

Jericho Site Stabilization Project- Amendment

Type de demande :	Amendment
Type de projet:	Mesures correctives
Date de la demande :	6/5/2017 9:48:40 AM
Period of operation:	from 2017-07-01 to 2019-01-01
Autorisations proposées:	from 2017-07-01 to 2019-01-01
Promoteur du projet:	Michael Westlake INAC 10th floor, 25 Eddy Street Gatineau QC K1A 0H4 Canada Téléphone :: 819-639-7344, Télécopieur ::

Description non technique de la proposition de projet

Anglais:	<p>The following are two proposed modifications for the Jericho Site Stabilization Project: 1) INAC on behalf of DFO proposes to remove the jetty which is in Carat Lake. The objective of this is to create approximately 1,207 m² fish habitat of Carat Lake through the development of an underwater rock shoal by excavating the existing causeway to at least 2 meter below normal summer water levels. All infrastructure associated with the water intake jetty will first be removed before excavations will commence. The reclamation of the causeway will be based on Tahera Diamond Corporation's design plan found in their Closure and Reclamation Plan Update Report (April 2007) which is attached for reference. In the report, the causeway is suggested to be "cut to 2m below the normal summer water level from the northern extent back to a water depth of 3.5m. From 3.5m water depth to 1m the causeway will taper up. The reclaimed causeway will intersect surface near the shoreline." This work will be conducted between July 1 to Aug 31 so as to not have any adverse impacts on the aquatic ecosystem. To isolate the jetty from the lake during the construction, silt booms and/or silt curtains will be used as sediment and erosion control measures. Additional sediment and erosion control measures that will be considered during in-water workings are available on the DFO website at http://www.dfompo.gc.ca/pnwppe/measures-mesures/measures-mesures-eng.html . A qualified biologist or environmental inspector will be on site during all in-water restoration/construction works . 2) As a contingency measure to aid in the removal of the frozen core West Dam, explosives may be used. The details of this can be found in the attached document prepared by Outcome Consultants and Rows Construction.</p>
Français:	This project does not fall within the boundaries of a french speaking region. Should this be an issue INAC will get french translation of our project summary.
Inuktitut:	Summary sent to translation
Inuinnaqtun:	see attached

Personnel on site: 500
Days on site: 180

Total Person days: 90000
Period of operation: from 2017-07-01 to 2017-09-30
Proposed term of operation: from 2017-07-01 to 2019-01-01

Activités

Activités

Emplacement	Type d'activité	Statut des terres	Historique du site	Site à valeur archéologique ou paléontologique	Proximité des collectivités les plus proches et de toute zone protégée
Jericho	Site Cleanup/Remediation	Crown	The West Dam was constructed for mining operations. As part of the remediation/site stabilization, the West Dam will be removed as described in the original application: "16UN052 Jericho Site Stabilization Project". This amendment includes the use of explosives as a back-up plan for the removal of the West Dam.	Site archaeological value same as described in original application: "16UN052 Jericho Site Stabilization Project"	260km southeast of Kugluktuk, NU
Carat Lake	Site Cleanup/Remediation	Crown	The jetty and pump house were installed at Carat Lake to draw freshwater for camp and minig operations. This amendment includes the removal of the pump house and jetty resulting in the creation of new fish habitat.	n/a	260km southeast of Kugluktuk
