April 4, 2026

Dear Fisheries and Oceans Canada

Thank you for the time to review my prospecting project Cache Zone 2026. It is my pleasure to inform your department of the concerns given within the commenting period ending March 31, 2026, on the NIRB website.

Inuit Mining & Exploration will adhere to the DFOs Protective Measures and respect the use of Nunavut Water, its habitat and fishes within the lake. The website has been reviewed and will practice Standard Codes within the website.

Water retrieval will include filter using cloth and juice jug then into basic water tank for drill and drinking purpose mostly when eating. Note that this project will only be during summer season and not during winter season.

Any death, disruption, harmful alteration or destruction of fish within the lake, we will notify DFO by email and use the incident report within DFO website.

Regards

John William Tugak
