'une loi comporte clairement une intention de lier la Couronne.

À mon avis, ce passage fait clairement ressortir qu'une analyse du contexte d'une loi peut révéler une intention de lier la Couronne si cette conclusion s'impose immanquablement par déduction logique.

On ne doit cependant pas effectuer cette analyse dans l'abstrait. En conséquence, il ne faudrait pas interpréter le «contexte» pertinent de façon trop restreinte. Le contexte doit plutôt englober les circonstances qui ont donné lieu à l'adoption de la loi et la situation qu'elle voulait corriger. Ce point de vue est compatible avec le raisonnement énoncé dans l'arrêt *Bombay* comme l'indiquent les passages susmentionnés dans lesquels le critère de la déduction nécessaire est exprimé par rapport au moment de l'adoption de la loi. En fait, l'analyse adoptée par la Haute Cour de Bombay a été critiquée par le Conseil privé pour ce motif même, à la p. 62:

> [TRADUCTION] Même si la Haute Cour a interprété correctement le principe, sa façon de l'appliquer permet de soulever l'objection qu'elle aurait dû tenir compte non pas des conditions qui ont existé pendant de nombreuses années après l'adoption de la Loi, mais de l'état de chose qui existait en 1888 ou que la législature aurait pu prévoir.

J'examinerai tout d'abord les circonstances qui existaient au moment de l'adoption de la loi, en tenant compte du fait que le sujet général de la loi porte sur la navigation.

Ce faisant, il est utile de passer en revue certains des principes fondamentaux du droit maritime dans ce domaine, notamment ceux qui se rapportent aux eaux navigables. Il importe de se rappeler que le droit de la navigation au Canada comporte deux dimensions fondamentales—l'ancien droit public de navigation de la common law et la compétence constitutionnelle sur la navigation—qui sont nécessairement interdépendantes en vertu du par. 91(10) de la *Loi constitutionnelle de 1867* qui confère au Parlement une compétence législative exclusive sur la navigation.

The common law of England has long been that the public has a right to navigate in tidal waters, but though non-tidal waters may be navigable in fact the public has no right to navigate in them, subject to certain exceptions not material here. Except in the Atlantic provinces, where different considerations may well apply, in Canada the distinction between tidal and non-tidal waters was abandoned long ago; see *In Re Provincial Fisheries* (1896), 26 S.C.R. 444; for a summary of the cases, see my book on *Water Law in Canada* (1973), at pp. 178-80. Instead the rule is that if waters are navigable in fact, whether or not the waters are tidal or non-tidal, the public right of navigation exists. That is the case in Alberta where the Appellate Division of the Supreme Court, applying the *North-West Territories Act*, R.S.C. 1886, c. 50, rightly held in *Flewelling v. Johnston* (1921), 59 D.L.R. 419, that the English rule was not suitable to the conditions of the province. There is no issue between the parties that the Oldman River is in fact navigable.

La common law d'Angleterre prévoit depuis longtemps que le public a un droit de navigation dans les eaux de marée; toutefois, bien que les eaux sans marée puissent être navigables, le public n'a pas le droit d'y naviguer, sous réserve de certaines exceptions qui ne sont pas pertinentes en l'espèce. Au Canada, la distinction entre les eaux de marée et les eaux sans marée a été abandonnée il y a longtemps, sauf dans les provinces de l'Atlantique où des considérations différentes pourraient bien s'appliquer; voir l'arrêt *In Re Provincial Fisheries* (1896), 26 R.C.S. 444; pour un sommaire des arrêts applicables, voir mon ouvrage intitulé *Water Law in Canada* (1973), aux pp. 178 à 180. La règle est plutôt la suivante: si les eaux sont navigables, que ce soient des eaux de marée ou sans marée, il existe un droit public de navigation. C'est le cas en Alberta où la Division d'appel de la Cour suprême, dans l'application de l'*Acte des territoires du Nord-Ouest*, S.R.C. 1886, ch. 50, a à bon droit statué dans l'arrêt *Flewelling c. Johnston* (1921), 59 D.L.R. 419, que la règle anglaise ne pouvait être appliquée à la province. Les parties ne contestent pas que la rivière Oldman est en fait navigable.

The nature of the public right of navigation has been the subject of considerable judicial comment over time, but certain principles have held fast. First, the right of navigation is not a property right, but simply a public right of way; see *Orr Ewing v. Colquhoun* (1877), 2 App. Cas. 839 (H.L.), at p. 846. It is not an absolute right, but must be exercised reasonably so as not to interfere with the equal rights of others. Of particular significance for this case is that the right of navigation is paramount to the rights of the owner of the bed, even when the owner is the Crown. For example, in *Attorney-General v. Johnson* (1819), 2 Wils. Ch. 87, 37 E.R. 240, a relator action to enjoin a public nuisance causing an obstruction in the River Thames and an adjoining thoroughfare along its bank, the Lord Chancellor said, at p. 246:

La nature du droit public de navigation a donné lieu à beaucoup de jurisprudence au cours des années, mais certains principes sont toujours valables. Premièrement, le droit de navigation n'est pas un droit de propriété, mais simplement un droit public de passage; voir l'arrêt *Orr Ewing c. Colquhoun* (1877), 2 App. Cas. 839 (H.L.), à la p. 846. Ce n'est pas un droit absolu, mais il doit être exercé d'une façon raisonnable de manière à ne pas empiéter sur les droits équivalents des autres. Il est tout particulièrement important en l'espèce de préciser que le droit de navigation l'emporte sur les droits du propriétaire du lit, même si le propriétaire est la Couronne. Par exemple, dans l'arrêt *Attorney-General c. Johnson* (1819), 2 Wils. Ch. 87, 37 E.R. 240, concernant l'action d'une partie civile visant à éliminer une nuisance publique causant une obstruction dans la Tamise et sur une voie publique le long de la rive, le lord chancelier dit à la p. 246:

I consider it to be quite immaterial whether the title to the soil between high and low water-mark be in the

[TRADUCTION] J'estime qu'il n'est aucunement pertinent que le titre de propriété du sol entre la laisse des hautes

Crown, or in the City of *London*, or whether the City of *London* has the right of conservancy, operating as a check on an improper use of the soil, the title being in the Crown, or whether either Lord *Grosvenor* or Mr. *Johnson* have any derivative title by grant from any one having the power to grant. . . . It is my present opinion, that the Crown has not the right either itself to use its title to the soil between high and low water-mark as a nuisance, or to place upon that soil what will be a nuisance to the Crown's subjects. If the Crown has not such a right, it could not give it to the City of *London*, nor could the City transfer it to any other person.

This Court later came to the same conclusion in *Wood v. Esson* (1884), 9 S.C.R. 239. There, the plaintiffs had extended their wharf so as to interfere with access to the defendant's wharf. The defendant pulled up the piles and removed the obstruction to allow passage to his wharf, and the plaintiffs then brought an action in trespass on the ground that they enjoyed title under a grant from the province of Nova Scotia to the soil of the harbour on which the wharf was constructed. The Court held that the defendant was entitled to abate the nuisance created by the obstruction to navigation in the harbour. Strong J. remarked, at p. 243:

> The title to the soil did not authorize the plaintiffs to, extend their wharf so as to be a public nuisance, which upon the evidence, such an obstruction of the harbour amounted to, for the Crown cannot grant the right so to obstruct navigable waters; nothing short of legislative sanction can take from anything which hinders navigation the character of a nuisance. [Emphasis added.]

This passage also underscores another aspect of the paramountcy of the public right of navigation —that it can only be modified or extinguished by an authorizing statute, and as such a Crown grant of land of itself does not and cannot confer a right to interfere with navigation; see also *The Queen v. Fisher* (1891), 2 Ex. C.R. 365; *In Re Provincial Fisheries*, *supra*, at p. 549, *per* Girouard J.; and *Reference re Waters and Water-Powers*, [1929] S.C.R. 200.

eaux et celle des basses eaux appartienne à la Couronne ou à la ville de *Londres*, ou que la ville de *Londres* possède le droit d'administration, permettant ainsi de surveiller toute utilisation incorrecte du sol lorsque la Couronne en détient le titre, ou que lord *Grosvenor* ou M. *Johnson* possède un titre dérivé obtenu par concession de quiconque a le pouvoir de le faire [. . .] À mon avis, la Couronne n'a pas le droit de créer une nuisance lorsqu'elle utilise son droit de propriété du terrain situé entre la laisse des basses eaux et celle des hautes eaux ou de placer sur ce terrain quelque chose qui constituera une nuisance pour les sujets de la Couronne. Si la Couronne ne possède pas ce droit, elle ne pouvait pas l'accorder à la ville de *Londres*, et la ville de *Londres* ne pouvait pas le transférer à qui que ce soit.

Notre Cour est arrivée à la même conclusion dans l'arrêt *Wood c. Esson* (1884), 9 R.C.S. 239. Dans cette affaire, les demandeurs avaient allongé leur quai et entravaient ainsi l'accès au quai du défendeur. Celui-ci fit enlever la partie des travaux qui obstruait l'accès à son quai; les demandeurs ont ensuite intenté une poursuite pour violation de propriété au motif qu'ils jouissaient, en vertu d'une concession par la province de la Nouvelle-Écosse, du titre de propriété du sol à l'endroit dans le port où le quai était construit. La Cour a statué que le défendeur avait le droit d'éliminer l'obstacle créé par l'obstruction à la navigation dans le port. Le juge Strong indique à la p. 243:

> [TRADUCTION] Le titre de propriété du sol n'autorisait pas les demandeurs à allonger leur quai de façon à créer une nuisance publique qui, selon la preuve, constituait une obstruction à la navigation dans le port car la Couronne ne peut concéder le droit d'entraver ainsi les eaux navigables; seule une loi peut déterminer que quelque chose qui gêne la navigation n'est pas une nuisance. [Je souligne.]

Ce passage fait également ressortir un autre aspect de la suprématie du droit public de navigation: ce droit ne peut être modifié ou éteint que par une loi habilitante, et la concession d'un bien-fonds par la Couronne ne peut conférer le droit de gêner la navigation; voir aussi les arrêts *The Queen c. Fisher* (1891), 2 Ex. C.R. 365; *In Re Provincial Fisheries*, précité, à la p. 549, le juge Girouard; et *Reference re Waters and Water-Powers*, [1929] R.C.S. 200.

What is more, the provinces are constitutionally incapable of enacting legislation authorizing an interference with navigation, since s. 91(10) of the *Constitution Act, 1867* gives Parliament exclusive jurisdiction to legislate respecting navigation. That was made clear by this Court in *Queddy River Driving Boom Co. v. Davidson* (1883), 10 S.C.R. 222, where an injunction was sought to restrain the defendant company from erecting piers and booms in the Queddy River in New Brunswick. The defendant relied on its constituent legislation, passed by the provincial legislature, which permitted a certain degree of interference with navigation. The only issue before the Court was the authority of the legislature to pass the Act incorporating the defendant. Ritchie C.J. concluded, at p. 232:

> ... the legal question in this case, which is, to which legislative power, that of the Dominion Parliament or the Assembly of *New Brunswick*, belongs the right to authorize the obstruction by piers or booms of a public tidal and navigable river, and thereby injuriously interfere with and abridge the public right of navigation in such tidal navigable waters. It is not disputed that this legislation interfered with the navigation of the river ...
>
> I think there can be no doubt that the legislative control of navigable waters, such as are in question in this case, belongs exclusively to the Dominion Parliament. Everything connected with navigation and shipping seems to have been carefully confided to the Dominion Parliament, by the B.N.A. Act.

These cases served as an impetus for the enactment of what ultimately became the *Navigable Waters Protection Act*. Of relevance here is the enactment of one of the antecedent pieces of legislation—*An Act respecting booms and other works constructed in navigable waters whether under the authority of Provincial Acts or otherwise*, S.C. 1883, c. 43—preceding the consolidated Act which was to govern all aspects of the protection of navigable waters. Section 1 provided:

> **1.** No boom, dam or aboiteau shall be constructed whether under the authority of an Act of a Legislature of a Province of Canada, or under the authority of an Ordi-

Par ailleurs, les provinces ne sont pas habilitées, sur le plan constitutionnel, à adopter une loi autorisant l'établissement d'un obstacle à la navigation puisque le par. 91(10) de la *Loi constitutionnelle de 1867* confère au Parlement une compétence législative exclusive sur la navigation. Notre Cour a clairement établi ce point dans l'arrêt *Queddy River Driving Boom Co. c. Davidson* (1883), 10 R.C.S. 222. Dans cette affaire, le demandeur cherchait à obtenir une injonction visant à empêcher la société défenderesse de construire des jetées et des estacades dans la rivière Queddy au Nouveau-Brunswick. La défenderesse invoquait sa loi habilitante, adoptée par la législature provinciale, qui autorisait certaines entraves à la navigation. La seule question en litige devant la Cour était le pouvoir de la législature provinciale d'adopter la loi constitutive de la défenderesse. Le juge en chef Ritchie conclut, à la p. 232:

> [TRADUCTION] ... la question juridique dans cette affaire, savoir qui du Parlement du Dominion ou de l'Assemblée législative du *Nouveau-Brunswick* possède le pouvoir législatif d'autoriser l'obstruction, au moyen de jetées et d'estacades, d'une rivière à marée publique et navigable portant ainsi gravement atteinte au droit public de navigation dans ces eaux. Il n'est pas contesté en l'espèce que la loi gênait la navigation dans la rivière ...
>
> Je crois qu'il ne fait aucun doute que c'est le Parlement du Dominion qui a la compétence législative exclusive sur les eaux navigables, comme celles visées en l'espèce. Tout ce qui touche la navigation et les expéditions par eau semble avoir été soigneusement conféré au Parlement du Dominion par l'A.A.N.B.

Ces arrêts ont donné lieu à l'adoption de textes législatifs qui ont finalement abouti à la *Loi sur la protection des eaux navigables*. Il est pertinent ici de mentionner l'un des textes législatifs—l'*Acte concernant les bômes et autres ouvrages établis en eaux navigables soit sous l'autorité d'actes provinciaux soit autrement*, S.C. 1883, ch. 43—qui a précédé la Loi codifiée qui devait régir tous les aspects de la protection des eaux navigables. L'article premier dispose que:

> **1.** Aucun *bôme*, barrage ou *aboiteau* ne sera établi soit sous l'autorité d'un acte rendu par une législature provinciale du Canada, soit sous l'autorité d'une ordon-

nance of the North-West Territories or of the District of Keewatin or otherwise, so as to interfere with navigation, unless the site thereof has been approved, and unless the boom, dam or aboiteau has been built and is maintained in accordance with plans approved by the Governor General in Council.

The Act also provided a means whereby existing structures which interfered with navigation, and thus created a public nuisance, could be legalized by seeking approval from the Governor General in Council.

That statute was but one enactment in which Parliament exercised its jurisdiction to prevent the erection or continuation of impediments to navigation. It had already legislated, *inter alia*, in respect of bridges (*An Act respecting Bridges over navigable waters, constructed under the authority of Provincial Acts*, S.C. 1882, c. 37); the removal of obstructions and wrecks from navigable waters (*An Act for the removal of obstructions, by wreck and like causes, in Navigable Waters of Canada, and other purposes relative to wrecks*, S.C. 1874, c. 29); and effluent from sawmills into navigable waters (*An Act for the better protection of Navigable Streams and Rivers*, S.C. 1873, c. 65).

The consolidation process began with the passage of *An Act respecting certain works constructed in or over Navigable Waters*, S.C. 1886, c. 35, dealing with construction of any "work" in navigable waters, and its companion legislation *An Act respecting the protection of Navigable Waters*, S.C. 1886, c. 36, concerning obstruction of navigable waters by wrecks. Section 1 of the former compendiously defined the term "work" to mean:

> **1.** In this Act, unless the context otherwise requires, the expression "work" means and includes any bridge, boom, dam, aboiteau, wharf, dock, pier or other structure, and the approaches or other works necessary or appurtenant thereto; . . .

The definition was far more comprehensive in scope than its predecessors, and this aspect of the

nance des Territoires du Nord-Ouest ou du District de Kéwatin, ou autrement, de manière à gêner la navigation, à moins que l'emplacement n'en ait été approuvé, —et que l'ouvrage n'ait été construit et ne soit maintenu en état conformément à des plans qui auront été approuvés—par le Gouverneur général en conseil.

La Loi prévoyait aussi que les ouvrages existants qui gênaient la navigation, créant ainsi une nuisance publique, pouvaient être légalisés s'ils étaient approuvés par le gouverneur général en conseil.

Cette loi n'est qu'un des textes où le Parlement a exercé sa compétence pour empêcher la construction ou la continuation d'obstacles à la navigation. Il avait déjà notamment légiféré à l'égard des ponts (*Acte concernant les ponts établis en vertu d'actes provinciaux sur des eaux navigables*, S.C. 1882, ch. 37), de l'enlèvement d'obstructions et d'épaves dans les rivières navigables (*Acte pour pourvoir à l'enlèvement d'obstructions provenant de naufrages et autres causes semblables dans les rivières navigables du Canada, et pour d'autres objets relatifs aux naufrages*, S.C. 1874, ch. 29) et des effluents des moulins à scie dans les eaux navigables (*Acte à l'effet de mieux protéger les cours d'eau et rivières navigables*, S.C. 1873, ch. 65).

La codification a commencé avec l'adoption d'un *Acte concernant certaines constructions dans et sur les eaux navigables*, S.C. 1886, ch. 35, ayant trait à la construction de tout «ouvrage» dans les eaux navigables et de la loi d'accompagnement intitulée *Acte concernant la protection des eaux navigables*, S.C. 1886, ch. 36, portant sur les obstructions provenant de naufrages dans les eaux navigables. L'article premier de l'*Acte concernant certaines constructions dans et sur les eaux navigables* définissait succinctement le terme «ouvrage»:

> **1.** Dans le présent acte, à moins que le contexte n'exige une interprétation différente, l'expression «ouvrage» signifie et comprend tout pont, estacade, barrage, aboiteau, quai, dock, jetée, pilier ou autre construction, et leurs approches ou avenues et autres travaux nécessaires ou s'y rattachant; . . .

Cette définition était beaucoup plus large que celles qui l'ont précédée et cet aspect de la loi, con-

law, coupled with the requirement for approval from the Governor in Council of all such works, caused considerable consternation at the time as to the breadth of its potential retrospective effect for existing structures erected in navigable waters.

However, the statute was merely declaratory of the common law. To the extent that a structure interfered with the public right of navigation, it was a public nuisance, and the provinces were constitutionally powerless to authorize an interference of that nature. The retrospective effect of the law with respect to works built under the statutory authority of a provincial legislature, however, only went back as far as the time the province joined Confederation. Section 7 provided:

> **7.** Nothing hereinbefore contained, except the provisions of the first and fifth sections hereof, shall apply to any work constructed under the authority of any Act of the Parliament of Canada, or of the legislature of the late Province of Canada, or of the legislature of any Province now forming part of Canada, passed before such Province became a part thereof.

Thus, no permission would be required for a work authorized by the legislature of a province before it joined Canada. That is because the province would then have had the constitutional jurisdiction to authorize the work. Similarly, the Act did not apply to works constructed under any other Act of Parliament so that it was clear which Act governed. Parliament had already passed legislation authorizing certain works of that nature; see for example *An Act to authorize the Corporation of the Town of Emerson to construct a Free Passenger and Traffic Bridge over the Red River in the Province of Manitoba*, S.C. 1880, c. 44.

The 1886 Acts were re-enacted in R.S.C. 1886, cc. 91 and 92, and consolidated in R.S.C. 1906, c. 115, when they were given the short title *Navigable Waters' Protection Act*. The Act has remained substantially the same since. In particular, s. 7 of c. 35 of the 1886 statute has remained

jugué à la nécessité de faire approuver tous les ouvrages par le gouverneur en conseil, a causé une grande consternation à l'époque concernant l'ampleur de son effet rétroactif possible à l'égard des structures existantes construites dans les eaux navigables.

Toutefois, la loi constituait simplement une déclaration de la situation en common law. Dans la mesure où une structure portait atteinte au droit public de navigation, elle constituait une nuisance publique et les provinces n'étaient pas habilitées sur le plan constitutionnel à autoriser l'établissement d'un obstacle de cette nature. Toutefois, en ce qui concerne les ouvrages construits sous l'autorité d'un acte de la législature d'une province, la loi avait un effet rétroactif qui ne remontait pas au delà de la date d'adhésion de la province à la Confédération.

> **7.** Rien de contenu ci-dessus, excepté les dispositions du premier et du cinquième articles, ne s'appliquera à aucun ouvrage construit sous l'autorité d'un acte du parlement du Canada, ou de la législature de la ci-devant province du Canada, ou de la législature d'aucune des provinces formant actuellement partie du Canada, passé avant que cette province en soit devenue partie.

En conséquence, il n'était pas nécessaire de faire approuver un ouvrage autorisé par la législature d'une province avant que celle-ci ne fasse partie du Canada puisque la province était alors habilitée sur le plan constitutionnel à autoriser la construction de l'ouvrage en question. La Loi n'était pas non plus applicable aux ouvrages construits en vertu d'une autre loi du Parlement; on savait donc clairement quel acte était applicable. Le Parlement avait déjà adopté un texte législatif autorisant certains ouvrages de cette nature; voir, par exemple, l'*Acte à l'effet d'autoriser la corporation de la ville d'Emerson à construire un pont libre pour les voyageurs et le trafic sur la rivière Rouge, dans la province du Manitoba*, S.C. 1880, ch. 44.

Les Actes de 1886 furent adoptés de nouveau dans les S.R.C. de 1886, ch. 91 et 92, et codifiés dans les S.R.C. de 1906, ch. 115, où ils reçurent le titre abrégé de *Loi de la protection des eaux navigables*. Cette loi est demeurée pratiquement inchangée depuis. Plus particulièrement, l'art. 7 du

materially unaltered, and is now found in s. 4 of the present Act. It was this provision that the Court of Appeal relied upon to find that the Crown in right of Alberta was bound by necessary implication. I agree with this position. By expressly excepting from the operation of the Act works authorized by Parliament since Confederation and by pre-Confederation provincial legislatures, at a time these bodies had power to interfere with navigation, the statute by necessary implication must be taken to provide that post-Confederation works undertaken by the provinces are subject to the Act. There are, however, even more fundamental considerations that lead to the view that the conclusion arrived at by the Court of Appeal was correct. To these I now turn.

In my view, the circumstances surrounding the passage of the legislation, informing as they must the context of the statute, do lead to the logical inference that the Crown in right of a province is bound by the Act by necessary implication. Neither the Crown nor a grantee of the Crown may interfere with the public right of navigation without legislative authorization. The proprietary right the Crown in right of Alberta may have in the bed of the Oldman River is subject to that right of navigation, legislative jurisdiction over which has been exclusively vested in Parliament. Parliament has entered the field principally through the passage of the *Navigable Waters Protection Act* which delegated to the Governor General in Council, and now the Minister of Transport, authority to permit construction of what would otherwise be a public nuisance in navigable waters. The Crown in right of Alberta requires statutory authorization from Parliament to erect any obstruction that substantially interferes with navigation in the Oldman River, and the *Navigable Waters Protection Act* is the means by which it must be obtained. It follows that the Crown in right of Alberta is bound by the Act, for it is the only practicable procedure available for getting approval.

ch. 35 de la loi de 1886 est demeuré substantiellement le même et constitue maintenant l'art. 4 de la Loi actuelle. C'est cette disposition que la Cour d'appel a appliquée pour statuer que la Couronne du chef de l'Alberta était liée par déduction nécessaire. Je souscris à cette opinion. Puisque sont expressément exclus de l'application de la Loi les ouvrages autorisés par le Parlement depuis la Confédération et par les législatures provinciales auparavant, au moment où ces corps législatifs avaient le pouvoir d'intervenir en matière de navigation, il faut comprendre, par déduction nécessaire, que la Loi s'applique aux ouvrages entrepris par les provinces après la Confédération. Il existe toutefois des considérations encore plus fondamentales qui nous amènent à soutenir que la conclusion de la Cour d'appel était correcte. J'en ferai maintenant l'analyse.

À mon avis, les circonstances qui ont entouré l'adoption de la loi, aussi révélatrices qu'elles soient du contexte de l'adoption de la loi, nous amènent à conclure en toute logique que la Couronne du chef d'une province est, par déduction nécessaire, liée par la Loi. Ni la Couronne ni un cessionnaire de la Couronne ne peuvent porter atteinte au droit public de navigation sans y être autorisés par une loi. Le droit de propriété que la Couronne du chef de l'Alberta peut détenir sur le lit de la rivière Oldman est assujetti au droit de navigation, sur lequel le Parlement exerce une compétence législative exclusive. L'exercice de la compétence du Parlement s'est principalement manifesté par l'adoption de la *Loi sur la protection des eaux navigables* qui a délégué au gouverneur général en conseil, et maintenant au ministre des Transports, le pouvoir d'autoriser la construction dans les eaux navigables de travaux qui constitueraient par ailleurs une nuisance publique. La Couronne du chef de l'Alberta doit obtenir l'autorisation législative du Parlement pour construire un ouvrage qui gênerait sérieusement la navigation dans la rivière Oldman; la *Loi sur la protection des eaux navigables* est le mécanisme qu'elle doit utiliser à cette fin. Il s'ensuit que la Couronne du chef de l'Alberta est liée par la Loi, car il s'agit là du seul moyen pratique d'obtenir l'approbation requise.

My colleague, Stevenson J., has however referred to the statement of Fitzpatrick C.J. in *Champion v. City of Vancouver*, [1918] 1 W.W.R. 216 (S.C.C.), to the effect that the Act was merely permissive and did not prevent a third party from bringing action for an interference with the public right of navigation despite the Minister's approval of the work. This statement, however, was mere dicta. The issue there was whether the structure concerned interfered with the plaintiffs' private right of access. The other two majority judges confined their remarks to this matter, and the two minority judges *a fortiori* did not agree with the statement. For my part, I prefer the view expressed in *Isherwood v. Ontario and Minnesota Power Co.* (1911), 18 O.W.R. 459 (Div. Ct.), that the Act does permit interference with the public right of navigation but does not interfere with the private rights of individuals. That is the proposition for which *Champion* is authority.

Mon collègue le juge Stevenson a cependant fait mention de la déclaration du juge en chef Fitzpatrick dans *Champion c. City of Vancouver*, [1918] 1 W.W.R. 216 (C.S.C.), selon laquelle la Loi ne faisait qu'accorder une permission et n'empêchait pas un tiers d'intenter une action pour atteinte au droit public de navigation malgré l'approbation de l'ouvrage par le Ministre. Toutefois, cette déclaration n'était qu'incidente. Il s'agissait de déterminer si la structure en cause portait atteinte au droit d'accès privé des demandeurs. Les deux autres juges de la majorité ont limité leurs remarques à cette question et les deux juges de la minorité n'ont pas, à plus forte raison, approuvé la déclaration. Pour ma part, je préfère l'opinion exprimée dans *Isherwood c. Ontario and Minnesota Power Co.* (1911), 18 O.W.R. 459 (C. div.), selon laquelle la Loi permet de porter atteinte au droit public de navigation mais non aux droits privés des particuliers. C'est la proposition pour laquelle l'arrêt *Champion* fait autorité.

For these reasons I have concluded that the Crown in right of Alberta is, as a matter of necessary or logical implication, bound by the *Navigable Waters Protection Act*. I am also of the view that the purpose of the Act would be wholly frustrated if this were not the case. I am affected by the considerations referred to by Stone J.A. that the provinces are among the bodies that are likely to engage in projects—bridges, for example—that may interfere with navigation, and that this was the case in this country well before the passage of the Act, but here again I am affected as well by even more fundamental considerations, namely the nature of navigation in this country and of Parliament's legislative power over this activity.

Pour ces motifs, j'ai conclu que la Couronne du chef de l'Alberta est, par déduction nécessaire ou logique, liée par la *Loi sur la protection des eaux navigables*. Je suis également d'avis que, s'il n'en était pas ainsi, la Loi serait privée de toute efficacité. J'ai pris note des considérations soulevées par le juge Stone, savoir que les provinces font partie des organismes susceptibles de participer à des projets, par exemple, la construction de ponts, qui peuvent gêner la navigation, ce qui était le cas au Canada bien avant l'adoption de la Loi; toutefois, je m'intéresse également à des considérations encore plus fondamentales, savoir la nature de la navigation au Canada et la compétence législative du législateur fédéral sur ce domaine.

Certain navigable systems form a critical part of the interprovincial transportation networks which are essential for international trade and commercial activity in Canada. With respect to the contrary view, it makes little sense to suggest that any semblance of Parliament's legislative objective in exercising its jurisdiction for the conservancy of navigable waters would be achieved were the Crown to be excluded from the operation of the Act. The regulation of navigable waters must be

Certains cours d'eau navigables constituent une partie cruciale des réseaux de transport interprovincial, essentiels aux échanges internationaux et à l'activité commerciale au Canada. En ce qui concerne l'opinion contraire, il n'est pas très logique de prétendre qu'il serait possible d'atteindre en quoi que ce soit l'objectif du Parlement dans l'exercice de sa compétence sur l'administration des eaux navigables si la Couronne n'était pas liée par l'effet de la Loi. La réglementation des eaux

viewed functionally as an integrated whole, and when so viewed it would result in an absurdity if the Crown in right of a province was left to obstruct navigation with impunity at one point along a navigational system, while Parliament assiduously worked to preserve its navigability at another point.

The practical necessity for a uniform regulatory regime for navigable waters has already been recognized by this Court in *Whitbread v. Walley*, [1990] 3 S.C.R. 1273, and the reasoning given there in support of a single body of maritime law within federal jurisdiction is equally applicable to this case. At pages 1294-95, it is stated:

> Quite apart from judicial authority, the very nature of the activities of navigation and shipping, at least as they are practised in this country, makes a uniform maritime law which encompasses navigable inland waterways a practical necessity. Much of the navigational and shipping activity that takes place on Canada's inland waterways is closely connected with that which takes place within the traditional geographic sphere of maritime law. This is most obviously the case when one looks to the Great Lakes and the St. Lawrence Seaway, which are to a very large degree an extension, or alternatively the beginning, of the shipping lanes by which this country does business with the world. But it is also apparent when one looks to the many smaller rivers and waterways that serve as ports of call for ocean going vessels and as the points of departure for some of Canada's most important exports. This is undoubtedly one of the considerations that led the courts of British North America to rule that the public right of navigation, in contradistinction to the English position, extended to all navigable rivers regardless of whether or not they were within the ebb and flow of the tide .... It probably also explains why the Fathers of Confederation thought it necessary to assign the broad and general power over navigation and shipping to the central rather than the provincial governments ....

Were the Crown in right of a province permitted to undermine the integrity of the essential navigational networks in Canadian waters, the legislative

navigables doit être analysée dans son ensemble et ce serait une situation absurde si la Couronne du chef d'une province pouvait impunément entraver la navigation à un endroit le long d'un cours d'eau navigable, alors que le Parlement travaille assidûment à en préserver la navigabilité à un autre.

La nécessité en pratique d'avoir un régime de réglementation uniforme pour les eaux navigables a déjà été reconnue par notre Cour dans l'arrêt *Whitbread c. Walley*, [1990] 3 R.C.S. 1273; le raisonnement présenté dans cet arrêt en faveur d'un régime de règles de droit maritime uniformes relevant de la compétence fédérale est également applicable en l'espèce. Aux pages 1294 et 1295, on dit:

> Mise à part la jurisprudence, la nature même des activités relatives à la navigation et aux expéditions par eau, du moins telles qu'elles sont exercées ici, fait que des règles de droit maritime uniformes s'appliquant aux voies navigables intérieures sont nécessaires en pratique. La plupart des activités relatives à la navigation et aux expéditions par eau ayant lieu sur les voies navigables intérieures du Canada sont étroitement liées avec celles qui sont exercées dans la sphère géographique traditionnelle du droit maritime. Cela est particulièrement évident lorsque l'on considère les Grands Lacs et la Voie maritime du Saint-Laurent, qui sont dans une très large mesure une extension, sinon le commencement, des voies de transport maritime grâce auxquelles le pays fait du commerce avec le monde. Mais cela est également manifeste lorsque l'on examine les nombreux fleuves, rivières et voies d'eau moins importants qui servent de port d'escale aux océaniques et de point de départ pour quelques-unes des plus importantes exportations du Canada. C'est à n'en pas douter l'une des considérations qui ont amené les tribunaux de l'Amérique du Nord britannique à décider que le droit public de navigation, contrairement à ce que prétendaient les Anglais, s'étend à tous les fleuves et rivières navigables, peu importe qu'ils soient ou non à l'intérieur de l'aire de flux et de reflux; [. . .] Cela explique probablement aussi pourquoi les Pères de la Confédération ont estimé nécessaire d'attribuer le pouvoir général sur la navigation et les expéditions par eau au gouvernement central plutôt qu'à celui des provinces . . .

Si la Couronne du chef d'une province était habilitée à saper l'intégrité des réseaux essentiels de navigation dans les eaux canadiennes, à mon avis,

purpose of the *Navigable Waters Protection Act* would, in my view, effectively be emasculated. In light of these findings, it is unnecessary to comment on the issue of waiver that was raised by the appellant Ministers.

Constitutional Question

The constitutional question asks whether the *Guidelines Order* is so broad as to offend ss. 92 and 92A of the *Constitution Act, 1867*. However, no argument was made with respect to s. 92A for the apparent reason that the Oldman River Dam project does not, in the appellants' view, fall within the ambit of that provision. At all events, the matter is of no moment. The process of judicial review of legislation which is impugned as *ultra vires* Parliament was recently elaborated on in *Whitbread v. Walley*, *supra*, and does not bear repetition here, save to remark that if the *Guidelines Order* is found to be legislation that is in pith and substance in relation to matters within Parliament's exclusive jurisdiction, that is the end of the matter. It would be immaterial that it also affects matters of property and civil rights (*Whitbread*, at p. 1286). The analysis proceeds first by identifying whether in pith and substance the legislation falls within a matter assigned to one or more of the heads of legislative power.

While various expressions have been used to describe what is meant by the "pith and substance" of a legislative provision, in *Whitbread v. Walley* I expressed a preference for the description "the dominant or most important characteristic of the challenged law". Naturally, the parties have advanced quite different features of the *Guidelines Order* as representing its most important characteristic. For Alberta, it is the manner in which it is said to encroach on provincial rights, although no specific matter has been identified other than general references to the environment. Alberta argues that Parliament has no plenary jurisdiction over the environment, it being a matter of legislative jurisdiction shared by both levels of government, and that the *Guidelines Order* has crossed the line

l'objet de la *Loi sur la protection des eaux navigables* serait, en fait, annihilé. Vu ces conclusions, je n'ai pas à examiner la question de la renonciation soulevée par les ministres appelants.

La question constitutionnelle

La question constitutionnelle vise à savoir si le *Décret sur les lignes directrices* est général au point de contrevenir aux art. 92 et 92A de la *Loi constitutionnelle de 1867*. Toutefois, aucun moyen n'a été présenté relativement à l'art. 92A au motif apparent que le projet de construction d'un barrage sur la rivière Oldman n'est pas, selon les appelants, visé par cette disposition. Quoi qu'il en soit, la question n'a pas d'importance. Le processus de révision judiciaire d'un texte législatif contesté parce qu'il serait *ultra vires* du Parlement a récemment fait l'objet d'une analyse dans l'arrêt *Whitbread c. Walley*, précité, et je n'ai pas besoin de la reprendre ici, sauf pour dire que si l'on conclut que, de par son caractère véritable, le *Décret sur les lignes directrices* est un texte législatif lié à des matières relevant de la compétence exclusive du Parlement, la question est épuisée. Il serait alors indifférent qu'il touche également des matières liées à la propriété et aux droits civils (*Whitbread*, à la p. 1286). L'analyse consiste tout d'abord à déterminer si, de par son caractère véritable, le texte législatif est lié à une matière relevant d'un ou plusieurs domaines de compétence législative.

Bien que diverses expressions aient été utilisées pour décrire ce que l'on entend par le «caractère véritable» d'une disposition législative, j'ai exprimé dans l'arrêt *Whitbread c. Walley* une préférence pour la détermination de «la caractéristique principale ou la plus importante de la loi contestée». Il va sans dire que les parties ont fait valoir des aspects fort différents comme caractéristique la plus importante du *Décret sur les lignes directrices*. Pour l'Alberta, c'est la façon dont le Décret empiéterait sur les droits provinciaux; toutefois, elle n'a pas mentionné de matière spécifique autre que des renvois généraux à l'environnement. L'Alberta soutient, d'une part, que le Parlement n'a pas une compétence absolue sur l'environnement, s'agissant là d'une matière relevant de la compé-

which circumscribes Parliament's authority over the environment. The appellant Ministers argue that in pith and substance the *Guidelines Order* is merely a process to facilitate federal decision making on matters that fall within Parliament's jurisdiction—a proposition with which the respondent substantially agrees.

The substance of Alberta's argument is that the *Guidelines Order* purports to give the Government of Canada general authority over the environment in such a way as to trench on the province's exclusive legislative domain. Alberta argues that the *Guidelines Order* attempts to regulate the environmental effects of matters largely within the control of the province and, consequently, cannot constitutionally be a concern of Parliament. In particular, it is said that Parliament is incompetent to deal with the environmental effects of provincial works such as the Oldman River Dam.

I agree that the *Constitution Act, 1867* has not assigned the matter of "environment" *sui generis* to either the provinces or Parliament. The environment, as understood in its generic sense, encompasses the physical, economic and social environment touching several of the heads of power assigned to the respective levels of government. Professor Gibson put it succinctly several years ago in his article "Constitutional Jurisdiction over Environmental Management in Canada" (1973), 23 *U.T.L.J.* 54, at p. 85:

> ... "environmental management" does not, under the existing situation, constitute a homogeneous constitutional unit. Instead, it cuts across many different areas of constitutional responsibility, some federal and some provincial. And it is no less obvious that "environmental management" could never be treated as a constitutional unit under one order of government in any constitution

tence législative des deux paliers de gouvernement et, d'autre part, que le *Décret sur les lignes directrices* est exorbitant de la compétence du Parlement sur l'environnement. Les ministres appelants soutiennent que, de par son caractère véritable, le *Décret sur les lignes directrices* n'est qu'un moyen d'aider le gouvernement fédéral à prendre des décisions dans des domaines qui relèvent de la compétence du Parlement; l'intimée est en grande partie d'accord avec cette proposition.

L'essentiel de la thèse de l'Alberta est que le *Décret sur les lignes directrices* prétend conférer au gouvernement du Canada une compétence générale sur l'environnement d'une façon qui empiète sur la compétence législative exclusive de la province. L'Alberta soutient que le *Décret sur les lignes directrices* tente de réglementer les répercussions environnementales de matières qui relèvent en grande partie de la compétence de la province et qui, par conséquent, ne peuvent, en vertu de la Constitution, constituer une préoccupation du Parlement. Elle est d'avis tout particulièrement que le Parlement n'a pas de compétence à l'égard des répercussions environnementales d'ouvrages provinciaux comme le barrage sur la rivière Oldman.

Je suis d'accord que la *Loi constitutionnelle de 1867* n'a pas conféré le domaine de l'«environnement» comme tel aux provinces ou au Parlement. L'environnement, dans son sens générique, englobe l'environnement physique, économique et social touchant plusieurs domaines de compétence attribués aux deux paliers de gouvernement. Le professeur Gibson a succinctement résumé ce point il y a plusieurs années dans son article intitulé: «Constitutionnal Jurisdiction over Environmental Management in Canada» (1973), 23 *U.T.L.J.* 54, à la p. 85:

> [TRADUCTION] ... la «gestion de l'environnement» ne constitue pas dans la situation actuelle une unité constitutionnelle homogène. Elle touche plutôt différents domaines de responsabilité constitutionnelle, certains relevant du fédéral, d'autres des provinces. Il est par ailleurs fort évident que la «gestion de l'environnement» ne pourrait jamais être considérée comme une unité constitutionnelle relevant d'un seul palier de gouvernement à l'intérieur d'une constitution de type fédéral

that claimed to be federal, because no system in which one government was so powerful would be federal.

I earlier referred to the environment as a diffuse subject, echoing what I said in *R. v. Crown Zellerbach Canada Ltd.*, *supra*, to the effect that environmental control, as a subject matter, does not have the requisite distinctiveness to meet the test under the "national concern" doctrine as articulated by Beetz J. in *Reference re Anti-Inflation Act*, *supra*. Although I was writing for the minority in *Crown Zellerbach*, this opinion was not contested by the majority. The majority simply decided that marine pollution was a matter of national concern because it was predominately extra-provincial and international in character and implications, and possessed sufficiently distinct and separate characteristics as to make it subject to Parliament's residual power.

It must be recognized that the environment is not an independent matter of legislation under the *Constitution Act, 1867* and that it is a constitutionally abstruse matter which does not comfortably fit within the existing division of powers without considerable overlap and uncertainty. A variety of analytical constructs have been developed to grapple with the problem, although no single method will be suitable in every instance. Some have taken a functional approach by describing specific environmental concerns and then allocating responsibility by reference to the different heads of power; see, for example, Gibson, *supra*. Others have looked at the problem from the perspective of testing the ambit of federal powers according to their general description as "conceptual" or "global" (e.g., criminal law, taxation, trade and commerce, spending and the general residuary power) as opposed to "functional" (e.g., navigation and fisheries); see P. Emond, "The Case for a Greater Federal Role in the Environmental Protection Field: An Examination of the Pollution Problem and the Constitution" (1972), 10 *Osgoode Hall L.J.* 647, and M. E. Hatherly, *Constitutional Jurisdiction in Relation to Environmental Law*, background paper

parce qu'aucun système à l'intérieur duquel un seul gouvernement serait aussi puissant ne serait fédéral.

J'ai déjà mentionné que l'environnement est un sujet diffus, reprenant ainsi ce que j'ai dit dans l'arrêt *R. c. Crown Zellerbach Canada Ltd.*, précité, que le contrôle de l'environnement, en tant que sujet, ne possède pas la particularité requise pour satisfaire au critère en vertu de la théorie de l'intérêt «national» formulée par le juge Beetz dans le *Renvoi relatif à la Loi anti-inflation*, précité. Bien que j'aie exprimé l'opinion minoritaire dans l'arrêt *Crown Zellerbach*, elle n'a pas été contestée sur ce point par les juges de la majorité. La majorité a simplement décidé que la pollution des mers est une question d'intérêt national à cause de son caractère et de ses incidences surtout extra-provinciales et internationales, et parce que ses caractéristiques sont suffisamment distinctes pour en faire un sujet relevant du pouvoir résiduel du Parlement.

Il faut reconnaître que l'environnement n'est pas un domaine distinct de compétence législative en vertu de la *Loi constitutionnelle de 1867* et que c'est, au sens constitutionnel, une matière obscure qui ne peut être facilement classée dans le partage actuel des compétences, sans un grand chevauchement et une grande incertitude. On a élaboré diverses méthodes analytiques pour régler ce problème; toutefois, il n'en existe pas une seule qui conviendra dans tous les cas. Certains envisagent une analyse fonctionnelle en décrivant des préoccupations environnementales spécifiques et en attribuant ensuite la responsabilité en fonction des divers domaines de compétence; voir par exemple Gibson, *loc. cit.* D'autres abordent le problème du point de vue de l'étendue des pouvoirs fédéraux en distinguant ceux qui peuvent être considérés comme «conceptuels» ou «globaux» (par exemple, le droit criminel, la taxation, les échanges et le commerce, le pouvoir de dépenser et le pouvoir résiduel général) par opposition à ceux qui sont «fonctionnels» (la navigation et les pêcheries); voir P. Emond, «The Case for a Greater Federal Role in the Environmental Protection Field: An Examination of the Pollution Problem and the Constitution» (1972), 10 *Osgoode Hall L.J.* 647, et M. E. Hatherly, *Constitutional Jurisdiction in*

prepared for the Protection of Life Project, Law Reform Commission of Canada (1984).

In my view the solution to this case can more readily be found by looking first at the catalogue of powers in the *Constitution Act, 1867* and considering how they may be employed to meet or avoid environmental concerns. When viewed in this manner it will be seen that in exercising their respective legislative powers, both levels of government may affect the environment, either by acting or not acting. This can best be understood by looking at specific powers. A revealing example is the federal Parliament's exclusive legislative power over interprovincial railways under ss. 92(10)(*a*) and 91(29) of the *Constitution Act, 1867*. The regulation of federal railways has been entrusted to the National Transportation Agency pursuant to the *National Transportation Act, 1987*, which enjoys a broad mandate as summarized in the declaration found in s. 3, which reads in part:

> **3.** (1) It is hereby declared that a safe, economic, efficient and adequate network of viable and effective transportation services making the best use of all available modes of transportation at the lowest total cost is essential to serve the transportation needs of shippers and travellers and to maintain the economic well-being and growth of Canada and its regions and that those objectives are most likely to be achieved when all carriers are able to compete, both within and among the various modes of transportation, under conditions ensuring that, having due regard to national policy and to legal and constitutional requirements,
>
> . . .
>
> (*d*) transportation is recognized as a key to regional economic development and commercial viability of transportation links is balanced with regional economic development objectives in order that the potential economic strengths of each region may be realized, . . .

This gives some insight into the scope of Parliament's legislative jurisdiction over railways and

Relation to Environmental Law, document d'étude rédigé dans le cadre du projet de la protection de la vie, Commission de réforme du droit du Canada (1984).

À mon avis, on peut plus facilement trouver la solution applicable à l'espèce en examinant tout d'abord l'énumération des pouvoirs dans la *Loi constitutionnelle de 1867* et en analysant comment ils peuvent être utilisés pour répondre aux problèmes environnementaux ou pour les éviter. On pourra alors se rendre compte que, dans l'exercice de leurs pouvoirs respectifs, les deux paliers de gouvernement peuvent toucher l'environnement, tant par leur action que par leur inaction. Pour mieux comprendre, on doit examiner des pouvoirs spécifiques. Un exemple intéressant est la compétence législative exclusive du Parlement fédéral sur le transport ferroviaire interprovincial en vertu de l'al. 92(10)*a*) et du par. 91(29) de la *Loi constitutionnelle de 1867*. La réglementation du transport ferroviaire fédéral a été confiée à l'Office national des transports conformément à la *Loi de 1987 sur les transports nationaux*; le mandat de cet office est vaste, comme le résume la déclaration figurant à l'art. 3 qui prévoit notamment:

> **3.** (1) Il est déclaré que, d'une part, la mise en place d'un réseau sûr, rentable et bien adapté de services de transport viables et efficaces, utilisant au mieux et aux moindres frais globaux tous les modes de transport existants, est essentielle à la satisfaction des besoins des expéditeurs et des voyageurs en matière de transports comme à la prospérité et à la croissance économique du Canada et de ses régions, d'autre part, ces objectifs ont le plus de chances de se réaliser en situation de concurrence, dans et parmi les divers modes de transport, entre tous les transporteurs, à condition que, compte dûment tenu de la politique nationale et du contexte juridique et constitutionnel:
>
> . . .
>
> *d*) les transports soient reconnus comme un facteur primordial du développement économique régional et que soit maintenu un équilibre entre les objectifs de rentabilité des liaisons de transport et ceux de développement économique régional en vue de la réalisation du potentiel économique de chaque région; . . .

Cette déclaration nous éclaire sur l'étendue de la compétence législative du Parlement en matière de

the manner in which it is charged with the responsibility of weighing both the national and local socio-economic ramifications of its decisions. Moreover, it cannot be seriously questioned that Parliament may deal with biophysical environmental concerns touching upon the operation of railways so long as it is legislation relating to railways. This could involve issues such as emission standards or noise abatement provisions.

transport ferroviaire et sur la façon dont on lui impose de tenir compte des ramifications socio-économiques à la fois nationales et locales de ses décisions. Par ailleurs, on ne peut sérieusement mettre en doute que le Parlement puisse s'occuper de questions biophysiques environnementales ayant une incidence sur l'exploitation des chemins de fer dans la mesure où il le fait dans le cadre d'une loi sur les chemins de fer. Il pourrait notamment s'agir de questions touchant les normes d'émission ou les mesures de réduction du bruit.

To continue with the example, one might postulate the location and construction of a new line which would require approval under the relevant provisions of the *Railway Act*, R.S.C., 1985, c. R-3. That line may cut through ecologically sensitive habitats such as wetlands and forests. The possibility of derailment may pose a serious hazard to the health and safety of nearby communities if dangerous commodities are to be carried on the line. On the other hand, it may bring considerable economic benefit to those communities through job creation and the multiplier effect that will have in the local economy. The regulatory authority might require that the line circumvent residential districts in the interests of noise abatement and safety. In my view, all of these considerations may validly be taken into account in arriving at a final decision on whether or not to grant the necessary approval. To suggest otherwise would lead to the most astonishing results, and it defies reason to assert that Parliament is constitutionally barred from weighing the broad environmental repercussions, including socio-economic concerns, when legislating with respect to decisions of this nature.

Pour poursuivre avec le même exemple, on peut proposer l'emplacement et la construction d'une nouvelle voie ferrée, qui devraient être approuvés en vertu des dispositions pertinentes de la *Loi sur les chemins de fer*, L.R.C. (1985), ch. R-3. En effet, cette voie pourrait traverser des habitats fragiles du point de vue écologique comme des marécages et des forêts. En outre, le risque de déraillement peut présenter un grave danger pour la santé et la sécurité des collectivités avoisinantes dans le cas de transport de marchandises dangereuses. Par contre, cette voie peut entraîner d'importantes retombées économiques locales grâce à la création d'emplois et à l'effet de multiplication qui s'ensuivra. L'autorité réglementante peut exiger que la voie soit construite à l'extérieur des districts résidentiels eu égard à la suppression du bruit et par souci de sécurité. À mon avis, on peut validement tenir compte de toutes ces considérations dans la décision finale d'accorder ou non l'approbation nécessaire. Prétendre le contraire nous conduirait à des résultats étonnants et il ne serait pas logique d'affirmer que la Constitution ne permet pas au Parlement de tenir compte des vastes répercussions environnementales, y compris des préoccupations socio-économiques, lorsqu'il légifère relativement à des décisions de cette nature.

The same can be said for several other subject matters of legislation, including one of those before the Court, namely navigation and shipping. Some provisions of the *Navigable Waters Protection Act* are aimed directly at biophysical environmental concerns that affect navigation. Sections 21 and 22 read:

Le même raisonnement peut être appliqué à plusieurs autres matières, y compris une de celles dont nous sommes saisis, savoir la navigation et les expéditions par eau. Certaines dispositions de la *Loi sur la protection des eaux navigables* visent directement les préoccupations environnementales biophysiques qui touchent la navigation. Les articles 21 et 22 disposent:

21. No person shall throw or deposit or cause, suffer or permit to be thrown or deposited any sawdust, edgings, slabs, bark or like rubbish of any description whatever that is liable to interfere with navigation in any water, any part of which is navigable or that flows into any navigable water.

22. No person shall throw or deposit or cause, suffer or permit to be thrown or deposited any stone, gravel, earth, cinders, ashes or other material or rubbish that is liable to sink to the bottom in any water, any part of which is navigable or that flows into any navigable water, where there are not at least twenty fathoms of water at all times, but nothing in this section shall be construed so as to permit the throwing or depositing of any substance in any part of a navigable water where that throwing or depositing is prohibited by or under any other Act.

21. Il est interdit de jeter ou déposer, de faire jeter ou déposer ou de permettre ou tolérer que soient jetés ou déposés des sciures, rognures, dosses, écorces, ou des déchets semblables de quelque nature susceptibles de gêner la navigation dans des eaux dont une partie est navigable ou qui se déversent dans des eaux navigables.

22. Il est interdit de jeter ou déposer, de faire jeter ou déposer ou de permettre ou tolérer que soient jetés ou déposés de la pierre, du gravier, de la terre, des escarbilles, cendres ou autres matières ou déchets submersibles dans des eaux dont une partie est navigable ou qui se déversent dans des eaux navigables et où il n'y a pas continuellement au moins vingt brasses d'eau; le présent article n'a toutefois pas pour effet de permettre de jeter ou déposer une substance dans des eaux navigables là où une autre loi interdit de le faire.

As I mentioned earlier in these reasons, the Act has a more expansive environmental dimension, given the common law context in which it was enacted. The common law proscribed obstructions that interfered with the paramount right of public navigation. Several of the "works" referred to in the Act do not in any way improve navigation. Bridges do not assist navigation, nor do many dams. Thus, in deciding whether a work of that nature is to be permitted, the Minister would almost surely have to weigh the advantages and disadvantages resulting from the interference with navigation. This could involve environmental concerns such as the destruction to fisheries, and all the *Guidelines Order* does then is to extend the ambit of his concerns.

Comme je l'ai mentionné, cette loi a une dimension environnementale de plus grande envergure, compte tenu du contexte de common law dans lequel elle a été adoptée. La common law interdit les obstacles qui portent atteinte au droit public suprême de navigation. Plusieurs des «ouvrages» mentionnés dans la Loi ne visent pas à améliorer la navigation. Les ponts ne favorisent pas la navigation ni d'ailleurs un grand nombre de barrages. Par conséquent, lorsqu'il s'agit de décider d'autoriser un ouvrage de cette nature, le ministre devrait presque certainement tenir compte des avantages et désavantages résultant de l'entrave à la navigation. Cela pourrait nécessiter un examen des préoccupations environnementales comme la destruction de la pêche; le *Décret sur les lignes directrices* ne vise donc qu'à étendre la portée de ses préoccupations.

It must be noted that the exercise of legislative power, as it affects concerns relating to the environment, must, as with other concerns, be linked to the appropriate head of power, and since the nature of the various heads of power under the *Constitution Act, 1867* differ, the extent to which environmental concerns may be taken into account in the exercise of a power may vary from one power to another. For example, a somewhat different environmental rôle can be played by Parliament in the exercise of its jurisdiction over fisheries than under its powers concerning railways or navigation since the former involves the management of a resource,

On doit rappeler que l'exercice d'une compétence législative, dans la mesure où elle se rapporte à l'environnement, doit, comme toute autre préoccupation, se rattacher au domaine de compétence approprié; puisque la nature des divers domaines de compétence en vertu de la *Loi constitutionnelle de 1867* diffère, l'importance qui pourra être accordée aux préoccupations environnementales dans l'exercice d'une compétence donnée pourra varier d'un domaine à l'autre. Par exemple, le Parlement peut jouer, en matière d'environnement, dans l'exercice de sa compétence sur les pêcheries, un rôle quelque peu différent de celui qu'il a en

the others activities. The foregoing observations may be demonstrated by reference to two cases involving fisheries. In *Fowler v. The Queen*, [1980] 2 S.C.R. 213, the Court found that s. 33(3) of the *Fisheries Act* was *ultra vires* Parliament because its broad prohibition enjoining the deposit of "slash, stumps or other debris" into water frequented by fish was not sufficiently linked to any actual or potential harm to fisheries. However, s. 33(2), prohibiting the deposit of deleterious substances in any place where they might enter waters frequented by fish, was found *intra vires* Parliament under s. 91(12) in *Northwest Falling Contractors Ltd. v. The Queen*, [1980] 2 S.C.R. 292.

The provinces may similarly act in relation to the environment under any legislative power in s. 92. Legislation in relation to local works or undertakings, for example, will often take into account environmental concerns. What is not particularly helpful in sorting out the respective levels of constitutional authority over a work such as the Oldman River dam, however, is the characterization of it as a "provincial project" or an undertaking "primarily subject to provincial regulation" as the appellant Alberta sought to do. That begs the question and posits an erroneous principle that seems to hold that there exists a general doctrine of interjurisdictional immunity to shield provincial works or undertakings from otherwise valid federal legislation. As Dickson C.J. remarked in *Alberta Government Telephones*, *supra*, at p. 275:

It should be remembered that one aspect of the pith and substance doctrine is that a law in relation to a matter within the competence of one level of government may validly affect a matter within the competence of the other. Canadian federalism has evolved in a way which

vertu de sa compétence sur les chemins de fer ou la navigation puisque dans le premier cas il gère une ressource, alors que dans les deux autres, il gère des activités. Ces observations peuvent être illustrées par deux arrêts sur les pêches. Dans *Fowler c. La Reine*, [1980] 2 R.C.S. 213, la Cour a statué que le par. 33(3) de la *Loi sur les pêches* excédait les pouvoirs du Parlement parce que l'interdiction générale de déposer «des déchets de bois, souches ou autres débris» dans une eau fréquentée par le poisson n'était pas suffisamment liée aux dommages, réels ou probables, que les pêches pourraient subir. Toutefois, dans l'arrêt *Northwest Falling Contractors Ltd. c. La Reine*, [1980] 2 R.C.S. 292, la Cour a statué que le par. 33(2), qui interdit à qui que ce soit de déposer une substance nocive en quelque lieu dans des conditions où cette substance nocive pourrait pénétrer dans des eaux poissonneuses, était de la compétence du Parlement du Canada en vertu du par. 91(12).

Les provinces peuvent de la même façon œuvrer dans le domaine de l'environnement dans l'exercice de leur compétence législative en vertu de l'art. 92. Par exemple, les lois ayant trait aux ouvrages et entreprises de nature locale tiendront souvent compte de préoccupations environnementales. Toutefois, dans la détermination de la compétence constitutionnelle de chacun des paliers de gouvernement sur un projet comme le barrage de la rivière Oldman, il n'est pas particulièrement utile de qualifier cet ouvrage de [TRADUCTION] «projet provincial» ou d'entreprise [TRADUCTION] «principalement assujettie à la réglementation provinciale» comme a tenté de le faire l'appelante l'Alberta. C'est présumer de la réponse et poser un principe erroné qui semble accepter l'existence d'une théorie générale de l'exclusivité des compétences visant à exempter les ouvrages ou entreprises de nature provinciale de l'application de lois fédérales par ailleurs valides. Comme le fait remarquer le juge en chef Dickson dans l'arrêt *Alberta Government Telephones*, précité, à la p. 275:

Il faut se rappeler que l'un des aspects de la théorie du caractère véritable est qu'une loi relative à un chef de compétence d'un palier de gouvernement peut validement toucher un chef de compétence de l'autre palier. Le fédéralisme canadien a évolué de façon à tolérer à

tolerates overlapping federal and provincial legislation in many respects, and in my view a constitutional immunity doctrine is neither desirable nor necessary to accommodate valid provincial objectives.

What is important is to determine whether either level of government may legislate. One may legislate in regard to provincial aspects, the other federal aspects. Although local projects will generally fall within provincial responsibility, federal participation will be required if the project impinges on an area of federal jurisdiction as is the case here.

There is, however, an even more fundamental fallacy in Alberta's argument, and that concerns the manner in which constitutional powers may be exercised. In legislating regarding a subject, it is sufficient that the legislative body legislate on that subject. The practical purpose that inspires the legislation and the implications that body must consider in making its decision are another thing. Absent a colourable purpose or a lack of *bona fides*, these considerations will not detract from the fundamental nature of the legislation. A railway line may be required to locate so as to avoid a nuisance resulting from smoke or noise in a municipality, but it is nonetheless railway regulation.

An Australian case, *Murphyores Incorporated Pty. Ltd. v. Commonwealth of Australia* (1976), 136 C.L.R. 1 (H.C.), illustrates the point well in a context similar to the present. There the plaintiffs carried on the business of mining for mineral sands from which they produced zircon and rutile concentrates. The export of those substances was regulated by the *Customs (Prohibited Exports) Regulations* (passed pursuant to the Commonwealth's trade and commerce power) and approval from the Minister of Minerals and Energy was required for their export. The issue in the case arose when an inquiry was directed to be made under the *Environment Protection (Impact of Proposals) Act* 1974-1975 (Cth), into the environmental impact of mineral extraction from the area in which the plaintiffs had their mining leases. The Minister responsible informed the plaintiffs that

plusieurs égards le chevauchement des lois fédérales et provinciales et, à mon avis, une théorie de l'immunité constitutionnelle n'est ni souhaitable ni nécessaire à la réalisation d'objectifs provinciaux réguliers.

Il importe de déterminer quel palier de gouvernement peut légiférer. Un palier peut légiférer à l'égard des aspects provinciaux et l'autre, à l'égard des aspects fédéraux. Bien que les projets de nature locale relèvent généralement de la compétence provinciale, ils peuvent exiger la participation du fédéral dans le cas où le projet empiète sur un domaine de compétence fédérale comme en l'espèce.

Toutefois, le raisonnement de l'Alberta recèle un sophisme encore plus fondamental, qui touche la façon d'exercer les pouvoirs constitutionnels. Lorsqu'il légifère sur une matière, l'organe législatif doit s'en tenir à cette matière. L'objet pratique à la base de la loi et les répercussions dont l'organe doit tenir compte dans sa prise de décision sont une toute autre chose. En l'absence d'un objet déguisé ou d'un manque de bonne foi, ces considérations ne porteront pas atteinte à la nature fondamentale de la loi. On peut exiger qu'une voie ferrée soit construite à un endroit où la fumée ou le bruit ne constituera pas une nuisance pour la municipalité, mais il s'agit néanmoins d'un règlement sur les chemins de fer.

Un arrêt australien, *Murphyores Incorporated Pty Ltd. v. Commonwealth of Australia* (1976), 136 C.L.R. 1 (H.C.), illustre bien le point dans un contexte semblable à celui de l'espèce. Dans cette affaire, les demandeurs exploitaient une carrière qui servait à la production de concentrés de zircon et de rutile. L'exportation de ces substances était régie par le *Customs (Prohibited Exports) Regulations* (adopté en vertu de la compétence du Commonwealth (c'est-à-dire le pouvoir fédéral) en matière d'échanges et de commerce) et devait être approuvée par le ministre des mines et de l'énergie. Le litige a pris naissance dans le cadre d'une enquête devant être réalisée en vertu de l'*Environment Protection (Impact of Proposals) Act* 1974-1975 (Cth) sur l'incidence environnementale de l'extraction minière à l'endroit où les demandeurs détenaient leurs baux miniers. Le ministre respon-

the report of that inquiry would have to be considered before allowing any further export of concentrates.

The plaintiffs contended that the Minister could only consider matters relevant to "trading policy" within the scope of the Commonwealth's trade and commerce power, rather than the environmental concerns arising from the anterior mining activity which was predominantly a state interest. That argument was unanimously rejected, Stephen J. putting it as follows, at p. 12:

> The administrative decision whether or not to relax a prohibition against the export of goods will necessarily be made in the light of considerations affecting the mind of the administrator; but whatever their nature the consequence will necessarily be expressed in terms of trade and commerce, consisting of the approval or rejection of an application to relax the prohibition on exports. It will therefore fall within constitutional power. The considerations in the light of which the decision is made may not themselves relate to matters of trade and commerce but that will not deprive the decision which they induce of its inherent constitutionality for the decision will be directly on the subject matter of exportation and the considerations actuating that decision will not detract from the character which its subject matter confers upon it.

I hasten to add that I do not mean to draw any parallels between the Commonwealth's trade and commerce power as framed in the Australian Constitution and that found in the Canadian Constitution. Obviously there are important differences in the two documents, but the general point made in *Murphyores* is nonetheless valid in the present case. The case points out the danger of falling into the conceptual trap of thinking of the environment as an extraneous matter in making legislative choices or administrative decisions. Clearly, this cannot be the case. Quite simply, the environment is comprised of all that is around us and as such must be a part of what actuates many decisions of any moment.

sable informa alors les demandeurs qu'il devrait faire analyser le rapport d'enquête avant d'autoriser toute autre exportation de concentrés.

Les demandeurs prétendaient que le ministre pouvait seulement tenir compte des questions se rapportant à la [TRADUCTION] «politique relative aux échanges» adoptée en vertu de la compétence des pays du Commonwealth en matière d'échanges et de commerce, plutôt que des préoccupations environnementales se rattachant à l'exploitation minière antérieure, qui relevait principalement de la compétence de l'État. Cette prétention a été unanimement rejetée; le juge Stephen indique à la p. 12:

> [TRADUCTION] La décision administrative d'assouplir ou non l'interdiction d'exporter des marchandises tiendra nécessairement compte des considérations qui intéressent l'administrateur; toutefois, quelle que soit la nature de ces considérations, la conséquence sera nécessairement exprimée en fonction des échanges et du commerce, soit l'approbation ou le rejet d'une demande visant à assouplir l'interdiction des exportations. Ce sera alors une décision prise dans le cadre d'un pouvoir constitutionnel. Les considérations à la base de la prise de décisions peuvent ne pas avoir trait aux questions d'échanges et de commerce, mais la décision ne sera pas inconstitutionnelle pour autant puisqu'elle porte directement sur le sujet de l'exportation et les considérations qui la sous-tendent ne portent pas atteinte au caractère que le sujet de compétence lui confère.

Je m'empresse d'ajouter que je ne veux pas établir de comparaison entre la compétence des pays du Commonwealth en matière d'échanges et de commerce prévue par la Constitution australienne et celle qui existe dans la Constitution canadienne. Certes, il y a des différences importantes entre les deux documents, mais l'idée générale qui ressort de l'arrêt *Murphyores* est néanmoins valide en l'espèce. Cet arrêt souligne le risque de croire à tort que l'environnement est une question accessoire lorsqu'il s'agit de faire des choix législatifs ou de prendre des décisions administratives. De toute évidence, cela ne peut être le cas. Tout simplement, l'environnement comprend tout ce qui nous entoure et, comme tel, doit être à la base d'un grand nombre de décisions courantes.

Environmental impact assessment is, in its simplest form, a planning tool that is now generally regarded as an integral component of sound decision-making. Its fundamental purpose is summarized by R. Cotton and D. P. Emond in "Environmental Impact Assessment", in J. Swaigen, ed., *Environmental Rights in Canada* (1981), 245, at p. 247:

> The basic concepts behind environmental assessment are simply stated: (1) early identification and evaluation of all potential environmental consequences of a proposed undertaking; (2) decision making that both guarantees the adequacy of this process and reconciles, to the greatest extent possible, the proponent's development desires with environmental protection and preservation.

As a planning tool it has both an information-gathering and a decision-making component which provide the decision maker with an objective basis for granting or denying approval for a proposed development; see M. I. Jeffery, *Environmental Approvals in Canada* (1989), at p. 1.2, § 1.4; D. P. Emond, *Environmental Assessment Law in Canada* (1978), at p. 5. In short, environmental impact assessment is simply descriptive of a process of decision making.

The *Guidelines Order* has merely added to the matters that federal decision makers should consider. If the Minister of Transport was specifically assigned the task of weighing concerns regarding fisheries in weighing applications to construct works in navigable waters, could there be any complaint that this was *ultra vires*? All that it would mean is that a decision maker charged with making one decision must also consider other matters that fall within federal power. I am not unmindful of what was said by counsel for the Attorney General for Saskatchewan who sought to characterize the *Guidelines Order* as a constitutional Trojan horse enabling the federal government, on the pretext of some narrow ground of federal jurisdiction, to conduct a far ranging inquiry into matters that are exclusively within provincial

L'évaluation des incidences environnementales est, sous sa forme la plus simple, un outil de planification que l'on considère généralement comme faisant partie intégrante d'un processus éclairé de prise de décisions. R. Cotton et D. P. Emond, dans un ouvrage intitulé «Environmental Impact Assessment», dans J. Swaigen, dir., *Environmental Rights in Canada* (1981), 245, à la p. 247, résument l'objet fondamental de cette évaluation:

> [TRADUCTION] Les concepts fondamentaux à la base de l'évaluation environnementale peuvent être énoncés en termes simples: (1) déterminer et évaluer avant coup toutes les conséquences environnementales possibles d'une entreprise proposée; (2) permettre une prise de décisions qui à la fois garantira l'à-propos du processus et conciliera le plus possible les désirs d'aménagement du promoteur et la protection et la préservation de l'environnement.

En tant qu'outil de planification, le processus d'évaluation renferme un mécanisme de collecte de renseignements et de prise de décisions, qui fournit au décideur une base objective sur laquelle il pourra s'appuyer pour autoriser ou refuser un projet d'aménagement; voir M. I. Jeffery, *Environmental Approvals in Canada* (1989), à la p. 1.2, § 1.4; D. P. Emond, *Environmental Assessment Law in Canada* (1978), à la p. 5. Bref, l'évaluation des incidences environnementales constitue simplement une description du processus de prise de décisions.

Le *Décret sur les lignes directrices* vient simplement s'ajouter aux questions dont les décideurs fédéraux doivent tenir compte. Si le ministre des Transports devait spécifiquement tenir compte des préoccupations en matière de pêche dans l'examen des demandes de construction d'ouvrages dans les eaux navigables, pourrait-on soulever que cette attribution de compétence est *ultra vires*? Tout ce que cela signifierait est que le décideur doit aussi prendre en considération d'autres questions qui relèvent de la compétence fédérale. Je ne suis pas indifférent aux propos du substitut du procureur général de la Saskatchewan qui a cherché à qualifier le *Décret sur les lignes directrices* de cheval de Troie constitutionnel permettant au gouvernement fédéral, sous prétexte de l'existence de quelque champ restreint de compétence fédérale, de procé-

jurisdiction. However, on my reading of the *Guidelines Order* the "initiating department" assigned responsibility for conducting an initial assessment, and if required, the environmental review panel, are only given a mandate to examine matters directly related to the areas of federal responsibility affected. Thus, an initiating department or panel cannot use the *Guidelines Order* as a colourable device to invade areas of provincial jurisdiction which are unconnected to the relevant heads of federal power.

Because of its auxiliary nature, environmental impact assessment can only affect matters that are "truly in relation to an institution or activity that is otherwise within [federal] legislative jurisdiction"; see *Devine v. Quebec (Attorney General)*, [1988] 2 S.C.R. 790, at p. 808. Given the necessary element of proximity that must exist between the impact assessment process and the subject matter of federal jurisdiction involved, this legislation can, in my view, be supported by the particular head of federal power invoked in each instance. In particular, the *Guidelines Order* prescribes a close nexus between the social effects that may be examined and the environmental effects generally. Section 4 requires that the social effects examined at the initial assessment stage be "directly related" to the potential environmental effects of a proposal, as does s. 25 in respect of the terms of reference under which an environmental assessment panel may operate. Moreover, where the *Guidelines Order* has application to a proposal because it affects an area of federal jurisdiction, as opposed to the other three bases for application enumerated in s. 6, the environmental effects to be studied can only be those which may have an impact on the areas of federal responsibility affected.

I should make it clear, however, that the scope of assessment is not confined to the particular head

der à un examen approfondi de questions qui relèvent exclusivement de la compétence des provinces. Toutefois, suivant mon interprétation du *Décret sur les lignes directrices*, le «ministère responsable» qui procède à l'évaluation initiale et, au besoin, la Commission d'évaluation environnementale n'ont que le mandat d'examiner les questions se rapportant directement aux domaines de compétence fédérale concernés. En conséquence, le ministère responsable ou la commission ne peuvent se servir du *Décret sur les lignes directrices* comme moyen déguisé d'envahir des champs de compétence provinciale qui ne se rapportent pas aux domaines de compétence fédérale concernés.

À cause de son caractère accessoire, l'évaluation des incidences environnementales doit «véritablement viser une institution ou une activité qui relève de la compétence législative [fédérale]»; voir l'arrêt *Devine c. Québec (Procureur général)*, [1988] 2 R.C.S. 790, à la p. 808. Compte tenu de l'élément nécessaire de proximité qui doit exister entre le processus d'évaluation environnementale et le domaine de compétence fédérale concerné, ce texte législatif peut, à mon avis, s'appuyer sur le domaine particulier de compétence fédérale invoqué dans chaque cas. Plus particulièrement, le *Décret sur les lignes directrices* exige un rapport étroit entre les répercussions sociales susceptibles d'être examinées et les répercussions environnementales en général. Aux termes de l'art. 4, les répercussions sociales examinées, au cours de l'étape initiale d'évaluation, doivent être «directement liées» aux effets possibles de la proposition sur l'environnement, à l'instar de l'art. 25 portant sur le mandat en vertu duquel une commission d'évaluation environnementale peut agir. Par ailleurs, dans le cas où le *Décret sur les lignes directrices* s'applique à une proposition parce qu'elle a des répercussions sur un domaine de compétence fédérale, par opposition aux trois autres cas d'application prévus à l'art. 6, les répercussions environnementales à examiner sont seulement celles qui peuvent avoir une incidence sur les domaines de compétence fédérale touchés.

Toutefois, je dois préciser que l'étendue de l'évaluation n'est pas limitée au domaine particu-

of power under which the Government of Canada has a decision-making responsibility within the meaning of the term "proposal". Such a responsibility, as I stated earlier, is a necessary condition to engage the process, but once the initiating department has thus been given authority to embark on an assessment, that review must consider the environmental effect on all areas of federal jurisdiction. There is no constitutional obstacle preventing Parliament from enacting legislation under several heads of power at the same time; see *Jones v. Attorney General of New Brunswick*, [1975] 2 S.C.R. 182, and *Knox Contracting Ltd. v. Canada*, [1990] 2 S.C.R. 338, at p. 350. In the case of the *Guidelines Order*, Parliament has conferred upon one institution (the "initiating department") the responsibility, in the exercise of its decision-making authority, for assessing the environmental implications on all areas of federal jurisdiction potentially affected. Here, the Minister of Transport, in his capacity of decision maker under the *Navigable Waters Protection Act*, is directed to consider the environmental impact of the dam on such areas of federal responsibility as navigable waters, fisheries, Indians and Indian lands, to name those most obviously relevant in the circumstances here.

In essence, then, the *Guidelines Order* has two fundamental aspects. First, there is the substance of the *Guidelines Order* dealing with environmental impact assessment to facilitate decision making under the federal head of power through which a proposal is regulated. As I mentioned earlier, this aspect of the *Guidelines Order* can be sustained on the basis that it is legislation in relation to the relevant subject matters enumerated in s. 91 of the *Constitution Act, 1867*. The second aspect of the legislation is its procedural or organizational element that coordinates the process of assessment, which can in any given case touch upon several areas of federal responsibility, under the auspices of a designated decision maker, or in the vernacular of the *Guidelines Order*, the "initiating department". This facet of the legislation has as its object the regulation of the institutions and agencies of

lier de compétence à l'égard duquel le gouvernement du Canada participe à la prise de décisions au sens du terme «proposition». Cette participation, comme je l'ai déjà mentionné, est une condition nécessaire à l'application du processus; toutefois, lorsque le ministère responsable a reçu le pouvoir de procéder à l'évaluation, cet examen doit tenir compte des répercussions environnementales dans tous les domaines de compétence fédérale. Aucun obstacle constitutionnel n'empêche le Parlement d'adopter un texte législatif en vertu de plusieurs domaines de compétence en même temps; voir les arrêts *Jones c. Procureur général du Nouveau-Brunswick*, [1975] 2 R.C.S. 182, et *Knox Contracting Ltd. c. Canada*, [1990] 2 R.C.S. 338, à la p. 350. Dans le cas du *Décret sur les lignes directrices*, le Parlement a conféré à une institution (le «ministère responsable») la responsabilité, dans l'exercice de son pouvoir de décision, d'évaluer les répercussions environnementales sur tous les domaines de compétence fédérale susceptibles d'être touchés. En l'espèce, le ministre des Transports, à titre de décideur en vertu de la *Loi sur la protection des eaux navigables*, doit examiner les incidences environnementales du barrage sur les domaines de compétence fédérale, comme les eaux navigables, les pêcheries, les Indiens et les terres indiennes, pour ne nommer que ceux qui sont le plus pertinents dans les circonstances.

Essentiellement, le *Décret sur les lignes directrices* comporte deux aspects fondamentaux. Il y a tout d'abord l'aspect de fond qui porte sur l'évaluation des incidences environnementales, dont l'objet est de faciliter la prise de décisions dans le domaine de compétence fédérale qui régit une proposition. Comme je l'ai mentionné, cet aspect du *Décret sur les lignes directrices* peut être maintenu au motif qu'il s'agit d'un texte législatif se rapportant aux matières pertinentes énumérées à l'art. 91 de la *Loi constitutionnelle de 1867*. Le deuxième aspect est l'élément procédural ou organisationnel coordonnant le processus d'évaluation, qui peut dans un cas donné toucher plusieurs domaines de compétence fédérale, relevant d'un décideur désigné ou, pour employer le jargon du *Décret sur les lignes directrices*, le «ministère responsable». Cette facette vise à réglementer la façon dont les

the Government of Canada as to the manner in which they perform their administrative functions and duties. This, in my view, is unquestionably *intra vires* Parliament. It may be viewed either as an adjunct of the particular legislative powers involved, or, in any event, be justifiable under the residuary power in s. 91.

The Court adopted a similar approach in the related situation that arose in *Jones v. Attorney General of New Brunswick*, *supra*. There this Court dealt with the constitutional validity, on a division of powers basis, of certain provisions of the *Official Languages Act*, R.S.C. 1970, c. O-2, the *Evidence Act* of New Brunswick, R.S.N.B. 1952, c. 74, and the *Official Languages of New Brunswick Act*, S.N.B. 1969, c. 14. The federal legislation made English and French the official languages of Canada, and the impugned provisions recognized both languages in the federal courts and in criminal proceedings. Laskin C.J. held, at p. 189:

> . . . I am in no doubt that it was open to the Parliament of Canada to enact the *Official Languages Act* (limited as it is to the purposes of the Parliament and Government of Canada and to the institutions of that Parliament and Government) as being a law "for the peace, order and good government of Canada in relation to [a matter] not coming within the classes of subjects . . . assigned exclusively to the Legislatures of the Provinces". The quoted words are in the opening paragraph of s. 91 of the *British North America Act*; and, in relying on them as constitutional support for the *Official Languages Act*, I do so on the basis of the purely residuary character of the legislative power thereby conferred. No authority need be cited for the exclusive power of the Parliament of Canada to legislate in relation to the operation and administration of the institutions and agencies of the Parliament and Government of Canada. Those institutions and agencies are clearly beyond provincial reach. [Emphasis added.]

The Court went on to uphold the federal legislation on the additional grounds that it was valid under Parliament's criminal jurisdiction (s. 91(27)) and

institutions et organismes du gouvernement du Canada exercent leurs fonctions et responsabilités administratives. Cela, à mon avis, est indiscutablement *intra vires* du Parlement. Cet aspect peut être considéré comme un pouvoir accessoire de la compétence législative en cause, ou de toute façon, être justifié en vertu du pouvoir résiduel prévu à l'art. 91.

Dans une situation connexe, la Cour a adopté une analyse similaire dans l'arrêt *Jones c. Procureur général du Nouveau-Brunswick*, précité. Dans cette affaire, la Cour devait trancher la question de la constitutionnalité, en fonction du partage des compétences, de certaines dispositions de la *Loi sur les langues officielles*, S.R.C. 1970, ch. O-2, de l'*Evidence Act* du Nouveau-Brunswick, R.S.N.B. 1952, ch. 74, et de la *Loi sur les langues officielles du Nouveau-Brunswick*, S.N.B. 1969, ch. 14. La loi fédérale faisait du français et de l'anglais les langues officielles du Canada; les dispositions attaquées reconnaissaient l'utilisation des deux langues officielles devant les tribunaux fédéraux et dans les procédures criminelles. Le juge en chef Laskin affirme à la p. 189:

> . . . je ne doute aucunement qu'il était loisible au Parlement du Canada d'édicter la *Loi sur les langues officielles* (restreinte qu'elle est à ce qui relève du Parlement et du gouvernement du Canada, et aux institutions de ces Parlement et gouvernement) à titre de loi «pour la paix, l'ordre et le bon gouvernement du Canada, relativement à [une matière] ne tombant pas dans les catégories de sujets . . . exclusivement assignés aux législatures des provinces». Les termes en question sont extraits de l'alinéa liminaire de l'art. 91 de l'*Acte de l'Amérique du Nord britannique*; et, en me basant sur eux comme fondement constitutionnel de la *Loi sur les langues officielles*, je ne tiens compte que du caractère purement résiduaire du pouvoir législatif qu'ils confèrent. Point n'est besoin de citer de précédent à l'appui du pouvoir exclusif du Parlement du Canada de légiférer relativement au fonctionnement et à l'administration des institutions et organismes du Parlement et du gouvernement du Canada. Ces institutions et organismes sont de toute évidence hors de la portée des provinces. [Je souligne.]

La Cour a également confirmé la loi fédérale en vertu de la compétence du Parlement en matière de droit criminel (par. 91(27)) et d'établissement de

federal power over federal courts (s. 101). Laskin C.J. also remarked that there was no constitutional impediment preventing Parliament from adding to the range of privileged or obligatory use of English and French in institutions or activities that are subject to federal control. For similar reasons, the provincial legislation providing for the use of both official languages in the courts of New Brunswick was upheld on the basis of its power over the administration of justice in the province (s. 92(14)).

In the end, I am satisfied that the *Guidelines Order* is in pith and substance nothing more than an instrument that regulates the manner in which federal institutions must administer their multifarious duties and functions. Consequently, it is nothing more than an adjunct of the federal legislative powers affected. In any event, it falls within the purely residuary aspect of the "Peace, Order, and good Government" power under s. 91 of the *Constitution Act, 1867*. Any intrusion into provincial matters is merely incidental to the pith and substance of the legislation. It must also be remembered that what is involved is essentially an information gathering process in furtherance of a decision-making function within federal jurisdiction, and the recommendations made at the conclusion of the information gathering stage are not binding on the decision maker. Neither the initiating department nor the panel are given power to subpoena witnesses, as was the case in *Canadian National Railway Co. v. Courtois*, [1988] 1 S.C.R. 868, where the Court held that certain provisions of the *Act respecting occupational health and safety*, S.Q. 1979, c. 63, which, *inter alia*, allowed the province to investigate accidents and issue remedial orders, were inapplicable to an interprovincial railway undertaking. I should add that Alberta's extensive reliance on that decision is misplaced. It is wholly distinguishable from the present case on several grounds, most importantly that the impugned provincial legislation there was made compulsory against a federal undertaking

tribunaux fédéraux (art. 101). Le juge en chef Laskin indique aussi que rien dans la Constitution n'empêche le Parlement d'étendre le champ de l'emploi privilégié ou obligatoire du français et de l'anglais dans les institutions ou les activités qui relèvent du contrôle fédéral. Pour des motifs semblables, la loi provinciale prévoyant l'utilisation des deux langues officielles devant les tribunaux du Nouveau-Brunswick a été jugée valide en raison de la compétence des provinces en matière d'administration de la justice (par. 92(14)).

En fin de compte, je suis convaincu que, de par son caractère véritable, le *Décret sur les lignes directrices* n'est rien de plus qu'un instrument qui régit la façon dont les institutions fédérales doivent gérer leurs diverses fonctions. En conséquence, il n'est rien de plus qu'un ajout à l'exercice des compétences législatives fédérales concernées. Quoi qu'il en soit, ce texte peut être adopté en vertu du pouvoir purement résiduel à titre de loi «pour la paix, l'ordre et le bon gouvernement du Canada» en vertu de l'art. 91 de la *Loi constitutionnelle de 1867*. Toute ingérence dans la sphère de compétence provinciale est simplement accessoire au caractère véritable du texte législatif. On doit aussi rappeler, d'une part, que le processus d'évaluation est essentiellement un processus de collecte de renseignements destiné à faciliter la prise de décisions relevant du fédéral et, d'autre part, que les recommandations présentées à la fin de l'étape de collecte de renseignements ne lient pas le décideur. Ni le ministère responsable ni la commission ne peuvent assigner des témoins à comparaître, comme c'était le cas dans l'arrêt *Compagnie des Chemins de fer nationaux du Canada c. Courtois*, [1988] 1 R.C.S. 868, dans lequel, la Cour a statué que certaines dispositions de la *Loi sur la santé et la sécurité du travail*, L.Q. 1979, ch. 63, qui permettaient notamment à la province d'enquêter sur les accidents et d'émettre des avis de correction, étaient inapplicables à une entreprise ferroviaire interprovinciale. Je tiens à préciser que l'Alberta a, à tort, accordé une trop grande importance à cet arrêt. Celui-ci se distingue de la présente affaire pour plusieurs motifs, le plus important étant que le texte législatif provincial attaqué dans cet arrêt était impératif à l'égard d'une entreprise fédérale

and was interpreted by the Court as regulating the undertaking.

For the foregoing reasons I find that the *Guidelines Order* is *intra vires* Parliament and would thus answer the constitutional question in the negative.

Discretion

The last substantive issue raised in this appeal is whether the Federal Court of Appeal erred in interfering with the motions judge's discretion not to grant the remedies sought, namely orders in the nature of *certiorari* and mandamus, on the grounds of unreasonable delay and futility. Stone J.A. found that the motions judge had erred in a way that warranted interference with the exercise of his discretion on both grounds.

The principles governing appellate review of a lower court's exercise of discretion were not extensively considered, only their application to this case. Stone J.A. cited *Polylok Corp. v. Montreal Fast Print (1975) Ltd.*, [1984] 1 F.C. 713 (C.A.), which in turn approved of the following statement of Viscount Simon L.C. in *Charles Osenton & Co. v. Johnston*, [1942] A.C. 130, at p. 138:

> The law as to the reversal by a court of appeal of an order made by the judge below in the exercise of his discretion is well-established, and any difficulty that arises is due only to the application of well-settled principles in an individual case. The appellate tribunal is not at liberty merely to substitute its own exercise of discretion for the discretion already exercised by the judge. In other words, appellate authorities ought not to reverse the order merely because they would themselves have exercised the original discretion, had it attached to them, in a different way. But if the appellate tribunal reaches the clear conclusion that there has been a wrongful exercise of discretion in that no weight, or no sufficient weight, has been given to relevant considerations such

et a été interprété par la Cour comme réglementant l'entreprise.

Pour ces motifs, je conclus que le *Décret sur les lignes directrices* est *intra vires* du Parlement et je répondrais par la négative à la question constitutionnelle.

Le pouvoir discrétionnaire

La dernière question de fond soulevée dans le présent pourvoi est de savoir si la Cour d'appel fédérale a commis une erreur en modifiant la décision du juge des requêtes, prise dans l'exercice de son pouvoir discrétionnaire, de ne pas accorder la réparation sollicitée, en l'occurrence un bref de la nature d'un *certiorari* et un bref de la nature d'un *mandamus*, en raison du retard déraisonnable et de la futilité de la procédure. Le juge Stone a statué que le juge des requêtes avait commis un type d'erreur justifiant la Cour d'appel de modifier l'exercice de son pouvoir discrétionnaire sur les deux motifs.

Les principes qui régissent l'examen en appel de l'exercice du pouvoir discrétionnaire d'un tribunal d'instance inférieure n'ont pas été examinés en profondeur, seule leur application aux faits de l'espèce l'a été. Le juge Stone a cité l'arrêt *Polylok Corp. c. Montreal Fast Print (1975) Ltd.*, [1984] 1 C.F. 713 (C.A.), qui approuve l'énoncé suivant du vicomte Simon, lord Chancelier, dans *Charles Osenton & Co. c. Johnston*, [1942] A.C. 130, à la p. 138:

> [TRADUCTION] La règle relative à l'annulation par une cour d'appel d'une ordonnance rendue par un juge d'une instance inférieure dans l'exercice de son pouvoir discrétionnaire est bien établie, et tous les problèmes qui se présentent résultent seulement de l'application de principes déterminés à un cas particulier. Le tribunal d'appel n'a pas la liberté de simplement substituer l'exercice de son propre pouvoir discrétionnaire à celui déjà exercé par le juge. En d'autres termes, les juridictions d'appel ne devraient pas annuler une ordonnance pour la simple raison qu'elles auraient exercé le pouvoir discrétionnaire original, s'il leur avait appartenu, d'une manière différente. Toutefois, si le tribunal d'appel conclut que le pouvoir discrétionnaire a été exercé de façon erronée, parce qu'on n'a pas accordé suffisamment d'importance, ou qu'on en n'a pas accordé du tout, à des consi-

as those urged before us by the appellant, then the reversal of the order on appeal may be justified.

That was essentially the standard adopted by this Court in *Harelkin v. University of Regina*, [1979] 2 S.C.R. 561, where Beetz J. said, at p. 588:

> Second, in declining to evaluate, difficult as it may have been, whether or not the failure to render natural justice could be cured in the appeal, the learned trial judge refused to take into consideration a major element for the determination of the case, thereby failing to exercise his discretion on relevant grounds and giving no choice to the Court of Appeal but to intervene. [Emphasis added.]

What, then, are the relevant considerations that should have been weighed by the motions judge in exercising his discretion? The first ground on which the motions judge exercised his discretion to refuse prerogative relief was delay. There is no question that unreasonable delay may bar an applicant from obtaining a discretionary remedy, particularly where that delay would result in prejudice to other parties who have relied on the challenged decision to their detriment, and the question of unreasonableness will turn on the facts of each case; see S. A. de Smith, *Judicial Review of Administrative Action* (4th ed. 1980), at p. 423, and D. P. Jones and A. S. de Villars, *Principles of Administrative Law* (1985), at pp. 373-74. The motions judge took cognizance of the period of time that elapsed between approval being granted by the Minister of Transport on September 18, 1987 and the filing of the notice of motion in this action on April 21, 1989, and the fact that the project was approximately 40 percent complete by that time. With respect, however, he ignored a considerable amount of activity undertaken by the respondent Society before taking this action, some of which was referred to by Stone J.A. I should note at this point that Stone J.A. was mistaken when he stated that this action was taken only two months after the Society became aware that approval had been granted. During cross-examination on her affidavit in support of the application, Ms. Kostuch, the vice-president of the Society, admitted that the Society became aware of the

dérations pertinentes comme celles que l'appelante a fait valoir devant nous, il est alors possible de justifier l'annulation de l'ordonnance.

C'était essentiellement le critère adopté par notre Cour dans l'arrêt *Harelkin c. Université de Regina*, [1979] 2 R.C.S. 561, dans lequel, le juge Beetz affirme à la p. 588:

> Deuxièmement, en refusant d'évaluer, malgré la difficulté, si le défaut de respecter la justice naturelle pouvait être corrigé en appel, le savant juge de première instance a refusé de tenir compte d'un élément prépondérant en l'espèce; de ce fait, il n'exerçait pas son pouvoir discrétionnaire pour des motifs pertinents et ne laissait à la Cour d'appel d'autre choix que d'intervenir. [Je souligne.]

Quelles sont alors les considérations pertinentes dont le juge des requêtes aurait dû tenir compte dans l'exercice de son pouvoir discrétionnaire? La question du retard est le premier motif invoqué par le juge des requêtes lorsqu'il a, dans l'exercice de son pouvoir discrétionnaire, refusé d'accorder le bref de prérogative. Il n'y a pas de doute qu'un retard déraisonnable peut empêcher un requérant d'obtenir un redressement assujetti à l'exercice d'un pouvoir discrétionnaire, notamment dans le cas où ce retard risquerait d'être préjudiciable à d'autres parties qui se seraient fiées, à leur détriment, à la décision contestée; la question du caractère déraisonnable dépendra des faits de chaque affaire; voir S. A. de Smith, *Judicial Review of Administrative Action* (4e éd. 1980), à la p. 423, et D. P. Jones et A. S. de Villars, *Principles of Administrative Law* (1985), aux pp. 373 et 374. Le juge des requêtes a, d'une part, tenu compte du délai qui s'est écoulé entre l'approbation accordée par le ministre des Transports le 18 septembre 1987 et le dépôt de l'avis de requête dans la présente action le 21 avril 1989 et, d'autre part, du fait que le projet était déjà complété à environ 40 pour 100 à cette date. Toutefois, en toute déférence, il n'a pas tenu compte d'un grand nombre de mesures que la Société intimée a prises avant d'entamer la présente contestation, dont certaines ont été mentionnées par le juge Stone. Je tiens à faire remarquer que le juge Stone s'est trompé lorsqu'il a affirmé que les procédures avaient été intentées deux mois seulement après que la Société

approval on February 16, 1988, some 14 months before the present action was launched.

This was not the only action taken by the Society in opposition to the dam, however. The Society first brought an action in October 1987 seeking *certiorari* with prohibition in aid to quash an interim licence issued by the Minister of the Environment of Alberta pursuant to the *Water Resources Act*. On December 8, 1987 Moore C.J.Q.B. quashed all licences and permits issued by the Minister on the grounds that the department had not filed the requisite approvals with its application, that it had not referred the matter to the Energy Resources Conservation Board as required by s. 17 of the Act, and that the Minister's delegate had wrongfully exercised his discretion in waiving the public notice requirements set out in the Act: *Friends of the Oldman River Society v. Alberta (Minister of the Environment)* (1987), 85 A.R. 321. Another interim licence was issued on February 5, 1988 and again the respondent brought an application to quash that licence, principally on the ground that the requirement for giving public notice had been improperly waived. The application was dismissed by Picard J. who held that the appropriate material had been filed with the application for the licence and that the Minister's delegate had acted within his jurisdiction in waiving public notice: *Friends of Oldman River Society v. Alberta (Minister of the Environment)* (1988), 89 A.R. 339 (Q.B.).

In the meantime, the respondent Society had been petitioning the Alberta Energy Resources Conservation Board to conduct a public hearing into the hydro-electric aspects of the dam pursuant to the *Hydro and Electric Energy Act*. The Board replied on December 18, 1987 refusing the Society's request for the reason that the dam did

eut été mise au courant de la décision d'accorder l'approbation. Au cours du contre-interrogatoire relatif à son affidavit à l'appui de la demande, M^me^ Kostuch, vice-présidente, a reconnu que la Société avait été mise au courant de l'approbation le 16 février 1988, soit quelque 14 mois avant le début de la présente action.

Toutefois, la présente action n'est pas la seule engagée par la Société relativement à la construction du barrage. La Société a tout d'abord intenté une action en octobre 1987, sollicitant la délivrance d'un bref de *certiorari* assorti d'un bref de prohibition visant à annuler un permis provisoire délivré par le ministre de l'Environnement de l'Alberta conformément à la *Water Resources Act*. Le 8 décembre 1987, le juge en chef Moore de la Cour du Banc de la Reine a annulé tous les permis qui avaient été délivrés par le ministre parce que le ministère n'avait pas déposé les approbations nécessaires avec sa demande, qu'il n'avait pas soumis la question à l'examen de l'Energy Resources Conservation Board conformément à l'art. 17 de la Loi et que le délégué du ministre avait mal exercé son pouvoir discrétionnaire en renonçant aux exigences prévues dans la Loi relativement aux avis publics: *Friends of the Oldman River Society v. Alberta (Minister of the Environment)* (1987), 85 A.R. 321. Un autre permis provisoire a été délivré le 5 février 1988; l'intimée a de nouveau présenté une demande d'annulation de ce permis, principalement au motif que l'on avait à tort renoncé aux avis publics. La demande a été rejetée par le juge Picard, qui a statué que les documents appropriés avaient été déposés en même temps que la demande de permis et que le délégué du ministre avait le pouvoir de renoncer à l'avis public: *Friends of Oldman River Society v. Alberta (Minister of the Environment)* (1988), 89 A.R. 339 (B.R.).

Entretemps, la Société intimée avait demandé à l'Energy Resources Conservation Board de l'Alberta de tenir une audience publique aux fins de l'examen des aspects hydro-électriques du barrage conformément à l'*Hydro and Electric Energy Act*. Dans sa réponse du 18 décembre 1987, le Board a refusé d'acquiescer à la demande de la Société au

not constitute a "hydro development" within the meaning of the Act. An application was taken for leave to appeal that decision to the Alberta Court of Appeal which refused leave, agreeing with the Board that the project was not a hydro development, even though it was designed to allow for the future installation of a power generating facility: *Friends of the Old Man River Society v. Energy Resources Conservation Board (Alta.)* (1988), 89 A.R. 280. Finally, Ms. Kostuch swore an information before a justice of the peace alleging that an offence had been committed under s. 35 of the *Fisheries Act*. After summonses were issued, the Attorney General for Alberta intervened and stayed the proceedings on August 19, 1988. I have already documented the correspondence directed to the federal Minister of the Environment and Minister of Fisheries and Oceans through 1987 and 1988 in which members of the Society sought to have the *Guidelines Order* invoked, all to no avail. This action was taken shortly after the Trial Division of the Federal Court in *Canadian Wildlife* held that the *Guidelines Order* was binding on the Minister of the Environment.

In my view, this chronology of events represents a concerted and sustained effort on the part of the Society to challenge the legality of the process followed by Alberta to build this dam and the acquiescence of the appellant Ministers. While these events were taking place, construction of the dam continued, despite ongoing legal proceedings; and as at the date of the hearing before this Court, counsel for Alberta advised that the dam had been substantially completed. I can find no evidence that Alberta has suffered any prejudice from any delay in taking this action; there is no indication whatever that the province was prepared to accede to an environmental impact assessment under the *Guidelines Order* until it had exhausted all legal avenues, including an appeal to this Court. The motions judge did not weigh these considerations adequately or at all. Accordingly, the Court of

motif que le barrage ne constituait pas un [TRADUCTION] «développement hydro-électrique» au sens de la Loi. Une demande d'autorisation d'appel a été présentée à la Cour d'appel de l'Alberta, qui a rejeté la demande, souscrivant à l'opinion du Board qu'il ne s'agissait pas d'un projet hydro-électrique, même s'il devait permettre l'installation future d'une centrale électrique: *Friends of the Old Man River Society v. Energy Resources Conservation Board (Alta.)* (1988), 89 A.R. 280. Enfin, M^me^ Kostuch a déposé une dénonciation devant un juge de paix dans laquelle elle allègue qu'une infraction a été commise en contravention de l'art. 35 de la *Loi sur les pêches*. Après les assignations, le procureur général de l'Alberta est intervenu et a ordonné un arrêt des procédures le 19 août 1988. J'ai déjà examiné les lettres adressées au ministre fédéral de l'Environnement et au ministre des Pêches et des Océans en 1987 et 1988, dans lesquelles des membres de la Société ont cherché en vain à faire appliquer le *Décret sur les lignes directrices*. La présente action a été intentée peu de temps après que la Section de première instance de la Cour fédérale eut décidé dans l'affaire *Fédération canadienne de la faune* que le ministre de l'Environnement était lié par le *Décret sur les lignes directrices*.

À mon avis, cette chronologie indique que la Société s'est efforcée d'une façon soutenue et concertée de contester d'une part, la légalité des mesures prises par l'Alberta relativement à la construction du barrage et d'autre part, l'acquiescement des ministres appelants. Pendant tout ce temps, la construction du barrage s'est poursuivie, en dépit des contestations judiciaires en cours; à la date de l'audience devant notre Cour, l'avocat de l'Alberta nous a informés que la construction du barrage était en grande partie achevée. Je ne crois pas qu'il existe une preuve que l'Alberta a subi un préjudice quelconque en raison d'un retard à intenter la présente action; rien n'indique que la province était disposée à consentir à une évaluation des incidences environnementales en vertu du *Décret sur les lignes directrices* avant l'épuisement de tous les recours légaux, y compris le pourvoi devant notre Cour. Le juge des requêtes n'a pas suffisamment accordé d'importance à ces considé-

Appeal was justified in interfering with the exercise of his discretion on this point.

The remaining ground for refusing to grant prerogative relief was on the basis of futility, namely that environmental impact assessment under the *Guidelines Order* would be needlessly repetitive in view of the studies that were conducted in the past. In my view this was not a proper ground to refuse a remedy in these circumstances. Prerogative relief should only be refused on the ground of futility in those few instances where the issuance of a prerogative writ would be effectively nugatory. For example, a case where the order could not possibly be implemented, such as an order of prohibition to a tribunal if nothing is left for it to do that can be prohibited; see de Smith, *supra*, at pp. 427-28. It is a different matter, though, where it cannot be determined *a priori* that an order in the nature of prerogative relief will have no practical effect. In the present case, aside from what Stone J.A. has already said concerning the qualitative differences between the process mandated by the *Guidelines Order* and what has gone before, it is not at all obvious that the implementation of the *Guidelines Order* even at this late stage will not have some influence over the mitigative measures that may be taken to ameliorate any deleterious environmental impact from the dam on an area of federal jurisdiction. I have therefore concluded that the Court of Appeal did not err in interfering with the motions judge's exercise of discretion to deny the relief sought.

On the matter of costs, it is my view that this is a proper case for awarding costs on a solicitor-client basis to the respondent Society, given the Society's circumstances and the fact that the federal Ministers were joined as appellants even though they did not earlier seek leave to appeal to this Court.

rations ou les a ignorées. En conséquence, la Cour d'appel était justifiée de modifier l'exercice de son pouvoir discrétionnaire sur ce point.

L'autre motif du refus de délivrer un bref de prérogative se fondait sur la futilité de la procédure, savoir que l'évaluation des incidences environnementales en vertu du *Décret sur les lignes directrices* serait inutilement répétitive en raison des études réalisées dans le passé. À mon avis, ce motif ne pouvait justifier un refus dans les circonstances. La délivrance d'un bref de prérogative devrait être refusée pour motif de futilité seulement dans les rares cas où sa délivrance serait vraiment inefficace. Par exemple, le cas où l'ordonnance ne pourrait pas être exécutée, savoir une ordonnance de prohibition à l'encontre d'un tribunal s'il ne lui reste rien à faire qui puisse être interdit; voir de Smith, *op. cit.*, aux pp. 427 et 428. Ce n'est pas du tout la même situation lorsque l'on ne peut déterminer à priori qu'une ordonnance de la nature d'un bref de prérogative n'aura aucune incidence sur le plan pratique. En l'espèce, mis à part ce que le juge Stone a déjà dit relativement aux différences du point de vue qualitatif entre l'évaluation prévue par le *Décret sur les lignes directrices* et les études antérieures, il n'est pas du tout évident que l'application du *Décret sur les lignes directrices*, même à cette étape tardive, n'aura pas un certain effet sur les mesures susceptibles d'être prises pour atténuer toute incidence environnementale néfaste que pourrait avoir le barrage sur un domaine de compétence fédérale. En conséquence, je conclus que la Cour d'appel n'a pas commis d'erreur en modifiant la décision du juge des requêtes de refuser, dans l'exercice de son pouvoir discrétionnaire, le redressement sollicité.

En ce qui concerne les dépens, à mon avis, il s'agit d'un cas où il est approprié d'accorder les dépens comme entre procureur et client à la Société intimée, compte tenu de la situation de cette dernière et du fait que les ministères fédéraux ont été joints comme appelants même s'ils n'avaient pas auparavant présenté une demande d'autorisation de pourvoi à notre Cour.

Disposition

For these reasons, I would dismiss the appeal, with the exception that there shall be no order in the nature of mandamus directing the Minister of Fisheries and Oceans to comply with the *Guidelines Order*, with solicitor and client costs to the respondent throughout. I would answer the constitutional question in the negative.

The following are the reasons delivered by

STEVENSON J. (dissenting)—I have had the benefit of reading the judgment of my colleague La Forest J. and respectfully disagree with him on three points. In my view:

1. The Crown is not bound by the *Navigable Waters Protection Act*, R.S.C., 1985, c. N-22 ("*N.W.P.A.*").

2. The Federal Court of Appeal, [1990] 2 F.C. 18, wrongly interfered with the discretion exercised by the motions judge in refusing the prerogative remedy.

3. The appellants should not be called upon to pay costs on a solicitor and client basis.

I agree with his analysis of the constitutional questions and with his interpretation of the provisions implementing the *Environmental Assessment and Review Process Guidelines Order*, SOR/84-467.

1. Crown Immunity

The question here is a simple one: is the Crown bound by the *N.W.P.A.*? For the purposes of this discussion, no distinction is to be drawn between the federal and provincial Crowns. The Crown is indivisible for this purpose: *Alberta Government Telephones v. Canada (Canadian Radio-television and Telecommunications Commission)*, [1989] 2 S.C.R. 225, at pp. 272-73.

Dispositif

Pour ces motifs, je suis d'avis de rejeter le pourvoi, sauf qu'il ne sera pas délivré de bref de la nature d'un *mandamus* ordonnant au ministre des Pêches et des Océans de se conformer au *Décret sur les lignes directrices*, avec dépens comme entre procureur et client en faveur de l'intimée dans toutes les cours. Je suis d'avis de répondre par la négative à la question constitutionnelle.

Version française des motifs rendus par

LE JUGE STEVENSON (dissident)—J'ai eu l'avantage de lire les motifs de mon collègue le juge La Forest et, avec égards, je ne suis pas d'accord avec lui sur trois points. À mon avis:

1. La Couronne n'est pas liée par la *Loi sur la protection des eaux navigables*, L.R.C. (1985), ch. N-22 («*L.P.E.N.*»).

2. La Cour d'appel fédérale, [1990] 2 C.F. 18, a commis une erreur en modifiant la décision du juge des requêtes, prise dans l'exercice de son pouvoir discrétionnaire, de ne pas accorder le bref de prérogative.

3. Les appelants ne devraient pas être contraints de payer les dépens comme entre procureur et client.

Je suis d'accord avec son analyse des questions constitutionnelles et avec son interprétation des dispositions de mise en œuvre du *Décret sur les lignes directrices visant le processus d'évaluation et d'examen en matière d'environnement*, DORS/84-467.

1. L'immunité de la Couronne

En l'espèce, la question est simple: la Couronne est-elle liée par la *L.P.E.N.*? Pour les fins de la présente analyse, je n'établis pas de distinction entre les Couronnes fédérale et provinciales. La Couronne est indivisible à cette fin: *Alberta Government Telephones c. Canada (Conseil de la radiodiffusion et des télécommunications canadiennes*, [1989] 2 R.C.S. 225, aux pp. 272 et 273.

Pursuant to the *Interpretation Act*, R.S.C., 1985, c. I-21 (formerly R.S.C. 1970, c. I-23), the Crown is not bound by legislation unless it is mentioned or referred to in the legislation. This has been interpreted in *Alberta Government Telephones*, at p. 281, as follows:

> It seems to me that the words "mentioned or referred to" in s. 16 [now s. 17] are capable of encompassing: (1) expressly binding words ("Her Majesty is bound"); (2) a clear intention to bind which, in *Bombay* terminology, "is manifest from the very terms of the statute", in other words, an intention revealed when provisions are read in the context of other textual provisions, as in *Ouellette*, *supra*; and, (3) an intention to bind where the purpose of the statute would be "wholly frustrated" if the government were not bound, or, in other words, if an absurdity (as opposed to simply an undesirable result) were produced. These three points should provide a guideline for when a statute has clearly conveyed an intention to bind the Crown.

All parties agree that there are no words in the *N.W.P.A.* "expressly binding" the Crown. In my view, it also cannot be said that a clear intention to bind the Crown "is manifest from the very terms of the statute". In making that determination, one is confined to the four corners of the statute. We must not forget that *Province of Bombay v. Municipal Corporation of Bombay*, [1947] A.C. 58 (P.C.), is no longer applicable in light of the express provisions of the *Interpretation Act*, except to the extent that it is adopted as it was in *Alberta Government Telephones*, which I take to be governing.

The respondent Society must therefore show that excluding the Crown would wholly frustrate the purpose of the *N.W.P.A.* or produce an absurdity. I am reminded by the Privy Council in *Bombay* that if the intention is to bind the Crown, "nothing is easier than to say so in plain words" (p. 63).

Does the failure to include the Crown work an absurdity? It is not enough that there be a gap: *Alberta Government Telephones*, at p. 283. The *N.W.P.A.* applies to private and municipal under-

Conformément à la *Loi d'interprétation*, L.R.C. (1985), ch. I-21 (auparavant S.R.C. 1970, ch. I-23), nul texte législatif ne lie la Couronne, sauf dans la mesure qui y est mentionnée ou prévue. La portée de ces termes a été interprétée dans l'arrêt *Alberta Government Telephones*, à la p. 281:

> Il me semble que les termes «mentionnée ou prévue» contenus à l'art. 16 [maintenant l'art. 17] peuvent comprendre: (1) des termes qui lient expressément la Couronne («Sa Majesté est liée»); (2) une intention claire de lier qui, selon les termes de l'arrêt *Bombay*, «ressort du texte même de la loi», en d'autres termes, une intention qui ressorte lorsque les dispositions sont interprétées dans le contexte d'autres dispositions, comme dans l'arrêt *Ouellette*, précité; et (3) une intention de lier lorsque l'objet de la loi serait «privé [. . .] de toute efficacité» si l'État n'était pas lié ou, en d'autres termes, s'il donnait lieu à une absurdité (par opposition à un simple résultat non souhaité). Ces trois éléments devraient servir de guide lorsqu'une loi comporte clairement une intention de lier la Couronne.

Toutes les parties sont d'avis que la *L.P.E.N.* ne renferme pas de termes qui «lient expressément» la Couronne. À mon avis, on ne peut soutenir qu'il existe une intention claire de lier la Couronne, qui «ressort du texte même de la loi». En prenant cette décision, on doit se limiter à ce que dit le texte législatif. Nous ne devons pas oublier que l'arrêt *Province of Bombay v. Municipal Corporation of Bombay*, [1947] A.C. 58 (C.P.), n'est plus applicable compte tenu des dispositions expresses de la *Loi d'interprétation*, sauf dans la mesure où il est adopté comme dans l'arrêt *Alberta Government Telephones*, qui, à mon avis, est l'arrêt de principe.

La Société intimée doit en conséquence démontrer que la *L.P.E.N.* serait privée de toute efficacité ou donnerait lieu à une absurdité si la Couronne n'était pas liée. Je dois garder à l'esprit l'arrêt *Bombay*, dans lequel le Conseil privé a dit que si l'intention du législateur est de lier la Couronne, [TRADUCTION] «rien de plus facile que de le dire en toutes lettres» (p. 63).

Si la Couronne n'est pas liée, cette situation donne-t-elle lieu à une absurdité? L'existence d'un vide ne suffit pas: *Alberta Government Telephones*, à la p. 283. La *L.P.E.N.* s'applique aux entreprises

takings and a moment's reflection reveals that there are many non-governmental agencies whose activities are thus subject to the *N.W.P.A.* There is thus no emasculation of the *N.W.P.A.*

Nor are the courts to assume bad faith on the part of the Crown in carrying out activities which might otherwise be regulated.

If the Crown interferes with public rights of navigation, that wrong is remediable by action. In short, there is no ground for saying that the *N.W.P.A.* will be frustrated by actions of government. There is ample scope in the regulation of non-governmental activities, and it cannot be said the object of the *N.W.P.A.* is frustrated.

I must mention briefly an argument that in invoking the *N.W.P.A.*, the appellant Alberta accepted the burden of the environmental regulation regime. There is no significant benefit in approval under the *N.W.P.A.* Tort actions may still lie. The *N.W.P.A.* does not expressly confer benefits of any type. Moreover, it is not clear that approval under s. 5 of the *N.W.P.A.* would necessarily provide any protection from possible actions in tort. In *Champion v. City of Vancouver*, [1918] 1 W.W.R. 216 (S.C.C.), Fitzpatrick C.J. of this Court held at pp. 218-19 that:

In considering the interpretation to be put upon this Act [the *N.W.P.A.*, R.S.C. 1906, c. 115], it must be borne in mind that every work constructed in navigable waters is not necessarily such an interference with navigation as to constitute an illegal obstruction. It may, however, be so and, as such, liable to be removed by the proper authority. It is therefore of great advantage to persons proposing to construct works for which there is no sanction to be able to obtain beforehand the approval of the Governor-in-Council under sec. 7; the provision is, however, purely permissive and the section does not provide for any consequences following upon the approval, certainly not that it shall render legal anything which would be illegal. Any interference with a public right of navigation is a nuisance which the Courts can

privées et municipales; réflexion faite, on se rend compte qu'il existe de nombreux organismes non gouvernementaux dont les activités sont régies par la *L.P.E.N.* L'objet de la *L.P.E.N.* n'est donc pas annihilé.

Par ailleurs, les tribunaux ne concluront pas à la mauvaise foi de la Couronne lorsqu'elle exerce des activités qui pourraient à d'autres égards être réglementées.

Si la Couronne porte atteinte aux droits publics de navigation, il est possible de la poursuivre en justice. Bref, on ne peut soutenir que la *L.P.E.N.* sera privée d'efficacité en raison des actes de l'État. La réglementation des activités non gouvernementales est vaste et on ne peut soutenir que l'objet de la *L.P.E.N.* est privé d'efficacité.

Il me faut mentionner brièvement l'argument que l'appelante l'Alberta, en invoquant l'application de la *L.P.E.N.*, aurait accepté d'être assujettie à la réglementation en matière environnementale. Il n'y a pas d'avantage important lié à l'approbation en vertu de la *L.P.E.N.* Il peut y avoir ouverture à responsabilité civile. La *L.P.E.N.* ne confère pas expressément d'avantages. Par ailleurs, il n'est pas évident que l'approbation accordée en vertu de l'art. 5 de la *L.P.E.N.* écarterait la possibilité de responsabilité civile. Dans l'arrêt *Champion c. City of Vancouver*, [1918] 1 W.W.R. 216 (C.S.C.), le juge en chef Fitzpatrick de notre Cour a statué, aux pp. 218 et 219, que:

[TRADUCTION] Dans l'examen de l'interprétation à donner à cette loi [la *L.P.E.N.*, S.R.C. 1906, ch. 115], on doit se rappeler que tout ouvrage construit dans les eaux navigables ne gêne pas nécessairement la navigation de façon à constituer une obstruction illégale. Cependant, dans l'affirmative, l'ouvrage pourrait être enlevé par l'autorité compétente. En conséquence, il est à l'avantage des personnes qui se proposent de construire des ouvrages, pour lesquels il n'existe pas de sanction, de pouvoir obtenir, préalablement au début des travaux, l'approbation du gouverneur en conseil en vertu de l'art. 7; cette disposition ne fait toutefois qu'accorder une permission et ne prévoit pas de conséquences une fois l'approbation obtenue; elle ne rendrait certainement pas légal un ouvrage qui serait illégal. Toute atteinte à

order abated notwithstanding any approval by the Governor-in-Council under sec. 7. [Emphasis added.]

un droit public de navigation est une nuisance à laquelle les tribunaux peuvent mettre fin, nonobstant l'approbation qu'aurait pu donner le gouverneur en conseil en vertu de l'art. 7. [Je souligne.]

2. Discretion

2. Le pouvoir discrétionnaire

The remedies sought by the respondent Society are discretionary: *Harelkin v. University of Regina,* [1979] 2 S.C.R. 561, at p. 574: "The principle that *certiorari* and *mandamus* are discretionary remedies by nature cannot be disputed", and D. P. Jones and A. S. de Villars, *Principles of Administrative Law* (1985), at pp. 372-73.

Les redressements sollicités par la Société intimée sont discrétionnaires: *Harelkin c. Université de Regina*, [1979] 2 R.C.S. 561, à la p. 574: «On ne peut contester le principe que le *certiorari* et le *mandamus* sont par nature des recours discrétionnaires», et D. P. Jones et A. S. de Villars, *Principles of Administrative Law* (1985), aux pp. 372 et 373.

Interference by an appellate court is only warranted when a lower court has "gone wrong in principle" or "has given no weight (or no sufficient weight) to those considerations which ought to have weighed with [it]": *Polylok Corp. v. Montreal Fast Print (1975) Ltd.*, [1984] 1 F.C. 713 (C.A.), at p. 724.

Une cour d'appel est justifiée d'intervenir seulement lorsque le tribunal d'instance inférieure a «commis une erreur de principe» ou «n'a pas accordé d'importance (ou qu'il n'a pas accordé suffisamment d'importance) aux considérations dont il aurait dû tenir compte.»: *Polylok Corp. c. Montreal Fast Print (1975) Ltd.*, [1984] 1 C.F. 713 (C.A.), aux pp. 724 et 725.

The Federal Court of Appeal was clearly wrong in dismissing the motions judge's conclusion on the question of delay, which it was "not persuaded" was well-founded in principle. The Court of Appeal says the respondent Society did not become aware of the grant of the approval under the *N.W.P.A.* until some two months before the proceedings were actually launched. In fact, it knew of the approval some 14 months beforehand and the principal promoters of the Society knew even before then.

La Cour d'appel fédérale a clairement commis une erreur en rejetant la conclusion du juge des requêtes relativement à la question du retard, conclusion dont elle «doute» qu'elle soit bien fondée dans son principe. La Cour d'appel affirme que la Société intimée n'a eu connaissance de la décision d'accorder l'approbation en vertu de la *L.P.E.N.* qu'environ deux mois avant que les procédures ne soient entamées. En fait, l'intimée avait été mise au courant de l'approbation quelque 14 mois auparavant et les principaux promoteurs de la Société le savaient même avant.

The common law has always imposed a duty on an applicant to act promptly in seeking extraordinary remedies:

La common law a toujours exigé du requérant qu'il agisse avec diligence lorsqu'il sollicite des recours extraordinaires:

Owing to their discretionary nature, extraordinary and ordinary review remedies must be exercised promptly. Donaldson J. of the Court of Appeal of England aptly explained the principle in *R.* v. *Aston University Senate*

En raison de leur caractère discrétionnaire, les recours en révision judiciaire, extraordinaires ou ordinaires, doivent être exercés avec diligence. Comme le rappelait dans un langage imagé le juge Donaldson, de la Cour

[[1969] 2 Q.B. 538, at p. 555]: "The prerogative remedies are exceptional in their nature and should not be made available to those who sleep upon their rights".

(R. Dussault and L. Borgeat, *Administrative Law* (2nd ed. 1990), vol. 4, at pp. 468-69.)

That duty was recognized by Laskin C.J. on behalf of this Court in *P.P.G. Industries Canada Ltd. v. Attorney General of Canada*, [1976] 2 S.C.R. 739, at p. 749:

> In my opinion, discretionary bars are as applicable to the Attorney General on motions to quash as they admittedly are on motions by him for prohibition or in actions for declaratory orders. The present case is an eminently proper one for the exercise of discretion to refuse the relief sought by the Attorney General. Foremost among the factors which persuade me to this view is the unexplained two year delay in moving against the Anti-dumpting Tribunal's decision. [Emphasis added.]

The importance of acting promptly when seeking prerogative relief has also been recognized in much of the legislation now governing judicial review. For example, Ontario's *Judicial Review Procedure Act*, R.S.O. 1990, c. J.1, empowers a court to extend the prescribed time for initiating an application for judicial review, but only where it is satisfied that there are *prima facie* grounds for relief and no substantial prejudice or hardship will result to those who would be affected by the delay (s. 5). Under British Columbia's *Judicial Review Procedure Act*, R.S.B.C. 1979, c. 209, an application for judicial review may be barred by the affluxion of time if a court considers that substantial prejudice or hardship will result by reason of the delay (s. 11). The *Federal Court Act*, R.S.C., 1985, c. F-7, s. 28(2) stipulates than an application for judicial review before the Federal Court of Appeal must be made within ten days from the time the impugned decision or order is first communicated. That time limit can only be extended with leave of the court. In Alberta, Rule 753.11(1) of the *Alberta Rules of Court* (Alta. Reg. 390/68) stipulates that where the relief sought is the setting aside of a decision or act, the application for judicial review

d'appel de l'Angleterre, dans *R.* v. *Aston University Senate* [[1969] 2 Q.B. 538, à la p. 555]: [TRADUCTION] «Les réparations par voie de brefs de prérogative sont de nature exceptionnelle et ils ne devraient pas être mis à la disposition de ceux qui tardent à exercer leurs droits».

(R. Dussault et L. Borgeat, *Traité de droit administratif* (2e éd. 1989), t. III, à la p. 660.)

Le juge en chef Laskin de notre Cour a reconnu cette obligation dans l'arrêt *P.P.G. Industries Canada Ltd. c. Procureur général du Canada*, [1976] 2 R.C.S. 739, aux pp. 749 et 750:

> À mon avis, les requêtes en annulation déposées par le procureur général sont sujettes au pouvoir discrétionnaire des tribunaux tout autant que le sont sans conteste ses requêtes pour l'obtention d'un bref de prohibition ou ses demandes de jugement déclaratoire. La présente cause est éminemment propice à l'exercice du pouvoir discrétionnaire qui permet de refuser le redressement demandé par le procureur général. Au premier rang des facteurs qui m'inclinent en ce sens il y a le retard inexpliqué de deux ans qui a précédé la contestation de la décision du Tribunal antidumping. [Je souligne.]

L'importance d'agir avec diligence dans les demandes de bref de prérogative a également été reconnue dans la plupart des textes législatifs qui régissent maintenant la révision judiciaire. Par exemple, la *Loi sur la procédure de révision judiciaire* de l'Ontario, L.R.O. 1990, ch. J.1, permet à un tribunal de proroger le délai fixé pour présenter une requête en révision judiciaire, mais seulement s'il est convaincu qu'il existe à première vue un motif pour accorder le redressement et qu'aucune personne touchée par la prorogation ne subira de préjudice grave (art. 5). En vertu de la *Judicial Review Procedure Act* de la Colombie-Britannique, R.S.B.C. 1979, ch. 209, une demande de révision judiciaire peut être prescrite par l'écoulement du temps dans le cas où un tribunal estime que le retard causerait un préjudice important (art. 11). Le paragraphe 28(2) de la *Loi sur la Cour fédérale*, L.R.C. (1985), ch. F-7, dispose que toute demande de révision judiciaire devant la Cour d'appel fédérale doit être présentée dans les dix jours qui suivent la première communication de la décision ou de l'ordonnance attaquée. Ce délai ne peut être prorogé qu'avec l'autorisation de la cour. En Alberta, le par. 753.11(1) des *Alberta Rules of*

must be filed and served within six months after that decision or act. Finally, in art. 835.1 of Quebec's *Code of Civil Procedure*, R.S.Q., c. C-25, which applies to all extraordinary remedies, it is stipulated that motions must be served "within a reasonable time". The Court of Appeal of Quebec held in *Syndicat des employés du commerce de Rivière-du-Loup (section Émilio Boucher, C.S.N.) v. Turcotte*, [1984] C.A. 316, at p. 318, that: [TRANSLATION] "This article [835.1] merely codified the common law rule that the remedy must be exercised within a reasonable time".

Court (Alta. Reg. 390/68) dispose que si le redressement sollicité est l'annulation d'une décision ou d'un acte, la demande de révision judiciaire doit être déposée et signifiée dans les six mois qui suivent la décision ou l'acte en question. Enfin, l'art. 835.1 du *Code de procédure civile* du Québec, L.R.Q., ch. C-25, qui s'applique à tous les recours extraordinaires, dispose que la requête doit être signifiée «dans un délai raisonnable». La Cour d'appel du Québec a statué dans l'arrêt *Syndicat des employés du commerce de Rivière-du-Loup (section Émilio Boucher, C.S.N.) c. Turcotte*, [1984] C.A. 316, à la p. 318: «Cet article [835.1] n'a fait que codifier la règle de la *common law* que ce recours doit être exercé dans un délai raisonnable.»

By the time this application was brought, the dam was 40 percent complete. A significant amount of public money had already been spent. It is a matter of public record that individual members of the respondent Society were aware of the approval issued under the *N.W.P.A.* prior to February, 1988. Even if such were not the case, the respondent Society still could have launched its action in early 1988. At that time, major construction had not yet taken place. Had the respondent Society initiated proceedings then as compared to April of 1989, the appellant Alberta would have been in a much better position objectively to assess any potential legal risk associated with continuing. Faced with the possibility of invalid federal approval, it may well have chosen at that point not to put out the public funds that it did.

Au moment où le présent recours a été exercé, le barrage était complété à 40 pour 100. Un bon montant de deniers publics avait déjà été dépensé. Il est établi que les membres de la Société intimée étaient au courant de l'approbation accordée sous le régime de la *L.P.E.N.* avant le mois de février 1988. Même s'ils ne l'étaient pas, la Société intimée aurait pu intenter son action au début de 1988. À cette époque, les travaux importants de construction n'avaient pas encore commencé. Si la Société intimée avait alors intenté ses poursuites au lieu de le faire en avril 1989, l'appelante l'Alberta aurait été en bien meilleure position pour évaluer objectivement tout risque juridique lié à la poursuite des travaux. Face à l'éventuelle invalidité de l'approbation du fédéral, elle aurait bien pu décider alors de ne pas investir les deniers publics comme elle l'a fait.

After years of extensive planning, innumerable public hearings, environmental studies and reports, and after the establishment of various councils and committees for the purpose of reviewing proposals that were put forward, the appellant Alberta embarked upon an enormous undertaking to meet the needs of its constituents. It did so at the expense of the public. And it did so after having been advised by the federal government that it could legitimately proceed. The Oldman River dam no doubt necessitates comprehensive administration. Its construction also involves a significant

Après avoir consacré de nombreuses années à une planification intense, tenu d'innombrables audiences publiques, réalisé un grand nombre d'études et de rapports en matière d'environnement et établi divers conseils et comités chargés de l'examen des propositions présentées, l'appelante l'Alberta s'est lancée dans une entreprise d'envergure pour répondre aux besoins de ses électeurs. Elle l'a fait aux frais du public, mais après avoir été avisée par le gouvernement fédéral qu'elle pouvait légitimement le faire. Le barrage de la rivière Oldman nécessite certes une administration glo-

number of contracts with third parties. Given the enormity of the project and the interests at stake, it was unreasonable for the respondent Society to wait 14 months before challenging the decision of the Minister of Transport. In the context of this case, it was imperative that the respondent Society respect the common law duty to act promptly.

Had the respondent Society acted more promptly, the appellant Alberta would have been able to assess its position without regard to the economic and administrative commitment that was a reality by the time these proceedings were launched. It is impossible to conclude that the appellant Alberta was not prejudiced by the delay. Moreover, the motions judge made a finding on prejudice, and found that there was no justification for waiting to launch the attack until the dam was nearly 40 percent completed.

The rationale for requiring applicants for prerogative relief to act promptly is to enable their erstwhile respondents to act upon the authority given to them. The applicant cannot invoke the fact that the respondent did what he or she was legally entitled to do as an answer to its own delay. Such a view would put a premium on delay and deliver the wrong message to those who plan prerogative challenges.

My colleague, La Forest J., would also give some weight to the fact that the appellant Alberta was aware of the opposition of the respondent Society and others because of the other unsuccessful challenges by the Society and others. In my view, those challenges are completely irrelevant to this question. Those attacks were all ill-founded, and the appellant Alberta was not bound to expect that these peripheral and collateral proceedings presaged a fundamental attack on the original permit. The fact that detractors are harassing a travelling train does not put one on guard against the proposition that they are going to attack the authority to depart in the first instance. In my opinion, those activities need not have been taken into consideration by the motions judge. None of the activities undertaken by the Society or its

bale. Sa construction comporte également un nombre important de contrats avec des tiers. Compte tenu de l'envergure du projet et des intérêts en jeu, il n'était pas raisonnable que la Société intimée attende 14 mois avant de contester la décision du ministre des Transports. Dans le présent contexte, la Société intimée devait absolument respecter l'obligation de diligence de la common law.

Si la Société intimée avait agi d'une façon plus diligente, l'appelante l'Alberta aurait pu évaluer sa position sans tenir compte de l'engagement économique et administratif qui était mis en œuvre au moment où les présentes procédures ont été intentées. Il est impossible de conclure que l'appelante l'Alberta n'a pas subi de préjudice en raison du retard. Par ailleurs, le juge des requêtes a évalué le préjudice et a statué que rien ne justifiait d'attendre pour entamer la présente contestation que le barrage soit complété pour près de 40 pour 100.

On exige que les auteurs d'une demande de bref de prérogative agissent avec diligence pour permettre aux intimés de donner suite au pouvoir qui leur est conféré. Le requérant ne peut justifier son retard en soutenant que l'intimé a fait ce qu'il avait légalement le droit de faire. Ce point de vue favoriserait les retards et induirait en erreur les personnes qui ont l'intention de présenter une demande de bref de prérogative.

Mon collègue le juge La Forest accorderait également une certaine importance au fait que l'appelante l'Alberta était au courant de l'opposition de la Société intimée et des autres parties en raison des autres contestations infructueuses intentées par celles-ci. À mon avis, ces contestations ne sont aucunement pertinentes en l'espèce. Elles étaient toutes mal fondées et l'appelante l'Alberta n'avait pas à s'attendre que ces poursuites connexes et incidentes laissaient présager une contestation fondamentale du permis initial. Le fait que des détracteurs manifestent du mécontentement au sujet d'un train en marche ne nous met pas en garde contre la possibilité qu'ils en contestent l'autorisation de mise en route. À mon avis, le juge des requêtes n'avait pas à tenir compte de ces activités. Aucune des activités de la Société ou de ses membres

members precluded the respondent Society from undertaking this challenge.

The activities referred to by my colleague were qualitatively different from that which is sought in this action, and irrelevant to the issue at hand. The applications for *certiorari* brought by the respondent Society in October 1987 and early 1988 respectively, were directed at interim licences issued by Alberta's Minister of Environment pursuant to that province's *Water Resources Act*, R.S.A. 1980, c. W-5. The petitioning of the Alberta Energy Resources Conservation Board focused on the hydro-electric aspects of the dam. The information sworn before a justice of the peace alleged an offence pursuant to the federal *Fisheries Act*, R.S.C., 1985, c. F-14.

This action centres on the constitutionality and applicability of the *Environmental Assessment and Review Process Guidelines Order*. It raises new and different issues. The previous efforts of the respondent Society were not necessary preliminaries; they were separate and distinct from the relief sought here. It is my view that in determining whether he should exercise his discretion against the respondent Society, Jerome A.C.J. was obliged to look only at those factors which he considered were directly connected to the application before him. He was clearly in the best position to assess the relevancy of that put forward by the parties. Interference with his exercise of discretion is not warranted unless it can be said with certainty that he was wrong in doing what he did. For the reasons stated above, I am of the opinion that the test has not been met in this case.

3. Costs

I see no justification for awarding the respondent Society costs on a solicitor and client basis. The general rule in this Court is that a successful party recovers costs on the usual party and party basis. That was the rule applied by the courts below. My colleague proposes an award of solici-

n'empêchait la Société intimée d'entamer la présente contestation.

Les activités mentionnées par mon collègue étaient qualitativement différentes de celles visées par la présente action et n'ont aucune pertinence en l'espèce. Les demandes de bref de *certiorari* présentées par la Société intimée en octobre 1987 et au début de 1988 visaient des permis provisoires délivrés par le ministre de l'Environnement de l'Alberta, sous le régime de la *Water Resources Act*, R.S.A. 1980, ch. W-5, de cette province. La demande auprès de l'Energy Resources Conservation Board de l'Alberta portait sur les aspects hydroélectriques du barrage. La dénonciation faite sous serment devant un juge de paix mentionnait une infraction de la *Loi sur les pêches*, L.R.C. (1985), ch. F-14.

Le présent pourvoi porte sur la constitutionnalité et l'applicabilité du *Décret sur les lignes directrices visant le processus d'évaluation et d'examen en matière d'environnement*. Il soulève des questions nouvelles et différentes. Les efforts déployés auparavant par la Société intimée n'étaient pas des préliminaires nécessaires; il s'agissait là de recours distincts et différents du redressement sollicité en l'espèce. À mon avis, pour déterminer s'il devait exercer son pouvoir discrétionnaire contre la Société intimée, le juge en chef adjoint Jerome devait examiner seulement les facteurs qui, selon lui, se rattachaient directement à la demande dont il était saisi. Il était clairement le mieux placé pour évaluer la pertinence de ce que les parties lui ont présenté. On n'est justifié d'intervenir à l'égard de l'exercice de son pouvoir discrétionnaire, que si l'on peut affirmer avec certitude qu'il a eu tort de procéder ainsi. Pour les motifs qui précèdent, je suis d'avis de conclure que l'on n'a pas satisfait à ce critère en l'espèce.

3. Les dépens

À mon avis, il n'est pas justifié d'adjuger les dépens comme entre procureur et client en faveur de la Société intimée. En règle générale devant notre Cour, la partie qui a gain de cause a droit aux dépens sur la base des frais entre parties. C'est la règle que les tribunaux d'instance inférieure ont

tor and client costs extending to the courts below. I see no ground for suggesting they were in error, and I see no ground for our departing from our own general rule. Public interest groups must be prepared to abide by the same principles as apply to other litigants. Were we to produce special rules for such litigants, we would jeopardize an important principle: those undertaking litigation must be prepared to accept some responsibility for the costs. I see nothing here to justify calling upon the taxpayers to meet the solicitor and client costs of this party.

4. Conclusion

I would allow the appeal with costs.

Appeal dismissed, with the exception that there should be no order in the nature of mandamus directing the Minister of Fisheries and Oceans to comply with the federal environmental guidelines order. STEVENSON J. *is dissenting.*

Solicitors for the appellant Her Majesty the Queen in right of Alberta: Milner & Steer, Edmonton.

Solicitor for the appellants the Minister of Transport and the Minister of Fisheries and Oceans: John C. Tait, Ottawa.

Solicitors for the respondent: Gowling, Strathy & Henderson, Ottawa.

appliquée. Mon collègue propose une adjudication des dépens comme entre procureur et client dans toutes les cours. Rien n'indique que les tribunaux d'instance inférieure ont commis une erreur et je ne vois pas pourquoi il faudrait déroger à notre règle générale. Les groupes d'intérêt public doivent être disposés à se plier aux mêmes principes que les autres plaideurs. Si l'on établissait des règles spéciales pour ces groupes, on mettrait en danger l'application d'un important principe: ceux qui intentent des poursuites doivent être disposés à accepter une certaine responsabilité quant aux dépens. En l'espèce, je ne vois rien qui justifie d'imposer aux contribuables qu'ils assument les dépens comme entre procureur et client pour le compte de cette partie.

4. Conclusion

Je suis d'avis d'accueillir le pourvoi avec dépens.

Pourvoi rejeté, sauf qu'il ne sera pas délivré de bref de la nature d'un mandamus ordonnant au ministre des Pêches et des Océans de se conformer aux lignes directrices fédérales en matière d'environnement. Le juge STEVENSON *est dissident.*

Environmental law --- Statutory protection of environment — Approvals, licences and orders — Aboriginal interests
Applicants were several Aboriginal bands and others who opposed pipeline development — Joint review panel found that project was in public interest and recommended that it go forward subject to 209 conditions — Two certificates of public convenience and necessity were issued — Several appeals and applications for judicial review regarding various aspects of proceedings were brought, and were consolidated into single application — Application granted — Order in council was reasonable and defensible, however, Canada did not fulfill its obligation to consult Aboriginal peoples to standard of reasonable satisfaction — Good faith was shown and proper framework was put in place for consultation but consultation aspect of process fell short — Order in council was quashed as well as certificates that were issued under them, and matter remitted — Governor in council's determination was reasonable in light of administrative law principles — Government did not prejudge result of process, and bias on part of governor in council was not shown — Framework of consultation process was not unilaterally imposed on first nations — Level of funding provided constrained participation in joint review process, but there was no evidence that funding available was so inadequate it made process unreasonable — Canada fell well short of its deep duty to make reasonable efforts to inform and consult — Canada assessed strength of claim of certain bands, but acted improperly in failing to share assessment with affected first nations — Not all items of interest were discussed in consultation process — During consultation meetings, Aboriginal groups were repeatedly told that Canada's representatives were working on assumption that governor in council needed to make its decision by particular date, and were tasked with information gathering, and were not authorized to make decisions — Requirement to give adequate reasons was not shown to be met.
Environmental law --- Statutory protection of environment — Approvals, licences and orders — Practice and procedure
Standing; evidence from affidavits.
The applicants were several Aboriginal bands and others who opposed a pipeline development. A joint review panel found that the project was in the public interest and recommended that it go forward subject to 209 conditions. After the recommendation, a phase of consultation with the applicants including Aboriginal bands was conducted. Two certificates of public convenience and necessity were issued.
Nine applications for judicial review of the orders were brought, as well as five applications for judicial review of the review panel's report, and four appeals of certificates issued related to the project. All related to the report of the joint review panel, the Order in Council made by the Governor in Council and the Certificates made by the National Energy Board The proceedings were consolidated.

Held: The application for judicial review was granted.

Per Dawson and Stratas JJ.A.: The order in council was reasonable and was defensible. However, Canada did not fulfill its obligation to consult Aboriginal peoples to a standard of reasonable satisfaction. Good faith was shown and a proper framework was put in place for consultation. However, the consultation aspect of the process fell short. The order in council was quashed as well as the certificates that were issued under them. The matter was remitted back to the governor in council for redetermination.

The legislative scheme was a complete code. The only effective decision maker was the governor in council. Under the legislative regime, the primary attack was against the governor in council's order in council, which prompted the issuance of the certificates.

The governor in council's determination was reasonable in the light of administrative law principles.

Canada fell well short of its duty to make reasonable efforts to inform and consult. The duty was a deep one. The honour of the crown was not maintained. Canada did not meet its duty regarding the 45 day consultation period that followed the release of the joint review panel's report.

The government did not prejudge the result of the process. Bias on the part of the governor in council was not shown. It must be shown that the decision-maker's mind was closed such that representations to the contrary would be futile.

The framework of the consultation process was not unilaterally imposed on the first nations. The Crown has discretion as to how it constructs its process. The level of funding provided constrained participation in the joint review process, but there was no evidence that the funding available was so inadequate it made the process unreasonable. It was not unreasonable for Canada to integrate the review process into the Crown consultation process, and the process was not over-delegated.

Canada assessed the strength of the claim of certain bands, but failed to share with affected first nations the assessment. Canada was not obliged to share its legal assessment, which was subject to solicitor-client privilege. Privilege barred Canada from disclosing factual information relevant to the consultation process. However, information on the strength of the claim was a necessary part of meaningful consultation. The information was not shared with any first nation. It was not consistent with the duty to consult and the obligation of fair dealing for Canada to simply assert that the project's impact would be mitigated without first discussing the nature and extent of the rights at stake.

Not all items of interest were discussed in the consultation process. In certain instances, information was put before the governor in council that did not accurately portray the concerns of the affected first nations, and these errors were not corrected or brought to the attention of the governor in council.

During the consultation meetings, Aboriginal groups were repeatedly told that Canada's representatives were working on the assumption that the governor in council needed to make its decision by a particular date, were tasked with information gathering, and were not authorized to make decisions. These actions fell short of the duty to consult. Canada's representatives repeatedly stated that they had to accept the findings of the joint review panel as set out in its report, when the consultation process was an opportunity to address errors and admissions in the report. Canada failed to engage, dialogue and grapple with the concerns expressed to it in good faith by all of the applicant first nations. There was no indication Canada intended to amend or supplement the conditions imposed by the panel, to correct any errors or omissions in its report, or to provide meaningful feedback on material concerns raised. There was no real effort to pursue meaningful two-way dialogue. There was no one from Canada's side to do more than take notes, and no one able to respond meaningfully.

Certain letters relied on by Canada did not fully respond to the concerns of the applicants. The letters centered on accommodation measures and were generic. The letters did not engage with the repeatedly expressed concern that insufficient evidence was available to allow for an informed dialogue about the potential impacts of the project on Aboriginal and treaty rights. During the process, the parties were entitled to much more information, consideration and explanation from Canada regarding the specific concerns they had put to Canada.

The requirement to give adequate reasons was not shown to be met.

The deficiencies might have been rectified with an extension of time but Canada did not request such an extension.

Per Ryer J.A. (dissenting): The applications should be dismissed. Imperfections in the process were not sufficient to render the consultation process inadequate. The Crown met its duty to consult with the applicants. The only Aboriginal rights engaged by the project were each first nation's asserted rights in relation to the use and benefits of the lands and waterways that the project would cross. The project did not affect governance rights or Aboriginal title.

The timelines for the consultations were statutorily imposed. The Crown had no obligation to make a request for an extension of time.

Any inaccuracies in the Crown consultation report were insufficient to render the Crown's consultations inadequate. The information requested by the applicants mostly related to matters that were considered by the joint review panel or matters that were never placed before the panel, but should have been.

The Crown made no error in failing to disclose the strength of its claim assessments. The Crown, as a matter of law, had no obligation to share its assessment of the strength of each First Nation's claim in respect of asserted rights. The Crown's legal assessment of the strength of a First Nation's claim is inherently subject to solicitor-client privilege, which extends to the Crown's information upon which its legal assessment is based.

The Crown's participation in the consultations was sufficient to fulfill the honour of the Crown, particularly in a process that dealt with a project of large duration, size and scope.

The Governor in Council's reasons were adequate. The Crown's reasoning was, adequately demonstrated by the report, the consultation meetings, the Crown consultation report and the correspondence from the Crown to the first nations who engaged in the consultations.

APPLICATION for judicial review of determination regarding pipeline development project.

***Dawson, Stratas JJ.A.*:**

1 Before the Court are nine applicav.tions for judicial review of Order in Council P.C. 2014-809. That Order required the National Energy Board to issue two Certificates of Public Convenience and Necessity, on certain conditions, concerning the Northern Gateway Project. That Project, proposed by Northern Gateway Pipelines Inc. and Northern Gateway Pipelines Limited Partnership, consists of two pipelines transporting oil and condensate, and related facilities.

2 Also before the Court are five applications for judicial review of a Report issued by a review panel, known as the Joint Review Panel, acting under the *Canadian Environmental Assessment Act, 2012*, S.C. 2012, c. 19, section 52 and the *National Energy Board Act*, R.S.C. 1985, c. N-7, as amended. The Governor in Council considered the Joint Review Panel's Report when making its Order in Council.

3 And also before the Court are four appeals of the Certificates issued by the National Energy Board.

4 All of these proceedings have been consolidated. These are our reasons for judgment in the consolidated proceedings. In conformity with the order consolidating the proceedings, the original of these reasons will be placed in the lead file, file A-437-14, and a copy will be placed in each of the other files.

5 As seen above, three administrative acts — the Order in Council, the Report and the Certificates — are all subject to challenge. But, as explained below, for our purposes, the Order in Council is legally the decision under review and is the focus of our analysis.

6 Applying the principles of administrative law, we find that the Order in Council is acceptable and defensible on the facts and the law and is reasonable. The Order in Council was within the margin of appreciation of the Governor in Council, a margin of appreciation that, as we shall explain, in these circumstances is broad.

7 However, the Governor in Council could not make the Order in Council unless Canada has also fulfilled the duty to consult owed to Aboriginal peoples.

8 When considering whether that duty has been fulfilled — *i.e.*, the adequacy of consultation — we are not to insist on a standard of perfection; rather, only reasonable satisfaction is required. Bearing in mind that standard, we conclude that Canada has not fulfilled its duty to consult. While Canada exercised good faith and designed a good framework to fulfil its duty to consult, execution of that framework — in particular, one critical part of that framework known as Phase IV — fell well short of the mark. A summary of our reasons in support of this conclusion can be found at paragraphs 325-332, below.

9 In reaching this conclusion, we rely to a large extent on facts not in dispute, including Canada's own factual assessments and its own officials' words. Further, in reaching this conclusion, we have not extended any existing legal principles or fashioned new ones. Our conclusion follows from the application of legal principles previously settled by the Supreme Court of Canada to the undisputed facts of this case.

10 Thus, for the following reasons, we would quash the Order in Council and the Certificates that were issued under them. We would remit the matter back to the Governor in Council for prompt redetermination.

11 For the convenience of the reader, we offer an index to these reasons:

A. The Project

12 The Northern Gateway Project consists of two 1,178 kilometer pipelines and associated facilities. One pipeline is intended to transport oil from Bruderheim, Alberta to Kitimat, British Columbia. At Kitimat, the oil would be loaded onto tankers for delivery to export markets. The other pipeline would carry condensate removed from tankers at Kitimat to Bruderheim, for distribution to Alberta markets.

13 The associated facilities include both tank and marine terminals in Kitimat consisting of a number of oil storage tanks, condensate storage tanks, tanker berths and a utility berth. Kitimat would be a much busier place, with 190-250 tanker calls a year, some tankers up to 320,000 tons deadweight in size.

14 If built, the Project could operate for 50 years or more.

15 Behind the Project are Northern Gateway Pipelines Limited Partnership and Northern Gateway Pipelines Inc. For the purposes of these reasons, it is not necessary to distinguish between the two and so the term "Northern Gateway" shall be used throughout for both or either.

16 Northern Gateway is not alone behind the Project. It has 26 Aboriginal equity partners representing almost 60% of the Aboriginal communities along the pipelines' right-of-way, representing 60% of the area's First Nations' population and 80% of the area's combined First Nations and Métis population. Northern Gateway continues to discuss long term partnerships with a number of Aboriginal groups and expects that the number of equity partners will increase.

B. The parties

17 The Project significantly affects a number of the First Nations who are parties to these proceedings. In no particular order, these parties are as follows:

- *Gitxaala Nation*. Portions of the oil and condensate tanker routes for the Project are located within the Gitxaala's asserted traditional territory. The Gitxaala maintain that the tanker traffic resulting from the Project would affect its Aboriginal rights, including title and self-governance rights. Its main community, Lach Klan, is roughly 10 kilometres from the tanker routes. Also near the tanker routes are fifteen of its reserves, several harvesting areas, traditional village sites, and spiritual sites.

- *Haisla Nation*. A portion of the pipelines, the entire Kitimat terminal and a portion of the tanker route are within territory claimed by the Haisla upon which they assert rights to hunt, fish, trap, gather, use timber resources and govern. Canada accepted the Haisla's comprehensive claim for negotiations decades ago and twenty years ago, Canada entered into a framework agreement with the Haisla for treaty negotiations.

- *Gitga'at First Nation.* All ships coming or going from the Kitimat terminal must pass through the Gitga'at's asserted territory. They have fourteen reserves along the proposed shipping route; indeed, the route is just two kilometres from the main Gitga'at community at Hartley Bay, British Columbia.

- *Kitasoo Xai'Xais Band Council.* This party is the body that governs the Kitasoo Xai'Xais Nation, a band of Aboriginal peoples comprised of the Tsimshian Kitasoo people and Heiltsuk language speaking Xai'Xais people. Their asserted territory includes a number of coastal islands and surrounding waters and mainland territory next to inlets and fjords. Tankers will cross their territory.

- *Heiltsuk Tribal Council.* This party governs the Heiltsuk Nation. The Heiltsuk Nation is a band of Aboriginal peoples amalgamated from five tribal groups located on the central coast of British Columbia. They assert a claim to 16,658 square kilometres of land and nearshore and offshore waters on the central coast of British Columbia. Their main community is Bella Bella, on Campbell Island. Tankers approaching Kitimat from the southern approach will travel through the Heiltsuk's asserted territory.

• *Nadleh Whut'en and Nak'azdli Whut'en*. They are part of the Yinka Dene or Dakelh people. Yinka Dene means "people of the earth" or "people for the land." Dakelh means "travellers on water." They have a governance system founded in ancestral laws, key elements of which include the affiliation of Dakelh people with clans that include hereditary leaders, land and resource management territories known as "keyoh" or "keyah," and a system of governance known as "bahlats" as an institution to govern the keyoh/keyah and clans. The pipelines would cross approximately 50 kilometres of the Nadleh's asserted territory and cross 86 watercourses on their land, 21 of which are fish-bearing waters. The pipelines would cross approximately 110 kilometres of the Nak'azdli's asserted territory and cross 167 watercourses on their land, 60 of which are fish-bearing waters. A pumping station would also be located on the Nak'azdli's asserted territory. The Nadleh and the Nak'azdli are members of the Carrier Sekani Tribal Council, whose comprehensive claim has been accepted by Canada for negotiation.

• *Haida Nation.* The Haida Nation is the Indigenous Peoples of Haida Gwaii. Haida Gwaii means "islands of the people," and is an archipelago of more than 150 islands, extending roughly 250 kilometres, with roughly 4,700 kilometres of shoreline. No place is further than 20 kilometres from the sea. All proposed tanker routes go through or are next to the marine portion of the territory asserted by the Haida. In the southern portion of Haida Gwaii is Gwaii Haanas, a Haida protected area and national park reserve that contains a UNESCO World Heritage Site called "sGan gwaay" or "nansdins." Northern Gateway identified nine ecosections and twelve oceanographic areas of significance for the Project and a number of these surround Haida Gwaii.

18 Other parties before the Court claim a strong interest in the Project:

• *ForestEthics Advocacy Association*. This non-profit environmental protection society has a long history of advocating for changes in the extraction of natural resources, protecting endangered forests and wild places, educating and informing the public and working with governments and others in pursuit of these objectives.

• *Living Oceans Society*. This non-profit society advances science-based policy recommendations to achieve the conservation of oceans and the communities that depend upon them. It has been involved in researching and proposing policy for oil and gas development as it affects the marine environment.

• *Raincoast Conservation Foundation.* This is a group of conservationists and scientists dedicated to protecting the lands, waters and wildlife of coastal British Columbia through peer-reviewed science and grassroots advocacy and the use of a full-time university lab, a research station and a research vessel.

• *B.C. Nature.* This is a federation of naturalists and naturalist clubs representing more than 5,000 people. It wishes to maintain the integrity of British Columbia's ecosystems and rich biodiversity. To this end, it engages in public education and coordinates a science-based program that identifies, conserves and monitors a network of habitats for bird populations.

• *Unifor*. This is a labour union that represents many energy and fisheries workers in Canada. The energy workers it represents are employed in oil and gas exploration, transportation, refining and conservation in petrochemical and plastics industries. A number of its members work in production and refining facilities in Alberta and British Columbia that are to be served by the Project. The fisheries workers are located across Canada. On the west coast, Unifor represents commercial fishers and fish plant workers who rely on healthy fish stocks and fish habitats.

C. The approval process for the Project

(1) Introduction

19 The challenges associated with the approval process for the Project were immense. Massive in size and affecting so many diverse groups and geographic habitats in so many different ways, the Project had to be assessed in a sensitive, structured, efficient, yet inclusive manner.

20 By and large — with the exception of certain aspects of Canada's execution of the duty to consult, to which we return later in these reasons — the assessment and approval process was set up well and operated well. Given the challenges, this was no small achievement.

(2) The beginning

21 In late 2005, Northern Gateway Pipeline submitted a preliminary information package to the National Energy Board and the Canadian Environmental Assessment Agency.

22 In early 2006, the Board, after consulting with various federal authorities, recommended that the Minister of the Environment refer the Project to a review panel. In the autumn, the Minister of the Environment referred the Project to a review panel to be conducted jointly under the *National Energy Board Act* and the *Canadian Environmental Assessment Act*. That review panel was known as the Joint Review Panel because it had two tasks. First, it was to prepare a report under section 52 of the *National Energy Board Act* for the consideration of the Governor in Council. Second, owing to the fact that the Project was a "designated project" within the meaning of section 2 of the *Canadian Environmental Assessment Act*, the Joint Review Panel was to conduct an environmental assessment of the Project and provide recommendations to the Governor in Council under section 30 of the *Canadian Environmental Assessment Act*.

23 The terms of reference for the Joint Review Panel needed to be settled. Those terms of reference were to appear in an agreement between the National Energy Board and the Minister of the Environment. In September 2006, the Canadian Environmental Assessment Agency released a draft of that agreement for comment. This was an opportunity for the public and, specifically, Aboriginal groups, to provide their views.

24 The review process was paused in late 2006 at the request of Northern Gateway which wanted time to complete various commercially necessary tasks. Those tasks were completed by mid-2008 when Northern Gateway requested the review process resume. In particular, it requested that the draft agreement setting the terms for the Joint Review Panel be finalized.

25 Throughout this time, Aboriginal groups continued to have an opportunity to comment on the draft agreement. And in late 2008-early 2009, the Canadian Environmental Assessment Agency specifically contacted Aboriginal groups to advise them about the Project and to inform them of opportunities to participate in proceedings before the Joint Review Panel and the related process of consultation with the Crown. Much more on this will be discussed below.

26 In February 2009, the Agency released the Government of Canada's framework for consulting with Aboriginal groups regarding the Project. This framework, found in a document entitled *Approach to Crown Consultation for the Northern Gateway Project*, outlined a comprehensive five phase consultation process:

- *Phase I: Preliminary Phase.* During this Phase, there would be consultation on the draft Joint Review Panel agreement and information would be provided to Aboriginal Groups on the mandates of the National Energy Board and the Canadian Environmental Agency and the Joint Review Panel process.

- *Phase II: Pre-hearing Phase.* Information would be given to Aboriginal groups concerning the Joint Review Panel process and groups would be encouraged to participate in the process.

- *Phase III: The Hearing Phase.* During this time, the Joint Review Panel would hold its hearings. Aboriginal groups would be encouraged to participate and to provide information to help the Joint Review Panel in its process and deliberations. During this phase, the Crown was to participate and to facilitate the process by providing expert scientific and regulatory advice.

- *Phase IV: The Post-Report Phase.* Following the release of the Report of the Joint Review Panel, the Crown was to engage in consultation concerning the Report and on any project-related concerns that were outside of the Joint Review Panel's mandate. For this purpose, the Canadian Environmental Assessment Agency was to be the contact point. This was

to take place before the Governor in Council's decision whether certificates for the Project should be issued under section 54 of the *National Energy Board Act*.

• *Phase V: The Regulatory/Permitting Phase.* During this phase, further consultation was contemplated concerning permits and authorizations to be granted for the Project, if approved.

27 In February 2009, the Canadian Environmental Assessment Agency also released a new draft Joint Review Panel agreement, amended to respond to concerns raised during the initial comment period. A public comment period regarding the new draft agreement followed. Although the public comment period closed in mid-April 2009, submissions and comments from Aboriginal groups continued to be accepted until August 2009. During this time, the Crown offered to meet with Aboriginal groups to discuss the draft Joint Review Panel agreement and how consultation with them would be carried out. In particular, the Gitga'at, the Gitxaala and the Haisla met with the Crown.

28 Near the end of 2009, the mandate of the Joint Review Panel and the process for the assessment of the Project began to be finalized. The National Energy Board and all federal "responsible authorities" within the meaning of the *Canadian Environment Assessment Act* signed an agreement entitled *Project Agreement for the Northern Gateway Pipelines Project in Alberta and British Columbia*. The Canadian Environmental Assessment Agency issued a document entitled *Scope of the Factors - Northern Gateway Pipeline Project, Guidance for the assessment of the environmental effects of the Northern Gateway Project*. Finally, the Agency issued letters to certain Aboriginal groups providing all of these documents and a table setting out the consideration given to comments made by Aboriginal groups.

29 Shortly afterward, the Canadian Environmental Assessment Agency and the National Energy Board issued the Agreement Between the National Energy Board and the Minister of the Environment concerning the Joint Review of the Northern Gateway Pipeline Project. In this agreement, Canada committed to a "whole of government" approach to Aboriginal engagement and consultation, including reliance, to the extent possible, on the consultation efforts of Northern Gateway and the Joint Review Panel.

30 Also appended to this agreement as an appendix were the terms of reference for the Joint Review Panel. These terms of reference included process requirements for the Joint Review Panel to follow during its review of the Project. And in January 2010, in accordance with that agreement, the Minister of the Environment and the Chair of the National Energy Board appointed three persons to serve on the Joint Review Panel.

31 The National Energy Board also established a Joint Review Panel Secretariat working in concert with the Canadian Environmental Assessment Agency to provide support to the Joint Review Panel.

32 The Canadian Environmental Assessment Agency acted as Canada's "Crown Consultation Coordinator" for the Project.

(3) The process gets underway

33 With these preliminary matters completed, the approval process formally began.

34 In May 2010, Northern Gateway filed an application requesting certificates from the National Energy Board for the Project, an order under Part IV of the *National Energy Board Act* approving the toll principles for service on the pipelines and such further relief as required.

35 In July 2010, the Joint Review Panel issued its first procedural direction. It sought comment from the public, including Aboriginal groups, concerning a draft list of issues, the information that Northern Gateway should be required to file over and above that submitted with its application, and locations for the Joint Review Panel's oral hearings. To this end, the Joint Review Panel received written comments and received oral comments at hearings held at three locations.

36 The Joint Review Panel considered what it had heard and decided certain things. It required Northern Gateway to file additional information to address certain issues specific to the Project and certain risks posed by the Project. The Joint Review

Panel stated that this information had to be provided before it could issue a hearing order. It also revised the list of issues and commented on the locations for its hearings.

37 Staff for the Joint Review Panel conducted public information sessions between 2010 and July 2011 and online workshops from November 2011 to April 2013. By March 31, 2011, Northern Gateway submitted additional information in response to the Joint Review Panel's decision.

38 In May 2011, the Joint Review Panel issued a hearing order. In that order, it described the procedures to be followed in the joint review process and gave notice that the hearings would start on January 10, 2012.

39 Around the same time, the Crown consulted with representatives of some of the Aboriginal groups who are applicants/appellants in these proceedings, including the Gitga'at, the Gitxaala, the Haida, the Haisla and the Heiltsuk. Also in 2011, a number of Aboriginal groups, including most of the Aboriginal groups who are parties to these proceedings, and a number of public interest groups registered to intervene in the proceedings before the Joint Review Panel.

40 A number of government agencies — Natural Resources Canada, Aboriginal Affairs and Northern Development Canada, Fisheries and Oceans Canada, the Canadian Coast Guard, Transport Canada, and Environment Canada — also registered as government participants in the proceedings. All interveners and government agencies had to file written evidence with the Joint Review Panel by one week before the start date for the hearings.

41 Through its Participant Funding Program, the Canadian Environmental Assessment Agency provided funding to certain public and Aboriginal groups to facilitate their participation in the Joint Review Panel process and Crown consultation activities.

42 As scheduled, on January 10, 2012, the Joint Review Panel's hearings began. The first set of hearings was known as the "community hearings." The Joint Review Panel travelled to many local communities and received letters of comment and oral statements, including statements from representatives of Aboriginal groups. At one point, the Joint Review Panel and other interveners accompanied representatives of the Gitxaala on a boat tour of a portion of their asserted traditional territory.

43 Around this time, the Joint Review Panel received a report setting out a technical review of marine aspects of the Project. Initiated in 2004 at the request of Northern Gateway, this technical review, known as the Technical Review Process of Marine Terminal Systems and Transshipment Sites or "TERMPOL", was conducted by a review committee chaired by Transport Canada, staffed by representatives of other federal departments and, among other things, assisted by a technical consultant acting on behalf of the Haisla and the Kitimat Village Council.

44 Also around this time, there were some legislative changes. Originally, the environmental assessment was to be conducted in accordance with the *Canadian Environmental Assessment Act* that was introduced in 1992. But in mid-2012, the *Jobs, Growth and Long-Term Prosperity Act*, S.C. 2012, c. 19 became law, repealing the 1992 version of the *Canadian Environmental Assessment Act*, enacting the *Canadian Environmental Assessment Act, 2012*, and amending the *National Energy Board Act*. The joint review process for the Project, already underway, was continued under these amended provisions. Hereafter, in these reasons, unless otherwise noted, references to the *Canadian Environmental Assessment Act, 2012* and the *National Energy Board Act* refer to the 2012 versions of these statutes.

45 A month after those statutory amendments became law, and in accordance with those amendments, the Minister of the Environment and the Chair of the National Energy Board directed that the Joint Review Panel submit its environmental assessment as part of the recommendation report under section 52 of the *National Energy Board Act* no later than December 31, 2013. They also finalized amendments to some of the agreements discussed above and the terms of reference of the Joint Review Panel.

46 Proceeding under the 2012 legislation, the Joint Review Panel had two main tasks. First, it had to provide a report under section 52 of the *National Energy Board Act*. Second, in that report it was also to include recommendations flowing from the environmental assessment conducted under *Canadian Environment Assessment Act, 2012*: subsection 29(1). Overall, the report was to:

• recommend whether the requested certificates should be issued;

• outline the terms and conditions that should be attached to any certificates issued by the Board for the Project;

• present recommendations based on the environmental assessment.

47 In September 2012, the Joint Review Panel conducted what it called "final hearings." This last phase of the hearing process ended in June 2013. During this stage, the parties asked questions, filed written argument and made oral argument.

(4) The parties' participation in the approval process

48 Overall, the parties had ample opportunity to participate in the Joint Review Panel process and generally availed themselves of it:

• *Gitxaala Nation*. The Gitxaala participated in all parts of the Joint Review Panel process, including making information requests, submitting technical reports, written and oral Aboriginal evidence, and attending hearings in many localities. Overall, the Gitxaala submitted 7,400 pages of written material, oral testimony from 27 community members and 11 expert reports on various subjects, including Northern Gateway's risk assessment methodology, oil spill modelling, and the fate and behaviour of spilled diluted bitumen. Among other things, the Gitxaala expressed deep concern about the specific effects the Project could have on asserted rights and title.

• *Haisla Nation*. The Haisla also participated in all parts of the Joint Review Panel process, including submitting technical and Aboriginal evidence, oral traditional evidence, attending hearings, and participating extensively in the final round of submissions. During the process, the Haisla filed a traditional use study that describes their culture, property ownership system and laws and how the Project will interfere with their use and occupation of their lands, water and resources. The Haisla also submitted a historic and ethnographic report and an archaeological site summary supporting their claim to exclusive use and occupation of their asserted lands. The Haisla also tendered statements and oral histories from hereditary and elected chiefs and elders outlining the Haisla's history, their use and occupation of their asserted lands, and their efforts to protect their lands, waters and resources for the benefit of future generations. The Haisla also expressed their concerns about the Project.

• *Kitasoo Xai'Xais Band Council.* The Kitasoo submitted brief written evidence, oral evidence at a community hearing and filed final written argument.

• *Heiltsuk Tribal Council.* The Heiltsuk submitted written evidence, answered an information request, gave oral evidence at a community hearing, conducted some cross-examination of witnesses for Northern Gateway and Canada, and submitted final argument.

• *Nadleh Whut'en and Nak'azdli Whut'en*. These parties made submissions to the Crown regarding the draft joint review agreement and the manner in which Canada was engaging in consultation during Phase I of the consultation process. The Yinka Dene Alliance, of which the Nadleh and the Nak'azdli were a part, elected not to intervene before the Joint Review Panel, but a keyoh within the Nak'azdli Whut'en system of governance did intervene.

• *Haida Nation.* The Haida participated in all parts of the Joint Review Panel process. They made information requests, submitted written technical and Aboriginal evidence, provided oral Aboriginal evidence, attended hearings to question Northern Gateway witnesses, submitted a final written argument with comments on proposed conditions, and made oral reply argument. They submitted a 336-page Marine Traditional Knowledge Study describing traditional harvesting activities, both historically and currently, locations of harvesting, and the time of year that harvesting is undertaken for various species throughout Haida Gwaii. The Haida and Canada collaborated on Living Marine Legacy Reports over six years culminating in 2006. These reports, totalling 1,247 pages, provide baseline inventories of marine plants, invertebrates, birds and mammals along the coastline of Haida Gwaii.

• *ForestEthics Advocacy Association, Living Oceans Society and Raincoast Conservation Foundation* (hereafter, the "Coalition"). The Coalition participated in the Joint Review Panel process as interveners, providing written evidence and written responses to information requests regarding that evidence, submitting written information requests to other parties, offering witnesses, questioning other parties' witnesses and making submissions.

• *B.C. Nature.* B.C. Nature participated in the Joint Review Panel process as a joint intervener with Nature Canada. It tendered written evidence, provided written responses to information requests regarding that evidence, questioned the witnesses of other parties, provided late written evidence, offered witnesses on that evidence, filed several motions and made submissions.

• *Unifor.* The predecessor unions of this national union participated in the Joint Review Panel process as interveners. They adduced expert evidence, exchanged information requests and responses, presented witnesses for questioning, and offered final argument.

49 Needless to say, the involvement of Northern Gateway and Canada throughout the Joint Review Panel process was massive. In Canada's case, as mentioned above, a number of departments and agencies registered with the Joint Review Panel process as government participants. They filed written evidence, information requests and responses to information requests. They also offered witnesses for questioning on the evidence provided.

(5) The Report of the Joint Review Panel

50 On December 19, 2013, the Joint Review Panel issued a two volume report: *Connections: Report of the Joint Review Panel for the Enbridge Northern Gateway Project*, vol. 1 and *Considerations: Report of the Joint Review Panel for the Enbridge Northern Gateway Project*, vol. 2.

51 The Joint Review Panel found that the Project was in the public interest. It recommended that the applied-for certificates be issued subject to 209 conditions. The conditions require a number of plans, studies and assessments to be considered and assessed by the National Energy Board and other regulators in the future. The 209 conditions include requirements that Northern Gateway provide ongoing and enduring opportunities for affected Aboriginal groups to have input into the continuing planning, construction and operation of the Project through a variety of plans, programs and benefits. A number of the conditions were offered by Northern Gateway during the process. Along with those 209 conditions, Northern Gateway made over 450 voluntary commitments.

52 The conditions deal with such matters as environmental management and monitoring, emergency preparedness and response, and the delivery of economic benefits. Northern Gateway says that these conditions represent an investment of $2 billion on its part. Aboriginal groups, including the First Nations parties in these proceedings will continue to have opportunities to provide input and participate in fulfilment of these conditions.

53 The Joint Review Panel also recommended that the Governor in Council conclude that:

• potential adverse environmental effects from the Project alone are not likely to be significant;

• adverse effects of the Project, in combination with effects of past, present and reasonably foreseeable activities or actions are likely to be significant for certain woodland caribou herds and grizzly bear populations; and

• the significant adverse cumulative effects in relation to the caribou and grizzly bear populations are justified in the circumstances.

(6) Consultation with Aboriginal groups: Phase IV

54 Following the release of the Report of the Joint Review Panel, the process of consultation with Aboriginal groups entered Phase IV of the consultation framework. A detailed description of what happened during this phase is set out below.

55 For present purposes, Phase IV began with the Crown sending letters to representatives of Aboriginal groups in December 2013, seeking input on how the Joint Review Panel's recommendations and conclusions addressed their concerns. Officials from the Canadian Environmental Assessment Agency and other federal departments held meetings with representatives from Aboriginal groups to discuss concerns. Federal representatives met with a number of Aboriginal groups including the Gitga'at, the Gitxaala, the Haida, the Haisla, the Heiltsuk, the Kitasoo and the Yinka Dene Alliance (which includes the Nak'azdli and the Nadleh).

56 Following these meetings and discussions, on May 22, 2014, Canada issued a report concerning its consultation: *Report on Aboriginal Consultation Associated with the Environmental Assessment*.

57 At this point, it is perhaps appropriate to note that this is not a case where the proponent of the Project, Northern Gateway, declined to work with Aboriginal groups. Far from it. Once the pipeline corridor for the Project was defined in 2005, Northern Gateway engaged with all Aboriginal groups, both First Nations and Métis, with communities located within 80 kilometres of the Project corridor and the marine terminal. Northern Gateway engaged with other Aboriginal groups beyond that area to the extent that they self-identified as having an interest because the corridor crossed their traditional territory.

58 In all, Northern Gateway engaged with over 80 different Aboriginal Groups across various regions of Alberta and British Columbia. It employed many methods of engagement, giving $10.8 million in capacity funding to interested Aboriginal groups. It also implemented an Aboriginal Traditional Knowledge program, spending $5 million to fund studies in that area.

(7) The Order and the Certificates

59 The Governor in Council had before it the Report of the Joint Review Panel. It also had other material before it that was not disclosed in these proceedings. Canada asserted privilege over that material under section 39 of the *Canada Evidence Act*, R.S.C. 1985, c. C-5.

60 On June 17, 2014, the Governor in Council issued Order in Council P.C. 2014-809. On June 28, 2014, the Order in Council was published in the *Canada Gazette*.

61 Balancing all of the competing considerations before it, the Governor in Council accepted "the [Joint Review] Panel's finding that the Project, if constructed and operated in full compliance with the conditions set out in Appendix 1 of Volume 2 of the [Joint Review Panel's] Report, is and will be required by the present and future public convenience and necessity." It "accept[ed] the Panel's recommendation." It added that "the Project would diversify Canada's energy export markets and would contribute to Canada's long-term economic prosperity."

62 As for matters raised by the environmental assessment, the Governor in Council found that, taking into account the implementation of mitigation measures, "the Project is not likely to cause significant environmental effects" within the meaning of subsection 5(1) of the *Canadian Environmental Assessment Act, 2012*. However, the Project would cause significant adverse environmental effects to certain populations of woodland caribou and grizzly bear within the meaning of subsection 5(2) of the *Canadian Environmental Assessment Act, 2012* but these effects were "justified in the circumstances." Exercising its authority under subsections 53(1) and 53(2) of the *Canadian Environmental Assessment Act, 2012*, the Governor in Council established conditions with which Northern Gateway must comply, which conditions were set out in Appendix 1 of *Considerations: Report of the Joint Review Panel for the Enbridge Northern Gateway Project*, vol. 2.

63 In light of the foregoing, exercising its power under section 54 of the *National Energy Board Act*, the Governor in Council directed the National Energy Board to issue Certificates of Public Convenience and Necessity to Northern Gateway for the Project in accordance with the terms and conditions set out in the Joint Review Panel's Report.

64 On the same day, at the behest of the Governor in Council, the National Energy Board issued a decision statement under subsection 54(1) of the *National Energy Board Act*. The Decision Statement summarized what the Governor in Council

had decided on the Joint Review Panel's recommendations made as a result of the environmental assessment. The Decision Statement reads as follows:

> The Governor in Council has decided, after considering the [Joint Review Panel's] report together with the conditions proposed in it, that the [Project] is not likely to cause significant adverse environmental effects referred to in subsection 5(1) of [the *Canadian Environmental Assessment Act*], but it is likely to cause significant environmental effects referred to in subsection 5(2) of [the *Canadian Environmental Assessment Act*] to certain populations of woodland caribou and grizzly bear as described in the [Joint Review Panel's] report.
>
> The Governor in Council has also decided that, pursuant to subsection 52(4) of [the *Canadian Environmental Assessment Act*], the significant adverse environmental effects that the [Project] is likely to cause to certain populations of woodland caribou and grizzly bear are justified in the circumstances.
>
> The Governor in Council has established the 209 conditions set out by the [Joint Review Panel] in its report as the conditions in relation to the environmental effects referred to in subsections 53(1) and (2) of [the *Canadian Environmental Assessment Act*] with which [Northern Gateway] must comply.

65 A day later, on June 18, 2014, following the direction of the Governor in Council, the National Energy Board issued to Northern Gateway two certificates: Certificate OC-060 for the oil pipeline and associated facilities and Certificate OC-061 for the condensate pipeline and associated facilities.

66 In July 2014, a month after the Governor in Council made its Order in Council and the Board issued its two Certificates, as part of Phase IV of the consultation framework, the Crown wrote a number of Aboriginal groups, including some of the parties to these proceedings, offering explanations concerning the comments they had made and the Governor in Council's Order in Council. To the same effect was an earlier letter written in June 2014, just before the Governor in Council made its Order in Council approving the Project. We will consider these letters, along with other facts concerning what took place during Phase IV, in more detail below.

(8) Future regulatory processes

67 The issuance of the Certificates by the National Energy Board is not the final step before construction of the Project starts. Further regulatory processes will have to be pursued. Northern Gateway must obtain:

- *Routing approval.* Northern Gateway must apply for and receive approval from the National Energy Board for the detailed route of the Project. Owners of land and those whose interests may be adversely affected will have an opportunity to file objections. In approving a route, the National Energy Board must take into account all representations made to it at a public hearing and consider the most appropriate methods of construction and its timing. The National Energy Board has the power to attach conditions to its approval. See generally sections 33-40 of the *National Energy Board Act*.

- *Acquisition of land rights.* Northern Gateway must acquire land rights for the Project in Alberta and British Columbia from private landowners or provincial Crowns by voluntary agreements, right-of-entry orders or Governor-in-Council consent. In some instances, it must pay compensation for acquisition of or damage to land. See generally sections 75, 77, 84, 87-103 of the *National Energy Board Act*.

- *Approval to start construction.* Northern Gateway must apply for and receive leave from the National Energy Board to start construction of the Project. Under this process, Northern Gateway must satisfy all of the pre-construction conditions contained in the Certificates granted by the National Energy Board. As a practical matter, during this process, the detailed design and operation of the Project will be refined. Out of the 209 conditions attached to the Certificates, roughly 120 involve the preparation and filing of further information with the Board before construction can begin. Some of the conditions require Northern Gateway to report on its consultations with Aboriginal groups as part of its application for approval submitted to the National Energy Board.

• *Approval to start operations.* Before the Project can be operated, Northern Gateway must apply to the National Energy Board for approval. Among other things, it must satisfy the National Energy Board that the pipelines can be opened safely for transmission.

• *Other approvals under federal and provincial legislation.* Northern Gateway will also have to apply for these. The application process may involve the need for further consultation with Aboriginal groups. Much of this may take place under Phase V of the consultation framework.

D. Legal proceedings

68 The following notices of application for judicial review challenge the Report of the Joint Review Panel:

• *Federation of British Columbia Naturalists d.b.a. BC Nature v. Attorney General of Canada et al.* (A-59-14);

• *ForestEthics Advocacy Association et al. v. Attorney General of Canada et al.* (A-56-14);

• *Gitxaala Nation v. Minister of the Environment et al.* (A-64-14);

• *Haisla Nation v. Canada (Minister of Environment) et al.* (A-63-14) (later amended);

• *Gitga'at First Nation v. Attorney General of Canada et al.* (A-67-14).

69 The following notices of application for judicial review challenge the decision of the Governor in Council, namely Order in Council P.C. 2014-809:

• *Gitxaala Nation v. Attorney General of Canada et al.* (A-437-14);

• *Federation of British Columbia Naturalists d.b.a. BC Nature v. Attorney General of Canada et al.* (A-443-14);

• *ForestEthics Advocacy Association et al. v. Attorney General of Canada et al.* (A-440-14);

• *Gitga'at First Nation v. Attorney General of Canada et al.* (A-445-14);

• *The Council of the Haida Nation et al. v. Attorney General of Canada et al.* (A-446-14);

• *Haisla Nation v. Attorney General of Canada et al.* (A-447-14);

• *Kitasoo Xai'Xais Band Council et al. v. Her Majesty the Queen et al.* (A-448-14);

• *Nadleh Whut'en Band et al. v. Attorney General of Canada et al.* (A-439-14);

• *Unifor v. Attorney General of Canada et al.* (A-442-14).

70 The following notices of appeal were filed against the National Energy Board's decision to issue the Certificates (Certificate OC-060 and Certificate OC-061):

• *ForestEthics Advocacy Association et al. v. Northern Gateway Pipelines et al.* (A-514-14);

• *Gitxaala Nation v. Attorney General of Canada et al.* (A-520-14);

• *Haisla Nation v. Attorney General of Canada et al.* (A-522-14);

• *Unifor v. Attorney General of Canada et al.* (A-517-14).

71 As mentioned above, these proceedings were all consolidated. This consolidated matter was one of the largest proceedings ever prosecuted in this Court, with approximately 250,000 documents and multiple parties before the Court. Seven months after the proceedings were consolidated and after several motions to resolve minor disputes, the consolidated proceedings were ready for hearing. This Court wishes to express its appreciation to the parties for their exemplary conduct in prosecuting the consolidated proceedings in an efficient and expeditious manner.

72 Broadly speaking, the consolidated proceedings, taken together, seek an order quashing the administrative decisions in this case because, under administrative law principles, they are unreasonable or incorrect. They also seek an order quashing the Order in Council and the Certificates because Canada has not fulfilled its duty to consult with Aboriginal peoples concerning the Project.

73 Thus, we shall review the administrative decisions following administrative law principles and then assess whether Canada fulfilled its duty to consult with Aboriginal peoples.

E. Reviewing the administrative decisions following administrative law principles

(1) Introduction

74 This is a complicated case, with appeals and judicial reviews concerning three different administrative decisions: the Report of the Joint Review Panel, the Order in Council made by the Governor in Council and the Certificates made by the National Energy Board.

75 In complicated cases such as this, it is prudent to have front of mind the proper methodology for reviewing administrative decisions.

76 Some of the administrative decisions have been challenged by way of appeal, others by way of application for judicial review. Regardless of how they have been challenged, we are to review them in the same way, namely the way we proceed when considering applications for judicial review: *Canada (Minister of Citizenship and Immigration) v. Khosa*, 2009 SCC 12, [2009] 1 S.C.R. 339 (S.C.C.).

77 Broadly speaking, in judicial reviews, we deal with any preliminary issues, determine the standard of review, use that standard of review to assess the administrative decisions to see if the court should interfere, and then, if we consider interference to be warranted, decide what remedy, if any, should be granted. See generally *Canada (Attorney General) v. Boogaard*, 2015 FCA 150, 87 Admin. L.R. (5th) 175 (F.C.A.), at paragraphs 35-37; *Delios v. Canada (Attorney General)*, 2015 FCA 117, 472 N.R. 171 (F.C.A.), at paragraph 26; *Budlakoti v. Canada (Minister of Citizenship and Immigration)*, 2015 FCA 139, 473 N.R. 283 (F.C.A.), at paragraphs 27-28.

78 However, in complicated cases with many moving parts like this one, often it is useful to begin at a more basic level. What exactly is being reviewed?

79 In this case, we have a statutory scheme for the approval of projects, such as the Project in this case, involving the participation of a Joint Review Panel, the Governor in Council, and the National Energy Board. As part of their participation, each makes a decision of sorts. But in the end, are there really three decisions for the purposes of review?

80 Before pursuing the methodology of review, it is often useful to characterize the decision or decisions in issue in light of the legislative scheme within which they rest. After all, the legislative scheme is the law of the land. Absent constitutional objection, the legislative scheme must always bind us and guide the analysis.

81 Therefore, we shall examine certain preliminary issues raised by the parties. Then we shall analyze the legislative regime with a view to understanding the nature of the administrative decisions made here. Then we shall proceed to the substance of review and, if necessary, proceed to remedy.

(2) Preliminary issues

(a) The standing of certain parties

82 Northern Gateway challenges the standing of the Coalition, BC Nature and Unifor to maintain their proceedings.

83 To have direct standing in a proceeding challenging an administrative decision, a party must show that the decision affects its legal rights, imposes legal obligations upon it, or prejudicially affects it in some way: *League for Human Rights of B'Nai Brith Canada v. R.*, 2010 FCA 307, 409 N.R. 298 (F.C.A.) [herinafter Odynsky]; *Rothmans of Pall Mall Canada Ltd. v. Minister of National Revenue*, [1976] 2 F.C. 500 (Fed. C.A.); *Irving Shipbuilding Inc. v. Canada (Attorney General)*, 2009 FCA 116, [2010] 2 F.C.R. 488 (F.C.A.).

84 On the evidence before us, we are persuaded that the legal or practical interests of these parties are sufficient to maintain proceedings. Above, at paragraph 18, we have set out these parties' interests. We also note that they were all active interveners before the Joint Review Panel, participating in much of its process. In our view, these parties have direct standing to maintain their proceedings.

85 In support of its submission that these parties did not have standing, Northern Gateway invokes this Court's decision in *Forest Ethics Advocacy Assn. v. National Energy Board*, 2014 FCA 245, [2015] 4 F.C.R. 75 (F.C.A.).

86 In that case, this Court held that ForestEthics did not have standing to apply for judicial review of interlocutory National Energy Board decisions concerning who could participate in its hearing, the relevancy of certain issues, and the participation of an individual in the hearing. In the circumstances of that case, the National Energy Board's decisions did not affect ForestEthics' rights, impose legal obligations upon it, or prejudicially affect it in any way and so it did not have direct standing. Nor did it have standing as a public interest litigant under *Downtown Eastside Sex Workers United Against Violence Society v. Canada (Attorney General)*, 2012 SCC 45, [2012] 2 S.C.R. 524 (S.C.C.). Instead, it was a classic "busybody" as that term is understood in the jurisprudence (at paragraph 33):

> ForestEthics asks this Court to review an administrative decision it had nothing to do with. It did not ask for any relief from the Board. It did not seek any status from the Board. It did not make any representations on any issue before the Board. In particular, it did not make any representations to the Board concerning the three interlocutory decisions.

87 The circumstances are completely different in the case at bar. Therefore, we reject Northern Gateway's challenge to the standing of the Coalition, BC Nature and Unifor to maintain proceedings.

(b) The admissibility of affidavits

88 In their memoranda, the Heiltsuk and the Kitasoo submit that the affidavits of Northern Gateway are "substantially submissions in affidavit form, and the whole of each...or alternatively the offending parts of each should be struck out." The Gitxaala have adopted these submissions.

89 Under Rule 81 of the *Federal Courts Rules*, S.O.R./98-106, affidavits offered in support of proceedings are to be "confined to facts within the deponent's personal knowledge."

90 We agree that some portions of the affidavits filed by Northern Gateway smack of submissions that should appear in a memorandum of fact and law, not an affidavit. In considering this consolidated proceeding, we disregarded the offending portions of Northern Gateway's affidavits. Northern Gateway's affidavits do contain admissible evidence that we have considered.

91 Northern Gateway also submitted that there were argumentative portions in other affidavits filed with the Court, such as the Affidavit of Chief Councillor Ellis and most of the exhibits to the Affidavit of Acting Chief Clarence Innis. We agree. Again, in determining this matter, we disregarded argumentative portions in the evidence, and this did not affect our determination.

(3) The legislative scheme in detail

92 This is the first case to consider this legislative scheme, one that integrates elements from the *National Energy Board Act* and the *Canadian Environmental Assessment Act, 2012* and culminates in substantial decision-making by the Governor in Council. It is unique; there is no analogue in the statute book. Accordingly, cases that have considered other legislative schemes are not relevant to our analysis.

93 We must assess this legislative scheme on its own terms in light of the legislative text, the surrounding context, and Parliament's purpose in enacting the legislation: *Rizzo & Rizzo Shoes Ltd., Re*, [1998] 1 S.C.R. 27, 154 D.L.R. (4th) 193 (S.C.C.); *Bell ExpressVu Ltd. Partnership v. Rex*, 2002 SCC 42, [2002] 2 S.C.R. 559 (S.C.C.). Where the legislative text is clear, as it is here, it will predominate in the analysis: *Canada Trustco Mortgage Co. v. R.*, 2005 SCC 54, [2005] 2 S.C.R. 601 (S.C.C.).

94 Broadly speaking, under this legislative scheme, the proponent of a project applies for a certificate approving the project.

95 In response to the application, information is gathered, evaluations are made, an environmental assessment is conducted and recommendations are prepared and presented to the Governor in Council in a report. Overall, on the basis of everything put before it, the Governor in Council decides whether or not the certificate should be issued.

96 If the Governor in Council decides that a certificate may be issued, the Governor in Council may also cause the Board to issue a decision statement setting out conditions relating to the mitigation of environmental effects and follow-up measures. The decision statement becomes part of the certificate, *i.e.*, the mitigation and follow-up measures must be complied with.

97 In cases of uncertainty, the Governor in Council may remit the matter back for reconsideration of the recommendations. After reconsideration, recommendations are sent back to the Governor in Council for decision.

98 We turn now to a more detailed analysis of the legislative scheme.

99 In this case, the decision-making process under the *National Energy Board Act* was triggered by Northern Gateway applying for certificates for the Project.

100 In response to an application, there are two stages: a report stage and a decision stage. During the former, a report is prepared under the *National Energy Board Act*. In cases like this involving a "designated project" within the meaning of the *Canadian Environmental Assessment Act, 2012*, the report must include a report of an environmental assessment prepared under the Act. In short, in a case such as this, the report stage requires fulfilment of requirements under the *National Energy Board Act* and the *Canadian Environmental Assessment Act, 2012*.

101 Under this legislative scheme, the National Energy Board is assigned many responsibilities, particularly at the report stage. In this case, as mentioned, a Joint Review Panel was established. It was a "review panel" for the purposes of the *Canadian Environmental Assessment Act, 2012* and stood in the shoes of the National Energy Board for the purposes of the report stage under the *National Energy Board Act*. So in this case, references in the legislation to the Board should be seen as references to the Joint Review Panel for the purposes of the report stage.

(a) The report stage: the National Energy Board Act requirements

102 First, under subsection 52(1) of the *National Energy Board Act*, a report has to be prepared and submitted to a coordinating Minister for transmission to the Governor in Council. Subsection 52(1) provides that the report is to set out a recommendation as to whether the certificates should be granted and, if so, what conditions, if any, ought to be attached to the certificates:

> **52.** (1) If the Board [here the Joint Review Panel] is of the opinion that an application for a certificate in respect of a pipeline is complete, it shall prepare and submit to the Minister, and make public, a report setting out

(a) its recommendation as to whether or not the certificate should be issued for all or any portion of the pipeline, taking into account whether the pipeline is and will be required by the present and future public convenience and necessity, and the reasons for that recommendation; and

(b) regardless of the recommendation that the Board [here the Joint Review Panel] makes, all the terms and conditions that it considers necessary or desirable in the public interest to which the certificate will be subject if the Governor in Council were to direct the Board to issue the certificate, including terms or conditions relating to when the certificate or portions or provisions of it are to come into force.

52. (1) S'il estime qu'une demande de certificat visant un pipeline est complète, l'Office établit et présente au ministre un rapport, qu'il doit rendre public, où figurent:

a) sa recommandation motivée à savoir si le certificat devrait être délivré ou non relativement à tout ou partie du pipeline, compte tenu du caractère d'utilité publique, tant pour le présent que pour le futur, du pipeline;

b) quelle que soit sa recommandation, toutes les conditions qu'il estime utiles, dans l'intérêt public, de rattacher au certificat si le gouverneur en conseil donne instruction à l'Office de le délivrer, notamment des conditions quant à la prise d'effet de tout ou partie du certificat.

103 Under subsection 52(2), the recommendation of the Board (here the Joint Review Panel) contained in its report must be based on certain criteria:

52. (2) In making its recommendation, the Board [here the Joint Review Panel] shall have regard to all considerations that appear to it to be directly related to the pipeline and to be relevant, and may have regard to the following:

(a) the availability of oil, gas or any other commodity to the pipeline;

(b) the existence of markets, actual or potential;

(c) the economic feasibility of the pipeline;

(d) the financial responsibility and financial structure of the applicant, the methods of financing the pipeline and the extent to which Canadians will have an opportunity to participate in the financing, engineering and construction of the pipeline; and

(e) any public interest that in the Board's opinion may be affected by the issuance of the certificate or the dismissal of the application.

52. (2) En faisant sa recommandation, l'Office tient compte de tous les facteurs qu'il estime directement liés au pipeline et pertinents, et peut tenir compte de ce qui suit :

a) l'approvisionnement du pipeline en pétrole, gaz ou autre produit;

b) l'existence de marchés, réels ou potentiels;

c) la faisabilité économique du pipeline;

d) la responsabilité et la structure financières du demandeur et les méthodes de financement du pipeline ainsi que la mesure dans laquelle les Canadiens auront la possibilité de participer au financement, à l'ingénierie ainsi qu'à la construction du pipeline;

e) les conséquences sur l'intérêt public que peut, à son avis, avoir la délivrance du certificat ou le rejet de la demande.

104 Subsections 52(4) to 54(10) place the Board (here the Joint Review Panel) on a strict time line to issue its report:

(4) The report must be submitted to the Minister within the time limit specified by the Chairperson. The specified time limit must be no longer than 15 months after the day on which the applicant has, in the Board's opinion, provided a complete application. The Board shall make the time limit public.

(5) If the Board requires the applicant to provide information or undertake a study with respect to the pipeline and the Board, with the Chairperson's approval, states publicly that this subsection applies, the period that is taken by the applicant to comply with the requirement is not included in the calculation of the time limit.

(6) The Board shall make public the dates of the beginning and ending of the period referred to in subsection (5) as soon as each of them is known.

(7) The Minister may, by order, extend the time limit by a maximum of three months. The Governor in Council may, on the recommendation of the Minister, by order, further extend the time limit by any additional period or periods of time.

(8) To ensure that the report is prepared and submitted in a timely manner, the Minister may, by order, issue a directive to the Chairperson that requires the Chairperson to

(a) specify under subsection (4) a time limit that is the same as the one specified by the Minister in the order;

(b) issue a directive under subsection 6(2.1), or take any measure under subsection 6(2.2), that is set out in the order; or

(c) issue a directive under subsection 6(2.1) that addresses a matter set out in the order.

(9) Orders made under subsection (7) are binding on the Board and those made under subsection (8) are binding on the Chairperson.

(10) A copy of each order made under subsection (8) must be published in the Canada Gazette within 15 days after it is made.

(4) Le rapport est présenté dans le délai fixé par le président. Ce délai ne peut excéder quinze mois suivant la date où le demandeur a, de l'avis de l'Office, complété la demande. Le délai est rendu public par l'Office.

(5) Si l'Office exige du demandeur, relativement au pipeline, la communication de renseignements ou la réalisation d'études et déclare publiquement, avec l'approbation du président, que le présent paragraphe s'applique, la période prise par le demandeur pour remplir l'exigence n'est pas comprise dans le calcul du délai.

(6) L'Office rend publiques, sans délai, la date où commence la période visée au paragraphe (5) et celle où elle se termine.

(7) Le ministre peut, par arrêté, proroger le délai pour un maximum de trois mois. Le gouverneur en conseil peut, par décret pris sur la recommandation du ministre, accorder une ou plusieurs prorogations supplémentaires.

(8) Afin que le rapport soit établi et présenté en temps opportun, le ministre peut, par arrêté, donner au président instruction :

a) de fixer, en vertu du paragraphe (4), un délai identique à celui indiqué dans l'arrêté;

b) de donner, en vertu du paragraphe 6(2.1), les instructions qui figurent dans l'arrêté, ou de prendre, en vertu du paragraphe 6(2.2), les mesures qui figurent dans l'arrêté;

c) de donner, en vertu du paragraphe 6(2.1), des instructions portant sur une question précisée dans l'arrêté.

(9) Les décrets et arrêtés pris en vertu du paragraphe (7) lient l'Office et les arrêtés pris en vertu du paragraphe (8) lient le président.

(10) Une copie de l'arrêté pris en vertu du paragraphe (8) est publiée dans la Gazette du Canada dans les quinze jours de sa prise.

105 In this case, as noted above, the Joint Review Panel was under an order requiring it to finish its report by December 31, 2013.

106 As subsection 52(1) of the *National Energy Board Act* makes clear, the report is submitted to the "Minister," who is defined in section 2 of the *National Energy Board Act* as "such member of the Queen's Privy Council for Canada as is designated by the Governor in Council as the Minister for the purposes of this Act." The role of that coordinating Minister is to place the report before the Governor in Council for its consideration under sections 53 and 54.

107 Once made, the report is "final and conclusive" but this is "[s]ubject to sections 53 and 54" of the *National Energy Board Act*. These sections empower the Governor in Council to consider the report and decide what to do with it: subsection 52(11) of the *National Energy Board Act*.

(b) The report stage: the Canadian Environmental Assessment Act, 2012 requirements

108 The second thing that happened after Northern Gateway applied for the certificates was an environmental assessment process. In this case, this was required. The Project was a "designated project" within the meaning of section 2 of the *Canadian Environmental Assessment Act, 2012*. Accordingly, under subsection 52(3), the report also had to set out an environmental assessment conducted under that Act:

52. (3) If the application relates to a designated project within the meaning of section 2 of the *Canadian Environmental Assessment Act*, 2012, the report must also set out the Board's environmental assessment prepared under that Act in respect of that project.

52. (3) Si la demande vise un projet désigné au sens de l'article 2 de la *Loi canadienne sur l'évaluation environnementale* (2012), le rapport contient aussi l'évaluation environnementale de ce projet établi par l'Office sous le régime de cette loi.

109 Environmental assessments are to include assessments of the matters set out in sections 5 and 19 of the *Canadian Environmental Assessment Act, 2012*. For present purposes, we need only offer a general summary of these matters. They include changes caused to the air, land or sea and the lifeforms that inhabit those areas. They also include consideration of matters specific to the Project and its specific effects on the environment and lifeforms who inhabit it. And they include the effects upon Aboriginal peoples' health and socio-economic conditions, physical and cultural heritage, the use of lands and resources for traditional purposes, and any structures, sites or things that are of historical, archaeological, palaeontological, or architectural significance.

110 What is submitted to the Governor in Council is not the whole environmental assessment but rather only a report of it. Under section 29 of the *Canadian Environmental Assessment Act, 2012*, the report must offer recommendations concerning the subject matter found in paragraph 31(1)(*a*) of the *Canadian Environmental Assessment Act, 2012* — *i.e.*, the existence of significant adverse environmental effects and whether or not those effects can be justified.

111 Section 29 of the *Canadian Environmental Assessment Act, 2012* provides as follows:

29. (1) If the carrying out of a designated project requires that a certificate be issued in accordance with an order made under section 54 of the *National Energy Board Act*, the responsible authority with respect to the designated project must ensure that the report concerning the environmental assessment of the designated project sets out

(a) its recommendation with respect to the decision that may be made under paragraph 31(1)(*a*) in relation to the designated project, taking into account the implementation of any mitigation measures that it set out in the report; and

(b) its recommendation with respect to the follow-up program that is to be implemented in respect of the designated project.

(2) The responsible authority submits its report to the Minister within the meaning of section 2 of *the National Energy Board Act* at the same time as it submits the report referred to in subsection 52(1) of that Act.

(3) Subject to sections 30 and 31, the report with respect to the environmental assessment is final and conclusive.

29. (1) Si la réalisation d'un projet désigné requiert la délivrance d'un certificat au titre d'un décret pris en vertu de l'article 54 de la *Loi sur l'Office national de l'énergie*, l'autorité responsable à l'égard du projet veille à ce que figure dans le rapport d'évaluation environnementale relatif au projet:

a) sa recommandation quant à la décision pouvant être prise au titre de l'alinéa 31(1)*a*) relativement au projet, compte tenu de l'application des mesures d'atténuation qu'elle précise dans le rapport;

b) sa recommandation quant au programme de suivi devant être mis en oeuvre relativement au projet.

(2) Elle présente son rapport au ministre au sens de l'article 2 de la *Loi sur l'Office national de l'énergie* au même moment où elle lui présente le rapport visé au paragraphe 52(1) de cette loi.

(3) Sous réserve des articles 30 et 31, le rapport d'évaluation environnementale est définitif et sans appel.

(c) Consideration by the Governor in Council

112 Armed with the report prepared in accordance with the foregoing provisions of the *National Energy Board Act* and *Canadian Environmental Assessment Act, 2012*, the Governor in Council may make its decision concerning the application for the certificate by the proponent, here Northern Gateway.

113 Overall, the Governor in Council has three options:

(1) It can "direct the Board to issue a certificate in respect of the pipeline or any part of it and to make the certificate subject to the terms and conditions set out in the report": paragraph 54(1)(*a*) of the *National Energy Board Act*. If this option is pursued, the Board has no discretion. It must grant the certificates within seven days: subsection 54(5) of the *National Energy Board Act*.

As part of its consideration, the Governor in Council must consider whether significant adverse environmental effects will be caused and, if so, whether the effects "can be justified in the circumstances." Depending on its decision, it may have to impose conditions that must be complied with: section 53 of the *Canadian Environmental Assessment Act, 2012*. It does this through the mechanism of a "decision statement" it can cause the Board to issue: section 31 of the *Canadian Environmental Assessment Act, 2012*. The Board must issue the decision statement within seven days and it forms part of the certificate: subsection 31(5) of the *Canadian Environmental Assessment Act, 2012*.

(2) It can "direct the Board to dismiss the application for a certificate": paragraph 54(1)(*b*) of the *National Energy Board Act*. If this option is pursued, the Board has no discretion. It must dismiss the certificates within seven days: subsection 54(5) of the *National Energy Board Act*.

(3) It can ask the Board to reconsider its recommendations in its report or any terms and conditions, or both: subsection 53(1) of the *National Energy Board Act*; subsection 30(1) of the *Canadian Environmental Assessment Act, 2012*. It can specify exactly what issue or issues are to be reconsidered and specify a time limit for the reconsideration: subsection 53(2) of the *National Energy Board Act*; subsection 30(2) of the *Canadian Environmental Assessment Act, 2012*. After its reconsideration is completed, the Board submits its reconsideration report. Then the Governor in Council considers the reconsideration report and decides again among these three options.

114 By law, the Governor in Council must choose one of these options within three months and only can take longer if it passes a specific order to that effect: subsection 54(3) of the *National Energy Board Act*.

115 For reference, section 31 of the *Canadian Environmental Assessment Act, 2012*, referred to above, provides as follows:

> 31. (1) After the responsible authority with respect to a designated project has submitted its report with respect to the environmental assessment or its reconsideration report under section 29 or 30, the Governor in Council may, by order made under subsection 54(1) of the *National Energy Board Act*
>
> (a) decide, taking into account the implementation of any mitigation measures specified in the report with respect to the environmental assessment or in the reconsideration report, if there is one, that the designated project
>
> (i) is not likely to cause significant adverse environmental effects,
>
> (ii) is likely to cause significant adverse environmental effects that can be justified in the circumstances, or
>
> (iii) is likely to cause significant adverse environmental effects that cannot be justified in the circumstances; and
>
> (b) direct the responsible authority to issue a decision statement to the proponent of the designated project that
>
> (i) informs the proponent of the decision made under paragraph (a) with respect to the designated project and,
>
> (ii) if the decision is referred to in subparagraph (*a*)(i) or (ii), sets out conditions — which are the implementation of the mitigation measures and the follow-up program set out in the report with respect to the environmental assessment or the reconsideration report, if there is one — that must be complied with by the proponent in relation to the designated project.
>
> (2) The conditions that are included in the decision statement regarding the environmental effects referred to in subsection 5(2), that are directly linked or necessarily incidental to the exercise of a power or performance of a duty or function by a federal authority and that would permit the designated project to be carried out, in whole or in part, take effect only if the federal authority exercises the power or performs the duty or function.
>
> (3) The responsible authority must issue to the proponent of the designated project the decision statement that is required in accordance with the order relating to the designated project within seven days after the day on which that order is made.
>
> (4) The responsible authority must ensure that the decision statement is posted on the Internet site.
>
> (5) The decision statement issued in relation to the designated project under subsection (3) is considered to be a part of the certificate issued in accordance with the order made under section 54 of the *National Energy Board Act* in relation to the designated project.
>
> 31. (1) Une fois que l'autorité responsable à l'égard d'un projet désigné a présenté son rapport d'évaluation environnementale ou son rapport de réexamen en application des articles 29 ou 30, le gouverneur en conseil peut, par décret pris en vertu du paragraphe 54(1) de la *Loi sur l'Office national de l'énergie*:
>
> a) décider, compte tenu de l'application des mesures d'atténuation précisées dans le rapport d'évaluation environnementale ou, s'il y en a un, le rapport de réexamen, que la réalisation du projet, selon le cas:
>
> (i) n'est pas susceptible d'entraîner des effets environnementaux négatifs et importants,

(ii) est susceptible d'entraîner des effets environnementaux négatifs et importants qui sont justifiables dans les circonstances,

(iii) est susceptible d'entraîner des effets environnementaux négatifs et importants qui ne sont pas justifiables dans les circonstances;

b) donner à l'autorité responsable instruction de faire une déclaration qu'elle remet au promoteur du projet dans laquelle:

(i) elle donne avis de la décision prise par le gouverneur en conseil en vertu de l'alinéa a) relativement au projet,

(ii) si cette décision est celle visée aux sous-alinéas *a*)(i) ou (ii), elle énonce les conditions que le promoteur est tenu de respecter relativement au projet, à savoir la mise en oeuvre des mesures d'atténuation et du programme de suivi précisés dans le rapport d'évaluation environnementale ou, s'il y en a un, le rapport de réexamen.

(2) Les conditions énoncées dans la déclaration qui sont relatives aux effets environnementaux visés au paragraphe 5(2) et qui sont directement liées ou nécessairement accessoires aux attributions qu'une autorité fédérale doit exercer pour permettre la réalisation en tout ou en partie du projet désigné sont subordonnées à l'exercice par l'autorité fédérale des attributions en cause.

(3) Dans les sept jours suivant la prise du décret, l'autorité responsable fait la déclaration exigée aux termes de celui-ci relativement au projet désigné et la remet au promoteur du projet.

(4) Elle veille à ce que la déclaration soit affichée sur le site Internet.

(5) La déclaration faite au titre du paragraphe (3) relativement au projet désigné est réputée faire partie du certificat délivré au titre du décret pris en vertu de l'article 54 de la *Loi sur l'Office national de l'énergie* relativement au projet.

116 For reference, section 54 of the *National Energy Board Act*, referred to above, provides as follows:

54. (1) After the Board has submitted its report under section 52 or 53, the Governor in Council may, by order,

(a) direct the Board to issue a certificate in respect of the pipeline or any part of it and to make the certificate subject to the terms and conditions set out in the report; or

(b) direct the Board to dismiss the application for a certificate.

(2) The order must set out the reasons for making the order.

(3) The order must be made within three months after the Board's report under section 52 is submitted to the Minister. The Governor in Council may, on the recommendation of the Minister, by order, extend that time limit by any additional period or periods of time. If the Governor in Council makes an order under subsection 53(1) or (9), the period that is taken by the Board to complete its reconsideration and to report to the Minister is not to be included in the calculation of the time limit.

(4) Every order made under subsection (1) or (3) is final and conclusive and is binding on the Board.

(5) The Board shall comply with the order made under subsection (1) within seven days after the day on which it is made.

(6) A copy of the order made under subsection (1) must be published in the Canada Gazette within 15 days after it is made.

54. (1) Une fois que l'Office a présenté son rapport en application des articles 52 ou 53, le gouverneur en conseil peut, par décret:

a) donner à l'Office instruction de délivrer un certificat à l'égard du pipeline ou d'une partie de celui-ci et de l'assortir des conditions figurant dans le rapport;

b) donner à l'Office instruction de rejeter la demande de certificat.

(2) Le gouverneur en conseil énonce, dans le décret, les motifs de celui-ci.

(3) Le décret est pris dans les trois mois suivant la remise, au titre de l'article 52, du rapport au ministre. Le gouverneur en conseil peut, par décret pris sur la recommandation du ministre, proroger ce délai une ou plusieurs fois. Dans le cas où le gouverneur en conseil prend un décret en vertu des paragraphes 53(1) ou (9), la période que prend l'Office pour effectuer le réexamen et faire rapport n'est pas comprise dans le calcul du délai imposé pour prendre le décret.

(4) Les décrets pris en vertu des paragraphes (1) ou (3) sont définitifs et sans appel et lient l'Office.

(5) L'Office est tenu de se conformer au décret pris en vertu du paragraphe (1) dans les sept jours suivant sa prise.

(6) Une copie du décret pris en vertu du paragraphe (1) est publiée dans la Gazette du Canada dans les quinze jours de sa prise.

117 For reference, section 30 of the *Canadian Environmental Assessment Act, 2012*, referred to above, which provides for consideration of the environmental recommendations set out in the report, provides as follows:

30. (1) After the responsible authority with respect to a designated project has submitted its report with respect to the environmental assessment under section 29, the Governor in Council may, by order made under section 53 of the *National Energy Board Act*, refer any of the responsible authority's recommendations set out in the report back to the responsible authority for reconsideration.

(2) The order may direct the responsible authority to conduct the reconsideration taking into account any factor specified in the order and it may specify a time limit within which the responsible authority must complete its reconsideration.

(3) The responsible authority must, before the expiry of the time limit specified in the order, if one was specified, reconsider any recommendation specified in the order and prepare and submit to the Minister within the meaning of section 2 of the *National Energy Board Act* a report on its reconsideration.

(4) In the reconsideration report, the responsible authority must

(a) if the order refers to the recommendation referred to in paragraph 29(1)(*a*)

(i) confirm the recommendation or set out a different one with respect to the decision that may be made under paragraph 31(1)(*a*) in relation to the designated project, and

(ii) confirm, modify or replace the mitigation measures set out in the report with respect to the environmental assessment; and

(b) if the order refers to the recommendation referred to in paragraph 29(1)(*b*), confirm the recommendation or set out a different one with respect to the follow-up program that is to be implemented in respect of the designated project.

(5) Subject to section 31, the responsible authority reconsideration report is final and conclusive.

(6) After the responsible authority has submitted its report under subsection (3), the Governor in Council may, by order made under section 53 of the *National Energy Board Act*, refer any of the responsible authority's recommendations set out in the report back to the responsible authority for reconsideration. If it does so, subsections (2) to (5) apply. However, in subparagraph (4)(*a*)(ii), the reference to the mitigation measures set out in the report with respect to the environmental assessment is to be read as a reference to the mitigation measures set out in the reconsideration report.

30. (1) Une fois que l'autorité responsable à l'égard d'un projet désigné a présenté son rapport d'évaluation environnementale en vertu de l'article 29, le gouverneur en conseil peut, par décret pris en vertu de l'article 53 de la *Loi sur l'Office national de l'énergie*, renvoyer toute recommandation figurant au rapport à l'autorité responsable pour réexamen.

(2) Le décret peut préciser tout facteur dont l'autorité responsable doit tenir compte dans le cadre du réexamen ainsi que le délai pour l'effectuer.

(3) L'autorité responsable, dans le délai précisé — le cas échéant — dans le décret, réexamine toute recommandation visée par le décret, établit un rapport de réexamen et le présente au ministre au sens de l'article 2 de la *Loi sur l'Office national de l'énergie*.

(4) Dans son rapport de réexamen, l'autorité responsable:

a) si le décret vise la recommandation prévue à l'alinéa 29(1)*a*):

(i) d'une part, confirme celle-ci ou formule une autre recommandation quant à la décision pouvant être prise au titre de l'alinéa 31(1)*a*) relativement au projet,

(ii) d'autre part, confirme, modifie ou remplace les mesures d'atténuation précisées dans le rapport d'évaluation environnementale;

b) si le décret vise la recommandation prévue à l'alinéa 29(1)*b*), confirme celle-ci ou formule une autre recommandation quant au programme de suivi devant être mis en oeuvre relativement au projet.

(5) Sous réserve de l'article 31, le rapport de réexamen est définitif et sans appel.

(6) Une fois que l'autorité responsable a présenté son rapport de réexamen en vertu du paragraphe (3), le gouverneur en conseil peut, par décret pris en vertu de l'article 53 de la *Loi sur l'Office national de l'énergie*, renvoyer toute recommandation figurant au rapport à l'autorité responsable pour réexamen. Les paragraphes (2) à (5) s'appliquent alors mais, au sous-alinéa (4)*a*)(ii), la mention des mesures d'atténuation précisées dans le rapport d'évaluation environnementale vaut mention des mesures d'atténuation précisées dans le rapport de réexamen.

118 And, finally, for reference, here is the reconsideration power under section 53 of the *National Energy Board Act*, referred to above:

53. (1) After the Board has submitted its report under section 52, the Governor in Council may, by order, refer the recommendation, or any of the terms and conditions, set out in the report back to the Board for reconsideration.

(2) The order may direct the Board to conduct the reconsideration taking into account any factor specified in the order and it may specify a time limit within which the Board shall complete its reconsideration.

(3) The order is binding on the Board.

(4) A copy of the order must be published in the Canada Gazette within 15 days after it is made.

(5) The Board shall, before the expiry of the time limit specified in the order, if one was specified, reconsider its recommendation or any term or condition referred back to it, as the case may be, and prepare and submit to the Minister a report on its reconsideration.

(6) In the reconsideration report, the Board shall

(a) if its recommendation was referred back, either confirm the recommendation or set out a different recommendation; and

(b) if a term or condition was referred back, confirm the term or condition, state that it no longer supports it or replace it with another one.

(7) Regardless of what the Board sets out in the reconsideration report, the Board shall also set out in the report all the terms and conditions, that it considers necessary or desirable in the public interest, to which the certificate would be subject if the Governor in Council were to direct the Board to issue the certificate.

(8) Subject to section 54, the Board's reconsideration report is final and conclusive.

(9) After the Board has submitted its report under subsection (5), the Governor in Council may, by order, refer the Board's recommendation, or any of the terms or conditions, set out in the report, back to the Board for reconsideration. If it does so, subsections (2) to (8) apply.

53. (1) Une fois que l'Office a présenté son rapport en vertu de l' article 52, le gouverneur en conseil peut, par décret, renvoyer la recommandation ou toute condition figurant au rapport à l'Office pour réexamen.

(2) Le décret peut préciser tout facteur dont l'Office doit tenir compte dans le cadre du réexamen ainsi que le délai pour l'effectuer.

(3) Le décret lie l'Office.

(4) Une copie du décret est publiée dans la Gazette du Canada dans les quinze jours de sa prise.

(5) L'Office, dans le délai précisé — le cas échéant — dans le décret, réexamine la recommandation ou toute condition visée par le décret, établit un rapport de réexamen et le présente au ministre.

(6) Dans son rapport de réexamen, l'Office:

a) si le décret vise la recommandation, confirme celle-ci ou en formule une autre;

b) si le décret vise une condition, confirme la condition visée par le décret, déclare qu'il ne la propose plus ou la remplace par une autre.

(7) Peu importe ce qu'il mentionne dans le rapport de réexamen, l'Office y mentionne aussi toutes les conditions qu'il estime utiles, dans l'intérêt public, de rattacher au certificat si le gouverneur en conseil donne instruction à l'Office de délivrer le certificat.

(8) Sous réserve de l'article 54, le rapport de réexamen est définitif et sans appel.

(9) Une fois que l'Office a présenté son rapport au titre du paragraphe (5), le gouverneur en conseil peut, par décret, renvoyer la recommandation ou toute condition figurant au rapport à l'Office pour réexamen. Les paragraphes (2) à (8) s'appliquent alors.

(4) Characterization of the legislative scheme

119 This legislative scheme is a complete code for decision-making regarding certificate applications. Other statutory regimes are not relevant unless they are specifically incorporated into this code, and then only to the extent they are incorporated into the code.

120 The legislative scheme shows that for the purposes of review the only meaningful decision-maker is the Governor in Council.

121 Before the Governor in Council decides, others assemble information, analyze, assess and study it, and prepare a report that makes recommendations for the Governor in Council to review and decide upon. In this scheme, no one but the Governor in Council decides anything.

122 In particular, the environmental assessment under the *Canadian Environmental Assessment Act, 2012* plays no role other than assisting in the development of recommendations submitted to the Governor in Council so it can consider the content of any decision statement and whether, overall, it should direct that a certificate approving the project be issued.

123 This is a different role — a much attenuated role — from the role played by environmental assessments under other federal decision-making regimes. It is not for us to opine on the appropriateness of the policy expressed and implemented in this legislative scheme. Rather, we are to read legislation as it is written.

124 Under this legislative scheme, the Governor in Council alone is to determine whether the process of assembling, analyzing, assessing and studying is so deficient that the report submitted does not qualify as a "report" within the meaning of the legislation:

- In the case of the report or portion of the report setting out the environmental assessment, subsection 29(3) of the *Canadian Environmental Assessment Act, 2012* provides that it is "final and conclusive," but this is "[s]ubject to sections 30 and 31." Sections 30 and 31 provide for review of the report by the Governor in Council and, if the Governor in Council so directs, reconsideration and submission of a reconsideration report by the Governor in Council.

- In the case of the report under section 52 of the *National Energy Board Act*, subsection 52(11) of the *National Energy Board Act* provides that it too is "final and conclusive," but this is "[s]ubject to sections 53 and 54." These sections empower the Governor in Council to consider the report and decide what to do with it.

125 In the matter before us, several parties brought applications for judicial review against the Report of the Joint Review Panel. Within this legislative scheme, those applications for judicial review did not lie. No decisions about legal or practical interests had been made. Under this legislative scheme, as set out above, any deficiency in the Report of the Joint Review Panel was to be considered only by the Governor in Council, not this Court. It follows that these applications for judicial review should be dismissed.

126 Under this legislative scheme, the National Energy Board also does not really decide anything, except in a formal sense. After the Governor in Council decides that a proposed project should be approved, it directs the National Energy Board to issue a certificate, with or without a decision statement. The National Energy Board does not have an independent discretion to exercise or an independent decision to make after the Governor in Council has decided the matter. It simply does what the Governor in Council has directed in its Order in Council.

127 In the matter before us, some parties filed notices of appeal against the Certificates issued by the National Energy Board. They, along with others, filed notices of application against the Governor in Council's Order in Council directing the

National Energy Board to grant the Certificates. In our view, under this legislative regime, the primary attack must be against the Governor in Council's Order in Council, as it prompts the automatic issuance of the Certificates. If the Governor in Council's Order in Council falls, then in our view the Certificates issued by the National Energy Board automatically fall as a consequence. As mentioned at the start of these reasons, since we would quash the Order in Council, the Certificates issued as a result of the Order in Council must also be quashed.

(5) Standard of review

128 With a full appreciation of the legislative scheme and our conclusion that the Governor in Council's Order in Council is the decision that is to be reviewed, we can now consider the standard of review.

129 Some of the parties before us submitted that the standard of review of the Order in Council made by the Governor in Council in this case has already been determined by this Court: *Council of the Innu of Ekuanitshit v. Canada (Attorney General)*, 2014 FCA 189, 376 D.L.R. (4th) 348 (F.C.A.).

130 In *Innu of Ekuanitshit*, the Governor in Council made an order in council approving a governmental response to a joint review panel established under the 1992 version of the *Canadian Environmental Assessment Act*. Among other things, this Court found that a failure to properly follow the earlier processes under the *Canadian Environmental Assessment Act* could invalidate the later order in council.

131 Many of the applicant/appellant First Nations argue that the processes under the *Canadian Environmental Assessment Act, 2012* in this case were not properly followed and so, on the authority of *Innu of Ekuanitshit*, the Order in Council in this case should be quashed.

132 On the surface, *Innu of Ekuanitshit* seems analogous to the case before us. In both cases, an order in council was made after a process under federal environmental assessment legislation had been followed. However, a closer inspection reveals that, in fact, *Innu of Ekuanitshit* was based on a fundamentally different statutory framework. To understand the differences, *Innu of Ekuanitshit* must be examined more closely.

133 In *Innu of Ekuanitshit*, this Court considered a decision made by three federal departments and a later order made by the Governor in Council approving the decision. The order and the decision came after an environmental assessment process had been followed concerning a hydroelectric project.

134 The Governor in Council's order in council approved the federal government's response to a report of a joint review panel established under the 1992 version of the *Canadian Environmental Assessment Act*. The order in council was made under section 37 of that legislation.

135 In considering the Governor in Council's order in council, this Court asked itself whether the Governor in Council and the departments "had respected the requirements of the [1992 version of the Canadian Environmental Assessment Act] before making their decisions" (at paragraph 39). It held (at paragraphs 40-41) that it could interfere with the Governor in Council's order only if it found that the legislative process was not properly followed before it made its decision, it made its decision without regard for the purposes of the Act or its decision had no basis in fact.

136 Of course, we are bound by this Court's decision in *Ekuanitshit*. However, in our view, it does not set out a standard of review that must be applied to the Governor in Council's decision under the different and unique legislative scheme in this case.

137 In assessing the standard of review, we cannot adopt a one-size-fits-all approach to a particular administrative decision-maker. Instead, in assessing the standard of review, it is necessary to understand the specific decision made in light of the provision authorizing it, the structure of the legislation and the overall purposes of the legislation.

138 The standard of review of the decision of the Governor in Council in *Ekuanitshit* may make sense where this Court is reviewing a decision by the Governor in Council to approve a decision made by others based on an environmental assessment.

The Governor in Council's decision is based largely on the environmental assessment. A broader range of policy and other diffuse considerations do not bear significantly in the decision.

139 In the case at bar, however, the Governor in Council's decision — the Order in Council — is the product of its consideration of recommendations made to it in the report. The decision is not simply a consideration of an environmental assessment. And the recommendations made to the Governor in Council cover much more than matters disclosed by the environmental assessment — instead, a number of matters of a polycentric and diffuse kind.

140 In conducting its assessment, the Governor in Council has to balance a broad variety of matters, most of which are more properly within the realm of the executive, such as economic, social, cultural, environmental and political matters. It will be recalled that under subsection 52(2), matters such as these must be included in the report that is reviewed by the Governor in Council.

141 The amorphous nature and the breadth of the discretion that the Governor in Council must exercise is shown by the fact that the section 52 report it receives can include "any public interest that in the National Energy Board's opinion may be affected by the issuance of the certificate or the dismissal of the application": subsection 52(2) of the *National Energy Board Act*.

142 In assessing the scope of an administrative decision-maker's discretion, it is sometimes helpful to consider the nature of the body that is exercising the discretion: *Odynsky*, above, at paragraph 76. In section 54 of the *National Energy Board Act* and in section 30 of the *Canadian Environmental Assessment Act, 2012*, Parliament has designated the Governor in Council as the body to receive and consider the section 52 report. The Governor in Council is the Governor General, acting on the advice of the Prime Minister and the Cabinet. (For that reason, throughout these reasons, we have referred to the Governor in Council as "it," in recognition of its practical status as a body of persons.) In Canada, executive authority is vested in the Crown — the Crown also being subject to the duty to consult Aboriginal peoples — and the Governor in Council is the advisory body, some might say the real initiator, for the exercise of much of that executive authority. See generally A. O'Brien and M. Bosc, *House of Commons Procedure and Practice*, 2d ed. (Cowansville: Éditions Yvon Blais, 2009) at pages 18-23 and 28-32; *Constitution Act, 1867*, sections 9, 10 and 13.

143 In *Odynsky*, this Court described the practical nature of the Governor in Council as follows (at paragraph 77):

> The Governor in Council is the "Governor General of Canada acting by and with the advice of, or by and with the advice and consent of, or in conjunction with the Queen's Privy Council for Canada": *Interpretation Act*, R.S.C. 1985, c. I-23, subsection 35(1), and see also the *Constitution Act, 1867*, sections 11 and 13. All the Ministers of the Crown, not just the Minister, are active members of the Queen's Privy Council for Canada. They meet in a body known as Cabinet. Cabinet is "to a unique degree the grand co-ordinating body for the divergent provincial, sectional, religious, racial and other interests throughout the nation" and, by convention, it attempts to represent different geographic, linguistic, religious, and ethnic groups: Norman Ward, *Dawson's The Government of Canada*, 6th ed., (Toronto: University of Toronto Press,1987) at pages 203-204; Richard French, "The Privy Council Office: Support for Cabinet Decision Making" in Richard Schultz, Orest M. Kruhlak and John C. Terry, eds., *The Canadian Political Process*, 3rd ed. (Toronto: Holt Rinehart and Winston of Canada, 1979) at pages 363-394.

144 In the case before us, by vesting decision-making in the Governor in Council, Parliament implicated the decision-making of Cabinet, a body of diverse policy perspectives representing all constituencies within government. And by defining broadly what can go into the report upon which it is to make its decision — literally anything relevant to the public interest — Parliament must be taken to have intended that the decision in issue here be made on the broadest possible basis, a basis that can include the broadest considerations of public policy.

145 The standard of review for decisions such as this — discretionary decisions founded upon the widest considerations of policy and public interest — is reasonableness: *New Brunswick (Board of Management) v. Dunsmuir*, 2008 SCC 9, [2008] 1 S.C.R. 190 (S.C.C.), at paragraph 53.

146 Reasonableness has been described as a range of acceptable and defensible decisions on the facts and the law or a margin of appreciation over the problem before it: *Dunsmuir*, at paragraph 47. The notion of a range or margin suggests that different decisions, by their nature, will admit of a larger or smaller number of acceptable and defensible solutions: *Catalyst Paper Corp. v. North Cowichan (District)*, 2012 SCC 2, [2012] 1 S.C.R. 5 (S.C.C.) at paragraphs 17-18 and 23; *Khosa*, at paragraph 59; *British Columbia (Securities Commission) v. McLean*, 2013 SCC 67, [2013] 3 S.C.R. 895 (S.C.C.), at paragraphs 37-41. For example, an issue of statutory interpretation where the statutory language is precise admits of fewer acceptable or defensible solutions than one where the language is wider and more amorphous, where policy may inform the proper interpretation to a larger extent.

147 Similarly, some decisions made by administrative decision-makers lie more within the expertise and experience of the executive rather than the courts. On these, courts must afford administrative decision-makers a greater margin of appreciation: see, *e.g.*, *Delios*, at paragraph 21; *Boogaard*, at paragraph 62; *Forest Ethics*, at paragraph 82.

148 Recently, this Court usefully contrasted two types of administrative decisions, the former inviting courts to review decision-making intensely, the latter less so:

> For present purposes, one might usefully contrast two types of administrative proceedings. At one end are matters where an administrative decision-maker assesses the conduct of an individual or known group of individuals against concrete criteria, the potential effects upon the legal or practical interests of the individual(s) are large, and the matters lie somewhat within the ken of the courts. A good example is a professional disciplinary proceeding where an individual is charged with violations of a disciplinary code and the individual faces serious legal or practical consequences such as restrictions, prohibitions or penalties. At the other end are matters where an administrative decision-maker assesses something broader and more diffuse, using polycentric, subjective or fuzzy criteria to decide the matter, criteria that are more typically within the ken of the executive and less so the courts.

(*Kabul Farms Inc. v. R.*, 2016 FCA 143 (F.C.A.), at paragraph 25)

149 To similar effect, a majority of this Court recently said the following:

> [W]here the decision is clear-cut or constrained by judge-made law or clear statutory standards, the margin of appreciation is narrow: see, *e.g.*, [*McLean v. British Columbia (Securities Commission)*, 2013 SCC 67, [2013] 3 S.C.R. 895]; *Canada (Attorney General) v. Abraham*, 2012 FCA 266, 440 N.R. 201; *Canada (Attorney General) v. Almon Equipment Limited*, 2010 FCA 193, [2011] 4 F.C. 203; *Canada (Public Safety and Emergency Preparedness) v. Huang*, 2014 FCA 228, 464 N.R. 112....On the other hand, where the decision is suffused with subjective judgment calls, policy considerations and regulatory experience or is a matter uniquely within the ken of the executive, the margin of appreciation will be broader: see, *e.g.*, [*Canada (Minister of Transport, Infrastructure and Communities) v. Farwaha*, 2014 FCA 56, [2015] 2 F.C.R. 1006]; *Rotherham Metropolitan Borough Council v. Secretary of State for Business Innovation and Skills*, 2015 UKSC 6.

(*Paradis Honey Ltd. v. Canada (Minister of Agriculture and Agri-Food)*, 2015 FCA 89, 382 D.L.R. (4th) 720 (F.C.A.), at paragraph 136.)

150 Although the legislative scheme in this case is unique, some administrative decision-makers, like the Governor in Council here, are empowered to make decisions on the basis of broad public interest considerations, along with economic and policy considerations, and weigh them against detrimental effects. A good example is the decision of the Alberta Utilities Commission in *FortisAlberta Inc. v. Alberta (Utilities Commission)*, 2015 ABCA 295, 389 D.L.R. (4th) 1 (Alta. C.A.). In words apposite to this case, the Alberta Court of Appeal upheld the Commission's decision, giving it a very broad margin of appreciation (at paragraphs 171-172):

> The legislature has entrusted the Commission with a policy-laden role, which includes a strong public interest mandate: see, for example, ss. 16(1) and 17(1) of the *Alberta Utilities Commission Act*. Its mandate includes the creation of a balanced and predictable application of principles to the relationship between revenues, expenses and assets (both depreciable and

> non-depreciable) of utilities on the one hand, and the reasonable expectations of the ratepayers who receive and pay for services on the other. The treatment of stranded assets is, at its foundation, a policy issue informed by public interest considerations. The Commission's policy choice, as expressed in the [decision], is a legitimate and defensible one, and well within its legislated power.
>
> One must also bear in mind that the questions raised have political and economic aspects. Courts are poorly positioned to opine on such matters. Judicial review considers the scope or breadth of jurisdiction, but by legislative design the selection of a policy choice from among a range of options lies with the Commission empowered and mandated to make that selection.

(See also *Trinity Western University v. Law Society of Upper Canada*, 2015 ONSC 4250, 126 O.R. (3d) 1 (Ont. Div. Ct.), at paragraph 37; *Odynsky*, above, at paragraphs 81-82 and 86.)

151 The Supreme Court itself has recognized that "[a]s a general principle, increased deference is called for where legislation is intended to resolve and balance competing policy objectives or the interests of various constituencies." In its view, "[a] statutory purpose that requires a tribunal to select from a range of remedial options or administrative responses, is concerned with the protection of the public, engages policy issues, or involves the balancing of multiple sets of interests or considerations will demand greater deference from a reviewing court." See *Q. v. College of Physicians & Surgeons (British Columbia)*, 2003 SCC 19, [2003] 1 S.C.R. 226 (S.C.C.), at paragraphs 30-31.

152 The words of all these courts are apposite here: the Governor in Council is entitled to a very broad margin of appreciation in making its discretionary decision upon the widest considerations of policy and public interest under sections 53 and 54 of the *National Energy Board Act*.

153 We acknowledge that on some occasions, the Governor in Council makes decisions that have some legal content. On these occasions, signalled by specific legislative language, the margin of appreciation courts afford to the Governor in Council will be narrow: see, *e.g.*, *Canadian National Railway v. Canada (Attorney General)*, 2014 SCC 40, [2014] 2 S.C.R. 135 (S.C.C.); *Public Mobile Inc. v. Canada (Attorney General)*, 2011 FCA 194, [2011] 3 F.C.R. 344 (F.C.A.).

154 But in this case, the Governor in Council's discretionary decision was based on the widest considerations of policy and public interest assessed on the basis of polycentric, subjective or indistinct criteria and shaped by its view of economics, cultural considerations, environmental considerations, and the broader public interest.

155 Does the economic benefit associated with the construction and operation of a transportation system that will help to unlock Alberta's oil resources and make those resources more readily available worldwide outweigh the detrimental effects, actual or potential, including those effects on the environment and, in particular, the matters under the *Canadian Environmental Assessment Act, 2012*? To what extent will the conditions that Northern Gateway must satisfy — many concerning technical matters that can be evaluated and weighed only with expertise — alleviate those concerns? And in light of all of these considerations, was there enough high-quality information for the Governor in Council to balance all the considerations and properly assess the matter? These are the sorts of questions this legislative scheme remits to the Governor in Council. Under the authorities set out above that are binding upon us, we must give the Governor in Council the widest margin of appreciation over these questions.

(6) The Governor in Council's decision was reasonable under administrative law principles

156 In our view, for the foregoing reasons and based on the record before the Governor in Council, we are not persuaded that the Governor in Council's decision was unreasonable on the basis of administrative law principles.

157 The Governor in Council was entitled to assess the sufficiency of the information and recommendations it had received, balance all the considerations — economic, cultural, environmental and otherwise — and come to the conclusion it did. To rule otherwise would be to second-guess the Governor in Council's appreciation of the facts, its choice of policy, its access

to scientific expertise and its evaluation and weighing of competing public interest considerations, matters very much outside of the ken of the courts.

158 This conclusion, however, does not end the analysis.

159 Before us, all parties accepted that Canada owes a duty of consultation to Aboriginal peoples concerning the Project. All parties accepted that if that duty were not fulfilled, the Order in Council cannot stand. In our view, these concessions are appropriate.

160 Section 54 of the *National Energy Board Act* does not refer to the duty to consult. However, in 2012, when Parliament enacted section 54 in its current form, the duty to consult was well-established in our law. As all parties before us recognized, it is inconceivable that section 54 could operate in a manner that ousts the duty to consult. Very express language would be required to bring about that effect. And if that express language were present in section 54, tenable arguments could be made that section 54 is inconsistent with the recognition and affirmation of Aboriginal rights under subsection 35(1) of the *Constitution Act, 1982* and, thus, invalid. A number of the First Nations before us were prepared, if necessary, to assert those arguments and they filed Notices of Constitutional Question to that effect.

161 It is a well-recognized principle of statutory interpretation that statutory provisions that are capable of multiple meanings should be interpreted in a manner that preserves their constitutionality: *Eldridge v. British Columbia (Attorney General)*, [1997] 3 S.C.R. 624, 151 D.L.R. (4th) 577 (S.C.C.), at paragraph 32; *R. v. Clarke*, 2014 SCC 28, [2014] 1 S.C.R. 612 (S.C.C.), at paragraphs 14-15. Parliament is presumed to wish its legislation to be valid and have force; it does not intend to legislate provisions that are invalid and of no force.

162 Further, it is a well-recognized principle of statutory interpretation that interpretations that lead to absurd or inequitable results should be avoided: *R. v. Canadian Pacific Ltd.*, [1995] 2 S.C.R. 1031, 125 D.L.R. (4th) 385 (S.C.C.), at paragraph 65.

163 Section 54 of the *National Energy Board Act* and the associated sections constituting the legislative scheme we have described above can be interpreted in such a way as to respect Canada's duty to consult and to remain valid. We interpret these sections in that way.

164 Under section 52 of the *National Energy Board Act*, the National Energy Board, or here the Joint Review Panel, submits its report to a coordinating Minister who brings the report before the Governor in Council, along with any other memoranda or information. There is nothing that prevents that coordinating Minister, or any other Minister who is assigned responsibility for the matter, from bringing to the Governor in Council information necessary for it to satisfy itself that the duty to consult has been fulfilled, to recommend that further conditions be added to any certificate for the project issued under section 54 to accommodate Aboriginal peoples or to ask the National Energy Board to redetermine the matter and consider making further conditions under section 53.

165 Here, subsection 31(2) of the *Interpretation Act*, R.S.C. 1985, I-21 is relevant. It provides that where a statute gives to a public official the power to do a thing, all powers necessary to allow that person to do the thing are also given. Subsection 31(2) provides as follows:

> **31.** (2) Where power is given to a person, officer or functionary to do or enforce the doing of any act or thing, all such powers as are necessary to enable the person, officer or functionary to do or enforce the doing of the act or thing are deemed to be also given.
>
> **31.** (2) Le pouvoir donné à quiconque, notamment à un agent ou fonctionnaire, de prendre des mesures ou de les faire exécuter comporte les pouvoirs nécessaires à l'exercice de celui-ci.

166 The Governor in Council's ability to consider whether Canada has fulfilled its duty to consult and to impose conditions is a power necessary for the Governor in Council to exercise its power under sections 53 and 54 of the *National Energy Board Act*.

Similarly, the activities of the coordinating Minister and other Ministers concerning the duty to consult are necessary matters that they can exercise in accordance with subsection 31(2) of the *Interpretation Act*.

167 We are fortified in this conclusion by the relationship between the Crown and the Governor in Council. The duty to consult is imposed upon the Crown. As explained in paragraph 142, above, the Governor in Council is frequently the initiator of the Crown's exercise of executive authority. Given the Governor in Council's relationship with the Crown, it stands to reason that that Parliament gave the Governor in Council the necessary power in section 54 of the *National Energy Board Act* to consider whether the Crown has fulfilled its duty to consult and, if necessary, to impose conditions.

168 Thus, we are satisfied that under this legislative scheme the Governor in Council, when considering a project under the *National Energy Board Act*, must consider whether Canada has fulfilled its duty to consult. Further, in order to accommodate Aboriginal concerns as part of its duty to consult, the Governor in Council must necessarily have the power to impose conditions on any certificate it directs the National Energy Board to issue.

169 While the parties did not seriously dispute whether the duty to consult could co-exist and be accommodated under the *National Energy Board Act*, they did dispute whether Canada has fulfilled its duty to consult on the facts of this case. We turn to this issue now.

F. The duty to consult Aboriginal peoples

(1) Legal principles

170 At this point, it is helpful to discuss briefly the existing jurisprudence which has considered the scope and content of the duty to consult. As mentioned at the outset of these reasons, insofar as that jurisprudence applies to these proceedings, it is not in dispute.

171 The duty to consult is grounded in the honour of the Crown. The duties of consultation and, if required, accommodation form part of the process of reconciliation and fair dealing: *Haida Nation v. British Columbia (Minister of Forests)*, 2004 SCC 73, [2004] 3 S.C.R. 511 (S.C.C.), at paragraph 32.

172 The duty arises when the Crown has actual or constructive knowledge of the potential existence of Aboriginal rights or title and contemplates conduct that might adversely affect those rights or title: *Haida Nation*, at paragraph 35.

173 The extent or content of the duty of consultation is fact specific. The depth or richness of the required consultation increases with the strength of the *prima facie* Aboriginal claim and the seriousness of the potentially adverse effect upon the claimed right or title: *Haida Nation*, at paragraph 39; *Carrier Sekani Tribal Council v. British Columbia (Utilities Commission)*, 2010 SCC 43, [2010] 2 S.C.R. 650 (S.C.C.) [hereinafter Rio Tinto], at paragraph 36.

174 When the claim to title is weak, the Aboriginal interest is limited or the potential infringement is minor, the duty of consultation lies at the low end of the consultation spectrum. In such a case, the Crown may be required only to give notice of the contemplated conduct, disclose relevant information and discuss any issues raised in response to the notice: *Haida Nation*, at paragraph 43. When a strong *prima facie* case for the claim is established, the right and potential infringement is of high significance to the Aboriginal peoples, and the risk of non-compensable damage is high, the duty of consultation lies at the high end of the spectrum. While the precise requirements will vary with the circumstances, in this type of case a deep consultative process might entail: the opportunity to make submissions; formal participation in the decision-making process; and, the provision of written reasons to show that Aboriginal concerns were considered and how those concerns were factored into the decision: *Haida Nation*, at paragraph 44.

175 It is now settled law that Parliament may choose to delegate procedural aspects of the duty to consult to a tribunal. Tribunals that consider resource issues that impinge on Aboriginal interests may be given: the duty to consult; the duty to determine whether adequate consultation has taken place; both duties; or, no duty at all. In order to determine the mandate of any particular tribunal, it is relevant to consider the powers conferred on the Tribunal by its constituent legislation, whether the

tribunal is empowered to consider questions of law and what remedial powers the tribunal possesses: *Rio Tinto*, at paragraphs 55 to 65.

176 Thus, for example in *Taku River Tlingit First Nation v. British Columbia (Project Assessment Director)*, 2004 SCC 74, [2004] 3 S.C.R. 550 (S.C.C.), the Supreme Court accepted that an environmental assessment process was sufficient to satisfy the procedural requirements of the duty to consult. At paragraph 40 of the Court's reasons, the Chief Justice wrote that the province did not have to develop special consultation measures to address the First Nation's concerns "outside of the process provided for by the [B.C. environmental legislation], which specifically set out a scheme that required consultation with affected Aboriginal peoples." Subsequently, in *Little Salmon/Carmacks First Nation v. Yukon (Director, Agriculture Branch, Department of Energy, Mines & Resources)*, 2010 SCC 53, [2010] 3 S.C.R. 103 (S.C.C.), at paragraph 39, the Supreme Court interpreted *Taku River* as saying that participation in a forum created for other purposes may satisfy the duty to consult "if *in substance* an appropriate level of consultation is provided" [emphasis in original].

177 In *Taku River*, the Supreme Court also recognized that project approval is "simply one stage in the process by which the development moves forward": at paragraph 45. Thus, outstanding First Nation concerns could be more effectively considered at later stages of the development process. It was expected that throughout the permitting, approval and licensing process, as well as in the development of a land use strategy, the Crown would continue to fulfil its duty to consult, and if required, accommodate.

178 When the Crown relies on a regulatory or environmental assessment process to fulfil the duty to consult, such reliance is not delegation of the Crown's duty. Rather, it is a means by which the Crown can be satisfied that Aboriginal concerns have been heard and, where appropriate, accommodated: *Haida Nation*, at paragraph 53.

179 The consultation process does not dictate a particular substantive outcome. Thus, the consultation process does not give Aboriginal groups a veto over what can be done with land pending final proof of their claim. Nor does consultation equate to a duty to agree; rather, what is required is a commitment to a meaningful process of consultation. Put another way, perfect satisfaction is not required. The question to be answered is whether the regulatory scheme, when viewed as a whole, accommodates the Aboriginal right in question: *Haida Nation*, at paragraphs 42, 48 and 62.

180 Good faith consultation may reveal a duty to accommodate. Where there is a strong *prima facie* case establishing the claim and the consequence of proposed conduct may adversely affect the claim in a significant way, the honour of the Crown may require steps to avoid irreparable harm or to minimize the effects of infringement: *Haida Nation*, at paragraph 47.

181 Good faith is required on both sides in the consultative process: "The common thread on the Crown's part must be 'the intention of substantially addressing [Aboriginal] concerns' as they are raised [...] through a meaningful process of consultation": *Haida Nation*, at paragraph 42. At the same time, Aboriginal claimants must not frustrate the Crown's reasonable good faith attempts, nor should they take unreasonable positions to thwart the government from making decisions or acting in cases where, despite meaningful consultation, agreement is not reached: *Haida Nation*, at paragraph 42.

(2) The standard to which Canada is to be held in fulfilling the duty

182 Canada is not to be held to a standard of perfection in fulfilling its duty to consult. In this case, the subjects on which consultation was required were numerous, complex and dynamic, involving many parties. Sometimes in attempting to fulfil the duty there can be omissions, misunderstandings, accidents and mistakes. In attempting to fulfil the duty, there will be difficult judgment calls on which reasonable minds will differ.

183 In determining whether the duty to consult has been fulfilled, "perfect satisfaction is not required," just reasonable satisfaction: *Ahousaht Indian Band v. Canada (Minister of Fisheries & Oceans)*, 2008 FCA 212, 297 D.L.R. (4th) 722 (F.C.A.), at paragraph 54; *Canada (Attorney General) v. Long Plain First Nation*, 2015 FCA 177, 388 D.L.R. (4th) 209 (F.C.A.), at paragraph 133; *Yellowknives Dene First Nation v. Canada (Minister of Aboriginal Affairs and Northern Development)*, 2015 FCA 148, 474 N.R. 350 (F.C.A.), at paragraph 56; *Clyde River (Hamlet) v. TGS-NOPEC Geophysical Co. ASA*, 2015 FCA 179, 474 N.R. 96 (F.C.A.), at paragraph 47.

184 The Supreme Court of Canada has expressed it this way:

> Perfect satisfaction is not required; the question is whether the regulatory scheme or government action "viewed as a whole, accommodates the collective aboriginal right in question": [*R. v. Gladstone*, [1996] 2 S.C.R. 723, 137 D.L.R. (4th) 648, at paragraph 170]. What is required is not perfection, but reasonableness. As stated in [*R. v. Nikal*, [1996] 1 S.C.R. 1013, 133 D.L.R. (4th) 658, at paragraph 110], "in ... information and consultation the concept of reasonableness must come into play. ... So long as every reasonable effort is made to inform and to consult, such efforts would suffice." The government is required to make reasonable efforts to inform and consult. This suffices to discharge the duty.

(*Haida Nation*, at paragraph 62.)

185 Therefore, the question is whether "reasonable efforts to inform and consult" were made. In applying this standard, we have been careful not to hold Canada to anything approaching a standard of perfection.

186 But here, in executing Phase IV of its consultation framework, Canada failed to make reasonable efforts to inform and consult. It fell well short of the mark.

(3) The consultation process

187 As explained above, from the outset of the Project, Canada acknowledged its duty to engage in deep consultation with the First Nations potentially affected by the Project owing to the significance of the rights and interests affected. Canada submits that, consistent with its duty, it offered a deep, consultation process consisting of five phases to more than 80 Aboriginal groups, including all of the First Nations in this proceeding.

188 The First Nations agree that Canada was obliged to provide deep consultation. However, they assert a number of flaws in the consultation process that rendered it inadequate. In this section of the reasons, we will review the nature of the consultation process, briefly describe the most salient concerns expressed about the process, and consider whether Canada fulfilled its duty to consult.

189 Canada describes the consultation process to include:

- Direct engagement by Canada with affected Aboriginal groups, both before and after the Joint Review Panel process. This consultation included consideration of the mandate of the Joint Review Panel.

- Participation by Canada in the Joint Review Panel process in order to effectively and meaningfully:

  i. gather, distribute and assess information concerning the Project's potential adverse impacts on Aboriginal rights and interests;

  ii. address adverse impacts to Aboriginal rights and interests by assessing potential environmental effects and identifying mitigation and avoidance measures; and

  iii. ensure, to the extent possible, that specific Aboriginal concerns were heard and, where appropriate, accommodated.

- The provision of almost $4,000,000 in participant funding by Canada to 46 Aboriginal groups to assist their involvement in the Joint Review Panel process and related Crown consultations.

- The provision of written reasons to Aboriginal groups explaining how their concerns were considered and addressed.

190 As noted above, and to reiterate, Canada's framework for consultation had five distinct phases:

1. Phase I provided for Canada's direct engagement with Aboriginal groups before the Joint Review Panel process, including consultation on the draft Joint Review Panel Agreement and the mandate of the Joint Review Panel.

2. Phase II required Canada to provide information to Aboriginal groups about the pending Joint Review Panel process.

3. Phase III provided for participation in the Joint Review Panel process by Canada and Aboriginal groups.

4. Phase IV provided for additional, direct consultations between Canada and Aboriginal groups after the Joint Review Panel process, but before the Governor in Council considered the Project.

5. Phase V would provide additional consultation on permits or authorizations that Canada might be requested to issue after the Governor in Council's decision on the Project.

(4) The alleged flaws in the consultation process

191 Briefly, the most salient concerns about the nature of the consultation asserted by the applicant/appellant First Nations are:

(a) The Governor in Council prejudged the approval of the Project.

(b) Canada's consultation framework was unilaterally imposed on the First Nations; there was no consultation on it.

(c) Canada provided inadequate funding to facilitate the participation of First Nations in the Joint Review Panel process and other consultation processes.

(d) The consultation process was over-delegated: the Joint Review Panel was not a legitimate forum for consultation and it did not allow for discussions between Canada and affected First Nations.

(e) Canada either failed to conduct or failed to share its assessment of the strength of the First Nations' claims to Aboriginal rights or title.

(f) The Crown consultation did not reflect the terms, spirit and intent of certain agreements between Canada and the Haida.

(g) The Report of the Joint Review Panel left too many issues affecting First Nations to be decided after the Project was approved.

(h) The consultation process was too generic. Canada and the Joint Review Panel looked at First Nations as a whole and failed to address adequately the specific concerns of particular First Nations.

(i) After the Report of the Joint Review Panel was finalized, Canada failed to consult adequately with First Nations about their concerns; it also failed to give reasons showing that Canada considered and factored them into the Governor in Council's decision to approve the Project.

(j) Canada did not assess or discuss First Nations' title or governance rights, nor was the impact on those rights factored into the Governor in Council's decision to approve the Project.

We shall examine each of these in turn.

(a) The Governor in Council prejudged the approval of the Project

192 The Gitxaala argue that Canada did not consult in good faith and one manifestation of this is that the outcome of the approval process was pre-ordained. In support of this submission, the Gitxaala point to:

• Statements made by the then Minister of Natural Resources reported in the *Globe and Mail* in July, 2011 that the Project "is in the national interest" and that discussions among Ministers will touch on ways of "improving the regulatory system so it is less duplicative, so it is more fair, transparent and independent — but takes into account the need for expeditious review."

• The adoption of a process that excluded real consideration of title and governance rights.

• The legislative change in 2012 after the review process had begun that modified the powers of the National Energy Board, giving the Governor in Council the final decision-making power.

193 The Haida adopt this submission.

194 In our view, the second and third concerns raised by the Gitxaala do not support its submission that Canada had prejudged the outcome. This is so because there are many possible explanations as to why the process was adopted and the powers of the National Energy Board were modified; many of those possible explanations do not lead to the conclusion that results were predetermined. Equivocal evidence cannot support an assertion of bias.

195 Of greater concern are the remarks attributed to the then Minister of Natural Resources. Notwithstanding the concern, the remarks are insufficient to establish bias.

196 In *Cie pétrolière Impériale c. Québec (Tribunal administratif)*, 2003 SCC 58, [2003] 2 S.C.R. 624 (S.C.C.), the Supreme Court observed that the content of the duty of impartiality varies according to the decision-maker's activities and the nature of the question it must decide.

197 In the present case, the decision-maker is the Governor in Council and the decision whether to approve the Project is politically charged, involving an appreciation of many, sometimes conflicting, considerations of policy and the public interest. The decision is not judicial or quasi-judicial.

198 In this circumstance, we accept that the duty of impartiality owed by the Governor in Council is not co-extensive with that imposed upon judicial or quasi-judicial decision-makers.

199 Thus, statements by individual members of Cabinet will not establish bias unless the person alleging such bias demonstrates that the statements are the expression of a final opinion on the question at issue. Put another way, it must be shown that the decision-maker's mind was closed such that representations to the contrary would be futile: *Old St. Boniface Residents Assn. Inc. v. Winnipeg (City)*, [1990] 3 S.C.R. 1170, 75 D.L.R. (4th) 385 (S.C.C.).

200 The evidence of one Minister's comment made years before the decision at issue is insufficient to establish that the outcome of the Governor in Council's decision was predetermined.

(b) The framework of the consultation process was unilaterally imposed upon the First Nations

201 The Haisla argue that while it was given the opportunity to comment on the draft Joint Review Panel Agreement, it was not consulted on the Crown consultation process itself. Instead, they argue, Canada unilaterally chose to integrate consultation into the Joint Review Panel process. The Haida adopt this submission.

202 The Kitasoo and the Heiltsuk argue that the Crown failed to consult with them about the five-phase review process, the impact of using a hearing process to engage in consultation, and the timing or scope of Canada's consultation in Phase IV of the consultation framework.

203 We disagree that the initial engagement with affected First Nations and the subsequent consultation on the draft Joint Review Panel Agreement (*i.e.*, Phase I) were flawed or unreasonable. As a matter of law, the Crown has discretion as to how it structures the consultation process and how the duty to consult is met: *Cold Lake First Nations v. Alberta (Minister of Tourism, Parks and Recreation)*, 2013 ABCA 443, 566 A.R. 259 (Alta. C.A.), at paragraph 39. What is required is a reasonable process, not perfect consultation: *Haida Nation*, at paragraph 62.

204 Phase I consultation included the following steps:

• Following receipt of a preliminary information package submitted by Northern Gateway, the National Energy Board, in consultation with other responsible federal authorities, requested that the then Minister of the Environment refer the

Project to a review panel. On September 29, 2006, the Minister referred the Project to a review panel and released the draft Joint Review Panel agreement for a 60-day comment period. A number of comments were received from Aboriginal groups. Thereafter, Northern Gateway put the Project on hold.

• Following resubmission of the Project by Northern Gateway, Canada, through the Canadian Environmental Assessment Agency, contacted over 80 Aboriginal groups to advise them of the Project and of opportunities to participate in the Joint Review Panel process and the related Crown consultation process. The Agency provided information to groups for whom Canada had a duty to consult. Other Aboriginal groups subsequently contacted the Agency expressing interest in the Project and were provided with information. Some Aboriginal groups were contacted but chose not to participate in the Joint Review Panel or Crown consultation process. The Agency communicated with Aboriginal groups throughout the consultation process. It requested input on the draft Joint Review Panel Agreement, provided information on opportunities for participation in the Joint Review Panel and subsequent consultation on the Report of the Joint Review Panel, advised on the availability of participant funding and met with Aboriginal groups to provide further clarification. Canada's approach to consultation was outlined in a document entitled "Aboriginal Consultation Framework," which was made available to Aboriginal groups in November 2009.

• Canada significantly modified the Joint Review Panel process in response to concerns expressed by affected Aboriginal groups. Examples of such modifications include:

  • in response to concerns raised by the Haisla and the Gitga'at that the Project's marine components, including marine shipping, were not within the mandate of the Joint Review Panel, Canada changed the scope of its review to include the marine transportation of oil and condensate;

  • in response to concerns raised by the Haisla respecting the capacity and expertise of the Joint Review Panel to undertake the environmental assessment review, Canada modified the Joint Review Panel selection process to ensure that the Joint Review Panel could retain expert consultants or special advisors if required; and

  • in response to concerns raised by the Haisla, the Nak'azdli, the Gitga'at, the Gitxaala and the Nadleh about Aboriginal involvement in the Joint Review Panel process, Canada modified the Joint Review Panel Agreement so as to include provisions requiring that the Joint Review Panel conduct its review to facilitate the participation of Aboriginal peoples and that Northern Gateway provide evidence setting out the concerns of Aboriginal groups.

205 The final Joint Review Panel Agreement required the Joint Review Panel to:

• consider and address all Project-related Aboriginal issues and concerns within its mandate;

• conduct its review in a manner that facilitated the participation of Aboriginal peoples;

• receive evidence from Northern Gateway regarding the concerns of Aboriginal groups;

• receive information from Aboriginal peoples related to the nature and scope of potentially affected Aboriginal and treaty rights; and

• include recommendations in its report for appropriate measures to avoid or mitigate potential adverse impacts or infringements on Aboriginal and treaty rights and interests.

206 Finally, Canada communicated with all of the Aboriginal applicants/appellants in this proceeding in November and December 2009 so as to ensure that they were aware of the modifications made to the Joint Review Panel process, the ongoing consultation activities and the ongoing availability of funding.

207 In our view, the evidence establishes that from the outset Canada acknowledged its duty of deep consultation with all affected First Nations. In Phase I, it provided information about the Project to affected First Nations, sought and obtained

comments on the proposed consultation process as initially outlined in the draft Joint Review Panel Agreement, and reasonably addressed concerns expressed by First Nations by incorporating significant revisions into the Joint Review Panel Agreement.

208 We will address in more detail below the submission that the Joint Review Panel was not a legitimate forum for consultation. However, we are satisfied that there was consultation about Canada's framework for consultation. It was not unilaterally imposed. It was reasonable.

(c) Inadequate funding for participation in the Joint Review Panel and consultation processes

209 The Kitasoo and the Heiltsuk argue that the process required significant legal assistance and significant travel expenses because the Joint Review Panel hearings were held in Prince Rupert and Terrace, British Columbia. They point to the fact that even though approximately 35 Aboriginal communities registered as interveners, only 12 First Nations cross-examined witness panels and only two First Nations substantially participated in the cross-examination hearings. The Kitasoo and the Heiltsuk say they could not afford to provide expert reports or retain experts to review the Proponent's extensive data. The Heiltsuk sought funding of $421,877 for all phases, but received $96,000. In Phase IV, the Kitasoo sought funding of $110,410 but received $14,000.

210 We have carefully reviewed the second affidavits of Douglas Neasloss and Marilyn Slett, which contain the evidence filed in support of the submissions. Without doubt, the level of funding provided constrained participation in the Joint Review Panel process. However, the affidavits do not explain how the amounts sought were calculated, or detail any financial resources available to the First Nations outside of that provided by Canada. As such, the evidence fails to demonstrate that the funding available was so inadequate as to render the consultation process unreasonable.

(d) The consultation process was over-delegated

211 The Haisla point to many asserted flaws flowing from the Crown's reliance on the Joint Review Panel process to discharge, at least in part, its duty to consult. The Haisla submit that:

- meaningful consultation requires a two-way dialogue whereas the Joint Review Panel process was a quasi-judicial process in which the Crown and Haisla had no direct engagement; and

- the Joint Review Panel did not assess the nature and strength of each First Nation's claimed Aboriginal rights and it did not assess the potential infringement of Aboriginal rights by the Project.

212 To this, the Heiltsuk add that the formalities of the quasi-judicial tribunal process led to friction between them and the Joint Review Panel and restrictions on the Heiltsuk's ability to provide all of the information they wished to provide for consultation purposes.

213 We have not been persuaded that the consultation process was over-delegated or that it was unreasonable for Canada to integrate the Joint Review Panel process into the Crown consultation process for the following reasons.

214 First, in *Rio Tinto*, at paragraph 56, the Supreme Court confirmed that participation by affected First Nations in a forum created for other purposes, such as an environmental assessment, can fulfil the Crown's duty to consult. The issue to be decided in every case is whether an appropriate level of consultation is provided through the totality of measures the Crown brings to bear on its duty of consultation.

215 In the present case, we are satisfied that Canada did not inappropriately delegate its obligation to consult to the Joint Review Panel - as evidenced by the existence of Phase IV of the consultation process in which there was to be direct consultation between Canada and affected Aboriginal groups following the Joint Review Panel process and before the Governor in Council considered the Project.

216 The Joint Review Panel process provided affected Aboriginal groups with the opportunity to learn in detail about the nature of the Project and its potential impact on their interests, while at the same time affording an opportunity to Aboriginal

groups to voice their concerns. As noted above, the Joint Review Panel Agreement gave the Panel the mandate to receive information regarding potential impacts of the Project on Aboriginal rights and title, consider mitigation where appropriate and report on information received directly from Aboriginal groups about impacts upon their rights.

217 Additionally, we accept the submission of the Attorney General that the Joint Review Panel had the experience and statutory mandate to address mitigation, avoidance and environmental issues relating to the Project.

(e) Canada either failed to conduct or failed to share with affected First Nations its legal assessment of the strength of their claims to Aboriginal rights or title

218 In this section of the reasons, we consider the assertion that Canada failed to conduct an assessment of the strength of the applicant/appellant First Nations' claims to Aboriginal rights and title. We also consider the assertion that Canada was obliged to disclose the analysis that led to its assessment of the strength of each First Nation's claim.

219 For example, the Gitxaala state that despite repeated requests, government officials responsible for consultation did not assess the strength of their claims to governance and title rights. Nor did they ever receive Canada's assessment of the strength of its claims. They submit this is an error of law that wholly undermined the consultation process. This argument is echoed by the Gitga'at and the Haisla.

220 The Haisla make the additional point that by letter dated April 18, 2012, the then Minister of the Environment advised their counsel that:

> Based on the significant evidence filed by the Haisla Nation in the joint review panel process, the federal government is currently updating its strength of claim and depth of consultation assessment and will provide a description of this analysis to the Haisla Nation once this work is completed and ready to be released. The results of this updated assessment will be shared with potentially affected groups prior to consultation on the Panel's environmental assessment report (Phase IV of the consultation process).
>
> [Emphasis added]

221 Canada never provided the Haisla with a copy of its updated strength of claim and depth of consultation analysis and assessment.

222 However, as set out in the portion of the letter extracted above, the Minister made no commitment to provide the actual legal analysis to the Haisla. He committed to providing only a description of the analysis, which we construe to be an informational component. In Phase IV, the Haisla were advised only in a general sense of the informational component. They were told that the preliminary strength of claim assessment "supports the Haisla Nation as having strong *prime* [*sic*] *facie* claim to both Aboriginal rights and title within lands claimed as part of the Haisla traditional territory": Exhibit H to the affidavit of Ellis Ross, at page 152 of Haisla's Compendium.

223 We reject the assertion that Canada failed to assess the strength of the First Nations' claims. The assertion is unsupported by the evidence.

224 We also conclude that Canada was not obliged to share its *legal* assessment of the strength of claim. In *Halalt First Nation v. British Columbia (Minister of Environment)*, 2012 BCCA 472, [2013] 1 W.W.R. 791 (B.C. C.A.), at paragraph 123, the British Columbia Court of Appeal observed that, inherently, a legal assessment of the strength of a claim is subject to solicitor-client privilege.

225 It is to be remembered that the strength of claim plays an important role in the nature and content of the duty to consult. Canada must disclose information on this and discuss it with affected First Nations. On this, Canada fell short. We say more about this below. But for present purposes we do not accept that Canada was obligated to share its *legal* analyses.

(f) The Crown consultation did not reflect the terms, spirit and intent of the Haida Agreements

226 The Haida have concluded a number of agreements with Canada and British Columbia to establish collaborative management of all of the terrestrial and portions of the marine area in Haida Gwaii. These agreements are:

- the 1993 Gwaii Haanas Agreement;
- the 2010 Gwaii Haanas Marine Agreement;
- the 2007 Strategic Land Use Plan Agreement;
- the 2009 Kunst'aa Guu-Kunst'aayah Reconciliation Protocol;
- the Memoranda of Understanding with Canada for cooperative management and planning of the s*G*aan *K*inghlas (Bowie Seamount).

227 The Haida argue that these agreements reinforce and individualize Canada's obligation to engage in a deep and specific level of consultation and accommodation with it. They submit that Canada followed only a "generic" consultation process, with the result that the Governor in Council's decision to approve the Project failed to respect the Haida Agreements.

228 In our view, Canada correctly acknowledged its obligation to consult deeply with the applicant/appellant First Nations, including the Haida. This deep consultation required the highest level of consultation possible, short of consent. The Haida Agreements do not, in our view, modify or add to that obligation.

229 There are four more concerns expressed by the applicant/appellant First Nations. We view these as overlapping and interrelated. They all focus primarily on Canada's execution of Phase IV of the consultation framework. Therefore, it is convenient to deal with them together.

(g) The Joint Review Panel Report left too many issues affecting First Nations to be decided after the Project was approved

(h) The consultation process was too generic: Canada and the Joint Review Panel looked at First Nations as a whole and failed to address adequately the specific concerns of particular First Nations

(i) After the Report of the Joint Review Panel was finalized, Canada failed to consult adequately with First Nations about their concerns and failed to give adequate reasons

(j) Canada did not assess or discuss title or governance rights and the impact on those rights

230 To this point we have rejected the arguments advanced by the applicant/appellant First Nations that Canada's execution of the consultation process was unacceptable or unreasonable. However, for the reasons developed below, Canada's execution of the Phase IV consultation process was unacceptably flawed and fell well short of the mark. Canada's execution of Phase IV failed to maintain the honour of the Crown.

231 We begin our analysis on this point by briefly setting forth some of the relevant legal principles that speak to what constitutes a meaningful process of consultation.

232 As explained above, the duty to consult is a procedural duty grounded in the honour of the Crown. The "common thread on the Crown's part must be "the intention of substantially addressing [Aboriginal] concerns as they are raised ... through a meaningful process of consultation": *Haida Nation*, at paragraph 42. The "controlling question in all situations is what is required to maintain the honour of the Crown and to effect reconciliation between the Crown and the Aboriginal peoples with respect to the interests at stake": *Haida Nation*, at paragraph 45.

233 Meaningful consultation is not intended simply to allow Aboriginal peoples "to blow off steam" before the Crown proceeds to do what it always intended to do. Consultation is meaningless when it excludes from the outset any form of

accommodation: *Mikisew Cree First Nation v. Canada (Minister of Canadian Heritage)*, 2005 SCC 69, [2005] 3 S.C.R. 388 (S.C.C.), at paragraph 54.

234 As the Supreme Court observed in *Haida Nation* at paragraph 46, meaningful consultation is not just a process of exchanging information. Meaningful consultation "entails testing and being prepared to amend policy proposals in the light of information received, and providing feedback." As submitted by Kitasoo and Heiltsuk, where deep consultation is required, a dialogue must ensue that "leads to a *demonstrably* serious consideration of accommodation (as manifested by the Crown's consultation-related duty to provide written reasons)..." [Emphasis added].

235 Further, the Crown is obliged to inform itself of the impact the proposed project will have on an affected First Nation and communicate its findings to the First Nation: *Mikisew Cree First Nation*, at paragraph 55.

236 Two final points are to be made. First, where the Crown knows, or ought to know, that its conduct may adversely affect the Aboriginal right or title of more than one First Nation, each First Nation is entitled to consultation based upon the unique facts and circumstances pertinent to it.

237 Second, where the duty to consult arises in a project like this, the duty to consult must be fulfilled before the Governor in Council gives its approval for the issuance of a certificate by the National Energy Board. This is because the Governor in Council's decision is a high-level strategic decision that sets into motion risks to the applicant/appellant First Nations' Aboriginal rights: *Haida*, at paragraph 76. Further, future consultation, as contemplated by the Joint Review Panel conditions, would not involve the Crown and future decision-making lies with the National Energy Board. Canada advised in the consultation process that the National Energy Board does not consult with First Nations at the leave to open stage.

238 Against this legal framework, we turn to the execution of Phase IV of the consultation process. We begin with a general comment about the importance of consultation at the beginning of Phase IV and the status of the consultation process at that time.

239 Phase IV was a very important part of the overall consultation framework. It began as soon as the Joint Review Panel released its Report. That Report set out specific evaluations on matters of great interest and effect upon Aboriginal peoples, for example matters involving their traditional culture, the environment around them, and, in some cases, their livelihoods. Specific evaluations call for specific responses and due consideration of those responses by Canada. Specific feedback regarding specific matters dealt with in the Report may be more important than earlier opinions offered in the abstract.

240 Further, the Report of the Joint Review Panel covers only some of the subjects on which consultation was required. Its terms of reference were narrower than the scope of Canada's duty to consult. One example of this is the fact that Aboriginal subjects that, by virtue of section 5 of the *Canadian Environmental Assessment Act, 2012*, must be considered in an environmental assessment are a small subset of the subjects that make up Canada's duty to consult.

241 In addition, in the Joint Review Panel's process:

- The proponent, Northern Gateway, made no assessment of the Project's impact on Aboriginal title: Cross-examination of Enbridge witness, Haisla Compendium, at pages 973, 975 and 976.

- Similarly, the Joint Review Panel made no determination regarding Aboriginal rights or the strength of an Aboriginal group's claim to an Aboriginal right or title: Report of the Joint Review Panel, at page 47.

- Northern Gateway confined its assessment of the Project's impact on Aboriginal and treaty rights to an assessment of the potential impacts upon the rights to harvest and use land and resources: Cross-examination of Enbridge witness, transcript, v. 149, line 22890; Report of the Joint Review Panel, at page 42.

- In assessing the various rights that Aboriginal peoples enjoy, including hunting, fishing and gathering rights, Northern Gateway did not look specifically at a single community's right. Rather it looked at rights "generally speaking": Cross-examination of Enbridge witness, transcript, v. 112, lines 9990-9993.

• The Joint Review Panel accepted this approach and relied upon it to conclude that the Project would not significantly adversely affect the interests of Aboriginal groups that use lands, waters or resources in the Project area: Report of the Joint Review Panel, at pages 49-50.

242 As for the status of the consultation process at the start of Phase IV, this was Canada's first opportunity — and its last opportunity before the Governor in Council's decision — to engage in direct consultation and dialogue with affected First Nations on matters of substance, not procedure, concerning the Project: Crown Consultation Report, Exhibit A to the affidavit of Jim Clarke (the Director General, Operations of the Major Project Management Office, Natural Resources Canada).

243 It is in this context that Canada entered Phase IV of the consultation process. Its goal was stated, in Canada's Aboriginal Consultation Framework, to be to:

> ...seek to establish whether all concerns about potential project impacts on potential or established Aboriginal and treaty rights have been characterized accurately. It will also consult on the manner and extent to which any recommended mitigation measures might serve to accommodate these concerns, and whether there remain any outstanding issues.

244 We turn now to consider Canada's execution of the process of consultation under Phase IV — a process we would characterize as falling well short of the minimum standards prescribed by the Supreme Court in its jurisprudence.

245 Canada initiated Phase IV shortly before the Joint Review Panel issued its Report. In a letter dated December 5, 2013, Canada advised that:

• consultation meetings would begin shortly after the release of the Report of the Joint Review Panel;

• 45 days was allotted to meet with all affected Aboriginal groups;

• the Report of the Joint Review Panel and a Crown Consultation Report would be used to inform the Governor in Council about whether to order the National Energy Board to issue a Certificate;

• affected First Nations were given 45 days to advise Canada in writing of their concerns by responding to the following three questions:

  • Does the Panel Report appropriately characterize the concerns you raised during the Joint Review Panel process?

  • Do the recommendations and conditions in the Panel Report address some/all of your concerns?

  • Are there any "outstanding" concerns that are not addressed in the Panel Report? If so, do you have recommendations (*i.e.*, proposed accommodation measures) on how to address them?

• Such responses "must not exceed 2-3 pages in length and must be received by April 16, 2014."

246 The First Nations responded that the timelines were arbitrarily short and insufficient to provide for meaningful consultation: see, for example, the Haisla's letter of December 12, 2013, Exhibit H to the affidavit of Chief Councillor Ellis Ross, at page 787.

247 At consultation meetings, the First Nations requested that the timelines for consultation be extended. Evidence illustrating this is found in the affidavit of Chief Ellis Ross of the Haisla:

> 107. During the March Meeting, the Haisla Nation asked the Crown representatives to extend the timeline for consultation. Mr. Clarke advised that the timelines were driven by legislation which they themselves were not authorized to extend. We pointed out that the relevant legislation provided the Crown with an ability to extend the timelines. Mr. Clarke conceded that this was correct. The Haisla Nation therefore asked the Crown representatives to ask the Minister to extend the timelines for the Decision to allow meaningful consultation. Mr. Clarke agreed to do so.

> 108. During the April Meeting, Mr. Clarke told us that he had communicated the Haisla Nation's request to extend the deadlines to the Minister of Natural Resources, but the Minister had failed to respond to this request. In our May 7, 2014 letter we requested again that a decision on the Project be delayed to allow meaningful consultation to take place. The Crown refused.
>
> [Emphasis added]

248 The Haisla Phase IV consultation meeting notes of March 3, 2014 and April 8-9, 2014 are consistent with this evidence.

249 As the Haisla observed at their consultation meeting, no explanation "from anyone at all" was ever provided for the rush "and that's a problem."

250 Throughout the consultation, the Haisla asked that Canada defer consideration of the Project. Specifically, the Haisla requested that the decision be delayed to allow for scientific studies. Taylor Cross, Deputy Chief Councillor of the Haisla, gave evidence that:

> 15. We further identified the lack of certainty surrounding the Crown's preparedness for potential spills of diluted bitumen as a reason to consider delaying Project approval. The Coast Guard Canada representative, Mr. Roger Girouard, could not say how long it would take Canada to be prepared to provide effective ocean-based spill response, even with an unlimited budget. Mr. Girouard further stated that ocean-based spill response requires additional information about the relevant waters, the nature of the products to be transported, and appropriate governance, management, and equipment requirements before it can be effective. We asked for a delay of the decision to allow for the proper scientific studies to take place. Canada's representatives told us they would place this request before decision-makers. If they did, it was ignored. [Emphasis added]
>
> 16. Ms. Maclean [of Environment Canada] stated that the spill modelling done conducted [*sic*] by Northern Gateway Pipelines Inc. and Northern Gateway Pipelines Limited Partnership (collectively "Northern Gateway") did not include stochastic modelling, which would have provided a better understanding about how environmental conditions would influence a spill. We asked for a delay of the decision until this modelling had been provided. Canada's representatives told us they would place this request before decision-makers. If they did, it was ignored.
>
> [Emphasis added]

251 While the Governor in Council was subject to a deadline for decision under subsection 54(3) of the National Energy Board Act, that subsection allows the Governor in Council, by order, to extend that deadline. The importance and constitutional significance of the duty to consult provides ample reason for the Governor in Council, in appropriate circumstances, to extend the deadline. There is no evidence that Canada gave any thought to asking the Governor in Council to extend the deadline.

252 But even if Canada did not wish to ask the Governor in Council for an extension, we consider that a pre-planned, organized process of Phase IV consultation would have allowed Canada to receive in time all relevant views, discuss and consider them, provide any necessary explanations and, if appropriate, make suitable recommendations to the Governor in Council, including any further conditions to be added to any approval of the Project.

253 By and large, many of the First Nations' concerns were specific, focused and brief; Canada's actions in response equally could have been specific, focused and brief.

254 Jim Clarke was involved in Phase IV and "acted as Canada's lead" on issues that involved the mandates of two or more government departments. Under cross-examination on his affidavit by counsel for Haisla, Mr. Clarke himself acknowledged that consultation on some issues fell well short of the mark:

> 323. Q. Now you indicated yesterday that you had to review the meeting notes to assess whether Canada and Haisla had been able to address the agenda items.

Generally is it your conclusion that Haisla and Canada had a full discussion of the items on the two agendas?

A. I focused my efforts in looking at the notes on the second agenda, and I apologize if that was not the understanding yesterday.

I looked at specifically all the items under 7(c) of the second agenda, all the issues, the extent to which panel terms and conditions addressed concerns of potential impacts, those 20 items.

324. Q. And generally is it your conclusion that Haisla and Canada had a full discussion of those 20 items?

A. I would say the general conclusion is that there was not a full discussion of those 20 items. There was discussion of a majority of those items. My assessment last evening was that there was discussion of 12 of 20 items.

. . .

327. Q. Would you say that the Haisla's concerns about potential impacts on hunting is one of the items that was fully discussed?

A. I would say, no, it wasn't.

328. Q. What about trapping?

A. I would say, no, it wasn't.

329. Q. How about marine spills? Was there a discussion about how marine spills may have negative effects on the marine environment?

A. Yes, in many different parts of the meeting.

330. Q. Was there a discussion of how Haisla rely on marine resources in the exercise of their Aboriginal rights?

A. I believe so.

331. Q. Could you point me to that in the meeting notes?

A. I have multiple Adobe references to where marine spills were discussed but that specific item I can't point you to right now.

332. Q. Was there a discussion of how the negative effects on the environment might impact the marine resources Haisla relies on in a way that might infringe its Aboriginal rights?

A. I don't recall if that was specifically part of the discussion.

333. Q. So you do not recall going into that level of detail?

A. I don't.

[Emphasis added]

255 A further problem in Phase IV was that, in at least three instances, information was put before the Governor in Council that did not accurately portray the concerns of the affected First Nations. Canada was less than willing to hear the First Nations on this and to consider and, if necessary, correct the information.

256 The first instance involved the Kitasoo. On June 9, 2014, Messrs. Maracle (the Crown Consultation Coordinator) and Clarke wrote acknowledging some of the Kitasoo's concerns expressed during Phase IV and enclosing that portion of the Crown Consultation Report that outlined its position and summarized its concerns.

257 Counsel for Kitasoo responded by letter dated June 17, 2014, identifying several inaccuracies in the letter of Messrs. Maracle and Clarke and the Consultation Report. Points made included the following:

- The Crown's letter incorrectly represented the Kitasoo's position respecting mitigation.

- The Consultation Report states "[t]he shipping route would cross the northwestern portion of the Kitasoo/Xai'xais First Nation for approximately 45 km. The confined channel assessment area is approximately 56 km from the proposed shipping route." This was incorrect and inconsistent with the Kitasoo's evidence that its territory extended into the confined channel assessment area.

- The information provided in the Crown Consultation Report was insufficient. By presenting the Kitasoo's concerns in a summary and high-level fashion, the decision-maker had insufficient information to assess the Kitasoo's outstanding concerns respecting the Project.

258 As counsel's information was conveyed to Canada only on the date the decision to approve the Project was made, the record before us does not demonstrate that these errors were corrected or brought to the attention of the Governor in Council.

259 On June 9, 2014, a similar letter was sent to the Heiltsuk. Again, its counsel responded by letter dated June 17, 2014. Errors and omissions identified by counsel included:

- an incorrect representation of the Heiltsuk's positon on mitigation.

- an incorrect statement that the "proposed shipping lane would be between 30 and 70 km north of the northern and western boundaries of the traditional territories." The Heiltsuk's evidence was that the proposed southern approach shipping lane intersected with a significant portion of the Heiltsuk's traditional territory.

- an incorrect representation of the Heiltsuk's position on equity participation.

- a failure to identify the central issue raised by the Heiltsuk regarding the lack of baseline work and the lack of spill modelling in the Open Water Area.

260 In the letter of June 17, 2014, counsel argued insufficient information was provided to the decision-maker that would allow assessment of the Heiltsuk's outstanding concerns. As was the case with the letter sent by counsel for the Kitasoo, this letter was only received the day the decision to approve the Project was made.

261 The final example comes from the June 9, 2014 letter with appended extracts of the Crown Consultation Report received by the Nadleh and the Nak'azdli. In a letter dated June 16, 2014, the Yinka Dene Alliance Coordinator highlighted issues and inaccuracies in this letter:

- The letter inaccurately stated that, at the Phase IV consultation meeting, federal officials discussed Canada's priorities regarding oil spill prevention and response and discussed the opportunity for future involvement in oil spill planning and response when such dialogue did not occur.

- The Crown failed to respond to the key concerns and impacts raised by the Nadleh and the Nak'azdli regarding the risks of an oil spill in their territory.

262 As with the Kitasoo and the Heiltsuk, the Nadleh and the Nak'azdli also responded to Canada asserting that the Governor in Council did not have sufficient information to make a decision. The record does not demonstrate that the Governor in Council had this information before making its decision. While Canada did respond acknowledging the errors in the Phase IV discussions,

it did not indicate any steps taken to correct the errors or state what effect, if any, this had on the Governor in Council's decision: July 14 letter, Major Book of Documents, page 469.

263 Also of significant concern is the lack of meaningful dialogue that took place in Phase IV.

264 During the consultation meetings, Aboriginal groups were repeatedly told that Canada's representatives were:

- working on the assumption that the Governor in Council needed to make the decision by June 17, 2014;
- tasked with information gathering, so that their goal was to get the best information to the decision-makers;
- not authorized to make decisions;
- required to complete the Crown Consultation Report by April 16, 2014.

265 When the role of Canada's representatives is seen in this light, it is of no surprise that a number of concerns raised by Aboriginal groups — in our view, concerns very central to their legitimate interests — were left unconsidered and undiscussed. This fell well short of the conduct necessary to meet the duty to consult. There are several examples.

266 At the consultation meeting on April 22, 2014, the Kitasoo made detailed submissions about why the Project's impacts on their Aboriginal rights could not be assessed without what they referred to as the "missing information." The Kitasoo representatives explained that they required information about spill modelling and assessment, the behaviour (or fate) of bitumen in the water, a baseline marine inventory and what the spill recovery would look like. Thereafter, Chief Clark Robinson asked Canada's representatives "who will engage in consultation, will you?" Canada's response was delivered by two of its representatives: Joseph Whiteside, a senior policy analyst with Natural Resources, and Brett Maracle, the Crown Consultation Coordinator. Their response shows little in terms of facilitating consultation; indeed, it shows just how short of the mark the Phase IV consultation was:

> Joseph Whiteside: Building on what I just said - we're not decision makers, our job is to collect information to make sure that within the individual expertise of Environment Canada, Transport Canada, my department Natural Resources and others, we fully understand what you're trying to tell us, and so the decision making is at a different level. Particularly on the matter of funding. They haven't given us funding approval authority yet - maybe they will. But, our job is to take the best recommendations forward that we can. We may have some questions as the afternoon unfolds, to detail more of what was in your slide presentation - I assume we have a copy of the slide presentation. That will help our analysis as well.
>
> So, part of our responsibility today is not to make decisions, or to tell you we have decisions that we can make. It is to tell you we will do the best job we can in taking your recommendations forward so that they are properly understood within our respective departments.
>
> Brett Maracle: And considered.
>
> Joseph Whiteside: and considered.
>
> Chief Clark Robinson: Will [you]make a recommendation on consultation?
>
> Joseph Whiteside: Well one of the things we can look at is, based on what your community and others have said - is that they are seeking, I think [it's] fair from the hereditary chiefs said this morning, you're looking for an additional level of consultation beyond what has already been engaged in prior to panel, through the panel, which Canada continues to say we rely on, to the extent possible to meet the duty to consult, and then using this phase IV to build on the work of the Panel to make sure we fully understood what Aboriginal communities are saying.
>
> To identify where you believes [there] are gaps, and I think [it's] fair to describe a lot of the presentation is talking about gaps in the analytical framework that you believe critically need to be filled, and then to see what more can be done. It

> may well be possible to take - to put forward a recommendation, and I can't say what's in the Cabinet submission because I don't make that decision. As to whether [Cabinet] feels there is ongoing consultation work that needs to be engaged [in regardless] of the whether the decision is pro or con on the particular project, that may well be an issue Ministers may wish to bring forward further information about consultation, I can't say the door is closed, and I can't say what the door on consultation may be, that part of the analysis, we as a team may have to do some work on to assist to assist our seniors.
>
> Chief Clark Robinson: We don't agree that there has been any consultation.
>
> [Emphasis added] [*sic* throughout]

267 In our view, the Kitasoo never received Canada's explanation why the missing information was not required and why Canada rejected the assertion that the Kitasoo had not been adequately consulted.

268 The Heiltsuk made similar submissions to the Kitasoo at their Phase IV consultation meeting with Canada in terms of requiring additional information to assess the impacts on their Aboriginal rights. Particularly concerning for the Heiltsuk was that there was insufficient information regarding the risk of an oil spill to herring-spawn-on-kelp — a resource over which the Heiltsuk have an Aboriginal right to fish on a commercial basis: see the Heiltsuk's closing submissions to the Joint Review Panel, extract book, Tab 19.

269 During the consultation meeting, elected leader and Chief Councillor Cecil Reid described the importance of the herring industry to the Heiltsuk and the "horrific" consequences that an oil spill would have on their livelihood. He then asked Canada's representative "[...] why did you come without the authority to discuss our concerns and react to them in a positive way so that we have some comfort that this thing is being taken seriously? ... How can you make a decision until all the information is in?"

270 Joseph Whiteside, a senior policy analyst with Natural Resources, responded along the same lines as he did at the Kitasoo meeting:

> Our responsibility is to collect the information we have and be as responsive to the questions and issues we've heard in the last day and a half, and to be as responsive back to, within the time that we have, to provide some information and try and build some understanding. Our main responsibility is to take your views back and integrate them into the report that we have to prepare, so that our senior managers and all up to the Ministers are fully aware of the perspective of the Heiltsuk Nation brings forward on the proposal that will be before the Cabinet by mid-June.

271 When Chief Councillor Marilyn Slett asked Canada's representatives if Canada would be available for further consultations with the Heiltsuk on this matter, Canada's Crown Consultation Coordinator, Brett Maracle, replied, "I can't say, because that would be basically the [M]inister's agreeing to [a] delay of the process." The Heiltsuk never received an explanation why the missing information concerning a resource necessary for their sustenance was not required.

272 Deputy Chief Counselor Taylor Cross of the Haisla also provided evidence of the following unaddressed concerns:

> 7. Despite a representative from Transport Canada attending the March and April Meetings, we did not have time to discuss Canada's Tanker Safety Expert Panel Report or our concerns with that report. We therefore requested that the Crown reply to our concerns regarding that report in writing. To the best of my knowledge, Transport Canada has not yet replied to our concerns in writing or otherwise.

273 The Haisla fared no better when they raised concerns about errors in the Report of the Joint Review Panel. For example, during the consultation meetings, Canada's representative agreed that hundreds of culturally modified trees exist at the proposed terminal site, notwithstanding that the Report of the Joint Review Panel stated that there were none. He agreed that many culturally modified trees would be destroyed by the Project and that this would have an impact on the Haisla. Canada then offered no suggestion as to how the impacts to the Haisla's culturally modified trees could be avoided or accommodated.

274 Deputy Chief Councillor of the Haisla, Taylor Cross, also gave evidence that Canada's representatives, including Jim Clarke, repeatedly stated that they had to accept the findings of the Joint Review Panel as set out in its Report. This was not so.

Phase IV in part was an opportunity to address errors and omissions in the Report on subjects of vital concern to Aboriginal Peoples. The consequence of Canada's position was to severely limit its ability to consult meaningfully on accommodation measures.

275 The Gitxaala encountered the same problems with Canada during Phase IV. It also took the position that approval of the Project was premature and that further studies on matters arising from the Report of the Joint Review Panel were required. The notes of the April 3, 2014 consultation meeting show that Canada was asked "[c]an we get any response, any reasons why the additional work that we're asking for can't be undertaken? Can we talk about what can or can't be undertaken? We invite any discussion?"

276 Jim Clarke, for Canada, replied that "I don't want to raise your expectations. Typically we just use the Joint Review Panel as information for the decision. It is not typical to delay the legislative timeframe for decision. It doesn't mean it can't happen it's just not routinely done."

277 During this April 2014 consultation meeting, Canada acknowledged to the Gitxaala that an oil spill could have a catastrophic effect on the Gitxaala's interests. The Gitxaala's representatives went on to observe that the Gitxaala had filed many expert reports in the Joint Review Panel process. The Gitxaala's representatives asked what Canada's views were on a specific report dealing with navigation issues, and how Canada intended to take such report into account. Transport Canada's representative answered, "If we can get more answers we'll try." Answers on this critical issue were never forthcoming.

278 One final example occurred during the March 3, 2014, consultation meeting with the Haisla. The Haisla's representatives expressed concern at the extent to which paid lobbyists were talking to government officials and affecting the consideration of their concerns and asked for disclosure of lobbying efforts. Mr. Maracle responded that it was "hard for us to get [information] from Ministers, [and it would be] better if you [used] an [access to information request]." If information was available through an access request, it is difficult to see why it would not be provided through the consultation process — particularly in light of the timelines Canada had imposed.

279 Based on our view of the totality of the evidence, we are satisfied that Canada failed in Phase IV to engage, dialogue and grapple with the concerns expressed to it in good faith by all of the applicant/appellant First Nations. Missing was any indication of an intention to amend or supplement the conditions imposed by the Joint Review Panel, to correct any errors or omissions in its Report, or to provide meaningful feedback in response to the material concerns raised. Missing was a real and sustained effort to pursue meaningful two-way dialogue. Missing was someone from Canada's side empowered to do more than take notes, someone able to respond meaningfully at some point.

280 Canada places great reliance on two letters sent to each affected First Nation on June 9, 2014 and July 14, 2014, the former roughly a week before the Governor in Council approved the Project, the other after. In our view, for the following reasons, these letters were insufficient to discharge Canada's obligation to enter into a meaningful dialogue.

281 Aside from the errors found in the June 9, 2014 letter sent to the Kitasoo, the Heiltsuk, the Nadleh and the Nak'azdli, the content of the letters can at best be characterized as summarizing at a high level of generality the nature of some of the concerns expressed by the affected First Nation. Thus, the letter explained that during Phase IV, officials "noted [their] perspective on the extent which [your] concerns could be mitigated by various measures" without setting out what the Nations suggested mitigation measures were. To the limited extent the June 9, 2014 letter responded to a concern, it did so only in a generic fashion. In substance, no explanation was provided about what, if any, consideration had been given to the suggested mitigation measures.

282 To illustrate, to the extent a First Nation had raised a concern about the consequence of an oil spill, Canada responded that it "place[d] a high priority on preventative measures to avoid the occurrence of spills in the first place, and on enhancing response and recovery measures in the unlikely event of a spill." The letter went on to inform that "the Government of Canada has recently announced new measures to further enhance Canada's world-class pipeline safety and tanker safety systems."

283 The July 14, 2014 letters were lengthier and were intended "to respond to the many important issues you have raised, and to describe some of the next steps related to the Project." Given that the decision to approve the Project had already been

made, and that consultation is to be complete prior to making the decision at issue, it is difficult to see these letters as fulfilling Canada's obligation to consult.

284 Moreover, again we characterize the content of the July letters as generic in nature, explaining that the Joint Review Panel had subjected the Project proposal "to a rigorous science-based review by an independent Panel." To the extent the letter addressed concerns expressed by the First Nation, those concerns were summarized at a general level and then responded to by reference to conditions imposed by the Joint Review Panel, by reliance upon the current marine safety regime, the possibility "there may be further interest in conducting geological and geotechnical sampling to gather additional information to better evaluate" hazards posed by geo-hazards, additional research and development on the fate of diluted bitumen and ongoing research.

285 It is fair to say the letters centered on accommodation measures.

286 However, the letters did not engage with the stated concerns that the Phase IV consultation process was rushed and lacked any meaningful dialogue. Nor did the letters engage with the repeatedly expressed concern that insufficient evidence was available to allow for an informed dialogue about the potential impacts of the Project on Aboriginal and treaty rights.

287 Following the authorities of the Supreme Court of Canada on the duty to consult, we conclude that during the Phase IV process, the parties were entitled to much more in the nature of information, consideration and explanation from Canada regarding the specific and legitimate concerns they put to Canada.

288 The dialogue necessary to fulfil the duty to consult was also frustrated by Canada's failure to disclose necessary information it had about the affected First Nations' strength of claims to rights and title. We stress information, as opposed to the legal assessments we discussed above at paragraphs 218-225. Canada's attitude to the sharing of information about this is troubling. Strength of claims was an important matter that had to be considered in order for the consultation in Phase IV to be meaningful. We wish to explain why.

289 The consultation process in Phase IV was not to be a forum for the final determination and resolution of Aboriginal claims to rights and title. We agree, based on the Supreme Court's reasoning in *Haida Nation*, that this was appropriate: the duty to consult is not a duty to determine unresolved claims. But disclosure by Canada of information concerning the affected First Nations' strength of claims to rights and title was needed for another reason.

290 In law, the extent and strength of the claims of affected First Nations affect Canada's level of obligation to consult and, if necessary, accommodate. It also defines the subjects over which dialogue must take place: a broad and strong claim to rights and title over an asserted territory means that broad subjects within that territory must be discussed and, perhaps, must be accommodated. Looking specifically at the case before us, Canada accepted that the obligation to consult was deep. But dialogue had to take place regarding what that meant. What subjects were on the table? How deep did the dialogue and, if necessary, accommodation have to go?

291 The case law is clear that Canada, acting under the duty to consult, must dialogue concerning the impacts that the proposed project will have on affected First Nations and to communicate its findings to the First Nations: *Mikisew Cree First Nation*, at paragraph 55. But contrary to that case law, Canada repeatedly told the affected First Nations that it would not share a matter fundamental to identifying the relevant impacts — information concerning the strength of the affected First Nations' claims to Aboriginal rights and title.

292 For discussions during Phase IV to be fruitful and the dialogue to be meaningful, this had to happen. And, as we noted above, in a letter dated April 18, 2012, the then Minister of the Environment committed to do just that — to provide a description of its strength of claim and depth of consultation assessment.

293 But Canada never provided the Haisla with that description. The evidence of Chief Ross of the Haisla shows that during Phase IV Canada resiled from that commitment and avoided defining exactly what was in play during the consultations:

99. There was no genuine discussion of the Haisla Nation's strength of claim at the March and April Meetings. At the March Meeting, the Haisla Nation raised the importance of openly discussing Aboriginal rights and title - a topic [the Joint Review Panel] had avoided entirely - and asked the Crown representatives to share the Crown's views of the strength of claim. In his letter dated April 18, 2012 the Minister of Environment had committed to sharing the Crown's results of its analysis of our strength of claim prior to the commencement of Phase IV of its Consultation Framework. We stressed that we needed to know of any disagreements regarding strength of claim in order for consultation to be meaningful, and so that we were not speaking at cross purposes.

100. The Environment Canada representatives, Mr. Brett Maracle and Analise Saely, stated that, based on a preliminary assessment, they were of the view that the Haisla Nation had a strong Aboriginal title claim to the terminal site, a strong Aboriginal title claim to portions of the pipeline right-of-way within Haisla Territory, as well as a strong claim to Aboriginal rights to fish and harvest marine resources in parts of the Kitamaat River, Kitamaat River or Estuary, and in the Douglas Channel. We asked that the Crown provide detail as to what portions of the pipeline route they conceded Haisla Nation has a strong Aboriginal title claim to and what areas of water the Crown has conceded Haisla Nation has a strong claim of aboriginal rights in. The Crown representatives told us they would seek permission to disclose the Crown's actual strength of claim analysis, including further analysis of strength of claim along the pipeline route. A copy of a March 11, 2014 letter to the Crown documenting at page 4 some of what the Crown admitted in terms of the Haisla Nation's strength of claim is found at pages 920 to 929 of Exhibit H to this my Affidavit. This letter, however, contains an error. At page 4, the letter incorrectly states that the Crown explicitly agreed that the Haisla Nation has a high strength of claim to its entire Traditional Territory. In fact, the Crown representatives only explicitly admitted that the Haisla Nation has a strong claim to title at the terminal site and portions of the pipeline route, as well as a strong claim to fishing and harvesting rights in the aforementioned waters.

101. Shortly after the March Meeting, the Crown sent a letter to the Haisla Nation with a generic and deliberately vague statement about our Nation's strength of claim that was divorced from the Project area. The letter states as follows at page 2:

> As discussed during our meetings on March 4 and 5, Canada's preliminary strength of claim assessment is based on the information the Haisla Nation have provided to the Panel and in correspondence with government officials. Without making any determination of the Haisla Nation's Aboriginal rights or title claims, our preliminary assessment of that information, for the sole purpose of the consultation process for this proposed project, is that it supports the Haisla Nation as a having strong *prime* [sic] *facie* claim to both aboriginal rights and title within lands claimed as part of the Haisla traditional territory.

A copy of the Crown's letter dated March 24, 2014 with this statement is found at pages 931 to 1,052 of Exhibit H to this my Affidavit.

102. This carefully crafted statement came as a surprise to me, given that the Crown representatives had previously conceded the Crown's view that the Haisla Nation has a high strength of claim to Aboriginal title to the terminal site itself and to portions of the pipeline right-of-way. Our request for clarity and for disclosure of the Crown's strength of claim analysis had resulted in a statement which effectively told us nothing about the Crown's view of the strength of our claim in relation to the Project.

103. At the April Meeting, the issue of strength of claim was again raised, as was the deliberately vague strength of claim language in the March 24 letter. We expressed concern that such language was entirely unhelpful for the consultation process. Mr. Maracle and Mr. Jim Clarke, of the Major Projects Management Office, told us that they were limited in what they were authorized to disclose. Specifically, Mr. Maracle stated that he had sought to disclose more and had drafted a letter that did in fact disclose more regarding our strength of claim, but that his supervisors had directed him to disclose nothing beyond what was set out in the March 24 letter. Mr. Clarke told us that the Minister of Natural Resources himself had directed that the consultation team disclose nothing more than what was in the letter quoted above. Mr. Clarke stated that he had done his best to seek the disclosure of the Crown's strength of claim analysis. He explicitly confirmed that the

> Minister of Natural Resources rejected this plea for disclosure and ordered that no further disclosure be made. We asked Mr. Clarke if he could explain the rationale behind the Crown's refusal to share its analysis of the Haisla Nation strength of claim. He stated that he could not. We stated that the effect of Canada's failure to share its strength of claim analysis was that Minister Kent's promise would be broken. The Crown representatives had no explanation. A copy of our letter of May 7, 2014 expressing frustration with the Crown's approach to Phase IV consultation is found at pages 1,054 to 1,066 of Exhibit H to this my Affidavit.
>
> [Emphasis added]

294 The experience of the Gitxaala was not dissimilar. By letter dated March 28, 2014, they were informed that Canada accepted the Gitxaala had a strong *prima facie* claim "to an Aboriginal right to fish and harvest shellfish and other marine resources for food, social and ceremonial purposes in the area claimed as part of the Gitxaala Nation traditional territory."

295 Thereafter, the notes of the Phase IV consultation meeting held on April 3, 2014 show that the Gitxaala asked, not for an adjudication of their rights, but for Canada's assessment of the strength of their claim as they had asserted governance and title rights, *i.e.* far more than just harvesting rights. Brett Maracle responded that Canada had already gone through many ministerial levels to get approval for the statement about the strength of claim that was provided in Canada's correspondence. Jim Clarke also advised they had pushed very hard to get this disclosure.

296 When asked if Canada agreed that the Gitxaala was owed a deep level of consultation, Mr. Maracle advised that he didn't have approval to say so. When further pressed, he repeated that Canada had tried to give as much information as it could about the rights of the Gitxaala, and what Canada's representatives were able to share they did share.

297 Chief Moody then observed that somewhere a determination had been made that their rights were focused on subsistence harvesting. In answer to the question of whether the discussion would be limited to this determination of their rights he was told, "No, but that's all we are allowed to share."

298 Again, at the April 22, 2014 consultation meeting with the Kitasoo, Mr. Maracle repeated that Canada was not at that time sharing the strength of claim assessments. Aynslie Saely of Environment Canada then added that they were still getting information which would allow them to complete the depth of consultation assessment. When asked if Canada would share its ultimate conclusion and the information it relied on for assessing the strength of claim, Ms. Saely responded that such conclusion would be a cabinet confidence, and as such it was not information that could be shared.

299 Three days later, the transcript of the April 25, 2014 consultation meeting with the Heiltsuk records Ms. Saely of Environment Canada advising that Canada had a strength of claim assessment but it was not something that could be shared. The stated rationale was that, as it had been prepared by the Department of Justice, it was protected by solicitor client privilege. When counsel for the Heiltsuk observed that while legal advice could not be disclosed, the result of the assessment could be disclosed, Ms. Saely responded that "[i]n terms of the directions that we received - that it is part of Cabinet confidence."

300 We do not accept that privileges in this case barred Canada's from disclosing factual information relevant to the consultation process.

301 At the consultation meeting with the Gitxaala held on April 2, 3 and 4, 2014, in response to questions about the impacts of oil spills upon governance and other concerns, Canada's representatives advised that "Phase IV consultations are an opportunity to carefully consider the concerns of Gitxaala Nation regarding the potential adverse impacts of the propose (*sic*) Project." The question was then asked if that was the only answer the Gitxaala was going to get. Mr. Maracle responded "[t]his is the answer that's being provided, and some of this will form part of our impact assessment, which we cannot share."

302 On cross-examination, Jim Clarke confirmed "Canada has not provided a detailed impact assessment to the Gitxaala, nor would Canada consider that to be a normal part of an environmental assessment process." Perhaps such information is not part of an environmental assessment process — but the Supreme Court has held it to be a necessary part of meaningful consultation.

303 Again, we refer to the affidavit of Chief Ross on this point:

> 106. At the March Meeting, we asked the Crown representatives to provide us with a list of the infringements of the Haisla Nation's Aboriginal rights and title that the Crown had identified as flowing from the Project. Mr. Maracle stated that this was a work in progress but that he would try to get that information to us as soon as possible. However, at the April Meeting, Mr. Maracle stated that his supervisors had prohibited any discussion of the Crown's assessment of infringements. In fact, Mr. Maracle told us that Canada had a document that sets out the Haisla Nation strength of claim, the severity of impacts from the Project, and the depth of consultation required, but that the Crown representatives had been forbidden from sharing that. We asked Mr. Maracle if he knew what the rationale was for his supervisors directing him to not provide this information. Mr. Maracle stated that he did not know.
>
> [Emphasis added]

304 This evidence is again consistent with the notes of the consultation meeting held on April 8 and 9, 2014, except that at the meeting Mr. Maracle stated that the direction precluding disclosure came from the Ministerial level.

305 We are satisfied that neither the Gitxaala nor the Haisla were singled out. Rather, the highest level of government directed that information vital to the assessment of the required depth of consultation (Canada's understanding of the strength of the right claimed and the potential impact of that right) not be shared with any First Nation.

306 We note that Canada does not argue that it was not obliged to consult with respect to title and governance matters. Rather, it argues that it reasonably accommodated potential impacts on assertions of Aboriginal title and governance claims to the point of Project development.

307 This is similar to the strategy that Canada employed with respect to disclosing its strength of claim assessments at the Phase IV consultation meetings. It was Canada's view that a dialogue regarding the content and extent of a particular right claim was unnecessary and it attempted to focus the meetings on mitigation and minimization of impacts. For example, at the April 3 meeting, the Gitxaala asked Canada "When Canada says it's taking the rights at face value, what does that mean? That it accepts Gitxaala has these rights?" Brett Maracle for Canada responded "No, it means considering whether there are measures that could address these impacts."

308 In our view, it was not consistent with the duty to consult and the obligation of fair dealing for Canada to simply assert the Project's impact would be mitigated without first discussing the nature and extent of the rights that were to be impacted. In order for the applicant/appellant First Nations to assess and consult upon the impacts of the Project on their rights there must first be a respectful dialogue about the asserted rights. Once the duty to consult is acknowledged, a failure to consult cannot be justified by moving directly to accommodation. To do so is inconsistent with the principle of fair dealing and reconciliation.

309 While we agree with Canada that the consultation process was not a proper forum for the negotiation of title and governance matters, similar to other asserted rights, affected First Nations were entitled to a meaningful dialogue about the strength of their claim. They were entitled to know Canada's information and views concerning the content and strength of their claims so they would know and would be able to discuss with Canada what was in play in the consultations, the subjects on which Canada might have to accommodate, and the extent to which Canada might have to accommodate. Canada's failure to be candid on this point, particularly in light of the initial commitments made in the letter of the Minister of the Environment dated April18, 2012 (discussed at paragraphs 220 and 292, above), was legally unacceptable. Canada's failure frustrated the sort of genuine dialogue the duty to consult is meant to foster.

310 We now consider the adequacy of Canada's reasons.

311 In the present case, Canada was obliged at law to give reasons for its decision directing the National Energy Board to issue the Certificates. The source of this obligation was two-fold. As we develop in more detail below, in the present circumstances where a requirement of deep consultation existed, the Crown was obliged to give reasons. Additionally, subsection 54(2) of the

National Energy Board Act requires that where the Governor in Council orders the National Energy Board to issue a certificate, the order "must set out the reasons for making the order."

312 Canada argues that the requirement to give reasons was met for the following reasons:

- Neither the *National Energy Board Act* nor the *Canadian Environmental Assessment Act, 2012* require the Governor in Council to expressly address the adequacy of consultation in the order, nor to provide reasons in relation thereto.

- To the extent that the fulfilment of the duty to consult required reasons to be provided with respect to Canada's assessment of Aboriginal concerns and the impact those concerns had, the June and July letters addressed the information and issues arising in the consultation process to the point of the Governor in Council's decision.

- "Added to the other aspects of the record and the lengthy consultation process in this case that unfolded over several years, the June and July letters amply accomplish this purpose."

- Read together with the findings and recommendations found in the Report of the Joint Review Panel, the Order in Council allows the parties and the Court to understand the decision and to determine whether it falls within the range of acceptable outcomes.

313 We accept the submission of the Attorney General that the Order in Council allows us to understand that the Governor in Council made its decision on the basis that it accepted the Joint Review Panel's finding that the Project will be required by present and future public convenience and necessity, and that the Project will diversify Canada's energy export markets and will contribute to Canada's long-term economic prosperity. This was sufficient to comply with the statutory requirement to give reasons in so far as the issues covered by the Joint Review Panel were concerned. But as far as the independent duty to consult is concerned, it fell well short of the mark.

314 Canada elected in these proceedings not to challenge, but to take at face value, assertions of Aboriginal rights and title. In some instances it has expressly acknowledged the existence of a strong *prima facie* case for a claim. For example, it has acknowledged the Heiltsuk's right to a commercial herring-spawn-on-kelp fishery as recognized by the Supreme Court in *R. v. Gladstone*, [1996] 2 S.C.R. 723, 137 D.L.R. (4th) 648 (S.C.C.). Given this, the importance of the claimed rights to Aboriginal groups, and the significance of the potential infringement of those rights, this is a case where deep consultation required written explanations of the sort described below to show that the Aboriginal groups' concerns were considered and to reveal the impact those concerns had on the Governor in Council's decision: *Haida Nation*, at paragraph 44.

315 We accept the submissions of counsel for the Kitasoo and the Heiltsuk that where, as in this case, the Crown must balance multiple interests, a safeguard requiring the Crown to set out the impacts of Aboriginal concerns on decision-making becomes more important. In the absence of this safeguard, other issues may overshadow or displace the issue of the impacts on Aboriginal rights.

316 Nor is the requirement to give reasons met by the Report of the Joint Review Panel or the June and July letters.

317 In its Report, the Joint Review Panel did not determine anything about Aboriginal rights or title and gave no explanation on how those non-assessed rights affected, if at all, its decision that the Project would not significantly adversely affect the interests of Aboriginal groups that use lands, waters or resources in the Project area. Thus, the Report of the Joint Review Panel — under this legislative scheme, nothing more than a guidance document — can shed no light on Canada's assessment of how the Project would impact upon asserted rights and title.

318 Similarly, as the Attorney General correctly conceded, the June and July letters are only capable of addressing issues up to the point of the Governor in Council's decision. Additionally, we addressed above the deficiencies of these letters as part of the consultation process. The letters' contents are not sufficient to show that the Governor in Council had proper regard for the asserted rights and how that appreciation of those rights factored into its decision to approve the Project.

319 The balance of the record that could shed light on this, *i.e.*, the staff recommendations flowing from the Phase IV consultation process, the ministerial recommendation to the Governor in Council and the information before the Governor in Council when it made his decision, are all the subject of Canada's claim to Cabinet confidence under section 39 of the *Canada Evidence Act* and thus do not form part of the record. Canada was not willing to provide even a general summary of the sorts of recommendations and information provided to the Governor in Council.

320 Finally and most importantly, on the subject of reasons, we note that the Order in Council contains only a single recital on the duty to consult. It records only that a process of consultation was pursued, nothing more:

> Whereas the Crown has undertaken a process of consultation and accommodation with Aboriginal groups relying on the work of the Panel and additional consultations with Aboriginal groups;

321 Nowhere in the Order in Council does the Governor in Council express itself on whether Canada had fulfilled the duty to consult. This raises the serious question whether the Governor in Council actually considered that issue and whether it actually concluded that it was satisfied that Canada had fulfilled its duty to consult. All parties acknowledge that the Governor in Council had to consider and be satisfied on the issue of the duty to consult before it made the Order in Council.

322 Similarly, the Order in Council does not suggest that the Governor in Council received information from the consultations and considered it.

323 There is nothing in the record before us to assist us on these matters. This is a troubling and unacceptable gap.

324 Had the Phase IV consultation process been adequate, had the reasons given by Canada's officials during the consultation process been adequate and had the Order in Council referred to and adopted, even generically, that process and the reasons given in it, the reasons requirement might have been met. But that is not what happened. Here too, Canada fell short of the mark.

(5) Conclusion

325 We have applied the Supreme Court's authorities on the duty to consult to the uncontested evidence before us. We conclude that Canada offered only a brief, hurried and inadequate opportunity in Phase IV — a critical part of Canada's consultation framework — to exchange and discuss information and to dialogue. The inadequacies — more than just a handful and more than mere imperfections — left entire subjects of central interest to the affected First Nations, sometimes subjects affecting their subsistence and well-being, entirely ignored. Many impacts of the Project — some identified in the Report of the Joint Review Panel, some not — were left undisclosed, undiscussed and unconsidered. It would have taken Canada little time and little organizational effort to engage in meaningful dialogue on these and other subjects of prime importance to Aboriginal peoples. But this did not happen.

326 The Project is large and has been in the works for many years. But the largeness of the Project means that its effects are also large. Here, laudably, many of the potentially-detrimental effects appear to have been eliminated or mitigated as a result of Northern Gateway's design of the Project, the voluntary undertakings it has made, and the 209 conditions imposed on the Project. But by the time of Phase IV consultations, legitimate and serious concerns about the effect of the Project upon the interests of affected First Nations remained. Some of these were considered by the Joint Review Panel but many of these were not, given the Joint Review Panel's terms of reference. The Phase IV consultations after the Report of the Joint Review Panel were meant to provide an opportunity for dialogue about the Report and to fill the gaps.

327 However, the Phase IV consultations did not sufficiently allow for dialogue, nor did they fill the gaps. In order to comply with the law, Canada's officials needed to be empowered to dialogue on all subjects of genuine interest to affected First Nations, to exchange information freely and candidly, to provide explanations, and to complete their task to the level of reasonable fulfilment. Then recommendations, including any new proposed conditions, needed to be formulated and shared with Northern Gateway for input. And, finally, these recommendations and any necessary information needed to be placed before the Governor in Council for its consideration. In the end, it has not been demonstrated that any of these steps took place.

328 In our view, this problem likely would have been solved if the Governor in Council granted a short extension of time to allow these steps to be pursued. But in the face of the requests of affected First Nations for more time, there was silence. As best as we can tell from the record, these requests were never conveyed to the Governor in Council, let alone considered.

329 Based on this record, we believe that an extension of time in the neighbourhood of four months — just a fraction of the time that has passed since the Project was first proposed — might have sufficed. Consultation to a level of reasonable fulfilment might have further reduced some of the detrimental effects of the Project identified by the Joint Review Panel. And it would have furthered the constitutionally-significant goals the Supreme Court has identified behind the duty to consult — the honourable treatment of Canada's Aboriginal peoples and Canada's reconciliation with them.

330 At the end of Phase IV of the consultation process is the Governor in Council. As we have explained above at paragraphs 159-168, under this legislative scheme the ultimate responsibility for considering whether the duty to consult has been fulfilled and whether necessary action must be taken in response to it rests with the Governor in Council and no one else. As a matter of law, the Governor in Council had to receive and consider any new information or new recommendations stemming from the concerns expressed by Aboriginal peoples during the consultation and, if necessary or appropriate, react, for example by imposing further conditions on any certificates it was inclined to grant.

331 Did the Governor in Council fulfil this legal obligation? In its Order in Council, the Governor in Council decided to acknowledge only the existence of consultations by others during the process. It did not say more despite the requirement to provide reasons under section 54 of the *National Energy Board Act* and under the duty to consult. The Governor in Council had to provide reasons to show that it fulfilled its legal obligation. It did not do so.

332 Overall, bearing in mind that only reasonable fulfilment of the duty to consult is required, we conclude that in Phase IV of the consultation process — including the execution of the Governor in Council's role at the end of Phase IV — Canada fell short of the mark.

G. Remedy

333 For the foregoing reasons, the Order in Council must be quashed. The Order in Council directed that the National Energy Board issue the Certificates. Now that the basis for the Certificates is a nullity, the Certificates are also a nullity and must be quashed. The matter is remitted to the Governor in Council for redetermination.

334 In that redetermination, the Governor in Council is entitled to make a fresh decision — one of the three options identified at paragraph 113 above, including the making of additional conditions discussed at paragraphs 159-168 above — on the basis of the information and recommendations before it based on its current views of the broad policies, public interests and other considerations that bear upon the matter. For example, if the Governor in Council, in looking at the matter afresh, considers that the environmental recommendations are unsatisfactory because the environmental assessment should have been conducted differently, it may exercise its discretion under section 53 to have the National Energy Board redetermine the matter.

335 But if the Governor in Council decides in that redetermination to have Certificates issue for the Project, it can only make that decision after Canada has fulfilled its duty to consult with Aboriginal peoples, in particular, at a minimum, only after Canada has re-done its Phase IV consultation, a matter that, if well-organized and well-executed, need not take long.

336 As a result of that consultation, Canada may obtain new information that affects the Governor in Council's assessment whether Canada has fulfilled its duty to consult. It may prompt Canada to accommodate Aboriginal concerns by recommending that additional conditions be added to the Project. It may also affect the balancing of considerations under section 54 of the *National Energy Board Act*. Thus, any new information and new recommendations must be placed before the Governor in Council.

337 It goes without saying that as a matter of procedural fairness, all affected parties must have an opportunity to comment on any new recommendations that the coordinating Minister proposes to make to the Governor in Council.

338 This leaves the Governor in Council in the same position as it was immediately before it first issued the Order in Council. All the powers that were available to it before are available to it now.

339 This means that on redetermination, the Governor in Council will have the three options available to it, summarized at paragraph 113 above, as well as the discretionary power, as explained at paragraphs 159-168 above, to impose further conditions on the Certificates in order to accommodate the concerns of Aboriginal peoples.

340 This also means that upon receipt of any new information or any new recommendations, the Governor in Council is subject to the strict time limits for making its decision under subsection 54(3) of the Act.

341 Finally, we note that the Governor in Council must provide reasons for its decision in order to fulfil its obligations under subsection 54(2) and the duty to consult.

H. Proposed disposition

342 For the foregoing reasons, we would dismiss the applications for judicial review of the Report of the Joint Review Panel in files A-59-14, A-56-14, A-64-14, A-63-14 and A-67-14.

343 We would also allow the applications for judicial review of the Order in Council, P.C. 2014-809 in files A-437-14, A-443-14, A-440-14, A-445-14, A-446-14, A-447-14, A-448-14, A-439-14 and A-442-14 and quash the Order in Council. We would also allow the appeals in files A-514-14, A-520-14, A-522-14 and A-517-14 and quash the National Energy Board's Certificates OC-060 and OC-061.

344 We would further order that:

(a) The matter is remitted to the Governor in Council for redetermination;

(b) At its option, the Governor in Council may receive submissions on the current record and, within the timeframe under subsection 54(3) of the *National Energy Board Act* calculated from the date submissions are complete, may redetermine the matter by causing it to be dismissed under paragraph 54(1)(*b*) of the *National Energy Board Act*;

(c) If the Governor in Council does not pursue the option in paragraph (b) or if it pursues that option but does cause the matter to be dismissed at that time, the matter will remain pending before it; in that case, Phase IV consultation shall be redone promptly along with any other necessary consultation with a view to fulfilling the duty to consult with Aboriginal peoples in accordance with these reasons;

(d) When the Attorney General of Canada is of the view that the duty under paragraph (c) and any procedural fairness obligations are fulfilled, she shall cause this matter to be placed as soon as practicable before the Governor in Council for redetermination, along with any new recommendations and any new relevant information; and

(e) The Governor in Council shall then redetermine this matter in accordance with these reasons within the timeframe set out in subsection 54(3) of the *National Energy Board Act*, running from the time it has received any new recommendations and any new relevant information.

345 If the parties are unable to agree on costs, we invite them to provide us with submissions of no more than five pages.

346 We thank the parties for the great assistance they have provided to the Court throughout.

C. Michael Ryer J.A. **(dissenting):**

347 I have read the thorough reasons of the majority (the "Majority Reasons") and am in agreement with much of them. In particular, I agree that the Order in Council is unimpeachable from an administrative law perspective. However, with respect, I do not agree that it should be set aside on the basis that the Crown's execution of the Phase IV consultations was inadequate

to meet its duty to consult. In my view, in the context of the overall Project-approval process, the execution of the Phase IV consultations was adequate, and I would dismiss the applications and appeals with costs.

348 In preparing these reasons, I have adopted all of the defined terms contained in the Majority Reasons, except where otherwise stipulated.

349 As a starting point, it is my view that the only Aboriginal rights that are engaged by the Project are each First Nation's asserted rights in relation to the use and benefits of the lands and waterways that the Project will cross. Additionally, the Project may engage the Heiltsuk Nation's established right to use a portion of the offshore waters to conduct commercial herring-spawn-on-kelp fishery operations. In these reasons, I refer to each of these engaged asserted or established Aboriginal rights as a "Usage Right".

350 I reject any assertion that the construction and operation of the Project could affect the asserted governance rights or asserted Aboriginal title. These are purely legal rights that could not be damaged or extinguished by the activities undertaken in the course of the Project. An action that has the effect of sterilizing land near the Project right of way would, no doubt, damage a First Nation's ability to use and enjoy the flora and fauna that would otherwise have been situated on the sterilized land. However, the sterilizing action would have no impact upon the First Nation's ability to establish, at some future time, a right to Aboriginal title to, and governance rights in respect of, such land.

351 A detailed description of the history, size and scope of the Project is contained in the Majority Reasons and does not bear repeating. Suffice it to say that the Project is a massive undertaking, with an estimated cost of over $7.9 billion. It also has the support of a majority of the affected First Nations, 26 of which accepted the Project proponent's offer to acquire an equity interest in the Project. In assessing the adequacy of the execution of the Phase IV consultations, it is important to consider these consultations in the context of the Project's duration, size and scope.

352 The Majority Reasons describe a number of alleged imperfections in the Crown's execution of the Phase IV consultations and conclude that such imperfections establish the Crown's failure to meet its duty to consult obligations. However, as acknowledged in the Majority Reasons, the standard to be met is that of adequacy and not perfection (*Haida Nation v. British Columbia (Minister of Forests)* [2004 CarswellBC 2656 (S.C.C.)], at paragraphs 60-63).

353 In essence, the alleged imperfections are as follows:

(a) the timelines for the Phase IV consultations were too short;

(b) the Crown Consultation Report contained inaccuracies in its portrayal of the First Nations' concerns, with the result that the Governor in Council had insufficient information to render its decision;

(c) the dialogue that occurred in the Phase IV consultations was not meaningful; and

(d) the Crown did not share its strength of claim information.

354 With respect, even assuming that these imperfections have been established, it is my view that taken together, in the context of such a large and complex project that has taken over 18 years to reach the present stage, they are insufficient to render the Phase IV consultations inadequate.

355 I wish to briefly address each of the four alleged imperfections. First, the timelines for the Phase IV consultations were statutorily imposed. The Majority Reasons criticize the Crown for failing to request an extension from the Governor in Council, but the Crown had no obligation to make such a request. Moreover, there has been no challenge, by way of judicial review, of the Crown's alleged failure to request an extension of the statutory timelines. The Majority Reasons offer the view that a short relaxation of the timelines — in the neighbourhood of four months — would have been sufficient to permit sufficient dialogue to take place and to fill any informational gaps. With respect, this view is speculative.

356 Secondly, because of the claim of Cabinet confidence, under section 39 of the *Canada Evidence Act*, this Court is unaware of the entirety of the materials that were before the Governor in Council when it made its decision. Accordingly, with respect, it is not possible for this Court to make any assessment of the adequacy of the materials that were before the Governor in Council when it made its decision. In any event, it is apparent that the Crown's summaries in the Crown Consultation Report, which contained the alleged inaccuracies, were not the only documents that were before the Governor in Council. Any such inaccuracies would have been apparent from a review of the Report, and the letters from First Nations which were appended to the Crown Consultation Report, both of which are presumed to have been reviewed by the Governor in Council. Thus, in my view, any inaccuracies in the Crown Consultation Report are insufficient to render the Crown's Phase IV consultations inadequate.

357 Thirdly, the Majority Reasons appear to conclude that the Crown failed to engage in a meaningful dialogue because some First Nations stated that they required further information regarding the Project's impacts, and the letters sent by the Crown following the Phase IV consultations addressed accommodation but not the First Nations' concerns regarding consultation. With respect, in my view, the requested information, by and large, related to matters that were considered by the Joint Review Panel or, in some instances, matters that were never placed before the Joint Review Panel, but should have been. The assertion of such imperfections in the Phase IV consultations represented an attack on the Report in a forum neither designed nor equipped to adjudicate its merits. Indeed, those First Nations have challenged the adequacy of the Report in this appeal, but to no avail. In addition, it is my view that a focus on accommodation in the letters is consistent with the Phase IV mandate to consider the efficacy of the "mitigation measures" put forth by the Joint Review Panel (Aboriginal Consultation Framework at page 8). Moreover, one may question the practical utility of engaging in ongoing discussions with respect to a concern that has been accommodated.

358 Finally, it is my view that the Crown made no error in failing to disclose its strength of claim assessments. It seems incongruous to stipulate that the consultation process was "not a proper forum for the negotiation of title and governance matters" (Majority Reasons at paragraph 309) and then to conclude that the Crown's "attitude to the sharing of information" regarding its assessment of the strength of the First Nations' claims in respect of such asserted rights was "troubling" (Majority Reasons at paragraph 288). This is especially so in light of the conclusion that the Crown, as a matter of law, had no obligation to share its assessment of the strength of each First Nation's claim in respect of asserted rights (Majority Reasons at paragraph 224). In my view, there is little, if anything, to distinguish between the Crown's "legal" assessment of a First Nation's claim and "information" the Crown has about the strength of such a claim. As the Majority Reasons stipulate, the Crown's legal assessment of the strength of a First Nation's claim is inherently subject to solicitor-client privilege. In my view, that privilege extends to the Crown's information upon which its legal assessment is based. To the extent that issues as to governance rights and Aboriginal title are live as between the Crown and any of the applicant/appellant First Nations, such issues ought to be pursued elsewhere as they are not, in my view, properly engaged by the Project-approval process. I agree that the Crown had no obligation to share its strength of claim assessments and, as a result, it is my view that this alleged failure does not establish the inadequacy of the Crown's Phase IV consultations.

359 In my view, the Crown's participation in the Phase IV consultations was sufficient to fulfill the honour of the Crown, particularly in a process that dealt with a project of this duration, size and scope. In conclusion, it is my view that the alleged imperfections in the execution of the Phase IV consultations, which are stipulated in the Majority Reasons, are insufficient to demonstrate that the Crown's consultations were inadequate.

360 The Majority Reasons also conclude that the Governor in Council's reasons were inadequate. In my view, there is no error in the Governor in Council's reasons that warrants this Court's intervention. In the Project-approval process, the Crown had the obligation to fulfill the duty to consult. As a result, any obligation to explain why the duty to consult was adequately discharged rested with the Crown, not the Governor in Council. The Majority Reasons (paragraph 331) appear to take issue with the Governor in Council's reference in the Order in Council to "consultations by others". I do not accept this as a valid criticism because, at least implicitly, it places an obligation on the Governor in Council to directly engage in *Haida* consultations with respect to the Project, rather than to simply determine the adequacy of the consultations that were undertaken by the Crown.

361 In my view, the Crown's reasons for concluding that it had met its duty to consult are readily apparent:

- an extensive consultation process was created, documented and implemented through the Aboriginal Consultation Framework, the Joint Review Panel Project-approval process and the Phase IV consultations;

- all of the applicant/appellant First Nations were encouraged to participate in the process and received, or were entitled to receive, funding in respect of their participation;

- the Crown acknowledged the potential impacts of the Project on the Usage Rights; and

- many of the First Nations' concerns were accommodated through the 209 conditions detailed in the Report.

362 The Crown's reasoning was, in my view, adequately demonstrated by the Report, the Phase IV consultation meetings, the Crown Consultation Report and the correspondence from the Crown to the First Nations who engaged in the Phase IV consultations. A more explicit explanation from the Crown was not required. Furthermore, in my view, the Governor in Council had no obligation to repeat the reason-providing exercise.

363 In my view, it is apparent from the Order in Council that the Governor in Council determined that the Crown's duty to consult had been met, thereby satisfying the condition precedent to the exercise of its power to issue the Order in Council. With respect, I find it difficult to accept that, notwithstanding the brevity of the reference to Crown consultation in the Order in Council, there is any doubt that the Governor in Council considered and determined the critical issue of whether or not the Crown had met its duty to consult obligations. As discussed above, at a minimum, the Governor in Council had the Report and the Crown Consultation Report before it, both of which clearly addressed this issue and both of which the Governor in Council is presumed to have reviewed. For the reasons that I have given, I conclude that the duty to consult was met in the circumstances and the Governor in Council was correct in so acknowledging. As no other defect has been demonstrated, the Order in Council should stand.

364 For the foregoing reasons, I would dismiss the applications and appeals with costs.

Application granted.

ON APPEAL FROM THE COURT OF APPEAL FOR BRITISH COLUMBIA

Crown — Honour of Crown — Duty to consult and accommodate Aboriginal peoples — Whether Crown has duty to consult and accommodate Aboriginal peoples prior to making decisions that might adversely affect their as yet unproven Aboriginal rights and title claims — Whether duty extends to third party.

For more than 100 years, the Haida people have claimed title to all the lands of Haida Gwaii and the waters surrounding it, but that title has not yet been legally recognized. The Province of British Columbia issued a "Tree Farm License" (T.F.L. 39) to a large forestry firm in 1961, permitting it to harvest trees in an area of Haida Gwaii designated as Block 6. In 1981, 1995 and 2000, the Minister replaced T.F.L. 39, and in 1999, the Minister approved a transfer of T.F.L. 39 to Weyerhaeuser Co. The Haida challenged in court these replacements and the transfer, which were made without their consent and, since at least 1994, over their objections. They asked that the replacements and transfer be set aside. The chambers judge dismissed the petition, but found that the government had a moral, not a legal, duty to negotiate with the Haida. The Court of Appeal reversed the decision, declaring that both the government and Weyerhaeuser Co. have a duty to consult with and accommodate the Haida with respect to harvesting timber from Block 6.

Held: The Crown's appeal should be dismissed. Weyerhaeuser Co.'s appeal should be allowed.

While it is open to the Haida to seek an interlocutory injunction, they are not confined to that remedy, which

EN APPEL DE LA COUR D'APPEL DE LA COLOMBIE-BRITANNIQUE

Couronne — Honneur de la Couronne — Obligation de consulter les peuples autochtones et de trouver des accommodements à leurs préoccupations — La Couronne a-t-elle envers les peuples autochtones une obligation de consultation et d'accommodement avant de prendre une décision susceptible d'avoir un effet préjudiciable sur des revendications de droits et titres ancestraux non encore prouvées? — L'obligation vise-t-elle aussi les tiers?

Depuis plus de 100 ans, les Haïda revendiquent un titre sur les terres des îles Haïda Gwaii et les eaux les entourant; ce titre n'a pas encore été juridiquement reconnu. En 1961, la province de la Colombie-Britannique a délivré à une grosse compagnie forestière une « concession de ferme forestière » (CFF 39) l'autorisant à récolter des arbres dans la région des îles Haïda Gwaii connue sous le nom de Bloc 6. En 1981, en 1995 et en l'an 2000, le ministre a remplacé la CFF 39 et en 1999 il a autorisé la cession de la CFF 39 à Weyerhaeuser Co. Les Haïda ont contesté devant les tribunaux ces remplacements et cette cession, qui ont été effectués sans leur consentement et, depuis 1994 au moins, en dépit de leurs objections. Ils demandent leur annulation. Le juge en son cabinet a rejeté la demande, mais a conclu que le gouvernement a l'obligation morale, mais non légale, de négocier avec les Haïda. La Cour d'appel a infirmé cette décision, déclarant que le gouvernement et Weyerhaeuser Co. ont tous deux l'obligation de consulter les Haïda et de trouver des accommodements à leurs préoccupations.

Arrêt : Le pourvoi de la Couronne est rejeté. Le pourvoi de Weyerhaeuser Co. est accueilli.

Il est loisible aux Haïda de demander une injonction interlocutoire, mais ce n'est pas leur seul recours. Par

may fail to adequately take account of their interests prior to final determination thereof. If they can prove a special obligation giving rise to a duty to consult or accommodate, they are free to pursue other available remedies.

The government's duty to consult with Aboriginal peoples and accommodate their interests is grounded in the principle of the honour of the Crown, which must be understood generously. While the asserted but unproven Aboriginal rights and title are insufficiently specific for the honour of the Crown to mandate that the Crown act as a fiduciary, the Crown, acting honourably, cannot cavalierly run roughshod over Aboriginal interests where claims affecting these interests are being seriously pursued in the process of treaty negotiation and proof. The duty to consult and accommodate is part of a process of fair dealing and reconciliation that begins with the assertion of sovereignty and continues beyond formal claims resolution. The foundation of the duty in the Crown's honour and the goal of reconciliation suggest that the duty arises when the Crown has knowledge, real or constructive, of the potential existence of the Aboriginal right or title and contemplates conduct that might adversely affect it. Consultation and accommodation before final claims resolution preserve the Aboriginal interest and are an essential corollary to the honourable process of reconciliation that s. 35 of the *Constitution Act, 1982*, demands.

The scope of the duty is proportionate to a preliminary assessment of the strength of the case supporting the existence of the right or title, and to the seriousness of the potentially adverse effect upon the right or title claimed. The Crown is not under a duty to reach an agreement; rather, the commitment is to a meaningful process of consultation in good faith. The content of the duty varies with the circumstances and each case must be approached individually and flexibly. The controlling question in all situations is what is required to maintain the honour of the Crown and to effect reconciliation between the Crown and the Aboriginal people with respect to the interests at stake. The effect of good faith consultation may be to reveal a duty to accommodate. Where accommodation is required in making decisions that may adversely affect as yet unproven Aboriginal rights and title claims, the Crown must balance Aboriginal concerns reasonably

ailleurs, il est possible que l'injonction interlocutoire ne tienne pas suffisamment compte de leurs intérêts avant qu'une décision définitive soit rendue au sujet de ceux-ci. S'ils sont en mesure d'établir l'existence d'une obligation particulière donnant naissance à l'obligation de consulter ou d'accommoder, ils sont libres de demander l'application de ces mesures.

L'obligation du gouvernement de consulter les peuples autochtones et de trouver des accommodements à leurs intérêts découle du principe de l'honneur de la Couronne, auquel il faut donner une interprétation généreuse. Bien que les droits et titre ancestraux revendiqués, mais non encore définis ou prouvés, ne soient pas suffisamment précis pour que l'honneur de la Couronne oblige celle-ci à agir comme fiduciaire, cette dernière, si elle entend agir honorablement, ne peut traiter cavalièrement les intérêts autochtones qui font l'objet de revendications sérieuses dans le cadre du processus de négociation et d'établissement d'un traité. L'obligation de consulter et d'accommoder fait partie intégrante du processus de négociation honorable et de conciliation qui débute au moment de l'affirmation de la souveraineté et se poursuit au-delà de la reconnaissance formelle des revendications. L'objectif de conciliation ainsi que l'obligation de consultation, laquelle repose sur l'honneur de la Couronne, tendent à indiquer que cette obligation prend naissance lorsque la Couronne a connaissance, concrètement ou par imputation, de l'existence potentielle du droit ou titre ancestral et envisage des mesures susceptibles d'avoir un effet préjudiciable sur celui-ci. La prise de mesures de consultation et d'accommodement avant le règlement définitif d'une revendication permet de protéger les intérêts autochtones et constitue même un aspect essentiel du processus honorable de conciliation imposé par l'art. 35 de la *Loi constitutionnelle de 1982*.

L'étendue de l'obligation dépend de l'évaluation préliminaire de la solidité de la preuve étayant l'existence du droit ou du titre revendiqué, et de la gravité des effets préjudiciables potentiels sur le droit ou le titre. La Couronne n'a pas l'obligation de parvenir à une entente mais plutôt de mener de bonne foi de véritables consultations. Le contenu de l'obligation varie selon les circonstances et il faut procéder au cas par cas. La question décisive dans toutes les situations consiste à déterminer ce qui est nécessaire pour préserver l'honneur de la Couronne et pour concilier les intérêts de la Couronne et ceux des Autochtones. Des consultations menées de bonne foi peuvent faire naître l'obligation d'accommodement. Lorsque des mesures d'accommodement sont nécessaires lors de la prise d'une décision susceptible d'avoir un effet préjudiciable sur des revendications de droits et de titre ancestraux non encore prouvées, la Couronne doit établir un équilibre

with the potential impact of the decision on the asserted right or title and with other societal interests.

Third parties cannot be held liable for failing to discharge the Crown's duty to consult and accommodate. The honour of the Crown cannot be delegated, and the legal responsibility for consultation and accommodation rests with the Crown. This does not mean, however, that third parties can never be liable to Aboriginal peoples.

Finally, the duty to consult and accommodate applies to the provincial government. At the time of the Union, the Provinces took their interest in land subject to any interest other than that of the Province in the same. Since the duty to consult and accommodate here at issue is grounded in the assertion of Crown sovereignty which pre-dated the Union, the Province took the lands subject to this duty.

The Crown's obligation to consult the Haida on the replacement of T.F.L. 39 was engaged in this case. The Haida's claims to title and Aboriginal right to harvest red cedar were supported by a good *prima facie* case, and the Province knew that the potential Aboriginal rights and title applied to Block 6, and could be affected by the decision to replace T.F.L. 39. T.F.L. decisions reflect strategic planning for utilization of the resource and may have potentially serious impacts on Aboriginal rights and titles. If consultation is to be meaningful, it must take place at the stage of granting or renewing T.F.L.'s. Furthermore, the strength of the case for both the Haida's title and their right to harvest red cedar, coupled with the serious impact of incremental strategic decisions on those interests, suggest that the honour of the Crown may also require significant accommodation to preserve the Haida's interest pending resolution of their claims.

Van der Peet*, [1996] 2 S.C.R. 507; *R. v. Badger*, [1996] 1 S.C.R. 771; *R. v. Marshall*, [1999] 3 S.C.R. 456; *Wewaykum Indian Band v. Canada*, [2002] 4 S.C.R. 245, 2002 SCC 79; *R. v. Sparrow*, [1990] 1 S.C.R. 1075; *R. v. Nikal*, [1996] 1 S.C.R. 1013; *R. v. Gladstone*, [1996]

raisonnable entre les préoccupations des Autochtones, d'une part, et l'incidence potentielle de la décision sur le droit ou titre revendiqué et les autres intérêts sociétaux, d'autre part.

Les tiers ne peuvent être jugés responsables de ne pas avoir rempli l'obligation de consultation et d'accommodement qui incombe à la Couronne. Le respect du principe de l'honneur de la Couronne ne peut être délégué, et la responsabilité juridique en ce qui a trait à la consultation et à l'accommodement incombe à la Couronne. Toutefois, cela ne signifie pas que des tiers ne peuvent jamais être tenus responsables envers des peuples autochtones.

Enfin, l'obligation de consultation et d'accommodement s'applique au gouvernement provincial. Les intérêts acquis par la province sur les terres lors de l'Union sont subordonnés à tous intérêts autres que ceux que peut y avoir la province. Comme l'obligation de consulter et d'accommoder qui est en litige dans la présente affaire est fondée sur l'affirmation par la province, avant l'Union, de sa souveraineté sur le territoire visé, la province a acquis les terres sous réserve de cette obligation.

En l'espèce, la Couronne avait l'obligation de consulter les Haïda au sujet du remplacement de la CFF 39. Les revendications par les Haïda du titre et du droit ancestral de récolter du cèdre rouge étaient étayées par une preuve à première vue valable, et la province savait que les droits et titre ancestraux potentiels visaient le Bloc 6 et qu'ils pouvaient être touchés par la décision de remplacer la CFF 39. Les décisions rendues à l'égard des CFF reflètent la planification stratégique touchant l'utilisation de la ressource en cause et risquent d'avoir des conséquences graves sur les droits ou titres ancestraux. Pour que les consultations soient utiles, elles doivent avoir lieu à l'étape de l'octroi ou du renouvellement de la CFF. De plus, la solidité de la preuve étayant l'existence d'un titre haïda et d'un droit haïda autorisant la récolte du cèdre rouge, conjuguée aux répercussions sérieuses sur ces intérêts des décisions stratégiques successives, indique que l'honneur de la Couronne pourrait bien commander des mesures d'accommodement substantielles pour protéger les intérêts des Haïda en attendant que leurs revendications soient réglées.

THE CHIEF JUSTICE —

I. Introduction

To the west of the mainland of British Columbia lie the Queen Charlotte Islands, the traditional homeland of the Haida people. Haida Gwaii, as the inhabitants call it, consists of two large islands and a number of smaller islands. For more than 100 years, the Haida people have claimed title to all the lands of the Haida Gwaii and the waters surrounding it. That title is still in the claims process and has not yet been legally recognized.

The islands of Haida Gwaii are heavily forested. Spruce, hemlock and cedar abound. The most important of these is the cedar which, since time immemorial, has played a central role in the economy and culture of the Haida people. It is from cedar that they made their ocean-going canoes, their clothing, their utensils and the totem poles that guarded their

Version française du jugement de la Cour rendu par

LA JUGE EN CHEF —

I. Introduction

1 À l'ouest de la partie continentale de la Colombie-Britannique s'étendent les îles de la Reine-Charlotte, patrie traditionnelle des Haïda. Les îles Haïda Gwaii, comme leurs habitants les appellent, se composent de deux grandes îles et de plusieurs petites îles. Depuis plus de 100 ans, les Haïda revendiquent un titre sur les terres des îles Haïda Gwaii et les eaux les entourant. Ce titre en est toujours à l'étape de la revendication et n'a pas encore été juridiquement reconnu.

2 Les îles Haïda Gwaii sont densément boisées. L'épinette, la pruche et le cèdre y foisonnent. Le plus important de ces arbres est le cèdre, qui, depuis des temps immémoriaux, joue un rôle central dans l'économie et la culture des Haïda. C'est à partir du cèdre qu'ils fabriquaient leurs canots maritimes, leurs vêtements, leurs ustensiles et les totems qui

lodges. The cedar forest remains central to their life and their conception of themselves.

3 The forests of Haida Gwaii have been logged since before the First World War. Portions of the island have been logged off. Other portions bear second-growth forest. In some areas, old-growth forests can still be found.

4 The Province of British Columbia continues to issue licences to cut trees on Haida Gwaii to forestry companies. The modern name for these licenses are Tree Farm Licences, or T.F.L.'s. Such a licence is at the heart of this litigation. A large forestry firm, MacMillan Bloedel Limited acquired T.F.L. 39 in 1961, permitting it to harvest trees in an area designated as Block 6. In 1981, 1995 and 2000, the Minister replaced T.F.L. 39 pursuant to procedures set out in the *Forest Act*, R.S.B.C. 1996, c. 157. In 1999, the Minister approved a transfer of T.F.L. 39 to Weyerhaeuser Company Limited ("Weyerhaeuser"). The Haida people challenged these replacements and the transfer, which were made without their consent and, since at least 1994, over their objections. Nevertheless, T.F.L. 39 continued.

5 In January of 2000, the Haida people launched a lawsuit objecting to the three replacement decisions and the transfer of T.F.L. 39 to Weyerhaeuser and asking that they be set aside. They argued legal encumbrance, equitable encumbrance and breach of fiduciary duty, all grounded in their assertion of Aboriginal title.

6 This brings us to the issue before this Court. The government holds legal title to the land. Exercising that legal title, it has granted Weyerhaeuser the right to harvest the forests in Block 6 of the land. But the Haida people also claim title to the land — title which they are in the process of trying to prove — and object to the harvesting of the forests on Block 6 as proposed in T.F.L. 39. In this situation, what duty if any does the government owe the

protégeaient leurs habitations. La forêt de cèdres demeure essentielle à leur vie et à la conception qu'ils se font d'eux-mêmes.

Les forêts des îles Haïda Gwaii étaient déjà exploitées avant la Première Guerre mondiale. Certaines parties du territoire ont été coupées à blanc. D'autres sont occupées par une forêt secondaire. Dans certaines régions, on peut encore trouver de vieilles forêts.

La province de la Colombie-Britannique continue de délivrer à des compagnies forestières des permis de coupe autorisant l'abattage d'arbres sur les îles Haïda Gwaii. Ce sont ces permis, maintenant appelés [TRADUCTION] « concessions de ferme forestière » (« CFF »), qui sont au cœur du présent litige. En 1961, MacMillan Bloedel Limited, une grosse compagnie forestière, a obtenu la CFF 39, qui lui permettait de récolter des arbres dans la région connue sous le nom de « Bloc 6 ». En 1981, en 1995 et en l'an 2000, le ministre a remplacé la CFF 39 conformément à la procédure prévue par la *Forest Act*, R.S.B.C. 1996, ch. 157. En 1999, il a autorisé la cession de la CFF 39 à Weyerhaeuser Company Limited (« Weyerhaeuser »). Les Haïda ont contesté ces remplacements et cette cession, qui ont été effectués sans leur consentement et, depuis 1994 au moins, en dépit de leurs objections. La CFF 39 est cependant restée en vigueur.

En janvier 2000, les Haïda ont engagé une procédure par laquelle ils s'opposent aux trois remplacements et à la cession de la CFF 39 à Weyerhaeuser, et demandent leur annulation. Invoquant l'existence d'un titre ancestral, ils ont plaidé grèvement en common law, grèvement en equity et manquement à l'obligation de fiduciaire.

Cela nous amène à la question dont la Cour est saisie. Le gouvernement détient le titre en common law sur les terres en question. Dans l'exercice des pouvoirs que lui confère ce titre, il a accordé à Weyerhaeuser le droit d'exploiter les forêts du Bloc 6. Mais les Haïda prétendent également détenir un titre sur ces terres — titre dont ils tentent actuellement d'établir l'existence — et s'opposent à l'exploitation des forêts du Bloc 6 prévue par la

Haida people? More concretely, is the government required to consult with them about decisions to harvest the forests and to accommodate their concerns about what if any forest in Block 6 should be harvested before they have proven their title to land and their Aboriginal rights?

CFF 39. Dans ces circonstances, le gouvernement est-il tenu à une obligation envers les Haïda et, si oui, laquelle? De façon plus concrète, a-t-il l'obligation de consulter les Haïda avant de prendre des décisions concernant l'exploitation des forêts et de trouver des accommodements à leurs préoccupations quant à la question de savoir si les forêts du Bloc 6 peuvent être exploitées — et, dans l'affirmative, lesquelles — avant qu'ils aient pu établir l'existence de leur titre sur les terres et leurs droits ancestraux?

The stakes are huge. The Haida argue that absent consultation and accommodation, they will win their title but find themselves deprived of forests that are vital to their economy and their culture. Forests take generations to mature, they point out, and old-growth forests can never be replaced. The Haida's claim to title to Haida Gwaii is strong, as found by the chambers judge. But it is also complex and will take many years to prove. In the meantime, the Haida argue, their heritage will be irretrievably despoiled.

7 Les enjeux sont énormes. Les Haïda font valoir que, si on ne procède pas à ces consultation et accommodement, ils obtiendront leur titre mais se retrouveront privés de forêts qui sont vitales à leur économie et à leur culture. Il faut des générations aux forêts pour parvenir à maturité, soulignent-ils, et les vieilles forêts sont irremplaçables. Comme a conclu le juge en son cabinet, leur revendication du titre sur les îles Haïda Gwaii s'appuie sur des arguments solides. Mais elle est également complexe, et il faudra de nombreuses années pour l'établir. Les Haïda affirment qu'entre-temps ils auront été irrémédiablement dépouillés de leur héritage.

The government, in turn, argues that it has the right and responsibility to manage the forest resource for the good of all British Columbians, and that until the Haida people formally prove their claim, they have no legal right to be consulted or have their needs and interests accommodated.

8 Le gouvernement, pour sa part, soutient qu'il a le droit et le devoir d'aménager les ressources forestières dans l'intérêt de tous les habitants de la Colombie-Britannique et que, tant que les Haïda n'auront pas formellement établi le bien-fondé de leur revendication, ils n'ont aucun droit à des consultations ou à des accommodements à leurs besoins et intérêts.

The chambers judge found that the government has a moral, but not a legal, duty to negotiate with the Haida people: [2001] 2 C.N.L.R. 83, 2000 BCSC 1280. The British Columbia Court of Appeal reversed this decision, holding that both the government and Weyerhaeuser have a duty to consult with and accommodate the Haida people with respect to harvesting timber from Block 6: (2002), 99 B.C.L.R. (3d) 209, 2002 BCCA 147, with supplementary reasons (2002), 5 B.C.L.R. (4th) 33, 2002 BCCA 462.

9 Le juge en son cabinet a décidé que le gouvernement a l'obligation morale, mais non légale, de négocier avec les Haïda : [2001] 2 C.N.L.R. 83, 2000 BCSC 1280. La Cour d'appel de la Colombie-Britannique a infirmé cette décision, déclarant que le gouvernement et Weyerhaeuser ont tous deux l'obligation de consulter les Haïda et de trouver des accommodements à leurs préoccupations en ce qui concerne la récolte de bois sur le bloc 6 : (2002), 99 B.C.L.R. (3d) 209, 2002 BCCA 147, avec motifs supplémentaires (2002), 5 B.C.L.R. (4th) 33, 2002 BCCA 462.

10 I conclude that the government has a legal duty to consult with the Haida people about the harvest of timber from Block 6, including decisions to transfer or replace Tree Farm Licences. Good faith consultation may in turn lead to an obligation to accommodate Haida concerns in the harvesting of timber, although what accommodation if any may be required cannot at this time be ascertained. Consultation must be meaningful. There is no duty to reach agreement. The duty to consult and, if appropriate, accommodate cannot be discharged by delegation to Weyerhaeuser. Nor does Weyerhaeuser owe any independent duty to consult with or accommodate the Haida people's concerns, although the possibility remains that it could become liable for assumed obligations. It follows that I would dismiss the Crown's appeal and allow the appeal of Weyerhaeuser.

11 This case is the first of its kind to reach this Court. Our task is the modest one of establishing a general framework for the duty to consult and accommodate, where indicated, before Aboriginal title or rights claims have been decided. As this framework is applied, courts, in the age-old tradition of the common law, will be called on to fill in the details of the duty to consult and accommodate.

II. Analysis

A. *Does the Law of Injunctions Govern This Situation?*

12 It is argued that the Haida's proper remedy is to apply for an interlocutory injunction against the government and Weyerhaeuser, and that therefore it is unnecessary to consider a duty to consult or accommodate. In *RJR — MacDonald Inc. v. Canada (Attorney General)*, [1994] 1 S.C.R. 311, the requirements for obtaining an interlocutory injunction were reviewed. The plaintiff must establish: (1) a serious issue to be tried; (2) that irreparable harm will be

Je conclus que le gouvernement est légalement tenu de consulter les Haïda au sujet de la récolte de bois sur le bloc 6, y compris en ce qui concerne la cession ou le remplacement des CFF. Une consultation menée de bonne foi pourrait à son tour entraîner l'obligation de trouver des accommodements aux préoccupations des Haïda à propos de la récolte de bois, mais il est impossible pour le moment de préciser le genre d'accommodement qui s'impose, à supposer qu'une telle mesure soit requise. Il faut une véritable consultation. Les intéressés n'ont aucune obligation de parvenir à une entente. Le gouvernement ne peut se décharger des obligations de consultation et d'accommodement en les déléguant à Weyerhaeuser. De son côté, cette dernière n'a pas d'obligation indépendante de consulter les Haïda ou de trouver des accommodements à leurs préoccupations, bien qu'il demeure possible qu'elle soit tenue responsable à l'égard d'obligations qu'elle aurait assumées. Je suis donc d'avis de rejeter l'appel de la Couronne et d'accueillir l'appel de Weyerhaeuser.
