Nunavut Kavamanga, Nunavunmi Ihivriunqimut Timiqutigiyanga	Scientific Research License, application will be submitted once NIRB SDR issued	Not Yet Applied		
Nunavut Imaligiyyit Katimayit	A Water Licence or a NWB Authorization will be obtained if required.	Not Yet Applied		
Government of Nunavut, Community Services	Land Use Permit will be obtained if drilling is required at the Sealift footprint.	Not Yet Applied		
Nunavut Kavamanga, Avatiliriyikkut	Wildlife Research Licence and/or Wildlife Observation Licence to be confirmed if required.	Not Yet Applied		
Iqalukhiurniqmut Tariuqmilu Kaanata	Licence to Fish for Scientific Purposes (LFSP) to be confirmed if required.	Not Yet Applied		
Crown-Indigenous Relations and Northern Affairs Canada	Land Use Permit, to be confirmed if required.	Not Yet Applied		
Nunavut Planning Commission	Conformity Determination	Active	2025-12-02	

Project transportation types

Transportation Type	Qanuq Atuqtauniarmangaa	Length of Use
Air	Field crew will travel to the program area by plane from Vancouver.	
Land	Field crews will travel by foot or local vehicles within the community.	

Project accomodation types

Nunauyuq

Ihuaqutivaluin Atuqtauyukhan

Hanalrutit atuqtaunahuat (ukuallu ikuutat, pampiutainnik, tingmitinik, akhaluutinik, hunaluuniit)

Hanalrutit Qanurittuq	Qaffiuyut	Aktikkulaanga – Qanurittullu	Qanuq Atuqtauniarmangaa
Multibeam Echo Sonar	1	1 m x 50 cm	Seabed type and conditions.
Subbottom Profiler	1	1 m x 1 m	Ground conditions below seabed.
Side Scan Sonar	1	2 m x 50 cm	Seabed type and conditions.
Excavator	1	30 to 40 ton	The excavator will be used to dig test pits.
Mounted drill rig	1	2.5 m x 5.5 m x 3 m	A geotechnical subsurface drilling program is required to understand the type and variability of subsurface soil and/or rock conditions.
Geotechnical hammer	1	~2 kg (30 to 40 cm)	A geotechnical survey is required to identify suitable quarry locations for sourcing the required fill and rock armour for the Sealift construction.
Sediment / grab sampler	1	3 m x 50 cm	Collection of sediment samples.
Drone	1	To be confirmed	Topographic and feature survey to conduct LiDAR and aerial surveys.
Remotely Operated Vehicle (ROV)	1	72 cm x 24 cm x 44 cm	Underwater video survey to determine habitat characteristics of the subtidal seabed.
Ponar	1	3 m x 50 cm	Subtidal samples will be collected using a ponar grab sampler (grab sampler) or by SCUBA divers.
Conductivity, temperature, depth meter	1	3.5 cm x 9.0 cm	Device used to assist in water quality parameters during water quality survey.
Biological Survey Equipment	As needed	To be determined	A variety of small manual hand tools including iPads, transect tape, quadrat, clinometer, binoculars, and GPS, will be required for the Marine and Terrestrial Programs.
Niskin Sampler	As required	1.5L	Collection device to get water from depth during water quality survey.

Avatiliriniqmut Ayurhauingit:

Environmental impacts associated with the field programs are expected to be minimal. Potential impacts to terrestrial and marine habitat and wildlife may occur, however, all personnel will be accompanied by a local field assistant to confirm minimal disturbances. Minor disruptions to traditional land use may occur in the proposed study area, however, arrival of the research team will be advertised on local social media prior to arrival. There will be an increase in anthropogenic presence in the Study Area but the research team is relatively small and are conducting non-invasive short term studies. Please see Table 8-1 of the attached application letter.

Qanurittuq Ittunik Avatinga: Avatingalluanga

The Project is occurring within municipal boundaries in a developed area. Baseline studies of the physical environment will be conducted as a component of this field program. This will include surveys of the geotechnical, geophysical, and topographical characteristics of the marine (intertidal and subtidal) and terrestrial environment within the Study Areas. Please see the attached application letter and Environmental Management Plan for further information.

Qanurittuq Ittunik Avatinga: Inuuhimayunut Avatinga

The Project is occurring within municipal boundaries in a developed area. Baseline studies of the biological environment will be conducted as a component of this field program, including surveys of the marine (intertidal and subtidal) and terrestrial habitats within the Study Areas. Please see the attached application letter and Environmental Management Plan for further information.

Qanurittuq Ittunik Avatinga: Inungit-maniliurutingit Avatinga

Kimmirut has a population of 426 residents and saw an increase in population approximately 9.5% since 2016 according to the 2021 Census data from Statistics Canada. Kimmirut typically sees two to three calls of dry cargo ships per year averaging three days each with sealift in early to mid-July and retrograde in September through late October. Sealift operations are undertaken in the middle of the community along the main boat ramp. In-person consultations with the community were conducted in 2021 as part of the GN-TIN marine infrastructure scoping study and most recently in November 2025. Ongoing consultation will be undertaken prior to arrival of the field team to confirm local support and gather traditional knowledge to support the baseline assessment. Please see Section 4 of the attached application letter.

Miscellaneous Project Information

Not applicable.

Naunaiyainiq ukuninga Ayurhauingit unalu Piumayaat Ikkiliyuumiutinahuarutit

Potential impacts to terrestrial and marine habitat and wildlife may occur, however, all personnel will be accompanied by a local field assistant to confirm minimal disturbances. Minor disruptions to traditional land use may occur in the proposed study area, however, arrival of the research team will be advertised on local social media prior to arrival. There may be temporary underwater and air noise disturbance due to geotechnical and geophysical studies, but the footprint of these activities will be minimal. Please see the attached application letter and Environmental Management Plan for further information.

Tamatkiumayunik Ihuikgutivaktunik

Several projects are taking place nearby during the same timeframe as this Project. These primarily involve

scientific research and tourism activities. Cumulative effects are expected to be minimal, as most project components include mitigation measures designed to reduce potential impacts. Please see the attached application letter and Environmental Management Plan for further information.
