

11 January 2021

Kim Poole, Aurora Wildlife Research, on behalf of the Kivalliq Inuit Association

KivIA Terrestrial – proposed Terms and Conditions

KivIA-TC-16 Monitoring of effects of AWAR and waterlines on caribou movement

a) Agnico Eagle will revise the Terrestrial Environment Management and Monitoring Plan (TEMMP) for the Meliadine Project to include additional details on monitoring and analysis of caribou movement through the Meliadine project and AWAR/waterlines corridor, including fine-scale GPS collar tracking, camera study, KHTO road monitoring, and site visits by Elders, and show how this monitoring will feed into adaptive management of caribou movement through the project. The next version of the TEMMP will be included in the 2020 Annual Report Submission.

b) Regarding establishing a Terrestrial Advisory Group for the Meliadine Project, the recommended T&C from GN is supported (GN-TRC-06; 1 to 2).

KivIA-TC-17 Optimal side slope of the berms on the waterline covering

Agnico Eagle will provide details on the proposed side slope of the covered waterlines 3 months prior to construction, and will provide details on the actual side slopes (“as built”) within 6 months of completion of waterline construction.
