Information is not available				

Avatiliriniqmut Ayurhautingit:

New infrastructure and water withdrawals introduce potential impacts. Key impacts and mitigation measures include:

- Groundwater and surface water: Withdrawals from Lake Qikiqtalik and the Apex River may lower water levels; pumps will be operated within DFO guidelines.
- Fish and aquatic habitat: Pump intakes will be screened; pumping will occur only when river flows exceed thresholds.
- Vegetation and wildlife: Clearing tundra vegetation will be minimized; pipeline alignment avoids sensitive habitats.
- Permafrost and soils: Construction will follow geotechnical recommendations to prevent or minimize thawing; reservoir liners will be used.
- Sediment control measures and spill response will be implemented for construction activities.
- Archaeological impact assessment Archaeological sites identified within the project area boundaries have been mitigated and are no longer considered significant and hold limited to no interpretive value.
- Environmental Protection Plan: mitigation plans (sediment control, spill response) are provided
