RE: NON Technical project proposal description (Section 4)-Iqaluit quarry sites

The Iqaluit quarry deposits are proposed sites currently being explored by the Government of Nunavut and the City of Iqaluit that will be used to extract aggregate (gravel, sand etc...) to meet the construction demands of the community. These sites are located north and north-west of Iqaluit. The equipment that will be working on site if approved will be dump trucks to haul aggregate, crushers to break up material and loaders to extract aggregate.

These quarries will remain active until all its aggregate are depleted. The City will use the proceeds from Quarry permit fees to remediate the area to a point in which the area's vegetation can grow back. These sites contain gravel, sand and silt suitable for construction purposes and road maintenance in reasonable quantities which makes these sites desirable locations.

The sites are in reasonable proximity to Iqaluit which results in easier access for the residents of the community to retrieve gravel and also minimizes costs to the contractors and the City due to the fact that the dump trucks do not need to travel long distances. There are existing access roads to both quarry site 1 and quarry site 2. The Government did explore other quarry sites but we felt this was the best option due to the reasonable proximity to Iqaluit, its gravel reserves and the quality of the gravel.

Sincerely,

Danny Zita
