

May 5, 2020

The hamlets should correspond or let each other know what research is being done in their communities and report to each other . It's great that we are able to send letters and answer questions; should we have any concerns.

We are happy with research that is happening including wildlife, vegetation, and sea mammals.

I am happy to answer to any concerns that we may be having in our community. They are straight forward and I thank the NIRB for that.
