Small Craft Harbour Location	Harbour infrastructure	Crown	The harbour area has been used for fishing, harvesting, transportation of goods for at least 60 years since the community of Clyde River was established in it's current location.	An archaeological Impact Assessment (AIA) was completed by Lifeways of Canada Limited in 2019. The AIA results state that there are no known archaeological or paleontological sites in the project area.	The closest community is Clyde River, which is located within 100 m of the Project area. The closest protected area is Isabella Bay, which is approximately 80 km southwest of the Project area.
Quarry Location	Quarry/Borrow pit	Municipal	There has been a quarry in the area for at least 16 years.	An archaeological Impact Assessment (AIA) was completed by Lifeways of Canada Limited in 2019. The AIA results state that there are no known archaeological or paleontological sites in the project area.	The closest community is Clyde River, which is approximately 1.5 km northwest of the quarry. The closest protected area is Isabella Bay, which is approximately 80 km southwest of the Project area.
Disposal at Sea Location	Marine Based Activities	Crown	Marine environment	No known archaeological resources.	The closest community is Clyde River, which is located within approximately 700 m of the disposal area. The closest protected area is Isabella Bay, which is approximately 80 km southwest of the Project area.
Haul Route	Access Road	Municipal	The road from the harbour location to the Clyde River airport has been in place since at least 1985. The haul route between the quarry and the airport was established in 2019.	No known archaeological resources.	The closest community is Clyde River, which the haul route goes through. The closest protected area is Isabella Bay, which is approximately 80 km southwest of the Project area.

North Baffin

## Angiuttauvaktunik

Munariniqmut Ayuittiaqtuq	Angirutinga Qanurittuq	Tadja Qanurittaakhaanik	Ublua Tuniyauyuq/Uuktuqtuq	Umikvikhaa Ublua
Environment and Climate Change Canada	Disposal at Sea (DAS) is not considered likely, however if required a DAS application will be submitted to Environment and Climate Change Canada (ECCC). A sample analysis plan (SAP) was submitted to and approved by ECCC for sediment analysis in the dredge footprint of the SCH. ECCC has been engaged from an early stage in project planning as the proponent (DFO-SCH) is a federal agency.	Not Yet Applied		
Tingmiliqiyiitkut Kaanatami	A Notice of Works (NoW) is expected to be required from Transport Canada due to the potential for interferences to navigation during construction, and to confirm navigational markers required during operations of the SCH. TC has been engaged from an early stage in project planning as the proponent (DFO-SCH) is a federal agency. Maintaining access for harvesters to the marine environment during construction has been a key part of consultation and measures will be in place during construction to confirm there are no access restrictions for hunters.	Not Yet Applied		
Anguhikiyiit	A permit from	Not Yet Applied		

Kanatami	NRCan is expected to be required for the transportation and storage of explosives (required for blasting). NRCan compliance requirements will be the responsibility of the contractor and will be applied for after contract award and before the start of construction.			
Nunavut Imaligiyyit Katimayit	A Type B license may be required if the haul road upgrades requires culverts to be installed or if stream alteration is required for the Project. The haul route will cross a river close to Clyde River. Any temporary structures used to cross the river may require review and licensing from NWB. NWB compliance requirements will be the responsibility of the contractor and will be applied for after contract award and before the start of construction.	Not Yet Applied		
Iqalukhiurniqmut Tariuqmilu Kaanata	A Fisheries Act Authorization (FAA) will be required due to the permanent loss of seabed habitat due to the construction of the Small Craft Harbour. Any impacts resulting from a haul road river crossing structure will also be recognized by DFO-Fish and Fish Habitat Protection Program (FFHPP). DFO-FFHPP has been engaged from an early stage in project planning as the proponent (DFO-SCH) is a federal agency.	Not Yet Applied		

#### Project transportation types

Transportation	Qanuq Atuqtauniarmangaa	Length of Use
----------------	-------------------------	---------------

Type		
Air	During construction, the Project will use commercially scheduled flights, with the potential for use of chartered flights but may need to use chartered flights if the existing service cannot support the additional throughput. In addition, the Project will confirm that if commercial flights are used, that there is no effect to availability of flight service to locals	
Water	During construction, the Project will use the existing scheduled sealift deliveries	
Land	Heavy Equipment, and contractor light vehicles (pick-up trucks) will be used during construction.

### Avatiliriniqmut Ayurhautingit:

Potential environmental impacts and mitigation measures are described in the Project Proposal (Chapter 7 and Chapter 8) and Construction Environmental Management Plan. There may be some negative residual environmental effects that will remain despite mitigation measures, predominantly with respect to ambient light, air quality, noise, marine water and sediments, marine fish and fish habitat and marine mammals, however, no residual effects are predicted to be significant.

# **Additional Information**

## **SECTION A1: Project Info**

Details can be found in the Project Proposal sections: Chapter 1 and 4

## **SECTION A2: Allweather Road**

An existing road is planned to be used to support the transportation of rock materials from the quarry to the SCH. Upgrades to the road will occur prior to construction and will be described in the Project Proposal document. In required, the contractor will be responsible for necessary permits from the NWB. Measures to manage traffic interactions with the community will be described in the CEMP, and the contractor will be required to develop a Traffic Management Plan (TMP) to detail methodologies (e.g. use of dust suppressants, speed limits, training requirements) to be undertaken to support CEMP requirements.

## **SECTION A3: Winter Road**

## **SECTION B1: Project Info**

## **SECTION B2: Exploration Activity**

## **SECTION B3: Geosciences**

## **SECTION B4: Drilling**

## **SECTION B5: Stripping**

## **SECTION B6: Underground Activity**

## **SECTION B7: Waste Rock**

## **SECTION B8: Stockpiles**

## **SECTION B9: Mine Development**

## **SECTION B10: Geology**

## **SECTION B11: Mine**

## **SECTION B12: Mill**

## **SECTION C1: Pits**

Details can be found in the Project Proposal sections: 4.5.3

## **SECTION D1: Facility**

Details can be found in the Project Proposal sections: Chapter 4

## **SECTION D2: Facility Construction**

Details can be found in the Project Proposal sections: Chapter 4

## **SECTION D3: Facility Operation**

The SCH once operational will remain the responsibility of DFO-SCH. An Operations Environmental Management Plan (OEMP) will be prepared prior to operations of the SCH. There are not expected to be any differences in vessel use before and after the construction of the SCH. Details can be found in the Project Proposal sections: Chapter 4.4

## **SECTION D4: Vessel Use**

## **SECTION E1: Offshore Survey**

## **SECTION E2: Nearshore Survey**

## **SECTION E3: Vessel Use**

## **SECTION F1: Site Cleanup**

## **SECTION G1: Well Authorization**

## **SECTION G2: Onland Exploration**

## **SECTION G3: Offshore Exploration**

## **SECTION G4: Rig**

## **SECTION H1: Vessel Use**

There is no shipping associated with the project construction as all materials will arrive under existing scheduled sealift deliveries. It is anticipated that small vessels related to the construction of the Harbour

## **SECTION H2: Disposal At Sea**

It has not been determined if disposal at sea is required, however the preferred DAS site is shown in the Project Proposal.

## **SECTION I1: Municipal Development**

### **Qanurittuq Ittunik Avatinga: Avatingalluanga**

Details can be found in the Environmental and Socio-Economic Baseline Report sections: 2, 4-5. Details can be found in the Project Proposal sections: Chapter 5

### **Qanurittuq Ittunik Avatinga: Inuuhimayunut Avatinga**

Details can be found in the Environmental and Socio-Economic Baseline Report sections: 2, 6-10. Details can be found in the Project Proposal sections: Chapter 5

### **Qanurittuq Ittunik Avatinga: Inungit-maniliurutingit Avatinga**

Details can be found in the Environmental and Socio-Economic Baseline Report sections: 11. Details can be found in the Project Proposal sections: Chapter 6

## **Miscellaneous Project Information**

## **Naunaiyainiq ukuninnga Ayurhautingit unalu Piumayaat Ikikliyuumiutinahuarutit**

Details can be found in the Project Proposal sections: Chapter 7. Additional mitigations will be found in the Construction Environmental Management Plan (CEMP)

## **Tamatkiumayunik Ihuikgutivaktunik**

There may be some negative residual environmental effects that will remain despite mitigation measures, predominantly with respect to ambient light, air quality, noise, marine water and sediments, marine fish and fish habitat and marine mammals, however, no residual effects are predicted to be significant. Details can be found in the Project Proposal sections: Chapter 8
