QANURITTUT

Tukihiannaqtunik havaariyauyumayumik uqauhiuyun

Qablunaatitut: A voluntary-based crew of eight people under captain and writer Arved Fuchs is undertaking a sailing cruise on the traditional sailing boat “Dagmar Aaen” in the Arctic region, starting at Hamburg and visiting Iceland and Greenland, and the territories of Nunavut and Nunatsiavut. The goal is to raise awareness about the ocean’s health and to speak with and learn from the local communities at the ports that are visited. The team is getting scientific support from GEOMAR ocean research centre in Kiel, Germany. From the boat, oceanographic measurements are conducted on they way, including temperature, salinity, carbon dioxide and oxygen to learn about the status of the ocean. If the communities of the coastal states allow, the measurements will be made publicly available and can be tracked live by the community on https://beluga.geomar.de and free to use by anyone. The journey will take place between early August 2026 and mid-August 2026. Arrival and departure are depending on the weather conditions at sea. The boat is coming from Sisimiut, Greenland, before crossing over to Nunavut territory. The track then leads southward, calling port at Pangnirtung, with final destination at Bridgewater (Nova Scotia), where the ship will overwinter. The sailing journey will be continued in 2027, crossing the Atlantic to sail back to Hamburg.

Uiviititut: Un équipage de huit bénévoles, sous la houlette du capitaine et écrivain Arved Fuchs, entreprend une croisière à bord du voilier traditionnel « Dagmar Aaen » dans la région arctique. Le voyage part de Hambourg et fait escale en Islande, au Groenland, ainsi que dans les territoires du Nunavut et du Nunatsiavut. L'objectif est de sensibiliser le public à la santé des océans et d'échanger avec les communautés locales dans les ports visités afin d'apprendre à leurs côtés. L'équipe bénéficie du soutien scientifique du centre de recherche océanographique GEOMAR à Kiel, en Allemagne. Depuis le bateau, des mesures océanographiques sont effectuées en cours de route, notamment la température, la salinité, le dioxyde de carbone et l'oxygène, afin d'évaluer l'état de l'océan. Si les communautés des États côtiers le permettent, les mesures seront rendues publiques et pourront être suivies en direct par la communauté sur https://beluga.geomar.de et utilisées librement par tout le monde. Le voyage se déroulera entre début août 2026 et mi-août 2026. Les dates d'arrivée et de départ dépendent des conditions météorologiques en mer. Le bateau partira de Sisimiut, au Groenland, avant de traverser vers le territoire du Nunavut. L'itinéraire se poursuivra ensuite vers le sud, avec une escale à Pangnirtung, pour aboutir à Bridgewater (Nouvelle-Écosse), où le navire passera l'hiver. Le voyage se poursuivra en 2027, avec la traversée de l'Atlantique pour retourner à Hambourg.

Avatiliriniqmut Ayurhautingit:

There are generally no expected impacts, neither negative nor positive. However, there could be an indirect positive effect, as data about coastal waters and the ocean will be made available publicly and accessible for the community about water temperatures, salinity and oxygen. If spotted, marine plastic litter will be collected when feasible (e.g. ghost nets). Noise levels are negligible and no harmful substances or methods are being used.

Qanurittuq Ittunik Avatinga: Avatingalluanga

Although coastal waters will be sailed through, the maximum effort is to avoid disturbing wildlife. Since a sailing boat is used, no lasting impacts are expected.

Qanurittuq Ittunik Avatinga: Inuuhimayunut Avatinga

Qanurittuq Ittunik Avatinga: Inungit-maniliurutingit Avatinga

The boat will call port at Pangnirtung and hopefully meet and talk with people of the local communities.

Miscellaneous Project Information

Naunaiyainiq ukuninnga Ayurhautingit unalu Piumayaat Ikikliyuumiutinahuarutit

No impact is expected, as the boat is mostly on the sea, sailing along its route. Waste will be collected on board, pressed and stored on board until it can be disposed at designated port facilities.
