

NIRB Application for Screening #125838

Real Ice - November Field Test with CHARS in Cambridge Bay, Canada

Application Type: New
Project Type: Scientific Research
Application Date: 7/6/2023 7:42:28 AM
Period of operation: from 0001-01-01 to 0001-01-01
Proposed Authorization: from 0001-01-01 to 0001-01-01
Project Proponent: Cian Sherwin
Real Ice Development Company Limited
M-sparc
Gaerwen Isle of Anglesey LL60 6AG
United Kingdom
Phone Number:: 07719148331, Fax Number::

Personnel

Personnel on site: 3

Days on site: 10

Total Person days: 30

Operations Phase: from 2023-11-14 to 2023-11-24

Activities

Location	Activity Type	Land Status	Site history	Site archaeological or paleontological value	Proximity to the nearest communities and any protected areas
Real Ice - CHARS Testing Area on Sea Ice (Exact area within polygon TBC by CHARS)	Scientific/International Polar Year Research	Marine	We will be seeking guidance from CHARS to operate at a site that does not present any disruption to residents or wildlife whilst also mitigating any damage to the environment. Guidance from local authorities will be needed to avoid known pathways/trails on the sea ice as well as hunting grounds for local residents.	We will operate in an area that not contain any archaeological/paleontological value.	Real Ice will be conducting research on the sea ice off the coast of Cambridge Bay within 10km of the CHARS facility.

Community Involvement & Regional Benefits

Community	Name	Organization	Date Contacted
Cambridge Bay	Robert Cooke & Rachel Mandel	Canadian High Arctic Research Station	2023-03-23

Authorizations

Indicate the areas in which the project is located:

Kitikmeot

Authorizations

Regulatory Authority	Authorization Description	Current Status	Date Issued / Applied	Expiry Date
Hunters and Trappers Associations/Organizations	Will need authorization and guidance to ensure minimal impacts to local wildlife and environment that could harm food availability for the local community.	Not Yet Applied		
Nunavut Research Institute	We have been advised to submit a research proposal with the NRI in order to conduct research in Nunavut.	Not Yet Applied		
Kitikmeot Inuit Association	We will need to meaningfully engage with local indigenous populations in Cambridge Bay before, during and after the research has taken place.	Not Yet Applied		

Project transportation types

Transportation Type	Proposed Use	Length of Use
Water	Snow-machine rented/used from the CHARS facility to travel on to the sea ice. Required licences & training to be acquired by team member(s) before conducting research.	
Land	Pick-up truck/ATV's. Suitable transport will be needed for 3 people and equipment when travelling on roads/land.	

Project accommodation types

Other,

Material Use

Equipment to be used (including drills, pumps, aircraft, vehicles, etc)

Equipment Type	Quantity	Size - Dimensions	Proposed Use
Water Pump	1	10inx19in	Pumping seawater on to the surface of sea ice
Fuel Cell Power Station	1	26inx20inx16in	Power supply for pump

Detail Fuel and Hazardous Material Use

Detail fuel material use:	Fuel Type	Number of containers	Container Capacity	Total Amount	Units	Proposed Use
Other	fuel	14	29	406	Liters	Hydrogen gas

Water Consumption

Daily amount (m3)	Proposed water retrieval methods	Proposed water retrieval location
0		

Waste

Waste Management

Project Activity	Type of Waste	Projected Amount Generated	Method of Disposal	Additional treatment procedures
Information is not available				

Environmental Impacts:

Scale of Test - We designed this test to be on a scale small enough that does not present any impacts across any of the physical, biological and socio-economic elements. Noise Pollution affecting Wildlife - Our prototype is designed to run almost silently with the noise of water flooding the sea ice dominating. Hunting grounds disruption - Having a presence or conducting activities in known hunting grounds could disrupt food availability for the local community. Guidance from the local HTO will aid in the selection of a site with minimal impacts. Sea Ice Trails/Pathways - Blocking routes across the sea ice could disrupt local communities. By including the community and Kitikmeot Inuit Association in this process, we can choose a site that presents no impact on transportation across the sea ice.

Additional Information

SECTION A1: Project Info

SECTION A2: Allweather Road

SECTION A3: Winter Road

SECTION B1: Project Info

SECTION B2: Exploration Activity

SECTION B3: Geosciences

SECTION B4: Drilling

SECTION B5: Stripping

SECTION B6: Underground Activity

SECTION B7: Waste Rock

SECTION B8: Stockpiles

SECTION B9: Mine Development

SECTION B10: Geology

SECTION B11: Mine

SECTION B12: Mill

SECTION C1: Pits

SECTION D1: Facility

SECTION D2: Facility Construction

SECTION D3: Facility Operation

SECTION D4: Vessel Use

SECTION E1: Offshore Survey

SECTION E2: Nearshore Survey

SECTION E3: Vessel Use

SECTION F1: Site Cleanup

SECTION G1: Well Authorization

SECTION G2: Onland Exploration

SECTION G3: Offshore Exploration

SECTION G4: Rig

SECTION H1: Vessel Use

SECTION H2: Disposal At Sea

SECTION I1: Municipal Development

Description of Existing Environment: Physical Environment

We are working with CHARS and the community to identify the site to conduct testing in order to minimise impact with any existing roads/trails, marine routes, etc. that are in existence at present time

Description of Existing Environment: Biological Environment

We are working with CHARS and the community to identify the site to conduct testing in order to minimise impact with any existing wildlife that are in existence at present time

Description of Existing Environment: Socio-economic Environment

The test area will be within 10km of the CHARS facility and therefore the Cambridge Bay community. No other significant socioeconomic elements will be impacted or within the test site.

Miscellaneous Project Information

Identification of Impacts and Proposed Mitigation Measures

Noise Pollution affecting Wildlife - Our prototype is designed to run almost silently with the noise of water flooding the sea ice dominating. Hunting grounds disruption - Having a presence or conducting activities in known hunting grounds could disrupt food availability for the local community. Guidance from the local HTO will aid in the selection of a site with minimal impacts. Sea Ice Trails/Pathways - Blocking routes across the sea ice could disrupt local communities. By including the community and Kitikmeot Inuit Association in this process, we can choose a site that presents no impact on transportation across the sea ice.

Cumulative Effects

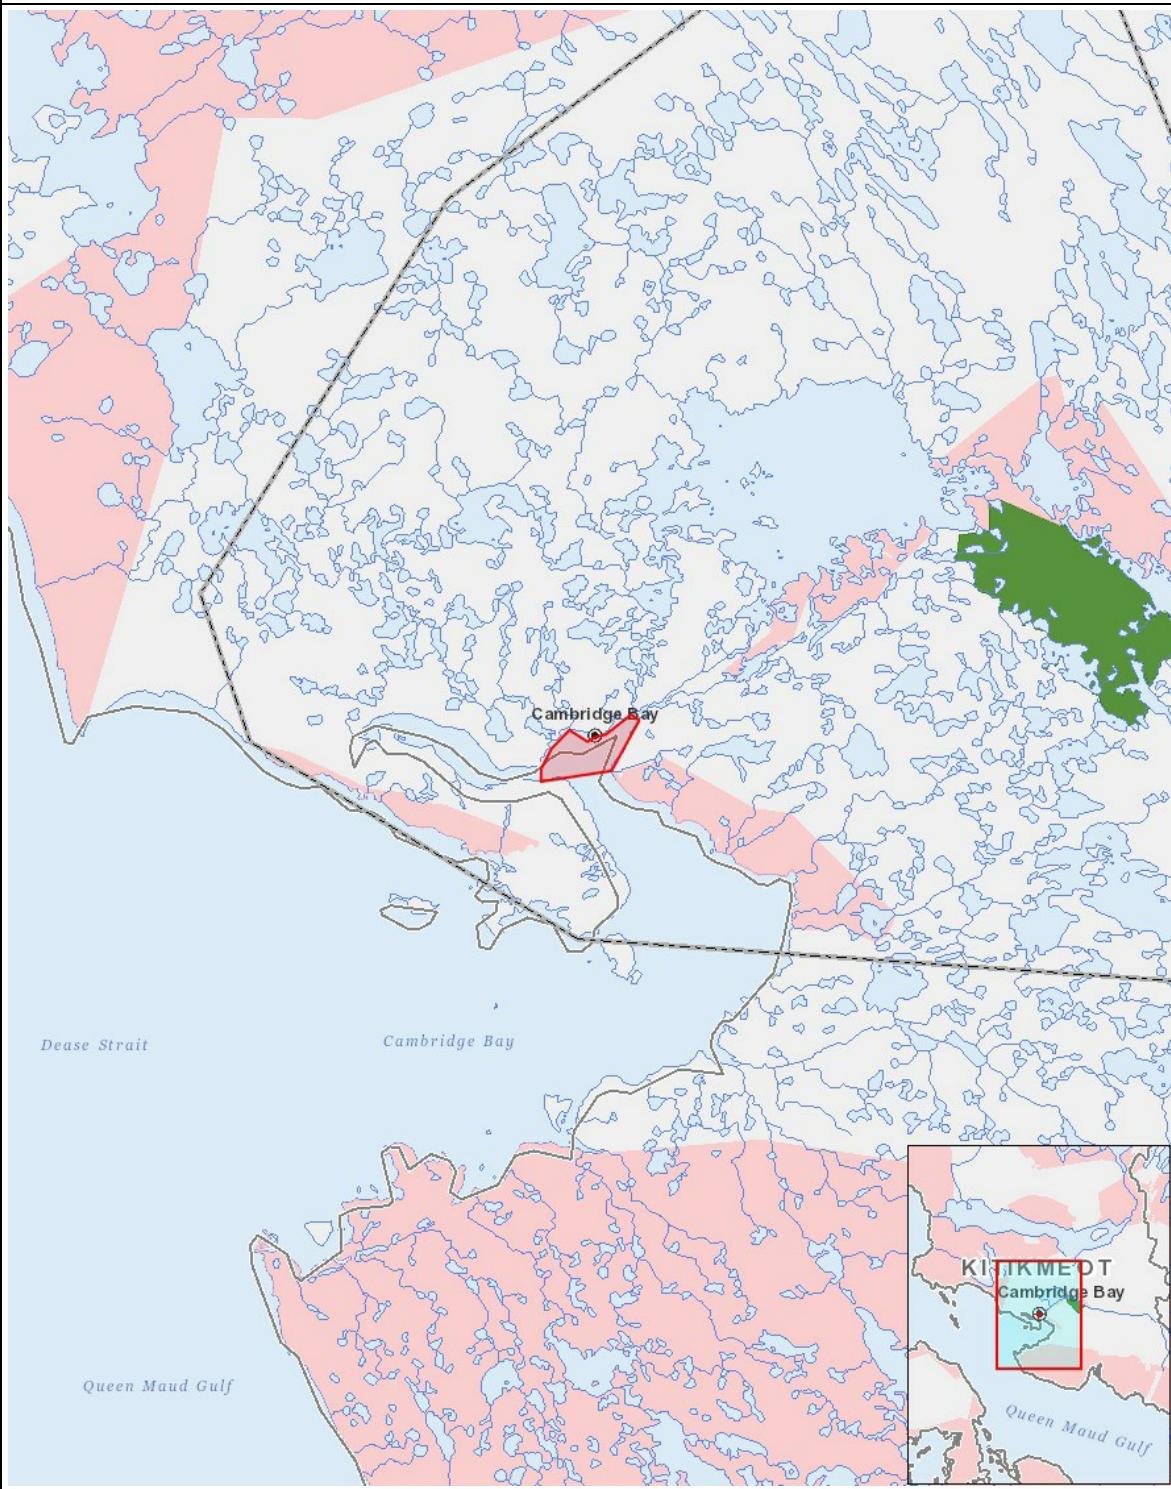

Our activities take place in a localised area to test sea ice thickening using a water pump and therefore would not generate any significant impacts on the environment.

Impacts

Identification of Environmental Impacts

(P = Positive, N = Negative and non-mitigatable, M = Negative and mitigatable, U = Unknown)
