TITLE: Stream Occupancy of Young-of-Year Arctic Grayling (*Thymallus arcticus*) and the Associated Impact from the Wastewater Treatment Facility in Baker Lake

OBJECTIVES OF RESEARCH:

Stream occupancy of young-of-year arctic grayling *Thymallus arcticus* and the associated impact from the wastewater treatment facility in Baker Lake, Nunavut. Currently, the Hamlet of Baker Lake uses a passive wastewater treatment system, where wastewater is released through a series of tundra ponds/lakes and into Baker Lake. This type of system, which is common in Northern communities, takes advantage of natural biological processes and is only capable of providing primary treatment. As a result, relatively high levels of nutrients are released into the system, which can ultimately affect fish and fish habitat. Based on significant positive feedback from the community, an upgraded wastewater treatment facility is anticipated to be constructed in Baker Lake in 2020.

TERMS & CONDITIONS:

The holder of the licence will be bound by the terms and conditions of the Nunavut Impact Review Board Screening Decision Report and the Department of Culture & Heritage archaeological sites terms and conditions. These terms and conditions will form part of this licence.

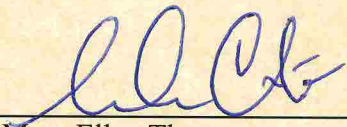

DATA COLLECTION IN NU:

DATES: June 15, 2019-September 30, 2019

LOCATION: Baker Lake

Scientific Research License 03 013 19R-M expires on December 31, 2019

Issued at Iqaluit, NU on May 15, 2019
