

## **NIRB Application for Screening #125922**

### **Carbon measurement in Taloyoak**

**Application Type:** New

**Project Type:** Scientific Research

**Application Date:** 3/19/2024 11:19:23 AM

**Period of operation:** from 2024-06-24 to 2024-06-28

**Project Proponent:** Clare Colleen Wark  
WWF-Canada  
410 Adelaide St W  
Toronto Ontario M5V 1S8  
Canada  
Phone Number:: 9059127309, Fax Number::

# DETAILS

## Non-technical project proposal description

English: Healthy ecosystems provide a variety of valuable ecosystems services such as climate regulation, water purification and nutrient cycling. Their ability to absorb and store atmospheric carbon is of particular interest for further emphasizing their need for protection and thoughtful management under a changing climate. Current models of carbon stocks at national and international scales rely on a small subset of data extrapolated to the entirety of the Arctic to quantify carbon in remote areas. However, there is concern that these models may be underestimating total carbon storage in the Arctic, which could result in unintended consequences for their relative protection and management in nationwide systematic planning exercises. Moreover, assessing carbon storage and sequestration of permafrost ecosystems will provide greater understanding of the impacts on and opportunities for Indigenous communities, and support the development of long-term climate change mitigation and adaptation strategies. WWF-Canada is looking to fill data gaps in the Arctic by conducting soil carbon measurement in Taloyoak, Nunavut. These in-field measurements will then be used to assess whether current carbon models are underestimating the carbon stored in the region. From June 24-28, 2024, we will take a total of nine soil core samples (1-2m depth) within a 25-kilometer radius of town. The Taloyoak Guardians will support the research by providing local knowledge and transportation. WWF-Canada can also provide soil sample training, if interested. A permafrost corer will be used to collect samples, which will be transported to coolers to keep samples fresh for lab analysis. Following field work, the samples will be processed in a lab to determine the total carbon stock and carbon density of the soils. We do not anticipate impacts of the research on the environment, wildlife or people, and commit to taking every precaution to ensure a sustainable and ethical approach. The data generated by the research will be stored and managed by WWF-Canada on secure servers. WWFCanada has a longstanding partnership with TUA. The data and results will be shared directly with the staff and board of directors of TUA in in-person meetings for their independent use of the information for landuse planning and advancing the Aqviqtuuq Inuit Protected and Conserved Area project. The research results will also be shared with community partners in subsequent community visits that are team frequently conducts.

French: Les écosystèmes en santé supportent un grand nombre de services écosystémiques, incluant la régulation climatique, la purification de l'eau et le cycle les nutriments. Leurs capacités d'absorber et de stocker le carbone atmosphérique est d'intérêt particulier afin de souligner leurs besoins de protection et de gestion appropriée dans un climat changeant. Les modèles actuels de stock de carbone aux échelles nationales et internationales dépendent d'un petit nombre de données extrapolées à toute l'arctique pour quantifier le montant de carbone dans ces régions éloignées. Cependant, on craint que ces modèles sous-estiment le stockage de carbone dans l'arctique, qui pourrait entraîner des conséquences imprévues sur leur protection et gestion lors d'exercices de planifications systématiques à l'échelle nationale. De plus, l'évaluation du stockage et de la séquestration du carbone dans des écosystèmes de pergélisol mènera à une meilleure compréhension des impacts sur et des opportunités pour les communautés autochtones, et pourra supporter le développement de stratégies d'atténuation et d'adaptation aux changements climatiques. WWF-Canada cherche à combler ce manque de données dans l'arctique en mesurant le carbone du sol à Taloyoak, Nunavut. Les échantillons pris sur le terrain serviront à déterminer si les modèles actuels sous-estiment le montant de carbone stocké dans cette région. Du 24 au 28 juin, 2024, nous prélèverons un total de neuf carottes de sol (mesurant 1 à 2m chaque) dans un rayon de 25km du village. Les Gardiens de Taloyoak supporteront la recherche en fournissant leurs connaissances locales et le transport. WWF-Canada peut aussi fournir une formation sur les méthodes d'échantillonnage, s'il y a intérêt. Un dispositif de carottage du pergélisol sera utilisé afin de prélever les échantillons, qui seront transporté dans des glacières afin qu'ils demeurent complets jusqu'à l'analyse en laboratoire. Suivant le travail de terrain, les échantillons seront traités en laboratoire afin de déterminer le stock total de carbone et la densité du carbone dans les sols. Nous anticipons aucun impact sur l'environnement, la faune ou les personnes, et nous sommes engagé à prendre toutes les précautions nécessaires afin d'assurer une approche durable et éthique. Les données générées par la recherche seront stockées et gérées par WWF-Canada sur des serveurs sécurisés. WWF-Canada a un partenariat de longue date avec TUA. Les données et les résultats de l'analyse seront partagés directement avec les employés et le conseil d'administration de TUA lors de rencontres en personne afin que l'information puisse être utilisée pour l'aménagement du territoire et pour soutenir l'aire protégée et de conservation inuite Aqviqtuuq. Les résultats de la recherche seront aussi partagés avec les partenaires communautaires lors de visites dans la communauté que notre équipe

## Activities

Location	Activity Type	Land Status	Site history	Site archaeological or paleontological value	Proximity to the nearest communities and any protected areas
SA1- Site 1	Sampling sites	Municipal	N/A for this project	N/A for this project	9.8km to Taloyoak
SA1-Site2	Sampling sites	Municipal	N/A	N/A	10.6km to Taloyoak
SA1-Site3	Sampling sites	Municipal	N/A	N/A	9.3km to Taloyoak
SA2-Site1	Sampling sites	Municipal	N/A	N/A	5.2km to Taloyoak
SA2-Site 2	Sampling sites	Municipal	N/A	N/A	6.7km to Taloyoak
SA2-Site3	Sampling sites	Municipal	N/A	N/A	5.2km to Taloyoak
SA3-Site1	Sampling sites	Municipal	N/A	N/A	7.7km to Taloyoak
SA3-Site2	Sampling sites	Municipal	N/A	N/A	7.2km to Taloyoak
SA3-Site3	Sampling sites	Municipal	N/A	N/A	5.4km to Taloyoak

## Community Involvement & Regional Benefits

Community	Name	Organization	Date Contacted
Taloyoak	Jimmy Ullikatalik	Taloyoak Umarulirigut Association (TUA)	2024-03-06
Taloyoak	Abel Aqqaq	Inuit Guardians at TUA	2024-03-04

# Authorizations

Indicate the areas in which the project is located:

Authorizations

Regulatory Authority	Authorization Description	Current Status	Date Issued / Applied	Expiry Date
Nunavut Research Institute	Nunavut Scientific Research license Contact for application: Masha Cote / ᐃᓂᐱ ᐅᓂᐱᓂᐱ, ᐃᓂᐱ ᐅᓂᐱᓂᐱ / ᐃᓂᐱ ᐅᓂᐱᓂᐱ, ᐃᓂᐱ ᐅᓂᐱᓂᐱ ᐃᓂᐱ ᐅᓂᐱᓂᐱ	Applied, Decision Pending		
Hunters and Trappers Associations/Organizations	Motion being brought forth by Jimmy Ullikatalik for April 2, 2024 meeting.	Not Yet Applied		

## Project transportation types

Transportation Type	Proposed Use	Length of Use
Land	ATV	

## Project accommodation types

Community

## Material Use

Equipment to be used (including drills, pumps, aircraft, vehicles, etc)

Equipment Type	Quantity	Size - Dimensions	Proposed Use
Permafrost corer	1	100cm x 200cm	Used to manually extract sediment cores from the ground, from a depth of 1-2m below ground.
ATVs	2	N/A	Used for transport to site locations
GoPro cameras	2	N/A	Used to photograph sites and cores
Coolers and packing materials	4	N/A	Used to store cores for transport
PVC pipes and duct tape	30	50cm long	For packaging individual cores
Sledgehammer	1	50cm long	Driving the permafrost corer down into dense sediment, as needed
Tarp	1	3m x 3m	For laying out core after extraction
Measuring tape	1	N/A	Measuring cores

### Detail Fuel and Hazardous Material Use

Detail fuel material use:	Fuel Type	Number of containers	Container Capacity	Total Amount	Units	Proposed Use
Gasoline	fuel	2	23	46	Liters	For ATVs

### Water Consumption

Daily amount (m3)	Proposed water retrieval methods	Proposed water retrieval location
0	N/A	N/A

# Waste

## Waste Management

Project Activity	Type of Waste	Projected Amount Generated	Method of Disposal	Additional treatment procedures
Sampling sites	Other, Waste from excess packing materials (bubble wrap, plastic wrap)	Negligible	Dispose of at dump once returning to Taloyoak	N/A

### Environmental Impacts:

We do not anticipate impacts of the research on the environment, wildlife or people, and commit to taking every precaution to ensure a sustainable and ethical approach.
