DÉTAILS

Description non technique de la proposition de projet

Anglais: Hapag-Lloyd Cruises small expedition style cruise vessel Hanseatic Nature will be making an Arctic cruise in 2025. The purpose of this proposed development is the carriage of passengers and crew members to landing sites in Nunavut. The company Hapag-Lloyd Cruises is a high-class cruise operator that wants to offer to its passenger's unique nature and culture experiences and to make them ambassadors for the Arctic. Hapag-Lloyd Cruises has extensive experience in operating ships in remote areas and polar waters for more than 20 years. The expedition cruise of m/v Hanseatic Nature includes an experienced Bridge Team and Expedition Team including lecturers, such as biologists, geologists, ethnologists and historians, who offering daily lectures to the passengers. Hapag Lloyd vessels have been previously screened, most recently in 2023. No operational changes have occurred since this screening.

Français: Le petit navire de croisière de style expédition Hanseatic Nature de Hapag-Lloyd Croises effectuera une croisière dans l'Arctique en 2025L'objectif de ce projet d'aménagement est le transport de passagers et de membres d'équipage vers des sites d'atterrissage au Nunavut. La compagnie Hapag-Lloyd Croises est un croisiériste haut de gamme qui souhaite offrir à ses passagers des expériences uniques en matière de nature et de culture et en faire des ambassadeurs de l'Arctique.Hapag-Lloyd Croises possède une vaste expérience dans l'exploitation de navires dans des zones reculées et des eaux polaires depuis plus de 20 ans. La croisière d'expédition du m/v Hanseatic Nature comprend une équipe de passerelle expérimentée et une équipe d'expédition comprenant des conférenciers, tels que des biologistes, des géologues, des ethnologues et des historiens, qui offrent des conférences quotidiennes aux passagers.Les navires Hapag Lloyd ont déjà fait l'objet d'un contrôle, le plus récemment en 2023. Aucun changement opérationnel n'est intervenu depuis cet examen.

Activités

| Emplacement | Type d'activité | Statut des terres | Historique du site | Site à valeur archéologique ou paléontologique | Proximité des collectivités les plus proches et de toute zone protégée |
|---|--------------------|-------------------|---|---|--|
| Iqaluit, 63,749440, -68,521670 | Tourism Activities | Crown | Before European contact, Iqaluit was inhabited by the Inuit for thousands of years and the region was a vital part their territory providing resources such as hunting, fishing, and gathering. | Iqaluit is archeologically significant due to such a long history of Indigenous occupation. Arctic cultures, and ancient human migration patterns. | Iqaluit |
| Lower Savage Islands, 61,819168, -65,710335 | Tourism Activities | Crown | The Savage Islands are significant to the Inuit people. The Islands' history, before European exploration, is mainly tied to the Inuit who visited this area for thousands of years. | Archeological evidence from nearby areas suggest that the islands could have been used as a stopover or base for hunting expeditions. | Iqaluit |
| Diana Island, 60,983299, -69,966698 | Tourism Activities | Crown | Like many Islands in the Canadian Arctic, Diana Island has a history primarily related to the Inuit people. | The archaeological significance of Diana Island lies in its potential to provide insights into the lifeways, subsistence strategies, and interactions of these Arctic cultures. Ongoing and future research in this area may further illuminate the historical narratives of human habitation in the eastern North American Arctic. | Iqaluit |
| Cape Wolstenholme, 62,580555, -77,509720 | Tourism Activities | Crown | Cape Wolstenholme, known in Inuktitut as Anaulirvik, is the northernmost point of Quebec, Canada, situated on the Hudson Strait approximately 28 kilometers northeast of | The archaeological findings at Cape Wolstenholme offer valuable insights into the migratory patterns, subsistence strategies, and cultural practices of the Inuit populations who once inhabited the region. However, comprehensive | Ivujivik |

| | | | | | |
|---|--------------------|-------|--|--|---------------|
| | | | Ivujivik. In 1610, during his quest for the Northwest Passage, English explorer Henry Hudson named the cape Wolstenholme to honor Sir John Wolstenholme, a financier of the expedition. | archaeological excavations have yet to be conducted, leaving aspects of the site's historical context and significance underexplored. | |
| Mansel Island, 62,000000, -79,833336 | Tourism Activities | Crown | Mansel Island, known in Inuktitut as Pujjunaq, is an uninhabited island located in Hudson Bay, off Quebec's Ungava Peninsula. Covering an area of approximately 3,180 square kilometers, it ranks as Canada's 28th largest island. In 1613, English explorer Sir Thomas Button named the island after Vice-Admiral Sir Robert Mansell. | Archaeological evidence indicates that Mansel Island was inhabited by the Dorset culture, a Paleo-Eskimo population that preceded the Inuit. In the early 1930s, the Hudson's Bay Company established a trading post at Swaffield Harbour on the island's northern coast. However, this post was short-lived, operating from 1930 to 1932. | Ivujivik |
| Walrus Island, 61.970000, -92.480000 | Tourism Activities | Crown | Located within the Arctic Archipelago in the Kitikmeot Region, this uninhabited island lies in Kiluhiqtuq, formerly known as Bathurst Inlet. While specific historical records about this island are limited, its name suggests a historical presence of walruses in the area. WIKIPEDIA | Archaeological evidence indicates that the Sadlermiut people were once active on the island, suggesting it played a role in their subsistence and culture | Coral Harbour |
| Chesterfield Inlet, 63,340800, -90,706100 | Tourism Activities | Crown | Chesterfield Inlet, known as Igluligaarjuk in Inuktitut meaning place with few houses, is the oldest permanent settlement in Nunavut, Canada. For thousands of years, the area has been | Chesterfield Inlet is rich in archaeological significance, offering insights into the region's ancient Inuit cultures. | Arviat |

| | | | | | |
|--------------------------------------|--------------------|-------|--|--|--------------|
| | | | inhabited by Inuit groups, including the Aivilingmiut and Qaernermiut. Chesterfield Inlet served as a significant gathering place for Inuit seal hunters during the late spring and early summer months. | | |
| Marble Island, 62,674206, -91,111916 | Tourism Activities | Crown | Marble Island, located in western Hudson Bay within Nunavut's Kivalliq Region, holds a rich and multifaceted history that intertwines Inuit culture, European exploration, and whaling endeavors. | Marble Island, located in western Hudson Bay within Nunavut's Kivalliq Region, holds significant archaeological importance, reflecting centuries of Inuit habitation and interaction with European explorers. | Rankin Inlet |
| Rankin Inlet, 62,811390, -92,115840 | Tourism Activities | Crown | Rankin Inlet, known as Kangiqtinik in Inuktitut, meaning deep bay, is a significant Inuit community. It serves as the regional center for the Kivalliq Region and is the second-largest settlement in Nunavut after Iqaluit. | Archaeological evidence indicates that the area was inhabited around 1200 CE by the Thule people, renowned bowhead whale hunters. By the late 18th century, the Kivallirmiut (Caribou Inuit) had settled in the region, engaging in caribou hunting and fishing Arctic char along the coast, including the Meliadine and Diana rivers. | Rankin Inlet |

|-------------------------|----------------------------------|-----|--|--|

Répercussions environnementales :

The plan has been carefully crafted with regard to the local environment and communities, aiming to minimize any adverse effects. The voyage has been designed to be self-sufficient and fully within the vessel's search and rescue capabilities, including medical emergencies and evacuation. Expedition activities will be managed by experienced onboard personnel, strictly following all applicable laws, regulations, company policies, and standard operating procedures. Thorough pre-trip planning and briefings, input from communities, review boards, and the public, along with implementation of mitigation measures, will reduce potential impacts. The captains and bridge teams have previous experience transiting in these areas. All operations will be carried out with respect to the environment, sensitive areas, local communities, harvesting areas, marine mammal aggregation areas, Marine Protected Areas, bird sanctuaries and National Parks. Applications for Federal and/or Territorial permits have been submitted to the appropriate authorities, and copies of permits will be carried onboard by expedition staff as required. The proposed voyage is expected to have a minimal or short-lived environmental impact. Hapag-Lloyd takes pride in its history of responsible operations in ecologically sensitive areas worldwide. We surpass international standards with each voyage we undertake. We invest heavily in state-of-the-art technology and eco-friendly systems to preserve the pristine regions we visit and minimize our impact. Our advanced wastewater treatment system ensures responsible water management. To address the issue of emissions during its operations, HANSEATIC NATURE solely uses low-sulfur diesel, and it is fitted with an exhaust gas purification system that effectively cleanses the exhaust produced by its engines. Moreover, the HANSEATIC NATURE adheres to the pollution prevention measures laid out in the Polar Code and complies with all emission regulations.

Description de l'environnement existant : Environnement physique

The Canadian Arctic Archipelago comprises of 94 major and 36,469 minor islands, covering a vast area of 1.4 million square kilometers in Northern Canada's North Atlantic Ocean. Nunavut and Northwest Territories form the majority of this region, which is separated from the mainland and each other by the Northwest Passage, the largest high Arctic land area worldwide. The terrain is mostly tundra, with the exception of mountainous areas, and Canada's glacial ice is mostly located in the highlands. The archipelago experiences cold winters, averaging between -20°C and -35°C, and mild summers, with temperatures ranging from 10°C to 25°C, with a wide range of plant and animal life, including various land and marine mammals, insects, and birds. The islands also have a range of plant species, such as mosses, liverworts, and lichens.

Description de l'environnement existant : Environnement biologique

During the expedition through Nunavut, the Northwest Territories, and Yukon, there are various endangered species in both marine and land environments that the vessel could potentially encounter. The Species at Risk Act (SARA) aims to protect species from extinction and has identified several species in Northern Canada as endangered, such as Barren-ground Caribou (NWT), Beluga Whale (Nvt), Caribou (Nvt), Eskimo Curlew (NWT, Nvt, YT), Gypsy Cuckoo Bumble Bee (NWT, YT), Ivory Gull (NWT), Little Brown Myotis (NWT, YT), Northern Myotis (NWT, YT), Red Knot (NWT), Ross's Gull (Nvt), and Whooping Crane (NWT).

Description de l'environnement existant : Environnement socio-économique

During the Arctic Voyage, passengers aboard the ship will have the chance to participate in a variety of activities both on and off the vessel. The proposed off-ship activities for the expedition include cultural performances, community visits, hiking, excursions on Zodiac boats, and opportunities for viewing and photographing nature and wildlife. These stops are anticipated to last from 5 to 8 hours. To ensure the safety of all individuals, briefings on proper conduct for shore excursions will be given to guests before departing the ship, taking into account Arctic weather conditions and respectful behavior when observing wildlife. The onboard Excursion Team will consider the advice of local communities, applicable permit conditions, guidelines and regulations, including those established by AECO for visits to remote communities, and historical and cultural sites. During all wildlife viewings and encounters, the team will follow the guidelines established by AECO and Canadian Wildlife Services (CWS). Community visits are planned. We are looking forward to working with the communities to develop a program that allows the passengers to learn about the culture in a respectful and engaging manner. Passenger landing fees are paid to the Hamlet to ensure there is a fiscal benefit to the community.

Miscellaneous Project Information

Identification des répercussions et mesures d'atténuation proposées

Please see attached document. Minimization and mitigation measures include following established standard operating procedures and education, which are viewed as being the key factors toward ensuring that crew, expedition staff and guests are educated and briefed appropriately. Staff and Guest Briefings will include pre-landing briefings on wildlife sensitivities and potential hazards, proper wildlife viewing techniques and safety and operational practices. Hanseatic Nature will take necessary measures to limit their impact on all species within the surrounding environment, extra precautions will be taken for the species listed above. It is important to note that the proposed activity may cause disturbances to the flora and fauna. However, we believe that with proper procedures and attention to detail, any potential impacts caused by the cruise ship can be minimized. Ship's command and the Expedition Leader are aware of Species at Risk to ensure that activities do not impact these species.

Répercussions cumulatives

The concept of Cumulative Environmental Impacts refers to the combined effects of all activities, past and present, without considering which parties are responsible for each individual impact. M/V Hanseatic Nature has implemented all necessary measures to minimize potential negative impacts on the environment. However, achieving a net zero effect is practically unfeasible, and any activities conducted in the Arctic will inevitably have some degree of contribution to the cumulative environmental impact. Nonetheless, Hanseatic Nature's proposed activities are expected to result in only minimal contributions to the cumulative impact.

Impacts

Identification des répercussions environnementales

| | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | </ |
