- Government departments and agencies shall discuss with NIRB how best to implement the terms and conditions of NIRB project certificates and may provide NIRB with drafts of permits, certificates, licences and other government approvals.
  - Although not Government, the Regional Inuit Associations also have a strong role in implementing Project Certificate terms and conditions

- Project certificate workshop is the beginning of this dialogue
  - NIRB will be tracking the various licencing processes as they progress
  - NIRB will seek to coordinate and provide advice on implementation

- What is a Project Certificate? How is it different than the licences, permits and approvals required for the Project?

- Project Certificate is a "post-decision" quality control mechanism.
  - If it functions properly, it allows regulators and the NIRB to revisit the impact predictions and proposed mitigation measures from the EIS to answer whether, as the project is implemented did the assessment of impacts really "get it right" and if not, to trigger the feedback loop to revisit how to "get it right".
  - Although it is recognized that there may be some overlap between the terms and conditions in a Project Certificate and the authorizations issued pursuant to licences or permits required to carry out specific project activities, the focus of the Project Certificate terms and conditions can be more global than is generally the case with licences and permits.

- To achieve the goal of post-decision quality control, a Project Certificate needs to do the following:

  1. **provide the basis for inspection and surveillance** to ensure that the project is implemented as it was proposed, reflecting both the project scope as assessed in the Environmental Assessment and the specific mitigation measures proposed in the Environmental Impact Statement, provided in the commitments list and contained in the Project Certificate;

  2. **provide a mechanism for overall compliance and effects monitoring** to ensure impacts remain within predicted levels;

- To achieve the goal of post-decision quality control, a Project Certificate needs to do the following:

    3. **support adaptive management** by requiring that unanticipated effects or changes to the magnitude of predicted impacts be identified and that mitigation measures and regulatory instruments be adapted to address unanticipated effects or changes to predicted impacts; and,

    4. **adopt audit and process evaluation measures** to examine and transparently report on the accuracy of predictions, the success or failure of mitigation measures and overall levels of environmental and socio-economic performance of the project and effectiveness of the environmental assessment **and** regulatory processes in supporting environmental performance.

ᑐᕐᖃᐃᐅᖅᓯᐊᕐᓂᐊᖅᑐᑦ          ᐅᖅᑲᐅᕆᐅᓂᐊᖅᑐᓕ

- Bring together the Proponent and relevant regulatory authorities to facilitate discussions on the implementation of terms and conditions contained within the Project Certificate into their respective licences, certificates and permits.

- NIRB has sought confirmation from regulatory authorities regarding which terms and conditions will be  implemented by each department or agency
  - Focus on priority items requiring discussion and potential clarification in Project Certificate

# Workshop Objectives
# ᗑᑰᒃᓴᐃᐅᖁᔅᐊᒡᓂᐊᖅᑐᑦ   ᐅᖅᑲᐅᔅᐅᓂᐊᖅᑐᖕᓄ

- We will avoid spending workshop time discussing:
  - the merits of, or justification for, terms and conditions
  - reporting schedules or specific dates for implementation

- Identify specific points of clarification required for terms and conditions prior to finalization and issuance of the Project Certificate by the Board.
  - Are the parameters of any terms and conditions incorrect?
  - Is it clear who implements and when?
  - Is additional commentary or specific clarification required to allow for implementation?

# Strategic Questions - ⊲∧ᕐᒃᑯᑎᑊᕐᑕᓚ

Strategic questions to Proponents

- Identify the most significant barrier your company experiences in participating in the NIRB's monitoring process

- Identify the area(s) of the monitoring program that you think would benefit from greater direction or clarification from NIRB

- Identify those items in the NIRB's yearly monitoring process that create challenges for timing of activities (e.g. where the timing of submission doesn't match up with the availability of information)

- Are there any other improvements to the NIRB monitoring program that would you like to see in future?

## Strategic questions to Responsible Authorities

- Identify the most significant barrier your organization experiences in participating in the NIRB's monitoring process.

- Identify the most significant limitation to incorporating NIRB monitoring program terms and conditions into permits/authorizations, suggestions as to how these limitations can best be addressed by the NIRB.

- Are there mechanisms that could be used to more clearly establish communication between responsible authorities and the NIRB that would make it easier to collect and exchange the information from all the regulators with regulatory monitoring programs for a given Project?

- Is there something that the NIRB/responsible agencies can do to support this on-going participation in the NIRB's monitoring of the project?

- Recognizing that there are currently no Project Certificates governed by NuPPAA, does INAC have any thoughts on ensuring that the NIRB's future monitoring programs are prepared in a fashion that makes the programs enforceable as will be the case for all terms and conditions of a NIRB Project Certificate issued under NuPPAA?

# Strategic Questions - ᐊᐱᖅᑯᑎᒃᓴᓕᐊᕆᓂᕐᒧᑦ

## Discussion items on Cost vs Results

### Proponent Questions

- Considering the costs of monitoring, including items such as data collection, in-person meetings/working groups, and processing of data which aspects of your monitoring program would you consider to be: (a) the most costly; (b) most important; and (c) best "value" for the costs incurred?

### Responsible Authority Questions

- Considering the costs of monitoring, including items such as data collection, in-person meetings/working groups, and processing of data which aspects of a Proponent's monitoring program would you expect to be: (a) the most costly; (b) most important; and (c) best "value" for the costs incurred?

- On which aspects of the monitoring program does each agency consider that they receive the least/most information from current monitoring processes, and which aspects of monitoring do they find most useful?

- In future refinements of monitoring programs, what issues would they like to see monitored more closely to inform their agency and other ongoing EA processes?

# Strategic Questions - ⊲∧ᕉᑯᑎᑊᒃᔅᶜᐸᐧᐦᐧᶜ

Considerations for Regulatory Authorities on opportunities to
coordinate

- Given direction that the NIRB, NPC, and NWB coordinate to reduce duplication, what are some opportunities that Parties would request that the NIRB consider in planning for coordination?  What are some challenges that parties have found with coordination processes undertaken to date especially with regards to project monitoring?
- Often the reporting timelines specified in NIRB's monitoring program are intended to line up with the timelines for other regulatory reporting; is this truly a good fit or are there better ways to coordinate monitoring activities, align comment periods, etc.
