**OANURITTUT**

**Tukihiannaqtunik havaariyaumayumik uqauhiyun**

Qablunaatitut: Between late July and mid-August 2018, I will carry out a small research project on historic Inuit life at the now-abandoned historic village site Avvavja (NiHg-1), nearby to Igloolik. Based upon information I have gathered from local elders' accounts and historical records, it is clear Avvavja was one of the most important sites in the region immediately before the establishment of the modern community (Igloolik). Along with a small field crew of between one and three field assistants and an Inuk high-school student (who will be trained in mapping techniques and paid an honorarium), I hope to achieve the following at Avvavja: 1. On-site consultation with Iglulingmiut elders who have firsthand knowledge of life at the site; 2. Detailed mapping of the Inuit-built sod house features at the site, as well as the Tuniit houses located nearby; and 3. Limited archaeological testing of parts of the site identified by elders as places where animal bones and other food waste were deposited. The crew will travel to Avvavja by boat, and will maintain a small campsite for the duration of the project (approx. four weeks). No permanent structures will be erected; our impacts on the cultural heritage at the site and the land itself will be minimal. At every stage of the work—from the design of the project to interpretation of the results—I hope to involve Inuit in meaningful ways. I understand the deep connection many Iglulingmiut elders have to these recently occupied places, and I am interested in learning more about them through Inuit Qaujimajatuqangit. I believe promoting elders' knowledge of the site both within and beyond Nunavut, as well as learning more about hunting and diets at the site through scientific methods, would be greatly beneficial to Iglulingmiut.

Avvajja archaeological site location	Scientific/International Polar Year Research	Inuit Owned Surface Lands	The site has been occupied by Paleo-Inuit (Dorset) and recent-historic Neo-Inuit (ca. AD 1930-1950) groups.	The archaeological site Avvajja (NiHg-1) is comprised of both Paleo- and Neo-Inuit components.	Avvajja is situated approximately eight (8) kilometres northwest of the modern community of Igloolik.

### Avatiliriniqmut Ayurhauingit:

As archeologists, we are sensitive to any negative impacts on the integrity of the cultural and natural landscape. Sod and other ground cover will be set aside at the beginning of excavations, and will be returned to the surface after excavation and backfilling; the goal is to leave the landscape and any visible cultural materials as close to the state in which we found them as possible. As noted previously, our four-person field crew will produce a small amount of personal waste. The sewage will be buried. Potentially hazardous materials on site include propane, camp fuel, batteries and approximately five gallons of gasoline; the spill contingency plan will be reviewed with each member of the field crew prior to setting up camp. Any significant sightings of wildlife will be recorded and reported to the Igloodik Hunters and Trappers Association; however, no wildlife will be disturbed during the course of this field season, and all efforts will be made to reduce contact.

### **Qanurittuq Ittunik Avatinga: Avatingalluanga**

The project area is nearby to the coast on relatively well-elevated land consisting of sod and rocky outcroppings.

### **Qanurittuq Ittunik Avatinga: Inuuhimayunut Avatinga**

Few large mammal species are present in the area, though birds are abundant. All sightings of wildlife will be documented and reported to the Igloodik Hunters and Trappers Association. No wildlife will be disturbed during the course of the project.

### **Qanurittuq Ittunik Avatinga: Inungit-maniliurutingit Avatinga**

The project area features a prominent archaeological site, consisting of around 10 historic Inuit sod house features--the mapping of which will form the bulk of the project.

### **Naunaiyainiq ukuninnga Ayurhautingit unalu Piumayaat Ikikliyuumiutinahuarutit**

No significant impacts are anticipated. A spill contingency plan (for the small amounts of gasoline and propane on site) is appended to this application.

### **Tamatkiumayunik Ihuikgutivaktunik**

There will be no significant lasting effects of this project.

## Impacts
