DÉTAILS

Description non technique de la proposition de projet

Anglais: Project Proposal Description: Drainage Improvements & Shore Protection, Pangnirtung, NUThe Department of Fisheries and Oceans, Small Craft Harbours Branch is responsible for keeping the Pangnirtung Harbour in safe working condition. Small Craft Harbours is proposing the following work:1. Drainage Improvements:a.To prevent harbour erosion in the spring melt, Small Craft Harbours is proposing to: 1.Realign and deepen the existing drainage ditch 2.Replace the existing culverts in the drainage ditch and resurface the road over new culverts with new gravel 3.Realign and resurface the existing harbour access road and upper road with new gravel 4.Remove the old culverts, resurface the parking area with new gravel, and install rock shore protection to prevent future erosion 5.Install rock erosion control in new drainage ditch to ensure it functions properly in the spring2. Berm Extension: a.To prevent the entrance channel of the harbour from infilling, Small Craft Harbours is proposing to: 1.Construct a rock berm extension between harbour entrance channel and tidal drainage outlet3. Breakwater Upgrades:a.To keep the existing harbour in good working condition, Small Craft Harbours is proposing to: 1.Install armour stone on the existing breakwater in areas required 2.Install additional gravel on fixed wharves where required 3.Install rock for shore protection/erosion control on inner basin of the harbour

Français: Description de la proposition de projet : Amélioration du drainage et protection des berges, Pangnirtung (Nunavut)La Direction des ports pour petits bateaux de Pêches et Océans Canada est chargée de maintenir le port de Pangnirtung en bon état de fonctionnement. Ports pour petits bateaux propose les travaux suivants :1. Amélioration du drainage :a.Afin d'empêcher l'érosion du port lors de la fonte printanière, Ports pour petits bateaux propose les mesures suivantes : 1.Réaligner et approfondir le fossé de drainage existant. 2.Remplacer les ponceaux existants dans le fossé de drainage et refaire le revêtement de la route sur les nouveaux ponceaux avec du gravier neuf. 3.Réaligner et refaire le revêtement de la route d'accès au port et de la route supérieure avec du gravier neuf. 4.Enlever les vieux ponceaux, refaire le revêtement du stationnement avec du gravier neuf et installer un dispositif de protection des berges en roches pour prévenir l'érosion. 5.Installer un système de contrôle de l'érosion des roches dans le nouveau fossé de drainage pour veiller à son bon fonctionnement au printemps.2. Prolongement de berme :a.Afin d'éviter le remplissage du chenal d'entrée du port, Ports pour petits bateaux propose les mesures suivantes : 1.Construire un prolongement de berme en enrochement entre le chenal d'entrée du port et la bouche du système de drainage des eaux de marée.3. Mises à niveau du brise-lames :a.Afin de maintenir le port en bon état de fonctionnement, Ports pour petits bateaux propose les mesures suivantes : 1.Installer des pierres de protection aux endroits requis sur le brise-lames existant. 2.Installer du gravier supplémentaire sur les quais fixes, au besoin. 3.Installer de la roche pour protéger les berges et contrôler l'érosion sur le bassin intérieur du port.

Autorisations

Organisme de régulation	Description des autorisations	État actuel	Date de l'émission/de la demande	Date d'échéance
Pêches et Océans Canada	FPP Request for Review regarding the addition of the rock berm	Applied, Decision Pending		
Transports Canada	Navigation Protection Program Notice of Works submitted to TC for review of the Rock Berm Addition	Applied, Decision Pending		

Project transportation types

Transportation Type	Utilisation proposée	Length of Use
Air	It is assumed that the personnel and possibly some materials will arrive in Pang by commercial flights.	
Water	It is assumed that the successful contractor will transport materials for the project (culverts, geotextile, and possibly a new rock crusher) to the site by sealift.	
Land	The crew will drive or walk to the harbour site in Pang from their local lodgings. The rock will also be transported form the local borrow pit to site overland by rock truck.

Déchets

Gestion des déchets

Activités du projet	Type des déchets	Quantité prévue	Méthode d'élimination	Procédures de traitement supplémentaires
Access Road	Mort-terrain (sol organique, déchets, résidus)	380	land disposal at designated location approved by Hamlet - material to be disposed is local material excavated for the new ditch alignment	n/a

Répercussions environnementales :

Predicted environmental impacts: 1. Access road and drainage ditch realignment: -loss of existing vegetation in existing drainage ditch - excess excavated material to be deposited in a spoil location approved by the Hamlet of Pangnirtung. Other than an approximately 380 cubic meter volume of local material deposited in the designated area, there are no foreseen impacts of the spoil pile 2. Harbour Infrastructure: a. New Rock Berm in tidal flat area -the proposed new rock berm will provide increased interstitial habitat spaces for fish at higher tides, as well as provide additional foraging areas for fish by providing surface area for algae growth and interstitial spaces for invertebrates - the proposed berm will reduce the sediment infilling of the entrance channel to the harbour -the proposed rock berm will be constructed at low tide, allowing access to the site across the tidal flats, thereby eliminating in-water work b. Additional Shore Protection and Armour Stone -the proposed work is to be done at low tide to eliminate in-water work. - the work is topping-up rock in existing area - no negative impacts forseen
