QANURITTUT

Tukihiannaqtunik havaariyauyumayumik uqauhiuyun

Qablunaatitut: The goal of this project is to run a pilot study to conduct baseline documentation of cultural sites in Ningninganiq NWA and explore what kinds of monitoring may be suitable to be conducted on a semi-regular basis by Inuit researchers and hunters from Clyde River, NU. Objectives include: 1) Collect baseline data about key environmental attributes and cultural sites in Ningninganiq NWA 2) Provide training and experience for Ittaq staff and community participants on how to collect high-quality environmental/cultural monitoring data. 3) Collect data for use in the development of a Ningninganiq NWA page in the Clyde River Atlas.

Uiviitut: L'objectif de ce projet est de mener une étude pilote pour effectuer une documentation de base des sites culturels dans la RNF de Ninginaniq et explorer quels types de surveillance pourraient être effectués sur une base semi-régulière par des chercheurs et des chasseurs inuits de Clyde River, au Nunavut. Les objectifs sont les suivants :1) Recueillir des données de référence sur les principaux attributs environnementaux et sites culturels de la RNF de Ninginaniq2) Fournir une formation et de l'expérience au personnel d'Ittaq et aux participants de la communauté sur la façon de recueillir des données de surveillance environnementale / culturelle de haute qualité.3) Recueillir des données qui pourraient être utilisées dans l'élaboration d'une page sur la RNF de Ninginaniq dans l'Atlas de la rivière Clyde.

Personnel

Personnel on site: 18

Days on site: 21

Total Person days: 378

Operations Phase: from 2023-05-01 to 2025-10-01

Camp	Ikulalimanngittun iqqakuuvaluin	10 bags total	Pack out of NWA to nearest community	N/A
Camp	Anaagun (inuin anaaguin)	18 people	Individuals dig a hole and bury their waste at least 100m from nearest water source. Paper products will be packed out or burned.	N/A

Avatiliriniqmut Ayurhautingit:

This project will have minimal impacts to wildlife, however, there is a chance that activities could disturb/modify behavior of any wildlife in the area. Helicopters may disturb animals when used to travel from point to point in the NWA. This disturbance will be minimized by flying high when going from point to point (and safe to do so), and by avoiding landing near animals whenever possible; the helicopter will not chase any wildlife. Travel over land may disturb animals and make them flee the area. This disturbance will be short-lived and monitors will not chase animals while traveling. When taking photographs or drone footage drone operators will follow guidelines specified by the ACMC and as described below. Drones will be used to image cultural sites, landscapes, not wildlife directly. We will be camping in the NWA for up to 3 weeks with up to 18 people (number depends on number of students that sign up for training program). All lead participants have experience with camping on the land and safe camp practices regarding wildlife and will take necessary precautions to avoid human-wildlife conflict, however, we will be carrying firearms for wildlife protection and will use these if absolutely required to keep people safe from threatening wildlife (e.g. bears). This could result in death of nuisance wildlife. We will have non-lethal deterrents available for use in any human-wildlife conflicts. Polar Bear, peregrine falcons, Ivory Gull, Ross' Gull, and Red Knots potentially occur or are known to occur in the NWA and are listed under schedule 1 of SARA. Monitors could potentially disturb individuals of these species, and in the unlikely event of an accident, conveyances could potentially disturb/destroy habitat of these species. These potential risks will be mitigated as described above.
