

Type de demande :	New
Type de projet:	Scientific Research
Date de la demande :	2/10/2019 5:47:16 PM
Period of operation:	from 0001-01-01 to 0001-01-01
Autorisations proposées:	from 0001-01-01 to 0001-01-01
Promoteur du projet:	Gifford Miller University of Colorado INSTAAR, 4001 Discovery Drive Boulder CO 80309-0450 USA Téléphone :: 303.492.6962, Télécopieur :: 303.492.6388

## DÉTAILS

## Description non technique de la proposition de projet

Anglais: NIRB “Ancient DNA in Lake Sediment” Project Proposal File Number 16YN010Who: Researchers from the University of Colorado, Boulder, the University of Buffalo (New York), and the University of Alaska, Fairbanks. Teams will consist of 4 scientists along with local Inuit guides and/or polar bear guards. What: We propose two short field programs. Lake CF8: The science team will travel to the lake site by snowmobile (May), ATV (July). We will camp at the lake in tents that will be taken with us when the work is completed. The team will be 4 scientists and an Inuit guide/polar bear guard, plus Inuit teams to transport the team to the lake and back to Clyde when work is complete. We will obtain sediment cores from the bottom of the lake, During the summer season ecologists will map the vegetation around the lake. We will not leave any permanent facilities at the sites, and expect our camping activities to have no long-term impact on the environment. Lake AFR: The science team will travel to the lake site by helicopter from Pond Inlet (August). We will camp at the lake in tents for 5 days. We will obtain sediment cores from the bottom of the lake, and map the vegetation around the lake. We will not leave any permanent facilities, and expect our camping activities to have no long-term impact on the environment. Why: We will reconstruct how climate and vegetation have changed in the past on Baffin Island by analyzing the sediment record preserved at the bottom of these lakes. The Arctic is changing rapidly and we want to understand how it has changed in the past to learn how much change we might expect in the future. We hope to learn what conditions were like during past warm times to help Nunavut anticipate the future. Where: Lake CF8 is a relatively isolated lake near the town of Clyde. AFR lake is a very isolated site at 800 meters above sea level, ~35 km from Pond Inlet. We will be working on the lake itself and in the immediate surrounding area with no expected impacts on the environment. There are no known archaeological sites around/near either of the lakes we propose to work on.

Français: Since neither Clyde River nor Pond Inlet are French-speaking towns, I assume we do not need a French translation

[illegible]

## Personnel

Personnel on site: 4

Days on site: 21

Total Person days: 84

Operations Phase: from 2019-05-07 to 2019-08-08

## Activités

Emplacement	Type d'activité	Statut des terres	Historique du site	Site à valeur archéologique ou paléontologique	Proximité des collectivités les plus proches et de toute zone protégée
AFR Lake - Research and temporary camp location. No known archaeological sites in the area.	Camp	Crown	No one has visited this lake that we know of. It was covered by ice until about 10 years ago	None known	35 km from Pond Inlet
CF8 Lake - Research and temporary camp location. Visited in Aug. 2017. No known archaeological sites in the area.	Camp	Inuit Owned Surface Lands	We have visited this site previously in August of 2017 to collect a preliminary lake sediment sample.	None known	16 km from Clyde River

### Engagement de la collectivité et avantages pour la région

Collectivité	Nom	Organisme	Date de la prise de contact
Pond Inlet	Charlie Inuarak, Mayor	Town Council	2019-02-11
Clyde River	Joshua Akavak	Iisaqsivik	2018-11-14

# Autorisations

Indiquez les zones dans lesquelles le projet est situé:

North Baffin

## Autorisations

Organisme de régulation	Description des autorisations	État actuel	Date de l'émission/de la demande	Date d'échéance
Institut de recherche du Nunavut	Request permit for scientific research	Applied, Decision Pending		

## Project transportation types

Transportation Type	Utilisation proposée	Length of Use
Air	PCSP Helicopter, Ken Borek Twin Otter	
Land	Walking, snowmobile, ATV	

## Project accomodation types

Temporary Camp

## Utilisation de matériel

Équipement à utiliser (y compris les perceuses, les pompes, les aéronefs, les véhicules, etc.)

Type d'équipement	Quantité	Taille – Dimensions	Utilisation proposée
Lake sediment core system	1	1x3 m	This is a hand operated system that pushes a plastic pipe into the mud at the bottom of a lake to recover a continuous sample of lake mud about 7 cm in diameter. Most lakes have 1 to 2 m of mud in them,

Décrivez l'utilisation du carburant et des marchandises dangereuses

Décrivez l'utilisation de carburant :	Type de carburant	Nombre de conteneurs	Capacité du conteneur	Quantité totale	Unités	Utilisation proposée
None	hazardous	0	0	0	Gallons	none
Gasoline	fuel	10	1	10	Liters	Stove Fuel

Consommation d'eau

Quantité quotidienne (m3)	Méthodes de récupération de l'eau proposées	Emplacement de récupération de l'eau proposé
0	From the lake in buckets	AFR1 Lake, CF8 Lake

# Déchets

## Gestion des déchets

Activités du projet	Type des déchets	Quantité prévue	Méthode d'élimination	Procédures de traitement supplémentaires
Scientific/International Polar Year Research	Eaux usées (matières de vidange)	4 persons for 21 days (2 different locations)	burial; biodegradable waste paper	Sewage will be buried at least 100 m from nearest water source

## Répercussions environnementales :

We will camp in a tent and cook food on a coleman stove. All human waste will be more than 100m from the nearest water. We expect no measurable environmental impact.

**SECTION G1: Well Authorization**

**SECTION G2: Onland Exploration**

**SECTION G3: Offshore Exploration**

**SECTION G4: Rig**

**SECTION H1: Vessel Use**

**SECTION H2: Disposal At Sea**

**SECTION I1: Municipal Development**

**Description de l'environnement existant : Environnement physique**

AFR is a small lake (0.7 x 0.4 km) close to ice caps. CF8 is also a small lake (0.3 x 0.2 km) located on Clyde Foreland.

**Description de l'environnement existant : Environnement biologique**

Polar desert

**Description de l'environnement existant : Environnement socio-économique**

None known

**Miscellaneous Project Information**

All our gear and all camp waste will be taken out by helicopter or snowmobile

**Identification des répercussions et mesures d'atténuation proposées**

No significant impacts

**Répercussions cumulatives**

No cumulative effects expected

Impacts

Identification des répercussions environnementales
