Hamlets and Municipalities	A letter requesting support for the project was sent to the Hamlet of Coral Harbour. Bridget Pingwartok has forwarded the request to the SAO and ASAO.	Applied, Decision Pending		
Kaanatami Huradjat Munariniq	MBS permit application was submitted to Alannah Kataluk Primeau on 2022-01-06. Decision pending.	Applied, Decision Pending		
Hunters and Trappers Associations/Organizations	A letter requesting support for the project was sent to the Aiviit Hunters and Trappers Association. No response has been received at this time.	Applied, Decision Pending		

Project transportation types

Transportation Type	Qanuq Atuqtauniarmangaa	Length of Use
Air	For Ikkattuaq (Harry Gibbons) MBS, the team will hire either a boat or an aircraft to access the sanctuary. We estimate air travel may take 1 hour (return).	
Water	For Ikkattuaq (Harry Gibbons) MBS, the team will hire either a boat or an aircraft to access the sanctuary. Travel by boat may take 16 hours (return).	
Land	The project team plans to visit Qaqsauqtuuq (East Bay) MBS using ATVs. We anticipate the trip to take approximately 12 hours (return). The team may travel on the land while in the MBS by foot or ATV. Travel by ATV will not exceed more than 3 hours per person.	

Project accomodation types

Avatiliriniqmut Ayurhauingit:

Impacts on wildlife are expected to be minimal. However, some wildlife may be disturbed by the project team's arrival, movement, and camp activity in the sanctuary. The team will include an experienced local guide. They will be knowledgeable on how to avoid and prevent wildlife disturbance. The rest of the project team will follow their guidance. Additionally, the team will be instructed to avoid any interactions with wildlife, including all known nesting, breeding, moulting, calving, and denning areas. They will be trained to identify these areas and maintain a safe distance from them. The project team will not feed or attempt to attract wildlife.

Qanurittuq Ittunik Avatinga: Avatingalluanga

The Ikkattuaq MBS is within the drainage basin of Ikkattuaq kuunga, and includes the delta, estuary, the adjacent tidal flats in the Bay of God's Mercy, and surrounding lowland areas. The grassy islands of the delta provide abundant nesting sites for a diversity of bird species, including waterfowl, shorebirds, and several other species of coastal and inland waterbirds. The sedge lowlands provide important feeding and molting habitats for geese.

(<https://www.canada.ca/en/environment-climate-change/services/migratory-bird-sanctuaries/locations/harry-gibbons/management-plan.html>) The Qaqsauqtuuq MBS encompasses approximately 1,124 km² of terrestrial and marine areas on Southamton Island, Nunavut. The eastern boundary of the sanctuary is the junction of East Bay and Foxe Channel. The boundary extends approximately 60 km inland and includes the flat sedge meadows and raised beach ridges surrounding East Bay. (https://publications.gc.ca/collections/collection_2021/eccc/CW66-689-2020-eng.pdf)

Qanurittuq Ittunik Avatinga: Inuuhimayunut Avatinga

Ikkattuaq MBS: The sanctuary supports breeding habitats for nationally significant populations (defined as greater than 1%) of lesser snow goose (*Anser caerulescens caerulescens*) and Atlantic brant (*Branta bernicla hrota*). Over fifty species of birds have been recorded in or near the MBS, but the presence of more is very likely. Thirteen species at risk (listed under the federal Species at Risk Act or assessed by the COSEWIC) occur or have the potential to occur within the MBS. The Ikkattuaq MBS also serves as year-round and seasonal habitat for nineteen species of marine and terrestrial mammals. (<https://www.canada.ca/en/environment-climate-change/services/migratory-bird-sanctuaries/locations/harry-gibbons/management-plan.html>) Qaqsauqtuuq MBS: The sanctuary supports breeding habitats for nationally significant populations (defined as greater than 1%) of lesser snow goose (*Anser caerulescens caerulescens*), Atlantic brant (*Branta bernicla hrota*), and common eider (*Somateria mollissima borealis*). Over ninety species of birds have been recorded, including nine species at risk (listed under the federal Species at Risk Act or assessed by the COSEWIC). The Qaqsauqtuuq MBS also serves as year-round or seasonal habitat for thirteen mammal and fish species at risk. (https://publications.gc.ca/collections/collection_2021/eccc/CW66-689-2020-eng.pdf)

Qanurittuq Ittunik Avatinga: Inungit-maniliurutingit Avatinga

The proposed project sites are approximately 75 km (Qaqsauqtuuq MBS) and 130 km (Ikkattuaq MBS) away from Salliq (Coral Harbour), the nearest community. The population of the community is estimated to be approximately 973 people, and approximately half of the population is over 18 years old (July 2020). As of 2016, the majority of the community population lives in private households of approximately 4 residents. Inuktitut is spoken by the majority of the population. There are three churches in the community. The Coral Harbour Airport serves as the main transportation hub for travel to and from Southamton Island. Calm Air is the only airline that operates regular flights to/from the island. All flights to the island come via Nunavut. Travel around the island is primarily through ATV, snowmobiles, truck, or foot (depending on the season). No public transit is available. The community has a health centre. Recently, the health centre has been involved in the COVID-19 vaccinations. In 2011, the Community Wellness Planning Committee of Coral Harbour published a report (in partnership with the Nunavut Community Wellness Project, Nunavut Tunngavik Inc., and other supporters). The report identified three main focus areas over the next decade, including nutrition (in particular, concerns surrounding obesity, prenatal care, and proper nutrition); youth engagement (ensuring they have

places to go with planned and structured activities, more youth programming, the addressing of sexuality issues and safe sex etc.), and addiction and mental health. The project activities will be occurring within Qaqsauqtuuq MBS and Ikkattuaq MBS. The Government of Nunavut's Department of Culture and Heritage has documented archaeological sites in the sanctuaries. In consultation with the community, the project team has identified sites of cultural importance. Neither of the proposed camp sites are within close proximity to these sites. When in the sanctuaries, the project team may film interviews around these sites. The team will maintain a safe distance from these sites and adhere to Government of Nunavut, ECCC, and cultural protocols. The project team is unaware of any palaeontological discoveries within the sanctuaries. They will adhere to the Nunavut Archaeological and Palaeontological Sites Regulations as required. The project team has documented land and resource use in the sanctuaries during community consultation, including their importance to Inuit. The project team may visit some of these specific areas when in the sanctuaries. Areas documented include harvesting sites for polar bears, foxes, and bird eggs. The team is also aware of tourism and guiding operators and will be taking advantage of these in the organization of the trip to hire local guides.

Miscellaneous Project Information

N/A

Naunaiyainiq ukuninnga Ayurhautingit unalu Piumayaat Ikkliyuumiutinahuarutit

Impacts on wildlife are expected to be minimal. However, some wildlife may be disturbed by the project team's arrival, movement, and camp activity in the sanctuary. The team will include an experienced local guide. They will be knowledgeable on how to avoid and prevent wildlife disturbance. The rest of the project team will follow their guidance. Additionally, the team will be instructed to avoid any interactions with wildlife, including all known nesting, breeding, moulting, calving, and denning areas. They will be trained to identify these areas and maintain a safe distance from them. The project team will not feed or attempt to attract wildlife.

Tamatkiumayunik Ihuikgutivaktunik

Impacts from this project may include the disturbance of wildlife by the team's arrival, movement, and camp activity. Cumulative impacts may include the migration of wildlife from travel routes and campsite areas (identified in the project map). This may result in the requirement for harvesters to change their harvesting areas and practices. The project team will include a local guide, who will provide instruction on how best to avoid disturbing wildlife and habitat.
