Good afternoon, thank you for reaching out for further information about the spatial data provided.

During the Information Request phase, some interested parties asked WKR for GIS layers or spatial summaries so they could review the spatial basis of the effects assessment in the Impact Statement. In response, WKR has provided a Geodatabase (GDB) file.

A Geodatabase stores and organizes map data, along with details about each feature, in one central place. It is a widely used format and can be opened in most Geographic Information System (GIS) programs, including ArcGIS.

The GDB contains:

- The Project Development Area and Project components
- Assessment areas (Local Assessment Area and Regional Assessment Area)
- Eskers

If you have any questions about the file or need help opening it, please let us know.

Take care,

Gavin Law
