Qablunaatitut: The Early Revenue Phase Proposal associated with the approved Mary River Iron Mine was assessed by the NIRB from 2013 - 2014. It was approved to proceed on May 28, 2014 subject to the terms and conditions of Project Certificate No. 005 Amendment 1. This project dashboard contains the original assessment information as well as monitoring information through to the approval of an amended Project Certificate associated with the Production Increase Proposal in 2018. Modified from the 2013 Project Description: The Early Revenue Phase Proposal is the proposed first development phase for the Mary River Project. It will include development of a nominal 3.5 million tonne per annum (Mt/a) road haulage operation from Mary River to a small port facility at Milne Inlet for shipping of iron ore during the open water season. The operation will be very similar in concept to the bulk sample program undertaken by Baffinland in 2008. The Early Revenue Phase will produce a nominal 3.5 Mt/a of iron ore mined from Deposit 1 and transported from the Mine Site to Milne Port over the Milne Inlet Tote Road on a year round basis. The ore will be stored in stockpiles at Milne Port ready for loading onto ships and transport to customers during the open water season only. Fuel to support the trucking operation will continue to be delivered to a tank farm facility at Milne Port each year. Ore handling operations consist of an ore stockpile, conveyors to transfer ore to the ore dock, and ship loading facilities at the ore dock. Shipping of supplies to Milne Port will occur during the approximately 90-day ice-free period of approximately July 15 to October 15. During the operation phase, the port will continue to be used to ship ore as part of the early revenue operation, as well as for resupply. Ships will follow a nominal shipping route from Milne Port, through Milne Inlet and into Eclipse Sound within the Nunavut Settlement Area and will continue to customer ports, primarily in Rotterdam and other European Ports.

Uiviititut: Proposition de phase de revenu initial (1ère NOUVEAUTÉ) La CNER a évalué la Phase de revenu initial inhérente à l'exploitation de la mine de fer de la rivière Mary de 2013 à 2014; sa mise en œuvre a été approuvée le 28 mai 2014, sous réserve des modalités et conditions de la modification 1 du certificat de projet no.005. Ce tableau de nord regroupe les données de l'évaluation initiale ainsi que les informations relatives à la surveillance effectuée jusqu'à l'approbation du certificat de projet modifié en 2018 par l'ajout de la proposition d'augmentation de la production. Modification par rapport à la description du projet de 2013: La Phase de revenu initial est la première phase d'exploitation proposée pour le projet de la rivière Mary. Elle comprend la production d'une quantité nominale de 3.5 millions de tonnes par an (Mt/a) de minerai, transportées sur une route aménagée du site de la rivière Mary jusqu'aux petites installations portuaires de l'inlet Milne aux fins d'expédition maritime pendant la saison des eaux libres. Le concept de cette exploitation sera très semblable aux travaux d'échantillonnage en vrac réalisés par Baffinland en 2008. Dans le cadre de la Phase de revenu initial, une quantité nominale de minerai de fer de 3,5 Mt/an sera extraite du gisement no.1 et transportée à l'année longue par le chemin Tote reliant le site de la mine au port Milne. Le minerai sera entreposé en piles de stockage, prêt à être embarqué dans des navires et expédié aux clients par voie maritime pendant la saison des eaux libres. Le carburant requis pour le camionnage continuera à être livré chaque année à un parc de stockage du port Milne. Le traitement du minerai s'effectuera en trois séquences : le dépôt de minerai, le transfert du minerai par convoyeurs jusqu'au quai minéralier et le chargement des bateaux avec de l'équipement approprié. Le transport maritime des approvisionnements jusqu'au Port Milne sera effectué pendant la période de 90 jours exempte de glace, soit du 15 juillet au 15 octobre environ. Pendant la période d'exploitation, et au titre de la Phase de revenu initial, le port continuera à être utilisé pour les navires ainsi que pour le réapprovisionnement. Les navires suivront la voie maritime nominale à partir du port Milne, puis traverseront le bras de mer Milne et le détroit d'Éclipse de la région du Nunavut pour rejoindre les ports européens des clients, notamment Rotterdam.
