

Gasoline Handling and Storage on board Glacial Bear

I. Purpose of the document

This document intends to describe the management of gasoline storage and use on board.

II. Scope

DECK DEPARTMENT

III. Content

A. Gasoline storage device

Gasoline should be stored at the dedicated area on deck. This is the only location where the gasoline can be stored on board.

This storage system should be easily slack, allowing the crew to throw all the gasoline tanks overboard in case of uncontrollable fire and under the instructions of the Master.

B. Gasoline storage condition

The gasoline is contained in dedicated gasoline tanks. The Bosun in charge of the storage should check that the plugs and tank vents are properly closed.

C. Gasoline handling

To handle the gasoline tanks between the storage place and the tender, maximum caution should be taken to avoid any spill.
