

## Demande de la CNER faisant l'objet d'un examen préalable #125150

### Jericho Site Stabilization Project- Amendment

Type de demande :

New

Type de projet:

Mesures correctives

Date de la demande :

6/5/2017 9:48:40 AM

Period of operation:

from 2017-07-01 to 2019-01-01

Autorisations proposées:

from 2017-07-01 to 2019-01-01

Promoteur du projet:

Michael Westlake  
INAC  
10th floor, 25 Eddy Street  
Gatineau QC K1A 0H4  
Canada  
Téléphone :: 819-639-7344, Télécopieur ::

## DÉTAILS

### Description non technique de la proposition de projet

Anglais:

The following are two proposed modifications for the Jericho Site Stabilization Project: 1) INAC on behalf of DFO proposes to remove the jetty which is in Carat Lake. The objective of this is to create approximately 1,207 m<sup>2</sup> fish habitat of Carat Lake through the development of an underwater rock shoal by excavating the existing causeway to at least 2 meter below normal summer water levels. All infrastructure associated with the water intake jetty will first be removed before excavations will commence. The reclamation of the causeway will be based on Tahera Diamond Corporation's design plan found in their Closure and Reclamation Plan Update Report (April 2007) which is attached for reference. In the report, the causeway is suggested to be "cut to 2m below the normal summer water level from the northern extent back to a water depth of 3.5m. From 3.5m water depth to 1m the causeway will taper up. The reclaimed causeway will intersect surface near the shoreline." This work will be conducted between July 1 to Aug 31 so as to not have any adverse impacts on the aquatic ecosystem. To isolate the jetty from the lake during the construction, silt booms and/or silt curtains will be used as sediment and erosion control measures. Additional sediment and erosion control measures that will be considered during in water workings are available on the DFO website at <http://www.dfo-mpo.gc.ca/pnpp/measures-mesures/measure-eng.html>. A qualified biologist or environmental inspector will be on site during all in-water restoration/construction works. 2) As a contingency measure to aid in the removal of the frozen core West Dam, explosives may be used. The details of this can be found in the attached document prepared by Outcome Consultants and Rowes Construction.

Français:

This project does not fall within the boundaries of a french speaking region. Should this be an issue INAC will get french translation of our project summary.

Inuktitut:
