Iqaluit Power Plant Fuel Farm	Fuel and chemical storage	Commissioners	The fuel tank farm has existed since 1964 and has since then been used to store diesel fuel to power electrical generators. An upgrade was done in 1994 to expand the berm in anticipation of installing another fuel tank.	N/A	North of Iqaluit and 500m from residential area subdivision.
1st water source	Other	Crown	No past activities have been identified in this area. This lake lies on un-surveyed crown land within the Iqaluit municipal boundary.	N/A	west of the power plant and slightly south of the Road to Nowhere subdivision.
2nd water source	Other	Crown	same as 1st water source. This could be a potential 2nd choice for drawing water.	N/A	West of power plant and slightly north of Plateau Subdivision.

Qanurittuq Ittunik Avatinga: Avatingalluanga

The project is located on an existing tank farm. The infrastructure consists of a 5.7 M litre steel tank within a lined gravel berm. The potential water sources are fed by annual snow melt and rain, are not significant in the surrounding watershed and are not connected to the watershed which feeds Lake Geraldine (city potable water source)

Qanurittuq Ittunik Avatinga: Inuuhimayunut Avatinga

The potential water sources are not known to contain fish or any other substantial wildlife.

Qanurittuq Ittunik Avatinga: Inungit-maniliurutingit Avatinga

The existing tank farm holds the total fuel for the production of electricity for the city. The potential water sources do not substantially contribute to community social, sporting or recreational activities.

Naunaiyainiq ukuninnga Ayurhautingit unalu Piumayaat Ikikliyuumiutinahuarutit

Possible spill risk will be mitigated by lined secondary containment berm. Contractor will have extensive spill response equipment on hand. Positive impacts include a better fuel handling capacity with fewer transfer operations. Potential water sources hold well beyond the volume required for testing purposes.

Tamatkiumayunik Ihuikgutivaktunik

Over time extended fuel storage will save money and time and eventually affect future power costs.
