AFFILIATION: University of British Columbia

TITLE: Origin of Coloured Spinel Occurrences in Southern Baffin Island, Nunavut:
Implications for local gemstone potential

OBJECTIVES OF RESEARCH:

Our goal is to expand on ongoing research by completing additional, more detailed field work at spinel and sapphire occurrences on the True North Gems property. Rock samples of interest to our research will be picked up (when loose), or extracted with hand tools. Small power tools may be used to extract small amounts of rock (< 1 m³) where hand tools are ineffective. The quantity of samples taken from each site, expected to range from 1 kg to 20 kg, depends on the complexity of the rock.

TERMS & CONDITIONS:

The holder of the licence will be bound by the terms and conditions stipulated in Nunavut Impact Review Board Screening Decision Report # 16YNO16

DATA COLLECTION IN NU:

DATES: July 01, 2018-August 31, 2018

LOCATION: Kimmirut & Surrounding Area

Scientific Research License 01 010 18R-M expires on December 31, 2018

Issued at Iqaluit, NU on February 05, 2018
