

Note Regarding Flight Plans for Scientific Research Project of Anthony Zerafa

Transportation to the McGill Arctic Research Station (MARS) is supported by Twin Otter aircraft of Kenn Borek Air Ltd. operating out of the Polar Continental Shelf Program (PCSP) in Resolute. Logistical support for my project is included in the logistics request form submitted to the PCSP by Dr. Wayne Pollard (Director, MARS) under "MARS baseline studies". As the PCSP has not yet released a decision on this logistics request application, I cannot yet provide detailed flight plans to the review board. The approximate dates for the flights are July 1, 2018 (PCSP to MARS) and September 1, 2018 (MARS to PCSP).
