QANURITTUT

Tukihiannaqtunik havaariyauyumayumik uqauhiuyun

Qablunaatitut: The Municipality of the Corporation of Baker Lake (the Hamlet), with support from the Government of Nunavut (GN) received funding from Transport Canada (TC) under the Oceans Protection Plan (OPP) for the construction of the sealift and laydown area (the Project) in the Hamlet of Baker Lake, Nunavut. Worley Canada Services Ltd., operating as Worley Consulting, has been retained by the Hamlet to design and support the construction of the sealift and laydown area in the Hamlet of Baker Lake (the Project). Dynamic Ocean Consulting Ltd. (Dynamic Ocean) is supporting Worley Consulting on the permitting requirements for the Project. The Project is within municipal boundaries and will require a resolution by the Hamlet Council once the design is finalized. Council has accepted the design in concept. The Project is consistent with the community's land use and zoning plan and the land is already appropriately zoned. The Project will not require additional infrastructure to be developed for a haul road or quarry, as existing Hamlet infrastructure will be utilized. Aggregates that are imported to the site will be taken from either the quarry site, approximately six kilometres (km) north of the Hamlet along the road to Agnico Eagle Meadowbank (AEM) or the gravel pit to the west of the Hamlet, both of which are within the municipal boundaries. Construction is planned to begin in summer 2025 and is expected to take approximately four months to complete, over a period of 124 days. Construction is expected to occur daily over a 10-hour period. The Project is expected to be operational in the open-water season of 2026. Letters of support from the community are attached.

Avatiliriniqmut Ayurhautingit:

There are no residual effects expected subsequent to the implementation of Project mitigation and monitoring measures. A CEMP (attached) has been developed that details measure to be implemented to minimize negative environmental and socio-economic effects associated with the construction phase of the Project. A Request for Review (RFR) will be submitted to Fisheries and Oceans Canada – Fish and Fish Habitat Program (DFO-FFHPP) to confirm if a Fisheries Act Authorization (FAA) is required. This is a community project, being led by the Hamlet. The community is very much looking forward to this long-awaited benefit from improved safety and efficiency of sealift operations. The community does not anticipate any major effects on wildlife from noise and construction activities. The effects on wildlife from the Project will be minimal and temporary and no concerns regarding impacts to wildlife were expressed. There is very limited harvesting, if any, in or around the Project and hunters do not anticipate that construction will have any impacts on wildlife or their ability to continue subsistence activities such as hunting, fishing, trapping, and gathering. A summary of potential impacts is provided in Section 3 of the CEMP. Proposed mitigation measures are detailed in Section 4.2, Table 4-1 of the CEMP.

SECTION I1: Municipal Development

A new laydown area will be constructed approximately 500 m east of the easternmost extent of the current developed zones. The new laydown area will initially measure approximately 1.5 hectares (ha) but will retain the potential for further eastward or northward expansion. Due to the approximately 1V:10H ground slope in the proposed area, the laydown area will consist of a single bench, partially cut and partially filled, and covered by 0.3 m of processed gravel at a 4 % slope. Drainage ditches on the upland side will redirect surface water both east and west, and down toward the lakeshore. A new access road will be constructed to link the existing road with the laydown area. The road will be 10 m wide and consist of 1.2 m of pit-run fill covered by 0.3 m of processed gravel. Drainage for the site will be a ditch cut alongside the road, and a culvert beneath to roadway access to the laydown area. A new landing ramp will be constructed to the edge of the lakeshore and will be accessible from the lower bench of the laydown area. The ramp will be 30 m wide to allow for two barges to unload simultaneously and will be surfaced with 0.5 m of processed gravel. The ramp will not extend below the HWL.

Qanurittuq Ittunik Avatinga: Avatingalluanga

The Project is occurring within municipal boundaries in a developed area with minimal natural habitat. The site is located between existing hamlet structures and the adjacent mine cargo marshalling yard. Adjacent road down to the shore is used a boat launch. Adjacent creek is referred to as “Garbage Creek” and drains a lake adjacent to the old hamlet landfill. The site is adjacent to an existing mine cargo marshalling area

Qanurittuq Ittunik Avatinga: Inuuhimayunut Avatinga

The Project is occurring within municipal boundaries in a developed area with minimal natural habitat, and sparse vegetation. There is no works below the High-Water Level (HWL).

Qanurittuq Ittunik Avatinga: Inungit-maniliurutingit Avatinga

Baker Lake is the fourth largest community in Nunavut with a population of 2,067 residents according to 2016 census data from Statistics Canada, which also noted a 10.5 % increase in population since 2011 (Statistics Canada, 2017). Considerable population growth and supporting services to the AEM mine has resulted in Baker Lake seeing a steady increase in sealift cargo. Baker Lake is also unique as the only in-land community in Nunavut, and navigating the Chesterfield Narrows to access the lake adds extra logistical complications to cargo delivery.

Tamatkiumayunik Ihuikgutivaktunik

All impacts from the Project were considered either “Positive” or “Negative and Mitigatable” and thus no residual effects are expected subsequent to implementation of mitigation and monitoring measures.
