

## **Demande de la CNER faisant l'objet d'un examen préalable #126449**

### **Leaf photosynthesis of shrub species - Response to air temperature and climatic feedback**

**Type de demande :** New

**Type de projet:** Scientific Research

**Date de la demande :** Friday, May 8, 2026

**Period of operation:** from 2026-07-13 to 2026-07-24

**Promoteur du projet:** Maire Vincent  
Université du Québec à Trois-Rivières  
3351 Bd des Forges  
Trois-Rivières Quebec G8Z 4M3  
Canada  
Téléphone :: 8196994514, Télécopieur ::

## Activités

Emplacement	Type d'activité	Statut des terres	Historique du site	Site à valeur archéologique ou paléontologique	Proximité des collectivités les plus proches et de toute zone protégée
Area where three plant sampling sites will be chosen	Sampling sites	Inuit Owned Surface Lands	Sylvia Grinnell National Park	The park also has archaeological sites but we will not visit them. Our plan is to sample 48 shrub individuals (four species) and to measure leaf photosynthesis back to the laboratory in Iqaluit. See attached document for details.	The nearest communities are the ones in Iqaluit.

### Engagement de la collectivité et avantages pour la région

Collectivité	Nom	Organisme	Date de la prise de contact
Iqaluit	Jamal Shirley	Arctic College	2026-01-10

# Autorisations

Indiquez les zones dans lesquelles le projet est situé:

South Baffin

## Autorisations

Organisme de régulation	Description des autorisations	État actuel	Date de l'émission/de la demande	Date d'échéance
Gouvernement du Nunavut, ministère de l'Environnement	Department of Environment – Wildlife Management Division, Nunavut Territory. NUNAVUT WILDLIFE RESEARCH PERMIT - Expected decision date : June 5th	Applied, Decision Pending		
Gouvernement du Nunavut, ministère de l'Environnement	NUNAVUT TERRITORIAL PARKS USE PERMIT - Application date : March 25th	Applied, Decision Pending		

## Project transportation types

Transportation Type	Utilisation proposée	Length of Use
Land	Car or ATV + walk	

## Project accomodation types

Collectivité

## Utilisation de matériel

Équipement à utiliser (y compris les perceuses, les pompes, les aéronefs, les véhicules, etc.)

Type d'équipement	Quantité	Taille – Dimensions	Utilisation proposée
VTT	1	86*48 in	The vehicle may be use to go on-site
GPS	1	5 * 10 cm	Record site location
Gas analyser	1	15 * 30 * 20 cm	leaf photosynthesis measurement
Temperature logger	10	1 * 1 * 0.5 cm	Recording temperature
Core sampler	1	20 * 6 * 6 cm	soil sampling
bucket	4	35 * 40 * 20 cm	plant transport
Pruning shear	1	20 * 10 cm	branch and leaf sampling
paper bag	100	20 * 10 cm	plant tissue storing
dry shipper	1	30 * 20 * 10 cm	preserving plant tissue

### Décrivez l'utilisation du carburant et des marchandises dangereuses

Décrivez l'utilisation de carburant :	Type de carburant	Nombre de conteneurs	Capacité du conteneur	Quantité totale	Unités	Utilisation proposée
Information is not available						

### Consommation d'eau

Quantité quotidienne (m3)	Méthodes de récupération de l'eau proposées	Emplacement de récupération de l'eau proposé
0		

# Déchets

## Gestion des déchets

Activités du projet	Type des déchets	Quantité prévue	Méthode d'élimination	Procédures de traitement supplémentaires
Sampling sites	Other, plants	100 grams	Compost if available, otherwise regular trash	Not required

## Répercussions environnementales :

The project is designed to have minimal environmental impact. Vegetation sampling is non-destructive and limited in scope. Soil sampling is small in scale and all sites are restored immediately after sampling. Temporary sensors will be removed after use, and no permanent infrastructure will be installed.

## **SECTION G2: Onland Exploration**

## **SECTION G3: Offshore Exploration**

## **SECTION G4: Rig**

## **SECTION H1: Vessel Use**

## **SECTION H2: Disposal At Sea**

## **SECTION I1: Municipal Development**

### **Description de l'environnement existant : Environnement physique**

Three study sites will be selected within Sylvia Grinnell Territorial Park to represent environmental variability across the landscape. At three sites, two contrasting soil fertility conditions will be identified: •Mineral soils associated with silty deposits, generally well-drained and relatively low in organic matter; •Organic soils characterized by high water saturation and accumulation of organic matter. Soil sampling will be conducted to characterize edaphic conditions. Three soil cores per fertility condition will be collected (10 cm depth, 6 cm diameter). This represents a small and localized disturbance. All sampling locations will be restored immediately after collection by refilling holes with surrounding substrate, thereby maintaining surface integrity.

### **Description de l'environnement existant : Environnement biologique**

Four shrub species will be targeted: *Salix arctica* (prostrated shrub), *Salix reticulata* (prostrated shrub), *Salix richardsonii* (erect shrub), *Betula glandulosa* (erect shrub). These species does not belong to endangered species list.

### **Description de l'environnement existant : Environnement socio-économique**

We will propose to arctic college to hire one person of the community to show us the sampling sites and explain the environment.

### **Miscellaneous Project Information**

### **Identification des répercussions et mesures d'atténuation proposées**

The project is designed to have minimal environmental impact. Vegetation sampling is non-destructive and limited in scope. Soil sampling is small in scale and all sites are restored immediately after sampling. Temporary sensors will be removed after use, and no permanent infrastructure will be installed. Access to the park will be conducted by ATV, while all activities within study sites will be performed on foot to minimize disturbance. No hazardous substances will be introduced into the environment.

### **Répercussions cumulatives**

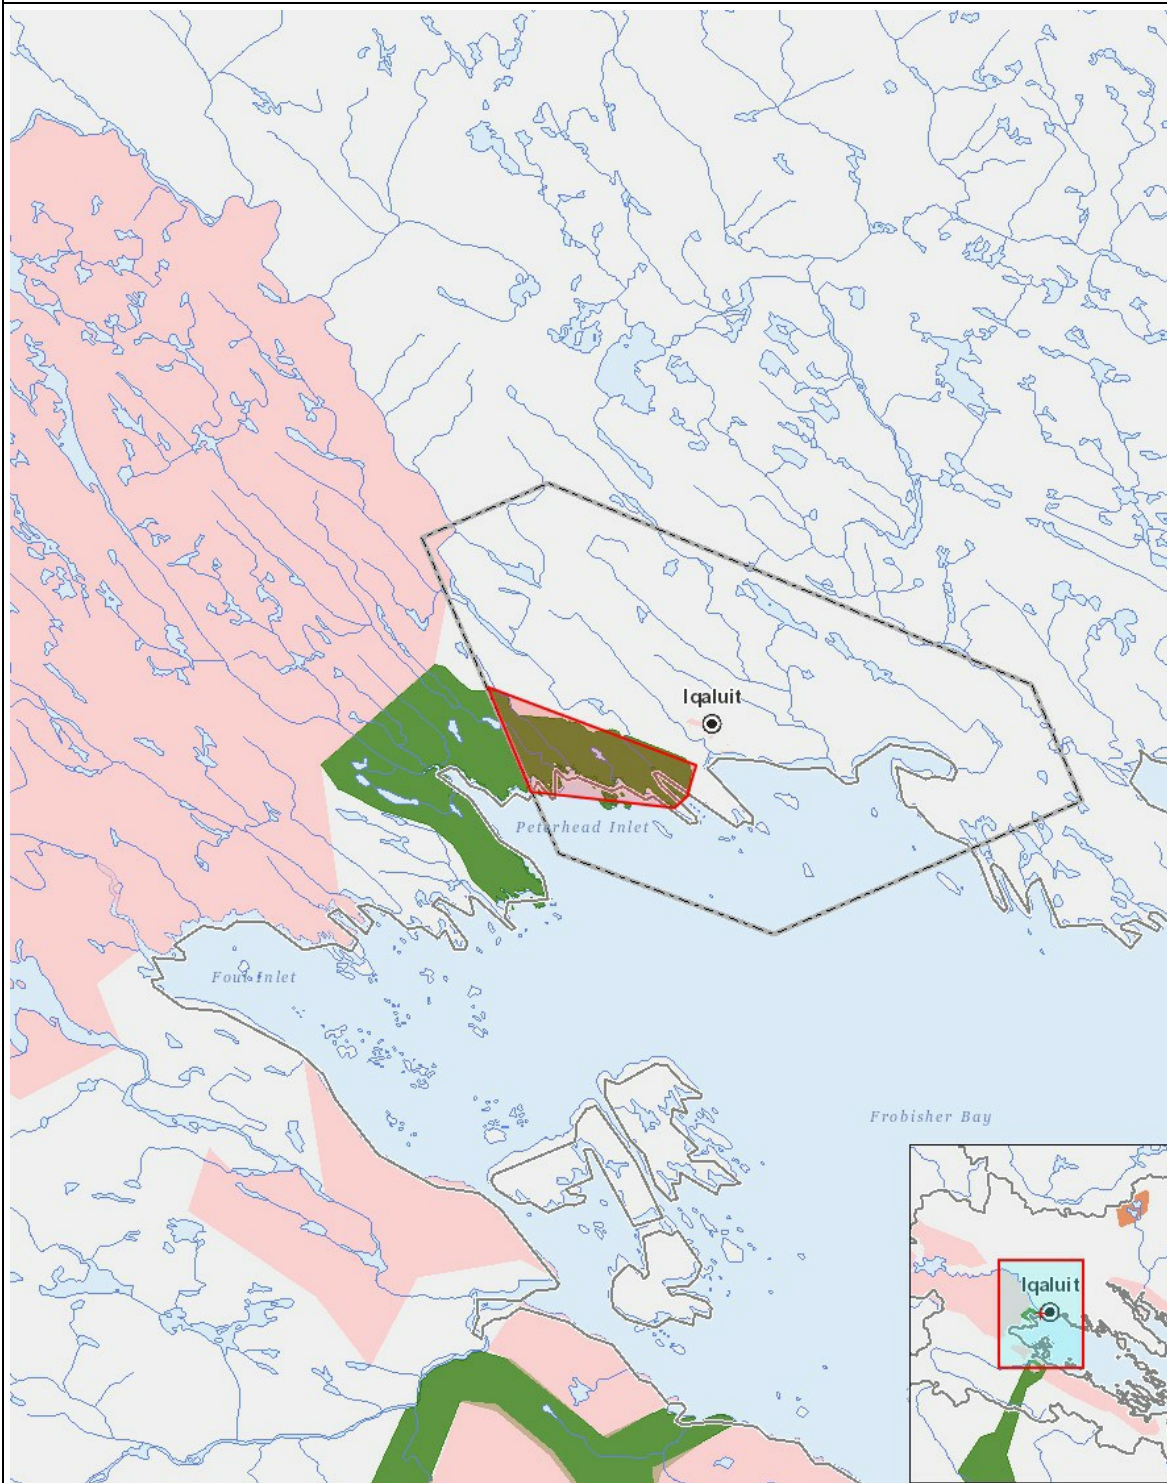

# Impacts

## Identification des répercussions environnementales

	PHYSICAL	Designated environmental areas	Ground stability	Permafrost	Hydrology / Limnology	Water quality	Climate conditions	Eskers and other unique or fragile landscapes	Surface and bedrock geology	Sediment and soil quality	Tidal processes and bathymetry	Air quality	Noise levels	BIOLOGICAL	Vegetation	Wildlife, including habitat and migration patterns	Birds, including habitat and migration patterns	Aquatic species, incl. habitat and migration/spawning	Wildlife protected areas	SOCIO-ECONOMIC	Archaeological and cultural historic sites	Employment	Community wellness	Community infrastructure	Human health
