TITLE: Diversity of pelagic primary producers in coastal habitats and the potential for harmful blooms in Eastern Canadian Arctic, with a focus near Iqaluit, Nunavut

OBJECTIVES OF RESEARCH:

As part of the Coastal Environmental Baseline Program of Fisheries and Oceans Canada, we propose to study the microscopic algae in the water of Frobisher Bay, near Iqaluit, Nunavut, in August 2019 and in September 2020. The objective of our scientific project would be to identify and describe the microscopic algae species present in Frobisher Bay, near Iqaluit. This project would help us to complete an algae species database that would be used to detect the introduction of new or toxic algae species in the Frobisher Bay region and in other ports in the Canadian Arctic.

TERMS & CONDITIONS:

The holder of the licence will be bound by the terms and conditions of the Nunavut Impact Review Board Screening Decision Report and the Department of Culture & Heritage archaeological sites terms and conditions. These terms and conditions will form part of this licence.

DATA COLLECTION IN NU:

DATES: August 01, 2019-August 15, 2019

LOCATION: Iqaluit (Koojesse Inlet, Tarr Inlet, Peterhead Inlet)

Scientific Research License 01 023 19N-M expires on December 31, 2019

Issued at Iqaluit, NU on July 16, 2019
