

NIRB Application for Screening #125448

Naujaat Community Access Trail

Application Type: New

Project Type: All-Weather Road / Access Trail

Application Date: 2/12/2019 1:57:58 PM

Period of operation: from 0001-01-01 to 0001-01-01

Proposed Authorization: from 0001-01-01 to 0001-01-01

Project Proponent: Hamlet of Naujaat-Mayor
Hamlet - Naujaat
Box 10
Naujaat Nunavut X0C 0H0
Canada
Phone Number:: 867-462-9952, Fax Number:: 867-462-4411

DETAILS

Non-technical project proposal description

English: The Hamlet of Naujaat is proposing to build an all-weather community access trail within municipal boundaries. The proposed trail is about 15 km long and will start on the existing road about 4 km north of Naujaat just before the community water filling station. The trail will follow the existing ATV trail to the southeast to where it crosses a stream about 200 m north of where the stream flows into the north end of Naujaat Inlet. From there the trail will mostly follow the ATV trail to the northeast, ending at a large gravel source about 1.8 km inside Naujaat's municipal boundary. Community near-term benefits of the access trail include: (1) job opportunities and training (the trail will be built by a local workforce where ever possible); and (2) safe and easy access to potential sand and gravel that could be used by the Hamlet, new potential carving stone sources, and areas popular for traditional land use. In the longer term, this trail could provide Naujaat with continuing economic benefits and jobs from tourism, traditional land use related education, and industry related opportunities like sources of aggregate, carving stone and diamonds. The trail will pass close to North Arrow Minerals' Q1-4 diamond deposit. The trail could be used by North Arrow to sample the kimberlite rock to test if it could be become a diamond mine. In the past, North Arrow used helicopters to do this. Using the access trail, North Arrow could use trucks instead of helicopters, providing more local employment of truck drivers and samplers and increased use of local businesses, like the Naujaat Coop. North Arrow could pay the Hamlet for using the trail. The Hamlet has teamed with three companies to help with engineering, environmental studies, permitting, early-stage financing and potential construction: Onsite Engineering Ltd (routing, design and potential construction of the trail), Ecologic Consultants Ltd. (permitting and environmental studies) and North Arrow Minerals (funding for Onsite and Ecologic's pre-construction work on the trail). Studies have been completed on about 11km of the proposed 15km trail. The last 4 km are scheduled to be studied in May-June 2019. Measurements of all water crossings will also be taken at that time. It will take about two months of construction time to build the trail. The proposed start date is September 2019 with completion planned for 2020. All construction activities will be staged in Naujaat. Building of access trail would provide two main environmental benefits: (1) less damage of tundra and wetlands: the existing ATV trail is very wide in some wet areas, as drivers try to find the driest possible routes. This disturbs more tundra than necessary; and (2) proper bridges and culverts will make stream crossings safer and will reduce impacts on the water quality, fish, and vegetation. Construction of this community access trail will create near-term local employment and will benefit Naujaat businesses. Construction related jobs offer potential experience and training in areas such as surveying, equipment operation, environmental monitoring, and archaeological monitoring. If the trail is built the community will gain access to sources of gravel and carving stone and will have safer and easier access to the land for traditional activities. There would be additional employment, training and business opportunities related to North Arrow's work on the Q1-4 diamond deposit, tourism, and education.

French: Le hameau de Naujaat propose de construire un sentier d'accès communautaire tout temps dans les limites des municipalités. Le sentier proposé a une longueur d'environ 15 km et débutera sur la route existante à environ 4 km au nord de Naujaat juste avant la station de remplissage en eau de la communauté. Le sentier suivra le sentier de VTT existant au sud-est jusqu'à un ruisseau situé à environ 200 m au nord de l'endroit où il se jette dans l'extrémité nord de l'inlet Naujaat. À partir de là, le sentier suivra principalement le sentier de VTT au nord-est, aboutissant à une grande source de gravier à environ 1,8 km à l'intérieur des limites municipales de Naujaat. Les avantages à court terme du sentier d'accès pour la communauté comprennent: (1) être construit par une main-d'œuvre locale dans la mesure du possible); et (2) un accès sûr et facile au sable et au gravier potentiels qui pourraient être utilisés par le hameau, à de nouvelles sources potentielles de pierre à sculpter et aux zones populaires pour l'utilisation traditionnelle des terres. À plus long terme, ce sentier pourrait procurer à Naujaat des avantages économiques permanents et des emplois liés au tourisme, à l'éducation traditionnelle sur l'utilisation des terres et à des opportunités liées à l'industrie, telles que des sources d'agrégats, de pierre à sculpter et de diamants. Le sentier passera près du gisement diamantifère Q1-4 de North Arrow Minerals. North Arrow pourrait utiliser le sentier pour échantillonner la roche kimberlitique afin de déterminer si elle pouvait devenir une mine de diamants. North Arrow utilisait autrefois des hélicoptères. En utilisant le sentier d'accès, North Arrow pourrait utiliser des camions plutôt que des hélicoptères, ce qui créerait plus d'emplois locaux pour les chauffeurs de camion et les échantilleurs, ainsi qu'un recours accru aux entreprises locales, comme la Coop Naujaat. North Arrow pourrait payer le hameau pour utiliser le sentier. Le hameau a collaboré avec trois entreprises pour les aider à l'ingénierie, aux études environnementales, aux autorisations, au financement en début de croissance et à la construction potentielle: Onsite Engineering Ltd (tracé, conception et construction potentielle du sentier), Ecologic Consultants Ltd. (autorisations et études environnementales). et North Arrow Minerals (financement des travaux de pré-construction sur le sentier effectués par Onsite et Ecologic). Des études ont été achevées sur environ 11 km de la piste proposée de 15 km. Les 4 derniers kilomètres devraient être étudiés en mai-juin 2019. Les mesures de tous les traversées de cours d'eau seront également prises à ce moment-là. La construction du sentier prendra environ deux mois. La date de début proposée est septembre 2019 et son achèvement est prévu pour 2020. Toutes les activités de construction auront lieu à Naujaat. La construction du sentier d'accès procurerait deux avantages environnementaux majeurs: (1) moins de

dommages causés par la toundra et les zones humides: le sentier de VTT existant est très large dans certaines zones humides, les conducteurs essayant de trouver les itinéraires les plus secs possibles. Cela perturbe plus de toundra que nécessaire; et (2) des ponts et des ponceaux appropriés rendront les traversées de cours d'eau plus sûres et réduiront les impacts sur la qualité de l'eau, les poissons et la végétation. La construction de ce sentier d'accès communautaire créera des emplois locaux à court terme et profitera aux entreprises de Naujaat. Les emplois liés à la construction offrent une expérience et une formation potentielles dans des domaines tels que l'arpentage, le fonctionnement de l'équipement, la surveillance de l'environnement et la surveillance archéologique. Si le sentier est construit, la communauté aura accès à des sources de gravier et de pierre à sculpter et aura un accès plus sûr et plus facile à la terre pour les activités traditionnelles. Le travail de North Arrow sur le gisement de diamants Q1-4, le tourisme et l'éducation offrirait d'autres possibilités d'emploi, de formation et d'affaires.

Personnel

Personnel on site: 20

Days on site: 90

Total Person days: 1800

Operations Phase: from 2019-08-20 to 2019-10-28

Operations Phase: from 2019-10-28 to 2025-08-19

Post-Closure Phase: from to

Activities

Location	Activity Type	Land Status	Site history	Site archaeological or paleontological value	Proximity to the nearest communities and any protected areas
Naujaat Community Access Trail	Baseline data	Municipal	A number of archaeological sites have been reported along the alignment. A map has been added under Project Supporting Documentation.	Unknown but will be evaluated as part of project development.	0-14km from Naujaat

Community Involvement & Regional Benefits

Community	Name	Organization	Date Contacted
Naujaat	Solomon Malliki	Mayor and Hamlet council	2019-01-03

Authorizations

Indicate the areas in which the project is located:

Kivalliq

Authorizations

Regulatory Authority	Authorization Description	Current Status	Date Issued / Applied	Expiry Date
Nunavut Water Board	Multiple watercourse crossings will require NWB review and approval	Not Yet Applied		
Government of Nunavut, Community and Government Services	Randy Mercer (Regional Lands Administrator) has informed municipality (November 1, 2018) that the project will not require a Land Use Permit.	Active		

Project transportation types

Transportation Type	Proposed Use	Length of Use
Air	air travel to community; potential helicopter use during environmental and engineering pre-construction activities	
Water	depending on final design and local machinery availability, equipment may requiring barge delivery to community	
Land	all construction activities will be terrestrial based	

Project accommodation types

Community

Material Use

Equipment to be used (including drills, pumps, aircraft, vehicles, etc)

Equipment Type	Quantity	Size - Dimensions	Proposed Use
gravel trucks	4	TBD	Four gravel trucks will be required to complete trail construction within the seasonal window.
bulldozer	1	TBD	One bulldozer will be required by the lead construction crew for establishing initial alignment and developing grade.
excavators	3	TBD	Three excavators will be required to complete trail construction within the seasonal window: one for lead crew (alignment and ditches), one for the crossing crew (culvert installation) and one for the surfacing crew (material movement).
Grader	1	TBD	One grader will be required for the surfacing crew.
Crusher	1	TBD	One crusher will be required by the surfacing crew.
roller/compactor	1	TBD	One roller/compactor will be required by the surfacing crew.
water truck	1	TBD	One water truck will be required by the surfacing crew.

Detail Fuel and Hazardous Material Use

Detail fuel material use:	Fuel Type	Number of containers	Container Capacity	Total Amount	Units	Proposed Use
Diesel	fuel	4	20000	80000	Liters	Fuel for construction equipment. Bulk fuel storage will occur at Naujaat, with work trucks delivering fuel to construction equipment as needed. Total estimate fuel usage over the construction period is 167,400 L. The capacity of long-term storage containers has not yet been decided.
Oil/grease	hazardous	4	100	400	Liters	Proposed equipment will

				require oil and grease for lubrication. All oil and grease will be stored at Naujaat and brought to site as needed. Total number of containers and volumns have not been determined.

Water Consumption

Daily amount (m3)	Proposed water retrieval methods	Proposed water retrieval location
0		

Waste

Waste Management

Project Activity	Type of Waste	Projected Amount Generated	Method of Disposal	Additional treatment procedures
Other	Combustible wastes	unknown at this time	Construction projects generate combustible wastes in the form of spill pads, rags, use oil filters. Naujaat will endeavour to work with contractors to ensure safe disposal	Secure on-site storage until end of work day, at which point material will be stored until disposal.
Other	Sewage (human waste)	unknown at this time	Portable toilets will be used at the job site. Construction staff will be staying in Naujaat.	None required

Environmental Impacts:

An assessment of potential project impacts has been provided in an attached document: Naujaat Environmental Considerations.

Description of Existing Environment: Physical Environment

See attached document: Naujaat Environmental Considerations

Description of Existing Environment: Biological Environment

See attached document: Naujaat Environmental Considerations

Description of Existing Environment: Socio-economic Environment

Our expectation is that the construction of the trail will result in important employment and training opportunities for our community members, and substantial procurement opportunities for our local businesses. The project-related employment will lead to capacity development in highly transferrable skills (e.g., surveying, equipment operation, environmental monitoring, archaeological monitoring) and will open up additional revenue streams (e.g., access to gravel and carving stone, guiding and ecotourism opportunities).

Miscellaneous Project Information

Identification of Impacts and Proposed Mitigation Measures

See attached document: Naujaat Environmental Considerations

Cumulative Effects

We are not aware of any other project planned in the vicinity of the proposed project; therefore, cumulative effects are not anticipated.

Impacts

Identification of Environmental Impacts

PHYSICAL		SOCIO-ECONOMIC	
Designated environmental areas			Archaeological and cultural historic sites
Ground stability		Birds, including habitat and migration patterns	Employment
Permafrost		Aquatic species, incl. habitat and migration/spawning	Community wellness
Hydrology / Limnology		Wildlife protected areas	Human health
Water quality			Community infrastructure
Climate conditions			
Eskers and other unique or fragile landscapes			
Surface and bedrock geology			
Sediment and soil quality			
Tidal processes and bathymetry			
Air quality			
Noise levels			
BIOLOGICAL		Vegetation
