### Unnamed Lake Water Supply Studies

**Type de demande :** New

**Type de projet:** Eau

**Date de la demande :** 9/9/2019 3:50:52 PM

**Period of operation:** from 0001-01-01 to 0001-01-01

**Autorisations proposées:** from 0001-01-01 to 0001-01-01

**Promoteur du projet:** City of Iqaluit CAO  
City of Iqaluit  
Building 901, Box 460

## DÉTAILS

## **Description non technique de la proposition de projet**

Anglais: The City of Iqaluit has been experiencing water shortages in its drinking water reservoir, Lake Geraldine. As part of planning for the future growth of the City, the City is studying potential new sources of drinking water to supplement the Lake Geraldine reservoir. In summer and fall of 2019, the City plans to continue with studies of the “Unnamed Lake” approximately 3 kilometres north of the Road to Nowhere. These studies will help to answer whether this lake could reliably supply enough water every year to permanently add to the City’s drinking water supply. Currently, very little is known about this lake, its depth, how much water flows in and out and the quality of the water. To help to answer these questions, several studies are proposed in 2019 and 2020: 1)Lake water level measurements throughout the year will be collected using a level-logger – an instrument that records water pressure. A two-person field team will set out two loggers in September 2019 and will retrieve the loggers after a full year. 2)Lake outflow measurements will be collected when outflow creek(s) are flowing 3)A bathymetric survey will map the lake bottom using a sensor similar to a fish finder. An inflatable zodiac with motor will be used to survey the entire lake during two days in summer of 2019. The boat will be transported there using ATV or helicopter. 4)Water samples will be collected from the surface and from various depths to analyze for water quality. The City will award contracts to complete the work by early July 2019, and work will begin in July 2019. A wildlife monitor will be retained for all field work. Unnamed Lake will be accessed from Iqaluit by ATV or by helicopter for a maximum of two days during up to four separate field programs in 2019 and 2020. Surveys will be conducted on foot and using an inflatable boat. Impacts to soil, vegetation, wildlife, fish and water are expected to be negligible and of short duration. The results of the water studies will be used to evaluate the suitability of Unnamed Lake as a water source, and to plan for potential future work.

## Autorisations

Indiquez les zones dans lesquelles le projet est situé:

South Baffin

### Autorisations

Organisme de régulation	Description des autorisations	État actuel	Date de l'émission/de la demande	Date d'échéance
Office des eaux du Nunavut	3AM-IQA1626 Application forAmendment	Active		
Institut de recherche du Nunavut	Nunavut Research License	Applied, Decision Pending		
Pêches et Océans Canada	Fish and Fish Habitat Protection Program - Fisheries and Oceans Canada Approval	Active		

### Project transportation types

Transportation Type	Utilisation proposée	Length of Use
Air	Transport of Equipment to/from work site if required.	
Water	Bathymetric Survey	
Land	Transport of personnel and equipment to and from Site	

### Project accomodation types

Collectivité

## Utilisation de matériel

Équipement à utiliser (y compris les perceuses, les pompes, les aéronefs, les véhicules, etc.)

Type d'équipement	Quantité	Taille – Dimensions	Utilisation proposée
ATV	2	1-2 person capacity	transport of personnel and equipment to/from site
helicopter	1	206L or similar	transport of equipment to/from work site if required
boat	1	16 ft	bathymetric survey

Décrivez l'utilisation du carburant et des marchandises dangereuses

Décrivez l'utilisation de carburant :	Type de carburant	Nombre de conteneurs	Capacité du conteneur	Quantité totale	Unités	Utilisation proposée
Gasoline	fuel	2	25	50	Liters	Refuel of Boat Engine
Batteries	hazardous	2	10	20	Kg	Survey Equipment

Consommation d'eau

Quantité quotidienne (m3)	Méthodes de récupération de l'eau proposées	Emplacement de récupération de l'eau proposé
0		

## Déchets

### Gestion des déchets

Activités du projet	Type des déchets	Quantité prévue	Méthode d'élimination	Procédures de traitement supplémentaires
Information is not available				

### Répercussions environnementales :

The research project has the potential to interact with Water Quality and Wildlife. Impacts to the environment from potential spills of fuel while refueling the boat will be minimized by applying spill contingency measures. This includes: transporting fuel in approved containers; minimizing fuel on site; not refueling on water; and carrying spill kits. Impacts to wildlife may result from disturbance of nests or dens. Project activities will minimize overland travel. An onshore staging area to be used during 2 days of project work will be established away from active nests or dens. A wildlife monitor will be retained to observe wildlife activity. Impacts to soil and vegetation will be minimized by avoiding wet areas during ATV travel.
