Subject: RE: NIRB File No.: 124674 / 16YN046 - Geotechnical and Environmental Baseline Studies - Pond Inlet Small Craft Harbour Development (Questions)

Hello Marie,

Thank you for your response. I can appreciate that the specific location of the proposed quarry would be selected based on results from geotechnical investigations, however, the proposed quarry study area(s) should be detailed within the maps submitted for the NIRB's, and respective commenting parties', consideration. As noted yesterday, the application has been returned to you to allow the additional mapping information to be included within your online project application.

Also, as mentioned in my email earlier this morning, could you address the following additional points:

- Can you confirm that the Deep Sea Port location noted in the Supplemental Information document is referring to the Study Area identified on the map?
- Can you provide the approximate number of surface drogues that would be deployed within the Study Area?
- Within the Waste Management Plan document it is noted that a drilling barge may be required for marine drilling during the open water season. As the barge was not listed as equipment to be used for the project could you provide details regarding its size and storage location? Further, should drilling occur during the ice-covered season, would you be using snow machines to mobilize drilling equipment on ice?

Thank you in advance,

Davin St. Pierre, M.REM

Subject: RE: NIRB File No.: 124674 / 16YN046 - Geotechnical and Environmental Baseline Studies - Pond Inlet Small Craft Harbour Development (Questions)

Hello Davin,

Thank you for your follow up email and your questions. The specific location of the proposed quarry will be further determined by the results of the geotechnical investigation. When the quarry location is confirmed, the information will be shared with the regulators and other stakeholders.

Regarding your question on the heli-portable drill rig, you are correct. A helicopter will *not* be used to transport the drill rig to the site. Heli-portable is the proposed type. Heli-portable drill rigs are useful in remote locations, as they are more lightweight, compact, and easier to maneuver.

We hope this information is what you require to move forward with the screening. If you need any additional information, please do not hesitate to contact us and we will respond promptly.

Thank you!
Marie

Hello Marie,

I hope this message finds you well. My name is Davin St. Pierre; I am a Technical Advisor with the Nunavut Impact Review Board and have been assigned your file for screening. Before we can move forward with our assessment I just have a couple questions:

- Within the non-technical summary and throughout the application quarry studies are discussed, however, based on the maps provided I'm unsure as to where the proposed quarry would be located. Could you provide an amended map that details where the quarry studies would occur/where the quarry is being proposed and also provide the lat and long locations for our internal mapping?
- On page 4 of the SupplementalInformation_PondInlet document, you refer to a "heli-portable" drill rig as equipment proposed for drilling activities. I just want to confirm that you are not proposing to use helicopter mobilization to transport the equipment detailed and that the use of "heli-portable" was simply meant to describe the size/type of drill to be used.

You will receive an advisory from our administrators that your application has been returned to you so that you can provide the additional map information within your online application. Please feel to touch base with myself or our administrators should you have any questions.

Best Regards,

Davin St. Pierre, M.REM
