Type de projet:	Municipal and Industrial Development
Date de la demande :	Monday, July 27, 2026
Period of operation:	from 2026-07-12 to 2026-09-12
Promoteur du projet:	Elan Chalmers Government of Nunavut PO Box 1000, stn 700 Iqaluit NU X0A0H0 Canada Téléphone :: 8679755461, Télécopieur ::

DÉTAILS

Description non technique de la proposition de projet

Anglais: The Government of Nunavut, Department of Transportation and Infrastructure, is proposing this work as part of planning for upgrades to the municipality's drinking water system. The proposed work is a small, temporary fisheries study at the municipality's current drinking water source. The study will help determine how the source can continue to support the community's drinking water needs while protecting fish and fish habitat. A small field crew will collect information on fish species presence and relative abundance. Sampling will use non-lethal methods, such as trap nets and electrofishing. Angling may also be used if needed, with barbless hooks and minimal fish handling. All captured fish will be identified, measured, weighed, and released alive. No permanent facilities will be built. Access may be by truck, ATV, boat, or on foot, depending on site conditions. The results will support the water licence renewal process and future drinking water system upgrades. The long-term goal is to support a safe and reliable drinking water supply while avoiding or minimizing impacts to fish and fish habitat. The work will take place at or near the existing drinking water source, close to the community, and is not expected to occur in a protected area. Field work is expected to occur during the open-water season and will be completed over a short period, depending on weather and site conditions.

Project transportation types

Transportation Type	Utilisation proposée	Length of Use
Air	Commercial flight	
Water	Motorless boat	
Land	Truck	

Project accomodation types

Collectivité

Utilisation de matériel

Équipement à utiliser (y compris les perceuses, les pompes, les aéronefs, les véhicules, etc.)

Type d'équipement	Quantité	Taille – Dimensions	Utilisation proposée
Non-motorized boat	1	N/A	Small non-motorized boat will be used to access the lake

Décrivez l'utilisation du carburant et des marchandises dangereuses

Décrivez l'utilisation de carburant :	Type de carburant	Nombre de conteneurs	Capacité du conteneur	Quantité totale	Unités	Utilisation proposée
Gasoline	fuel	1	5	5	Liters	Drive to site, rental truck will come full of fuel

Consommation d'eau

Quantité quotidienne (m3)	Méthodes de récupération de l'eau proposées	Emplacement de récupération de l'eau proposé
0	The water use will be negligible. Water withdrawn in the process of collecting fish will be returned to the lake.	Municipal water supply lake

Déchets

Gestion des déchets

Activités du projet	Type des déchets	Quantité prévue	Méthode d'élimination	Procédures de traitement supplémentaires
Sampling sites	Other, Disposable gloves, fishing line	1-5L	Municipal waste stream	N/A

Répercussions environnementales :

Impacts are expected to be minimal. All sampling will be completed using non-destructive fishing techniques, such as trap nets or electrofishing. Angling may also be completed, depending on the success of other techniques, and employ barbless hooks and minimal "playing" of fish. All fish captured will be identified to species, measured, weighed and live released.
