MORE ABOUT THIS ITEM

Conduct UV degradation studies for pharmaceutical, cosmetic, semiconductor, printing, forensic applications and more. The UV light intensity appears on the large backlit display in either μW or mW/cm^2 while the small lower display simultaneously shows minimum, maximum, average, and recorded data. Up to 20 data points can be recorded automatically at a variety of intervals. The UV-A/B model measures long and medium wave UV-A/B for forensics, chromatography, electrophoresis, and dermatology applications. Use the UV-C model for UV light fume hoods, industrial glass, and nondestructive testing.

Please note: These units do not sterilize equipment.
