ᑭᑦᑎᑭᑦᑭᑦ

Whereas Fisheries + Oceans Canada
is planning to conduct an aerial survey of cetaceans
in eclipse sound + Admiralty Inlet would be conducted
through DFO or Baffinland's monitoring program

ᑭᑦᑎᑭᑦᑭᑦ ᑭᑦᑎᑭᑦᑭᑦ

Therefore be it resolved that MHTO support
fisheries + oceans to do aerial survey of cetaceans

Be it further resolved that MHTO will not support
aerial survey ^{of Cetaceans} if Baffinland is going to conduct
monitoring program. Be it further resolved that DFO provides
MHTO with aerial survey results, if DFO does not provide survey
results MHTO will not support future aerial surveys

Subject: High Arctic Cetacean Survey (HACS) 2023

Dear Hunters and Trappers Organization,

We are planning to conduct an aerial survey of cetaceans (narwhal, beluga and bowhead whales) in August 2022 across the Canadian Arctic, called the High Arctic Cetacean Surveys (HACS). We would like this to be paired with aerial surveys for narwhal in Eclipse Sound and Admiralty Inlet that would be conducted through DFO or Baffinland's monitoring program. The proposed work would involve flying twin otters from the communities of Arctic Bay and Pond Inlet, in conjunction with DFO surveys from Qikiqtarjuaq, Clyde River, Pangnirtung, Resolute Bay, Taloyoak, and Sanirajak.

Please complete your response below to show whether or not your HTO is supportive of the High Arctic Cetacean survey in 2023. The completed response can be returned to us by email at Maha.Ghazal@dfo-mpo.gc.ca or Marianne.Marcoux@dfo-mpo.gc.ca.

Sincerely,

Marianne Marcoux
Research Scientist
Fisheries and Oceans Canada

We, the Hunters and Trappers Organization/Association of Mittimatalik (Pond Inlet)

support the proposal to conduct a High Arctic Cetacean survey in 2023.

do not support the proposal to conduct a High Arctic Cetacean survey in 2023.
