Personnel

Personnel on site: 60

Days on site: 750

Total Person days: 45000

Operations Phase: from 2019-06-02 to 2032-06-01

Additional Information

SECTION A1: Project Info

SECTION A2: Allweather Road

SECTION A3: Winter Road

SECTION B1: Project Info

Gold

SECTION B2: Exploration Activity

General exploration activities such as geological mapping, prospecting, geochemical sampling (till, soil, rock, etc), geophysical surveys (airborne and ground). Seasonal temporary/mobile camps capable of supporting up to 60 people. Temporary fuel caches to support exploration, drilling, and camp. Project access via helicopter and overland winter access. Fixed wing aircraft, if necessary, will use an already existing airstrip on an adjacent Property. Drilling (Diamond, Reverse Circulation, Rotary Air Blast).

SECTION B3: Geosciences

1. Indicate the geophysical operation type: Airborne and ground-based geophysical surveys (i.e electromagnetic, gravity, radiometrics and others) 2. Indicate the geological operation type: Prospecting, geological mapping, geochemical surface sampling 3. Indicate on a map the boundary subject to air and/or ground geophysical work: All exploration activities will be strictly confined to the Hood River Project Claims or active mineral tenure within the Roma Project Extent as identified by the Project Map. 4. Provide flight altitudes and locations where flight altitudes will be below 610m: Aircraft will only fly lower than 610 m (2,100 ft) when necessary, such as take-off and landing, slinging, geophysical surveys or when weather circumstances and emergencies require. When low altitude flights are necessary, all efforts will be taken to avoid wildlife, dwellings, and nests. Pilots will be instructed not to land where wildlife is present unless it is an emergency situation. If a landing occurs for any reason in the presence of wildlife, it will be documented and submitted to CIRCAC, NWB and KIA as part of the Annual Report.

SECTION B4: Drilling

1. Provide the number of drill holes and depths (provide estimates and maximums where possible): Drill hole locations and depths are to be determined based on ongoing analysis of historic exploration activities, and results of new exploration activities. Drilling may occur anywhere within the Roma Project Extents on active mineral tenure or on the Hood River claims further south. 2. Discuss any drill additives to be used: The exact drill additives are not known at this time, but Blue Star Gold Corp. will ensure that the drilling contractor maximizes the use of non-toxic and biodegradable additives. The spill contingency will be updated with appropriate MSDS sheets once any additional additives are determined. It is anticipated that calcium chloride (CaCl₂) may be used as antifreeze. 3. Describe method for dealing with drill cuttings: The drill cuttings will be directed into a natural depression adjacent to the drill pad, along with the drill water, mud, and other drill wastes. The natural depression will be at least 31 m from the ordinary high water mark of any proximal water body, where direct flow into a water body is not possible and no additional impacts are created. 4. Describe method for dealing with drill water: Drilling will utilize recirculation and filtration systems to minimize loss of water and drill additives. Nontoxic and bio-degradable drilling fluids will be used at all times wherever possible. Drilling fluids will be directed into a natural depression adjacent to the drill, located a minimum of 31m from the ordinary high water mark (OHWM) of any proximal waterbody, where direct flow into a water body is not possible and no additional impacts are created. If any artesian water flow is detected, the hole will be plugged immediately and cemented in bedrock to prevent continued flow. 5. Describe how drill equipment will be mobilized: The drill, drilling equipment and accessories (pumps, hose, tanks, etc.) will be mobilized by fixing wing aircraft to the Property and then slung by helicopter to drill sites. 6. Describe how drill holes will be abandoned: If later reactivation of the hole is not required, casing will be removed whenever possible. Any remaining/fused casing will be cut off to ground level, or below, and capped. Any holes with flowing water will be permanently sealed unless written instruction from the relevant authority is received to indicate otherwise. 7. If project proposal involves uranium exploration drilling, discuss

the potential for radiation exposure and radiation protection measures. Please refer to the Canadian Guidelines for Naturally Occurring Radioactive Materials for more information:N/A.

SECTION B5: Stripping

N/A

SECTION B6: Underground Activity

N/A

SECTION B7: Waste Rock

N/A

SECTION B8: Stockpiles

N/A

SECTION B9: Mine Development

SECTION B10: Geology

SECTION B11: Mine

SECTION B12: Mill

SECTION C1: Pits

SECTION D1: Facility

SECTION D2: Facility Construction

SECTION D3: Facility Operation

SECTION D4: Vessel Use

SECTION E1: Offshore Survey

SECTION E2: Nearshore Survey

SECTION E3: Vessel Use

SECTION F1: Site Cleanup

SECTION G1: Well Authorization

SECTION G2: Onland Exploration

SECTION G3: Offshore Exploration

Property lies partially within the Hood River watershed with numerous lakes on the Property. The project should not have any effect on watersheds, lakes, streams, sediment geochemistry, surface water flow, or groundwater flow. Tidal processes and bathymetry in the project area (if applicable): N/A Water quality and quantity: Water quality on the Property appears to be abundant and pristine. All efforts will be made to keep water quality as close to pristine as possible. Air quality: All pollutants will be kept to an absolute minimum. Climate conditions and predicted future climate trends: The Property is characterized by a sub arctic climate with temperature extremes of minus 40° C in the winter to plus 30° C in the summer. The microclimate is very unpredictable and daily temperatures can change rapidly. The biggest single difficulty in the summer is the common occurrence of fog banks forming in the morning and persisting until noon. Total annual precipitation is usually less than 250 mm in the west and rarely more than 500 mm in the east. Noise levels: Will be kept to an absolute minimum. Other physical Valued Ecosystem Components (VEC) as determined through community consultation and/or literature review: None known at this time.

ᐱᓐᓇ ᐱᓇᐱᓂᐅᓐ ᓂᓄᐱᓐᓂᐅᓐᓂᓐ: ᐅᐱᓐᓂᓐᓂᓐ

Vegetation (terrestrial as well as freshwater and marine where applicable):Vegetation at the Property consists mainly of moss, lichens, and shrubs such as dwarf birch, willow, northern Labrador tea, avens (various) and blueberries (various). Wildlife, including habitat and migration patterns: Typical wildlife include caribou, muskoxen, grizzly bear, wolverine, Arctic hare, Arctic fox, red fox and wolf. Small mammals (e.g., Arctic ground squirrel, voles, and lemmings) are distributed throughout the region. Birds are discussed below. Birds, including habitat and migration patterns:Many species of migratory birds are present in the area during the summer season, including waterfowl, raptors, songbirds, and shorebirds, while some bird species are present year round (e.g., ptarmigan, gyrfalcon, and common raven). The proposed activities should not interfere with bird habitat and migration patterns. Species of concern as identified by federal or territorial agencies, including any wildlife species listed under the Species at Risk Act (SARA), its critical habitat or the residences of individuals of the species:According to the Species at Risk Public Registry, the following species at risk could be found within the Project area: SARA Schedule 1: Barren-ground Grizzly bear, Wolverine, Transverse Lady Beetle, Short-eared Owl, Red-necked Phalarope, Rusty BlackbirdCOSEWIC Special Concern: Barren-ground caribou (under consideration for SARA schedule 1), Harris’s SparrowThe “BAU Ulu, Hood River & Roma Wildlife Protection Plan 2024” outlines the company’s environmental protection measures and wildlife management practices in detail for the species listed above. Aquatic (freshwater and marine) species, including habitat and migration/spawning patterns:The proposed activities should not interfere with marine species. Screens will be placed over water intakes for the camp and drills to ensure no entrapment of freshwater species. Other biological Valued Ecosystem Components: None known at this time.

ᐱᓐᓇ ᐱᓇᐱᓂᐅᓐ ᓂᓄᐱᓐᓂᐅᓐᓂᓐ: ᐱᓄᓂᓐᓂᓐᓂᓐᓂᓐ-ᐱᓄᓂᓐᓂᓐᓂᓐᓂᓐ

Proximity to communities:The community of Kugluktuk is approximately 210 km northwest of the Property, which lies within the Kitikmeot Region of Nunavut.Archaeological and culturally significant sites (e.g. pingos, soap stone quarries) in the project (Local Study Area) and adjacent area (Regional Study Area):The company is not aware of any known archaeological and/or culturally significant sites on the Roma Property. Past archaeology studies indicated 1 site within the vicinity of the Hood River Property. Additional studies have been previously proposed and permitted for as exploration continuesPalaeontological component of surface and bedrock geology:The company is not aware of any known palaeontological sites on the Property.Land and resource use in the area, including subsistence harvesting, tourism, trapping and guiding operations:Due to the proximity of the Project Kugluktuk community therefore all exploration activity planning will take into account any possible impacts to the cultural value of the area, including subsistence harvesting and quality of water. Previous engagement with the communities and HTO’s has indicated that the land and resources used in the area, other than for exploration, is limited. However, communications and engagement remain ongoing so that any changes can be communicated and discussed. Local and regional traffic patterns:This Project is not anticipated to have any effect on local or regional traffic patterns.Human Health, broadly defined as a complete state of wellbeing (including physical, social, psychological, and spiritual aspects):This project is not anticipated to have any effect on human health.Other Valued Socioeconomic Components (VSEC) as determined through community consultation and/or literature review. None known at this time.
