## 1 Summary

INAC Land Use Permit Number: **N2015C0014**

NWB License Number: **2BE-STO1520**

Work Completed: Prospecting traverses, airborne survey

Dates Work Completed: July 12, 2017 to July 19, 2017

Property Location: NTS 058C10, C11, C13, and C14; Somerset Island, Nunavut, Canada

Storm Camp Location: 73°39'23" N latitude; 94°27'07" W longitude

## 2 Introduction

The Aston Bay Property is located on northern Somerset Island, Nunavut in the Canadian Arctic Archipelago (Figure 1). The nearest community is the hamlet of Resolute Bay, located 112 km north of the Property, on Cornwallis Island. The Property is approximately 1,500 km northwest of Iqaluit, the capital of Nunavut, and about 1,500 km northeast of Yellowknife, Northwest Territories. The Aston Bay Property includes the Seal Zinc prospect and multiple copper-silver showings, collectively known as the Storm Copper prospect.

The 2017 Aston Bay Property exploration program included a site visit by Aston Bay personnel and several prospecting traverses. All exploration activities were helicopter supported and based out of Storm Camp, located along the Aston River at approximately 73°39'23" N latitude and 94°27'07" W longitude. The program was completed between July 12 and July 19, 2017, including mobilization and demobilization of camp. Minor improvements were made on the camp during the program.

The 2017 Aston Bay Property exploration program was conducted in accordance with the Indigenous and Northern Affairs Canada ("INAC") Land Use Permit N2015C0014, and Nunavut Water Board ("NWB") Water License 2BE-STO1520, both issued to Aston Bay.

## 3 Land Use Area Description and Location

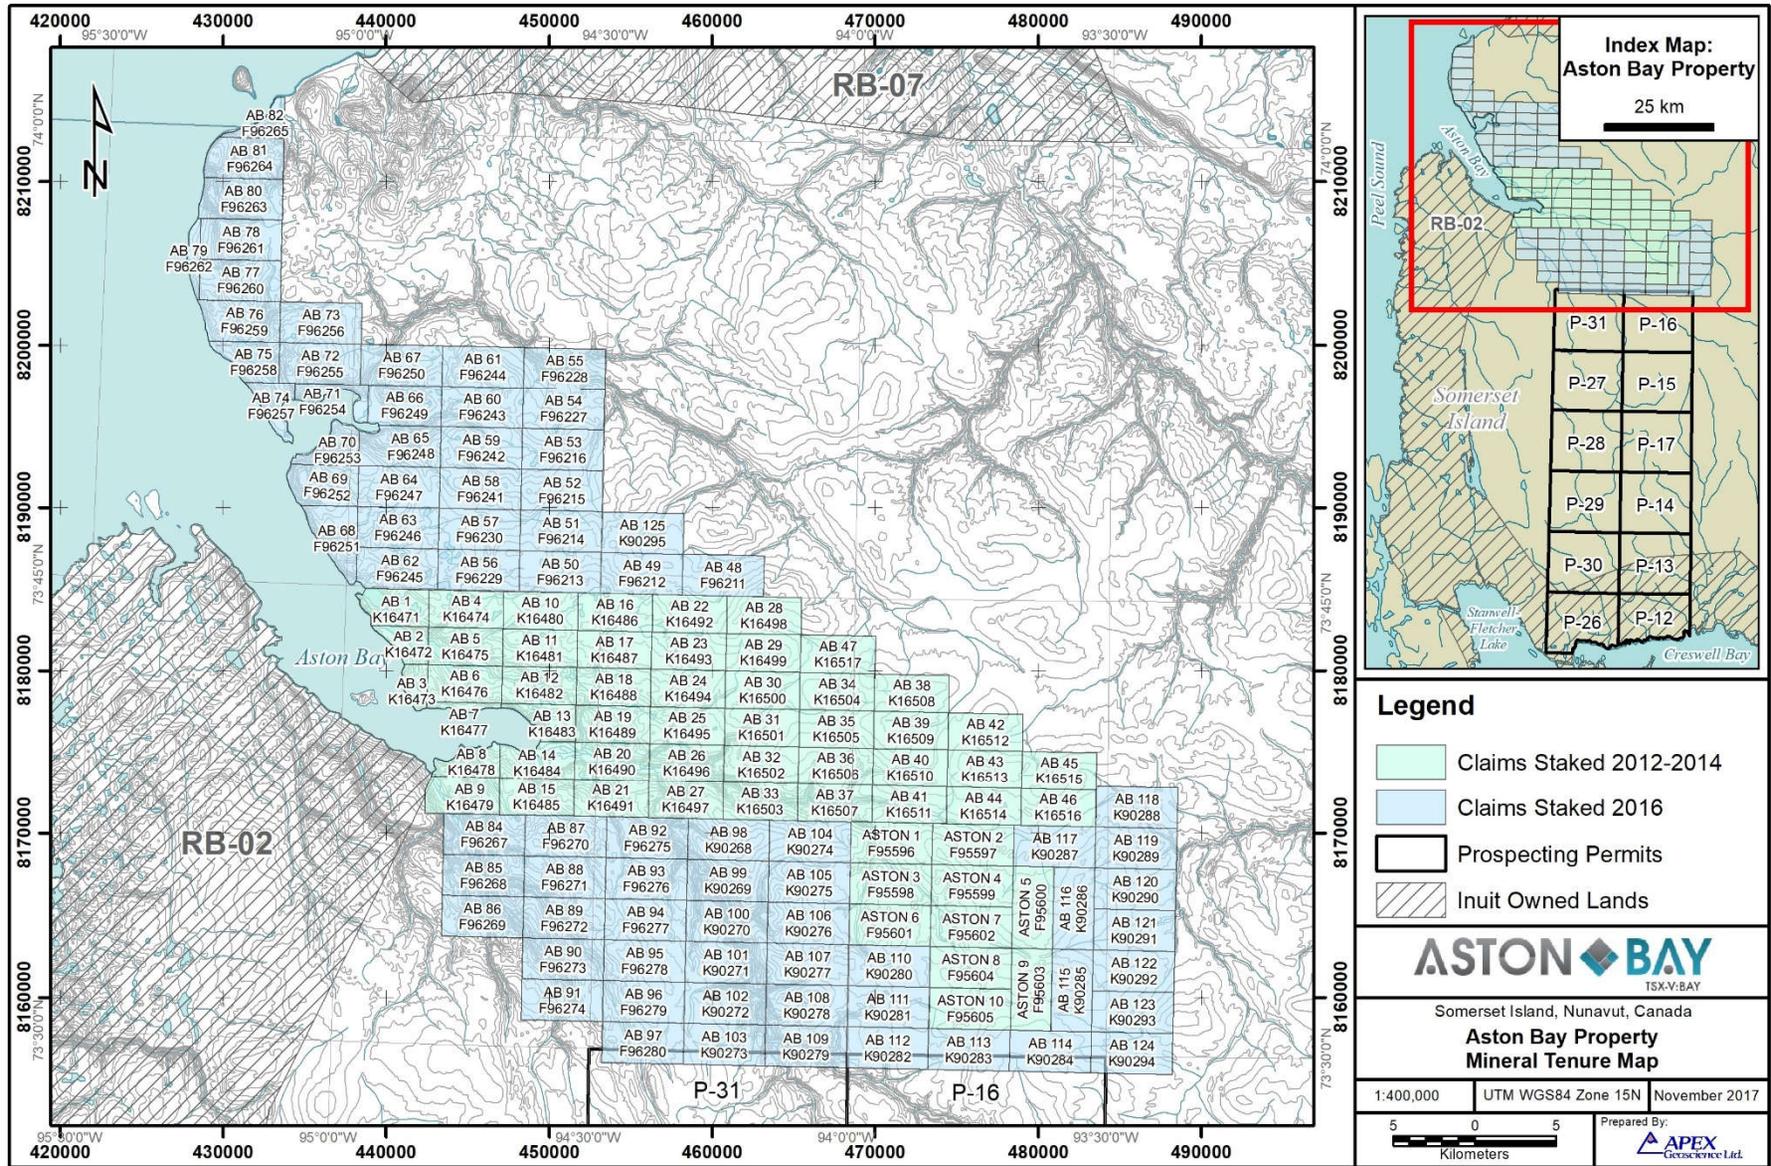

The Aston Bay Property is situated in the Qikiqtaaluk Region of Nunavut, within the 1:50,000 scale NTS (National Topographic System) map sheets 058B14 and 15, and 058C02, 03, 06, 07, 10, 11, 13 and 14. The Property comprises one hundred thirty-four contiguous mineral claims and twelve prospecting permits (Appendix 1, Figure 2). The mineral claims and prospecting permits are 100% owned by Aston Bay.

The Aston Bay Property covers a combined area of approximately 976,357.1 acres (395,118.0 ha). The Property is bound by latitudes 72°45' N and 73°52.5' N, and longitudes 93°30' W and 95°30' W, and is centred at approximately 73°20' N latitude and 94°30' W longitude.

Figure 1 Aston Bay Property Location

Figure 2 Aston Bay Property Mineral Tenure Map

## 4 2017 Exploration

The 2017 Aston Bay Property exploration program included a site visit by Aston Bay personnel and several prospecting traverses. Traverses were completed at the Seal Zinc and Storm Copper prospects, the Typhoon Zinc showing and in several other areas. An airborne gravity geophysical survey was also completed during 2017. The survey was completed using a fixed wing aircraft based in Resolute Bay. No landings were made on the Property.

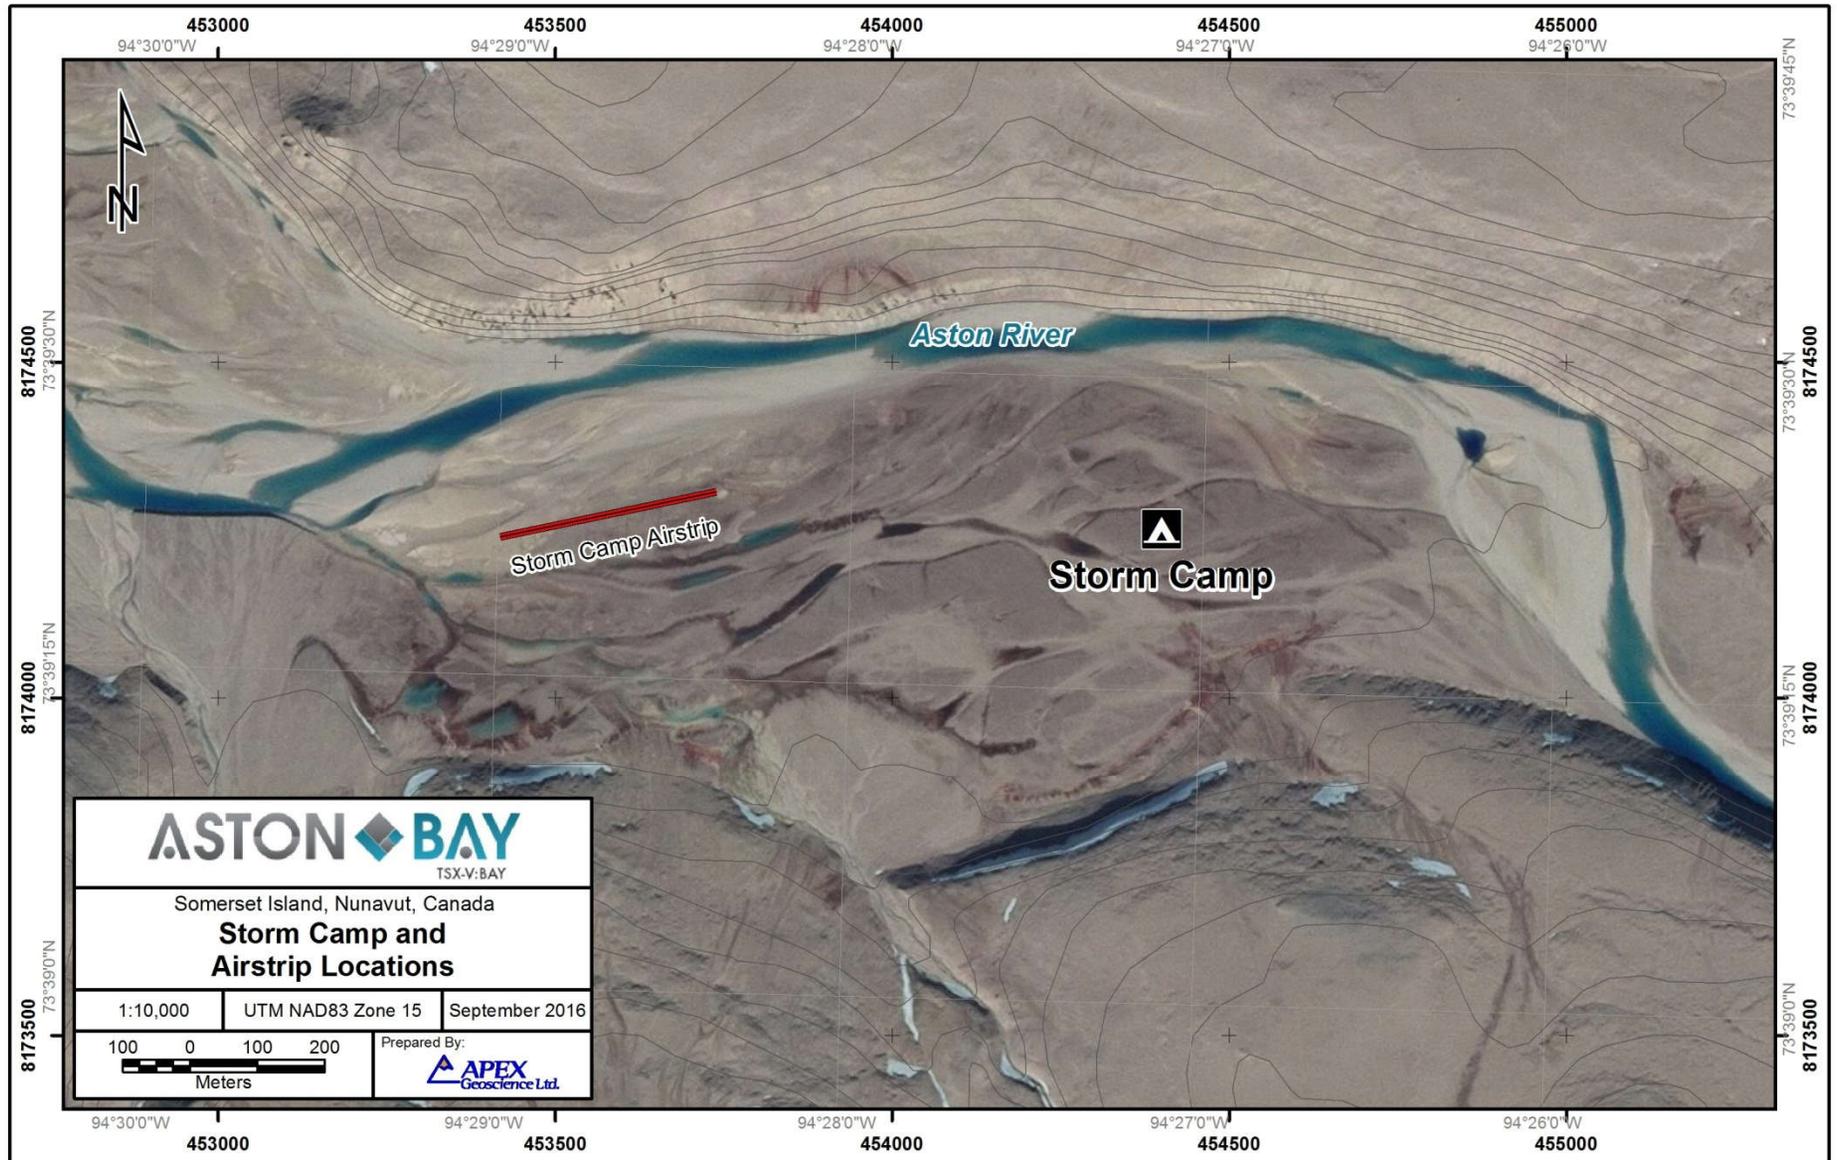

All field activities during the 2017 program were helicopter supported and based out of Storm Camp, located along the Aston River at approximately 73°39'23" N latitude and 94°27'07" W longitude (Figure 3). A B2 Astar was contracted from Great Slave Helicopters Ltd. ("GSH") of Yellowknife, NT, for the duration of the program. A fixed wing Twin Otter aircraft based in Resolute Bay, NU was chartered from Kenn Borek Air Ltd. ("Kenn Borek") of Calgary, AB. Camp services and logistical support was provided by Atco Structures & Logistics ("Atco") of Resolute Bay, NU and Discovery Mining Services Ltd. ("DMS") of Yellowknife, NT.

The 2017 exploration program was completed between July 12 and July 19, 2017, including mobilization and demobilization of camp. A notice of commencement for the 2017 program was sent to the INAC Engineer at [landsmining@aandc.gc.ca](mailto:landsmining@aandc.gc.ca), and to the INAC Manager of Land Administration, a Resource Management Officer and a Water Resources Officer on July 3, 2017. A notice of commencement and safety plan was sent to the Workers Safety and Compensation Commission (WSCC) Chief Inspector of Mines and Nunavut Mines Inspector on July 5, 2017. Permission for the work program was granted by the WSCC on July 11, 2017.

## 5 Personnel

All personnel associated with the 2017 exploration program are listed in Appendix 2.

Figure 3 Storm Camp and Airstrip Locations

## 6 Land Use Considerations

### 6.1 Camp & Waste

All field activities during the 2017 program were helicopter supported and based out of a temporary exploration camp known as Storm Camp, located along the Aston River at approximately 73°39'23" N latitude and 94°27'07" W longitude (Figure 3). The camp site is located on an elevated gravel bar in the river valley, and includes an airstrip suitable for landing a Twin Otter. A staging area was established at the east end of the airstrip, approximately 600 metres west of Storm Camp.

Camp equipment was mobilized from Yellowknife to Resolute Bay ahead of the program by chartered aircraft and was shuttled to site by Twin Otter at the start of the program. Four prospector-style tents were set up for a kitchen and living quarters, in addition to the three existing wooden structures (pacto toilet shack, storage shack, generator shack) already on site. A fourth wooden structure was constructed during the 2017 program to add additional off-season storage, and to be used as a shop and water tank storage in future programs.

Upon completion of the program, all tents were taken down. The existing tent floors and wooden structures were left in place for future use. Drums, sandbags and other heavy items were used to weigh down the floors. Any remaining equipment was stored inside or secured to the outside of the hard-sided shacks. All remaining lumber was stacked at the east end of camp for future use. Camp closure photos are included in Appendix 3.

Camp water was collected from the Aston River for cooking and cleaning. Bottled drinking water was flown in from Resolute Bay. A total of 1.6 m<sup>3</sup> of water was taken from the Aston River for camp use, averaging 200 litres per day. No running water was available in camp. Twenty litre jugs were used for water. Grey water was emptied into an excavated sump behind the kitchen and over 100 m from the nearest water body. No leaks or overflows were observed.

All waste and sewage (pacto bags) were placed in appropriate containers and backhauled to Resolute Bay for proper disposal.

### 6.2 Fuel Storage

The majority of the fuel mobilized to site in 2017 was used during the exploration program. A small fuel cache remains at the Property (Table 1), located at the Storm Camp fuel cache site (73° 39' 23" N latitude; 94° 26' 58" W longitude). Tent drums were placed upright on tent floors for added weight and the remaining fuel drums were consolidated into a single "Insta-Berm"

equipped with a cover and “Rain Drain” hydrocarbon filter. Propane cylinders were placed on tent floors and secured.

**Table 1 Storm Camp Fuel Inventory (July 19, 2017)**

<b>Material</b>	<b>Container</b>	<b>Quantity on Site</b>
Diesel	205 L Drum	14 Drums*
Jet Fuel (Jet A)	205 L Drum	26 Drums
Gasoline	205 L Drum	1 Drum
Propane	100 lb Cylinder	17 Cylinders

\*Tent drums were left standing upright on the tent floors for added weight.

The fuel cache is located a minimum of 31 metres from the normal high water mark of any water bodies. Prior to the completion of field work, and during the course of field work, drums were inspected for damage or leaks. No damaged or leaking drums were identified. Drums were stored in an organized manner with the bungs at the 9 o’clock and 3 o’clock positions. All empty fuel drums and waste fuel drums were backhauled to Resolute Bay for disposal.

No spills were reported during the 2017 program.

### **6.3 Flights**

All field work completed during 2017 was helicopter supported, using Storm Camp as a base. A B2 Astar was contracted from GSH for the duration of the program. Personnel and gear were transported to and from the field daily using the B2. Pilots were instructed, when possible, to avoid landing in areas with soft ground to avoid rutting. Helicopter pads at the camps and drill sites were situated on firm, level ground a safe distance from work sites.

A fixed wing Twin Otter aircraft based in Resolute Bay, NU was chartered from Kenn Borek for the duration of the program. The Twin Otter was used to move personnel, samples, fuel and supplies between Resolute Bay and the Storm Camp airstrip.

### **6.4 Archaeological Sites**

No new or known archaeological sites were encountered during the 2017 exploration program.

### **6.5 Inuit Owned Land**

Aston Bay Prospecting Permits P-12 and P-26, and portions of P-13 and P-30 lie within IOL parcel RB-02. No work was completed on Inuit Owned Land during the 2017 Aston Bay Property exploration program.

## **7 Wildlife and Environment**

No wildlife was observed during the 2017 program.

## **8 Reclamation Work**

Progressive reclamation included keeping work areas clean and removing wastes from work sites daily. All wastes were stored in appropriate containers for later incineration or removal. The camp and all drill sites were inspected by the site supervisors for cleanliness and any sign of contamination prior to the close of the field program. All sites were deemed acceptable.

## **9 Waste Disposal**

All waste and sewage (pacto bags) were placed in appropriate containers and backhauled to Resolute Bay for proper disposal.

## **10 2018 Work Plan**

The 2018 Aston Bay Property exploration program is anticipated to include 3,000 to 6,000 metres of diamond drilling. The program may also include some sampling and ground or airborne geophysics. The program will start as early as June and continue until as late as September. All exploration activities at the Aston Bay Property will be helicopter supported and based out of Storm Camp.

A 20 to 30 person tent camp is proposed for the Storm Camp site to support the 2018 program. The proposed camp will be similar to the 2016 camp and is likely to include an operations office, geology office, core shack, medical tent, kitchen, men's' dry, women's' dry, drillers' dry, storage shack, generator shack, pacto toilet shack and 8 to 10 sleepers. The majority of the structures will be insulated Weatherport or Weatherhaven tents with plywood floors.

A fuel cache of approximately 80,000L (~400 drums) will be established at the current fuel cache location, adjacent to the camp. The cache will be primarily diesel and jet fuel, with small quantities of gasoline and propane. Each fuel type will be stored separately. All fuel will be stored within "Insta-Berms", or other industry standard containment berms. When possible, "Rain Drain" hydrocarbon filters will be utilized.

With proper design and execution, environmental impacts of the proposed exploration program are expected to be minimal. Plans are continuously being updated for storage and handling of fuel, waste management, reclamation, and wildlife management, all with the goal of ensuring minimal impact on the environment.
